MANDARIN, a name which the Portuguese originally gave to the Chinese nobility. According to a French author, the Mandarins are divided into nine orders, each having a peculiar mark of distinction to ascertain its rank.

Civil MANDARINS, (*Mandarins lettrés*, Fr.) These were able and scientific men who had the management of the different branches belonging to civil government.

Military MANDARINS, (*Mandarins militaires*, Fr.) A certain proportion of the body of mandarins is selected by the Emperor of China, to superintend and command the militia of the country,—these are called military mandarins.

The mandarins are considered as noblemen, but their rank is not hereditary. Every mandarin undergoes a severe and close examination respecting his natural and acquired talents, before he receives a civil or military appointment; and there are public schools or seminaries to which the natives of the empire may repair to obtain the requisite qualifications for such important and honourable stations.

MANDER, *Fr.* to acquaint; to inform.

MANDILION, (*Mandille*, Fr.) the soldier's coat is so called by the Italians. It does not, however, bear that meaning either among us or among the French; *Mandilion* and *Mandille* signifying a footman's great coat. Hence, *il a porté la Mandille*, he has been a footman.

MANDREL. Mandrels are made with a long wooden shank, to sit stiff into a round hole which is made in the work that is to be turned.

MANDRIN, *Fr.* a small bowl or wooden cylinder which is used in making up cartridges. See **MANDREL**.

MANEGE, in horsemanship, the exercise of riding the great horse, or the ground set apart for that purpose; which is sometimes covered, for continuing the exercise in bad weather; and sometimes open, in order to give more liberty and freedom both to the horseman and horse.

MANGAN, *Fr.* This word is sometimes written **MANGON**, (see **GUN**), a

warlike machine which was formerly used. The term itself, indeed, was generally adopted to signify any species of warlike machine. But it more particularly meant the largest and most powerful machine that could be used for warlike purposes; whether it was practised to throw enormous stones against besieged places, or to cast javelins, &c. It was likewise called *balista*, from the Greek, *tormentum* from the Latin *à torquendo*; and sometimes *petraria*, because stones weighing upwards of three hundred and sixty pounds were thrown from it. This machine answered the double purpose of defending or attacking fortified places, and it was sometimes used at sea. According to a French writer, one of these machines may be still seen at Basle.

MANGANELLE, *Fr.* See **MANGONNEAU**.

MANGE, (*mangeaison*, Fr.) the itch or scab in cattle.

MANGEAILLE, *Fr.* food; victuals.

MANGER, (*mangeoire*, Fr.) the place or vessel, in which animals are fed with corn.

To MANGLE, (*charcuter*, Fr.) to cut or tear peacemeal; to butcher; as the Jacobins did at the commencement of the French revolution.

MANGONNEAU, *Fr.* a word originally derived from the Greek which, according to Potter, seems to signify any engine designed to cast missile weapons. With respect to that particular engine, which the French have called *mangan*, *manganelle* and *mangonneau*, our ingenious countryman observes, there is not any proper term, he knows of, for that famous engine, out of which stones, of a size not less than mill-stones, were thrown with such violence, as to dash whole houses in pieces at a blow. It was called indeed by the Romans *balista*; but this name, though of Grecian original, appears not to have been used in Greece; this engine, however, was known there, and was the same with that used by the Romans, the force of which is expressed by Lucan:—

*At saxum quoties ingenti verberis ictu
Excutitur, qualis rupes, quam vertice montis
Abscidit impulsu ventorum adjuta vetustas;
Fragit cuncta ruens, nec tantum corpora pressa
Exanimat, totos cum sanguine dissipat artus.*

MANIE, *Fr.* madness; excessive fondness. This word has been used by

the French, to express an attachment to national manners, &c. Hence, *Anglo-manie*, Fr. a predilection for, or attachment, to English principles, &c.—They also say, *gallo-manie* or *Franco-manie*, a similar likeness to French manners.

MANIEMENT *des armes*, Fr. manual exercise. Although it might be thought superfluous to enter into a minute explanation of the manual as practised by the French, it will not be deemed entirely useless to the British officer, to make him master of the different terms. With this view, we shall likewise give the words of command used in the platoon exercise, &c. The advantage proposed to be derived from a technical knowledge of them, must be considerably felt whenever the two countries come into close warfare. Under such circumstances, a distinct possession of the several words of command, especially in outpost and detached services, may lead the British officer to a discovery of the enemy's movements, without any ulterior knowledge of the French language. The first word of command is,

Présentez vos armes.—Present arms.
Portez vos armes.—Shoulder arms.
Reposez sur vos armes.—Order arms.
Posez vos armes à terre.—Ground arms.
Relevez vos armes.—Take up arms.
Portez vos armes.—Shoulder arms.
L'arme au bras.—Support arms.
Portez vos armes.—Carry arms.
Présentez la baïonnette. Charge bayonet.
Portez vos armes.—Shoulder arms.

The other words of command which do not belong to the manual, but are occasionally practised, consist of

Baïonnette au canon.—Fix bayonet.
Tirez la baguette.—Draw ramrod.
Baguette dans le canon.—Spring ramrod.
L'arme à volonté.—Slope arms.
L'arme au bras gauche.—Secure arms.
Armes au faisceau.—Pile arms.
Repos.—Stand at ease.
Portez les armes comme sergent.—Advance arms.
Remettez la baguette.—Return ramrod.
Remettez la baïonnette.—Return or unfix bayonet.
Ouvrez le bassinnet.—Open pan.
Fermez le bassinnet.—Shut pan.

Port arms is not practised among the French. When a guard is dismissed, instead of *Porting arms*, the soldier receives the following word of command, *Haut*

les armes! which is sometimes similar to *Recover arms.*

MANIEMENT *des armes*, Fr. The platoon exercise is also so called in the French service, and is distinguished from their manual by the additional caution of *charge en douze tems*, or prime and load in twelve motions.

Chargez vos armes.—Prime and load.
Ouvrez le bassinnet.—Open pan.
Prenez la cartouche.—Handle cartridge.
Amorcez.—Prime.
Fermez le bassinnet.—Shut pan.
L'arme à gauche.—Cast about.
Cartouche dans le canon.—Load.
Tirez la baguette.—Draw ramrod.
Bourrez.—Rain down cartridge.
Remettez la baguette.—Return ramrod.
Portez vos armes.—Shoulder arms.

FIRING AFTER THE MANUAL.

Apprêtez vos armes.—Make ready.
Joue.—Present.
Feu.—Fire.
Chargez.—Prime and load.
Le chien au repos.—Half-cock firelock.
Portez vos armes.—Carry arms.
Présentez vos armes.—Present arms.
Portez vos armes.—Shoulder arms.
Reposez-vous sur vos armes.—Order arms.
Repos.—Stand at ease.

INSPECTION D'ARMES.—INSPECTION OF ARMS.

Baïonnette au canon.—Fix bayonet.
Baguette dans le canon.—Spring ramrod.

In the British service the ramrod is rammed down the barrel without any further word of command.

Vos armes à terre.—Ground arms.
Relevez vos armes.—Take up arms.
Portez vos armes.—Shoulder arms.
L'arme au bras.—Support arms.
L'arme à volonté.—Slope arms.
L'arme au bras.—Support arms.
Portez vos armes.—Carry arms.
L'arme sous le bras gauche.—Secure arms.
Portez vos armes.—Shoulder arms.
Croisez la baïonnette.—Charge bayonet.
Croiser la baïonnette likewise signifies to cross bayonets in such a manner as to form a sort of *cheval de frise* to resist the attack of cavalry from either flank. This has been adopted since the revolution.

Portez vos armes.—Carry arms.
Charge précipitée.—Prime and load in four motions.

Chargez vos armes.—Load.

Deux.—Go.

Trois.—Go.

Quatre.—Go.

Charge à volenté.—Independent or running fire.

Charge à volenté.—Independent firing.

Chargez vos armes.—Prime and load.

PLATOON FIRING.

Peloton.—'Toon.

Armes.—Ready.

Joue.—'Psent.

Feu.—Fire.

Chargez.—Prime and load.

Roulement.—Roll.

Fin de Roulement.—Cease to roll.

Feu à volenté.—Independent firing.

Peloton.—'Toon.

Armes.—Ready.

Commencez le jeu.—Commence firing.

Roulement.—Roll.

It is here necessary to explain to the English reader, that the words of command *Roulement* and *Fin de Roulement*, are only used in the drill, or when there is not any drum to beat the prescribed roll.

MANIER, *Fr.* to handle. This word is generally used among the French in a military sense, whenever they speak of portable fire-arms, &c.

MANIER *les armes*, *Fr.* to handle the fire-lock, or handle arms.

MANIFESTO, (*Manifeste*, *Fr.*) a public declaration which is made by a prince or state, containing its reasons for entering into a war. The formality of a *manifesto* has been considerably reduced in modern times. Among the ancients, on the contrary, it was particularly attended to. Potter, in his *Grecian Antiquities*, observes, that invasions without notice, were looked upon rather as robberies than lawful wars, as designed rather to spoil and make a prey of persons innocent and unprovided, than to repair any losses or damages sustained, which, for aught the invaders knew, might have been satisfied for an easier way. It is therefore no wonder, what Polybius (*lib. iv.*) relates of the *Aetolians*, that they were held for the common outlaws and robbers of Greece, it being their manner to strike without warning, and to make war without any previous and public declaration, whenever they had an opportunity of enriching themselves with the spoil and booty of their

neighbours. Yet there want not instances of wars begun without previous notice, even by nations of better repute for justice and humanity; but this was only done upon provocations so great and exasperating, that no recompense was thought sufficient to atone for them: whence it came to pass, that such wars were of all others the most bloody and pernicious, and fought with excess of rage and fury; the contesting parties being resolved to extirpate each other, if possible.

Before the *Grecians* engaged themselves in war, it was usual to publish a declaration of the injuries they had received, and to demand satisfaction by ambassadors; for however prepared, or excellently skilled they were in the affairs of war, yet peace, if to be procured upon honourable terms, was thought more eligible: which custom was observed even in the most early ages, as appears from the story of *Tydeus*, whom *Polynices* sent to compose matters with his brother *Eteocles*, King of *Thebes*, before he proceeded to invest that city, as we are informed by *Statius*, (*Thebaid. lib. ii. v. 568.*) and several others. See *Potter*, p. 64 and 65.

The *Romans*, on the other hand, used abundance of superstition in entering upon any hostility, or closing in any league or confederacy; the public ministers who performed the ceremonial part of both these, were the *Feciales*, or heralds. The ceremonies were of this nature: when any neighbouring state had given sufficient reason for the senate to suspect a design of breaking with them; or had offered any violence or injustice to the subjects of *Rome*, which was enough to give them the repute of enemies; one of the *feciales*, chosen out of the college upon this occasion, and habited in the vest belonging to his order, together with his other ensigns and habiliments, set forward for the enemy's country. As soon as he reached the confines, he pronounced a formal declaration of the cause of his arrival, calling all the gods to witness, and imprecating the divine vengeance on himself and his country, if his reasons were not just. When he came to the chief city of the enemy, he again repeated the same declaration, with some addition, and withall desired satisfaction. If they delivered into his power the authors of

the injury, or gave hostages for security, he returned satisfied to Rome; if otherwise, they desired time to consider; he went away for ten days, and then came again to hear their resolution; and this he did, in some cases, three times: but, if nothing was done towards an accommodation in about thirty days, he declared that the Romans would endeavour to assert their right by their arms. After this, the herald was obliged to return, and to make a true report of his embassy before the senate, assuring them of the legality of the war, which they were now consulting to undertake; and was then again dispatched to perform the last part of the ceremony, which was to throw a spear into, or towards the enemy's country, in token of defiance, and as a summons to war, pronouncing at the same time a set form of words to the like purpose. Kennett's Roman Antiquities, book iv. p. 229.

MANIGLIONS, the two handles on the back of a piece of ordnance. See **CANNON**.

MANIPLE. See **MANIPULUS**.

MANIPULARIS, (*manipulaire*, Fr.) from **MANIPLE**, a handful or bottle of straw. The chief officer in a part of the Roman infantry called Manipulus, was so called.

MANIPULE, *Fr.* See **MANIPULUS**.

MANIPULE pyrotechnique, *Fr.* a certain quantity of iron or brass petards, which may be thrown by the hand upon an enemy. These petards, and the method of making them, are particularly described by Casimi in his work on artillery. See **PETARDS**.

MANIPULUS, (*manipule*, Fr.) a small body of infantry, originally so called among the Romans during the reign of Romulus.

MANIVELLE, *Fr.* a handle; as the handle of a pump.

MANIVELLES à tiers points, *Fr.* pump handles which set three suckers in motion at the same time; as is the case with the pumps on the Pont-Notre-Dame, at Paris.

MANŒUVRE, (*manœuvre*, Fr.) Manœuvres of war consist chiefly in habituating the soldier to a variety of evolutions, to accustom him to different movements, and to render his mind familiar with the nature of every principle of offensive or defensive operation. The regular manœuvres which are ordered to be practised throughout the British

army, at review, are nineteen: they are detailed in the Rules and Regulations for the Formations, Field Exercise, and Movements of his Majesty's Forces, with appropriate references to the several sections of that work, which elucidate the mode of performing them.

The word manœuvre is frequently used in the French artillery to express the method with which a piece of ordnance or mortar is raised and placed upon its carriage by several hands, assisted by the crab or any other machine. In a general acceptation of the term, *manœuvre* means that mechanical process by which any weight is lifted.

To **MANŒUVRE** is to manage any body or armed force in such a manner as to derive sudden and unexpected advantages before the enemy, from a superior talent in military movements. It consists in distributing equal motion to every part of a body of troops, to enable the whole to form, or change their position, in the most expeditious and appropriate method, to answer the purposes required of a battalion, brigade or line of cavalry, infantry, or artillery. It has always been lamented, that men have been brought on service without being acquainted with the uses of the different manœuvres they have been practising; for, having no ideas of any thing but the uniformity of the parade, they instantly fall into disorder and confusion when they lose the step, or see a deviation from the straight lines they have been accustomed to at exercise. It is a pity to see so much attention confined to show, and so little given to instruct the troops in what may be of use to them on real service.

No manœuvre should be executed in the presence of an enemy, unless protected by some division of the troops.

MANŒUVRE, *Fr.* a labourer; an able seaman.

Grande MANŒUVRE de guerre, *Fr.* this expression is peculiarly French, and may be said to signify the dispositions of war upon a large scale. According to Marshal Saxe these dispositions consist chiefly in drawing troops up in such a manner, that the cavalry and infantry may support each other; but he objects to that arrangement by which companies or platoons of infantry are intermixed with squadrons of horse; for, as he justly observes, if the latter should be beaten, the foot soldiers must unavoidably

be thrown into confusion by the enemy's cavalry, and be cut to pieces. For further particulars on this important article, see Saxe's *Réveries*, where he treats of *La Grande Manœuvre de Guerre*, and the Supplement to them by Baron d'Espagnac, page 69.

Warlike MANŒUVRES, (*manœuvres de guerre*, Fr.) warlike manœuvres, or the different exercises, &c. by which men are taught the military profession: these exercises, from the earliest periods of history, have been infinitely diversified. Vegetius, an ancient writer, remarks, that the Romans, in order to enure their raw troops to the fatigues of war, had specific regulations drawn up, by which every recruit was regularly practised in martial exercises. These regulations were originally formed during the existence of their republic, and were afterwards confirmed by the emperors Augustus and Adrian.

MANŒUVRER, Fr. to manœuvre. This verb, in the French language, may be applied two ways; as, *manœuvrer les voiles*, to manage the sails and tackle of a vessel; *manœuvrer des troupes*, to make soldiers go through their different manœuvres. *Ces troupes ont bien manœuvré*, those soldiers have ably manœuvred.

MANŒUVRIER, Fr. any officer who is perfectly acquainted with the art of manœuvring.

MANŒUVRIER is also applied to a troop or company, and even to a whole army, whose evolutions are done with correctness.

MANQUEMENT de parole, Fr. the breach of one's word.

MANQUER, Fr. to miss; to be deficient in any thing; as *manquer à sa parole*, to break one's parole.

Une arme à feu MANQUE, Fr. a musket misses fire, or mis-serves.

MANQUER de munitions, Fr. to be in want of stores and ammunition.

MANQUER de foi, Fr. to be guilty of a breach of faith.

MANSARDE, Fr. the roof of a house, the top of which is almost flat and the sides nearly perpendicular; so called from *Mansard* the architect who invented them.

MANTEAU, Fr. This word, which literally signifies a cloak, is frequently used among the French to express the covering that hussars or light infantry troops carry for the double purpose of

shielding their bodies from the inclemencies of the weather in out-posts, &c. and for spreading over their heads, by means of poles, when they occasionally halt, and take a position.

MANTEAU d'armes, Fr. a piece of ticking made in the form of a cone, with which a stand of arms is secured against the rain. This case is sometimes made with straw, or the branches of trees.

MANTEAU d'honneur, Fr. In the days of chivalry the *mantel d'honneur*, or robe of honour, was the greatest ornament that could be worn by a knight, when he was not armed. It was of a bright scarlet dye, very long, and lined with ermine. When any gentleman was knighted he received this robe of honour from the king himself.

MANTEAU de cheminée, Fr. mantle tree; chimney-piece.

MANTEAU de fer, Fr. an iron tie, commonly called a tassel, which binds the arch and pier of a chimney together.

Garder les MANTEAUX, Fr. a figurative expression used among the French to signify a bye-stander.—It is more immediately applicable to seconds in a duel. Among boxers the bottle holders may be said to do so.

MANTELETS, in a military sense, are either single or double, composed of great planks of wood, about 5 feet high, and 3 inches thick. The single ones are sometimes covered with tin, made musket-proof, which the pioneers generally roll before them fixed upon wheels, to cover them from the enemy's fire in opening the trenches, or carrying on the sap, &c. The double ones form an angle, and stand square, making two fronts, which cover both the front and flank of the sappers, &c. when at work: these have double planks, with earth rammed in between them: they are 5 feet high and 3 in breadth, and are sometimes covered with plates of iron. They may, with propriety, be called a moving parapet, having a shaft to guide them by.

MANTONET, Fr. a small piece of wood or iron, which is notched, for the purpose of hanging any thing upon it. The pegs in soldiers' rooms are sometimes so called.

MANUAL, in a general acceptance of the word, means any thing done by the hand.

MANUAL exercise, a regulated method which officers and soldiers are taught,

for the purpose of rendering them familiar with the musket, and of adapting their persons to military movements under arms.

MANUBALISTE, *Fr.* from the Latin *manubalista*, a cross bow.

MANUBIAL, belonging to spoil; taken in war.

MANUFACTURES *d'armes*, *Fr.* places appropriated for the manufacturing of arms.

MANUTENTION, *Fr.* the act of keeping back, or holding in hand, by connivance or otherwise.

MAP, in a military and geographical sense, is a plane figure, representing the surface of the earth, or a part thereof, according to the laws of perspective; distinguishing the situation of cities, mountains, rivers, roads, &c. The French use the word *carte* for any particular map; and *mappemonde* for a general one.

MARAIS, *Fr.* a marsh. This species of soil affords great defence and security to any strong fort, which is surrounded by it.

To MARAUD, to plunder. This word is, by respectable authority, suggested to have been derived from a proper name. We read, in Gustavus Adolphus, that one Merodé, a bold and enterprising Spanish partizan of some distinction, was in the habit of making depredations and incursions at the head of a party, which disregarded the common laws and regulations of war. He afterwards fell a victim to his own rashness. In confirmation of this opinion, Harte, in his History of the Life of Gustavus Adolphus, makes the following observations: vide page 70, vol. ii.

“According to strict orthography, we ought to write *merodeurs*, and not *marauders*. The truth is, these partizans took their name from a Count de MERODÉ, a brutal and licentious officer in these wars, who was killed in a drunken quarrel by *John de Wert*. From this man's practice, a plunderer and a ravisier was surnamed *merodista*, by the Spanish and Italian soldiers, who served then under the emperor: whence came the French word *MARAUDER*, which the Maréchal de Luxembourg always spelt *MARODEUR*. *Réflexions Militaires et Politiques de Santa Cruz*. tom. iii.

This word is, however, to be found in

Gombauld, a French writer of high fashion in his time; who was near 30 years old before *Gustavus* was born; whose chief patrons, (except Madame de Rambouillet,) Henry the Fourth, and Marie de' Medici, died before *Gustavus* was king; and who was near sixty before *Gustavus* went to war!

The word in Gombauld (as it is also in Molière) is *maraud* (now more usually *maraudeur*) to express the perpetrator of the act; the man who goes à *la maraude*, viz.

*Voyant la splendeur, non commune,
Dont ce MARAUD est revêtu,
Qui ne diroit que la Fortune
Veut faire enrager la Vertu!*

Hearing what wealth, wealth hardly heard!

This vile *Marauder* dares to steal,
One almost thinks Chance thus has err'd,
That Virtue's temper she might feel!

On the other hand, it is asserted by a correspondent, that the word has been long since traced to *Maroud*, which in *Hebrew* also expresses a man guilty of fraud and rapine. Thence it has passed, with deflections, not very violent in language, through the *Greek* and *Latin*.

The word is not in *Johnson*, though it might have indulged him in his fine manner, as a moralist, and as an anti-gallican too, on the horrible enormity of a *marauder*; for which we have no word but what we must borrow from the *Frenchman*, or the *Jew*!

MARAUDE, *Fr.* the act of marauding. This word specifically means the theft or depredation which a soldier commits against the peasantry of the country, and for which offence he is punished with death in all foreign services.

MARAUDING. This crime is provided against by Sect. xiv. Article xviii. of the Articles of War.

MARC, *Fr.* a weight equal to eight ounces. In France, it is usual for silver-smiths and jewellers, to take a marc at that standard; but when articles of greater bulk and grosser quality than those they deal in, are brought to the scale, the marc contains 16 ounces to the pound. All stores and ammunition were appreciated by this measure.

A **MARCH** (*une marche*, *Fr.*) is the moving of a body of men from one

place to another. Care must be taken in marching troops, that they are not liable to be flanked or intercepted; for of all operations none is more difficult, because they must not only be directed to the objects they have in view, but according to the movements the enemy may have made.

MARCH! (*marche*, Fr.) as a word of command, whenever it is given singly, invariably denotes that *ordinary* time is to be taken; when the *quick* march is meant, that word will precede the other. The word *march*, marks the beginning of movements from the *halt*; but it is not given when the body is in previous motion. It should be sharp, clear and distinct.

In marching, every soldier must be well balanced on his limbs: his arms and hands, without stiffness, must be kept steady by his sides, and not suffered to vibrate. He must not be allowed to stoop forward, still less to lean back. His body must be kept square to the front, and thrown rather more forward in marching than when halted, that it may accompany the movement of the leg and thigh: the ham must be stretched, but without stiffening the knee: the toe a little pointed, and kept near the ground, so that the shoe-soles may not be visible to a person in front; the head to be kept well up, straight to the front, and the eyes not suffered to be cast down: the foot, without being drawn back, must be placed flat on the ground.

Quick-MARCH, a movement by which troops advance at the rate of 108 steps in the minute, each of 30 inches, making 270 feet in a minute.

Quick-MARCH, as a word of command, signifies, that the troops should move in quick time.

Slow-MARCH, a movement by which troops advance at the rate of 75 steps in the minute.

In order to teach a recruit the just length of pace, accurate distances must be marked out on the ground, along which he should be practised.

Wheeling-MARCH, or *quickest time*, is 120 steps of 30 inches each, or 300 feet in the minute.

This is the most rapid movement by which men under arms, or otherwise when formed, go from line into column, or come from column into line. The regulation prescribes 120 steps of 30 inches each, or 300 feet in the minute.

This is applied chiefly to the purpose of wheeling, and is the rate at which all bodies accomplish their *wheels*, the outward file stepping 33 inches, whether the wheel be from line into column, during the march in column, or from column into line. In this time also should divisions double and move up, when passing obstacles in line; or when in the column of march, the front of divisions is increased or diminished. A quicker pace, called *Double Quick Time*, has lately been introduced; which, we presume, is the *Pas de charge* among the French.

A MARCH, (*la marche*, Fr.) a certain tune or concord of notes, which is adapted to the movement of any particular body of troops, as the *grenadiers* march, the march of the *Marseillois*, *la marche des Janissaires*, the march of the *Jauizaries*.

MARCHING to the front or rear. As this is confessedly one of the most difficult operations in military movements, we shall extract from the Rules and Regulations, as published by authority, the first principles by which men are taught to march together.

“The person instructing a platoon will, before he puts it in motion to front or rear, indicate which flank is to direct, by giving the word *Eyes Right!* or *Eyes Left!* and then *March*. Should the right be the directing flank, the commander of the platoon himself will fix on objects to march upon, in a line truly perpendicular to the front of the platoon; and when the left flank is ordered to direct, he and his covering sergeant will shift to the left of the front rank, and take such objects to march upon.

“The conductor of the platoon, before the word *march* is given, will endeavour to remark some distant object on the ground, in his own front, and perpendicular to the directing flank, he will then observe some nearer and intermediate point in the same line, such as a stone, tuft, &c. these he will move upon with accuracy, and as he approaches the nearest of these points, he must, from time to time, chuse fresh ones, in the original direction, which he will by these means preserve, never having fewer than two such points to move upon. If no object in the true line can be ascertained, his own squareness of person must determine the direction of the march.

“The same observations hold good in all movements to front or rear, or from either flank; and the only way to execute them with accuracy, is for the leader to look out for small intermediate points of march.”

MARCH of a battalion in file, is to advance from the right, left, or center of any given number of men, for the purposes of countermarching, or of closing, or opening an interval in line.

Points of MARCH, are two objects which ought always to be prepared for the direction of any considerable body, every leader of which who moves directly forward in front, must take care to conduct it in a line perpendicular to that front. But should a leader either in file or front, have only one marked point of march ascertained to him, he will himself instantly look out for his small intermediate points.

MARCH in line, (*marche en bataille*, Fr.) According to the last printed Regulations, the *march in line* must be uniformly steady, without floating, opening, or closing.

MARCH in file, (*marche par files*, Fr.) must be close, firm, and without lengthening out.

To MARCH past, (*marcher en revue*, Fr.) is to advance in open or close column, in ordinary or quick time, with a firm and steady step, erect person, the eye glanced towards the reviewing general.

The ordered or cadenced MARCH—(*marche cadencée*, Fr.) the prescribed movement in military tactics. It is observed in the Regulations printed by authority, (see page 78,) that all military movements are intended to be made with the greatest quickness consistent with order, regularity, and without hurry or fatigue to the troops. The uniformity of position, and the cadence and length of step, produce that equality and freedom of march, on which every thing depends, and to which the soldier must be carefully trained, nor suffered to join the battalion, until he be thoroughly perfected in this most essential duty. Many different times of march must not be required of the soldier.—These three must suffice:

Ordinary time, 75 steps in the minute—*Quick time*, 108 in the minute—*Wheeling or quickest time*, 120 in the minute.

In order to accustom soldiers to ac-

curate movements, plummet, which vibrate the required times of march in a minute, have been recommended: musket-balls suspended by a string which is not subject to stretch, and on which are marked the different required lengths, will answer the above purpose. The length of the plummet is to be measured from the point of suspension, to the center of the ball.

The several lengths are :—

	<i>steps in.hun.</i>		
Ordinary time in a minute	75	24	96
Quick time - - - - -	108	12	3
Quickest or wheeling time	120	9	80

Double quick time, an increased pace, (beyond the wheeling one) with which soldiers advance in charging order, &c.

MARCHING by files, is to march with the narrowest front, except that of rank entire or Indian file, which bodies of men are susceptible of.

The strictest observance of all the rules for marching is particularly necessary in marching by files, which is first to be taught at the ordinary time, or 75 steps in the minute, and afterwards in quick time or 108 steps in the minute.

In file-marching, particularly at the drill, the whole of a company or squad, having been previously faced, are immediately to step off together, gaining at the very first step 30 inches.

The first adoption of file-marching has been attributed to the Prussians, and the advocates for what is called the *ordre mince des Prussiens*, the *thin* or *narrow* order, have in contradistinction named the *ordre profond*, the deep order, or column, the French order. According to a very ingenious and lively writer, who has had frequent occasions to see the practice of both orders, the *ordre mince*, or file-marching, may be very useful during a march, but the deep order or column ought only to be depended upon in manœuvring before an enemy.

To MARCH according to time and measure, (*marcher en cadence*, Fr.) Marshal Saxe, in page 23, art. 6, of the folio edition of his *Réveries*, or *Mémoires sur l'Art de la Guerre*, is of opinion, that marching to time and measure constitutes one of the essential requisites in war; he calls it indeed the principal one to be observed by troops who are going into action. By marching according to time and measure, we understand that regular movement of a large body of

men whose steps are cadenced and uniformly the same, and which are kept so by the artificial aid of music.

The Marshal observes, that although military men will enter into much desultory conversation respecting the tactic (*la tactique*) of the ancients, they seldom or ever understand the real definition of the word. It is, in fact, so much corrupted in modern times, that what really conveyed no more than a regular principle in marching, has since been made to signify the exercise and evolutions of troops. All the world know how to beat a march, without comprehending the real object, and half the world imagine, that the noise of a drum or fife is nothing more than military parade.

It is ridiculous to suppose, that martial sounds and military music were first invented for the sole purpose of confounding each other on the day of battle. Let us indulge a better opinion of the good understanding of the ancients, particularly of the Romans, and endeavour to prove, that regularity in marching (which depends wholly upon the cadenced step) is the ground work of military operations, and that nothing is more simple, because it corresponds with nature. This was, in fact, the military step which the Romans brought to so great a perfection, and which has since been so closely followed by the Prussians. It was upon this principle that marches were first devised, and that the drum was adopted to second the purpose. This is literally nothing more than a certain beat or *tact*, as the Marshal expresses it, and which is evidently derived from the Roman word *tactum*, touch, and by means of which men may be taught to move in quick or slow time. As long as this principle can be followed up, the rear will never lag behind, soldiers will preserve the same step, and march with the same foot; the wheelings will be made uniformly together, without confusion, or delay; and the men will be less fatigued than if they were suffered to march or wheel at random. Every person of the least reflexion or observation, will be convinced of the truth of this last remark. Let one man, for instance, be ordered to dance two hours, without the assistance of any sort of musical instrument, and let another, with the same bodily powers and activity, go through the same operation, during

double the time, accompanied by music, and let it then be determined which of the two has been most fatigued. It will evidently appear, that the former has: for it is an unquestionable fact, that sounds of concord and harmony have a wonderful secret influence over the human frame, and that they render the exercises and functions of the body extremely easy. It is well known, that when the camel drivers wish to make their camels go on, they never flog or strike them with sticks, but sing, whistle, or repeat some humorous song.

Should it be asked, what sort of music is best adapted to the human organs in military movements, it may safely be replied, all those simple tunes which can be played by the fife and drum. I shall perhaps be told, (observes the Marshal) that many men have no ear for music; this I deny, as far as the observation regards marching, which is a movement so easy to the human frame, that it comes, as it were, naturally to man. I have often remarked, that when the long roll has beat, the men in repairing to their several parades, have insensibly preserved the regular step, without knowing that they did so: nature, in fact, and instinct go together. If marching according to time and measure be considered in a mere superficial manner, the cadence step will undoubtedly appear of little importance; but if it be considered as an essential requisite to quicken, or slacken, the movement of troops who are going into action, it must be found an important object. No evolution, in fact, can be well done at close order without its assistance. The military step of the Romans was the cadenced or measured movement, and they were thereby enabled to march with ease upwards of 24 miles in 5 hours. This, however, would be looked upon as great exertion, if not fatigue, among modern troops, although it constituted a principal part of the Roman exercise. Hence some opinion may be formed of the attention which they paid to that species of training, by which men were habituated to long marches; and this they accomplished by means of the *tact*, or cadenced movement.

In order to prove the validity of our observations, let us, for a moment, imagine a thing that is scarcely possible to be accomplished by troops that do not march according to time and measure.

Let us, suppose, that two battalions, advancing to attack one another, should march up without floating, overlapping or breaking in the least; under these circumstances, which would obtain the superiority? the one that should imprudently have commenced firing, or that which should have reserved its fire? Every intelligent and able officer will instantly determine in favour of the latter; and his decision would unquestionably be correct; for the former, besides being disheartened by seeing men advance against them with a reserved fire, would necessarily be retarded in their march in order to prime and load; and it must be evident to every man, that their antagonists would completely overthrow them by advancing with a rapid and cadenced step.

This was the plain and effectual method of the Romans. It may, perhaps, be said, that their ignorance of the use of gunpowder alters the case with respect to our manner of fighting. Let it, however, be recollected, that they fought with missile weapons, which did full as much mischief as our fire-arms can produce. Gunpowder, in fact, is not so destructive as most people are apt to imagine. Few men are killed in regular fought actions, by the two armies engaging with musketry only. Marshal Saxe does not scruple to assert, that it is impossible for a battalion of armed men to charge its enemy with vigour and effect, unless it preserve the cadenced step. For the ranks must unavoidably open during the march in line; and when the troops get within 50 or 60 paces of their opponents, the commanding officers see chasms, cry out *Serre!* or close in to the center; and in the hurry of so doing, one rank overlaps another, and the center itself becomes insensibly broken, standing eight and ten deep, while the wings are two, three, or four. To remedy this defect, the whole line is halted, and if the enemy be wise enough to advance in regular order during this operation, it is ten to one that he turns the flank of his opponent, and completely routs him. This was the case at the battle of Marengo, when the Austrian general most imprudently extended his wings, and left an opening in the center, through which the French general Desaix charged with his cavalry. With regard to the musketry-firing, it may be laid down as a certain fact, that the mis-

chief it does in pitched battles is more imaginary than real. It has been acknowledged by the most experienced officers; it is, indeed, positively asserted by Marshal Saxe, (page 29 of the folio edition) that the closest volleys have produced little or no effect against a line of determined steady troops. I have seen, observes the Marshal, a whole volley of cool directed musketry, occasion the loss of no more than four men; while the troops against which it has been poured, have calmly marched up, reserved their fire till they got in contact with the enemy, and then amply revenged the deaths of their comrades by discharging their pieces, and following up with the bayonet. It is at this stage of the battle, that a real carnage commences, and its execution rests wholly with the victorious party; and we need scarcely add, that its success must be attributed to that composed, steady movement, or cadenced step, which enabled the troops to act together, when they came to close action. —The military reader will be gratified by a perusal of two or three interesting anecdotes in pages 29, 30, 31, of the *Rêveries*, fol. edit.

Night-MARCHES. Whenever marches are undertaken in the night, great precaution should be observed on the part of the commanding officer of the troops, to attach two or three faithful and intelligent guides to each column or detachment; for it will very easily happen, that in moving a considerable detachment during the night, some troops or squadrons may lose themselves, especially where there are cross roads, and difficult passes.

The commanding officer at the head of the detachment must march slowly, provided the nature of his expedition will admit of it: and wherever he finds any bye-roads on the march, he must post a few men there, to direct the succeeding squadron; which squadron is to repeat the same caution, and so on throughout the whole.

As it is almost impossible for squadrons to keep constantly close together; and as it almost always happens, that, in order to conceal a march from the enemy, no trumpet must be sounded, (which would otherwise serve for a direction in the night time) a good non-commissioned officer, with four or six men, must be appointed to the rear of every squadron, who are to divide them-

selves, and form a chain in the interval, between it and the one succeeding, in order to prevent any mistake of the road.

Before the detachment marches off, the officer commanding must be careful to exhort the officers leading troops or squadrons, strictly to observe all the above directions: he must also have several orderly men to attend him; and, if possible, two or three guides in front.

The advanced guard must be reinforced in the night time, and march at a small distance from the main body, and whenever it shall happen unexpectedly to meet the enemy, it must instantly charge with all possible vigour; on which account, and in order to be in continual readiness, it must always march with advanced arms. Page 39, *Military Guide*.

Secret MARCHES are made with a design to reconnoitre an enemy, surprise his camp, secure a post, or seize a place. They are likewise undertaken to succour troops that may be precariously situated, to relieve a besieged town, &c. It is in this service that a commander has occasion for his utmost sagacity and penetration, to prevent his being discovered, or betrayed. In order to ensure success, the person who conducts the march, should have previously obtained good information relative to the different roads through which he is to pass, the disposition of the inhabitants, &c. He should also obtain correct intelligence respecting the situation of the enemy's outposts, &c.—*Military Guide*.

To MARCH for the direct purpose of fighting an enemy. In order to effect this important operation with confidence and safety, every army that marches from a distant point towards the ground which is occupied by an enemy, endeavours, as much as possible, to preserve its regular front, and to advance in order of battle. Whenever obstacles occur and the ground becomes so confined, that the march in line cannot be preserved, the different squadrons and battalions must approach the enemy in such a disposition of columns as to be able to form line in the quickest manner, and before the enemy could possibly attempt to make an impression on the advancing columns, by charging with his cavalry.

The general officers who command

the several columns, in leading them forward, must attentively observe each other's movements, so that their heads, at least, be upon a line; and that when they reach the ground where the whole are to deploy, this manœuvre may be accomplished with dispatch and safety, and the order of battle be fully made, out of the reach of the enemy's horse.

The general, or commander in chief, with his aides-de-camp, &c. takes his ground in such a manner as to be able to see the effect of the first fire. From being thus conveniently situated, he will know what orders to send, whether to support that part of the line which has gained ground, or to replace any particular one that may have given way. In order to accomplish this double purpose, he either makes use of the troops which have been drawn up between the two lines, as circumstances may require, or detaches from the reserve, as he judges best for the service.

The instant the line is formed, and the enemy appears in sight, every general officer must be found at the head of his division, actively employed either in leading on the troops entrusted to his skill and valour, or in speedily remedying every symptom of disorder which may occur throughout the whole extent of his command.

The disposition of an army (to quote the words of Mons. de Fenquères) which comes to close action, differs essentially from that it assumes in a march, or previous movement. Were troops, indeed, to advance over a wide space of open and unembarrassed ground, the formation of them might be the same. But this is seldom or ever the case. The intervention of hills, woods, rivers, villages, and narrow passes or defiles, gives rise to so many obstacles, that a large body of men, such as constitutes an army, must necessarily be divided into many different corps, in order that the collective force may arrive, at a given time, within the lines of a new camp, or within sight of an enemy.

On these occasions, the movements of an army are attended with considerable risk, especially if the enemy has himself taken the field; for by ably manœuvring he may take advantage of the divided state of your army, and attack it piecemeal. The greatest precautions, however, are observed in modern warfare, which were either unknown to, or neg-

lected, by our ancestors. Most of these have already been discussed, as far as the limits of our undertaking would admit. The following additional observations may not, perhaps, be thought wholly superfluous.

In the first instance, it will be necessary for the quarter-master general, and for the different officers who compose the staff, or état-major, of the army, to render themselves perfectly masters of the country through which the troops are to march. The corps of guides, especially if the march should be continued during the night, must be well chosen on these occasions; and the different captains that have the charge of them, are frequently to communicate with the principal officers on the staff, to facilitate the several movements. All the general officers must be in possession of correct topographical sketches of the country; and their aides-de-camp, &c. must not only know how to deliver orders, but they must themselves be able to calculate (from a cursory view of the chart) time and distance. The science of locality has, indeed, become so manifestly useful in all military operations, that the French have formed regular companies of topographers, who accompany their armies; and it reflects credit upon the new institution, at High-Wycombe, to see so much attention paid to this branch of necessary knowledge.

Artificers and workmen, with appropriate escorts, precede the several columns, in order to clear the roads, and to remove obstacles that occur. Light troops and large detachments of cavalry, are pushed forward for the purpose of keeping the enemy in awe, and to send the earliest intelligence respecting his movements. Bridges are thrown across rivers with astonishing activity and dispatch; every thing in a word, which relates to the movement of the army, is so well digested before-hand, and subsequently so well executed, that all the different corps co-operate, and readily succour each other, should the enemy attack. The natural formation of the battalion is preserved, whether the grenadiers are disposed in front, or the light companies lead; and the several piquets come regularly up with the rear during the march, and are as readily stationed in the front when their corps halt.

When a forced march is undertaken

for the specific purpose of rendering some design of an enemy abortive, it is the duty of the commissariat to have provisions ready at hand, during the transient halts which are made in this harassing and fatiguing enterprize.

It is usual for great armies to march in three columns, in conformity to the order of battle, which has been laid down by the general, or commander in chief, at the beginning of the campaign. Those battalions and squadrons which compose the right, take their line of march through that direction of the country: those which compose the left, preserve their relative time and distance in that quarter. The artillery and heavy baggage are generally disposed of in the center column.

When an army marches directly forward to attack, or meet, an enemy, the artillery is almost always distributed in the center: sometimes a brigade of that corps, with a body of select troops in front, precedes each column; but the heavy baggage invariably moves in the rear, under cover of the reserve.

When an army marches through a woody or close country, the heads of the different columns are usually covered by a strong detachment of grenadiers, preceded by squadrons of horse. Should the enemy be in your rear, when it is found expedient to make a movement, the hospital stores, ammunition, baggage, and artillery, escorted by some squadrons of horse, must be sent forward, and the best disciplined troops, with a certain quantity of artillery, are in that case to make up the rear-guard. If the enemy should hang upon your flank, (the right for instance,) the artillery, stores, and baggage, must be conducted by the left; should the enemy direct his operations from the left, the same movements must take place on the right.

A small army may march in one column, having its artillery and baggage between the advanced and rear-guards. Should it be brought to action, the dragoons and light cavalry belonging to the advanced guard will compose one wing, and the troops that are disposed of in the rear, will form the other: the infantry will be distributed in the center with the artillery in its front.

The French seem to have paid the greatest attention to the various details and incidental circumstances which at-

tend the march of any considerable body of troops. It was not, however, until the reign of Louis XIII: that any sort of regular system began to prevail.— There was certainly less necessity for such an arrangement, because the baggage was by no means so great, nor was the train of artillery half so extensive.— The only dangers, indeed, which were to be guarded against, when the enemy was near, seemed confined to the loss of baggage and artillery. These were, of course, provided against by every able general, who naturally observed the greatest secrecy with respect to his encampment, and practised various stratagems to conceal his *march* from the enemy.

Some very sensible observations, relative to the manner in which troops should be managed, previous to an engagement, may be found in the *Réveries de M. Maréchal de Saxe*; and considerable information may be derived from *Les Réflexions de M. le Baron d'Espagnac*, on the best method of forming the infantry for battle. See *Supplément aux Réveries*, page 19. See likewise *Œuvres Militaires*, tom. i. p. 124.

General Observations on the March of Troops.—As the Regulations on this head, as far as they relate to the British home service, must be known to every officer, we shall extract some desultory observations from a French work, that may be applicable to general service. When troops are ordered to march, four principal objects should be well considered, viz. *locality, time, possible ambushes*, and the *ultimate end* for which the march is undertaken. In order to secure these important points, some topographers (without whom no army can be said to be well constituted, or its staff ably appointed) should be directed to give in plans of the country, to shew where it is intersected, where hills with their different incurvations appear, where the roads are narrow, where the ground is soft or marshy, and unfavourable to the passage of artillery, where intricate passes occur, where there are woods, hedges, rivers, or marshes, and finally, where the country becomes totally impervious.

When these different objects have been well ascertained, and thoroughly digested at head quarters, the component parts of the army must be so

distributed with respect to the battalions of infantry, squadrons of horse, artillery, and baggage, that the front of the leading column shall invariably correspond with the extent of the road, or defile, which is to be marched over.

When troops are ordered to march through an inclosed country, the whole army is divided into a given number of columns, which successively follow each other, and are encamped, cantoned, or quartered separately. Sometimes the country is cleared, as much as circumstances will admit, in order that the several columns may advance, while the artillery, under an escort of infantry on each side, and with cavalry distributed, upon both wings of the army, makes the best of its way through the main road. Small detachments, consisting of active, spirited young men, headed by intelligent and enterprising officers, are sent forward to take possession of the different defiles, woods, passes, and to post themselves close to an enemy's post, for the purpose of blocking it up until the whole of the army has marched by.

The leading columns should always be composed of tried and steady soldiers; and the front of each should invariably consist of the best men in the army.

The advanced and rear guards must be well supported by infantry, with the addition of some light field pieces. The order of battle is so arranged, that the heavy ordnance, the baggage, and the greatest part of the cavalry, which can be of little use on the wings, may be distributed in the center.

When it is necessary to cross a river, the artillery must be planted directly opposite to the post which the army intends to occupy. Considerable advantage will accrue should the river wind in such a manner as to form a reentrant angle in that particular spot, which advantage would be greatly increased by having a ford near.

In proportion as the construction of the bridge advances, some steady troops must be marched forward, and a regular discharge of musketry must be kept up against the enemy on the opposite bank.

The instant the bridge is finished, a corps of infantry, with some cavalry, some pieces of artillery, and a certain number of pioneers, to fortify the head of the bridge, must be ordered over.— Should there be the least ground to

suspect an attack upon the rear guard, the inside tête de pont must also be fortified.

Proper precautions will have been taken to prevent any surprize during the construction of the bridge, and while the troops are crossing. Each side of the river, above and below the bridge, will on this account have been well reconnoitred, to ascertain that there are not any armed barges or floating rafts, with infernals upon them, kept ready to blow up the bridge, when a considerable part of the army shall have passed the river. If the preservation of the bridge be considered as an object, both ends must be fortified, and adequate guards stationed to defend them.

Each corps that marches separately, such as the advanced and rear guards, and the main body, must be provided with shovels, pick-axes, and a sufficient number of pioneers and guides, to clear the roads, and to direct it on its march. For additional observations on the passage of rivers, &c. see NATATION.

The following general rules in route marching have been laid down by the celebrated Montecuculli:—

No officer or soldier is on any account to quit his post or rank. The battalion companies must never intermix with the squadrons, or troops, of cavalry. Squadrons, or troops, of cavalry must always take care not to leave such wide intervals between them, as will expose them to be suddenly cut off, or such contracted ones as might enable the enemy to throw them into confusion.

In summer, troops should quit their ground, or quarters, at day-break.

In winter, great care should be taken by the commissariat, to see that the troops are well supplied with fuel whenever they halt. During very inclement weather, the march of troops should be greatly contracted.

Some steady old soldiers must be stationed at the different cross roads, to prevent the rear men from mistaking the line of march.

The leading columns, or those troops that precede them, must instantly fall upon any body of the enemy that may attempt to oppose their progress.

Three things are always to be considered, and well weighed, viz. whether there be much ground to apprehend a serious attack from the enemy; whether

there be little ground to fear him; or whether there be no ground at all?

In the latter case each corps of cavalry and infantry marches separately, and with its own baggage.

All convoys, containing stores and ammunition, move with the artillery, accompanied by an officer from the adjutant, or quarter-master-general's department, who has the direction of the march, as far as regards the convoy itself; but cannot interfere with the artillery: the commanding officer of the latter being presumed to know best, when and where his park should halt, &c. A very sensible observation on this head may be found in the *Manuel des Adjudans Généraux*, by Paul Thiébault. On the evening preceding a march, each corps is specifically furnished with the necessary orders in writing.

At the hour which is named in general orders for the troops to commence their march, the quarter-master-general, and the captain of guides, repair to the advanced guard.

If the army has been encamped, the lines of intrenchment are levelled, or cleared in such a manner, that the troops may move with an extended front. As soon as the troops have marched off, the different guards belonging to the camp will be withdrawn.

Pioneers must be sent forward to clear the roads, preceded by small detachments of light and select troops, together with estafettes, or mounted messengers, and vedettes, who are to reconnoitre in front, rear, and round the wings of the army. To these must be added appropriate guards and escorts to accompany the artillery, and to protect the baggage. It will belong to this latter description of troops, to take possession of advantageous heights, to discover ambuscades, and to send a faithful detail of all they observe to head quarters. These communications will be made by the chief of the état major who accompanies them.

The advanced guard of the army will be composed of one half of the cavalry, the main body will consist of the infantry, attended by pioneers and detached corps of light artillery, which will be preceded by an iron instrument made in the shape of a plough-share, for the purpose of tracing out the paths, which must be kept by the wagon train. In the rear of the main body must follow the heavy

ordnance, the baggage-wagons belonging to the several regiments, and the train of artillery. The other half of the cavalry will be disposed of in the rear-guard, in which the army stores and ammunition are to be escorted by a regiment of horse.

If the army should be divided, and march in different columns by indirect roads, a rendezvous, or place of arms, must be marked out in writing, where the whole may conveniently meet on the line of march. The utmost attention must be paid to the selection of this spot, by the adjutant and quarter-master-general, lest it should be exposed to a surprise from the enemy; on which account, it is kept as secret as possible, lest any intelligence should be given to him by deserters, or spies. The hour and the manner in which the several columns are to arrive, are specifically stated to the different leaders; and scouts, &c. are sent round the country to discover the enemy's movements.

If there should be any reason to apprehend an attack, the various precautions must be increased in proportion to the alarm.

An army must always march, if it possibly can, in that order from which it may easily and expeditiously deploy into line; that is, it should invariably preserve the order of battle; every column bearing a natural front towards the enemy. Montecuculli further adds, that an army must invariably march the right or left in front, and not from its centre.

Field pieces, with a sufficient quantity of ammunition, shovels, spades, and pick-axes always at hand, must be disposed along the most vulnerable part of the rendezvous; these must be guarded by a body of cavalry and infantry, who are to be selected for that specific duty.

Care is likewise taken to lodge the baggage-wagons, &c. in the most secure, and best defended spot.

The first two lines of the army will consist of the mounted artillery in front, next to which will stand the different squadrons of horse that are posted in intervals between the infantry battalions: after these will follow the train of caissons, &c. in as many files as the road will admit; then the stores and baggage, and finally the reserve.

Whenever the leading columns have passed an obstacle, the front men must be halted till the rear have completely

cleared it likewise; and when the whole enters on open country, the line must be formed, and the march be continued in order of battle until a fresh obstacle occurs, when the troops must be prepared to pass the defilé, the advanced guard leading, the main body following next, and the reserve bringing up the rear.

When an army is thus advancing, the right or left flank (according to circumstances) of its line of march, must be covered by rivers, and banks, rising grounds, or eminences; and if these natural advantages do not present themselves, artificial ones must be resorted to. These may consist of wagons, chevaux de frize, or other temporary means of defence; the quantity, &c. must depend upon the nature of the country, and the number of troops that compose the columns.

It is, however, impossible to set down general rules for all cases; these must vary with the manifold circumstances that occur, and the different designs which are to be accomplished, or pursued.

When the movements of an army are to be concealed, the march must be undertaken at night, through woods, valleys, and concealed ways; all frequented and inhabited places must be carefully avoided; no loud instruments must, on any account, be played; and if fires are made, they must only be lighted on the eve of breaking up camp; in which case they must be left burning, for the purpose of deluding the enemy into a supposition, that the troops have not moved.

Small parties of cavalry are sent forward to seize all stragglers or scouts from the enemy, or to take possession of the different passes. In order to avoid being discovered in the object of the march, a different road must be taken from the one which you really propose to march through; and a fit opportunity must afterwards be embraced to get into the real track. Before you march out of a town, or fortified place, the utmost care must be observed to prevent your intended route from being conveyed to the enemy. On this account, the troops must be first marched out, and the gates immediately shut upon the rear, so that no stranger, &c. may be able to slip out with the men.

During a march of this nature, the troops must be provided with subsistence, stores and ammunition, to last

out until the object is attained. No scout, or vedette, is sent forward, when an army, or any part of it, advances to take possession of a post or place, to succour a town, to surprize an enemy, in a close or woody country, by favour of the night, or in hazy weather, or on any occasion when orders have been given to oppose and fight every thing it meets.

When an army marches for the direct purpose of forcing a passage, which is guarded by an enemy, a feint must be made in one quarter, whilst the real object is vigorously pursued in another. Sometimes you must appear suddenly disposed to make a retrograde movement, and then again as suddenly resume your progress; sometimes march beyond the spot you wish to occupy, insensibly drawing off the enemy's attention; and whilst the whole army is thus pushing forward, and is closely watched by its opponents, (who hang upon the flanks, and hug its line of march,) let detached parties of cavalry and foot, that have lain in ambush, suddenly surprize the passage, and post themselves upon it.

When it is found expedient to advance rapidly into a country for the purpose of surprizing an enemy, getting possession of a town, or place, or avoiding superior forces, every species of baggage must be left behind; even the common necessaries of the men, if circumstances require. The cavalry must be sent forward, and the infantry put in carts, carriages, and chaises, or mounted behind the dragoons. If there be spare horses enough in the different troops, or any can be procured from the inhabitants of the country, they must be led in order to relieve those that are doubly mounted, in the manner practised by the Tartars.—Marches of this description and urgency must be kept up night and day; and it is on such occasions, that the value of a good staff, or état-major, will have all its weight.

It must be observed, as a general maxim, that whenever troops are retiring from a weak position, or to avoid the approach of a superior force, the retreat must be so managed, as not to bear the least resemblance of a flight.

A forced MARCH, (*marche accélérée*, Fr.) a movement of troops in which little or no relaxation is allowed, and every

exertion is made to reach a given point. It is also called *marche forcée*.

Rogue's MARCH, a tune which is played by the trumpeters or fifers of a regiment (as the case may be) for the purpose of drumming out any person who has behaved disorderly, &c. in a camp or garrison. Thieves, strumpets, &c. are frequently marked in this manner; being marched down the front of a battalion, from right to left, and along the rear: after which they are conducted to the gate of the garrison, or entrance of the camp, where they receive a kick in the posteriors from the youngest drummer, and are warned never to appear within the limits of either place, under pain of being severely punished.

MARCHANDS, Fr. slop-sellers, petty-sutlers. Men of this description always flock round and follow an army on its march. As they generally deal in articles which are wanted by the officers and soldiers, it is the business of every general to see them properly treated, to ensure their safety, and to permit them, under certain regulations, to have access to the camp. They should, however, be warily watched in some instances, especially upon the eve of a retreat, or before any advanced operation takes place. Spies frequently disguise themselves as pedlars, and under the mask of selling trifling articles, pry into the state of a camp, put indirect questions to the soldiers, and tamper with those who may seem disposed to act in a traitorous manner. Yet as armies cannot do without such men, they must be sanctioned; and it is the particular duty of the provost-marshal, and of the wagon-master general, to watch and superintend their motions.

MARCHE, Fr. a step.

MARCHE-palier, Fr. the stair-head; the broad-step of a stair-case.

MARCHE accélérée, ou pas accéléré, Fr. quick time.

MARCHE ordinaire, ou pas ordinaire, Fr. ordinary time.

MARCHE précipitée, ou pas précipité, Fr. quickest time.

MARCHE cadencée, ou pas cadencé, Fr. march or step according to time and measure. It is likewise called the cadence step.

MARCHE non-cadencée, ou pas non-cadencé, Fr. This step is likewise called

pas de route, and signifies that unconstrained movement which soldiers are permitted to adopt in marching over difficult ground, and in columns of route.

MARCHE de flanc, Fr. flank movement or march.

MARCHE forcée, Fr. a forced march.

Battre, sonner la MARCHÉ, Fr. to put troops into motion by the beat of drum or sound of trumpet, &c.

Gagner une MARCHÉ sur l'ennemi, Fr. to gain ground, or time, upon an enemy; which signifies to get in his front or upon his flanks, so as to harass or perplex him, or by any able manœuvre to get the start of him.

Dérober sa MARCHÉ, Fr. to steal a march.

Couvrir une MARCHÉ, Fr. to conceal a march.

MARCHÉ, Fr. this word is likewise used among the French, to express the course or progress of a ship, or as we say technically, the way she makes: hence *marche d'un vaisseau*.

MARCHER par le flanc, Fr. to march from any given flank.

MARCHER en colonne avec distance entière, Fr. to march in open column at open distance.

MARCHER en colonne à distance de section, ou en masse, Fr. to march in column, quarter distance, or in mass.

MARCHER en bataille, ou en colonne d'attaque, Fr. to advance in column, for the purpose of attacking an enemy.

MARCHER en bataille, en ordre déployé, Fr. to advance in line or in deployed order.

MARCHER en retraite, Fr. to retreat.

MARCHER en bataille par le dernier rang, Fr. to march in line, rear front.

MARCHER au pas accéléré, Fr. to march in quick time.

MARCHER le pas en arrière, Fr. to take the back-step.

MARCHER au pas ordinaire, Fr. to march in ordinary time.

MARCHER au pas précipité, Fr. to march in quickest time.

MARCHER par le flanc droit, ou gauche, Fr. to march by the right or left flank.

MARCHER en colonne, la droite, ou la gauche, en tête, Fr. to march in column, the right, or left in front.

MARCHER en colonne serrée, Fr. to march in close column.

MARCHER en colonne ouverte, Fr. to march in open column.

MARCHER en terme d'évolutions, Fr. to march in line, &c. which see.

MARCHER en colonne renversée, Fr. to march by inverted column; that is, to make the army move left in front; the left being the leading flank.

Lords MARCHIERS, noblemen who anciently inhabited and secured the marches of Wales and Scotland.

MARCHES. The limits or bounds between England, Wales, and Scotland, have been so called. Marches also signify any limits or boundaries. The French use the same word.

MARCHES, Fr. the various modes of marching which are adopted by a body of armed men in offensive, or defensive movements.

MARCHES d'armées, et ce que les soldats ont à faire quand la générale est battue, Fr. column of route, or general order of march, which an army observes when it takes the field. See *CAMP*.

MARCHING Regiments, a term given to those corps who had not any permanent quarters, but were liable to be sent not only from one end of Great Britain to another, but to the most distant of her possessions abroad. Although the word *marching* is insensibly confounded with those of *line* and *regulars*, it was originally meant to convey something more than a mere liability to be ordered upon any service; for by marching the regular troops from one town to another, the inhabitants, who from time immemorial have been jealous of a standing army, lost their antipathy to *real* soldiers, by the occasional absence of regular troops. At present, the guards, militia, and fencibles, may be considered, more or less, as marching regiments. The marines and volunteer corps have stationary quarters.

St. MARCOU, two rocks upon the coast of Normandy, lying in a bite or bay between Cape Barfleur and Point Percé, bearing south-east from La Hogue nine miles, from the mouth of the river Isigny, north, eight miles, and distant from the body of the French shore about four miles. The surface of each island, which is 18 or 20 feet above the level of the sea at high water, comprises about an acre, and bear from each other W. by N. and E. by S. distant 200 yards.

MARDIKERS or *Topasses*, a mixed breed of Dutch, Portuguese, Indians, and other nations, incorporated with the Dutch at Batavia, in the East Indies. *Mardikers*, in all probability, derive their name from some original adventurers, who left a place called *Mardike*, about four miles from Dunkirk, and formerly subject to, or forming part, of the Seventeen United Provinces. When the Dutch took possession of that territory which is named Batavia, these adventurers were, perhaps, the leading party, and from their being called *Mardikers*, the natives in those quarters insensibly attached the term to all persons of European descent, or connection. All, in fact, who wear hats are distinguished among turbaned nations by the appellation of *Topasses* and *Mardikers*, and from that circumstance are confounded in the term, with respect to Batavia.

MARÉCHAL, *Fr.* a dignity of the second class, in the order of Malta. It was formerly attached to the Tongue or Langue of *Auvergne*.

MARÉCHAL de camp, *Fr.* a military rank which existed during the French monarchy, and was revived by Bonaparte. The person invested with it was a general officer, and ranked next to a lieutenant-general. It was his duty to see the army properly disposed of in camp, or quarters; to be present at all the movements that were made; to be the first to mount his charger, and the last to quit him. He commanded the left in all attacks. The appointment, under this distinction, was first created by Henry IV. in 1598.

MARÉCHAL du camp, *Fr.* During the reign of the first kings of France, when duelling was permitted, an officer was appointed to superintend the contest.

MARÉCHAL-général des camps et armées du Roi, *Fr.* a post of high dignity and trust, which, during the French monarchy, was annexed to the rank of *Maréchal de France*. Military writers differ with respect to the privileges, &c. which belonged to this appointment; it is, however, acknowledged, that the general officer who held it, was entrusted with the whole management of a siege, being subordinate only to the constable, or to any other *Maréchal de France*, who was his senior in appointment.

MARÉCHAL-général des logis de l'armée, *Fr.* This appointment, which ex-

isted during the old French government, and has since been replaced by the *Chef de l'Etat-Major*, corresponds with that of *Quarter-Master-General* in the British service.

MARÉCHAL de bataille, *Fr.* a military rank, which once existed in France, but was suppressed before the Revolution, or rather confined to the body guards. An officer belonging to that corps received it as an honorary title. Its original functions, &c. with respect to general service, sunk in the appointments of *Maréchal de camp*, and *Major-général*. It was first created by Louis XIII.

MARÉCHAL-général des logis de la cavalerie, *Fr.* This appointment took place under Charles IX. in 1594. He had the chief direction of every thing which related to the French cavalry.

MARÉCHAL des logis dans la cavalerie, *Fr.* the quarter-master of a troop of horse was so called in the French service. In the old system every infantry regiment had one *Maréchal des logis*; two were attached to each company of the gendarmes: each troop of light horse had likewise two; and every company of musketeers had eight.

MARÉCHAL des logis de l'artillerie, *Fr.* an appointment which existed in France before the Revolution, and which was in the gift of the Grand Master of the Ordnance. This officer always accompanied the army on service, and was under the immediate orders of the commanding officer of the artillery.

MARÉCHAL des logis pour les vivres, *Fr.* a person attached to the quarter-master-general's department, to whom the purveyors belonging to an army are subordinate.

MARÉCHALAT, *Fr.* marshalship.

MARÉCHAL ferrant, *Fr.* a farrier.

La MARÉCHALE, *Fr.* a marshal's lady, i. e. wife, was so called in France. We have already mentioned *la Colonelle*, &c. This practice has, indeed, of late, obtained in England, but not in the unlimited manner which prevailed among the French. We use it merely to distinguish two ladies of the same name and family, or neighbourhood, viz. Mrs. Johnson, and Mrs. Colonel Johnson; meaning thereby that the latter is the wife, or widow, &c. of Colonel Johnson.

MARÉCHIAUSSÉES de France, *Fr.* a species of military police, which has long existed in France.

MARENCO, a plain and village in

Italy, about one league distant from Tortona. These spots have been rendered memorable in military history by the obstinate and decisive engagement which took place on the 14th of June, 1800, between the Imperialists commanded by General Field Marshal Melas, and the Republican French army under the direction and personal guidance of Bonaparte, then First consul. General Désaix was killed on this occasion.

MARÉE, Fr. tide.

Haute-MARÉE, Fr. high-water.

Basse-MARÉE, Fr. low-water.

Morte-MARÉE, Fr. neap-tide.

Contre vent et MARÉE, Fr. against wind and tide; figuratively, against all opposition.

Chasse-MARÉE, Fr. this term means literally a ripier, or man who brings fish from the sea coast to sell in the inland parts; but it has frequently been used to signify the cart or carriage itself on which he sits. According to the French construction of it, it may serve for several purposes, particularly for the speedy conveyance of small bodies of troops. It consists of a four-wheel carriage, of equal height with a common axletree, having a platform sufficiently elevated to suffer the fore-wheels to pass under it when on the lock. In the center of this platform is an upright back, with a seat on each side, resembling the seat of an Irish car; so that about six soldiers might sit on each side, back to back. On the platform, and attached to the axle-tree, nearly at each corner, are four stout stumps or knee-hinges, that allow them to turn down flat on the platform, or to be fixed upright; when they serve, by a crutch which fits into a hole as a rest for rifles, or for a piece of horse light artillery; on the crutch being taken out it fits into the hole, after the manner of a swivel on board ship.

MARGA SEERSIA, Ind. a month which partly agrees with October.

MARGELLE, Fr. the brim of a well. Belidor calls it *mardelle*, but allows the propriety of using the word *margelle*.

MARIN, Fr. a seaman; any thing appertaining to the sea. *Marin* is likewise used to distinguish a sea-faring man, (*homme de mer*) from *Marinier*, which literally means a sailor.

La MARINE, Fr. The French navy is so called.

MARINE, Fr. this word signifies generally navy; navigation; marine; sea-affairs; beach; sea-piece; *termes de marine*, sea-terms.

MARINE implies, in general, the whole navy of a kingdom or state, comprehending all the royal dock yards, and the officers, artificers, seamen, soldiers, &c. employed therein; as well as the shipping employed by the merchants, for military or commercial purposes; together with whatever relates to navigation, ship-building, sailors, and marines.

The history of the marine affairs of any one state is a very comprehensive subject; much more that of all nations. Not only the preservation of that share of commerce we at present possess, but its future advancement, and even the very being of Britain, as an independent empire, and a free people, depend no less on the good condition and wise regulation of our affairs of the marine, than on the superiority of its naval power. The Delphic oracle being consulted by the Athenians, on the formidable armament and innumerable forces of Xerxes, returned for answer, "that they must seek their safety in wooden walls." To which we may affirm, that whenever this nation, in particular, has recourse to her floating bulwarks, for her security and defence, she will find wealth, strength, and glory, to be the happy infallible consequences.

Gens de MARINE, Fr. seamen.

Carte MARINE, Fr. sea-chart.

MARINGOUIN, Fr. a muskito; a gnat which is very troublesome in hot countries.

MARINES, or MARINE FORCES, a body of soldiers raised for the sea-service, and trained to fight either in a naval engagement, or in an action on shore. Officers of the marines may sit on courts-martial with officers of the land forces. See *MUTINY ACT*, Sect. 13.

The great service which this useful corps has frequently rendered, entitles it to a fair record in every publication that treats on military matters. In the course of former wars, the marines have distinguished themselves by great perseverance, strict attention to duty, and unquestionable valour. The facings of the marines are now royal blue, with lace; they were formerly white.

MARK, a note, character, &c. set upon a thing. Hence the soldier's mark ✕ which he makes in his captain's or

pay-serjeant's book, &c. when he cannot write.

MARK also denotes money of account. The English mark is 13s. 4d.; among the Saxons it was equivalent to 7s. 6d. of our money. It is also a money of account in Scotland, and formerly a silver coin, being equal to 13d. and one-third English.

To MARK *time*, to cease marching towards any particular point, direct, oblique, sideways, or retrograde; yet still to keep the regular motion, so as not to lose the step. This is frequently practised when a front file, or column, is opened too much, in order to afford the rear an opportunity of getting up; and sometimes to let the head of a column disengage itself, or a body of troops file by, &c. The French say, *marquer le pas*.

Gunpowder MARKS. The different sorts of gunpowder are distinguished by the following marks on the heads of the barrels. All gunpowder for service is mixed in proportions according to its strength, so as to bring it as much as possible to a mean and uniform force. This sort of powder is marked with a blue L. G. and the figure $\frac{1}{2}$, or with F. G. and the figure 3, whose mean force is from 150 to 160 of the éprouvette. This is the powder used for practice, for experiments, and for service. The white L. G. or F. G. is a second sort of powder of this quality. It is sometimes stronger but not so uniform as the blue L. G. It is therefore generally used in filling shells, or such other things as do not require accuracy. The red L. G. F. G. denotes powder entirely made at the king's mills, with the coal burnt in cylinders, and is used at present only in particular cases, and in comparisons, and to mix with other sorts to bring them to a mean force. The figures 1, 2, or 3, denote that the powder is made from saltpetre obtained from damaged gunpowder; 4, 5, or 6, from saltpetre obtained from the group. See pages 123, 124, of the Little Bombardier.

MARK *to shoot at*, a round or square piece of wood which is generally painted in red and white circles, and has a black spot in the center called the bull's eye. Soldiers should be frequently practised in shooting at a mark.

Knights of St. MARK, an order of knighthood which formerly existed in the republic of Venice, under the protection of St. Mark the Evangelist.

To be MARKED. Marshal Saxe, in his *Rèveries*, proposes that every soldier should be marked in his right hand to prevent desertion. He recommends the composition which is used by the Indians; and grounds the propriety of his plan upon the custom which prevailed among the Romans, who marked their soldiers with a hot iron. We mention this as a suggestion grounded upon good authority: but we by no means recommend it as an adoption which would be palatable to Englishmen. Tastes and palates, however, are seldom to be attended to in military matters.

MARK in a horse, (*marque noire, germe de jève*, Fr.) the evidence of a horse's age. MARKSMEN, men expert at hitting a mark.

Light-armed MARKSMEN, men that are armed and accoutred for very active and desultory service. See RIFLEMEN.

Austrian Volunteer MARKSMEN, a corps formed in the hereditary dominions of the Emperor of Germany, and increased by recruits and volunteers from the Tyrol, &c. The success which uniformly attended the French *tirailleurs* in all their actions, induced other nations to pay great attention to the formation of similar corps.

MARKET, (*marché*, Fr.) a public time, and appointed place, of buying and selling.

MARKET-place, (*le marché*, Fr.) the place where the market is held.

MARKET-price, (*courant du marché*, Fr.) the price at which any thing is currently sold.

MARLINS, in *artillery*, are tarred white skains, or long wreaths, or lines of untwisted hemp, dipped in pitch or tar, with which cables and other ropes are wrapped round, to prevent their fretting and rubbing in the blocks, or pulleys, through which they pass. The same serves in artillery upon ropes used for rigging gins, usually put up in small parcels called skains.

MARLINSPIKE, a small piece of iron for fastening ropes together.

MARMIITE, Fr. porridge-pot, kettle; an utensil in which soldiers boil their victuals.

MARNOIS, Fr. a barge of large dimensions used upon the rivers Marne and Seine, from Brie and Champagne to Paris.

MARON, Fr. a piece of brass or copper, about the size of a crown, on

which the hours for going the rounds were marked, in the old French service.

MARON d'artifice, Fr. a species of fire-work, which is made with a piece of pasteboard in the shape of a parallelogram, one side of which is as five to three; so that fifteen squares, equal among themselves, may be made, three on one side, and five on the other; these are folded into the form of a die or cube, and filled with gunpowder. The effect produced by this firework is extremely beautiful.

MARQUE, or *Letters of Marque*, in naval affairs, are letters of reprisal, granting the subjects of one prince or state liberty to make reprisals on those of another. See **LETTERS of Marque**.

MARQUÉE, a word corrupted from the French *Marquise*, signifying a tent or cover made of strong canvass or Russia-duck, which is thrown over another tent, and serves to keep out rain. Its primitive etymology may be traced to *Marquis*, or *Marchio*, whence *Marchers*, and *Marches*.

The complete weight of a *marquée* is 1 cwt. 17lbs. ridge pole 7 feet: standard 8 feet.

MARQUER le pas, Fr. See **MARK time**.

MARQUER un camp, Fr. to prick out the lines of an encampment.

MARQUIS, *Marquess*, *Marchio*, title of honour given by letters patent to a person who holds a middle rank between the dignity of a Duke and that of an Earl. This word, like *Margrave*, is derived from the high Dutch, or from the French *marche*, a limit, as the guard of the frontiers was entrusted to a *Marquis*. The title itself is originally French, and was first known under Charlemagne. King Richard the Second first introduced the dignity of *Marquis* among us, by creating Robert de Vere, Earl of Oxford, *Marquis of Dublin*; but it was a title without any office annexed to it.

MARQUISE, Fr. See **MARQUÉE**.

Tendre une MARQUISE, Fr. to pitch a *marquée*.

MARQUISE, Fr. This word likewise means a species of sky-rocket. See **FUSÉE VOLANTE**.

MARRIAGE. It is generally understood in the British service, that no soldier can marry without the previous knowledge and consent of his captain, or commanding officer. There is not, however, any specific regulation on this head.

MARS, in the heathen mythology the God of War. The French frequently use the word in a figurative sense, viz. *les travaux de Mars*, the labours or exploits of Mars; *le métier de Mars*, the military profession.

The **MARSELLOIS**, or *Marseilles Hymn*, a national march adopted by the French during the course of their revolution, and regularly played in their armies, when they went to battle. It was frequently accompanied, or rather succeeded, by the "Ça Ira," a lively tune; the former being calculated for slow or ordinary time, and the latter for quick movements. Both airs are now proscribed.

MARSH, (*marais*, Fr.) a fen; a bog; a swamp.

SALT-MARSH, (*marais-salant*, Fr.) a marsh impregnated with saline particles from the sea.

MARSHAL, } in its primitive signification, means an officer who has the care and charge of horses; but it is now applied to officers who have very different employments.—
In a military sense, it means the commander in chief of all the forces. It is likewise given as an honorary rank to general officers who have no immediate command. See **GENERAL**.

MARSHAL of France, an officer of the greatest dignity in the French army. It was first established by Philip-August, in the year 1185.

Provost-MARSHAL, an executive officer, whose duty is to see punishments put in force, when soldiers are condemned to death, or are to be otherwise chastised. Every army is provided with a provost-marshal-general, who has several deputies under him. By the last General Regulations it has been ordained, that in case the army should take the field in Great Britain, a deputy provost-marshal will be appointed to each district. The provost, under those circumstances, will frequently make the tour of the camp, and its environs, and will have instructions to seize such persons as are committing disorders.

Judge-MARSHAL. See **Judge-ADVOCATE**.

MARSHY ground, (*les marais, ou terre marécageuse*, Fr.) As it may be frequently necessary to convey heavy ordnance, &c. over marshy ground, and sometimes indeed to erect batteries upon it, the following method has been recommended:—

In the first place, a firm and solid road must be made, in order to convey, with safety, the different materials which may be wanted for the construction of the battery, and along which the men may securely drag the various pieces of ordnance. This road must be ten feet high at least.

If the marsh or bog should not be very deep, let a bed or platform, consisting of fascines, and disposed according to the direction of the road, be constructed between two rows of thick saucissons, that are secured and fixed in the earth with strong stakes. This platform must be two thirds as thick as the bog is deep, and contain 12 feet in breadth. Spread hurdles over the level surface of this platform, and then make another bed or covering with fascines, ten feet long, and disposed according to the breadth of the road, taking care to bind their ends, &c. well together by means of stakes, which must be driven through the hurdles and the lower bed. Let this second surface be sufficiently covered with earth and straw, to secure the fascines, and to render the road solid and compact.

If the road should appear unsafe after these precautions, it must be made wider and deeper.

If the marsh or bog be very deep, you must construct several beds or surfaces of fascines, in the manner already mentioned, taking care to make the top equal to the breadth of the road, and capable of supporting the weight of a wagon, or carriage. The ground for the epanlement belonging to the platforms, their recoil backwards, and the path to the magazines, must be rendered firm and solid after the same manner. On each side of this epanlement you must throw up a berm or path, measuring three feet in front, and as much on the sides.

You will collect the earth, &c. in the usual way, for the construction of batteries on rocks, and mask your artificers in like manner.

MARSILIANE, *Fr.* a sort of ship or vessel which is used by the Venetians in the gulph of Venice, and along the coast of Dalmatia. It has a square poop, is very broad on the fore-castle, carries four masts, and is equal to seven hundred tons.

MARTEAU d'armes, *Fr.* an offensive weapon, so called from its resemblance to a hammer.

MARTEL, *Fr.* uneasiness, inquietude.

MARTELLO-tower, erroneously supposed to be derived from *martel*. See **MORTELLA**.

MARTIALIST, a warrior, a man at arms.

MARTIAL-law is the law of war, which entirely depends on the arbitrary power of the Prince, or of those to whom he has delegated it; for, though the king can make no laws in time of peace, without the consent of parliament, yet in time of war he has an absolute power over the army; he can place and promote, or displace and degrade officers at will, without being responsible to any constituted authority whatsoever.

MARTINET, a word frequently misapplied to signify a strict disciplinarian, who sometimes gives officers and soldiers unnecessary trouble. It is supposed to have taken its origin from an adjutant of that name, who was in high repute, as a drill officer, during the reign of Louis the XIVth.

In a book, published some years back for the use of the militia of England, there is the following note on this head.

Lewis the XIVth, in 1662, employed Monsieur Martinet to regulate and discipline his infantry, after the Dutch manner. He was first Lieutenant-Colonel, and afterwards Colonel of the *Régiment du Roi*, or what we call the King's own regiment, which was then the pattern. He was killed at the siege of Doesberg, in 1672.—His name is become, among our military gentlemen, (or rather *would be* military gentlemen,) a term of sneer and reproach, too often applied to such officers as shame the rest of their corps, by being more assiduous and exact in the performance of their duties, than suits the levity of the young, or the indolence of the old.

MARTINET, *Fr.* a small discipline, or cat-o'-nine-tails, fixed to the end of a wooden handle, which schoolmasters use to punish refractory, or idle boys. This affords us another path, and perhaps a surer one, than the surname already quoted, to find out the real origin of Martinet in a military sense, more especially, as it is particularly indicative of the severity that is sometimes practised by what is (ridiculously enough) called a *tip-top* adjutant.

MARTINET, *Fr.* according to the last published Military Dictionary in France

a huge hammer, which was used by the ancients to force open the gates of besieged towns. Vegetius mentions it in his writings.

MARTINGAL, (*martingale*, Fr.) a thong of leather, fastened to one end of the girth under the belly of a horse, and at the other end to the mussroll, to keep him from rearing.

MARTIOBARBULUS, a weapon used among the Romans. There was also a militia amongst them so called, consisting of twelve thousand men, who were singularly expert in throwing their arrows.

MASH, a mixture for a horse, consisting generally of ground malt put into a pail with scalding water, and well stirred about.

Cold MASH, the same mixture given cold.

MASHKAWAR, *Ind.* monthly accounts.

A MASK, in field fortification, (*une masque*, Fr.) It sometimes happens, that a ditch or fossé must be dug in an exposed situation; in this case it will be absolutely necessary for the artificers and workmen to get under cover, and to mask themselves in such a manner as to answer the double purpose of executing their immediate object, and of deceiving the enemy with respect to the real spot they occupy. For further particulars on this head, see pages 828, 829, 830, Vol. II. of the *Aide-Mémoire à l'usage des Officiers d'Artillerie*, &c.

To MASK, (*masquer*, Fr.) to cover any particular post or situation, for the purpose of attack or defence. In ambuscade, a battery is said to be masked, when its outward appearance is such as not to create any suspicion, or mistrust, in a reconnoitring, or approaching enemy. A town, or fortress, a battery, or the head of a bridge, may likewise be said to be masked, when a superior force sits down before it, and keeps the garrison in awe. This is frequently done, in order to render the advantages of such a place, or hold, ineffectual, while an army acts in its neighbourhood, or marches by.

MASOLES, a militia belonging to Croatia, which is bound to march to the frontiers, whenever there appears the least symptom of hostile disposition on the part of the Turks. The private soldiers have lands allotted to them, which they cultivate for their own use,

but they do not receive any pay from the public. The officers are paid.

MASQUER *un passage*, Fr. to block up any road, or avenue, through which an army might attempt to march.

MASSALGIES, *Ind.* persons employed in India as porters, or messengers. Massalgies, Coolies, and Palaukeen bearers, are allowed a certain batta when they travel.

MASS, (in mathematics,) the matter of any body cohering with it, *i. e.* moving and gravitating along with it; and is distinguished from its bulk, or volume, which is its expansion in length, breadth and thickness.

Levy in MASS, (*levée en masse*, Fr.) the act of raising men by general requisition, or, in Great Britain, by *Posse Comitatus*, that is, calling out the effective population of each county.

MASSE, *Fr.* a species of stockpurse, which, during the French monarchy, was lodged in the hands of the regimental paymaster, for every serjeant, corporal, unspesade, drummer, and private soldier.

MASSE *d'armes*, *Fr.* a warlike weapon, which was formerly used. It consisted of a long pole with a large iron head.

MASSE, *Fr.* in architecture, the whole, or collective parts of a building.

MASSE *de bois*, *Fr.* a large wooden hammer, or mallet which is used in driving down stakes, &c.

MASSE *de carrière*, *Fr.* the several beds or pieces of stone which lie one upon another in a quarry.

MASSES, the great lights and shadows of a picture.

MASSELOTE, a French term which is used in foundry, signifying that superfluous metal which remains after a canon or mortar has been cast, and which is sawed or filed off, to give the piece its proper form.

MASSIF, *Fr.* a short stick or rod, used by artificers in making cartridges.

MASSIVE, (*massif*, *Fr.*) heavy; unwieldy. This term is applied to any work whose dimensions are not well proportioned; or where the walls are very thick, and the outlets small, &c.

MASSOOLAS, *Ind.* the common boats of a very slight construction, which are used on the Coromandel coast.

MASSUE, *Fr.* a club.

MASTER *at arms*, in the *marine*, an officer appointed to teach the officers

and crew of a ship of war the exercise of small arms; to confine prisoners, and plant sentinels over them, and to superintend whatever relates to them during their confinement.

MASTER gunner, in a *ship of war*, an officer appointed to take charge of the artillery and ammunition aboard, and to teach the men the exercise of the great guns.

MASTER of the horse, a great officer of the crown, who orders all matters relating to the king's stables, races, breed of horses, &c. and commands the equerries, and all the other officers and men in the king's stables. His coaches, horses, and attendants, are the king's, and bear the king's arms and livery.

MASTER of the Ordnance. This officer formerly ranked next to the Earl Marshal, when he was considered as an officer. The first master of the ordnance was Rauf Bigod appointed in the first year of the reign of Richard III. during life. The clerk of the ordnance is mentioned in Rymer, as early as the 5th of Henry V. It does not appear that the English had any particular officer presiding over their projectile machines or artillery, before the invention of gunpowder and cannon.

In France, they were under the direction of an officer called the *Grand master of the cross bows*. This office is of great antiquity in that kingdom, for we find it mentioned in the reign of St. Louis, who died in 1270. See **ORDNANCE**.

MASTER-general of the ordnance. See **ORDNANCE**.

Baggage-MASTER and Inspector of roads, formerly an appointment in the British service, but now discontinued.

Barrack-MASTER-General, an officer with the rank of a major-general in the British army, who was vested with considerable powers during the late war. These powers were formerly exercised by the board of ordnance, but they were transferred to the barrack-master-general by a warrant under the sign manual, and countersigned by the secretary at war on the 30th day of May, 1794. In 1795 the two warrants, whereby all matters relative to the government of barracks had been partially entrusted to the board of ordnance and a barrack-master-general, were revoked, and the following rules, orders, powers, and directions were established in lieu thereof, in as much as regards the duties of the de-

partment entrusted to the barrack-master-general to the British forces.

Quarter-MASTER-General. See **QUARTER-MASTER-General**, in letter Q.

Quarter-MASTER of the victuals. The person who had the chief care and management of the provisions belonging to an army, was formerly so called. See **PURVEYOR**.

Scout-MASTER-General. A person formerly so called, under whose direction all the scouts and army messengers were placed. The appointment does not exist at present.

MASTICH, (*mastic*, Fr.) a kind of mortar, or cement.

MASTIGADOUR, (with horsemen,) a slabbing bit, a snaffle of iron, quite smooth, and of a piece, guarded with *pater-nosters*, and composed of three halves of great made into demi-ovals of unequal bigness, the lesser being enclosed within the greater, which ought to be about half a foot high. A *mastigadour* is mounted with a head and two reins.

MASULIT, a boat used in the East Indies, which is caulked with moss.

Echec et MAT, Fr. check-mate. A certain point at the game of chess, when your adversary cannot make another move. Hence to be *check-mated*, to be so entirely out-manœuvred as not to have a single position tenable, or a movement left.

MATADORS, Fr. a banditti, who formed themselves into armed bodies about the year 1714, in Catalonia.— Their object was to destroy every fellow citizen that would not acknowledge the claim of the Archduke of Austria to the crown of Spain.

MATAFUNDA, an ancient machine out of which stones were cast by means of a sling. Some derive its name from *fundu* and *mactare*, otherwise *matate*, i.e. a murdering sling.

MATAMORE, Fr. a drawcansir; a bully; a wretch that has more impudence than courage. The French say figuratively, *faire des pas de matamore*, to step forward like a bully.

MATCH, in *artillery*, a kind of rope slightly twisted, and prepared to retain fire for the uses of the artillery, mines, fire-works, &c. Slow match is made of hemp or tow, spun on the wheel like cord, but very slack; and is composed of three twists, which are afterwards again covered with tow, so that the twists do not appear: lastly, it is boiled in the

lees of old wine. This, when once lighted at the end, burns gradually, without going out, till the whole be consumed. It is mounted on a linstock.

Quick MATCH, used in *artillery*, is made of three cotton strands drawn into lengths, and put into a kettle just covered with white wine vinegar, and then a quantity of saltpetre and mealed powder is put in it, and boiled till well mixed. Others put only saltpetre into water, and after that take it out hot, and lay it into a trough with some mealed powder, moistened with spirits of wine thoroughly wrought into the cotton by rolling it backwards and forwards with the hands; and when this is done, they are taken out separately; drawn through mealed powder, and dried upon a line. See **LABORATORY**.

MATCHBOX, a little wooden, tin or leathern cylindrical box, containing one charge for a musket fired with a matchlock.

MATCHLOCK, a sort of *harquebuss*, originally of no particular length or bore. The *matchlock*, or *harquebuss*, as well as the *hand-gun*, *hack-butl*, and *dag*, were at first fired with a match, and afterwards some of them with the wheel-lock. The former, by a spring, let down a burning match upon the priming in the pan, and the latter was a contrivance for exciting sparks of fire, by the friction of a notched wheel of steel, which grated against a flint. These wheels were wound up with an instrument called a *spanner*. The caliver is also a light matchlock piece.

MATEGRIFTON, or **MATEGRIFFIN**, an ancient machine which threw both darts and arrows.

MATELAS, *Fr.* mattress; wad.

MATELOT, *Fr.* sailor. Hence à la *matelote*, seaman-like.

MATER, *Fr.* to mast.

MATÉRIEL, *Fr.* in a military sense, every thing belonging to an army, save and except the officers and men, such as horses, cannon, gunpowder, stores and provisions. See **PERSONNEL**.

MATHEMATICS, (*mathématiques*, *Fr.*) the name of a science, which from its importance was styled by the Greeks *μαθηματικά*, *learning*, what ought to be learned by every one. It contains the knowledge of quantity, either continued or discrete; the former science being called *geometry*, the latter *arithmetic*. The one treats of magnitude capable of

mensuration, the other of numbers in particulars, or numbers unlimited. The former is treated of in the common books of arithmetic, the latter is known by the name of algebra, or arithmetic universal. Under the latter head comes the doctrine of fluxions, by which algebra has been carried, in modern times, to the solution of a variety of problems inaccessible to the ancients. Geometry, being the science of measurement in general, treats of the measurement of plane and spherical surfaces, the lines of angles on each, as also the contents of solids. Both sciences are of unlimited extent, and are the foundation of many other sciences, such as astronomy, navigation, castrametation, gunnery, fortification, &c. To a soldier both sciences are necessary, if he wishes to excel in his profession; and it may not be useless to inform him, that some of the most difficult problems in both sciences were performed in a camp. Descartes, who excelled in both, was a soldier.

MATHEMATICS are commonly distinguished into *pure* and *speculative*, which consider quantity abstractedly; and *mixed*, which treat of magnitude as subsisting in material bodies, and consequently are interwoven every where with physical considerations.

Mixed mathematics are very comprehensive, since to them may be referred astronomy, optics, geography, hydrography, hydrostatics, mechanics, fortification, gunnery, projectiles, mining, engineering, and navigation.

Pure mathematics have one peculiar advantage, that they occasion no difference of opinion among wrangling disputants, as in other branches of knowledge; and the reason is, because the definitions of the terms are premised, and every one that reads a proposition has the same idea of every part of it. Hence it is easy to put an end to all mathematical controversies, by shewing, that our adversary has not stuck to his definitions, or has not laid down true premises, or else that he has drawn false conclusions from true principles; and, in case we are able to do neither of these, we must acknowledge the truth of what he has proved.

It is true, that in mixed mathematics, where we reason mathematically upon physical subjects, we cannot give such just definitions as the geometers: we

must therefore rest content with descriptions; and they will be of the same use as definitions, provided we are consistent with ourselves, and always mean the same thing by those terms we have once explained.

Dr. Barrow gives a most elegant description of the excellence and usefulness of mathematical knowledge, in his inaugural oration, upon being appointed professor of mathematics at Cambridge.

The mathematics, he observes, effectually exercise, not vainly delude, nor vexatiously torment studious minds with obscure subtleties; but plainly demonstrate every thing within their reach, draw certain conclusions, instruct by profitable rules, and unfold pleasant questions. These disciplines, likewise, enure and corroborate the mind to constant diligence in study; they wholly deliver us from a credulous simplicity, most strongly fortify us against the vanity of scepticism, effectually restrain us from a rash presumption, most easily incline us to a due assent, and perfectly subject us to the government of right reason. While the mind is abstracted and elevated from sensible matter, it distinctly views pure forms, conceives the beauty of ideas, and investigates the harmony of proportions; the manners themselves are insensibly corrected and improved, the affections composed and rectified, the fancy calmed and settled, and the understanding raised and excited to nobler contemplations.

MATINAL, *Fr.* that rises by times; which every officer ought to do.

MATINÉE, *Fr.* forenoon; morning.

Etoile MATINIÈRE, *Fr.* the morning star.

MATRAS, *Fr.* a dart anciently used, but not sufficiently pointed to occasion more than a bruise.

MATRICE, *Fr.* the womb of a woman; it also signifies the mould in which any thing is cast; also the die, as the die of a medal.

Langue MATRICE, *Fr.* mother-tongue.

MATRON, a woman, (generally the wife of some well behaved and good soldier,) who is employed to assist in the regimental hospital. She is under the direction of the surgeon, by whom she is originally appointed to the situation. —See **NURSE**.

MATROSSES are properly assistants, being soldiers in the royal regiment

of artillery, and next to the gunner; they assist in loading, firing, and spunging the great guns. They carry firelocks, and march along with the guns and store wagons, both as a guard and to give their assistance on every emergency. These men are now called gunners; the term *matross* being obsolete in the service.

MATTADOR. This word is taken from the Spanish, and signifies a great destroyer. It is sometimes written with one T.

MATTE, *Fr.* was heretofore (in Paris) a rascally place, whereat common gamesters, cheaters, conycatchers, and cutpurses usually met: *Enfans, ou suppôts, de la Matte*, such well given youths. The *Cercle*, in the Rue de la Loi at Paris, was of this description, in 1802; to which many of our unguarded countrymen had reason to lament their introduction.

MATTER of Deed (in law) denotes something to be proved by witnesses, in contradistinction from *Matter of Record*, which may be proved from some process, &c. appearing in any court of record.

MATTER of fact, not founded upon mere conjecture, or growing out of assumed premises; proof positive; hence a *matter of fact-man* (such as every soldier ought to be) is one who comes directly to the point, and never attempts to deviate from the truth.

MATTER of opinion, business or thing established upon assumed principles of theory.

MATTER of regulation, business or thing whose basis is some established rule or regulation, as a clause in the Articles of War.

MATTER, in a military sense, especially with regard to courts-martial, consists of the specific charges which are brought against a prisoner, and to which the president and members must strictly confine themselves. It has been very properly observed, in a small pamphlet upon martial law, that unacquainted with the serious consequences of a strict attention to the minutiae of form in criminal proceedings, general courts-martial have looked upon the first swearing in of the court, as a sufficient authority to warrant their proceeding on the trial of a variety of offences; whereas, in propriety, the court should be sworn

afresh at the commencement of every new prosecution: for though, as judges, (in the manner of a court of common law,) once swearing would be sufficient; yet, as jurors, who are sworn on every different trial, though identically the same men, so are the members of general courts-martial to be considered when a new criminal and fresh *Matter* are brought before them. Lest, however, an established, and therefore an undisputed practice should have acquired a force still difficult to be eradicated, we shall endeavour to point out those reasons which induce us to maintain this opinion. In the oath which is taken by each of the several members of a general court-martial, the words *matter* (see Sect. 16th, Art. 6th, Articles of War) and *prisoner*, are cautiously inserted.— These words, therefore, being absolutely confined to a single matter, and a single prisoner, and *matters* and *prisoners* not being subjected to their jurisdiction, how is it possible that men, with propriety, can proceed upon a trial which they are not warranted by law to decide upon? Were the obligation in the Articles of War decisive as to the trial of all matters, and all persons, and in all cases; or were the court possessed of the authority of extending the meaning of the oath, once swearing would undoubtedly be sufficient; but, as in every respect, the contrary is evident, as the very words of the oath express, (words which cannot be altered, but by the legislature,) that “*they shall well and truly try and determine according to their evidence, in the matter before them, between their sovereign lord the king’s majesty, and the prisoner to be tried,*” how can it be otherwise than an unwarrantable irregularity in them, to proceed upon the trial of offenders, who, in the eye of the law, are not amenable to their authority? For, if the first prisoner to be tried has a right to challenge an officer, who may be appointed to sit on an investigation of his offence, as a member of a court of inquiry, or who may be liable to any exceptions, why shall not the second and third prisoner be entitled to the same merciful indulgence? See *Thoughts on Martial Law*, pages 25, 26, 27, 28.

New or fresh MATTER, any thing which does not strictly and *bonâ fide* appertain to original charges, &c.

Combustible MATTER, and MATTER

of Composition. All solids and fluids are so called which are of an inflammable nature themselves, and can communicate fire to other substances.

MATTOCK, an instrument somewhat resembling a pick-axe, but having two broad sharp edges instead of points.

MATTRESS, a sort of quilted bed of horse-hair or of straw, used by officers on service, instead of the feather bed. The straw mattress differs from the *paillasse* in one particular only; the straw in the latter being loose, whereas that of the mattress is quilted in.

MATTUCASHLASH, an ancient Scotch weapon, sometimes called *arn-pit dagger*, which was worn there ready to be used on coming to close quarters. This, with a broad sword and shield, completely armed the Highlander.— Since the use of fire-arms, this weapon has been laid aside.

MAUG, *Ind.* the name of a month which partly agrees with our January and February.

MAUL, a heavy beater or hammer, generally shod with iron, used in driving piles, &c.

MAURI, the ancient inhabitants of Mauritania. They were famous for their skill in throwing lances, and constituted a part of the Roman cavalry.

MAWANY, *Ind.* See **KITSBUNDY**.

MAXIMS, in *fortification*. See **FORTIFICATION**.

MAXIMUM and **MINIMUM**, in higher geometry, the art of finding out the greatest and the smallest quantity; that is, the greatest and the smallest proportion of a curve, which can represent whatever quantity is required.

MEAL, *hot*, ten pence is the present price to be paid by each soldier to the innkeeper.

MEALED, pulverized, or reduced to powder.

MEAN, contemptible; low in worth; ungenerous; spiritless. Every thing that an officer, or soldier ought not to be. The French use the word *bas*, *crapuleux*.

MEAN Fortification. See **FORTIFICATION**.

MEANA, *Ind.* a machine or vehicle, resembling a palankeen, but only used for carrying one person. It is borne, by four men, and supported by means of a bamboo extended from the ends; being generally seven feet long, and three wide, with Venetian blinds, which slide and

act as doors. Persons in India sometimes travel to a considerable distance in these vehicles; the number of bearers being increased, and successively relieved. It is computed that they will easily go at the rate of four miles in the hour.

MEANNESS, (*bassesse*, Fr.) lowness of mind; sordidness; niggardness; bad qualities which ought to be incompatible with rank and high birth, but are not always so; notwithstanding the certain punishment they entail by loss of character or substance.

MEANING, the sense; the thing understood; as the meaning of a sweeping clause in the Articles of War.

To MEASURE, (*mesurer*, Fr.) to take the dimensions of any substance or thing.

To MEASURE a man, (figuratively,) to calculate the extent of his abilities; to form a correct judgment of his understanding. It may truly be said, that few persons know how to measure themselves; especially when the brilliancy of command comes in dazzling contact with sober reason.

To MEASURE one's self with another. See **MESURER**, Fr.

MEASURE, in *geometry*, any quantity assumed as one, to which the ratio of other homogeneous or similar quantities is expressed.

MEASURE of an angle, the length of an arch described from the vertex to any place between its legs: hence angles are distinguished by the ratio of the arches between the legs to the peripheries. See **ANGLE**.

MEASURE of a figure, a square, whose side is an inch, foot, yard, or other determinate measure. Hence *square measures*.

Among geometricians it is usually a square rod, called *decempeda*, divided into 10 square feet, and those into square digits, and those again into 10 lines, &c.

MEASURE of a line, any right line taken at pleasure, and considered as unity.

MEASURE of a mass or quantity of matter, in *mechanics*, is its weight: it being apparent that all the matter which coheres with a body, gravitates with it; and it being found by experiment, that the gravities of homogeneous bodies are in proportion to their bulks: hence, while the mass continues the same, the absolute weight will be the same, whatever

figure it puts on; for, as to its specific weight, it varies as the quantity of its surface does.

MEASURE of a number, in *arithmetic*, such a number as divides another without leaving a fraction: thus nine is a measure of 27.

MEASURE of a solid is a cube, whose side is an inch, foot, yard, or other determinate length: in *geometry*, it is a cubic perch, divided into cubic feet, digits, &c. Hence cubic measure, or measure of capacity.

MEASURE of velocity, in *projectiles*, and *mechanics*, the space passed over by a moving body in any given time.—The space therefore must be divided into as many equal parts, as the time is conceived to be divided into: the quantity of space answering to such portion of time, is the measure of the velocity.

Measures then are various, according to the different kinds and dimensions of things measured. Hence arise lineal and longitudinal measures for lines or lengths; for square areas; and solid or cubic, for bodies and their capacities: all which again are very different in different countries and ages, and even many of them for different commodities. Hence also arise other divisions, of domestic and foreign, ancient and modern, dry and wet (or liquid) measures, &c.

Long MEASURE. The English standard long measure, or that whereby the quantities of things are ordinarily estimated, is the yard, containing three English feet, equal to three Paris feet one inch and 3-12ths of an inch, or 7-9ths of a Paris ell. Its subdivisions are the foot, span, palm, inch, and barley corn: its multipliers are the pace, fathom, pole, furlong, and mile.

The English foot to the French royal, is as 107 to 114: and the French toise is equal to six feet English, nearly.

Proportions of the long MEASURES of several nations to the English foot.

The English standard foot being divided into 1000 equal parts, the other measures will have the proportions to it, which follow:

The English foot from the standard at Guildhall	-	1000
Paris royal foot in the Chatelet	1063	
Rhinland foot of Snellius	-	1033
Greek foot	-	1007 $\frac{29}{100}$
Roman foot on the monument of Cossutius	-	967

Roman foot of Villalpandus, taken from the congius of Vespasian - - -	986
Venetian foot - - -	1162
Ell of Amsterdam - - -	2268
Amsterdam foot - - -	942
Ell of Antwerp - - -	2283
Foot of Antwerp - - -	946
Ell of Leyden, in Holland - - -	2260
Canua of Naples - - -	6880
Vara of Almeria, and Gibralt- tar, in Spain - - -	2760
Spanish foot - - -	1001
Toledo foot - - -	899
Braccio of Florence - - -	1913
Palm of Genoa - - -	815
Common Braccio of Sienna	1242
Braccio of Sienna for linen	1974
Palm of the architects at Rome, whereof 10 make the canna of the same architects - - -	732
Palm of the braccio for the mer- chants and weavers at Rome, from a marble in the Capitol, with this inscription, CU- RANTE LV POETO - - -	995½
Large Pique of the Turks at Constantinople - - -	2200
Small Pique of the Turks at Constantinople, is to the larger as 31 to 32.	
Arish of Persia - - -	3197
Derah or cubit of the Egyptians	1824
Dort foot, in Holland - - -	1184
Middleburg foot - - -	991
Strasbourg foot - - -	920
Bremen foot - - -	964
Foot of Cologne - - -	954
Foot of Frankfort on the Main	943
Dantzick foot - - -	944
Foot of Copenhagen - - -	965
Foot of Prague - - -	1526
Riga foot - - -	1831
(Mantua - - -	1585
(Bononia - - -	1204
Foot of (Mechlin - - -	919
(Stockholm - - -	963½
(Lisbon - - -	1005

French standard MEASURE is the aune or ell, containing three Paris feet, seven inches, eight lines, or one yard 2-7ths English: the Paris foot royal exceeding the English by 68-1000 parts: this ell is divided two ways; namely, into halves, thirds, sixths, and twelfths: and into quarters, half quarters, and sixteenths. This ell obtains in the greatest part of France, excepting at Troyes, Ares, and some parts of Picardy, and Burgundy, where the ell is no more

(than two feet, five inches, one line; and at St. Genoux, where it exceeds the Paris ell by eight lines: but at Marseilles, Montpellier, Thoulouse in Provence and Guinne, it contains five Paris feet five inches, and six lines, or a Paris ell and an half: at Montpellier and the lower Languedoc, in Provence, Avignon, and even Dauphiné, it is a Paris ell and two thirds.

Standard MEASURE, in Holland, Flanders, Sweden, a good part of Germany, many of the Hans-Towns, Dantzic, and Hambourg, and at Geneva, Frankfort, &c. is likewise the ell, being different in all these parts: in Holland it contains one Paris foot, eleven lines and 4-7ths of the Paris ell: the Flanders ell contains 7-12ths of the Paris ell: the ell of Germany and Brabant, &c. is equal to that of Flanders.

Italian MEASURE is the braccio, or fathom; which obtains in the states of Modena, Venice, Florence, Lucca, Milan, Mantua, Bologna, &c. At Venice it contains one Paris foot, eleven inches, three lines, or 8-15ths of the Paris ell: at Bologna, Modena, and Mantua, the same as at Venice; at Lucca it contains half a Paris ell; at Florence, 40-100 of a Paris ell: at Milan the brace for silks is 4-9ths of a Paris ell, and that for woollen cloths, the same as in Holland; at Bergama the brace is 5-9ths of a Paris ell. The usual measure at Naples is the canna, containing one Paris ell 15-17ths.

Spanish MEASURE is the vara, containing 17-24 of the Paris ell; but in Castile and Valentia, the measure is the pau, span, or palm; which is used, with the canna, at Genoa. In Arragon, the vara is equal to a Paris ell and a half.

Portuguese MEASURE is the covedo, containing 4-7ths of the Paris ell; and the vara, of which 106 make 100 Paris ells.

Piedmontese MEASURE is the covedo, containing 4-7ths of the Paris ell. In Sicily the measure is the canna, the same with that of Naples.

Muscovite MEASURES are the cubit, equal to one Paris foot, four inches, two lines; and the arcin, two whereof are equal to three cubits.

Turkish and Levant MEASURES are the pique, containing 3-5ths of the Paris ell. The Chinese measure is the cubre, ten of which are equal to three Paris ells. In Persia, and some parts of the

Indies, the gueze, of which there are two kinds; the royal gueze, or gueze monkelser, containing 4-5ths of the Paris ell; and the shorter gueze, only 2-3rds of the former. At Goa and Ormus, the measure is the Portugueze vara. In Pegu, and other parts of the Indies, the cando, equal to the Venice ell. At Goa, and other parts, they use a larger cando, equal to 17 Dutch ells. In Siam they use the ken, short of three Paris feet by an inch; the ken contains two socks, the sock two keubs, the keub twelve nions or inches; the nion is equal to eight grains of rice, that is, about nine lines. At Camboia, the haster; in Japan the tatam; and the span on some of the coasts of Guinea.

English square or superficial MEASURES are raised from the yard of 36 inches multiplied into itself; and this producing 1296 square inches in the square yard, the divisions of this are square feet and inches, and the multipliers, poles, roods, and acres.

Cubical MEASURES, or measures of capacity for liquors. English liquid measures were originally raised from troy weight, it being ordained that eight pounds troy of wheat, gathered from the middle of the ear, and well dried, should weigh a gallon of wine measure; yet a new weight, viz. the avoirdupois weight, has been introduced, to which a second standard gallon is adjusted, exceeding the former in the proportion of the avoirdupois weight to the troy weight. From this latter standard are raised two measures, the one for ale, the other for beer.

The sealed gallon at Guildhall, which is the standard for wine, spirits, oil, &c. is supposed to contain 231 cubic inches; yet, by actual experiment made in 1688, before the lord mayor and commissioners of excise, it only contains 224 cubic inches. It was however agreed to continue the common supposed contents of 231: hence, as 12 : 231 :: $14\frac{1}{2}$: $281\frac{1}{2}$ the cubic inches in an ale gallon; but, in effect, the ale quart contains $70\frac{1}{2}$ cubic inches; on which principles the ale and beer gallon will be 282 cubic inches.

Dry MEASURE is different from both the ale and wine measure, being nearly a mean between both.

According to an Act of Parliament, passed in 1697, every round bushel with a plain and even bottom, being $18\frac{1}{2}$

inches throughout, and eight inches deep, is to be accounted a legal Winchester bushel, according to the standard in his Majesty's Exchequer; consequently a corn gallon will contain 268.8 inches, as in the following table.

inches				
2688 gallons				
5376		2	pecks	
21504		8	$4\frac{1}{2}$ bushels	
172032		64	32	8 quarters

MEASURE of wood for firing is the cord, being four feet high, as many broad, and eight long; it is divided into two half cords.

MEASURE for horses is the hand, which, by statute, contains four inches.

French square MEASURES are regulated by 12 square lines in the inch square, 12 inches in the foot, 22 feet in the perch, and 100 perches in the arpent or acre.

French liquid MEASURES. At Paris, and in a great part of the kingdom, the smallest measure is the possu, which contains 6 cubic inches: 2 possus make the demiseptier; 2 demiseptiers the chopine; 2 chopines a pint; 2 pints a quart or pot; 4 quarts the gallon, or septier of estimation; 36 septiers the muid; which is subdivided into 2 demimuids, 4 quarter muids, and 8 half quarter muids. The quene in Orleans, Blois, &c. contains a Paris muid and a half. The tun used at Bayonne and Bourdeaux consists of 4 bariques, and is equal to 3 Paris muids; at Orleans to 2; so that the first tun contains 364 pints, and the second 576. The demiqueue in Champagne, 96 quarts; the pipe in Anjou and Poictou, 2 bussards, equal to 2 demi-queues of Orleans, &c. or a muid and a half of Paris. The millerolle used in Provence contains 66 Paris pints; and the poinçon at Nantz, in Touraine, and the Blessois, equal to half the Orleans tun. The poinçon at Paris is the same with the demiqueue.

The French have lately formed an entire new system of weights and measures, as in the following table, from *Nicholson's Philosophy*.

PRINCIPAL MEASURES OR UNITIES.

Proportions of the measures of each species to its principal measure or unity.		First part of the name which indicates the proportion to the principal measure or unity.	Length.	Capacity.	Weight.	Agrarian.	For Firewood.
10,000 1,000 1,00 10 0 0.1 0.01 0.001	}	Myria Kilo Hecto Deca — Deci Centi Milli	Metre.	Litre.	Gramme.	Are.	Stere.
Proportion of the principal measures between themselves, and the length of the Meridian.		10,000,000th part of the dist. from the Pole to the Equator					
Value of the principal measures in the ancient French measures.	}	}	3 feet 11 lines and $\frac{1}{2}$ nearly.	1 pint and $\frac{1}{20}$ or 1 litron and $\frac{1}{4}$ nearly.	18 grains and 841,000 parts	Two squareperches des eaux et forêt.	1 demy voie or $\frac{1}{4}$ of a cord des eaux et forêt.
Value in English measures			Inches 39.383	61,083 inch, which is more than the wine and less than the beer quart.	22-966 grains.	11.968 square yards.	One cubic metre.

Powder MEASURES, made of copper, holding from an ounce to 12 pounds, are very convenient in a siege, when guns or mortars are to be loaded with loose powder, especially in ricochet firing, &c.

The French recommend measures

that are made of block tin, such as are used for measuring out salt, viz. 1 ounce, 2, 3, 4, 8, which make the half pound; and lastly, of 16, which make the pound. These quantities answer every sort of ordnance.

Diameters and Heights of Cylindric Powder Measures, holding from 1 to 15 Ounces.

Ounces	0	1	2	3	4	5
0	0	1.256	1.583	1.811	1.994	2.148
1	2.760	2.793	2.876	2.953	3.027	3.098

Diameters and Heights of Cylindric Powder Measures, holding from 1 to 15 Pounds.

Pounds	0	1	2	3	4	5
0	0	3.165	3.988	4.565	5.024	5.412
1	6.890	7.039	7.245	7.442	7.628	7.805

MEASURE-angle, a brass instrument to measure angles, either salient or reentrant, in order to ascertain, with precision, the number of degrees and minutes for the purpose of delineating them on paper.

MEASURE of an angle, (*mesure d'un angle*, Fr.) See ANGLE.

MEASURING, } in military ma-
 MENSURATION, } thematics, the assuming any certain quantity, and expressing the proportion of other similar quantities to the same; or the determining, by a certain known measure, the precise extent, quantity, or capacity of any thing.

MEASURING, in general, constitutes the practical part of geometry; and from the various subjects which it embraces, it acquires various names, and constitutes various arts, viz. LONGIMETRY, ALTIMETRY, LEVELLING, GEODESIA, or SURVEYING, STERIOMETRY, SUPERFICIES, and SOLIDS, &c. which see.

MEASURING. See CHAIN.

MÆCÈNE, Fr. Mæcenas. The proper name of a Roman, who owes the remembrance of his worth to the genius of a poet. It now signifies, generally, any patron of arts and sciences, civil as well as military; but God only knows where such a being exists!

MECHANICS, a mixed mathematical science, which considers motion and moving powers, their nature and laws, with the effects thereof, in machines, &c. The word is derived from the Greek. That part which considers motion arising from gravity, is sometimes called statics, in contradistinction from that part which considers the mechanical powers, and their application, properly called mechanics: it is, in fine, the geometry of motion.

MECHANICAL, } constructed by
 MECHANIC, } the laws of mechanics; skilled in mechanics.

MECHANICAL philosophy, that which explains the phenomena of nature, and the operations of corporeal things, on the principles of mechanics; namely, the motion, gravity, figure, arrangement, &c. of the parts which compose natural bodies.

MECHANICAL powers. When two heavy bodies or weights are made by any contrivance to act in opposition, so as mutually to prevent each other from being put into motion by gravity, they are said to be in equilibrium. The same expression is used with respect to other forces, which mutually prevent each other from producing motion.

The most simple of those instruments,

by means of which weights or forces are made to act in opposition to each other, are usually termed *mechanical powers*. Their names are, the *Lever*, the *Axis*, or *Axle*, and *Wheel*, the *Pulley* or *Tackle*, the *inclined Plane*, the *Wedge*, and the *Screw*.

MECHANICAL, in *mathematics*, denotes a construction of some problem, by the assistance of instruments, as the duplicature of the cube, and quadrature of the circle, in contradistinction to that which is done in an accurate and geometrical manner.

MECHANICALLY, (*machinale-ment*, Fr.) according to the laws of mechanics.

To act **MECHANICALLY**, (*agir machinalement*, Fr.) to be extremely minute and methodical in all our actions.

MÉCANIQUE, Fr. a science whose immediate object is the increase or accumulation of force and motion, by means of machines and instruments. See **MECHANICS**.

MÈCHE, Fr. See **MATCH**.

Eventer la MÈCHE, Fr. to discover a plot.

MÉCHER, Fr. to vapour a cask with burning brimstone.

MÉCOMPTE, Fr. misreckoning.

MÉDECIN, Fr. physician.

MEDIATOR. Any state or potentate, that interferences to adjust the quarrel between any two or more powers, is called a mediator.

MEDICINE-CHEST is composed of all sorts of medicines necessary for a campaign, together with such surgical instruments as are useful, fitted up in chests, and portable. The whole army is supplied with these at the expense of government.

Specific regulations have been issued by the Medical Board, respecting the quantity and quality of the different medicines.

MEDIUM-Guard, a preparatory guard, of the broad sword or sabre, which consists in presenting the sword in a perpendicular line with the center of the opposed object, having the point upwards, the ward iron and the cutting edge next to the object.

MEER BUKSHY, *Ind.* chief paymaster.

MEERTOZUK, *Ind.* a marshal whose business is to preserve order in a procession or line of march, and to report absentees.

General MEETINGS. The general

meetings of the lieutenancy of every county, riding, or place, must be holden, according to Act of Parliament, in some principal town in every such county, riding, and place; and such general meetings must consist of the lieutenant, together with two deputy lieutenants at the least, or, on the death or removal, or in the absence of the lieutenant, then of three deputy lieutenants at the least, of every county, riding, and place respectively. Notice is to be given in the *London Gazette*, and also in any weekly newspaper usually circulated in such county, riding, or place, fourteen days at the least before the days appointed for holding such meetings respectively.

Subdivision MEETINGS. These are appointed, in the first instance, by the lieutenant and deputy lieutenant, or the deputy lieutenants, at every annual meeting; and regular notice is to be given by the clerk to the several deputy lieutenants.

MEGG, a weapon made use of by the Turkish horse, when in pursuit of an enemy. It resembles a long iron spit, and has a scabbard like a sword.

MEGGHETERIARQUE, Fr. the commanding officer of a body of men, who formerly did duty at Constantinople, and were called *Hétéricennes*, being composed of soldiers that were enlisted in the allied nations.

MÉLANDRES, Fr. those spaces of ground which are made level, in order to lay pieces of turf upon, as in a glacis, &c.

MELÉE, Fr. a military term, which is used among the French to express the hurry and confusion of a battle; thus, *Un général habile conserve sa tranquillité au milieu du combat, et dans l'horreur de la mêlée*:—an able general preserves his presence of mind, in the thickest of the battle, and remains calm during all the horror of mutual carnage. *Mêlée* corresponds with the English expression *Thick of the Fight*.

MÉMARCHURE, Fr. a sprain in a horse's leg.

MEMBERS, (*membres*, Fr.) In civil architecture, all the lesser parts and ornaments belonging to the different orders are so called.

MEMBRURE, Fr. pannel square; also a cord for measuring wood.

MEMOIRS are, strictly speaking, a species of history written by persons who have had some share in the transactions they relate, answering, in some measure,

to what the Romans call *commentarii*, i. e. commentaries. Hence Cæsar's Commentaries, or the Memoirs of his Campaigns.

MEMORABLE, (*mémorable*, Fr.) worthy of remembrance; a term applied to some extraordinary feat in war.

MEMORIAL, an address to the king, or other chief commander, praying for reward of services, or redress of grievances.

Battalion-MEN. All the soldiers belonging to the different companies of an infantry regiment are so called, except those of the two flank companies.

Camp-Colour-MEN, soldiers under the immediate command and direction of the quarter-master of a regiment. Their business is to assist in marking out the lines of an encampment, &c. to carry the camp-colours to the field on days of exercise, and fix them occasionally for the purpose of enabling the troops to take up correct points in marching, &c. So that in this respect they frequently, indeed almost always, act as markers, or what the French call *julonneurs*. They are likewise employed in the trenches, and in all fatigue duties.

Contingent-MEN, soldiers borne upon the establishment of a regiment for the benefit of the colonel, but never effective.

Drag-rope-MEN, in artillery, the men attached to light or heavy pieces of ordnance, for the purpose of advancing or retreating in action. The French *servans à la prolonge* are of this description.

Eight and nine months-MEN, persons enlisted in America, for a specific period of service, during her contest with the mother country.

Minute-MEN, persons whose names were enrolled at the beginning of the revolution in America, and who were liable to be called upon at a minute's warning.

Warrant-MEN, non-effective soldiers that are borne upon the establishment of a regiment for the benefit of an agent.

MENACE, an hostile threat. Any officer or soldier using menacing words or gestures in presence of a court-martial, or to a superior officer, is punishable for the same.—See the *Articles of War*.

MENACE, *palissader en*, Fr. See **FRAISER**.

MENAGER, Fr. to husband, to take care of, as, *ménager ses troupes*, to be careful of one's soldiers; not to over-march or over-drill, or wantonly fight them.

MENEAX, Fr. the transoms, or cross-bars of windows.

MENÉE, Fr. underhand dealing; secret practices.

MENER, Fr. to draw. As *mener une ligne droite parallèle à une ligne droite donnée*, to draw a straight line parallel to any given straight line.

Se MENER, Fr. to run; to be drawn. *Le parapet de la fausse-braye se menera parallèle à la ligne fondamentale de la forteresse*, the parapet of the fausse-braye must run, or be drawn parallel to the fundamental line of the fortress. *Jean Brioyes, ingénieur, et géographe du roi, sur la Nouvelle Manière de Fortification*, p. 33.

MENSURATION, (*mesurage*, Fr.) in general, denotes the act or art of measuring lines, superficies and solids.

MENSURATION, in *military mathematics*, is the art, or science, which treats of the measure of extension, or the magnitude of figures; and it is, next to arithmetic, a subject of the greatest use and importance, both in affairs that are absolutely necessary in human life, and in every branch of mathematics: a subject by which sciences are established, and commerce is conducted; by whose aid we manage our business, and inform ourselves of the wonderful operations in nature; by which we measure the heavens and the earth, estimate the capacities of all vessels, and bulks of all bodies, gauge our liquors, build edifices, measure our lands, and the works of artificers, buy and sell an infinite variety of things necessary in life, and are supplied with the means of making the calculations which are necessary for the construction of almost all machines.

MENTEUR, Fr. See **LIAR**.

MENTIR, Fr. to lie. The French say figuratively *Le bon sang ne peut mentir*; a noble nature cannot utter an untruth, or yield to base conditions.

MENTONNETS, Fr. embossments, or pieces of jagged timber about three feet long, which are left at the ends of a pilework, in order to secure platforms or boards which are afterwards nailed together.

MENTONNIÈRE, Fr. that part of an ancient warrior's head-piece or helmet which protected the chin.

MENU, Fr. bill of fare; bill of parcels: any specific, or particular account.

MENU-bois, Fr. brush-wood; bavin.

MENS-plaisirs, Fr. privy purse.

MENU-peuple, *Fr.* the vulgar or common people.

MENU-grains, *Fr.* oats, barley, pease, vetch, &c.

MENU-monnaie, *Fr.* copper-money; such as penny and halfpenny pieces, &c.

MENUISÉ, *Fr.* small shot.

MENUISERIE, *Fr.* joinery; the putting together different pieces of wood.

MENUISERIE d'assemblage, *Fr.* all sort of carpentry work which is put together; such as wainscot, ceiling, doors, &c.

MÉPLAT, *Fr.* a term applied particularly to any piece of wood which has more breadth than depth, as a panel-square, a platform, &c.

MÉR, *Fr.* the sea.

Haute MÉR, *Fr.* the main; the deep.

En pleine MÉR, *Fr.* out at sea.

Bras de MÉR, *Fr.* a bay; gulph; arm of the sea.

MERCY, (*merci*, *Fr.*) willingness to save; clemency; power of acting at pleasure. The French say *être à la merci de l'ennemi*, to be at the mercy of the enemy.

MERDE de fer, *Fr.* the dross of iron. *Merde* means, literally, excrement. The French say familiarly, *lutter contre la merde*, to struggle against an excrement; i. e. to engage with a low fellow.

MERIAU, *Ind.* a deduction or abatement is so called in India.

MÉRIT, desert, excellence, deserving honour or reward.

MÉRIT, *Order of*, a military distinction given to officers or soldiers, for some signal service: the badge of which is generally expressive of the service.—Such was the medal, or order of merit, presented by the Emperor of Germany to the officers of the 15th light dragoons, for their unexampled bravery in the affair of *Villers en Couché*, in 1794. See **ORDERS**.

MÉRKIN, a mop to clean cannon; any thing rough or frizzled.

MÉRLEF, *Fr.* a battlement.

MÉRLIN, handspike.

MÉRLON, *Fr.* the space of the parapet between two embrasures.

MÉRODEURS. See **MARAUD**.

MÉRRAIN, *Fr.* ship timber.

MÉSAULE, *Fr.* an entry; a lobby; a passage.

MÉSINTELLIGENCE, *Fr.* misunderstanding; also false information.

MÉSIRE, *Fr.* disease of the liver. See **LIVER**.

MESSAGERIE, *Fr.* post-house; it also signifies a public coach, or land conveyance, so called in France. During the old monarchy it was termed *Messagerie Royale*; during the revolution, *Messagerie Nationale*; and during the reign of Bonaparte, *Messagerie Impériale*. It resumed its old name of *Massagerie Royale* at the restoration of Louis XVIII.

MESS, (*mes*, *Fr.*) a sort of ordinary where officers eat and drink together, at a regulated price.

Blue-MESS. The mess of the royal horse guards is so called.

Guard-MESS. The table which was kept by his Majesty for the officers of the life and foot guards in St. James's palace. It is now abolished.

To MESS, to feed, to eat. The French say: *être de plat*. The principal military mess in Great Britain was an exception to this rule, being kept and provided for in the extraordinaries of the army, at the Horse Guards. This mess consisted of the field officers in waiting of the life and foot guards, officers on the king's life and king's foot guards; officer of the queen's guard, and tilt picket, and adjutant of the battalion of foot guards that mounts. The colonel of the foot guards was allowed to invite three visitors. There were likewise two breakfasts provided every morning, one for the guard coming on, and one for the guard going off, together with a supper every night. The expense was about nine thousand pounds sterling per annum. Among other reductions, the abolition of this extravagant and unmeaning table, is not the least worthy of the plans of economy which have been adopted by government in 1816.

Mess-Mate, one who eats at the same table. The French say, *commensal*.

MESSENGER, (*messenger*, *Fr.*) one who carries an errand; one who brings an account, or foretoken of any thing.

MESSENGERS (of state) are officers under the direction of the secretaries of state, of whom there are 20 always in waiting, who are relieved monthly, and distributed in the following manner: four at court, five at each secretary's office, two at the third office for North Britain, three at the council office, and one at the lord chamberlain's office; who attend, and are always in readiness to be sent with dispatches, either domestic or foreign; to apprehend persons accused or suspected of high trea-

son, or other offences against the state, being empowered by warrant from the secretaries: for the safe keeping of which, their houses are made a sort of confinement or prison; and for the maintenance of the prisoners they have a certain allowance from government. over and above what is required from the prisoner himself. The number has been increased since 1795.

Military MESSENGERS, a class superior to orderly men, consisting of confidential persons that are sent to and from head quarters, &c.

MESTRAL, *Fr.* from the Italian *Mæstrale*, the north west wind.

MESTRE de camp, *Fr.* the commanding officer of a regiment of cavalry was so called in the old French service. He was distinguished by this appellation on account of there being a colonel-general in the cavalry. The duty of a *Mestre de camp* was principally confined to the following heads:—To see that the troops or companies were kept complete, that the arms were in good state and condition, the horses of a proper size, sound and well trained. He had likewise the direction of the different guards, &c.

MESTRE de camp général, *Fr.* the next officer in rank, in the old French cavalry service, to the colonel-general. This appointment was created under Henry II. in 1552.

MESTRE de camp général des dragons, *Fr.* an appointment which first took place under Louis XIV. in 1684.

MESURER son épée avec quelqu'un, *Fr.* to fight a duel, or single combat.

Se MESURER avec quelqu'un, *Fr.* to compare one-self, or to enter into competition with another; to struggle against him. This figurative phrase is taken in two senses, viz. to vie with a superior, or to contend against an inferior. In either case, the motive and the action must constitute the praise or blame. Thus an individual of unimpeached integrity, &c. would be disgraced were he to measure himself with a common swindler, a low money scrivener, calling himself a solicitor, or a trafficking lamponer.

MESURES à poudre, *Fr.* tin cases or vessels used in the artillery to measure out gunpowder, according to the size of the caliber of each piece of ordnance. See Powder MEASURES.

Over-METAL, (in gunnery).—When

the mouth of a piece of ordnance, in disparting it, lies higher than the breech, it is then said to be *laid over metal*.

Under-METAL, (in gunnery) is when the mouth of a piece of ordnance lies lower than her breech.

Right with METAL, (in gunnery.) When a piece of ordnance lies truly level, point blank, or right with the mark, she is said to lie *right with her metal*.

Superficies of METALS, (in gunnery,) the surface, or outside of a gun.

METATORES, among the ancient Romans, were officers whose duties corresponded with those of the quartermaster-general's department in modern armies.

MÉTIER, *Fr.* means, literally, any calling or business. In a military sense, it is peculiarly applicable to those nations which keep up large standing armies, and make war their principal object and pursuit. In speaking of military matters, it is common among the French to say—*Guerre sur terre est notre métier; Guerre sur mer est le métier des Anglais*.—The land service is our peculiar business or calling. Late events, particularly in the Peninsula and at Waterloo, have proved that Englishmen, properly commanded, are as invincible by land, as they are known to be by sea.

Chevalier Folard gives the following definition relative to the question which is often discussed on the subject of war, namely, whether war be a trade or a science? (The English call it a profession.) Folard, however, distinguishes it in this manner:—*La Guerre est un métier pour les ignorans, et une science pour les habiles gens*. War, in the apprehension, and under the management of ignorant persons, is certainly a mere trade or business; but among able men, it becomes an important branch of science.

Faire MÉTIER de sa loyauté, *Fr.* to make a trade of one's loyalty.

MÉTIER de Maréchal ferrant, *Fr.* See FARRIERY.

MÉTIVES, *Fr.* harvest time.

MÉTIVIER, *Fr.* a reaper.

METOPE, (*métope*, *Fr.*) N. Bailey writes this word *metopa*, from the Greek *μετωπα*, a space or interval between every triglyph in the frieze of the Doric order, which, among the ancients used to be adorned with the heads of beasts, basins, vases, and other instruments used in sacrificing; also the space between the mortice holes of rafters and planks.

METTLE, (*bravoure, fougue, Fr.*) courage, spirit, vivacity: hence *a man of mettle*, or one who has blood to his finger ends.

METTLESOME, full of vivacity; full of spirit.

METTRE à la main, Fr. to grasp or take hold of any thing.

METTRE l'épée à la main, Fr. to draw swords. *Ils mirent l'épée à la main*, a figurative expression, signifying, they took their ground, and stood prepared to fight.

METTRE les armes à la main de quelqu'un, Fr. to teach a person the first rudiments of war, or lead him for the first time into action. *C'est lui qui m'a mis les armes à la main*. He first taught me how to fight, or I fought the first campaign under his orders.

METTRE aux arrêts, Fr. to put under arrest.

METTRE sur pied, Fr. to arm, to equip, to put troops upon an established footing.

MEURTRIÈRES, Fr. small loop holes, sufficiently large to admit the barrel of a rifle gun or musket, through which soldiers may fire, under cover, against an enemy. They likewise mean the cavities that are made in the walls of a fortified town or place. See *Murdresses*.

MICHIÉ. See *Malingerer*.

La Saint MICHEL, Fr. Michaelmas.

MICROMETER, (*micromètre, Fr.*) an instrument contrived to measure small spaces, as in the divisions of the worm of a screw.

MIDI, Fr. the south; one of the four cardinal points. It is always looked for at the bottom of a map, and is opposite to the north.

MILE, (*mille, Fr.*) the usual measure of roads in England, 1760 yards.

MILE, in *geography*, is of different extent in different countries. The geometrical mile contains 1000 geometrical paces, or *mille passus*, from which miles are denominated.

We shall here give a table of the miles in use among the principal nations of Europe, in geometrical paces, 60,000 of which make a degree of the equator.

Geometrical paces.

Mile of Russia	-	-	750
— Italy	-	-	1000
— England	-	-	1200
— Scotland and Ireland	-	-	1500
The old league of France	-	-	1500

The small league of France 2000

The great ditto - - 3000

Mile of Poland - - 3000

— Spain and Portugal 3428

— Germany - - 4000

— Sweden - - 5000

— Denmark - - 5010

— Hungary - - 6000

— Holland - - 3500

MILESTONE, (*colonne milliaire, Fr.*) a stone set to mark the miles.

MILICE, Fr. soldiery, but more particularly the militia or trained bands.

MILICES gardes côtes, Fr. a militia, somewhat similar to our sea-fencibles, which existed during the old French government, and whose services were confined to the coast. Every province, contiguous to the sea, was obliged to furnish a certain proportion of its male inhabitants, from 16 to 60 years old. This militia was exempted from the regulations which governed the land militia. It was under the admiralty.

MILITAIRE, Fr. a term used among the French, to signify any individual who bears arms for his country, or belongs to the profession: hence *un bon militaire*, a good and experienced officer or soldier.

MILITANT, the state of warfare, or business of war.

MILITAR, } something belonging
MILITARY, } to the soldiery or militia, &c.

MILITARY-fever, in a figurative sense, an overweening fondness for the outward appendages of a soldier, familiarly called in England, the *scarlet fever*.

MILITARY-fever, a kind of malignant fever, frequent in armies, by reason of the bad food, &c. of the soldiery. According to Dr. Pringle, this fever is most prevalent at the latter end of August, when the days are hot, and the nights cold; especially in low countries.

MILITARY architecture, the same with fortification. See *fortification*.

MILITARY ways, the large Roman roads which Agrippa procured to be made through the empire in the reign of Augustus for the marching of troops and conveying of carriages. They were paved from the gates of Rome to the utmost limits of the empire: most of the roads in France are of this description.

MILITARY discipline. Next to the forming of troops, military discipline is the first object that presents itself to

our notice: it is the soul of all armies; and unless it be established amongst them with great prudence, and supported with unshaken resolution, soldiers become a contemptible rabble, and are more dangerous to the very state that maintains them, than even its declared enemies. See DISCIPLINE.

MILITARY execution, the ravaging or destroying of a country or town that refuses to pay the contribution laid upon the inhabitants. Also the punishment inflicted by the sentence of a court-martial.

MILITARY first principles consist in the bodily training of a soldier, to make him hardy, robust, and capable of preserving health, amidst fatigue, bad weather, and change of climate; to march at such a pace, and for such a length of time, and with such a burden, as without training he would not be able to do.

MILITARY REGULATIONS, the rules and regulations by which the discipline, formations, field exercise, and movements of the whole army are directed to be observed in one uniform system.

MILITES adscriptitii, supernumerary men that followed the Roman armies, for the purpose of filling up any vacancies which might occur through death or sickness. No particular duties were exacted from them, except that of marching in front of the troops, in order to annoy the enemy with their cross-bows.

MILITES causarii, among the Romans, soldiers who were discharged on account of sickness and inability to serve, or from some other cause.

MILITES consummati, soldiers among the Romans, who had served their prescribed period. They were also called *Emeriti*.

MILITES mercenarii, auxiliary troops, or soldiers, who were hired by the Romans in time of war. Hence men hired to fight are called mercenaries.

MILITES provinciales, troops which composed the Roman legions, and consisted wholly of Roman citizens. The auxiliary troops were originally drawn out of the Italian provinces, that were in alliance with Rome; and when they afterwards became Roman citizens, soldiers were enlisted and paid from other countries. Thus, before Barbary fell under the Roman yoke, large levies were obtained from that quarter of the globe.

MILITES stationarii, bodies of armed

men, among the Romans, who were distributed through the empire, in order to check disorders, prevent plunder, and to escort the guilty to the tribunals of justice.

MILITES subitarii, troops raised upon emergency, especially on the breaking out of unexpected hostilities. On these occasions, men of all ages were obliged to enrol themselves.

MILITES urbani, a class of Roman soldiers, or rather an armed portion of the inhabitants of Rome, which remained in the capital, without any particular mark of distinction among themselves, in order to protect it during the absence of the regular troops, on the sudden commencement of hostilities. During the reign of the emperors, these men became the janissaries of Rome; for they insensibly grew into so much importance, that they yielded in rank and consideration, as a body, to the Prætorian bands only. They had regular camps in the city, which were called *castra urbana*. They were in high favour with the Emperors, and generally shared a large proportion of the legacies which were left by the former in their wills. The privates received half the pay and subsistence which were allowed the prætorian bands; enjoyed exclusive privileges, and could only be commanded by the Præfect of Rome.

The French, in imitation of the Romans, have called the different bodies of armed men belonging to the several towns and districts, *Troupes urbaines*, urban troops.

MILITIA, a force whose services, in general, do not exceed the boundaries of its native land, but which may volunteer beyond them. In this case, as far at least as regards the British militia, the extension of service must have the sanction of parliament. The militia, among the Romans, was frequently called *Agrarian soldiers*. With respect to the native spirit and perseverance of the national troops of this country, (by national troops we mean the militia as established by law,) it will not be thought superfluous to give the following account of their behaviour at the Norman conquest:— In page 74 of Entick's History and Survey of London, Westminster, &c. it is recorded, that in 1066 the Danes, who had entered the Humber, and laid siege to York, were entirely routed by King Harold, and forced to return with great

loss to Denmark. It was otherwise with the Duke of Normandy; for Harold, in opposing him, fell amongst the slain in the field of battle, and in the midst of the London and Middlesex militia, which had the honour of being commanded by himself in person, and his brother, and received the Normans with such resolution and courage, that they were at the point of retreating, had not William, whose crown now lay at stake, both performed the part of a leader bravely, and restrained them with his presence and authority; and, at last, an unfortunate dart was shot through Harold's left eye into his brain, by which he fell off his horse, and was slain under his own standard, with 67,974 English soldiers, upon a Saturday, on the 14th of October, about seven miles from Hastings, in Sussex.

For the direction and command of the militia, the king constitutes lords-lieutenant of each county. The militia, when called out in time of war, are subject to the same regulations as to discipline and pay, that govern the infantry of the line, and are under the orders of the commander in chief.

In the time of Charles the Second, the militia were exercised four times a year, in their respective districts, and once a year in battalion. Some time after, the appointed time for their exercise and discipline was eight days in the course of the year, in companies, and four in camp. It was afterwards ordered by Act of Parliament, that the militia should be exercised twice a year for the space of fourteen days each time. After the American war, no provision was made for the training and disciplining the militia, for a considerable time; and when government began to turn its attention to this important national concern, it was considered, on account of the effects produced by a long and expensive war, as proper to attend to the strictest economy. According to this principle, only two-thirds of the militia were called out, for the purpose of discipline, in the course of the year. The militia having been increased from 50 to 40,000 men, it appeared proper to government, that the whole should be exercised once a year, for twenty-one days instead of twenty-eight; by which regulation, a saving was made of seven days' pay of officers and men. It was subsequently thought that it was not very advisable to attend par-

ticularly to economy, in a matter of such importance to the nation, and it was on that account, that Mr. York, the secretary at war, on the 12th of February, 1803, made a motion to have the militia drawn out for twenty-eight days instead of twenty-one. The whole expense of training the militia was, at that period, 200,000*l.* and the additional charges would not exceed the sum of 18,000*l.*

Supplementary MILITIA, an auxiliary body of men, which was raised in 1798, for the defence of Great Britain. See Act of the 20th of February, to enable the King to order out a certain proportion of the supplementary militia, and to provide for the augmentation of the militia, by incorporating the supplementary militia therewith.

Local MILITIA, another species of auxiliary troops, established in 1809, for the purpose of rendering the male population of the several counties more effective than the volunteer system had proved to be. The county of Middlesex, for reasons best known to the government, has been exempted from this requisition. Lord Castlereagh's bill is referred to for further explanation.—During the late war the militia proved a nursery to the line.

MILL, (*moulin*, Fr.) properly denotes a machine for grinding corn, &c. but more generally all such machines whose action depends upon a circular motion. There are various kinds, though foreign to this work.

Gun-powder MILL, (*moulin à poudre*, Fr.) is that used for pounding and beating together the ingredients of which gunpowder is composed.

These ingredients being duly proportioned, and put into the mortars of the mills, which are hollow pieces of wood, each capable of holding 20 pounds of paste, are incorporated by means of the pestle and spindle. There are 24 mortars in each mill, where are made each day 480 pounds of gunpowder, care being taken to sprinkle the ingredients in the mortars with water, from time to time, lest they should take fire. The pestle is a piece of wood 10 feet high, and 4½ inches broad, armed at bottom with a round piece of metal. It weighs about 60 pounds.

MIM BASHY, *Ind.* a commander of one thousand horse.

MIND, (*esprit*, *ame*, Fr.) the reason, or rational part of the soul.

Military MIND, (*esprit, génie militaire*, Fr.) By this phrase we mean that uncommon constitution of mind, which is peculiar to great generals alone, which once animated the breasts of CÆSAR and of HANNIBAL in ancient, and of TURENNE, MONTECUCULI, WELLINGTON, BLUCHER, and BONAPARTE, in modern times. Great occasions may call it into action, experience may improve it; but, like the poet's fire, it is the boon of nature, the chosen gift of God to the elect. An attention to minute details, when confined within just limits, may not only be laudable, but necessary. However, the verse of the *Henriade*, *Tel brille au second rang qui s'éclipse au premier*, applies with more force to the army than to any other profession, or to any other human pursuit. He that is great on the parade, may be little in the field; he that can draw on the sources of his memory, and cause to be performed with exactness, manœuvres which he has gotten by heart like a school boy, may be entirely deficient in that quickness of intellect, and that vigour of mind, which can alone enable an officer to execute military movements, in the presence of an enemy, and under all the varying circumstances of actual warfare. The mere drill never formed a general. To be such, God, in the bounty of his providence, must have caused him to have been born a great man. On the contrary, the pursuits of little objects must narrow and shackle the mind.—Those habits which ensure mediocrity will, almost always, preclude excellence. The boy who can form a Latin verse is not therefore a poet. A special pleader is not a Somers, or a Clarendon; nor is a good adjutant a great general. There is hardly any man so humbly gifted, that with sufficient application cannot become the former. To constitute the latter, requires the assemblage of some of the noblest attributes of our nature: that power of mind, that grasp of thought, which seizes almost every thing, as if by intuition; which thinks, decides and acts, in the same moment; which forms the best possible judgment in the shortest possible time; which is not only cool and collected, but is roused and excited by danger; must all be united to adorn the character of a great general. Add to these qualities, great powers of discrimination, a constant attention to the study

of the higher branches of his profession, an anxious imitation of the great models which antiquity and modern times afford, and, above all, the possession of that military imagination, of which the king of Prussia speaks in his instructions to his generals, and without which there can be no real excellence, or superiority. You, who are conscious that you are thus endowed, may, with firm and assured step, approach the sanctuary; view, with the eye of anticipated hope, your niche in the Temple of Fame, saying, with Correggio—*Anche io son pittore*.

MINE, Fr. countenance, appearance, or look, disposition, &c. The French use this term in a variety of ways.

Bonne MINE, Fr. a good countenance, well looking.—*Avoir bonne mine*, to have seeming good dispositions.

Mauvaise MINE, Fr. a bad countenance, or ill-looking.—*Avoir mauvaise mine*, to have seeming bad dispositions.

Faire bonne, ou mauvaise MINE, Fr. to look pleasantly, or unpleasantly at another.

La MINE guerrière, Fr. a warlike look.

La MINE d'homme de guerre, Fr. the look of a military man.

MINE, (*mine*, Fr.) a subterraneous passage dug under the wall, or rampart, of a fortification, for the purpose of blowing it up by gunpowder.

Counter-MINES are those made by the besieged, whereas mines are generally made by the besiegers. Both mines and counter-mines are made in the same manner, and for the like purposes, viz. to blow up their enemies and their works; only the principal galleries and mines of the besieged are usually made before the town is besieged, and frequently at the same time the fortification is built, to save expense.

Definitions of MINES. A mine is a subterraneous cavity made according to the rules of art, in which a certain quantity of powder is lodged, which by its explosion blows up the earth above it.

It has been found by experiments, that the figure produced by the explosion is a *paraboloid*, and that the center of the powder, or charge, occupies the *focus*.

The place where the powder is lodged is called the *chamber* of the mine, or *fourneau*.

The passage leading to the powder is called the *gallery*.

The line drawn from the center of the chamber, perpendicular to the nearest

surface of the ground, is called the line of least resistance.

The pit, or hole, made by springing the mine, is called the *excavation*.

The fire is communicated to the mine by a pipe, or hose, made of coarse cloth, whose diameter is about $1\frac{1}{2}$ inch, called a *saucisson*, (for the filling of which near half a pound of powder is allowed to every foot,) extending from the chamber to the entrance of the gallery, to the end of which is fixed a match, that the miner who sets fire to it may have time to retire before it reaches the chamber.

To prevent the powder from contracting any dampness, the saucisson is laid in a small trough, called an *auge*, made of boards, three inches and a half broad, joined together lengthwise, with straw in it, and round the saucisson, with a wooden cover nailed upon it.

Foyer, Fr. *Focus*, or center of the chamber. Some authors call the end of the saucisson that comes within the work, and which is to be set fire to, the *foyer*, or *focus*; but by most people, this is generally understood to be the center of the chamber.

Galleries and chambers of MINES. Galleries made within the fortification, before the place is attacked, and from which several branches are carried to different places, are generally 4 or $4\frac{1}{2}$ feet wide, and 5 or $5\frac{1}{2}$ feet high. The earth is supported from falling in by arches and walls, as they are to remain for a considerable time; but when mines

are made to be used in a short time, then the galleries are but 3 or $3\frac{1}{2}$ feet wide, and five feet high, and the earth is supported by wooden frames, or props.

The gallery being carried on to the place where the powder is to be lodged, the miners make the chamber. This is generally of a cubical form, large enough to hold the wooden box, which contains the powder necessary for the charge: the box is lined with straw and sand-bags, to prevent the powder from contracting dampness.

The chamber is sunk something lower than the gallery, if the soil permits; but where water is to be apprehended, it must be made higher than the gallery; otherwise the besieged will let in the water, and spoil the mine.

Quantities of powder to charge MINES. Before any calculation can be made of the proper charge for a mine, the density and tenacity of the soil in which it is to be made must be ascertained, either by experiment, or otherwise, for, in soils of the same density, that which has the greatest tenacity, will require the greatest force to separate its parts. The density is determined by weighing a cubic foot (or any certain quantity) of the soil; but the tenacity can only be determined by making a mine. The following table contains experiments in six different soils, which may be of some assistance to form a judgment of the nature of the soil, when an actual experiment cannot be had.

Nature of the Soil.	Density.	Tenacity.
	Weight of 1 cubic foot.	Quantity of powder to raise 1 cub. fathom.
1. Loose earth or sand.	95 pds.	8 pds.
2. Common light soil	124	10
3. Loam or strong soil	127	$12\frac{1}{4}$
4. Potter's clay, or stiff soil	135	$13\frac{1}{2}$
5. Clay, mixed with stones	160	16
6. Masonry	205	$21\frac{1}{2}$

All the requisites in mining may be determined by the following problems, which admit of four cases; for any three of the articles below being given, the fourth may thence be found.

1. The nature of the soil.
2. The diameter of the excavation.
3. The line of least resistance.
4. The charge.

PROBLEM I.

Given the nature of the soil, the diameter of the excavation, and the line of least resistance, to find the charge.

RULES.

1. To the square of the diameter of the excavation, add the square of double the line of least resistance, and reserve the said sum.

2. Multiply the square root of the reserved sum by double the line of least resistance, and subtract the product from the same sum.

3. Multiply half the remainder by the line of least resistance, and 1.57 times the product, will give the solidity of the excavation.

4. The charge will then be determined from the nature of the soil, as in the following example.

EXAMPLE I.

It is required to make a mine in the second sort of soil, mentioned in the foregoing experiments, which shall have a line of least resistance of 10 feet, and the diameter of its excavation 20 feet; what will be the proper charge?

The nature of this soil, by the table, requires ten pounds of powder to 216 cubic feet.

CALCULATION.

1. The diameter of the excavation is 20, and its square	400
Double the line of least resistance is 20, and its square	400

Therefore the sum to be reserved is 800

2. The square root of 800 is 28.3	}	566
Double the line of least resistance is 20		

Which leaves the remainder 234

3. Half the remainder is	117
Which multiplied by the line of least resistance	10

Gives the product 1170

Which multiplied by 1.57

Gives the solidity of the excavation 1836.9 feet

<i>feet.</i>	<i>lb.</i>	<i>feet.</i>	<i>lb.</i>
4. If 216	: 10	: 1836.9	: 85
which is the charge required.			

By Logarithms.

1. Diam. of excavation is = 20	1.301030
Diameter squared is	2.602060
Double the line of least resistance is = 20 and its square	400

The sum to be reserved is 2.903090 800

2. Square root of sum is 28.3	- - - 1.451545
Double the line of least resistance is = 20	1.301030

Product to be subtracted is	- - - 2.752575	566

Remainder is - 2.369216 234

Line of least resist. = 10 1.000000

10 pounds of powder 1.000000

To 216 cubic feet, *compl.*

arith. - - - 7.665546

To which add. the *const.*

log. - - - 9.894870

And the sum is the logarithm charge required - - - 1.929632 = 85lb.

PROBLEM II.

Given the nature of the soil, the line of least resistance, and the charge, to find the diameter of the excavation.

RULES.

1. Find the solidity of the earth to be raised, by a proportion from the nature of the soil, and multiply it by 1.97.— Divide the product by the line of least resistance, and to the quotient add the square of the line of least resistance: reserve the sum.

2. Multiply the same root of the sum reserved by twice the line of least resistance, and add the product to the said sum, and from the result subtract three times the square of the line of least resistance: so will the square root of the remainder be the diameter of the required excavation.

EXAMPLE I.

Let a mine be charged with 100 pounds of powder, in a soil which requires eleven pounds of powder to raise

216 cubic feet, and let its line of least resistance be ten feet: what will be the diameter of the excavation?

By the nature of the soil 11lb.: 216 feet: : 100lb.: 1964 feet, which is the solidity of the earth to be raised.

1. Therefore multiply - - 1694
By - - - - - 1.27

The product is - - - 2491.28

Which divided by the line of least resistance, 10, is - 249.428

To which add the square of the line of least resistance - 100.000

And the sum to be reserved is 349.428

2. The square root of 349.428 is 18.7, which multiplied by twice the line of least resistance, 20, gives - - 374.

This added to the sum reserved gives - - - 723.428

From which subtract 3 times the square of least resistance 300.

And there will remain - 423.428

The square root of which is, 20.5 feet, being the required diameter of the excavation.

By Logarithms.

	Numb.	Logar.	Numb.
Cubic feet = 216		2.334454	
Powder 11lb. <i>co. ar.</i>		8.953607	
Charge = 100		2.000000	
Line of least resist. 10,			
<i>co. ar.</i>		9.000000	
Constant logarithm		0.103804	
		<hr/>	
		2.396865	249.4

To which add the square of line of least resistance - - - 100.0

Sum to be reserved is 2.543323 349.4

Half of which logar. 1.271661

Twice line of least resistance, 20, - 1,301030

Product to be added is 2.572691 373.8

The result is - - - 723.2

From which subtract thrice the square of

the line of least resistance - - - 300.0

And there remains 2.626546 423.2
Half of which logar. is 1.313273 20.57
feet, the diameter of the excavation required.

Loading and stopping of MINES.—

The gallery and chamber being ready to be loaded, a strong box of wood is made of the size and figure of the chamber, being about 1-3d, or 1-4th bigger than is required for containing the necessary quantity of powder: against the sides and bottom of the box is put some straw, and this straw is covered over with empty sand bags, to prevent the powder from contracting any dampness: a hole is made in the side next the gallery, near the bottom, for the saucisson to pass through, which is fixed to the middle of the bottom, by means of a wooden peg, to prevent its loosening from the powder: or to hinder the enemy (if he should reach the entrance) from being able to tear it out. This done, the powder is brought in sand bags, and thrown loosely in the box, and covered also with straw and sand bags; upon this is put the cover of the box, pressed down very tight with strong props; and, to render them more secure, planks are also put above them; against the earth, and wedged in as fast as possible.

This done, the vacant spaces between the props are filled up with stones and dung, and rammed in the strongest manner: the least neglect in this work will considerably alter the effect of the mine.

Then the auget is laid from the chamber to the entrance of the gallery, with some straw at the bottom; and the saucisson laid in it, with straw over it: lastly, it must be shut with a wooden cover nailed upon it. Great care must be taken, in stopping up the gallery, not to press too hard upon the auget, for fear of spoiling the saucisson, which may hinder the powder from taking fire, and so prevent the mine from springing. The gallery is stopped up with stones, earth, and dung, well rammed, six or seven feet further from the chamber than the length of the line of least resistance.

Globe of compression in MINES, from Belidor. If you imagine a large globe

of earth homogeneous in all its parts, and a certain quantity of powder lodged in its center, so as to produce a proper effect without hursting the globe; by setting fire to the powder, it is evident that the explosion will act all round, to overcome the obstacles which oppose its motion; and as the particles of the earth are porous, they will compress each other in proportion as the flame increases and the capacity of the chamber increases likewise: but the particles of earth next to the chamber will communicate a part of their motion to those next to them, and those to their neighbours; and this communication will thus continue in a decreasing proportion, till the whole force of explosion is entirely spent; and the particles of earth beyond this term will remain in the same state as they were at first. The particles of earth that have been acted upon by the force of explosion will compose a globe, which Mr. Belidor calls the globe of *compression*.

Fougasses are a sort of small mines, frequently made before the weakest parts of a fortification, as the salient angles and faces, not defended by a cross fire.

Trefle MINES are mines with two chambers only.

T-MINES, so called from their great resemblance to that letter. They are double mines, having four lodgments.

Double T-MINES have eight lodgments, and four doors.

Triple T-MINES have twelve lodgments, and six doors.

Double Trefle MINES have four lodgments, and eight doors.

Triple Trefle MINES have six lodgments, and twelve doors.

Faire jouer une MINE, Fr. to spring a mine.

MINE sans cervelle, Fr. literally signifies a mine without brains. This expression is used among miners to describe any unthankful piece of ground, which has no consistency within itself, either at the top of the gallery, or on its sides, and is rendered firm by various expedients.

Eventer la MINE, Fr. to spring a mine. When used figuratively, this expression signifies to discover a plot, or make it known. It likewise serves to express the failure of any expedition or undertaking.

MINER, Fr. to undermine.

MINERS, (*mineurs*, Fr.) are generally soldiers: most of the foreign regiments of artillery have each a company of miners, commanded by a captain and two lieutenants. When the miners are at work in the mines, they wear a kind of hood to keep the earth that falls, out of their eyes. In the English service the artificers are ordered for that purpose.

MINERVA, (*Minerve*, Fr.) according to the heathen mythology, the goddess of wisdom, of war, and of the arts; she was also looked upon as the goddess of peace. She is generally represented with a helmet on her head, a shield on her arm, and a lance and an olive branch in her hand; several mathematical instruments, and the figure of an owl near her, as the emblem of wisdom.

MINING, in military affairs, is the art of blowing up any part of a fortification, building, &c. by gunpowder.—The art of *mining* requires a perfect knowledge both of fortification and geometry; and by these previous helps, the engineer may be qualified to ascertain correctly the nature of all manner of heights, depths, breadths, and thicknesses; to judge perfectly of slopes and perpendiculars, whether they be such as are parallel to the horizon, or such as are visual; together with the true levels of all kinds of earth. To which must be added, a consummate skill in the quality of rocks, earths, masonry, and sands; the whole accompanied with a thorough knowledge of the strength of all sorts of gunpowder.

Mining is become one of the most essential parts of the attack and defence of places: so much artillery is used, that nothing above ground can withstand its effects; the most substantial ramparts and parapets can resist but a short time; the outworks, though numerous, serve only to retard, for a time, the surrender of the place.

We are told in history, that mines were made long before the invention of gunpowder; for the ancients made galleries or under-ground passages, much in the same way as the moderns, from without, under the walls of the places, which they cut off from the foundation, and supported them with strong props: then they filled the intervals with all manner of combustibles, which being set on fire burnt their props, and the wall being no longer supported, fell, whereby a breach was made.

The besieged also made under-ground passages, from the town, under the besieger's machines, by which they battered the walls, to destroy them; which proves that necessity has been the inventress of mines, as well as of other useful arts.

The first mines, since the invention of gunpowder, were made in 1487, by the Genoese, at the attack of Serezanella, a town in Florence; but these failing they were for some time neglected, till Peter Navarro, being then engineer to the Genoese, and afterwards to the Spaniards in 1503, against the French, at the siege of the castle del Ovo, at Naples, made a mine under the wall, and blew it up; in consequence of which, the castle was taken by storm.

Mr. Valliers relates the same story, but differs in the name of the engineer: he says it was Francis George, an Italian, who serving at Naples in quality of architect, proposed to Peter Navarro, the Spanish governor, to take this castle by mining.

Names of Articles used in MINING.

Auget, a kind of small trough, made of strong inch boards, about 4 inches square, in which the saucisson is laid in straw, to prevent the powder from contracting any dampness.

Chamber, the place where the powder is lodged, being first put in cubical boxes made for that purpose.

Excavation, } the pit or hole made by
Entonnoir, } a mine when sprung.

Focus, the center of the chamber where the powder is lodged.

Fougasse, a kind of small mine.

Fourneau. See CHAMBER.

Miners Tools are augers of several sorts, levers of different sorts, needles for working in rocks, rakes, spades, shovels, wheel-barrows, sledge-hammers, masons' hammers, pick-axes, picks, mat-tocks, chissels, plummets, rules, a miner's dial, &c.

Line of least resistance is a line drawn from the center of the space containing the powder, perpendicular to the nearest surface.

Gallery, the passage leading to the powder.

Saucisson, a pipe or hose made of coarse cloth, whose diameter is about an inch, and filled with gunpowder; then laid in the trough or auget, which extends from the chamber to the entrance of the gallery, that the miner who sets

fire to it, may have time to retire before it reaches to the chamber.

MINIÈRE, *Fr.* a mine.

MINION, a piece of ordnance, of which there are two kinds, the large and ordinary; the large minion has its bore $3\frac{1}{2}$ inches diameter, and is 1000 pounds weight; its load is $3\frac{1}{2}$ pounds of powder; its shot three inches in diameter, and $3\frac{1}{2}$ pounds weight; its length is eight feet, and its level range 125 paces. The ordinary minion is three inches diameter in the bore, and weighs about 800 pounds weight: it is seven feet long, its load $2\frac{1}{2}$ pounds of powder, its shot near three inches in diameter, and weighs three pounds four ounces, and shoots point blank 120 paces. There is not at present any piece of ordnance thus termed in the British service.

MINISCULE, *Fr.* a small letter.

MINISTER, according to Johnson, is one who acts not by any inherent authority of his own, but under another. Thus in England, all ministers act under a supreme authority, which is vested in the King, Lords, and Commons, to whom they are responsible. In military matters, there is not only a war minister, but a secretary at war, who likewise acts conjointly with the secretary of state. All dispatches and papers of consequence, relating to the army, must first pass through the secretary of state, and the war minister, before they are laid before Parliament, or otherwise acted upon by the secretary at war.—The common arrangements of corps, directions with respect to marching, &c. are transmitted to the secretary at war, and to the quarter-master-general's office, without previously passing through the secretary of state, or war minister.

MINISTER of War, or war minister, a department created during the revolutionary war in France, and filled by one of the principal secretaries of state.

MINISTRE de la Guerre, *Fr.* minister of the war department. The appointment of minister and secretary at war, among the French, first took place in the reign of Henry the Second in 1549.

MINUTE, a hasty sketch taken of any thing in writing. Hence minutes of a general, or regimental court-martial.

MINUTES of council in the military department, the notification of orders and regulations, which are directed to be observed by the army in India, is so called. These minutes receive the

sanction of the governor-general in council, and are the result of previous communications from the Hon. Court of Directors in Europe. They answer to the French word *résultat*, which was prefixed to all orders and regulations that were occasionally issued by the military boards, or *conseils de guerre*, for the government of the army. The term *jugement d'un conseil de guerre*, corresponded with our minutes of a general, or regimental court-martial, and expressed not only the minutes, but the sentence of the court.

MINUTE, the 60th part of each degree of a circle; and in computation of time, the 60th part of an hour.

MINUTE, in architecture, the 60th part of a measure, called a module. In the Doric order, where the module is half the diameter of the body of the column below, it is the 30th part of that measure.

La MINUTE, *Fr.* the original of a sentence, or decree.

MINUTER, *Fr.* to make a rough draught; to propose; to put down in small writing.

MIOPE, *Fr.* short-sighted; purblind.

MIQUELETS, *Fr.* a banditti that infest the Pyrenean mountains, and are extremely obnoxious to travellers.

The MIQUELETS are armed with pistols in their waist-belts, and an arquebuss, and a dagger at their side. These men are frequently employed by the Spaniards in time of war; but their service is confined to the mountains, which they climb with wonderful agility.

MIQUELETTI, a small body of mountain fusileers, belonging to the Neapolitan army.

MIRE, *Fr.* in the French artillery, a piece of wood, about four inches thick, one foot high, and two feet and a half long, which is used in pointing cannon.

Coins de MIRE, *Fr.* wedges made of wood, which serve to raise, or depress, any piece of ordnance. They are likewise used for the same purpose in mortars.

MIRLITON, *Fr.* an old French Louis d'or.

MIRZA, *Ind* Sir, Lord, Master.

MIRZAS, princes of the blood royal in Mogul.

MISAPPLICATION, application to a wrong purpose. By the Articles of War, every army agent who shall retain one shilling from an officer's pay or sub-

sistence, or shall misapply the same, is liable to a fine of 100l. for every offence, and to be rendered incapable of acting in that capacity.

To MISBEHAVE, in a military sense, to act in any manner unbecoming the character of an officer, or soldier.

MISBEHAVIOUR *before the enemy*, want of proper conduct, or personal resolution, when on duty, and in actual service. Every officer, who shall be convicted of either, is, by the Articles of War, liable to be cashiered or punished with death. See MUTINY ACT.

MISCELLANEOUS, an item or charge in the estimates of the British army, so distinguished; as *Miscellaneous services*; consisting of several heads of expenditure.

MISCONDUCT, ill-behaviour, &c.

MISCONSTRUCTION, wrong interpretation of words, or things.

MISCREANT, (*mécéant*, *Fr.*) a wretch not to be trusted; one who holds a false faith with respect to God and man.

MISDEMEANOUR, offence; ill-behaviour, liable to any punishment short of death.

MISE, *Fr.* disbursement; current.

Mise *en campagne*, *Fr.* sums advanced at the beginning of a campaign for the outfit of an army.

MISÉRICORDE, *Fr.* a short dagger, which the cavalry formerly used, for the purpose of dispatching an enemy who would not ask quarter, or mercy.

MISINFORMATION, false intelligence, false accounts.

To MISQUOTE, (*citer à faux*, *Fr.*) to quote falsely. Next to the treachery, the meanness and the wickedness of betraying private conversation, the act of misquoting what a person may have said, (perhaps unthinkingly,) is most scandalous, and unbecoming the character of an officer and a gentleman. See REPORTER.

MISRAK, a Turkish sabre. See SPAHIS.

MISSIDOMINICI, afterwards called among the French *Juges des exempts*, certain persons, or commissioners, who, under the reign of Louis-le-gros, king of France, watched the conduct and behaviour of the dukes and counts, and reported accordingly.

MISSILE, } any weapon which is either thrown by the hand, or which strikes at a distance from the moving power.

MISSILE *weapon*, (*armes de trait*, *flèches*, Fr.) Although the invention of gunpowder has rendered these instruments unnecessary in our days, it may not be uninteresting to give a short account of those that were used by the ancients, particularly by the Romans. We shall extract it from an old book, called a *Treatise on the Arms and Engines of War*, published in 1678, and addressed to the Right Worshipful Sir Jonas Moore, Knight, surveyor general of the ordnance and armories of Great Britain.

The *dart*, or *pilum*, was the weapon which the Romans gave to their *velites*, or *skirmishers*; it was in length two cubits, and a finger's breadth in thickness: the head of it was of iron, a foot long; but so thin and sharp pointed, that being once thrown, it bowed and became crooked; so that the enemy could not use it any more.

They had likewise other *javelots* or *darts*, (*jaculum*, à *jaciendo*) with three feathers at the lower end; such as are used by the Poles, and many others, especially the Moors, who call them *zagayes*.

Élicles was the most ancient of darts, a cubit and a half long, with a double point, which was tied to the wrist with a leathern strap, or cord, to pull it back when the blow was given.

Fganca was a very light javelot, or dart.

Ancyle was a dart which gave the name of Ancilista, to those that used it.

Ansata were darts thrown by handfuls.

Dolones were javelots, which had their name from the Greek word *dolos*, which signifies hurt.

Geum was a javelot wholly of iron.

Manobarbulas was a javelot, or dart, like the leaden *pile*, and the soldiers that used them were called *Manobarbuli*.

Materis was a javelot not quite so long as a lance.

The *pile* or *pilum*, was a kind of half pike, about five feet long. The Roman *pile* was but three feet long, with a head barbed, like a serpent's tongue, which weighed nine ounces.

Romphea was the Thracian javelot.

Runa was a javelot with a very large broad head.

Spara was a very little dart, called so, à *spargendu*, scattering; being thrown in large quantities.

Tragula was a javelot, or screw, with which they drew towards them the enemy's buckler.

Triphorum was a shaft three cubits long, which the French call *materas*; in English a quarrel, and was shot out by a cross-bow. The ancients had also other javelots or darts, which variously named according to their different figures, as *sibina*, *gesa*, *sigimnum*, *urbina*, *verbina*, *verutum*, and *zenabulum*; the latter was used by huntsmen, and *gesa* by the *Gauls*.

MISSING, an expression used in military returns, especially in field reports, after an engagement, to account for the general loss of men.

MISSION, (*mission*, Fr.) the state of being sent by authority.

Military MISSION, the state of being sent, with private instructions, to communicate on military matters. This word (both in the French and English acceptation of it) was formerly confined to such persons as were sent to propagate religious opinions (particularly those of the Roman Catholic faith) under a licence given by the Pope: whence *Church-Militant*. It is now generally used to express any commission of trust.

MISSIVE, Fr. This word, as an adjective, is seldom used except with the word *lettre*. Hence *lettre missive*, a letter written for the express purpose of being sent to somebody. It is used as a substantive, in familiar language: *il m'a écrit une longue missive*.

MISSIVE is also used by us in the same manner; as the king's letters *missive*, and *missives* for letters. Shakespeare calls messengers *missives*.

MISTRESS, (*maitresse*, Fr.) a kept woman, or concubine; a creature, who, if permitted to dabble in civil, or military matters, will not fail to pollute all the sources of honour and integrity. See **SCABBARD**,

To MISTRUST, to have suspicions of: thus every wise statesman and general mistrusts the information which is given by foreigners, or persons employed to procure intelligence; taking care to guard against treachery through other sources.

MISUNDERSTANDING, quarrel, disagreement.

MITCHELS, (in masonry,) *Purbeck* stones for paving, picked all of a size from 15 inches square, to 2 feet; being squared and hewn ready for paving.

MITHRIDATES, (*mithridate*, Fr.) the name of an ancient king of Pontus, who was taken prisoner by the Romans, and poisoned himself.

MITHRIDATE, (*mithridate*, Fr.) one of the capital medicines of the shops, consisting of a great number of ingredients, and has its name from *Mithridates*, being an antidote to poison. Several of the ingredients of which are viper's-flesh, gaarick, opium, squills, &c. The French say, figuratively, *Vendeur de Mithridate*, any person who deals in quack medicines; they also apply the same term to any man who makes an ostentatious display of words, promises much, and does nothing.

MITIGATION, (*mitigation*, Fr.) abatement of any thing penal, harsh, or painful. Hence, *mitigation of punishment*.

MITON, Fr. a mitten or glove without fingers.

MITONNER, Fr. to manage any person or thing, in order to derive advantages hereafter.

MITOYEN, Fr. middle.

Mur **MITOYEN**, Fr. partition wall. See **WALL**.

L'espace **MITOYEN**, Fr. any given space which separates one body from another.

MITRAILLE, Fr. small pieces of old iron, such as heads of nails, &c. with which pieces of ordnance are loaded; commonly called grape-shot.

Tirer à MITRAILLE, Fr. to fire with grape-shot. The term is frequently used by the French, to express the bribery which is practised in time of war by one nation upon another, for the purpose of fomenting civil insurrections. Hence, *Tirer à mitraille d'or*.

MITRAILLADES, Fr. a discharge of grape shot from pieces of ordnance.— This was a new mode of punishment devised under the revolutionary government of France, and was principally practised during the reign of Robespierre, in the Commune of Lyons. Cannon, loaded with grape shot, were fired on citizens, bound hand and foot; and such as were only wounded by the shot, were afterwards put to death by the sword or sabre.

MITER, } a mode of joining two
MITRE, } boards, or other pieces of wood together at right angles.

MITRE, Fr. tiles which are placed over the tops of chimnies to prevent

them from smoking. They are called *mitre* from their resemblance to that ornament.

MITRE, (with artificers,) an angle that is just 45 degrees.

MITTENS, coarse gloves for the winter; such as are worn by soldiers.

MITTIMUS, a warrant by which a justice commits an offender to prison.

MIXTILIGNE, Fr. a term used in geometry to express such figures as are terminated partly by straight, and partly by curved lines.

To be **MIXED up** with any thing, or any body. To be implicated with, or made a party to, any particular thing, or person. This term is generally used in a bad sense. Good and unsuspecting characters are frequently *mixed up* with bad ones, by an indiscreet association with them. See **S'IMMISER**.

MIXT *mathematics* are those arts and sciences which treat of the properties of quantity, applied to material beings, or sensible objects, as *astronomy, geography, dialling, navigation, gauging, surveying, &c.*

MOAT, a wet, or dry ditch, dug round the walls of a town, or fortified place. When an enemy attacks a town, which has dry moats round it, the rampart must be approached by galleries under ground, which galleries are run beneath the moat; when the place is attempted through wet moats, your approaches must be made by galleries above ground, that is to say, by galleries raised above the surface of the water. The brink of the moat next the rampart is called the scarp, and the opposite one the counterscarp.

Dry-MOAT, that which has no water. It should invariably be deeper than the one that is full of water.

Flat-bottomed MOAT, that which hath no sloping, its corners being somewhat rounded.

Lined MOAT, that whose scarp and counterscarp are cased with a wall of mason-work made sloping.

To **MOAT**, (*moter*, Fr.) to surround with canals by way of defence.

MOB, the croud; the mass of population, collected together in a tumultuous manner. The French say *la populace*, also *la tourbe*. Bailey calls a mob a giddy multitude, a tumultuous rabble. The Romans were accustomed to compare a mob to a wild beast, *bellua populus*. A mob is, in fact, an enraged bull, that

runs headlong at every thing and every body, without distinguishing between friend or foe; and would as soon toss into the air the man who has fed him, as he would mangle the savage butcher that has unmercifully goaded him into frenzy.

Mob-law, a peremptory decision, without sense or justice.

Mr. Gibbon has somewhere said, that under a democratical government, the citizens exercise the powers of sovereignty; and those powers will be first abused and afterwards lost, if they are committed to an unwieldy multitude.

MOBILE, *Fr.* inducement; instigation. This word is variously used by the French; viz.

Le MOBILE, *Fr.* (in mechanics) the body that moves another, or is moved.

Le premier MOBILE, *Fr.* What we call *primum mobile*, (in ancient astronomy,) a ninth heaven or sphere imagined to be above those of the planets and fixed stars. We also call *primum mobile* the chief incentive, the principal motive. Thus the *primum mobile* of a real soldier is a laudable ambition to serve his country; and the *primum mobile* of war is money.

Premier MOBILE, *Fr.* the principal agent in any affair; the head of a conspiracy. The French say: *l'intérêt est le premier mobile de la plupart des hommes*: interest is the ruling motive of the greatest part of mankind; also *l'argent est le mobile universel*: money is the universal passion, or excitement, in human affairs.

MOBILIAIRE, or **MOBILIÈRE**, *Fr.* household goods, furniture, or chattels.

MODEL, (*modèle*, *Fr.*) a mould; also a diminutive representation of any thing. Thus models of warlike instruments, fortifications, &c. &c. are preserved in the Royal Laboratory at Woolwich, and in the Tower.

MODEL, (with architects,) a kind of measure, which is the diameter of the bottom of a pillar in each order, by which the length &c. of it is measured, and which is commonly divided into 60 equal parts, called *minutes*; except in those of the *Doric* and *Tuscan* orders, where the model is but half the diameter. In the *Composite*, *Corinthian*, and *Ionic* orders, it is divided into 18 parts, the same as *module*.

Les MODÉRÉS, *Fr.* a class of persons so called in France, during the

revolution, from professing moderate principles, and thus endeavouring to steer between the extremes of unlimited monarchy, and unrestrained democracy. They were of course mistrusted by both parties, and fell victims to the savage temper of the latter.

MODERN, something of our own times, in opposition to what is antique or ancient. Hence the *moderns*.

MODERN Tactics, and **MODERN Art of War**, that system of manœuvre and evolution, which has been adopted since the invention of gunpowder and fire-arms, in contradistinction to the *ancient tactics and ancient art of war*, the system which was pursued by the Greeks and Romans, &c. before the invention of gunpowder and fire-arms.

MODILIONS, (*modillons*, *Fr.*) (in architecture,) are little inverted *consoles*, under the soffit, or bottom of the *drip*, in the *Ionic*, *Composite*, and *Corinthian* cornices, and ought to correspond with the middle of the columns. In the *Corinthian*, they are always moulded with carved work. In the *Ionic*, and *Composite*, they are more simple, having seldom any ornament, except one single leaf underneath.

MODULE, (*module*, *Fr.*) (in architecture,) a certain measure of bigness, taken at pleasure, for regulating the proportions of columns, and the symmetry, or distribution of the whole building.

MOGNIONS, from the French *magnon*, signifying the stump of a limb, a sort of armour for the shoulders.

MOGO, a name given to a hatchet or tomahawk, by the natives of New Holland.

MOGUL, the Emperor of India, from whom the nabobs originally receive their appointments, as governors and superintendants of provinces.

Mogul Tartars, a nation so called, that made considerable conquests in India.

MOHOCK, the name of a cruel nation of America, given to ruffians formerly imagined to infest the streets of London.

MOHUR, *Ind.* a gold coin, which sometimes varies in its value, but generally goes for fifteen or sixteen rupees.

MOIDORE, a Portuguese gold coin, in value 27 shillings sterling.

MOIENNE, *Fr.* an old piece of ordnance which is now called a four-pounder, and which is ten feet long.

MOILON, *Fr.* the smallest rough stones, or shards, that are found in quarries. Those which consist of broken pieces of rock, are called *meulères* or *molières*.

MOILON *cu coupe*, *Fr.* unhewn stones which are used in the construction of arches.

MOILON *piqué*, *Fr.* stone out of the quarry, from which the crust is taken off, and closely pointed with the hammer.

MOILON *d'appareil*, *Fr.* a square piece of stone, which is dressed for the purpose of lining the outside of a wall. According to Randle Cotgrave, *moilon* also signifies a kind of soft, or tender stone, that lies 10 or 12 feet thick above the hardest free-stone, in the quarries about Paris.

MOINE, *Fr.* a half-sheet of paper, folded into two or four parts, with which is covered the train of gunpowder that serves to set fire to the saucisson.

MOINE *de mine*, *Fr.* See *Saiguée de SAUCISSON*.

MOINEAU, a French term for a little flat bastion, raised upon a re-entering angle, before a curtain which is too long, between two other bastions. It is commonly joined to the curtain, but is sometimes separated by a fosse, and then called a detached bastion. It is not raised so high as the works of the place.

Le MOIS Romain, or Roman month, considered as a tax, or contribution, which is collected from all the circles, amounts to eighty-three thousand, nine hundred and sixty-four German florins, when it is paid in specie, and to 2681 cavalry, and 12,795 foot soldiers, when the quota is given in effective forces.

This tax grows out of an old custom, which originally prevailed when the Emperors went to Rome to be crowned, and which served to defray their expenses thither.

MOISES, *Fr.* (in carpentry,) half beams of timber which are used to fasten other pieces together.

MOISES *circulaires*, *Fr.* half beams of timber which are used in the construction of water-mills.

MOISSON, *Fr.* harvest. This word is used in various senses by the French, particularly in two, of a poetical and figurative kind, viz. *Il a vu cinquante Moissons*: he has lived fifty years; literally, has seen fifty harvests.

MOISSON *de lauriers*, *Fr.* a succession

of victories, &c. literally, a harvest of laurels.

MOISSON *de gloire*, *Fr.* is taken in the same sense.

MOISSONNER *des lauriers*, *Fr.* to reap laurels.

MOISSONNER *les hommes*, *Fr.* to kill off, &c. To mow down men.

MOLE, *Fr.* a pier; a bank or causey, on the sea-side, or near a haven.

MOLETTE, *Fr.* a rowel, or that rotary part of a spur which resembles a star, and has sharp points to it.

MOLIERE, *Fr.* a bog, or quagmire.

Pierre de MOLIERE, *Fr.* a grindstone.

MOLLESE, *Fr.* in a figurative sense, signifies want of firmness, or resolution. *Je crains la mollesse de vos conseils*, I mistrust the pliant tendency of your advice, or counsel.

MOLLETON, *Fr.* See **FLANNEL**.

MOLLETTE, *Fr.* windgall.

MOLLIR, *Fr.* literally means to wax soft. It is used figuratively among the French, to signify, in a military sense, the yielding, or giving way of armed men, viz. *les troupes mollissent*, the troops give way.

MOLTEN-Gruse, (in horses,) a distemper which is a fermentation, or ebullition of pituitous and impure humours, that precipitate and disembogue into the guts, and sometimes kill horses.

MOMENT, or **INSTANT**, (*moment ou instant*, *Fr.*) (in mathematics,) an indivisible particle of time. A moment is to time, or duration, what a mathematical point is to space or measurement. For as a line may be traced by continual motion, so the continued lapse of many moments constitutes time.

MOMENTUM, (in mechanics,) the same with *impetus*, or quantity of motion in any moving body.

MOMENTUM, (in projectiles,) that power, or force incident to moving bodies, whereby they continually tend from their present places. The momentum of a moving body is equal to its weight multiplied by its velocity; hence the momenta of different projectiles are to each other in the compound ratio of their weights and velocities.

MONDE, *Fr.* in a military sense, means men or soldiers, viz.

Ce capitaine n'avoit que la moitié de son MONDE, that captain had only half his complement of men.

On a perdu beaucoup de MONDE, *Fr.* they have lost a considerable number of men.

Il a un MONDE d'ennemis sur les bras, Fr. he is assailed by a multiplicity of foes.

Le nouveau MONDE, Fr. This term is frequently used to denote America.—Hence *l'ancien et le nouveau monde* means the two continents.

MONEY-matters, a term in familiar use to express all pecuniary concerns. It cannot be too strongly recommended to every responsible military man to be scrupulously correct on this head. More than half the breaches of friendship and common acquaintance that occur in life, may be traced to irregularity in money matters: but in no instance are its effects so fatal, as when the soldier is wronged, or is induced to think so, by the omisions, &c. of officers or serjeants.

Bed-MONEY. All officers serving in Ireland, have an allowance of this description. It amounts to 15s. 6d. per annum. For broken periods it is calculated at three half-pence per diem.

Beer-MONEY, an allowance of one penny per diem, given to private soldiers in lieu of small beer.

Bounty-MONEY. See RECRUITING.

Emery, Oil, and Brick-dust-MONEY, a certain allowance which is made to soldiers in the British service to enable them to keep their arms in good condition; in which are included brushes, pickers, turnscrows, and worms. The actual expenditure for these articles, certified upon honour by the colonel, or commanding officer, is allowed by government; provided the amount does not, in any half year, exceed the rate of 1s. 4½d. per man for each effective rank and file.

Grass-MONEY, a certain sum, so called, which was formerly stopped from the dragoons, for answering the expenses customarily borne by the regiments.

Levy-MONEY, the money which is paid for recruiting the army is so called.

Lodging-MONEY, a sum allowed to officers to provide lodgings, when they cannot be accommodated in barracks, or government houses.

Marching-MONEY, commonly called *marching guinea*, a specific sum, which is issued by the receiver-general of each county, when the militia is first embodied for service; and which is accounted for, by the several captains of companies, to the individuals who compose them. It is called marching guinea, from that sum being paid to every man before he quits his county, and marches on general service.

Marching or Billet-MONEY. According to an act of Parliament which was passed in 1793, on the motion of the late Mr. Windham, then Secretary at War, the publicans and other persons obliged to furnish quarters, have been relieved by a further allowance of 4d. each man per diem for the cavalry, and 6d. each man do. for the infantry; which makes the whole sum for each man's diet and small beer per diem 10d. They are also, by a subsequent act, entitled an Act for the relief of Innkeepers, &c. allowed 4½d. for each horse's hay and straw, in addition to the former sixpence. By a Circular, dated War-Office, 24th May, 1816, to general officers commanding districts, in conformity with "An Act for fixing the rates of subsistence to be paid to innkeepers and others on quartering soldiers," the rate of allowance for the Hot Meal, provided for non-commissioned officers or private soldiers on a march in South Britain, is fixed at the sum of one shilling per diem, until the 24th ultimo inclusive, and from and after that day at the sum of tenpence per diem; and that the sum to be paid to innholders and others, on whom any of the horses belonging to His Majesty's forces shall be quartered, is fixed at one shilling and twopence per diem, until the 24th ultimo inclusive, and at tenpence per diem from and after that date.

Passage-MONEY, an allowance which is made to officers in the British service, to enable them to pay the expenses of voyages to and from the East and West Indies.

Regimental MONIES, all sums issued to paymasters for the subsistence, &c. of the men belonging to a regiment, are so called; for the regular distribution of which, colonels, or captains of companies, are responsible. *La comptabilité*, among the French, corresponds with this explanation.

Revenue-MONEY, an allowance which was formerly made to field officers in India. It was discontinued in 1797.

Smart-MONEY, the money which is paid by the person who has taken the king's shilling, in order to get released from an engagement entered into previous to a regular enlistment. The sum is generally twenty shillings, which must be given before the oath is administered; otherwise both parties would be criminally implicated: one for deserting, and the other for conniving, aiding, and abetting. The custom of taking smart money

is certainly founded upon a just principle, but that principle has been often perverted, and the most dishonest advantages taken of ignorant young men. In the regulations for carrying on the recruiting service, the following order has been issued :

“Art. XX. It being contrary to law, and highly injurious to the recruiting service, to permit money to be taken by any non-commissioned officer or soldier, under the name of *smart money*, and in consequence thereof to discharge any man who has received enlisting-money, except such man shall have been carried before a magistrate within the four days prescribed by the Mutiny Act, and in his presence shall have declared his dissent to such enlisting; recruiting officers are therefore to report any non-commissioned officer or private soldier guilty of this offence, to the inspecting field officer of the district, who will forthwith cause such non-commissioned officer or soldier to be brought to trial for the same, by a detachment court-martial.

Utensil-MONEY, an annual allowance given to non-commissioned officers and privates, in Ireland, amounting to about 10*l.* each.

Feather-MONEY, an item of disbursement which is charged by army clothiers, in their account of off-reckonings against the colonels in the line, for the supply of feathers to the non-commissioned officers and the band belonging to their respective regiments and battalions; and for which no allowance is granted by government.

MONEY for the repair of arms, a specific allowance which is made by government to every captain of a company, for the charge and repair of arms.

Mounted-MONEY, a term used to express an additional allowance, which is made to the non-commissioned officers of the brigade of horse artillery; it amounts to two pence per man, per diem. See *Artillery Table* in the *Regimental Companion*.

MONEY-lender, or *usurer*, (*usurier*, Fr.) a person who under the specious character of scrivener and attorney, lets out his own money, or that entrusted to him by others, for the purpose of making more interest than the law allows. This creature, (for no spider can spin a web so artfully to ensnare its prey,) has all the outward appearance of a frank, in-

dustrious, and intelligent man; but is generally at bottom, a downright swindler, and always a self-interested creature.

MONEY-changer,
MONEY-maker,
MONEY-jobber, or
stock-broker. } (*agioteur*, Fr.) a person who deals in bills, &c.

MONEY-scrivener, one who raises money for others, and by whom many a gallant officer has been reduced to beggary. Dr. Johnson in an excellent quotation says: Suppose a young unexperienced man in the hands of *money-scriveners*; such fellows are like your wire-drawing mills; if they get hold of a man's finger, they will pull in his whole body at last.

MONEY-order-office, an office established in the General Post Office, Lombard street, for the benefit of such persons as may have occasion to remit money.

A clerk regularly attends from nine in the morning till six o'clock in the evening, and guaranties the safe conveyance of any sum, payable at sight, by the deputy post-masters in the country, Edinburgh or Dublin; who will also receive any money, and give an order at sight on the money-order office in London.

MONGER, a dealer; a seller. This word is seldom used alone, being generally coupled with something in which the person deals or trafficks.

Commission-MONGER, one who trafficks in the sale, exchange, and purchase of commissions, and thereby makes a livelihood. By a clause in the Articles of War, and by an act of Parliament passed in 1806, no such person is now allowed to act in any way whatsoever. See *BROKER*.

MONIES, in a military sense, are such sums as are issued for public service, and are more specifically distinguished by the appellation of army estimates. It is usual for the secretary at war to move for the estimates of the army.

MONKEY, a machine which is used to drive large piles of wood into the earth.

MONNAIE obsidionale, Fr. a sort of base metal, made into current coin during a long siege. Of all expedients, this is perhaps the worst, as it usually creates feuds and quarrels between the garrison and the inhabitants. See *DÉSORDRE*.

MONNAIE, Fr. money; any metallic

currency, or representative coin. This word was formerly written *monnoie*.

MONNAIE des médailles, Fr. medals struck at the mint in commemoration of certain events, &c. Hence *Monnaie des médailles du règne de Napoléon*. This consists of a collection of medals on which the memorable events that occurred during the reign of Bonaparte, and at his first entrance into public life, are represented. The dies have been destroyed in Paris by order of the French king.

MONNAIE, Fr. the mint.

MONNAIE also signifies change; as *Monnaie pour un Louis d'or*, change for a Louis d'or.

MONOMACHY, (*monomachie*, Fr.) a single combat, or the fighting of two, hand to hand: it is derived from the Greek. A duel may properly be called monomachy.

MONOPOLIST, (*monopoleur*, Fr.) in a confined sense, one who, by engrossing, or patent, obtains the sole power or privilege of vending any commodity. In a more general acceptation, any person who, by influence, or money, gets an overgrown share of profitable agencies or employments.

MONSEIGNEUR, Fr. a title given among the French to persons of exalted rank.

MONSIEUR, Fr. a title used among the French, when they speak to their equals. Also the title of the French king's elder brother.

MONSON ou MOUSON, Fr. a word derived from the Arabic, signifying the wind of any particular season, or one that blows regularly.

MONSOONS, (*monsoon*, Fr.) In India, the year is divided into two seasons. From the month of October to March, the winds blow from the north, and during the rest of the year from the southern points of the compass: these seasons are by mariners called monsoons; the change from the one to the other is generally preceded by an interval of about twenty days, in which calms, or light and uncertain winds, prevail: the setting in of the northern monsoon generally falls out some time in the month of October, as that of the southern in the month of April. On the coast of Coromandel, the northern monsoon sometimes begins with a violent tempest, or hurricane; and if the monsoon sets in with moderation, it is often productive of tempestuous weather, at different intervals, until the

middle of December, and sometimes later; so that it is held dangerous for any vessels to remain on the coast after the 15th of October, or to return to it before the 20th of December.

MONT, Fr. mountain; hill; mount; rising ground. This word is seldom used in prose, except with a proper name, as *Le Mont Etna*, Mount Etna; *Les Monts Pyrénées*, the Pyrenean mountains.

MONT-joye Saint Denis, Fr. a sort of war-hoop, which was practised during the reigns of the first kings of France. A French writer observes, that so many traditions and accounts have been given of its origin, and those so contradictory among themselves, that the least said is the best. This cry or war-hoop was adopted under *LOUIS-le-gros*, and was wholly laid aside under Henry IV. See *CRU des Armes*.

MONT-joye, according to Bailey, a name by which Frenchmen call heaps of stones laid together by pilgrims, in which they stick crosses when they are come within view of the end of their journey, and so those betwixt St. Denis and Paris are called St. Denis's *Mont-joies*. A heap of stones piled up by a French army, in token of a victory gained near the spot, was also formerly called *Mont-joye*.

MONTAGNARD, Fr. a highlander; a mountaineer.

MONT-Pagnote, ou Poste des Invulnérables, Fr. an expression which is derived from *Pagnote*, a coward, a poltroon. It signifies any eminence, or place, whence the operations of a siege, or the actual conflict of two armies, may be seen without personal danger to the curious observer. It is also a term of reproach: *C'est un général qui voit le combat du Mont-Pagnote*; he is one of those generals that look on whilst others fight.—During the American war a particular body of men, who seemed to side with the British, were called *Invulnérables*.

MONTAGNES, Fr. hills, mountains, &c. In a military sense the term is peculiarly applicable to that species of warfare which is carried on in a mountainous and intersected country. We have already given a general outline of this species of warfare under the head *GUERRE de montagne*: nevertheless, the following observations may not appear superfluous, or irrelevant, in this place. The chevalier Folard has written largely, and with no inconsiderable degree of method, on that part of a war among

hills, &c. where an army might run the risk of being surrounded, or shut up.— He observes, that a body of men may be drawn into snares by the well-concerted movements of an able and active enemy, most especially in a country which is intersected by rivers, and occasionally broken with hills and eminences. Although disasters of this sort are manifest proofs of a want of ability in the person who holds the chief command, they become infinitely more disgraceful when a general runs headlong into a snare, as Euripidas did, without having sufficient courage to attempt a daring enterprize; for it certainly remains with ourselves to determine, whether we chuse to move into an impracticable country; and it equally rests with us to avoid stratagems and snares.

All this, however, depends upon a knowledge of the country into which the war is carried; and as it is impossible to be in possession of the requisite information without some extraneous means, every general ought to lay it down as a maxim, not to advance into a mountainous country, without having a good number of intelligent and faithful guides. These, in addition to some able topographers, will prevent the possibility of being surprized, and make him thoroughly master of all the passes, &c.

It is not, however, sufficient to be in possession of the heights that immediately command a valley into which an army has moved; in proportion as you advance, you must be certain, that the enemy who retreats before, is not insensibly winding round a second range of hills, to get upon your flanks, or ultimately fall upon your rear.

It moreover frequently happens, that some vallies have not any outlets, and that others become so narrow, that an army is under the necessity of marching by single files, in order to reach a more open piece of ground, or to get at some important pass for the purpose of intercepting, or obstructing the march of an enemy.

When it is found necessary to retreat, or to march over a country as Hannibal did over the Alps, it is of little consequence what steps or measures you take, with regard to those parts which you are abandoning; but when you advance against an enemy, and are determined to dispute his march through a valley or

hollow way, you must adopt every precaution to secure your rear and flanks, lest, as we have already observed, your antagonist should take advantage of the various passes and intricate bye-ways, which are found in a mountainous country; and it must always be remembered, that many *coups de main*, and daring enterprizes, may be undertaken by four or five hundred active partizans, which an army would find impracticable.

An able general cannot have a better, or more favourable field to exercise his military genius in, than that which is afforded by a mountainous country. All the chicanery and stratagem of war may be resorted to; and however weak an army might be, yet such are the manifold resources of this peculiar kind of contest, that there is scarcely any thing which may not be attempted, provided the officer, who commands, has a thorough knowledge of the country, is fertile in expedients, and has a calm determined mind. Many instances might be adduced to illustrate these observations; we shall be satisfied with stating, that the Prince of Conti, in the campaign of 1744, which he so ably conducted, owes a considerable part of his reputation to the scope afforded to his talents, by the locality of Piedmont. This country, indeed, as well as Switzerland, seems to have been cut out as the peculiar theatre of great military talents. But neither the Prince of Conti, nor Bonaparté, when First Consul of France, would have succeeded in the brilliant manner they most unquestionably have done, had not the science of topography seconded the natural advantages of that mountainous part of Europe.

MONTANT, *Fr.* an upright post, beam, stone or bar, (in building.)

Joint-MONTANT, *Fr.* the mounting joint of a stone.

MONTANT, *Fr.* the sum total of any account, or broken numbers.

MONTANT, *Fr.* next for promotion. The French say: *ce lieutenant est le premier montant*, that lieutenant is next for promotion.

MONTANT, *Fr.* a motion in fencing, whereby the sword is lifted up, before a thrust is made.

MONTE, *Fr.* This word is used by the French to express the equipment which a person has in horses, or the act of being well mounted on a particular

horse. Hence, *il est bien MONTÉ*, he has a very good stable, or set of horses. *MONTÉ comme un St. George*, literally mounted like St. George, or riding a very fine horse. It also signifies the number of guns a ship carries, *Un vaisseau MONTÉ de 50 pièces de canon*; a ship carrying 50 guns.

MONTÉE, *Fr.* a familiar term for staircase, particularly in a small building.

MONTÉE de pont, *Fr.* the height or elevation of a bridge, taken from its buttment up to the crown-work of the vault of its main arch.

MONTÉE de voûte, *Fr.* the height or elevation of an arch taken from its first declivity up to the bottom of its closing, or key-stone. It is also called *voussure*, or bending of an arch.

MONTER, *Fr.* to mount; to ascend.

MONTER un cavalier, *Fr.* to equip a cavalry officer; to rise from one rank to another, in the way to promotion.

MONTER à l'assaut, *Fr.* See *MOUNT* the breach.

MONTER la garde, *Fr.* See *To MOUNT* guard.

MONTER la tranchée, *Fr.* See *To MOUNT* the trenches.

MONTER un vaisseau, *Fr.* to embark on board a ship.

MONTERO, a Spanish horse-cap, *bonnet de chasseur*, *Fr.*

MONTH, considered as a military period, in the British service, consists alternately of 30 and 31 days, commencing on the 24th, and ending on the 25th day (inclusive) of each month properly so called; except in the royal artillery, where each military month commences on the 1st and ends on the 30th, or 31st inclusive.

MONTHLY Abstract. See *Pay*.

MONTHLY Return. See *Return*.

MONTHLY Report. See *Report*.

MONTHLY Inspection. See *Regimental Inspection*.

MONTOIR, *Fr.* a mounting or jossing-block. According to Bailey, a stone as high as the stirrups, which Italian riding masters mount their horses from without putting their foot in the stirrup.

Le côté du MONTOIR, *Fr.* the near foot or side of a horse.

Le côté hors du MONTOIR, *Fr.* the off foot or far side of a horse. The French say, *cheval facile au montoir*, a horse easily mounted.

MONTOIR also signifies the poise or rest of the foot on the left stirrup.

MONTRE, *Fr.* the review, or muster of the men.

MONTRE likewise signified, in the old French service, the money which was paid to soldiers every month, when they passed muster. *Il a reçu sa montre*, he has received his monthly pay.

MONTRER les talons, *Fr.* literally to shew one's heels, to run away.

Passer les MONTS, *Fr.* an expression which is generally used to signify the passing over the Alps.

MONTURE de scie, *Fr.* the wooden frame of a saw.

MONTURE, *Fr.* the complement of men and number of cannon, on board a French ship of war.

MONTURE d'un fusil, d'un pistolet, *Fr.* the stock of a gun or pistol.

MONTURE d'éperon, *Fr.* the spur-leather.

MONUMENT, (*monument*, *Fr.*) in a military sense, any public edifice, pillar, or mark of distinction, which is exhibited to perpetuate the memory of some illustrious character.

MOONSHINE, a figurative expression, signifying not real, not solid, not productive of any thing general: so called from the moon giving light, but not emitting heat, as the sun does. Thus an officer offering to sell his half-pay, which is not alienable, is said to offer moonshine.

MOOTIANA, *Ind.* soldiers employed to collect the revenue.

MOQUA, *MUCK*, a frenzied riot of some Mahometans, who have returned from Mecca, against those who have not professed Mahometanism. This horrid custom was practised during the late war, by the Malays, both at the island of Ceylon, and at the Cape of Good Hope. In the latter place indeed, the fanaticism of one of these blind enthusiasts went so far, that he stabbed a soldier who stood sentinel at the governor's gate. His intention was to have destroyed the governor. He that runs the *moqua*, or *muck*, gets intoxicated with bang, or opium, loosens his hair, (which is generally bound up under a handkerchief,) then takes a dagger (called a crease) in his hand, whose blade is usually half poisoned, and in the handle of which there is some of his mother's or father's hair preserved, and running about the streets kills all those he meets, who are not Mahometans, till he is killed himself; pretending to believe, that he serves

God and Mahomet, by destroying their enemies. When one of these madmen is slain, all the Mahometan rabble run to him, and bury him like a saint, every one contributing his mite towards making a noble burial.

MORAILLE, *Fr.* barnacles. An instrument, made commonly of iron, for the use of farriers, to hold a horse by the nose, to hinder him from struggling when an incision is made.

Le MORAL, *Fr.* this word is frequently used among the French, as a substantive of the masculine gender, to express the moral condition of man. It likewise means the prepossession or assurance which we feel in conscious superiority; viz. *Quand les Anglais se battent sur mer, ils ont le moral pour eux, les Français l'ont sur terre.* At present the English have it on both elements.

MORASS, in *military drawings*, denotes moor, marshy, orienly low grounds, on which waters are lodged.

MORATTOES. See *Mahrattas*.

MORDRE la poussière, *Fr.* literally means to bite the dust; a figurative expression, to express the act of being killed in battle.

MOREAU, *Fr.* a species of bag which the drivers of mules use to carry their hay. It is likewise the name of a French general, highly celebrated for his able retreat out of Germany, during the most disastrous period of the French republic.

Cheval MOREAU, *Fr.* a horse of a shining black colour.

MORESQUE, *Fr.* moresk work; a rude or antique painting or carving.

See **MORFONDRE**, *Fr.* to dance attendance; to wait in vain: a torture to which the most brave and most intelligent officers are frequently exposed, through the insolence of assumed authority in some public offices.

MORGLAY, (from the French *morte* and *glaiue*,) a deadly weapon.

MORGUE, *Fr.* a certain chair wherein a new-come prisoner was placed, in the Chastelet of Paris, where he continued some hours, without stirring either head or hand, that the keeper's ordinary servants might the better take notice of his face and features.

MORIA, a sort of steel cap, or head-piece formerly in use.

MORION, *Fr.* a head-piece; an iron or steel hat, without visor or bever.

Donner sur le MORION, *Fr.* This was

a species of punishment which was formerly inflicted upon French soldiers for crimes that were not capital. They were shut up in a guard-house, and received a certain number of strokes with a halbert. The gantelope was substituted in its stead; but neither the one nor the other is practised in the present French army.

MORIONNÉ, *Fr.* armed, or covered with a head-piece.

Lièvres MORIONNÉS, *Fr.* an old French term literally signifying hares covered with head-pieces, but figuratively meaning, according to Richelet, silly artificers, cowardly tradesmen turned watchmen for the safety of a town.

Soldats MORIONNÉS, *Fr.* armed men serving on foot. So called from their wearing a helmet, or head-piece.

MORISON. See *Helmet, Casque, &c.*

MORISQUE, *Fr.* mizzen sail of a ship.

MORNE, *Fr.* court-yard; also a place in Paris close to the Seine, where dead bodies are left to be owned.

Lance MORNE, *Fr.* a lance with a blunt head.

Eperons MORNES, *Fr.* spurs with blunt rowels.

MORNING-Star. See *STAR*.

MORRAIL de Mulet, *Fr.* a kind of muzzle tied about the nose of a mule with a bag hanging from it full of hay or oats for him to feed upon as he goes.

MORRIS or **MOORISH PIKE**. See *PIKE*.

MORT d'eau, *Fr.* low water.

MORTARS, short cannon, of a large bore, with chambers: made of stone, brass, or iron.—Their use is to throw hollow shells, filled with powder; which, falling on any building, or into the works of a fortification, burst, and their fragments destroy every thing within reach. Carcasses are also thrown out of them. These are a sort of shells with 5 holes, filled with pitch, and other combustibles, in order to set buildings on fire: and sometimes baskets full of stones the size of a man's fist, are thrown out of them upon an enemy placed in the covert-way during a siege. The very ingenious general *Desaguliers* contrived to throw bags filled with grape-shot, containing, in each bag, from 400 to 600 shot of different dimensions, out of mortars; the effect of which is extremely awful and tremendous to troops forming the line

of battle, passing a defile, or landing, &c. pouring down shot, not unlike a shower of hail, on a circumference of above 300 feet. Mortars are distinguished chiefly by the diameter of the bore. For example, a 13-inch mortar is that, the diameter of whose bore is 13 inches. There are some of 10 and 8 inch diameters; and some of a smaller sort, as coehorns of 46 inches, and royals of 58 inches.

English mortars are fixed to an angle of 45 degrees, and it is customary to lash them strongly with ropes to that elevation. In a siege, shells should never be thrown with an angle of 45 degrees, excepting when the battery is so far off that they cannot otherwise reach the works: for when shells are thrown out of the trenches into the works of a fortification, or from the town into the trenches, they should have as little elevation as possible, in order to roll along, and not bury themselves; whereby the damage they do, and the terror they cause to the troops, is much greater than if they sink into the ground. On the contrary, when shells are thrown upon magazines, or any other buildings, with an intention to destroy them, the mortars should be elevated as high as possible, that the shells may acquire a greater force in their fall, and consequently do more execution.

The use of mortars is thought to be older than that of cannon; for they were employed in the wars of Italy to throw balls of red-hot iron, and stones, long before the invention of shells. It is generally believed, that the Germans were the first inventors, and that they were actually used at the siege of Naples, in the reign of Charles VIII. in 1435. History informs us, with more certainty, that shells were thrown out of mortars at the siege of Watchendonk, in Guelderland, in 1588, by the Earl of Mansfield. Shells were first invented by a citizen of Venlo, who, on a festival, given in honour of the Duke of Cleves, threw a certain number, one of which fell on a house, and set fire to it; by which misfortune the greatest part of the city was reduced to ashes. Mr. Malter, an English engineer, first taught the French the art of throwing shells, which they practised at the siege of Motte, in 1634. The method of throwing red-hot balls out of mortars was first put in practice, with certainty, at the siege of Stralsund, in 1675, by the elector of

Brandenburg; though some say in 1653, at the siege of Bremen.

Land MORTARS are those used in sieges, and of late in battles, mounted on beds; and both mortar and bed are transported on block-carriages. There is also a kind of land-mortars, mounted on travelling carriages, invented by Count Buckeburg, which may be elevated to any degree.

Partridge MORTAR is a common mortar surrounded by 13 other little mortars, bored round its circumference in the body of its metal. The center one is loaded with a shell, and the others with grenades. The vent of the large mortar being fired, communicates its fire to the small ones; so that both shells and grenades go off at once. The French used them in the war of 1701, and more especially at the siege of Lisle, in 1708, and at the defence of Bouchain, in 1702.

Hand MORTARS were frequently used before the invention of coehorns. They were fixed at the end of a staff $4\frac{1}{2}$ feet long, the other end being shod with iron to stick in the ground; while the bombardier, with one hand, elevated it at pleasure, he with the other hand fired.

Firelock MORTARS, (*bombards*,) are small mortars, fixed at the end of a firelock: they are loaded as all common firelocks are; and the grenade, placed in the mortar at the end of the barrel, is discharged by a flint-lock; and, to prevent the recoil hurting the bombardier, the bombard rests on a kind of halberd, made for that purpose. They were first invented by major-general Siebach, a German, about the year 1710.

Names of the several parts of a MORTAR.

Grand divisions exterior, viz.—The whole length of the mortar, muzzle, chace, reinforce, breech, trunnions.

Small divisions exterior—The vent, dolphins, vent astragal and fillets, breech ring and ogee, reinforce ring and ogee, reinforce astragal and fillets, muzzle astragal and fillets, muzzle ring and ogee, muzzle mouldings, shoulders.

Interior parts. Chamber, bore, mouth, vent.

Sea-MORTARS are those which are fixed in the bomb-vessels, for bombarding places by sea: they are made somewhat longer, and much heavier than the land mortars.

Sea-MORTAR-Beds are made of very solid timber, and placed upon very

strong timber frames, fixed in the bomb ketch; to which a pintle is attached in such a manner, that the bed may turn round. The fore part of these beds is an arc of a circle, described from the same center as the pintle-hole.

Land-MORTAR-Beds. Beds for iron mortars are usually of iron; those for brass mortars of wood.

Stone-MORTARS serve to throw stones into the enemy's works, when near at hand: such as from the town into the trenches in the covert-way, or upon the glacis; and from these trenches into the town. The bore is terminated by two quadrants of a circle, terminated by the reinforce and lines drawn from the ends of the cylinder, made to lodge the tompons parallel to the axis of the mortar. The bottom of the conic chamber is terminated by an arc of 60 degrees, and the round part of the outside is a semi-circle.

MORTARS for projecting stones. There is a description of mortars excavated from the solid rock, for throwing an immense shower of stones, and are meant for the protection of any particular place where the coast is assailable by boats for the landing of troops. There is one of these mortars in Gibraltar, and several in the island of Malta; at which latter place an experiment was made upon one in a bay at that island, by brigadier general Lawson, on his return from Egypt in the year 1802, in the presence of General Fox, and a number of other officers. The manner of loading it was thus: the chamber was filled with 180 lbs. of powder, over which was placed a bottom of wood; then the stones were brought in baskets from the weight of forty to one pound each, the large stones next the powder, containing in the whole about two tons weight of stones; down the whole interior of the mortar was a groove in which the quick-match to communicate with the powder was placed, to the end of the quick-match; at the mouth of the mortar was a portfire of a length sufficient to enable the man who lighted it to get to a place of safety before it was burnt out. When the explosion took place, the effect of the stones, in the air, and falling into the water, produced the utmost astonishment to every person present. There was not a space of more than a yard on the surface of the water where the stones did not strike; although the distance

which they fell was between 5 and 700 yards from the mortar; by which it was proved, that if an enemy had assembled in the bay, with an intention to land, scarce a single boat would have escaped receiving considerable injury. It cannot be supposed, that the mortar could be loaded more than once during the time that an enemy is making a landing, and therefore the greatest nicety must be observed in firing the mortar, in order that the effect may be produced at the most eligible moment, when the boats are assembled.

Chamber in MORTARS, the place where the powder is lodged. The chambers are of different sorts and dimensions. M. Belidor mentions four; namely, the cylindric, the spheric, the conic, and the concave or bottled; to which a fifth may be added, the parabolic, invented by Count de Mippe Buckeburg.

Cylindric chambers. This kind of chamber is, in our opinion, for all sorts of mortars under a 13-inch diameter, the best. They are the only kind of chambers that may be conveniently loaded with cartridges. Though experience demonstrates, that concave chambers will throw the shell farthest of any with the same charge, yet, in this case, where but little powder is required, their entrance would become too narrow, and consequently inconvenient to clean; whereas, when they are cylindric, the difference between the advantages of the one and the other will be but little, and not attended with any inconveniences.

Conic chambers are generally made in a circular form at the bottom, so that the sides produced meet the extremities of the diameter at the mouth; it being imagined, we suppose, that the powder acts in right lines parallel to the sides of the chamber; but, as that is not the case, we conclude, contrary to the opinion of Belidor and others, that the conic chambers are the worst of all.

Spheric chambers are much inferior to the cylindric or concave; for it is well known by the properties of geometry, that when a cylinder and a frustum of a cone occupy equal spaces, the surface of the cone is always greater than that of the cylinder. Hence, if the entrance of these chambers be not made very narrow, contrary to practice, as demonstrated by Mr. Muller, in his second edition of artillery, page 38 of the introduction, and the examples that follow, we con-

clude that these and the conic chambers are the worst.

Concave chambers. The advantage of these kinds of chambers consists in this, that their entrance may be made narrower than that of any other form; and practice has sufficiently proved it. Yet, when the entrance is so small as not to admit a man's hand, they are not easily cleaned: for which reason all 13 and 10-inch mortars should have concave chambers, and the others cylindric ones.

Parabolic chambers. These chambers, being the widest of any, may therefore be included amongst the worst; as it is not the inward figure of the chamber, but its entrance, which produces the effect, because the smaller it is, the nearer it reduces the effect into the direction of the shell. It has, however, one advantage, namely, that the shells will have no windage.

MORTAR-battery. The floating mortar battery, for the bombardment of the enemy's ports, which was invented by Mr. Congreve, son of General Congreve, of the artillery, is said to be proof both against shells and red-hot balls, and so contrived, that though provided both with masts and sails for any voyage, yet it can be securely disposed of in less than a quarter of an hour, so that the battery then presents nothing but a mere hull, with sloping sides, upon the water, which is rowed by forty men under cover of the bomb-proofs, and may, by the peculiar construction of the masts and rigging, be brought under sail again as expeditiously as when dismantled. The rudder and moorings are *entirely* under water, and protected by the bomb-proof, so that no disappointment as to them can possibly arise. The battery is armed with four large mortars for bombardment, and four 42-pounder carronades for self-defence; although from being covered with plates and bars of iron, she can neither be set fire to, nor carried by boarding. Four such vessels, though they are not more than 250 tons burthen each, and draw less than 12 feet water, would throw upwards of 500 shells into any place in one tide, and with the greatest effect and precision, both because from their construction they have nothing to apprehend from approaching the enemy's batteries, and because, from the peculiar contrivance of the mortar-beds, the elevation of the mortars is not affected by the rolling or pitching of the

vessel. The rockets, however, seem to have superseded this invention, at least for the present.

MORTAR, (*mortier*, Fr.) a composition of lime, sand, &c. mixed up with water, that serves as a cement to bind the stones, &c. of any building. Mine sand makes weak mortar, and the rounder the sand, the stronger the mortar; and if the sand is washed before it is mixed, so much the better.

The proportion of lime and sand for making mortar is extremely variable. Some use three parts of pit sand, and two of river-sand, to one of lime; others a proportion of sand to quick-lime, as 36 to 35. It should be well mixed, and beat every 24 hours for a week together, letting it then lie for a week more; and when it is used, must be beat and mixed again. By this means it will make good mortar, though the lime is but indifferent.

MORTAR for water-courses, cisterns, &c. is made of lime and hog's lard; sometimes mixed with the juice of figs, and sometimes with liquid pitch, which is first slaked with wine; and, after application, it is washed over with linseed oil.

MORTAR for furnaces, &c. is made with red clay wrought in water, wherein horse-dung and chimney-soot have been steeped; by which a salt is communicated to the water, that binds the clay, and makes it fit to endure the fire. The clay must not be too fat, lest it should be subject to clinks; nor too lean or sandy, lest it should not bind enough.

MORTAR, made of tarras, pozzuolana, tile-dust, or cinders, is mixed and prepared in the same manner as common mortar; only these ingredients are mixed with lime instead of sand in a due proportion, which is to be in equal quantities. As this mortar is to be used in aquatic buildings, the lime should be the very best.

In fortifications, docks, or piers of harbours, you should lay all the works under water with tarras-mortar, and the rest of the facings, both within and without, with cinder or tile-dust mortar, for about two feet deep.

MORTELLA, *MORTELLO*, or *MORTILLA TOWER*, a small castle erected for the defence of a coast. According to Captain Grose, the word is derived from *morta*, whence mote, or moat, which anciently signified a castle. Thus *morta de Windsor* is used

for Windsor Castle, in the agreement between King Stephen and Henry Duke of Normandy. So that *Mortella* may readily be considered as the diminutive of *Morta*.

There are, however, some very respectable authorities which differ from the above etymology, from which we have selected the following:

MORTELLA, MERTOL, or much more probably MARTELLO TOWERS, from the Italian "*Sonare la Campana a Martello*," to sound the alarm bell; which, in parts of Italy, (as the Carillons are in Flanders, &c.) is struck by hammers. Thus also, *Beacon-points* in Corsica and Greece are called *Mortello Capes*. In old French also, the word, for the same thing (now *marteau*,) was *Martel*; and "*Martel en tête*," the old adage for a rumour of annoyance and alarm. Though this might derive too from the popular abhorrence of Charles Martel's administration! that demon of taxation; the proverbial curse of his country, for oppressions and impositions the most abominably vile! *Mortello* has no discoverable affinity to any place, language, or known man. For *Mertola*, there is, only, the name of a place in the West of Spain. In opposition to this authority, we must not only refer to the following description of the towers in the Island of Jersey, but also to an extract of a letter from Lord Hood, dated Victory, St. Fiorenzo, February 22, 1794; and to the notorious fact, that the Tower of Mortella in Corsica takes its name from *Mortella*, a *Myrtle*; the Bay which it commands being called *Mortella*, or *Myrtle Bay*.

"On the 7th, Commodore Linzee anchored in a bay to the westward of Mortella Point, with the several ships and transports under his command.—The troops were mostly landed that evening, and possession taken of a height which overlooks the tower of Mortella. The next day, the General (Dundas) and Commodore being of opinion, that it was advisable to attack the tower from the bay, the Fortitude and Juno were ordered against it, without making the least impression, by a cannonade continued for two hours and a half; and the former ship being very much damaged by red hot shot, both hauled off. The walls of the tower were of a prodigious thickness, and the parapet, where there were two eighteen-pounders, was lined

with bass junk, five feet from the walls, and filled up with sand; and although it was cannonaded from the height for two days, within 150 yards, and appeared in a very shattered state, the enemy still held out; but a few hot shot setting fire to the bass, made them call for quarter. The number of men in the tower was, 33: only two were wounded, and those mortally."

MORTELLA Tower, as adapted to the defence of the Island of Jersey. This tower is quite round, of a conical form, being something broader at the base than the top, and about 40 feet high. It is built of the hard grit stone of the country, (which in general are very large,) closely cemented together, and the surfaces rendered quite smooth by the hammer; the mason-work is admirable. The only entrance is by a door $7\frac{1}{2}$ feet from the ground; you ascend to this by a ladder, which is pulled up into the tower every night. The door is arched, and is $5\frac{1}{2}$ feet high, and wide in proportion; the wall in this part is $5\frac{1}{2}$ feet thick. Having quitted the ladder, you mount a step two feet high, and then you are on the first floor of the tower. This room is round, and 13 feet diameter in the clear. Underneath it is the magazine, to which there is no way of getting, except through a trap-door that is in the middle of the floor. Round this room are eleven loop-holes, for the men to fire through, and benches to stand on during this operation. On these benches their beds are placed at night; this is, in fact, their guard-room, for here is the fire-place, &c. &c.

To the next floor you ascend by a ladder also, through a trap-door, the ladder then may be pulled up, the trap closed, and all communication between the two stories completely cut off. In this room are four small windows; there are the same number of loop-holes, benches, &c. for the same purposes as the room below, but no fire-place. The loop-holes are not placed exactly over each other, but in quin-cunx order. This room is covered with a strong arch, in the center of which is a round hole 30 inches diameter. When you get through this hole, which you do by means of a ladder, you are then on the top of the tower.

At the sides of this hole are firmly fixed three very strong iron hoops or bars, which form an arch over it, on

the top of which is a massy iron pin. On this pin, or pivot, rests the center of a large beam of wood, on one end of which is placed an iron 18-pound carronade, on a sort of frame, constructed like those used on board ships, where the gun slides back in the recoil. This end of the beam is supported by two pieces of timber, each resting on a small block wheel; the other end of the beam is supported by a lesser beam, resting on a large block wheel. All these wheels run in a wooden groove, that goes round the inside of the parapet. The whole is so well contrived and balanced, that the beam is easily turned round, so that the gun may be fired over any part of the parapet.

The parapet is built of brick, and is $4\frac{1}{2}$ feet high, with a slope of four feet, forming an angle of about $22\frac{1}{2}$ degrees, with the top of the parapet. When the men proceed to load, they stand on a bench, and when loaded, step down, and are sheltered from the enemy's shot by the parapet; there are places also on the top, for three wall-pieces. The ordinary guard consists of a sergeant or corporal, and from 6 to 12 men. Some of the Towers were guarded by the veteran battalion, and others by the militia of the island, who mounted in their common working clothes.

The towers were built about 20 years ago, and were thought, until the middle of the year 1800, to be perfectly complete for what they were designed, as well as the square towers in the forts; when machicoulis were added to all, and a carronade mounted, *en barbette*, on the top of each. Shot fired from so high an elevation is, in the opinion of engineers, of little use. The men inside the towers are quite safe from musketry, but those who are to load and fire the carronade, must be exposed, as on a *barbette* battery. In case of attack, the guns on all these towers are manned by the militia of the island; they are exercised at them every Sunday morning, but never fire powder.

The MORTELLA TOWERS which have been erected at Halifax, in Nova Scotia, are, in the opinion of a very intelligent engineer, preferable to those in Romney Marsh, which are twenty-seven in number, and about a quarter of a mile distant from one another. Each of them was originally intended to carry a large gun

against shipping, and a howitzer for a reciprocal, or mutual, flanking defence. But after several of them had been erected, it was found they would not answer the intended purpose, and could carry only one gun each.

MORTES-payes, Fr. soldiers that were paid for the constant duty of a town or fortified place, both in time of peace and war.

MORTES-*auvres*, Fr. the sides, or inside of a ship, from the wales upwards.

MORTES-*eaux*, Fr. ebb-tides.

MORTIERS *Pierriers*, Fr. See Stone MORTARS.

MORTIER *Perdreau ou à Perdreaux*, Fr. See Partridge MORTAR.

MORTIER *à la Coehorn*, Fr. a small mortar which is used only to throw grenades. It is so called from that celebrated engineer, who first adopted it.

MORTIER *à la Gomer*, Fr. from the name of the supposed inventor. This mortar is esteemed by the French, because the shell is reckoned to go truer from its chamber, which is a sort of half cone, than from the cylindrical one. For particulars see *Elémens de Fortification*, page 378.

For MORTIER in its general import, see Bombardier Français, by Béliidor; also *Mémoires d'Artillerie de Survey de Saint-Remy*, last edit. in 3 vol. 4to. *La Théorie de l'Artillerie* par Mr. Dulacq, in 4to. and *Le Traité d'Artillerie*, by Mr. Le Blond, in 8vo.

MORTISE, a hole cut in wood, so that another piece may be fitted into it.

MORTISE, (*mortaise*, Fr.) This word is sometimes written *mortoise*, and signifies (among joiners and carpenters) one piece of timber which is fastened into another.

To MORTISE, to fix the tenon of one piece of wood into a hole or mortise of another; as in bed-posts, &c.

Les MORTS, Fr. the dead on a field of battle are so called.

MORVE, Fr. glanders, a complaint in horses.

MOSIAC-Work, } (*mosaique*,) Fr.

MOSAIC, } According to N.

Bailey, this word should be written *Musaic*, being called, as some say, from the *Musca*, of the Greeks, which were adorned both out and inside with it, and from whom, Pliny says, they were derived. Mosaic work is curiously wrought with stones of divers colours,

and divers metals, into the shape of knots, flowers, and other things, with that nicety of art, that they seem to be all but one stone, or rather the work of nature.

MOT, *Fr.* parole, watchword.—This word bears the same import in French that it does in English. See **PAROLE**.

Donner le MOT, *Fr.* to give the parole, or watchword.

Aller prendre le MOT, *Fr.* to go for the parole, or watchword.

On l'envoya porter le MOT, *Fr.* he was sent with the parole or watchword.

In the French service *parole* and *countersign* are frequently comprehended under the word *mot*, viz. *Le mot qu'on avoit donné le jour du combat, étoit Saint Louis et Paris*; which, according to the English method of giving out orders, would have stood thus:—*Parole St. Louis, countersign Paris*. See **MOTS**.

MOT de guet, *Fr.* See **GUET**.

MOT de Ralliement, *Fr.* a word given to any armed body of men, who either attack or are attacked, and which serves as a rallying point among them.

MOTHIR *al Mooluc*, in Indian fortification, barricadoes, intrenchments, or breastworks, are so called.

MOTION is defined to be the continued and successive change of place. There are three general laws of motion: 1. That a body always perseveres in its state of rest, or of uniform motion in a right line, till by some external force it be made to change its place: for as a body is passive in receiving its motion, and the direction of its motion, so it retains them without any change, till it be acted on by something external.—2. The second general law of motion is, that the change of motion is proportional to the force impressed, and is produced in the right line in which that force acts. 3. The third general law of motion is, that action and re-action are equal, with opposite directions, and are to be estimated always in the same right line.

MOTION, a word bearing the same signification in the British service, as *tems* does in the French. It is peculiarly applicable to the manual and platoon exercise; as *draw ramrod*, which is done in two motions—*Tirez la baguette en deux tems*. Motion, in a military sense, is distinguished from movement, inasmuch as the former applies specifically to something done by an individual,

with an instrument of war, as handling the musket; whereas the latter is generally understood to mean the different changes, &c. which are made in evolutions, &c. Motion is the particular adjunct of the manual, and movement that of evolution. The French make the same distinction with respect to *Manicement*.

MOTION, (*mouvement*, *Fr.*) generally so called, a continual and successive change of place.

MOTIONS of an army, (*mouvements d'une armée*, *Fr.*) are the various changes which it undergoes in marching from one place to another; these are more generally understood by the term movement.

MOTIONS of the firelock during the manual and platoon exercise. We have already said, that motion in this sense is expressed by *tems* among the French. These consist of those prescribed methods which have been explained under *Manual*.

MOTION compound (*mouvement composé*, *Fr.*) is the motion of one body impelled by two different powers.

MOTION of projection, (*mouvement de projection*, *Fr.*) that by which bodies are impelled through the air, or through any other fluid. A shell which is forced out of a mortar by means of inflammable gunpowder has a motion of projection.

MOTION of vibration, or vibrating motion, (*mouvement de vibration*, *Fr.*) is the circular motion of a body, which is generally round, or spherical.

MOTIONS of an enemy, (*mouvements d'un ennemi*, *Fr.*) the different marches, positions, &c. which an enemy takes, are so called.

To watch the MOTIONS of an enemy, (*guetter un ennemi*, *Fr.*) to keep a good look out by means of a regular communication between head quarters, and the outposts of your army. On a large scale the business of an army of observation is chiefly confined to this species of service. On a more limited one, the duty is frequently entrusted to partisans and light troops.

MOTION of a bomb or ball. The progress which a bomb, or ball, makes through the air may be said to consist of three sorts of motion, after it has been delivered out of the mortar, or emitted from a gun or musket. These are:—

The violent MOTION, or first explosion, when the powder has worked its

effect upon the ball, so far as the bomb, or ball, may be supposed to move in a ball line.

The *mixed* MOTION, or yielding impulse, when the natural weight of the bomb, or ball, begins to overcome the force which was given by the gunpowder.

The *natural* MOTION, or exhaustion of the first impulse. This occurs when the bomb, or ball, is falling to the ground.

To MOTION a thing, to propose it in a military or civil meeting.

MOTION, *Fr.* This word has been adopted by the French, to convey the same meaning that it does in English, namely, a proposition; hence *appuyer la motion dans une assemblée*; to support a motion in a public assembly or meeting. *Délibérer sur la motion*, to deliberate upon the motion. *Retirer sa motion*, to withdraw one's motion. *Rejeter la motion*, to throw out the motion.

MOTIONS *militaires*, *Fr.* This term was formerly used among the French to signify the various evolutions which an army, or regiment might be put through. It has been succeeded by *évolutions militaires*, which seems a more comprehensive expression.

MOTIVE, (*motif*, *Fr.*) that which determines the choice; that which incites the action.

MOTIVER, *Fr.* to give reasons for any thing; to state particulars. The French say: *Il ne motive jamais son avis*, he never explains his motive when he gives advice.

MOTOS, a piece of old linen, toyzed like wood, which is put into ulcers, and stops the flux of blood.

MOTS *d'ordre et de ralliement*, *Fr.* In a publication by Paul Thiébault, adjutant general on the French staff, the following explanation is given of paroles and countersigns, which may be considered as the free translation of *Mots*, with this exception, that the *mot de ralliement* seems peculiarly used in the French service.—Among us the parole and countersign only are practised, and their distinct import seems so little understood, that we shall not hesitate to give the whole article from the French.

The *Mots d'ordre et de ralliement* consist of three distinct and separate words, which are chosen for the specific purpose of enabling the soldiers belonging to the same army, to be in perfect

intelligence with one another, especially during the night.

These three words are composed in the following manner, viz. *Le Mot d'ordre*, or what we call the parole, must be taken from the name of some deceased person, to which must be added that of some town or country, for the countersign.

The *Mot de ralliement* must consist of a substantive, which does not relate either to the name of a man, the name of a town, or the name of a country.

These three words are given out every morning from head quarters, and are delivered, sealed up, to the officers of the different guards, and to those persons who are entrusted with the command of an outpost, or have the charge of a patrol.

The *Mot d'ordre*, or parole, must never be confided beyond officers and non-commissioned officers; the *mot de ralliement* may in some cases be given to sentinels that are stationed at certain distances from the out-posts; but those should invariably consist of old soldiers, whose fidelity and courage can be depended upon.

The *Mot d'ordre*, or parole, as well as the *mot de ralliement*, is always given out from head quarters; nor ought any general or commanding officer to take upon himself to alter either, except under circumstances so peculiarly urgent, that the good of the service would justify the change. Among these circumstances may be considered, the desertion of a sentinel from the out-post, and the strong presumption, that the enemy has been made acquainted with the words, &c. Whenever this necessity occurs, all the commanding officers who have any communication with that quarter whence the parole was issued, should instantly be made acquainted with the alteration.

With respect to the manner in which these words are to be delivered out, and the frequency of their circulation, the whole must depend upon circumstances. When an army or body of troops lies at some distance from the enemy, they are usually forwarded at the different quarters, camps, or cantonments, for five, ten, or fifteen days together. When close to an enemy, they are given out, as we have already observed, every day. When there is no ground to apprehend a surprize or attack, one word will be suffi-

cient for each day: but, in critical cases, the parole must be changed two or three times during the night. If several corps are cantoned together, the *mot d'ordre*, or parole, must be sent to the officer commanding in the cantonment. When the troops are encamped, it is generally sent to the commanding officer of each regiment; and seldom to the commandant of each brigade.

The *Mot*, or parole, must always be given out during the day, except in cases of emergency; and it must never be delivered to any person unless the individual, who is entrusted with it, be fully convinced, that he is authorized to receive it. It ought indeed to be given personally to him only to whom it is addressed by name,

MOTTE, *Fr.* a clod; a lump of earth; turf. Any small eminence covered with moss, or grass: also a hillock: among tanners, peat.

MOTTO, a sentence, either with, or without a badge, by which any regiment is particularly distinguished; as, for example, the 3d regiment of foot, or Buffs, have a griffin embossed as their badge, and the motto, *Veteri frondescit honore*. The motto of the grenadiers is: *Nec aspera terrent*. The various military orders have also different mottos. See **GARTER**, **BATI**, **THISTLE**, &c. also **DÉVISE**, *Fr.*

MOU, *Fr.* soft; effeminate; inactive; not resolute.

Un esprit Mou, *Fr.* a weak man.

Cheval Mou, *Fr.* a washy horse. See **WASH**.

MOUCHARD, *Fr.* a domestic spy, an informer. Among the French it more particularly means a person who is employed to watch the motions of any marked man. Creatures of this infamous, although perhaps necessary, class, were constantly attached to the police of France.

MOUCHE, *Fr.* a spy; an informer.

Prendre la Mouche, *Fr.* to be easily nettled, or put out of humour.

MOUCHES *ét* **MOUTONS**, *Fr.* persons who act in the double capacity of a spy, or informer, by affecting to be of some particular party in order to betray it, and for that purpose are seemingly persecuted by their employers.

Cheval MOUCHETÉ, *Fr.* a flea-bitten horse.

MOUCHOIR, *Fr.* a handkerchief.

Montrer le Mouchoir blanc, *Fr.* literally to hang out a white handker-

chief; to make an offer of submission.

MOVEABLE Pivot. When the *pivot flank* of any body of men describes in the wheel a smaller circle than the *wheeling flank*, the wheel is said to be made on a moveable pivot.

MOVEABLE Towers or Belfreys, machines used by the ancients in the attack of towns and fortified places. They consisted of several stories; the archers or cross-bow men being placed in the upper, and a large ram, with which a breach was attempted, in the bottom ones.

MOVEMENT, (*mouvement*, *Fr.*)—Under this term are comprehended all the different evolutions, marches, countermarches and manœuvres which are made in tactics for the purpose of retreating from, or of approaching, towards an enemy. It also includes the various dispositions which take place in pitching a camp, or arranging a line of battle. The science of military movements forms one of the principal features in the character of a great commander. If he be full of resources in this important branch, he may oftentimes defeat an enemy without even coming to blows; for to conceal one's movements requires great art and much ingenuity. See **STRATAGEMS in War**.

MOVEMENT. According to the Regulations, printed by authority, every inspecting general is directed to report minutely and comparatively on the performance of each battalion of the great leading points of movement.

Counter MOVEMENTS of defence are movements calculated to defeat any premeditated attack. According to the Regulations they may be briefly explained, by observing, that if the flank of one body is thrown forward, that of the other may, by similar means, be thrown back. If one body prolongs its line to outflank, the other may by the same movement maintain its relative situation. Whatever change of position is made by one body, the other may counteract it by a similar change. If the wing of one body is refused, the wing of the other may be advanced to seize an advantage.

MOVEMENTS of previous formation are military dispositions which every general must have carefully digested, before he advances upon a direct line of offensive operations. A body of troops, which has a considerable march to make

previous to the *attack*, must always approach an enemy in one, or more columns, at open or other distances, according to circumstances.—Some general knowledge of an enemy's situation, determines the manner in which he is to be approached, the composition of the columns, the flank of each which leads, and their combination in forming. A nearer view determines a perseverance in the first direction, or a change in the leading flanks, and direction of the column, in order to form in the most speedy and advantageous manner.

MOVEMENTS of attack are made by bodies of men advancing in line or column to attack an opposing enemy.—When a considerable body of troops is to act offensively, it must form in line, at latest, within 1200 or 1500 paces of a posted enemy, unless the ground particularly favour, and cover from the fire of the artillery, the enfilade of which is what chiefly prevents bodies in column from approaching nearer; and that space, under the unceasing fire of their own artillery, troops in line will march over in 18 minutes.

Movements of attack, when they are made from a parallel position, must be either in line, or by flank of the line in echelon, that flank being reinforced, and the other refused; or from a new and advantageous position taken up, and not provided against by the enemy. From an *oblique* position, the attack is directed against a comparatively weak point of the enemy. Attacks from the center are more liable to be enfiladed, and are sooner guarded against than from the flank.

MOVEMENTS of retreat are combinations of columns of march, covered by positions, and a strong rear guard. Troops are occasionally taken out of the retiring columns of march, to occupy positions and heights; they remain till the rear has passed, and then become the rear guard; this they continue to be, till they find other troops in like manner posted; these last, in their turn, become also the rear guard, and in this way are the troops of columns in such situations relieved. A rear guard will fall back by the *retreat in line*—the *chequered retreat*—the *passage of lines*—the *echelon* changes of position.

MOVEMENTS in echelon of the line.—Echelon, or diagonal movements, especially of a great corps, are calculated

not only to disconcert an enemy, but likewise to enable the army, which adopts them, either to make a partial attack, or a gradual retreat. The attack may be formed from the center, or from either of the wings reinforced.—If successful, the divisions move up into line to improve the advantage: if repulsed, they are in a good situation to protect the retreat. In advancing, the several bodies move independent, act freely, and are ready to assist; in retiring, they fall gradually back on each other, and thereby give mutual aid and support. Echelon movements, in fact, comprize within themselves all the essential principles of extension and compression, which are found in close or open column, with the additional advantage of being better adapted to throw a considerable line into an oblique position, of presenting a narrow front, with the means of increasing it at pleasure, unexposed to the enemy's fire, and of diminishing it with the same facility and safety.

Echelon MOVEMENTS on an oblique line, are best calculated to outwing an enemy, or to preserve the points of appui of a wing; possessing this advantage, that such movements may not be perceptible to the enemy, as it consists of short and independent lines, which, when seen at a distance, appear as if a full line.

Echelon movements by half battalions or less, are made by their directing flank, which is always the one advanced from, or wheeled to. Echelon movements by whole battalions, are governed by their advanced serjeants.—Echelon movements by several battalions, are made in line, each by its own center, and the whole by the battalion next the directing flank.

MOVEMENTS that are made in face of an enemy, (*Mouvements devant l'ennemi*, Fr) There is no operation in war which requires so much nicety, precision, and judgment as that of retreating in the presence of an enemy. Every movement from the direct line of battle is more or less critical; but when a regiment is obliged to retire under the eye, and perhaps the fire, of a pursuing foe, the utmost presence of mind is required in the officers who command, and the greatest steadiness in the men. In a situation of this sort, it becomes the peculiar duty of the major, to see that every change of manœuvre, and every

movement, be made with promptitude and accuracy. For although he is subordinate to others, and must, of course, follow superior directions, yet so much of the executive duty rests with him, that his character and abilities, as an officer, will be more conspicuous on these occasions than in any other. The movements of a corps which retreats, consist in retrograde marches, in line, by alternate companies, in column, by wings, or in square.

Eventail, or fan MOVEMENT. This movement is performed on the march, and must be begun at a distance behind the line, proportionate to the body which is to oblique and form. It may be applied to one battalion, but hardly to a more considerable body, which would find great difficulty in the execution. It gives a gradual increase of front during a progressive movement. With justness it can be made on a front division only, not on a central, or rear one: in proportion as the leading platoon shortens its step, will the one behind it, and successively each other, come up into line with it. As soon as the colours of the battalion arrive, they become the leading point. Although it is an operation of more difficulty, yet if the leading division continues the ordinary, and the obliquing ones take the quick step, till they successively are up with it, a battalion column which is placed behind the flank of a line, may in this manner, during the march, and when near to the enemy, gradually lengthen out that line.

Vourff or Quick MOVEMENT. This movement is frequently resorted to when the head of a considerable open column in march arrives at, or near the point from which it is to take an oblique position, facing to its then rear, and at which points its third, fourth, or any other named battalion, is to be placed.

The justness of the movement depends on the points in the new direction being taken up quickly, and with precision: on the previous determination that a certain battalion, or division of a battalion, shall pass, or halt at the point of intersection; and that every part of the column which is behind that battalion, shall throw itself into open column on the new line behind the point of intersection, ready to prolong, or to form the line whenever it comes to its turn.

This movement will often take place

in the change of position of a second line, and is performed by all those that are behind the division, which is to stop at the point where the old and new lines intersect. And at all times when the open column changes into a direction on which it is to form, and that the division which is to be placed at the point of entry can be determined, it much facilitates the operation to make every thing behind that division gain the new line as quick as possible, without waiting till the head of the column halts.

MOVEMENT of troops in general. With regard to the geometrical precision required in the movements of troops, on which so much stress has been laid by some confined writers, we submit the following extract of a letter which was written by Baron de Besenval, in the year 1786, in a communication to the Maréchal de Ségur, the French minister at war.

“I have heard you say, that it appeared absolutely necessary to insist upon the greatest degree of precision in time of peace, in order to secure some portion of it in time of war. I cannot be of your opinion on this head. The effect of such a principle will be to tease and discourage the troops; and when, after a few campaigns, the loss of old soldiers replaced by raw recruits, has unavoidably made it necessary to relinquish the usual precision, and to manœuvre without it, such a step will at first lessen them in their own opinion, which is a great evil; at last they will sink into a state of relaxation, and naturally conclude, that they were originally tormented to no purpose. This impression must, of course, be highly injurious to the service; and in order to prevent its effects, it is well known, that the Great Frederick preferred the existence of an acknowledged evil, sooner than run the risk of a greater by innovation. When his brother, Prince Henry of Prussia, saw the gendarmerie manœuvre before him, he only said: *C'est trop!* this is too much, or this is overdoing the thing.”

MOUFFETTES, Fr. foul air in mines.

MOUFLE, Fr. several pulleys which act together in raising burthens, or weights. The adjective *mouflé, ée*, is never used except in conjunction with *Poulie*, which see.

MOUFLE also signifies the truckles for a pulley.

MOUFLE, *Fr.* a sort of stuffed glove. It is common among the French to say, *Il ne faut pas y aller sans mouflés*; figuratively meaning, that no dangerous enterprise ought to be undertaken without sufficient force to carry it into execution.

MOUILLAGE, *Fr.* anchorage.

MOUILLE, *Fr.* the lower floodgate of a sluice.

MOUILLER, *Fr.* to anchor; to let go the anchor.

MOULDS, vessels used in casting shot for guns, muskets, carbines, and pistols; the first are of iron, used by the founders, and the others by the artillery in the field, and in garrison.

Laboratory Moulds are made of wood, for filling and driving all sorts of rockets, and cartridges, &c.

Moulds of founders of large works, such as statues, bells, guns, &c. are of wax, supported within side by what is called a *core*, and covered on the outside with a cap, or case.

The liquid metal runs in the space which the wax occupied before it melted away, and ran off through a great number of little canals, which cover the whole mould.

Moulds of founders of small works are frames filled with sand; it is in these frames, which are likewise filled with sand, that their several works are fashioned, into which, when the two frames whereof the mould is composed are rejoined, the melted brass is run.

MOULDINGS of a gun or mortar are all the eminent parts, as squares or rounds, which serve for ornaments: such as the breech-mouldings. The rings, &c. are also called mouldings.

MOULE, *Fr.* See **MOULD**.

MOULE de fusée volante, *Fr.* a piece of round wood used in fire-works.

MOULIN, *Fr.* a mill.

MOULIN à bras portatif, *Fr.* a species of hand-mill, which was invented in France by Le Sieur de Lavault, and which has been found extremely useful to troops on service. Ten of these mills may be conveniently placed on one wagon.

MOULINET, *Fr.* a capstan, turnstile, &c.

MOULINET à bras, *Fr.* a rack for a cross-bow.

MOUND, in old military books, is a term used for a bank or rampart, or other defence, particularly that which is made of earth.

To MOUNT is a word variously made use of in military matters, as;

To MOUNT cannon, to place any piece of ordnance on its frame, for the more easy carriage and management of it in firing. Hence to dismount is to take cannon from any serviceable position.

To MOUNT a breach, to run up in a quick and determined manner to any breach made in a wall, &c.

To MOUNT guard, to do duty in a town or garrison, in a camp, or at out quarters.

To MOUNT, to place on horseback, to furnish with horses; as, twelve thousand men have been well mounted, without any considerable expense to the country. A cavalry regiment may be said to be well or ill mounted; in either of which cases, the commanding officer is generally blameable or praise-worthy.

To mount likewise signifies the act of getting on horseback, according to prescribed military rules; as, to prepare to mount, is when the left hand files move their horses forward in the manner described under *Unlink your horses*. The whole then put their firelocks into the buckets, and buckle them on, doubling the strap twice round the barrel, come to the front of the horses, fasten the links, throw them over the horses' heads with the left hand round the horses' heads, take their swords, and buckle them tight into the belt, take the bit reins up, then take a lock of the mane, and put it into the left hand, the left foot into the stirrup, and the right hand on the cantle of the saddle, waiting for the word *Mount*: when they spring smartly up, and look to the right of the rear. At the next signal, they must throw the leg well over the cloak, and place themselves well in the saddle, with the right hand leaning on the off holster. The men must be careful not to check the horses with the bits in mounting. In mounting and dismounting, the files that move forward must take care to keep their horses straight, and at the prescribed distances from each other; and when mounting, as soon as the gloves are on, belts right, &c. the left files must dress well to the right, putting the horses straight, and leaving distance enough for the right files to come in.

To MOUNT a gun is either to put the gun into its carriage, or else, when in the carriage, to raise the mouth higher.

MOUNTAINS, called *Great and*

Little St. Bernard, a part of the Alps, situated in the *Glacières* of Switzerland, which has been rendered famous in modern history by the passage of the French army under Bonaparte, then First Consul. The *Simplon*, of which there exists a medal, as of the former, is also remarkable in the same way.

MOUNTED-money. See **MONEY.**

MOUNTEE, an alarm to mount, or go upon some warlike expedition.

Half or *small MOUNTINGS*, the shirt, shoes, stock and hose, or stockings, which were formerly furnished by the colonels or commandants of corps every year. This mode of distribution which engendered a multiplicity of abuses, has been abolished by his Royal Highness the Duke of York: in lieu of which a regulation has taken place, that (if *honestly* attended to) must be highly beneficial to the soldier.

MOUNTING and **DISMOUNTING**, when the horses are to be led away. It frequently happens, especially in retreating or advancing, that it may be necessary to cover the defiling of a regiment by dismounting a squadron or part of one, to flank the mouth of a defile.—This is generally effected by lining the hedges, &c. and keeping up a hot fire upon the enemy. It follows, of course, that the horses cannot be linked together, but they must be led away (in a retreat) to the most convenient spot in the defile for the men to mount again. In advancing they must be led to a spot where they will not impede the defiling of the regiment, but where they will be at hand for the dismounted parties to mount.

Guard MOUNTING, (*à la garde montante*, Fr.) the hour at which any guard is mounted obtains this appellation, viz. *The officers will assemble at guard mounting.*

MOURGON, Fr. a man belonging to the galleys, who plunges into the sea to pick up any thing that may have fallen overboard.

MOURIR, Fr. to die.

MOURIR d'une belle épée, a French phrase, which signifies to fall under the hands of an enemy of great skill and reputation.

MOURNE, (*mourne*, Fr.) the round end of a staff; the part of a lance to which the steel is fixed, or where it is taken off.

MOURNER, a person attending the funeral or interment of a fellow creature.

Chief MOURNER. The chief mourner comes last: every thing in military funerals being reversed.

MOURNING is expressed among military men, in the British service, by a piece of black crape round the arm, and handle of the sword; and in some instances by a cockade of the same. See **DEVIL**, Fr.

MOURNING of the chine, (in horses) a disease which causes ulcers in the liver.

MOURRAILLES, Fr. barnacles for a horse's nose.

MOURRE, Fr. the muzzle or chuff of beasts.

MOUSER, an ironical term, which is sometimes used in the British militia to distinguish battalion men from the flank companies. It is indeed generally applied to them by the grenadiers and light bobs, meaning, that while the latter are detached, the former remain in quarters, like cats, to watch the mice, &c. In the line, and among the guards, they are called *buffers*.

MOUSQUET, Fr. musket. This word, which signifies an old weapon of offence that was formerly fired by means of a lighted match, has been variously used among the French, viz. *gros mousquet*, a heavy musket; *un petit mousquet*, a short musket; *un mousquet léger*, a light musket. Muskets were first used by the French in the 15th century.

MOUSQUET à fourchette, Fr. a musket with a rest attached to it.

Coup de MOUSQUET, Fr. See **COUP d'arme à feu**.

Recevoir un coup de MOUSQUET, Fr. to receive a musket shot.

Porter le MOUSQUET dans une compagnie d'infanterie, Fr. to stand in the ranks as a foot soldier.

MOUSQUET Biscayen, Fr. a long heavy musket which is used in fortified places to annoy reconnoitring parties.

MOUSQUETADE, Fr. a musket shot. This term is generally used to express a smart discharge of musketry: *on a entendu une vive Mousquetade*: they have heard a brisk discharge of musketry.

Essuyer une MOUSQUETADE, Fr. to stand, or support a discharge of musketry.

MOUSQUETAIRES, Fr. Musketeers, under the old government, originally raised by Louis XIII. in 1622, out of the Carabineers. This corps consisted of two companies selected from the young men of noble extraction, each

of 244 officers and privates. The first company's *uniform* was a scarlet coat, faced with the same, and a scarlet waist-coat, gold buttons and button-holes, the coat edged with gold; a hat laced with gold, with a white feather in it. The second company's was the same, with the exception of silver in the place of gold. The *cloaks* and *great coats* were blue, laced with silver, with white crosses sewed before and behind, and red streaks running into the corners, or ren-trant angles;—the streaks in the second company were yellow. The *horses* of the first company, or *Mousquetaires gris*, wore white or dapple-grey; of the second, or *Mousquetaires noirs*, black. The *arms* were, instead of the musket, a carbine, two pistols in the saddle-bow, and a sword, calculated for infantry and cavalry duty.—The *standard* of the first company was a *bomb* falling upon a besieged town, with the motto, *Quo ruit ad lethum*: that of the second company was a bunch of arrows, with these words underneath, *Alterius Jovis altera tela*. The *Mousquetaires* never served on horse-back except when the king travelled. Several princes and almost all the general officers and marshals of France were indebted to this establishment for the first elements of military science. The corps was indeed considered as a military school for the French nobility. The English Roman catholic noblemen who wished to enter the *Mousquetaires* were obliged to prove certain degrees of nobility before they were admitted: this was not the case in the Irish brigade.

MOUSQUETON, *Fr.* a fire-arm lighter and shorter than the common firelock; usually carried by dragoons. The French guards, during the monarchy, had their mousquetons highly polished and ornamented with gold, &c.

MOUSQUETERIE, *Fr.* musketry.

Feu de MOUSQUETERIE, *Fr.* musket-firing.

MOUSSE, *Fr.* moss. This is used in flood-gates to prevent the water from oozing through.

MOUSTACHE, *Fr.* This word was originally derived from the Greek, adopted by the Italians, subsequently by the French, and then used by us. It literally means the hair which is allowed to grow upon the upper lip of a man; and which is better known amongst us by the familiar term whiskers. The French use it in a figurative sense, viz.

Eulerer sur la moustache; *jusque sur la moustache de quelqu'un*, *Fr.* to seize or take possession of any thing under the very nose, or in the presence of a person. *Les ennemis sont venus pour défendre cette place, on la leur a enlevée sur la moustache*, the enemy drew near to defend the town, but it was taken under their very noses.

MOUTH, (in geography) a place where a river disembogues or empties itself into the sea.

MOUTH of a cannon, (*bouche d'un canon*, *Fr.*) See **CANNON**; also *bouches à feu*.

MOUTH of a river, (*embouchure*, *Fr.*)

MOUTH of a haven, (*entrée*, *Fr.*) the entrance into a harbour.

A fine MOUTH, (in horsemanship.) A horse is said to have a *fine mouth* that stops if the horseman does but bend his body backwards, and raise his hand without waiting for the check of the bridle: Such a mouth, according to Bailey, is also called *sensible*, *light*, and *loyal*.

A fixed MOUTH, } is when a horse

A certain MOUTH, } does not hack, or beat upon the hand.

A false MOUTH is when, though the parts of a horse's mouth look well, and are well formed, it is not at all sensible.

A MOUTH of a full appui, i. e. a mouth of a full rest upon the hand, is the mouth of a horse that has not the tender nice sense of some fine mouths; but nevertheless has a fixed and certain rest, suffers a hand that is a little hard, without hacking or beating upon the hand.

MOUTH of fire. The entrance into the garrison of Gibraltar, by the grand battery and the old mole, is so called by the Spaniards, on account of the formidable appearance of the ordnance from the lines.

MOUTHED. This word in horsemanship is applied in two senses, viz.

Hard-MOUTHED. See **HARD** in **HAND**.

Soft-MOUTHED. See **EASY** in **HAND**.

Foul-MOUTHED. See **LANGUE**, *Fr.*

MOUTON, *Fr.* a rammer used to drive large piles into the earth, &c. It is also called *hie*.

MOUTON, *Fr.* This term is used among the French to signify a person who is placed with another confined under suspicious circumstances, for the purpose of discovering his real sentiments.

MOUTONNERIE, *Fr.* the act of watching or decoying another. This art is practised in France to great perfection, particularly by persons attached to the police. It is awkwardly imitated in England, for it is seldom in the character of an Englishman to descend to treachery.

MOUTTONNIER, *Fr.* sheep-like; gregarious. The notorious Marat used to say, during the effervescence of the French revolution, *Tout peuple est mou-tonnien*, the nation or people at large are always gregarious, and ready to follow a leader.

Nation MOUTONNIÈRE, *Fr.* a nation which suffers itself to be gulled and led like sheep by designing men.

Sable MOUVANT, *Fr.* quicksand.

MOUVEMENS de tête, *Fr.* motions of the head. For the English explanation of these motions, see *Eyes*. The French express them in the following manner: *Tête à droite*, eyes right.—*Tête à gauche*, eyes left.—*Fixe!* eyes front.

MOUVEMENS, *Fr.* movements, commotions, broils.

MOUVEMENS des troupes sous les armes, *Fr.* By these are understood the different changes of position, and the various facings which soldiers go through under arms.

MOUVEMENS de pied ferme, *Fr.* that exercise, consisting of the manual and facings, which a soldier performs, without quitting his original ground. The left foot on this occasion becomes a standing pivot.

MOUVEMENS ouverts, *Fr.* movements, or evolutions, which are made at open order.

MOUVEMENS serrés, *Fr.* movements, or evolutions, which are made at close order.

MOUVEMENS opposés, *Fr.* opposite movements, or evolutions.

MOUVEMENT, *Fr.* See *Movement*.

MOUVEMENT, *Fr.* See motion for its general acceptation.

MOYE, *Fr.* a crack in free-stone, &c.

MOYEN, *Fr.* means; power; help.

MOYEN, *Fr.* the bastions which are constructed on the angles are called Royal Bastions. Some engineers have distinguished those bastions by the name of *Moyens Royaux*, or medium royals, whose flanks contain from ninety to one hundred toises.

MOYENEAU, (in fortification,) a lit-

tle flat bastion raised upon a *re-entering angle* before a *courtin*, which is too long, between two other bastions.

MOYENNE, *Fr.* a piece of ordnance formerly so called. See *Minion*.

MOYENNE ville, *Fr.* a term given by the French to any town in which the garrison is equal to a third of the inhabitants, and which is not deemed sufficiently important to bear the expense of a citadel; more especially so, because it is not in the power of the inhabitants to form seditious meetings without the knowledge of the soldiers who are quartered on them.

MOYENS côtés, *Fr.* in fortification, are those sides which contain from eighty to one hundred and eighty toises in extent: these are always fortified with bastions on their angles. The *moyens côtés* are generally found along the extent of irregular places; and each one of these is individually subdivided into small, mean, and great sides.

MOYENS sourds, *Fr.* underhand methods.

MOYER, *Fr.* to saw free-stones.

MOYEU, *Fr.* the stock of a wheel; the nave.

MOYLE, a mule.

MUD-WALLS. The ancient fortifications consisted chiefly of mud or clay, thrown up in any convenient form for defence against sudden inroads.

MUET, *Fr.* See *Mute*.

MUFFETEERS, a name given to such regiments of dragoons as have been ordered to wear furred caps, particularly the 7th and 15th light dragoons. The name is so far appropriate, because the caps of these corps resemble the common muffs worn by the females in Great Britain, and by the effeminate males upon the continent.

To MUFFLE, to wrap any thing up so as to deaden the sound, which might otherwise issue from the contact of two hard substances. When the French effected their passage over the march Al-baredo, on their route to the plain of Marengo, they were so much exposed to the Austrians, that in order to get their artillery and ammunition over, without being betrayed by the noise of the carriage wheels, and the clattering of the horses' shoes, both were muffled with bands of hay and straw, and dung was spread over the ground. In this manner they crossed that stupendous rock. Thirty men were put to the drag

ropes of each piece, and as many were employed to draw up the caissons.

MUFFLED. Drums are muffled at military funerals or burials, and at military executions, particularly when a soldier is shot for some capital crime.

MUFFLED spurs, spurs whose points are blunted or covered. We say, figuratively, to ride a free horse, or a generous person, with muffled spurs, that is, not to push either beyond his strength or means.

MUFLE, *Fr.* (in architecture) a piece of ornamental sculpture, which represents the head of some animal, as that of a lion, &c. and serves as a water-spout to a ledge or wave.

MUFTI, (*moufti*, *Fr.*) the high priest of the Mahometans.

MUGIR, *Fr.* to roar; to make a great noise. *Les soldats ne font que mugir dans les champs.* The soldiers do nothing but roar and bellow in the fields.

MUGS, a banditti of plunderers from an Indian nation.

MUGUÉTER *une ville*, *Fr.* to endeavour by all possible means and stratagems to surprize a fortified town or place.

MUID, *Fr.* a hog'shead.

MUID de blé, *Fr.* comb and a bushel of corn.

MULAGIS, Turkish cavalry, consisting of a small number of chosen men, who are personally attached to the *Beglerbeg*, or viceroy, in Turkey. The *beglerbeg* is head or chief of a militia, which is called after him, and is commanded by subordinate *beglers*. There are 24 *beglers*, or viceroys, under the Grand Signor, who are extremely rich.

MULATTO, (*mulâtre*, *Fr.*) in the Indies, denotes one begotten by a negro man on an Indian woman, or by an Indian man on a negro woman. Those begotten of a Spanish woman and Indian man are called *metis*, and those begotten of a savage by a *metis*, are called *jambis*. They also differ very much in colour, and in their hair.

Generally speaking, especially in Europe, and in the West Indies, a mulatto is one begotten by a white man on a negro woman, or by a negro man on a white woman. The word is Spanish, *mulata*, and formed of *mula*, a mule, being begotten, as it were, of two different species.

Mulattoes abound in the West Indies;

so much so, that on the dangerous symptoms of insurrection, which appeared among the blacks after the success of Toussaint in St. Domingo, a proposal was made to government by a rich planter, to raise a mulatto corps, as an intermediate check upon the blacks.— After six months suspense, the memorial was rejected by the war minister, Henry Dundas, afterwards Viscount Melville. But a corps of men of colour was afterwards raised and sent to Ceylon, on very different principles.

MULCT. A soldier is said to be mulct of his pay when put under fine or stoppages for necessities, or to make good some dilapidations committed by him on the property of the people or government.

MULE, (*mulet*, *Fr.*) an animal generated between a he-ass and a mare, or between a she-ass and a horse; a sure-footed beast that is very serviceable in mountainous countries, and much used in Spain; but like many useful men and women, extremely obstinate.

MULETEER, (*muletier*, *Fr.*) a mule driver. A corps of these was attempted to be raised, or rather got together, during the Spanish insurrection in 1808.

MULIN, *Fr.* a narrow heel, and high coffin; such as all mules have.

MULON de foin, *Fr.* a hay-rick; hay-stack; or great hay-cock.

MULTANGULAR is said of a figure, or body, which has many angles.

MULTILATERAL, having many sides.

MULTINOMIAL quantities, (*multinome*, *Fr.*) (in algebra) are quantities composed of several names or *monomes*, joined by the signs + or —; thus $m+n-n+p$, and $b-a-c+d-f$, are *multinomials*.

MULTIPLE, one number containing another several times; as 9 is the multiple of 3, 16 that of 4, and so on.

MUNDICK, a kind of marcasite, or semi-metal, found in tin mines.

MUNI, *Fr.* in possession of; as *étant muni de ses passeports*, being in possession of his passports.

MUNIMELL, a strong hold, fortification, &c.

MUNIONS, (in architecture) the short upright posts or bars which divide the several lights in a window-frame.

MUNIR *une place*, *Fr.* to throw stores, ammunition, and provisions, into a place which is likely to be besieged.

MUNITION, an old word signifying a fortification or bulwark.

MUNITION-ships, vessels employed to carry ammunition, to attend upon a fleet of ships of war.

MUNITION, Fr. This word is used among the French to express not only victuals and provisions, but also military stores and ammunition.

MUNITIONS de bouche, Fr. victuals or provisions, (such as bread, salt, meat, vegetables, butter, wine, beer, brandy, &c. which may be procured for soldiers) are so called by the French. Corn, oats, hay, straw, and green forage, for cavalry, bear the same appellation. See **SUBSISTENCE**.

MUNITIONS de guerre, Fr. military stores, such as gunpowder, shot, balls, bullets, matches, &c. See **Stores**.

MUNITIONNAIRE ou entrepreneur des vivres, Fr. military purveyor, or commissary of stores. Amaury Bourguignon, from Niort, a town of Poitou, was the first *Munitionnaire*, and *entrepreneur général*, or purveyor-general, among the French. He was appointed in the reign of Henry III. in 1574. See **PURVEYOR**.

MUNITIONNAIRE pour la marine, Fr. the head of the victualling office was so called among the French. There was a person on board every ship of war, called *commis* or clerk, who acted under his orders. The appointment of the latter was somewhat similar to that of a purser in the British navy.

MUNSUB, Ind. a title which gives the person invested with it, a right to have the command of seven thousand horse, with the permission of bearing amongst his ensigns that of a Fish; neither of which distinctions is ever granted, excepting to persons of the first note in the empire.

MUNUS, a gift; an offering. It was customary among the Romans, when a military funeral took place, for the friends of the deceased to throw his clothes and arms into the pile the instant the body was consigned to the flames; this was looked upon as the last offering to his memory. Sometimes they threw gold and silver with the arms and accoutrements. When the remains of Julius Cæsar were burned, all the soldiers who attended threw their helmets, &c. into the burning pile. We, in some degree, follow this custom, by placing upon the pall the hat or cap, side-arms,

&c. of the deceased; but we are too wise to destroy the articles, although not sufficiently prudent (especially in populous towns) to burn the body.

MUR, Fr. a wall. For its various significations, see **BELIDOR**.

MURAGE, money appropriated to the repair of military works was anciently so called.

MURAILLE, Fr. a wall; a close and compact continuity of brick or stone.

The charge *en muraille*, was always practised by the old king of Prussia. Major-general Warnery not only objects to a phalanx, except it be formed by battalions in circle upon Puysegur's principle, but also differs with Frederick, because he conceives that cavalry in phalanx without any interval, loses all the principles of velocity.

MURAILLE de revêtement, Fr. the wall which surrounds a fortified place is so called.

Charger en MURAILLE, Fr. to charge or attack an enemy, in a firm, compact, and steady line. This is generally done on the wings of infantry, or by close squadrons of cavalry.

MURAILLE de la Chine, Fr. See **WALL**.

MURAL-crown, (couronne murale, Fr.) See **CROWN**.

MURATORS, individuals, among the Romans, who were employed during the games that were performed in the Circus. It was their business to see that the chariots started at given times, that they preserved their order or ranks, and kept their allotted distances.

MURDRESSES, in *ancient fortification*, a sort of battlement with interstices, raised on the tops of towers to fire through.

Ville MURÉE, Fr. a walled town.

MURRION. See **MORION**.

MURTHERERS, or *murthering pieces*, small pieces of ordnance, having chambers, and made to load at the breech. They are mostly used at sea, in order to clear the decks when an enemy has boarded a vessel.

MUSCULUS. Kennett, in his *Roman Antiquities*, page 237, says, "the *Musculus* is conceived to have been much of the same nature as the *Testudo*; but it seems to have been of a smaller size, and composed of stronger materials, being exposed a much longer time to the force of the enemy; for in these *Musculi*, the pioneers were sent to the very walls, where they were to

continue, while with their dolabræ or pick-axes, and other instruments, they endeavoured to undermine the foundations. Cæsar has described the *Musculus* at large in his second book of the civil wars.

MUSELIÈRE, *Fr.* a barnacle for an unruly horse's nose.

MUSEUM, a study or library; also a college or public place for the resort of learned men. The Museum in Paris, together with the adjacent gallery of pictures, is open to all the inhabitants of the town, or strangers that may be in it. The Museum in London is not so.

The **MUSEUM**, a magnificent building in the city of Oxford, founded by *Elias Ashmole*, Esq.

MUSIC, a general term for the musicians of a *regimental band*.

MUSICIANS. It has been often asked, why the dress of musicians, drummers, and fifers, should be of so varied and motley a composition, making them appear more like harlequins and mountebanks, than military appendages?—The following anecdote will explain the reason, as far at least as it regards the British service:—the musicians belonging to the guards formerly wore plain blue coats, so that the instant they came off duty, and frequently in the intervals between, they visited alehouses, &c. without changing their uniform, and thus added considerably to its wear and tear. It will be here remarked, that the clothing of the musicians falls wholly upon the colonels of regiments; no allowance being specifically made for that article by the public. It is probable, that some general officer undertook to prevent this abuse, by obtaining permission from the king to clothe the musicians, &c. in so fantastical a manner, that they would be ashamed to exhibit themselves at public-houses, &c.

Phrygian Music. See **MOOD**.

Modes of Music. See **MOOD**.

La MUSIQUE, *Fr.* the regimental band.

Directeur de la MUSIQUE, *Fr.* the leader of the band.

MUSKET, } the most serviceable
MUSQUET, } and commodious fire-arm used by an army. It carries a ball of 29 to 2 pounds. Its length is 3 feet 6 inches from the muzzle to the pan. The Spaniards were the first who armed part of their foot with muskets. At first they were made very heavy, and

could not be fired without a rest: they had matchlocks, and did execution at a great distance. These kinds of muskets and rests were used in England so late as the beginning of the civil wars.

MUSKETS were first used at the siege of Rhege, in the year 1521.

MUSKET baskets. These are about a foot, or a foot and an half high, eight or ten inches diameter at bottom, and a foot at the top; so that, being filled with earth, there is room to lay a musket between them at bottom, being set on low breast-works, or parapets, or upon such as are beaten down.

MUSKET-shot, (*coup de mousquet*, *Fr.*)

MUSKET-proof, (*qui est à l'épreuve du mousquet*, *Fr.*) that which resists the force of a musket ball.

MUSKETEERS, soldiers armed with muskets; who, on a march, carried only their rests and ammunition, and had boys to bear their muskets after them.—They were very slow in loading, not only by reason of the unwieldiness of the pieces, and because they carried the powder and ball separate, but from the time required to prepare and adjust the match; so that their fire was not so brisk as ours is now. Afterwards a lighter kind of matchlock musket came in use; and they carried their ammunition in bandeliers, to which were hung several little cases of wood, covered with leather, each containing a charge of powder; the balls they carried loose in a pouch, and a priming horn, hanging by their side. These arms were, about the beginning of the last century, universally laid aside in Europe, and the troops were armed with firelocks.

MUSKETOONS, short thick muskets, whose bore is the 33th part of their length: they carry five ounces of iron, or $7\frac{1}{2}$ of lead, with an equal quantity of powder. The term musketoon is also applied to a fire-arm resembling a horse pistol, of a very wide bore, and sometimes bell-mouthed.

MUSOIR, *Fr.* the foremost or salient part of a sluice or dam.

MUSROL, (*muserole*, *Fr.*) the nose-band of a horse's bridle.

MUSSUCK, *Ind.* a skin in which water is carried.

MUSSULMAN, from the Arabic, signifying faithful in religion. A title which the Mahometans take to themselves.

MUSTACHES, whiskers, worn by the

Germans, Russians, and other foreign troops; also by some regiments of light dragoons in the British service.

MUSTER, from the Italian *mostrare*, or French *montrer*, to shew, to put forth, to display. In a military sense, a review of troops under arms, to see if they be complete, and in good order; to take an account of their numbers, the condition they are in, viewing their arms and accoutrements, &c. At a muster, every man must be properly clothed and accoutred, &c. and answer to his name. The French call it *appel nominatif*.

To pass MUSTER, to be borne upon the establishment of a regiment, &c. We also say, figuratively, such a thing will not *pass muster*, or will not be allowed.

MUSTER-Master-General, Commissary General of the MUSTERS, one who takes account of every regiment, their number, horses, arms, &c. reviews them, sees that the horses are well mounted, and all the men well armed and accoutred, &c.

MUSTER-ROLL, (*état nominatif*, Fr.) a specific list of the officers and men in every regiment, troop or company, which is delivered to the inspecting field officer, muster master, regimental or district paymaster, (as the case may be,) whereby they are paid, and their condition is known. The names of the officers are inscribed according to their rank, those of the men in alphabetical succession. Adjutants of regiments make out the muster-rolls, and when the list is called over every individual must answer to his name. Every muster-roll must be signed by the colonel, or commanding officer, the paymaster and adjutant of each regiment, troop, or company: it must likewise be sworn to by the muster-master or paymaster, (as the case may be,) before a justice of the peace previous to its being transmitted to government.

MUSTI, one born of a mulatto father or mother, and a white father or mother.

MUTA, *Lat.* Mews, *Eng.* Mue, *Fr.* an enclosure for birds; whence the royal stables at Charing Cross took that name, having been anciently full of *Mews*, where the King's hawks were kept.

MUTILATED, in a military sense, signifies wounded in such a manner as to lose the use of a limb. A battalion is said to be mutilated, when its divisions, &c. stand unequal.

MUTINE, or MUTINEER, a soldier guilty of mutiny.

Se MUTINER, Fr. to mutiny; a term which is particularly applicable to soldiers who cabal together to the ultimate subversion of good order and discipline. It is wisely observed by the French writer of this article, that however just the ground of discontent may be, no time must be lost in instantly quelling the first symptoms of disobedience. The leaders, or primary instigators, must be summarily proceeded against, and not allowed to mix with their fellow soldiers until the cause has been thoroughly examined, and effectual measures have been adopted to obviate any mischievous consequence. In order to prevent soldiers from mutinying, their commanding and subordinate officers must, under all circumstances, be scrupulously correct towards them; and if the condition of things should be such, as to render it impossible to grant redress in the first instance, solemn promises must be made, and those promises religiously attended to. It ought always to be remembered, that the dreadful example of a barrack or garrison being in a state of mutiny, may be extended to all the inhabitants of the town and adjacent villages. On this account no troops should be placed in barracks, or stationed in citadels, without the strictest attention having previously been given to the character of each individual officer belonging to them: the latter must be resolutely just, without unnecessary harshness or severity.

MUTINERIE, *Fr.* mutiny; the act of mutinying.

To MUTINY, in a military sense, to rise against authority.

MUTINY-Act, an act which passes every year in the House of Commons, to answer some specific military purposes; and by which the army is continued on a peace or war establishment. For amendments in the Mutiny Act, passed in the 45 Geo. 3, see *Regimental Companion*.

MUTON, a spear or fish-gig used by the natives of new Holland. See *Grant's Voyage*.

MUTULES, *Fr.* brackets, corbells, or shouldering pieces, or more properly compartments (in building): also a kind of square modillions in the Doric cornice.

MUZZLE of a beast, (*museau, musle, Fr.*)

MUZZLE of a gun or mortar, (*bouche d'un canon, ou d'un mortier, Fr.*) the extremity at which the powder and ball are put in.

MUZZLE mouldings, the ornaments round the muzzle.

MUZZLE-RING of a gun, that which encompasses and strengthens the muzzle or mouth of a cannon.

MYRIAD denotes the number ten thousand.

MYRIARCH, the captain or commander of ten thousand men.

MYRMIDONS, in antiquity, a people of Thessaly, of whom it is said in fabulous history, that they arose from pismires, upon a prayer put up to Jupiter, by Æacus, after his kingdom had been depopulated by a pestilence. In Homer, and in Virgil, the Myrmidons are Achilles's soldiers. When Achilles pretended to dictate to others, he was bid by Agamemnon to go and tyrannise over his own immediate dependants, his *Myrmidons*, and hence the word became a sort of reproach, and meant a slave

under the absolute command of any tyrant.

MYRMILLONES, a sort of combatants among the Romans, who had on the top of their casque or helmet, the representation of a fish; and in their engagements with the Retiarii, if they were caught and wrapped in the net, it was not possible for them to escape.

MYRTLE Bay, (in Corsica,) so called from the Italian *Mortella*, a myrtle; whence *Mortella towers*; for a description of which, see **MORTELLA**.

MYSORE, an extensive country in the East Indies, which borders on the Carnatic to the S. W. bounded on the east by the south part of the Carnatic, and the kingdom of Trichinopoly. It extends west within thirty miles of the sea coast of Malabar. Seringapatam is the capital.

MYSTIFICATION, *Fr.* the act of abusing the credulity of another with a view to render him ridiculous.

MYSTIFIER, *Fr.* to trick, cajole or mislead, by specious words or actions.

N.

NABOB, *Ind.* a corruption from *Na-waub*, the plural of *Naib*. The title means *Deputed*, but it is often assumed in India without a right to it. As the real signification and import of this word are not generally known, we shall extract a passage out of Mr. Orme's History of the Carnatic, that will place them in the clearest point of view:

“Most of the countries which have been conquered by the Great Mogul in the Peninsula of India, are comprized under one viceroyalty called from its situation *Decan*, or *South*. From the word *Soubah*, signifying a province, the viceroy of this vast territory is called *Soubadar*, and by the Europeans improperly *Soubah*. Of the countries under his jurisdiction, some are entirely subjected to the throne of Delhi, and governed by *Mahomedans*, whom Europeans improperly call *Moors*; whilst others remain under the government of their original Indian princes or *rajahs*, and are suffered to follow their ancient modes, on condition of paying

tribute to the Great Mogul. The Moorish governors depending on the *Soubah*, assume, when treating with their inferiors, the title of *Nabob*, which (as we have already observed) signifies deputy: but this in the registers of the throne (of Delhi) is synonymous to *Soubadar*, and the greatest part of those who style themselves *nabobs* are ranked at Delhi under the title of *Phous-dar*, which is much inferior to that which they assume. The Europeans established in the territories of these pseudo-nabobs (if we may be allowed the expression) following the example of the natives with whom they have most intercourse, have agreed in giving them the title they so much affect.

“A nabob ought to hold his commission from Delhi; and if at his death a successor has not been previously appointed by the Great Mogul, the *Soubah* has the right of naming a person to administer the nabubship until the will of the sovereign is known; but a nabob thus appointed by a *Soubah* is not

deemed authentically established until he is confirmed from Delhi. The Soubah receives from the several nabobs the annual revenues of the crown, and remits them to the treasury of the empire. The nabobs are obliged to accompany him in all military expeditions within the extent of his viceroyalty, but not in any without that extent. These regulations were intended to place them in such a state of dependance on the Soubah, as should render them subservient to the interests of the empire, and at the same time leave them in a state of independence, which would render it difficult for the Soubah to make use of their assistance to brave the throne.

“Nabobs, however, have kept possession of their governments in opposition both to the Soubah and the throne; and what is more extraordinary in the offices of a despotic state, both Soubahs and Nabobs have named their successors, who have often succeeded with as little opposition as if they had been the heirs apparent of an hereditary dominion.” *History of the Carnatic*, Book I. p. 35, 36, 37.

NABOBSHIP, the office of nabob. The Carnatic is one of the most considerable nabobships dependant on the Soubah of Decan. From its capital it is likewise named the province of Arcot; but its present limits are greatly inferior to those which bounded the ancient Carnatic before it was conquered by the Great Mogul; for we do not find, that the nabobs of Arcot have ever extended their authority beyond the river Gondegama to the north, the great chain of mountains to the west, and the borders of the kingdoms of Trichinopoly, Tanjore, and Mysore, to the south. The sea bounds it to the east. For further particulars respecting nabobs, see pages 27 and 28 in the *Dissertation* prefixed to the *History of the Carnatic*.

NACCAIRE, a kind of kettle drum, which was introduced from the east by the crusaders. It is mentioned by Joinville in the life of St. Louis, as having been used by the Saracens.

NACELLE, *Fr.* a small boat that has neither mast nor sail. It is properly called a ferry boat.

NASCELLES, *Fr.* (in architecture) round rings in the juttings of pillars;

all these semi-oval members in profiles are so called.

NADIR, in astronomy, is that point in the heavens which is directly under our feet, and is diametrically opposite to the zenith, or point over our heads. The word is pure Arabic, signifying the same thing. The zenith and the nadir are the two poles of the horizon, each 90° distant from it, and consequently each in the meridian.

NAGARA, *Ind.* the drum made from a hollow cylinder of teek wood, and the ends covered with goat skin; it is suspended from the left shoulder to the right side, and beat with a stick made of teek wood.

NAGER, *Fr.* to swim.

Se sauver à la NAGE, *Fr.* To save oneself by swimming.

L'Art de NAGER, *Fr.* the art of swimming. As this important branch of military and naval education has been little attended to in our island, we think it our duty, under this general head, to give the following extract out of a French publication, referring the reader to a very interesting article, under the word *Swimming*, with which we have been furnished by a correspondent, who, to our personal knowledge, has practically proved the validity of his arguments.

The Greeks and the Romans, although they held military discipline and evolutions on shore in higher estimation than naval tactics, nevertheless taught their children, in their infancy, to swim. This art constituted one of the principal exercises among the latter in the field of Mars, or *Campus Martius*. No person, in fact, was said to be educated, or fit for any situation, unless he could swim.

It were to be wished (continues our French author), that modern speculators in natural philosophy, instead of devoting the whole of their time and attention to the idle and fantastic idea of governing the regions of the air, would enter seriously into the study of this important and necessary art. I do not, however, wish to be understood to mean by this reflection, that indiscriminate and hazardous bathing should be adopted by our youths. I am well aware of the dangers of such a suggestion. My object is to induce the government of the country to make a

suitable establishment for the instruction of young men, and to provide able adepts in the art for that purpose. Innumerable instances might be brought forward to prove the utility of this art. When the island of Ré was besieged and blockaded by the English in 1627, Thoiras, who was governor of the place, dispatched three swimmers to make the Duke of Angoulême acquainted with the critical situation in which he stood. The distance across was upwards of six miles, or two French leagues. One of the swimmers was taken by the English; the second was drowned on his return; but the third reached the Duke, communicated the object of his mission, and brought back his answer. When Cyzicum (the ancient Dindymis, formerly a large and strong place) was closely besieged by Mithridates, Lucullus (the Roman general) sent instructions to the inhabitants by a swimmer, who faithfully executed his mission. See *To SWIM*.

NAGEUR, *Fr.* a swimmer.

NAGEURS de l'Armée, *Fr.* swimmers attached to an army.

Compagnies de NAGEURS, *Fr.* troops or companies consisting of swimmers.

NAGGUR, *Ind.* the principal drum in Asiatic armies, commonly allowed to persons of high dignity.

NAIB, *Ind.* a deputy. The governor of a town under a nawaub or nabob is so called in India.

NAIC, or *NAICK*, *Ind.* a subaltern officer in the Sepoys.

Drill NAIC, or *NAICK*, *Ind.* a subaltern officer belonging to the native infantry in India, answering to our drill corporal. Every battalion of native infantry has two drill havildars or sergeants, and two drill naicks, called *non-effective*, attached to it.

NAIL, (*clou*, *Fr.*) an iron pin.

NAILS of various sorts are used in artillery. See *CARRIAGE*.

To NAIL, *spike*, or *cloy* cannon, (*enclouer le canon*, *Fr.*) to drive an iron spike into the touch-hole, by which means the cannon is rendered unserviceable for the present. When circumstances make it necessary to abandon cannon, or when the enemy's artillery are seized, and it is not however possible to take them away, it is proper to nail them up, in order to render them useless; which is done by driving a large nail or iron spike into the vent of

a piece of artillery, to render it unserviceable. There are various contrivances to force the nail out, as also sundry machines invented for that purpose, but they have never been found of general use; so that the best method is to drill a new vent, or touch hole.

One Gasper Viernerulus was the first who invented the nailing of cannon. He was a native of Bremen, and made use of his invention first in nailing up the artillery of Sigismund Malatesta.

Béhidor, in his *Dictionnaire Portatif*, observes, that there is another method by which cannon may be rendered useless, which is by forcing in a ball of a larger caliber than that of the piece of ordnance.

NAIRES, *Ind.* the military tribe of the Malabar coast. Many affirm that they are the oldest nobility in the world. Their pride, on this supposition, is greater than that of the Rajpoots. In 1755, the king of Travancore, with the assistance of a French officer, called Lannoy, disciplined 10,000 Naires in the method of European infantry.

Pays de ma NAISSANCE, *Fr.* my native country.

De haute NAISSANCE, *Fr.* of what is called high birth; as Plantagenet, &c.

De basse NAISSANCE, *Fr.* of what is called low birth.

NAISSANCE de vouête, *Fr.* those stones that are laid in the curve of an arch, which have no immediate dependance upon the center, or key stone.

NAISSANCE d'enduits, *Fr.* certain borders which are made round in case-ments, and which are only distinguished from the common plaster-work, by plaster of Paris.

NAKARCONNA, *Ind.* the place where all the drums and war music are kept.

NAKOUDA, captain or pilot so called in India.

NAME, (*nom*, *Fr.*) the discriminative appellation of a thing or person; also character, reputation, as a *good*, a *bad name*.

Christen-NAME, (*nom de baptême*, *Fr.*) the name given to a child in baptism of which a register is taken, and kept in the parish church.

Sur-NAME, (*nom de famille*, *Fr.*) the name of the family; the name which an individual bears over and above the Christen name.

False NAME. See *GUERRE*.

NANA, *Ind.* the title which is given to the king of the Morattoes. It more properly signifies the acting head of the government, and general of the forces.

NAPE of the neck, (*nuque*, Fr.) the hinder part of the neck, so called from soft short hair growing there like the nap of cloth. Previous to the execution of a criminal by the guillotine, the nape of the neck was always cleared, as the blade first falls on that part. This was also done when a person fell under the axe, as was the case with Charles I.

NAPE, } a wooden instrument or de-
NEAP, } vice to bear up the fore-part of a laden wain, or wagon.

NAPIER'S Bones, certain numbering rods for performing speedily several arithmetical operations, as multiplication by addition, and division by subtraction, invented by the Lord Napier, (Nepier, or Neper,) baron of Merchiston, in Scotland. The Chinese have an invention of a similar tendency, consisting of balls, whence is derived the term *taugible* arithmetic.

NAPPE de feu, Fr. See *Jets de Feu*.

NAPPE d'eau, Fr. a sheet of water, or level surface of that element.

NAPPE jaune, Fr. figuratively, a field of corn when quite ripe.

NARROW, of small breadth.

NARROW Front. A battalion, &c. is said to assume a narrow front, when it goes from line into column, upon the principles of compression.

To go **NARROW** (with horsemen.) A horse is said to go narrow, when he does not take ground enough, or that does not bear fair enough to one hand or the other.

The **NARROW**, a channel which runs between the Margate sands and the Main.

NASR-JUNG, *Ind.* victorious, or triumphant, in war.

NATATION, (*natation*, Fr.) See **SWIMMING**.

NATION, a people; also a country. As the English nation, the French nation. It is more generally used in the first sense; as, *The nation at large seemed disposed to resist every attempt that the French might make to invade the country.*

NATIONAL, (*national*, Fr.) that which belongs to a whole nation; as national character, national honour, &c.

NATIONAL guard, a body of men who

first armed themselves in Paris, when the Revolution began to gain an ascendancy over the old established government.

NATIONAL, preference given to some particular country.

NATIONAL spirit, (*esprit national*, Fr.) under this term may be comprehended all that is meant by the *amor patriæ* of the ancients. Indeed, we scarcely conceive it possible, that any man can be so far weaned from his native country, even by persecution and ill-usage, as not to feel a secret pleasure whenever the national character is raised by some extraordinary feats of valour and good sense.

NATIONAL troops, (*troupes nationales*, Fr.) are those born in our own dominions, in contradistinction to foreigners.

NATIVE, in general, denotes a person born in a certain place, but it refers more particularly to the proper residence of the parents, and where the person has his education.

NATIVE Cavalry, a body of troops so called in India, in contradistinction to the king's regiments.

NATIVE Infantry, a body of troops under the immediate direction of the Presidency of Bengal, composed of the natives of India.

NATURAL Fortification consists in those natural obstacles which are found in some countries, and which impede or prevent the approach of an enemy. Thus a place, the avenues to which are easily closed, or which is surrounded by impassable rivers or marshes, is defended by natural fortification.

NATURAL day, space of 24 hours.

NATURAL year, one entire revolution of the sun, comprehending the space of 365 days, and almost 6 hours.

Lettres de **NATURALITÉ**, Fr. a grant of naturalization.

NATURALIZATION, (*naturalisation*, Fr.) in Great Britain, is the admission of an alien to the privilege of a natural subject by an act of parliament, or consent of the three estates.

To **NATURALIZE**, (*naturaliser*, Fr.) to admit into the number of natural subjects. Also to receive a foreign expression, or word, into the original stock of a language, as has been the case with most of our military terms, particularly in artillery and fortification, &c. from the French.

NATURE, Fr. in kind. *Donner un*

officier ses allowances en nature: to give an officer his allowances in kind.

NATURE, a term used in the British artillery to express the different calibers of gun; as the nature of 12, or 24 pounders. The French say, generally, *calibre*.

NAVAB, *Ind.* See **NABOB**.

NAVAL, *Fr.* This word is used to convey the same meaning among the French that it does with us, viz. *armée navale*, naval armament; *combat naval*, sea fight, or naval combat; *forces navales*, naval forces. It is remarked in the Dictionnaire de l'Académie Française, that *naval*, when used in the masculine gender, is not susceptible of the plural number.

A NAVAL. According to Shakespeare, this term signifies the same as fleet, or navy.

NAVAL armament, the fitting out a fleet, with all kinds of provisions and military stores, for actual service.

NAVAL camp, in military antiquities, a fortification, consisting of a ditch and parapet on the land side, or a wall built in the form of a semi-circle, and extended from one point of the sea to the other. This was beautified with gates, and sometimes defended with towers, through which they issued forth to attack their enemies. Towards the sea, or within it, they fixed great pales of wood, like those in their artificial harbours; before these the vessels of burthen were placed in such order, that they might serve instead of a wall, and give protection to those without; in which manner Nicias is reported by Thucydides to have encamped himself. When their fortifications were thought strong enough to defend them from the assaults of enemies, the ancients frequently dragged their ships on shore. Around these ships the soldiers disposed their tents, as appears every where in Homer: but this seems only to have been practised in winter, when their enemy's fleet was laid up, and could not assault them; or in long sieges, and when they lay in no danger from their enemies by sea, as in the Trojan war, where the defenders of Troy never once attempted to encounter the Grecians in a sea fight.

NAVAL crown, in Roman antiquities, a crown conferred, among the Romans, on persons who distinguished themselves in sea engagements. A. Gellius says, in general, the naval crown was adorned

with prows of ships. Lipsius distinguishes two kinds; the first he supposes plain, and given to the common soldiers; the other rostrated, and only given to generals, or admirals, who had gained some important victory at sea.

NAVAL officers are admirals, captains, lieutenants, masters, boatswains, midshipmen, gunners, &c.

NAVAL engagement implies in general, either a sea-fight between single ships, or whole fleets of men of war, or galleys, &c.

NAVE, in gun carriages, that part of a wheel in which the arms of the axle-tree move, and in which the spokes are driven and supported. See **WHEEL**.

NAVE-hoops are flat iron rings to bind the nave: there are generally three on each nave.

NAVE-bores were formerly made of brass; but experience has shewn that those of cast iron cause less friction, and are much cheaper: there are two, one at each end, to diminish the friction of the axle-tree against the nave.

NAVÉE, *Fr.* a barge full; a ship load.

NAVEL gall, a bruise on the back of a horse, or pinch of the saddle behind.

NAVES plicatiles, pontoons, which were anciently used by the Romans, and which were made of skins and hoops that took to pieces.

NAUFRAGE, *Fr.* shipwreck.

NAVIGATION, the theory and art of conducting a ship by sea, from one port to another, or of disposing and influencing her machinery, by the force of the wind, so as to begin, and continue her motion at sea. This art may be considered under three heads. The first is that of *piloting*, which shews how the vessel is to be steered. The second is that of *working*, which prescribes certain fixed laws by which the motions of a ship may be managed in the most advantageous way. The third is that of *masting*, which furnishes rules and methods by which the bulk, or body, of the ship may be constantly kept in a just equilibrium. These three arts united, constitute what is called the art of *navigation*. The Phœnicians, from whom the Carthaginians descended, are supposed to be the inventors of navigation. In modern times the British navy bears the palm of superiority, as to general use (especially for warlike purposes); but the French claim the merit of construction. Their method of *masting* is

singularly correct. *P. Fournier*, *P. Deschalles*, and *Messrs. Bouguer*, (father and son,) are the best French writers on navigation.

Mr. Clarke, of Edinburgh, is equally eminent in our country; he first suggested the breaking of the line, as a mode of attack; which was so gloriously executed by Lord Nelson, &c.

NAVIRE *de guerre*, Fr. a man of war.

NAVIRE *marchand*, Fr. a merchantman. It is likewise called *vaisseau marchand*.

NAULAGE, NAULIS, Fr. passage money or freight given for goods or persons carried by sea, or passage over a river.

NAULISER, Fr. to freight or hire a vessel.

NAUMACHIE, sea fights, owe their origin to the time of the first Punic war, when the Romans initiated their men in the knowledge of sea affairs. After the improvement of many years, they were designed as well for the gratifying the sight as for increasing their naval experience and discipline; and therefore composed one of the solemn shows, by which the magistrates or emperors, or any affectors of popularity, so often made their court to the people. It will be observed from this passage out of Kennett's Roman Antiquities, page 269, that the necessity which Rome was under of fighting Carthage upon her own element, first gave rise to naval manœuvres. But the overgrown empire of the former, and the subsequent corruption of her people, soon converted these powerful auxiliaries to the legions, by whom she had conquered the universe, into instruments of pleasure and debauchery. Lampridius, in the life of the Emperor Heliogabalus, relates that, in a representation of a naval fight, he filled the channel, where the vessels were to ride, with wine instead of water: a story scarcely credible, though we have the highest conceptions of that wretch's prodigious luxury and extravagance. The frequent threats which a powerful neighbour of these islands has put forth, and the similitude which she affects to draw between herself and Great Britain, to Rome and Carthage, may probably lead to great naval exertions. But if England be only true to herself, the naumachia of France will have little effect

upon the natural bulwarks of the country. The events of 1815 have fully proved the correctness of this sentence.

NAVRER, Fr. to wound, to distress another most sorely. *Avoir le cœur navré*, to be broken-hearted.

NAVRURE, Fr. a severe wound; a gnawing pain.

NAUTICAL *planisphere*, a description of the terrestrial globe upon a plane, for the use of mariners: but more usually called *chart*.

NAVY implies, in general, any fleet, or assembly of ships. It is, however, more particularly understood of the vessels of war that belong to a kingdom or state. The term is also used to denote a collective body of officers and seamen. They are called the royal navy.

Navy-board, together with its civil and military departments, consists of a lord high admiral, or lords commissioners for executing this office; one first lord commissioner, and six other lords commissioners, with a number of inferior officers, and clerks.

Surveyor of the Navy, an officer who inquires into the state of all stores, and sees that the king's ships are regularly supplied with them.

Treasurer or Paymaster of the Navy, an officer who receives money out of the exchequer to pay all charges of the royal navy, by order from the principal officers of it. It is particularly directed, by statute, that all monies received on this head shall be lodged in the Bank of England, and be drawn out for the immediate and open purposes of the navy only.

NAWAUB, *Ind.* See NABOB.

NEABUT, *Ind* a deputyship, or lieutenantcy: from *naib*, a deputy.

NEAP, scanty, deficient; as *neaptides*. See NEEP.

NECESSARIES, in a military sense, are such articles as are ordered to be given to every soldier in the British service, at regulated prices.

NECK of LAND. This term is probably meant to signify what Bailey describes under *Land-Cape*, which he calls a narrow point of land, that runs farther into the sea than the rest of the continent. The French call it *langue de terre*, which, literally taken, is a tongue of land, or narrow slip that runs to the extremest point of a promontory or isthmus. The French also use *langue de terre* to express any slip

of ground which runs through a wider space. Hence, *une langue de terre labourable qui traverse la prairie*, an arable tongue or slip of land, which runs through the meadow. Whereas *gorge*, which is the literal translation of neck, is only used among the French to express a narrow space or hollow, as *gorge de montagne*. See also *gorge*, in FORTIFICATION.

NECK of a gun, that part which lies between the muzzle mouldings and the cornish ring.

NECK of the cascable, that part which lies between the breech mouldings and the cascable.

NECK-line, an old term in fortification, signifying the gorge.

NECK-piece, (*gorgerin*, Fr.) what was formerly used to cover the breast of an officer or soldier. It is now represented by a gorget, which is purely ornamental.

NECK-strap. See STRAP.

NECK and Heels, a disgraceful and inhuman punishment, which, like that of the *wooden horse*, was formerly used in the British service: it was thus performed. The criminal sat down on the ground, when a firelock was put under his hams, and another over his neck, which were forcibly brought almost together by means of a couple of cartouch box straps. In this situation, with his chin between his knees, many a man has been kept till the blood has gushed out at his nose, mouth and ears; and ruptures have too often been the fatal consequences, and a worthy subject lost to the service, or rendered incapable of maintaining himself, when the exigencies of the state no longer require his duty. This punishment, as well as those of picketting and riding the wooden horse, were inflicted without even the formality of a trial, or the sentence of a court martial.—*Proh pudor!*

HORIZONTAL NEEDLE, that which regularly points out the North and South in the mariner's compass.

MAGNETICAL NEEDLE (in navigation), a needle touched with a loadstone, and suspended on a pivot or center, on which, playing at liberty, it directs itself to certain points in and under the horizon.

NEEP-tides are those tides, which fall out when the moon is in the middle of the second and last quarter, which are four days before the full or change, and are called *dead neep*.

NEESHUNGPAT, *Ind.* a violent assault without bloodshed.

NEF, *Fr.* a ship.

NEGATIVE, (*négatif*, Fr.) This term is sometimes used to express the result of measures or enterprizes, which, though not entirely successful, are not productive of serious or mischievous consequences. Hence *Negative Success*.

NEGATIVE penalties, certain laws, whereby persons are excluded from honours, dignities, &c. without incurring any positive pains; as the laws against papists and nonjurors.

NEGATIVE pregnant, (*négatif qui comprend un affirmatif*, Fr.) a negative which implies an affirmative.

NEGATIVE quantities (see ALGEBRA), are quantities having the negative sign minus prefixed, as $-a b$ is a negative quantity.

NEGATIVE sign, (*négatif*, Fr.) In algebra it is thus marked $-$, and is directly contrary to an affirmative one.

NEGLECT, (*négligence*, Fr.) omission, disregard, want of care.

NEGLECT of DUTY. Total omission or disregard of any prescribed service, or officer-like execution of it which is punishable at the discretion of a court-martial.

To be NEGLECTED, to be overlooked in promotion, &c.

To NEGOTIATE, (*négociier*, Fr.) to treat, whether of public affairs, or private matters.

NEGOTIATOR, (*négociateur*, Fr.) the person who treats. No officer can be properly called a consummate or perfect general, unless he possess those qualifications of the mind which will enable him to meet the subtlety of his foe in the cabinet, with as much success as he faced him in the field.

NÈGRE, NÈGRESSE, *Fr.* See NEGRO.

NÈGRILLON, *Fr.* a little negro.

NEGRO, (*négre*, Fr.) one born in Nigritia, in Africa; a black, a niger, a slave.

NEIGES d'antan, *Fr.* last year's snow. The French say, figuratively, *S'en soucier comme des neiges d'antan*, to be perfectly indifferent about a thing.

NELLI-COTAH, a fort situated about forty miles to the south of Timivelly, in the East Indies. This fort has been rendered memorable by the intrepid manner in which it was carried by the English in 1755.

NERF, *Fr.* sinew.

NERF *de bœuf*, *Fr.* a bull's pizzle, which, when dried, is used in chastising men. *Donner des coups de nerf de bœuf.* to strike or lash with a bull's pizzle.

NERF-ferrure, *Fr.* in farriery, a blow or attain which a horse has received upon the back sinew of the fore or aft leg.

Plein de NERFS, *Fr.* full of nerves, *i. e.* very vigorous; not easily disheartened; firm, as a soldier ought to be.

NERVER *une selle*, *Fr.* to make the tree of a saddle firm and compact, by putting pieces of wood, &c. under the bow.

NERVES (in architecture) are the moulding of the projecting arches of vaults; or such as arise from the branches of the *ogives*, and cross each other diagonally in *Gothic* vaults.

NERVOUS, (*nervoux*, *Fr.*) well-strung; strong; vigorous both in body and mind.

NERVOUS, (*affecté des nerves*, *Fr.*) according to Dr. Johnson, (in medical cant,) having weak, diseased nerves. Many persons in a nervous state may put on an appearance of courage, but it soon subsides, and ends in pusillanimity. Passionate men are almost always nervous in this sense.

NERVURES, *Fr.* carved work; such as ornamental foliage, &c. also mouldings. In the singular, *nervure* signifies *twist*, round edging.

NESHAUNBURDAR, *Ind.* an ensign.

NESS, a point of land which runs into the sea, as Inverness, Sheerness, &c.

NESTOR, a king of Pylos, famous for eloquence and prudence. He is said to have lived 300 years. Nestor and Hector are of direct opposite meanings. One signifies a man who weighs well every thing he is about to undertake, and the other an individual who never thinks at all. A perfect general ought to unite both characters.

NET, *Fr.* Neat in English is what remains after all allowances are made.—Hence Net or Neat off-reckonings. See OFF-RECKONINGS.

NET-produce, a term used to denote what any commodity has yielded, all tare and charges deducted.

NETHERLANDS, that part of Lower Germany which lies next to the sea, and so called from being situated

between France, Lorrain, Germany, and the Ocean.

They were formerly divided into 17 provinces, four of which were dukedoms viz. Brabant, Limberg, Luxemburg, and Guelderland; seven were earldoms, viz. Flanders, Artois, Hainault, Holland, Zealand, Namur, and Zutphen; and five baronies, viz. West Friesland, Mechlin, Utrecht, Overysell, and Groningen.

These were originally governed by distinct lords or princes, but were all united under Philip the Good, duke of Burgundy, who left them to his son Charles, surnamed the Hardy; who being killed at Nancy, in 1747, the 17 provinces fell to his only daughter, Mary of Burgundy, who by marrying with Maximilian the First, carried them into the house of Austria.

The kings of France pretended a right to Artois, Flanders, &c. In the reign of king Philip II. of Spain, William of Nassau, prince of Orange, and several other discontented noblemen, gave beginning to those disturbances which terminated in the loss of Holland, and the other countries known by the name of the *United Provinces*, occasioned by the dread of the Inquisition, the insupportable rigour of the government of the duke of Alva, and the violent encroachments of the Spaniards upon the liberties and privileges of the countries.

The Netherlands, comprehending Holland, underwent material alterations during the progress of the French revolution. Brabant and Flanders, which belonged to the house of Austria, were annexed to the French Republic, and formed one of its departments. Holland, upon the expulsion of the Stadholder, was allowed to call itself an independent country in alliance with France, and was then distinguished by the name of the Batavian Republic; but the constitution of either country was not long permitted to remain, and the whole Batavian republic was united under one kingdom; on the throne of which Louis Bonaparte was placed by his brother Napoleon. In consequence of the battle of Waterloo, and the re-establishment of Louis XVIII. on the throne of his ancestors, these extensive provinces, together with the parts which belonged to Austria, were thrown into one kingdom, and the Prince of Orange

or Stadtholder assumed the character, and was invested with the powers of a Sovereign Prince. He is now called the King of the Netherlands.

NETTOYER, *Fr.* to clean; clear; scour, &c.

NETTOYER *les magasins*, *Fr.* in artillery, signifies to remove the different pieces of ordnance, for the purpose of having them carefully examined, &c. and to have the stores and ammunition so arranged as not to receive damage. This duty is generally performed by small parties of soldiers, under the command of serjeants, who are detached from the different guards of a garrison town. In the old French service, the *commissaire d'artillerie* superintended the execution of this necessary duty, and the soldiers who were employed, got relieved from any further attendance as part of the guard, the instant their work was done.

NETTOYER, *ou enfiler*, *Fr.* to scour, or enfilade.

NETTOYER *la courtine*, *Fr.* to scour, or fire through, the whole extent of the curtain.

NETTOYER *le rempart*, *Fr.* to scour the rampart.

NETTOYER *la tranchée*, *Fr.* to scour or clean the trenches. This is effected by means of a vigorous sally which the garrison of a besieged place make upon the besiegers, when they beat in the guard, drive off the artificers and workmen, level the parapet, break up and choak the line of circumvallation, and spike or nail the cannon.

NEUTRAL, (*neutre*, *Fr.*) neither the one nor the other.

NEUTRALITY, (*neutralité*, *Fr.*) the state or condition of one who is neuter, a middle condition between a friend and an enemy. In a military sense, remaining strictly indifferent, whilst other powers are at war, without assisting any party, with arms, ammunition, or men. When a country, calling itself neutral, furnishes a quota or contingent to any nation that is at war with another, it cannot be said to observe the strict laws of neutrality.—Of all precarious and difficult situations that perhaps is the most so, in which a weak nation is placed, when two powerful nations wage war on each side, and the exact laws of neutrality are expected to be observed by the intermediate country. History

does not furnish a single instance of inviolable adherence to them under such critical circumstances. Bayle, speaking of neutrality, exclaims, *Heureux les pacifiques quant à l'autre monde, mais dans celui-ci ils sont misérables!* happy are the peaceable with respect to the next world, but they are miserable in this! In trying to derive advantages from the dissensions and broils of others, they insensibly become the victims of both parties. The French humorously says, *Ils veulent être marteaux, cela fait que continuellement ils sont enclumés à droite et à gauche:* they would fain be hammers, instead of which they become anvils, and get beaten both right and left. This happened to the Venetians in 1701, who endeavoured to remain neutral during the campaigns that took place between the French and the Imperialists. The observance of a strict neutrality is unquestionably a matter of extreme difficulty, and requires uncommon ability. Few princes possess those qualities of the head and heart that distinguished Hieron, king of Syracuse, who so dexterously managed his neutrality in the war between Rome and Carthage. His subjects were considerably benefited by the conduct he observed, whilst his own reputation was not a little increased by the sound policy which dictated it.

There is not perhaps in human politics, a rule of conduct which is so intricate, and of course so difficult to be observed, as that of neutrality. *La loi des plus forts*, or the law of the strongest, so often tramples down natural rights, that necessity drives those to the adoption of questionable measures, who would otherwise remain strictly neutral; whilst others again, from being contiguous to contending armies, resort to various pretences, in order to remain in an armed condition for the purpose of taking advantage at a critical moment. Of this description was the system of armed neutrality which Pope Leon X. is recorded to have pursued. When Francis I. king of France, was engaged in a war with the Swiss Cantons, respecting the Milanese, His Holiness resolved to remain neuter, or at least affected to be so, although he was strongly invited by both parties to take an active and open part. He drew his troops towards the frontiers of the Milanese, under a pretext of covering the ecclesiastical

states, but in reality for the purpose of being at hand, when the two armies should come to a decisive engagement, of unexpectedly falling upon the victorious army, at the close of an obstinate and bloody battle, of driving it out of Italy, becoming master of Lombardy, and finally establishing himself as the arbiter of the country. But all these imaginary triumphs of the Pope soon disappeared. His troops, which had already reached the frontiers of the Milanese, no sooner learned, that the Swiss had been totally routed by the French, than they were panic-struck, and dispersed in the greatest disorder; as if they were conscious of being engaged in a crooked and illegal cause.

Ancient history affords us several examples of this species of neutrality.— During the civil wars between the adherents of Vespasian and those of Otho and Vitellius, various means of duplicity were resorted to. We likewise read of the same sort of conduct having been observed by the inhabitants of Corcyrus when they went to war with the Corinthians; and modern history is full of similar instances of specious neutrality. For further particulars on this interesting subject, especially on the conduct to be observed by neutrals in war, see from page 531 to 533, of the English translation of Hugo Grotius, by William Evats, B. D.

NEW, (*neuf, nouveau*, Fr.) as *New Guard*: *Old Guard*. See **GUARD**. The French say, *garde montante*; *garde descendante*. See **GARDE**.

NEW-*reckoning*, } an account or com-
After-*reckoning*, } putation which is
made subsequent to one already furnished.

NEWEL, in architecture, is the upright post or compass round which the winding stairs turn.

NEXT, as next for duty, the person who stands upon the roster in immediate succession to another who is on duty. The French say *le premier à prendre*, or the next to take.

NICHE, (*niche*, Fr.) a hollow space which is made in a wall for the purpose of placing any figure, or statue, in it. Thus to have a niche in the Temple of Fame, signifies, figuratively, to be recorded for some glorious, or meritorious action.

NICK-NAME, (*sobriquet*, Fr.) a surname, which is used in ridicule or good humour, to distinguish an indivi-

dual; Dr. Johnson calls this *nom de nique*, from the French.

NICK-NAMES, among military men, are familiarly used in a collective sense. Thus the light-infantry are called *Light Bobs*, the grenadiers *Tow Rows*, and the battalion men *Flat-Foots*; and in many instances whole corps have been particularized in this manner. The 28th of Foot were familiarly called the *Slashers*; and a very respectable general officer in the British service used to be nick-named General *No-Flint*, from a circumstance which occurred during the American war, when he commanded a species of forlorn hope. During the campaigns of 1793 and 1794, in Flanders, &c. the 15th regiment of light dragoons were called *Young Eyes* by the Guards, who received, or rather gave themselves the nick-name of *Old Eyes*.

NIGHER, *Ind.* any fortified city, measuring at least eight coss, or eight English miles, in length and breadth.

NILOMETRE, an instrument used among the ancients to measure the height of the water in the overflowings of the Nile.

NIQUIBS, *Ind.* men whose military functions among the Sepoys correspond with those of corporals in the king's service.

NITHING, a coward, or poltroon.

NITRE. See **SALTPETRE**.

NIVEAU, *Fr.* a level.

NIVEAU *de la campagne*, *Fr.* the level surface of a country is so called, in contradistinction to the talus or slope of any rising ground.

De NIVEAU, *Fr.* level; even.

NIVEAU *d'eau*, *Fr.* a water level.— This instrument is extremely simple, and of great use to engineers in the construction of works.

NIVEAU *de charpentier*, *Fr.* a carpenter's rule, or level.

NIVEAU *de paveur*, *Fr.* a pavior's level.

NIVEAU *à lunettes*, *Fr.* an instrument which is used for the purpose of ascertaining precisely any level point that is at a great distance.

NIVEAU *à pendule*, *Fr.* that which marks the horizontal line by means of another line that is perpendicular to its plummet.

NIVEAU *à pinules*, *Fr.* a level with two sights placed at parallel distances from the two extremities of its base, through which any point, that is even with the instrument, may be surveyed.

NIVEAU d'air, Fr. that which marks the level line by means of a small bubble of water contained, with some spirit or liquid, in a glass cylinder, hermetically sealed at both ends.

NIVEAU de réflexion, Fr. that level which is made by means of a moderately expanded surface of water, shewing the downward representation of the same object that we see with our own eyes; so that the point, at which these two objects appear to meet, is upon a level with the surface of the water.

NIVELER, Fr. to level.

NIVELER les eaux, Fr. to find the true level for conveying water.

NIVELER le terrain, Fr. to find the true level of ground, and to ascertain the relative elevations of places.

NIVELEUR, Fr. a leveller: it is likewise sometimes used to express a trifier; but it does not signify a leveller in the political sense in which we apply the English word in these days; nor does it mean a *Leveller* belonging to a set of people in Oliver Cromwell's army, who were for having an equal share in the administration of the government between the nobility and the commonalty.

NIVELLEMENT, Fr. the art of levelling.

NIZAM, Ind. a title which is bestowed by the Great Mogul on one of his principal viziers, on his being appointed to the command and administration of certain provinces. The word means, an adjuster, a regulator, an arranger, or manager, &c.

NIZAM ul Mooluc, Ind. the protector of the country.

NIZAMUT, the office of Nizam.

NOBILITY, (*noblesse*, Fr.) from the Latin, *Nobilitas*. This word has been variously defined. It is, however, generally understood to signify *Illustrious Descent*, and *Conspicuousness of Ancestors*, with a succession of arms conferred on some one (and from him to his family) by the Prince, by law, or by custom, as a reward for the good and virtuous actions of him that performed them. The only true purchase of nobility must, therefore, consist of great and good actions; which, in proportion as they dignified and ennobled the original owner, become objects of important trust with every descendant; who either reflects them back by a laudable imitation, or

shamefully abuses the tenure by dishonourable practices.

To be merely descended from a noble family, is of little consequence in the eyes of true thinking men; and still less so, when the heir discovers no other proofs of his nobility, than show and ostentation.

NOBILITY likewise means a quality that dignifies, or renders a person noble: particularly that raises a person possessed of it above a peasant or a commoner.—The quality or degree of a nobleman: also the whole body of noblemen separated from the commonalty.

NOBILITY also means Name, Reputation, Renown.

NOBLES, } are the grandees of
NOBLEMEN, } any kingdom or nation, by whatsoever title they are distinguished. Honorary distinctions have been very ancient. The Greeks distinguished their people into three ranks, viz. *Noblemen*, *Land-holders*, or *Farmers* and *Tradesmen*. The first were indulged with great privileges, and wore the figure of a grasshopper, as a badge of honour, in their hair. The Romans wore a half-moon upon their shoes.

Among the Romans, those persons were called Nobles who preserved the statues of their ancestors in their courts or cabinets. The faces of these statues were painted to resemble life. But it was necessary to be descended from the ancient magistrates, called *Curules*, to be entitled to have these statues. They were exhibited to the public on festival days; and when any of the family died, they were carried in solemn procession before the corps; so that under these circumstances, an individual might be a Patrician without being actually of noble blood or extraction.

That person was called Noble in France, who first received a letter patent constituting him such, and who thus gave rise to the nobility of his descendants.—Those born of him bore the title of *gentilhomme*, or gentleman. *Un ancien gentilhomme*, or gentleman of some standing, was styled *homme de condition*, or person of condition. Those gentlemen who were descended from illustrious houses were called, *Men of quality*, *Gens de qualité*.

In England those only are called Nobles or Noblemen, who have the title of Duke, Marquis, Earl, Viscount,

Lord, or Baron; which titles either descend to individuals from family-right, are gratuitously conferred upon them by the Prince (who is called the fountain of honour), or are obtained at the price of gold. The hereditary tenure becomes equally solid in all these instances, though not equally estimable, unless the title be itself ennobled by some great and good actions of the possessor. By those, and those only, can a purchased or indeed any title be converted into sterling gold out of base metal.

NOBLESSE Militaire, Fr. military nobility. Although most of our orders may be considered as appendages which confer a sort of military nobility, especially that of the garter, which was instituted by king Edward III. on the 19th of January, 1344, yet we cannot be strictly said to have amongst us, that species of military nobility, or distinction, that was peculiarly known in France, &c. under the immediate title of *Noblesse Militaire*. In order to reward military merit, an edict was issued by the French court, at Fontainebleau, in November, 1750, and enregistered on the 25th of the same month by the parliament of Paris, whereby a *Noblesse Militaire*, or Military Nobility, was created; the acquisition of which depended wholly upon martial character, but did not require any letter patent for the purpose of ennobling the individual.

NŒUD de l'artificier, Fr. a particular knot which artificers, or fireworkers, make use of to bind fusées together.

NŒUD de charrué, Fr. a particular knot or stress, which is used in the artillery when ropes are passed under carriages, for the purpose of raising any piece of ordnance that has been overturned.

NŒUD d'épaule, Fr. shoulder-knot: it signifies also the same as *aiguillette*, a tagged point.

NOM de guerre, Fr. See **GUERRE**.

NOMADES, a tribe of wandering Arabs belonging to Mesopotamia, (the ancient name of Diabekr,) a province in Asiatic Turkey: they live on plunder.

NOMINAL, by name. Hence

NOMINAL call, which corresponds with the French *appel nominatif*; and, in a military sense, with our *roll call*.

NON-ACTIVITÉ, Fr. state of not being employed, or on service.

NON-EFFECTIVE. This expres-

sion is used as the privative or negative of effective. Hence non-effective state of a regiment; non-effectives, &c.

NOTAMMENT, Fr. for instance; that is, an exemplification of any thing asserted, as *notamment moi*: for instance myself.

NOTÆ, a peculiar method among the Romans of writing expeditiously. The invention is given to *Tyro*, who was Cicero's bondman. This art consists in being able to take down correctly, every sentence that is spoken, let the enunciation be ever so rapid.

We call it *tachygraphy*, from the Greek compound, signifying *swift* and *write*.

NOTIFICATION, the making any thing known. Hence, a war-office notification, respecting the appointment of an officer, &c.

NOTIFICATION-Book, among army agents, a book in which a regular entry is made of officers recommended for commissions in the army; also of such as are appointed by a notification from the war-office.

NOTORIETY, (*notoriété*, Fr.) according to Dr. Johnson, public knowledge; public exposure. This word, like notorious, is commonly used of things and persons known to their disadvantage. Thus a *notorious* thief; a *notorious* coward. *Notoriety*, in the sense we take it, signifies an overweening desire to be talked of, without any regard to truth, or solid reputation. A thing wrapped up in itself, which is always running after notoriety. It is like a soap-ball blown out of a tobacco pipe at mid-day, reflecting from the sun a variety of splendid colours, and then bursting into nothingness from its want of inward consistency.

NOUE, Fr. in building, that part where two roofs join together and form a reentrant angle.

NOUE cornière, Fr. that part where the sloping drains, at the tops of two houses, join together.

NOURRICE, Fr. a nurse; a female who attends the sick. This word is likewise used by the French to express the means of subsistence, &c. which are supplied by the agricultural part of a kingdom. Hence, *Une province est la nourrice d'une ville*; a town or city is fed by the country round it. *La Sicile est la nourrice de Rome*, Sicily is the

nurse of Rome; meaning thereby, that the latter was supplied with corn, &c. by the former.

NOURRIR, *Fr.* to feed. The French say familiarly, *la soupe nourrit le soldat*; broth feeds the soldier.

NOWARRA, *Ind.* an establishment of boats, which is kept at Dacca, for a defence against the Mugs and other plunderers.

NOYAU, *Fr.* a long piece of iron, which is placed in the middle of a cannon mould, in order that the liquid metal may be poured round it, and the piece obtain an equal thickness on all sides.

NOYAU, *Fr.* likewise means the whole of the vacant space or bore of a cannon, under which are comprehended the diameter of the mouth, the vacant cylinder, the breech, and the vent.

With respect to bombs, grenades, and hollow balls, that which is called *noyau* consists of a globular piece of earth, upon which the cover of bombs, grenades, and hollow balls is cast. The metal is poured in between this cover and the *noyau*, after which the *noyau*, or core is broken, and the earth taken out.

NOZLE, the nose; the snout; the end of any thing, as the nozle of a candlestick.

NUCLEUS, (in architecture,) the cement which is put between a lay or bed of pebbles, &c.

NUD de mur, *Fr.* the outside surface of a wall that covers those parts which project, or jut out.

NUDDÉE, *Ind.* the name of a rivulet.

NULLA, *Ind.* This term likewise signifies a rivulet, and means the place which was once the bed of a river.

NUMBER, (*nombre*, *Fr.*) in arithmetic, the assemblage, or collection of any quantities whatever.

NUMÉRAIRE, *Fr.* specie; ready-money; coined gold, silver or copper which is in circulation at a certain standard. A commodity once very plentiful

in these kingdoms, but now extremely scarce.

NUMÉROS, *Fr.* round pieces made of brass, or other metal, which were numbered, and used in the old French service in the detail of guards. See **MARON**.

NURSE, (*nourrice*, *Fr.*) a person, generally a female, whose whole business is to attend the sick in the general or regimental hospital. She is under the immediate direction of the surgeon. According to the Regulations published by authority in 1799, there is to be one decent, sober, woman nurse, who shall receive at the rate of one shilling *per diem*, whose duty will be to prepare the slops and comforts for the sick, and occasionally to assist in administering medicines, cooking the victuals, washing &c. and for every ten men confined to bed by fever, an additional nurse and orderly-man should be allowed. All the patients, who are able, are every morning and evening to assist in cleaning and airing the hospital, carrying away dirt, &c. and by every means to assist the helpless.

The additional allowance to the sergeants, orderly-men, and nurse, in regiments of the line, to be made by the paymaster; and in regiments of militia and fencibles, the surgeons are to pay them out of their allowances.

NURSE is also used, in a figurative sense, to signify one of those humble dependants upon a wealthy person, who contrives to get into his confidence, and acts in the double capacity of adviser and follower. Old generals have sometimes their dry-nurses.

NUT, one of the chief component parts of a screw, which is perforated to the dimensions of the cylinder of a rifle-barrel, in the internal cavity of which a groove is cut for the purpose of receiving the thread.

NUT, the worm of a screw; also part of an anchor, cross-bow, &c. Also a small body with teeth which corresponds with the teeth of wheels.

O.

O A T

O. This letter is generally used in the British service to signify Orders, viz.

B. O. Brigade orders.

C. O. Corps orders.

D. O. District orders.

GL. O. General orders.

A. G. O. After General orders.

GN. O. Garrison orders.

R. O. Regimental orders.

S. O. Station orders.

OAK, (*bois de chêne*, Fr.) The timber of this tree, which in its perfection is peculiar to Great Britain, is serviceable, and adapted to every purpose of rural, domestic, naval and military economy; particularly for staves, laths, spokes of wheels, gun-carriages, &c. It is hard, tough, tolerably flexible, and not very liable to splinter.

Heart of OAK, a figurative term used by the British, particularly with respect to the firm and daring intrepidity of a seaman.

OARS, a boat for the conveyance of passengers, having two men to row it; hence the familiar phrase, *a pair of oars*, meaning a boat of the above description. *Oars* also signify the instruments where-with boats are rowed.

OATH, a solemn asseveration made in the presence of a magistrate, and taken on the Evangelists, in Great Britain and its dependencies, whereby an individual binds himself to observe certain conditions, or swear to specific facts which he knows of his own knowledge. Soldiers from time immemorial have been accustomed to take oaths of fidelity. These oaths were, however, observed with greater solemnity among the ancients than they are administered in modern armies, except upon very particular occasions. In the latter, indeed, it seldom or ever happens, that oaths are taken by bodies of soldiers assembled for the purpose.—Oaths are taken by men newly enlisted, but those oaths are individually administered, and separately taken. The military oath, on the contrary, among the Romans, was of a more general and impressive

O B E

nature. Kennett in his *Roman Antiquities*, page 188, gives the following account of it:—"The levies being finished, the tribunes of every legion chose out one whom they thought the fittest person, and gave him a solemn oath at large, the substance of which was, that he should oblige himself to obey the commander in all things to the utmost of his power, be ready to attend whenever they ordered his appearance, and never to leave the army but by their consent. After he had ended, the whole legion, passing one by one, every man, in short, swore to the same effect, crying, as he went by, *Idem in me*. The same by me."

OATH of Allegiance. See **ALLEGIANCE**.

OATHS on general and regimental courts-martial. According to the amendments introduced into the last Mutiny Act, passed in 45 Geo. III. it is enacted, "That in all courts-martial (other than general courts-martial), which shall be held by virtue of this act, or of any articles of war, established by his Majesty, in pursuance thereof, every member assisting at such trial, before any proceedings be had thereupon, shall take the prescribed oaths upon the Holy Evangelists."

N. B. Although the oath of supremacy, or any other oath, is not administered, on a religious principle, in the army, no officer in the navy can be made *post* without first having taken the former.

OATS, a grain which constitutes a principal portion in the feed of horses: The distribution of this article ought to be narrowly watched by every officer commanding a troop; since it is notorious, that government is frequently charged for quantities which are not delivered, by which means the horse suffers, and the public are imposed upon.

OBEDIENCE, (*obéissance*, Fr.) submission to the orders of a superior. The first principle which ought to be inculcated and impressed upon the mind of

every officer and soldier is obedience to all lawful commands. It is the main spring, the soul and essence, of military duty.

OBEEDIENCE of orders, an unequivocal performance of the several duties which are directed to be discharged by military men. Blucher in one of his addresses to the Silesian army advancing into France, justly says, bravery confers honour on the soldier; but *obedience* and discipline form his brightest ornaments.—October 30, 1814.

OBEEDIENCE, Fr. This word is only used in French when speaking of religious houses, or matters relating to the pope and his dominions, whence *ambassadeur d'obédience*; *pays d'obédience*.

Prêter OBEÏSSANCE, Fr. to swear allegiance, fidelity, &c.

Remettre dans l'OBEÏSSANCE, Fr. to recal to duty.

OBELISK, (obélisque, Fr.) a huge, solid piece of marble, or fine stone, four square, and all of one piece, growing smaller from the bottom, and ending in a point at the top, like a pyramid, set up for a monument, &c. Obelisks are sometimes made of different pieces of stone, &c. The French call it also *aiguille*, or needle.

To OBEY, (obéir, Fr.) in a military sense, is, without question or hesitation, to conform zealously to all orders and instructions which are legally issued. It sometimes happens, that individuals are called upon (by mistake, or from the exigency of the service) out of what is called the regular roster. In either case they must cheerfully obey, and after they have performed their duty, they may remonstrate.

OBJECT, (objet, Fr.) in a military sense, signifies the same as point, with respect to mere movements and evolutions. Thus in marching forward in line, &c. the leader of a squad, company, or battalion, must take two objects at least, upon which he forms his perpendicular movement, and by which the whole body is regulated. In proportion as he advances, he takes care to select intermediate and distant objects or points, by which his march is governed. See *Marching in LINE*.

OBJECT, the matter of an art or science, or the thing about which it is employed; the same as subject.

OBLAT, Fr. a disabled soldier. In catholic countries he had the benefit of

a monk's place given him in the abbey; also the maintenance itself.

OBLATE, any rotund figure flattened at the poles. Hence the term *oblate spheroid*.

OBLIQUATION, } a deviation from
OBLIQUITY, } the parallel or perpendicular line.

OBLIQUE, or second flank. The face of a bastion discovered from a part of the curtain is so called.

OBLIQUE projection is that wherein the direction of the striking body is not perpendicular to the body struck, which makes an oblique angle with the horizontal line.

OBLIQUE deployment. When the component parts of a column that is extending into line, deviate to the right or left, for the purpose of taking up an oblique position, its movements are called oblique deployments.

OBLIQUE fire or defence, that which is under too great an angle, as is generally the defence of the second flank, which can never be so good as a defence in front.

OBLIQUE percussion is that wherein the direction of the striking body is not perpendicular to the body struck, or is not in line with its center of gravity.

OBLIQUE position, a position taken in an oblique direction from the original line of formation.

OBLIQUE radius, a line extending from the centre to the exterior side of a polygon.

OBLIQUE step, to the left, is made in ordinary time, and consists in carrying the left foot 19 inches in the diagonal line to the left, bringing the right foot 30 inches forward, so that the heel may be 13 inches before the left foot; thus obtaining a general obliquity of about an angle of 25°. In obliquing to the right, the same is precisely done by the reverse feet; the original squareness of the body to its proper front being preserved in both cases throughout.

To OBLIQUE, in a military sense, is to move forward to the right or left, by stepping sideways in either of those directions, according to the following words of command:—

Right OBLIQUE! When the squad is marching in front, and receives the word *to the right oblique*, each man, the first time he raises the right foot, will, instead of throwing it straight forward, carry it 19 inches in the diagonal direc-

tion, to the right, gaining thereby about 13 inches to the side, and about 13 inches to the front, without altering his personal squareness of position. The greatest attention is to be paid to the shoulders of every man in the squad, that all may remain parallel to the line on which they first were placed, and that the right shoulders do not fall to the rear, which they are very apt to do in obliquing to the right, and which immediately changes the direction of the front.—On the word *forward*, the incline ceases, and the whole march forward.

In obliquing to the left, the same rules are to be observed, with the difference of the left going to the left, and the left shoulder being carefully kept up.

Obliquing to the right is to be practised sometimes with the eyes to the left; and obliquing to the left, with the eyes to the right; as being absolutely necessary on many occasions; for if one of the battalions of a line in advancing be ordered to oblique to the right, or to the left, the eyes must still continue turned towards its center.

Oblique movements, though they may be made by a squad, or division, in quick time, must be executed by a larger body in ordinary time.

To OBLIQUE in file. When any body of men is ordered to oblique to the right or left by files, the center and rear rank men (supposing the line to stand three deep) will continue looking to their leaders of the front rank. Each file is to consider itself as an entire rank, and to preserve the same front and position of the shoulders, during the oblique, as before it began. The Regulations, from which these passages are extracted, observe, that, as this is a very useful movement, recruits should be often practised in it.

Pas OBLIQUE, Fr. oblique step.

OBLIQUE à droite, Fr. right oblique.

OBLIQUE à gauche, Fr. left oblique.

Feux OBLIQUES à droite et à gauche, Fr. oblique firings to the right and left.

Marcher OBLIQUEMENT, Fr. to oblique, or march in an oblique direction.

OBLIVION. See AMNESTY.

OBLONG, (oblong, Fr.) any figure which contains more in length than in breadth.

OBLONG Square. See SQUARE.

OBSEDER, Fr. to besiege, to beset, to get possession of: also to tease by vexatious applications.

OBSEQUIES, (obseques, Fr.) funeral rites; funeral solemnities.

OBSERVATION. See ARMY of *Observation.*

To be under OBSERVATION, to be carefully watched and looked after—*être vu de près; être suivi de près.*

OBSERVATORY, (observatoire, Fr.) a building, public or private, which is erected and provided with all sorts of instruments proper for astronomical observations, &c. The most noted observatories in Europe are:—

1. That of Tycho Brahe, a nobleman of Denmark, at Uraineberg, in the island of Wern, between the coasts of Schonen and Zealand, in the Baltic.

2. The observatory at Paris, which was erected by Louis XIV. This building stands in the Fauxbourg St. Germain, and is so constructed as to answer the four cardinal points of the world, east, west, north, and south.—The foundation is laid 80 feet below the ground, and the edifice carried as much above it. It contains three stories in height, and has a terrace at top, from which the whole horizon appears flat. The staircase of this observatory deserves notice, from the singularity of its construction, being in the form of a screw, and so contrived, that from the bottom there is a full sight of the stars that pass the zenith of this place.

3. The royal observatory at Greenwich, which was founded by Charles the Second.

4. The observatory at Pekin, in China, which was erected by the late Emperor, at the intercession of the Jesuits.

To OBSERVE, to watch closely, &c. Hence *to observe the motions of an enemy,* is to keep a good look out by means of intelligent and steady spies or scouts, and to be constantly in possession of his different movements. No man can be said to have the talents of an able general, who neglects to observe his enemy in all directions; for if it be his intention to attack, you may thwart him by previous manœuvres; and if you are liable to be attacked yourself, you may assume the best possible position, and prevent surprize, &c.

OBSESSION, the act of besieging.

OBSDIONAL, belonging to a siege.

OBSDIONAL Crown, (couronne obsidionale, Fr.) a crown so called among the ancient Romans, which was bestowed

upon a governor or general, who, by his skill and exertions, either held out, or caused the siege to be raised of any town belonging to the republic. It was made from the grass which grew upon the spot, and was therefore called *gramineus*, from the Latin word *gramen*, grass.

Monnaie OBSIDIONALE, Fr. any substitute for coin, which has a value put upon it that is greater than its intrinsic worth; and a currency given, to answer the convenience of the inhabitants of a besieged place. *On a employé le cuir à faire des monnaies obsidionales*: the inhabitants made use of leather as a substitute for coin.

OBSTACLES, (*obstacles*, Fr.) in a military sense, are narrow passes, woods, bridges, or any other impediments, which present themselves when a battalion is marching to front or rear. These are passed, by the formation, march, and deployment, of the close column. Such parts as are not interrupted still move on in front; such parts as are interrupted, double by divisions as ordered, behind an adjoining flank or flanks, and in this manner follow in close column in their natural order. As the ground opens, they successively deploy, and again perfect the line. The columns are always behind the line, and march closed up. The formed part of the battalion, whether advancing or retiring, continues to move on at the ordinary pace, and in proportion as the obstacles increase or diminish, will the formed or column parts of the line increase or diminish.

The general attentions directed to be observed on these occasions are, that the columns formed shall be of sub-divisions, if the ground will admit. The first subdivision that is obliged to double, will be directed to which hand by the commander of the battalion; the others, as they successively double, will, in consequence, place themselves behind it, and behind each other, and the hand first doubled to, will be that which presents the opening most favourable to the subsequent march, and formation, and which the commanding officer will always hold in view, and order accordingly. The interrupted body will double to one or both flanks, according to circumstances, and the order it receives. Obstacles that impede a flank will occasion a single column to be formed from the flank to-

wards the center. Obstacles that impede the center, or a central part of a wing, will, if considerable, occasion two columns to be formed, from the center towards the flanks. The columns will follow a flank of such part of the line as is not impeded; and either in doubling into column, or extending into line, the rear divisions will conform to the movements of their then leading one. No part less than the front of the column doubles or moves up, and when half or more of a battalion must be thrown into one column, it will be ordered by companies.

OBSTACLES whose fronts are parallel to the line. When such occur, the divisions impeded must all at once double behind such one, or two other divisions as clear them of the obstacle.

OBSTACLES whose first points continue to increase as the line advances. In these cases the doubling is successive, beginning with that division which is first interrupted, and continuing as it becomes necessary, till the column can advance in clear ground.

OBSTACLES passed, or diminished.—When obstacles are of such a nature as to allow the complete extension at once into line: the whole column performs it by the commands and deployments of the close column on the front division, which then makes part of the line. But when obstacles diminish by degrees only, then the divisions of the column must come up into line successively as the ground opens, and the remainder of the column must, in diminishing, shift towards the obstacle, in the same manner as it before shifted from it in increasing.

OBSTACLES that are passed in presence of an enemy. Under these circumstances, if the battalion, in advancing, should be obliged to fire, it halts in the situation it is then in, executes such firings as are ordered, and again advances.

If the battalion, in retiring, is pressed by the enemy, the part in line will *halt!* *front!* the part in column will move on till the last division arrives in line, and will then *halt, front*. The firing that is ordered, will be executed; and when it is again proper to retire, the whole will face about, the part in line will *march*, and the columns will also be put in march when the line arrives at their head.

OBSTACLES whose points of opening

are narrow, and continue so, more or less. In such cases, the interrupted division will be ordered to face either to one or both flanks, and closely to follow in file such parts of the battalion as are not broken: the filing will increase as the obstacles increase, but as they diminish, file after file will successively and quickly move up to their place, till the whole are again formed; and during this operation, the leading file will always remain attached to the flank of the part in line. The same rules that direct the doubling in column, direct the doubling by files; when a subdivision files it will be from the flank only; when a company files, it may be from both flanks; and if a larger front than two companies is interrupted, it then doubles into column. Where the obstacles are of small extent, but frequently occurring, this mode is the readiest that can be applied in advancing, but in retiring it cannot be of use, if the enemy be at hand to press upon the battalion; and therefore the passing by column is to be looked upon as the general method.— For further explanations on the important operations of passing obstacles, we refer our military readers to the Rules and Regulations, as published by authority.

OBSTINACY, (*opiniâtreté*, Fr.) in a moral sense, that state of mind which is sometimes erroneously called firmness. The obstinacy of a fool is frequently mistaken for the perseverance of a wise man. The difference, however, is soon discovered by the contrary effects which they produce.

OBSTINATE, in a military sense, determined, fixed in resolution. Hence, obstinate resistance.

OBSTINATELY, perseveringly. The two armies fought so obstinately, that night only could separate the combatants.

OBSTINÉMENT, Fr. obstinately, stubbornly, inflexibly, with unshaken determination.

S'OBSTINER, Fr. to persist in any thing.

OBSTRUCTION, any difficulty or impediment, opposing the operations of an army, &c.

OBTUSE, (*obtus*, Fr.) an angle which is greater than a right angle, or contains more than 90°.

OBTUSE angle, (*angle obtus*, Fr.) Any angle which contains more than 90° is

so called, and is therefore named *irregular*.

OBTUSANGULAR, having angles larger than right angles.

OBUS, (*haubitze, ou obusier*, Fr.) ho-bits. A species of small mortar, resembling a mortar in every thing but the carriage, which is made in the form of that of a gun, only shorter. It has been frequently used at sieges; and is well calculated to sweep the covert-way, and to fire ricochet shots. They are usually loaded with cartouches. Béli-dor writes upon the subject at some length, in his *Bombardier Français*, page 39.

OC, an arrow which is used among the Turks.

OCCASIO, L. among the Romans, an allegorical divinity; the goddess of time, who presides over the most favourable moment for success in any enterprise. She is represented as stark naked, with a long lock of hair upon her forehead, and bald behind; and also standing on a wheel, with wings on her feet, and is said to turn herself very swiftly round; by which is intimated, that we should lay hold of the present opportunity. Among modern nations, no people pay greater attention to the instruction which is conveyed by this allegory than the French do. It is common amongst them to say:—*L'Occasion est chauve*. Occasion or opportunity is bald—alluding to the Roman allegory: and in the same figure, *il faut prendre l'Occasion par les cheveux*. You must seize Time (by which is meant occasion or opportunity) by the forelock.

OCCASION, Fr. has the same signification, in military matters, that affair bears among the English.

Une occasion bien chaude, Fr. a warm contest, battle, or engagement.— It further means, as with us, the source from which consequences ensue.

Se servir de l'occasion, Fr. to take advantage, or make a proper use of time and opportunity. A French writer has judiciously observed, that to seize with dexterity occasions as they occur, is a certain proof of courage and ability, especially in the general of an army.— Opportunity or occasion, according to Tacitus, is the mother of events. *Opportunos magnis conatibus transitus rerum*. One complete and decisive victory leads us to a multiplicity of enterprizes and

great desigs, all of which grow out of the first triumph.

A full and decisive victory, by which the country is left entirely at the mercy of the conqueror, must necessarily throw the inhabitants into confusion, and open fresh avenues to conquest; for one opportunity or occasion, well embraced and acted upon, becomes the source of many others. There is not, perhaps, in human contingencies any thing which spreads itself so rapidly, or ought to be so little neglected. An enterprize which grows out of another, though it be in reality more arduous to get through than the one which produced it, becomes more easy in its execution: and yet, how many brave and skillful generals have existed, who could not make a proper use of opportunity! In reading over their gallant exploits, one would be led to believe, that all their knowledge consisted in merely knowing how to fight. We have seen them with unexampled intrepidity, doing every thing that man dares to do, in the field of battle: we have seen them make a decisive blow, and place victory within their grasp; and when they were in the actual possession of all they fought for, we have seen them suddenly relax, give their enemies time to breathe, and finally lose all the fruits of their victory. The courage and promptitude which they manifested in a decisive battle, were the effects of a transitory impulse, which was soon wasted and extinguished.

Hannibal, so much celebrated for his bold enterprize against the Romans, was guilty of this error. After the battle of Cannæ it rested entirely with himself to march to Rome. He had only to follow up his first blow, to take advantage of the consternation of the Romans, and to pursue them to their capital. By so doing he would have made use of the glorious *occasion* which fortune had thrown into his hands by the first victory, and would not have been driven to the necessity of endeavouring to obtain the original object of his enterprize, by fighting several battles that proved abortive of it. Adherbal, on this account, after having failed in his attempt to persuade Hannibal to pursue his first good fortune, and march to the gates of Rome, is recorded to have used the following expression:—*Vincere scis, Hannibal; sed victoriâ uti*

nescis. Hannibal, thou knowest how to conquer; but thou dost not know how to make use of a victory.

Gustavus Adolphus made the same mistake. Had he, after having won the battle of Leipsick, hung upon the rear of the discomfited Imperialists, and pushed and harassed them to the gates of Vienna, there is little doubt of the consequences which must have ensued.

The Emperor Ferdinand was as weak in effective forces at his capital, as the Romans were at Rome, and the same consternation prevailed among the inhabitants. Had Gustavus profited by his first success, and converted the means, which so glorious an occasion offered, into prompt and vigorous pursuit, he would not indeed have reaped additional laurels in the plains of Outzen, where he fell at the head of his victorious Swedes, but he must have reached Vienna, and there have dictated his own terms.

Carthalo, among the ancients, was, on the contrary, an instance of how much may be done by acting up to circumstances, and by judiciously making use of fortune as occasion offers. He was not satisfied with having surprized the Roman fleet, taken off a considerable number of ships, and burned others, but he instantly availed himself of his first good fortune, attempted another enterprize, and succeeded.

We could enumerate various instances of both kinds, which have occurred during the late contest with the French, but it is not within our province. Future historians will undertake the task, and what might appear injudicious in us, will be esteemed in them as the dictates of impartial truth. That favourable opportunities and occasions have presented themselves during the progress of the French revolution, whereby a happy issue might have been brought about, even by vigorous and well directed measures, no man in his senses will affect to controvert. *Sed heu spes inanes et irritus hominum labor!*

OCCASIONEL, *elle*, Fr. This adjective is used in a different sense among the French, to what it is with us, viz. *cause occasionelle*; any thing that occasions an event.

OCCIDENT, *Fr.* the west.

OCCUPE, *Fr.* to be taken possession of. *Les environs furent occupés par des*

troupes légères; the neighbouring places were taken possession of by the light troops.

To OCCUPY is to take possession of any work or post, or to remain stationed at any place.

OCQUE, a Turkish weight equal to 2lb. 11oz.

OCTAEDRE, *Fr.* one of the five regular bodies which is terminated by eight equilateral equal triangles.

OCTAGON, (*octogone*, *Fr.*) a figure or polygon that has eight equal sides, which likewise form eight equal angles. The octagon, in fortification, is well calculated, in its ground, for the construction of large towns, or for such as have the advantage of neighbouring rivers, especially if the engineer can so place the bastions, that the entrance and outlet of the rivers may be in some of the curtains. By means of this disposition, no person could come in, or go out of, the garrison without the governor's or commandant's permission, as the sentinels must have a full view from the flanks of the neighbouring bastions.

OCTAVON, *one*, *Fr.* any male or female that is born of a quarteron and a white woman, or of a white man and a quarterone.

OCTOEDRICAL, having eight sides.

OCTONS, *Fr.* a mathematical instrument, which is used to take the measure of an angle, and contains 45°, or the eighth part of a circle.

OCTOSTYLE, the face of a building containing eight columns.

ODA. The different corps or companies, into which the janizaries are divided, bear this appellation. The word itself means a room, and the companies are so called from messing separately.

ODDS, inequality; excess of either compared with the other; as the enemy overpowered us by his numbers, and from many other circumstances, had the odds in his favour.

ODEN, or ODIN, a deity so called in ancient times among the Swedes and Goths. He was their god of war, in the same manner that they acknowledged *Thor* to be their *Jupiter*, and *Frigga* their *Venus*.

ODOMETER, (*odomètre*, *Fr.*) an instrument by which you may ascertain how much ground you go over on foot, or in conveyance.

(ECONOMY, good order; method;

disposition; constitution; harmony; Hence *Military Economy*, which signifies the interior management of all that relates to an armed body of men, in contradistinction to the exterior duties of the field.

ECONOMY, (with architects,) that method which has regard to the expenses and quality of the materials.

OEIL, *Fr.* in architecture, any round aperture, which is made in a building.

OEIL *de dome*, *Fr.* an opening made at the top of an edifice.

OEIL *de bœuf*, *Fr.* a round window or aperture, which is made in a wall or roof. The black spot in the center of a target is likewise called *œil de bœuf*, or bull's eye.

OEIL *de pont*, *Fr.* the opening, or vacant space, under the arch of a bridge.

OEIL *de volute*, *Fr.* the small circle in the middle of the Ionic arch, which the architects call *cathete*, *Fr.*

Coup d'OEIL, *Fr.* See *COUP*.

OEILLÈRE, *Fr.* a horse's eye-flap.

OEUFs, (in architecture,) the ovals or ornaments of pillars; from the French *œuf*, an egg.

OEUVRE, *Fr.* in architecture. This word admits of various significations in the French language, and may be connected with different prepositions, all of which determine the signification, viz.

Dans OEUVRE, *Fr.* within. *Trente toises de long dans œuvre*, thirty toises in length within doors.

Hors d'OEUVRE, *Fr.* without. *Un escalier hors d'œuvre*, a stair-case, without doors.

Sous OEUVRE, *Fr.* from the bottom. *Reprendre un mur sous œuvre*, to build up a wall from the foot or bottom.

OIN, or OING, *Fr.* cart-grease, such as is used to the wheels of ordnance-carriages, &c.

OFF, an adverb which is frequently conjoined with verbs; and, in a military sense, is used as follows:

To kill OFF, a term well known in this country by its curious application during the French war, but rendered obsolete by the ridicule it engendered.

To march OFF, to quit the ground on which you are regularly drawn up, for the purpose of going upon detachment, relieving a guard, or doing any other military duty.

To tell OFF, to count the men com-

posing a battalion or company, so as to have them readily and distinctly thrown into such proportions, as suit military movements or evolutions.

Off duty, although on service, not immediately employed upon any of the active duties it requires.

Off-service, not employed.

Off the staff. This term applies to general officers, who, having been entrusted with certain commands, are taken from them and put upon the shelf—or to officers who have been employed upon general service, and are ordered to return to regimental duty.

OFFENCES. All acts that are contrary to good order and discipline, omissions of duty, &c. may be called military offences. The principal ones are specified in the Articles of War. No officer or soldier can be tried twice for the same offence; unless in case of an appeal from a regimental to a general court martial; and the appeal must then be grounded upon some pecuniary wrong; nor can any officer or soldier be tried for any offence committed more than three years before the date of the warrant for trial; except in cases when the offenders were not amenable to justice in that period, when they may be brought to trial any time within two years after the impediment ceased. All cases of high treason are exceptions to these limitations; *Nullum tempus occurrit Regi*.

OFFENSIVE War. Military acts of aggression constitute what is called an offensive war. Those who assail an opposite or adverse army, or invade the dominions of another power, are said to wage an offensive war.

OFFENSIVE Weapons are such as are fit for the purpose of carrying on an offensive war, as cannon, mortars, swords, pistols, muskets, &c.

OFFENSIVE Fortification. See *Approaches, Sieges, &c.*

OFFICE, a place or apartment for officers to attend in, for the discharge of their respective employments, civil, ecclesiastical, naval or military. The French generally use the word *bureau*.

OFFICE and Board are sometimes synonymous terms; as, Transport Board or Office—Barrack Board or Office—Ordnance Board or Office. Sometimes the term office is inapplicable to places where military business is transacted, viz.—Clothing Board—Board of Gene-

ral Officers, &c. The word *Conseil* is used by the French in the latter sense, the term *Bureau*, in almost all others.

Alien OFFICE, created by Mr. Pitt for the government and superintendance of foreigners in Great Britain. It is a branch of the home department. For the rules, &c. to be observed by foreigners in Great Britain, civil, and military, see the Alien's Guide published by H. W. Brooke, Esq. of the Alien office. The functions of this office are now absorbed into those of the under secretary of state for the home department.

Auditor's OFFICE, Somerset House. This department acts as a check between all public accountants and the treasury. All accounts are consequently forwarded from the respective public departments under which the expenditure immediately takes place, to this office, for final examination and approval. Powers of attorney, enabling agents to receive monies from public departments whose expenditure passes the audit, must be first entered at this office, before any sums can be issued to individuals so authorized.

Barrack-OFFICE. The barrack department is at present upon a very large and extensive footing. It was originally formed in May, 1793, at the commencement of the late war, and gradually increased until it was erected into an establishment completely distinct from all others, by a warrant from his Majesty, dated the 24th of March, 1794. Since that period it has also been further enlarged, owing to the additional number of temporary barracks and prisons, which were ordered in the autumn of 1796.

The business of this office is conducted at No. 21, New Street, Spring Gardens. There was formerly a barrack-master-general at the head of this department, but the situation was abolished upon General Hewitt being appointed Commander in Chief in India, when a Board was established.

We cannot forbear mentioning in this place, that although most of the public accountants are sworn, barrack masters sign and give in their returns, &c. *on honour*, only.

Commander in Chief's OFFICE, Horse Guards. Commander in chief, 1 military and 1 private secretary, 3 assistants, 16 clerks, 1 officer keeper, 1 house-

keeper. From this office all instructions for the military regulations of the army are issued, and all military appointments are to pass through the medium of this department; the business extends to every office in any manner connected with military concerns, all of which are of course subordinate to it. The commander in chief is applied to in every material case, upon which there is no specific instruction, and decides thereupon.

Adjutant General's OFFICE. This office is an appendage, and consequently subordinate, to that of the commander in chief; it consists of two separate departments; one for the recruiting service, the business of which is transacted at No. 16, Great George Street, Westminster; the other branch is at the Horse Guards, where all descriptions of army returns, both home and foreign, are invariably addressed and examined; applications for leave of absence are made to this office; the sentences of courts-martial are reported to, and circulated from, this department. The establishment of the office in time of war is as follows:

Horse Guards Department.

1 Adjutant general, 1 deputy adjutant general, 1 assistant adjutant general, 1 first clerk, 1 second clerk, 11 clerks.

Recruiting Department.

2 Assistant adjutant generals, 1 chief clerk, 5 clerks.

OFFICE of Inspectors of Army Clothing.

This is a branch of the board of general officers, and is kept at No. 19, King Street, Westminster, under the immediate superintendance of two officers of rank and experience, whose business is to see that the clothing corresponds in price and quality with the sealed patterns.

Commissary General's, or Commissary in Chief's OFFICE, No. 35, Great George Street, Westminster, receives contracts for supplying the army with provisions, forage, and barrack accommodations, (such as beds, paillasses, &c.) and every description of stores. The persons, with whom this office corresponds, are the contractors, paymasters of cavalry regiments, and barrack masters, through whom the business is principally transacted. The office consists of 1 commissary general of stores, now called chief commissary, principal deputy com-

missary, assistant commissaries, chief commissary of musters, deputy ditto, 2 messengers.

Comptroller of Army Accounts OFFICE.

The duties of this office are so multifarious, that they cannot be classed under any particular denomination. The officers at the head of this department are, however, considered in the nature of counsel to the treasury upon all important matters relating to army expenditure, which are at all times referred to them. The "general disbursements," for military service, are under the immediate control of this office, from which the assignments of off-reckonings are invariably regulated and issued. The business extends generally to the barrack department, commissariat, clothing of the army, military extraordinaries, &c. &c.

Inspector General's OFFICE. The business of this office was conducted at No. 16, Great George Street, Westminster, of which General Whitlocke was at the head. Upon his appointment as commander in chief to the memorable expedition to South America, early in 1807, the office was attached to the adjutant general's department.

Judge Marshal, and Advocate General's OFFICE.—The functions of this office are to receive detailed reports of all the courts-martial held at home, or on foreign stations, and are by this officer occasionally laid before his Majesty for his confirmation of the sentences. When courts-martial are held in London, the duty of this officer is to prosecute on the part of the crown.—The establishment is 1 judge marshal, 1 deputy ditto.

Army Medical Board OFFICE, No. 4, Berkely Street, Piccadilly. Under the superintendance of this board, the appointments to the medical situations of the army take place after a previous examination of individual competency, and formal recommendation to the commander in chief. Instructions relating to particular duties, and the general economy of the establishment, are issued from the office; which, however, is under the immediate control of the commander in chief.

1 physician general, 1 surgeon general, 1 inspector general of army hospitals, 2 inspectors, at York hospital, Chelsea, 1 physician, and 1 surgeon.

OFFICE of Commissioners of Military Inquiry.—This office was at No. 17, Buckingham street, Adelphi, and was instituted during the administration of the late Mr. Pitt, in 1805, for the purpose of investigating the army expenditure. Several reports have been published by this board, relating chiefly to the particular duties of individuals belonging to the war-office and ordnance department, and the manner of conducting the accounts, &c. of those departments, medical board, &c.

OFFICE of Ordnance, or Board of Ordnance.—This important and extensive branch of service comprises several departments, and may be properly called a mixed office, being conducted at the Tower, and in Pall Mall. The whole, together with the departments at Woolwich and elsewhere, are subservient to the master-general and the board, with regard to civil and military matters.

The accounts for the expenditure of this service are made up and forwarded by the respective individuals, to the surveyor general at the Tower, at whose office they are examined and passed.

It belongs to the office of ordnance to supply all military stores for the army and navy, to defray the expense of the corps of artillery, corps of engineers, and other military corps attached to the ordnance service; and also the charge of repairing and building fortifications, at home and abroad; excepting field works abroad, and excepting also those fortifications which commanders in chief may deem it expedient to erect without previous instructions from home; in which two cases, the bills are paid by the Treasury, and placed to account in the extraordinaries of the army. All contingent expenses, attending ordnance stores, as well as camp equipage for the artillery, and the article of tents for the privates of the whole army, are included in the payments of the ordnance.

The hire of vessels for the transportation of ordnance for foreign service, has, since the establishment of the transport board, been transferred to that office; and the building of barracks belongs now to the barrack department, except when barracks are ordered to be built within a fortification.

The master general, who, in his military character, is commander in chief over the artillery and engineers, has, in

his civil capacity, the entire controul over the whole ordnance department: he can alone do any act, which can otherwise, if he does not interpose, be done by the board. He can order the issue of money, but that order must be executed in the usual mode, by three board officers.

The lieutenant-general, who is second in command over the artillery and engineers, is, in his civil capacity, the first in rank among the members of the Board, which consist of the master-general, lieutenant-general, surveyor-general, clerk of the ordnance, principal storekeeper, and clerk of the deliveries. There is also one civil secretary, with subordinate clerks, who has his office in Pall-Mall. During the absence of the master-general, or the vacancy of the office, the whole executive power devolves on the board. It belongs to them, though they are subject to the interposition of the master-general, to make contracts for stores, and for performance of services, and to direct the issue of stores and of money. The signatures of three members of the board, of whom the clerk of the ordnance must be one, are necessary for the payment of money.

The principal store-keeper at the Tower, is also a board officer, and has the custody of the stores delivered in there: and the store-keepers at the out-ports and garrisons have, in like manner, the charge of the stores issued to them. In general, a store-keeper and his securities are considered as personally liable to pay for any deficiency in their stores. At the appointment of every new store-keeper at the out-port it is the practice of office to take an account (or a *remain*, as it is termed) of the stores left by the predecessor. The quantity, reported by the officer employed in taking the remain, to be actually delivered over, is compared, by the ledger-keeper, with the quantity which it appears, by ledgers of articles formed from the journals of receipts and issues, that the predecessor ought to have had in his possession: and in case a deficiency arises, which cannot be satisfactorily accounted for, it is ordered by the Board to be made good by the predecessor, or his representatives. Remains of stores are ordered to be taken, in like manner, at all places at home, once in seven years, as also at the expiration of a war. In foreign parts, a

remain is taken only on the appointment of a new store-keeper.—The store-keepers abroad send home annual accounts of their receipts and issues. When an expedition takes place, a commissary is specially appointed to take the charge of ordnance stores, who is liable himself, or by his securities, to make good any deficiency in the same manner as a store-keeper. In the event of the capture of ordnance stores by the enemy, the commanding officer's certificate of the quantity captured is the voucher, on the faith of which alone the board of ordnance are accustomed to give credit to the commissary.

Whenever any business, either of receipt or issue, is going forward, the clerk is ordered personally to attend, and he must be present at the opening of the store early in the morning.

Fortifications are erected by the commanding engineer, pursuant to an order from the master-general, for carrying a project into execution, according to an approved plan and estimate. The estimate is usually formed in the first place by the engineer, who is afterwards to execute the work; and its accuracy is examined into by a committee of engineers at home, the expediency of the measure being submitted to the master-general. All fortifications, works, and repairs are carried on by measurement, and by contract, except where the soldiers of the corps of royal military artificers have been employed; and even in such cases, the materials worked up by the soldiers are usually supplied by contract. It belongs to the store-keeper at the place where the fortifications are carried on, to make the payments. Money is imprested to him for this purpose on account, in consequence of a letter from the engineer to the board, in which he mentions the particular service. The store-keeper having been made debtor for the sums imprested, is afterwards discharged by producing vouchers for his disbursements, which consist of the receipt of the person receiving the money, together with the signature of either one, or two witnesses, who are usually persons in the ordnance service. The store-keeper's own affidavit of the payment is also required. In respect to the payment of those services, which are not under the direction of the engineer, but under that of the store-

keeper, the clerk of the survey, and the clerk of the cheque of the place, who "are called the respective officers," a joint application is made by them to the board.

In the case of the works, or services abroad, the payment is made by the means of bills drawn on the board of ordnance, by the storekeepers of the regular establishments, and by the commissary and paymaster (who are usually the same person) attending the detachment of artillery, which is with his majesty's forces. Those who draw are made debtors for their drafts, and account afterwards in the same manner, and are subject to the same checks as a storekeeper at home. It is further required of every accountant abroad, who draws bills, that he should take an oath that he has made public advertisements of his intention to draw the sum which he had in contemplation; and that he has accepted the lowest proposal offered to him, and that he has not, either directly or indirectly, received any fee, or gratuity, for drawing the bills. When any bill, drawn from abroad, is evidently improper, the acceptance is not refused; but the bill is accepted on the credit of the drawer, in order, as it is obvious, to save the charges attending its return. The drawer, on entering his office, having given security for the faithful discharge of it, it is assumed, that if a bill, accepted on his credit, should be afterwards disallowed on account of the service being, on investigation, deemed improper, the money is to be recovered from him, or his securities.

The sums voted for the ordnance consist of the three following heads:—1st. The ordinary, which comprehends the provision for the ordinary establishment, civil and military, for the year ensuing. 2dly. The extraordinary, which comprehends every service known before-hand, of a temporary and contingent nature, being a provision for the ensuing year also; and 3dly, the services unprovided for, consisting of services which either have been actually paid in the past year, as is generally the case, or which are supposed to have been paid, but which were not foreseen when the estimate for the past year was made up. Among these unforeseen expenses are included various exceedings, which have happened in the individual services voted in the

past year's ordnance estimates; to which are added, such sums as may be necessary to make up the deficiency of the sum, directed to the ordnance use for the naval service.

The board meets three times a week at the office of Ordnance, in Pall-Mall, viz. on Monday, Wednesday, and Friday, all the year round, with the exception of Christmas, Good Friday, and the two principal royal birthdays. Three officers constitute a board: so that two out of the five principal officers (as the members of the board are termed) may be absent, but there is not any monthly arrangement of duty, in rotation. Each member attends as his particular duties seem to require, or arrangements for convenience permit. The master general or lieutenant-general seldom fails to attend, except when absent on military duty.—Some of the other officers take alternate months of attendance; and there is no one of them who is not frequent in his attendance at the board. The board officers have no regular hours and places of attendance on the duties of their own individual office, but interfere at their option, and as far as each of them may judge necessary, in the regulations of their respective departments of the Tower, where their chief clerks reside.

The general hours of attendance of the clerks in the ordnance offices, are from ten to four, besides other hours, if necessary. They are promoted usually by rotation, entering, for the most part, as junior clerks, at 70*l.* per annum.—All salaries of clerks in the ordnance of above 100*l.* per annum, are subject to a deduction of 1*s.* 6*d.* in the pound. The land tax duty, to which the salaries of the clerks would otherwise be liable, is defrayed, by a particular order, at the expense of the public: which order is said to have been made many years ago, in consideration of the lowness of the salaries.

All fees are expressly prohibited, except those taken by the clerk of the ordnance, the principal storekeeper, and the clerk of deliveries already mentioned. Officers of the ordnance are prohibited from holding a share in ordnance contracts or agencies, with the exception of agencies to any officer of artillery, or engineers. There are no sinecure places under the board of ordnance; nor is it conceived, that there are any persons in

the ordnance service who hold other offices under government.

There is no regular fund for superannuated officers under this establishment; but the expense of that head of service is annually provided for by parliament in the ordinary of the ordnance, under the heads of superannuated and disabled men, half pay of reduced officers, widows' pensions, and allowances to officers for good services; the whole of which amounted, in 1797, to 19,610*l.* 13*s.* 2*d.* The greatest rate of allowance, lately given to the civil servants, for the greatest length of service, has been two thirds of the amount of the salary; a rate which appears to be very generally adopted in other departments.

The whole amount of the establishment of the office of ordnance, as it stood at Christmas, 1796, was 51,618*l.* 10*s.* 2*d.* besides certain allowances for house-rent, coals, and candles; besides also a per centage on the remittance of money to storekeepers of 25*s.* per cent. in some cases, 20*s.* and 10*s.* in others, but in general of 2*d.* in the pound.

The additions consist, 1*st.* of new officers in London, and also at Guernsey, Jersey, New Brunswick, and the West-India islands, and some other places. A sum exceeding 700*l.* appears to be on account of a new appointment of officers at the powder mills.—2*dlly.* of an increase of the existing salaries, and of allowances, amounting to 5,531*l.* 11*s.* 2*d.* making together 13,493*l.* 1*s.* 2*d.* from which, however, is to be deducted, on account of diminutions in the establishment since 1782, the sum of 4,293*l.* 2*s.* 6*d.* making the actual increase, on a comparison of the two establishments, to be 14,201*l.* 18*s.* 8*d.*

The committee of the house of Commons, from whose report we have made these copious extracts, conclude by observing, that the estimates for works abroad have been much oftener exceeded than those at home; that the frauds are more numerous; that the difficulties of prosecuting, there, are considered as greater; that additional precautions to prevent impositions in the drawing of bills are necessary; and that the taking of a periodical remain, as is done at home, is there omitted. The enormous frauds practised by so many servants, in various West-India islands, while the vouchers sent home continued to be fair and regular, create a reasonable

jealousy and suspicion, in respect to the manner of conducting this branch of the public service, in those possessions in general which are distant; and the money, asked for extraordinary services in those parts, should obviously, therefore, be voted only after having given due consideration to the case in question, and after full explanation of the extent of the projected service.

With respect to the establishment of the office of ordnance, and of the salaries and duties of its servants, it appears obvious, that from many things which have been stated, it is not so much on any general regulations, or instructions, however strict and prudently framed, that parliament must depend for the proper application of the money voted for ordnance service, as on the disposition strictly to execute those orders; on the proper choice of the inferior servants, and the careful superintendance of them; on the integrity, vigilance, and knowledge of business of the principal officers of the board of ordnance; and more particularly of the master-general, in whose hands almost all the patronage, and ultimately all the power, are placed.

A board, consisting of the master-general, or, in his absence, of the lieutenant-general and seven officers, regularly sit for the transaction of public business on Mondays, Wednesdays, and Fridays, at the office in Pall Mall, where the correspondence and arrangement of the general service of this branch take place. Applications, upon every description of business connected with this department, are addressed to the civil secretary; through whose medium the regimental requisitions for military appointments are issued from the stores, and forwarded to the several stations.

The office consists, at present, of the master-general, 1 lieutenant-general, 1 surveyor-general, 1 clerk of the ordnance, 1 principal storekeeper, 1 clerk of the deliveries, 1 treasurer, 1 secretary to the master-general, 1 secretary to the board, 1 under secretary to the *master-general*, 2 clerks under ditto, 2 clerks under the *lieutenant-general*. 1 chief clerk under the *surveyor-general*, 13 senior clerks on the establishment, 12 junior clerks on ditto, 15 assistant clerks. 1 chief clerk under the *clerk of the ordnance*, 10 senior clerks on the establishment, 10 junior clerks on ditto, 6 assistant clerks, 1 chief clerk under the *storekeeper*, 8

senior clerks on the establishment, 10 junior clerks on ditto, 3 assistant clerks. 1 chief clerk under the *clerk of the deliveries*, 6 senior clerks on the establishment, 6 junior clerks on ditto, 7 assistant clerks. 1 chief clerk under the *treasurer*, 7 senior clerks on the establishment, 7 junior clerks on ditto, 6 assistant clerks. 1 chief clerk under the *civil secretary to the board*, belonging to the minuting branch, 6 senior clerks on the establishment, 6 junior clerks on ditto. 1 chief clerk belonging to the *corresponding branch*, 6 senior clerks on the establishment, 7 junior clerks on ditto. 1 master-general's messenger, with several other porters, doorkeepers and messengers, 1 messenger from Woolwich to Westminster, 1 solicitor, 1 architect, 1 assistant ditto, 1 principal clerk of the works at the Tower, 1 assistant, 1 overseer under ditto, 1 superintendent of shipping, 1 clerk to ditto, 1 assistant to ditto, 1 armourer at the Tower, 1 clerk of the cheque at ditto, 1 enginekeeper, 1 housekeeper at ditto. 1 housekeeper at the office in Pall-Mall. 1 clockmaker, 1 bargemaster, 1 superintendent of ordnance tradesmen, 1 inspector of small arms belonging to the small-gun department, 1 assistant, 1 superintendent, 1 master furbisher, 2 clerks to the inspector, 1 furbisher for Hampton-Court and St. James's, 2 ditto for Windsor.

Subordinate and responsible to the office of ordnance :

OFFICERS belonging to the Royal Military Academy at Woolwich—One governor, who is invariably the master-general, 1 lieutenant-governor, 1 inspector, 1 assistant inspector, 1 professor of fortification, 1 professor of mathematics and first master, 1 second mathematical master, 1 third ditto, 1 French master, 1 first assistant for fortification, 1 fourth mathematical master, 1 fifth ditto, 1 second assistant for fortification, 1 sixth mathematical master, 1 first mathematical assistant, 1 second ditto, 1 third ditto, 1 drawing-master for ground, 1 ditto for figures, 1 ditto for landscapes, 1 dancing-master, 1 second French master, 1 fencing-master, 1 assistant drawing-master for ground, 1 ditto for figures; 1 first clerk, 1 second ditto, 1 first modeller, 1 second ditto. 1 *inspector of artillery*, 1 assistant to ditto, 1 second assistant and draftsman, 1 first clerk, 1 second clerk, 1 assistant clerk, 1 prof-

master, 1 searcher of ordnance, 1 instrument-keeper, 1 modeller, 1 inspector of the royal brass foundry, 1 master founder, 1 assistant ditto, 1 foreman to ditto, 1 clerk.

OFFICERS belonging to the Royal Laboratory at Woolwich—One comptroller, 1 chief fire-master, 2 assistant fire-masters, 1 chemist, 1 inspector of gunpowder, 1 chief clerk, 5 clerks, 3 extra clerks, 1 surgeon, 1 assistant fire-master at Portsmouth, 1 clerk to ditto, 1 assistant fire-master at Plymouth, 1 clerk to ditto.

OFFICERS belonging to the Carriage Department at Woolwich—One inspector, 1 first assistant, 1 second assistant, 1 constructor of carriages, 1 first senior constructor, 1 second ditto, 4 junior constructors, 3 ditto for the out-ports, 1 clerk of the cheque. 1 senior clerk belonging to the inspector's office, 2 junior ditto, 2 senior clerks belonging to the clerk of the cheque's office, 2 junior ditto, 1 clerk ditto, 6 master artificers, 1 superintendant of the royal military repository, 1 modeller, 1 clerk, 1 draftsman to ditto.

OFFICERS belonging to the Royal Military Repository at Woolwich:

1 superintendant, 1 modeller, 1 clerk, 1 draftsman, 1 astronomical observer at Greenwich.

OFFICERS at Outports and Stations belonging to the Ordnance.

Woolwich—One storekeeper, 1 clerk of survey, 1 clerk of the cheque, 4 clerks, 1 clerk of the works, 4 barrack-master, in the new barracks, 1 paymaster. Purfleet—One storekeeper, 1 clerk of survey, 1 clerk of the cheque, 1 clerk of the works. Gravesend and Tilbury Fort—One storekeeper, 1 clerk of the cheque. Chatham—One storekeeper, 1 clerk of survey, 1 clerk of the cheque, 1 barrack-master. Upnor Castle—One storekeeper, 1 clerk of the cheque. Sheerness—One storekeeper, 1 clerk of survey, 1 ditto of the cheque. Dover—One storekeeper, 1 clerk of the cheque. Faversham—One storekeeper, 1 clerk of the cheque, 1 master worker. Waltham Abbey—One storekeeper, 1 clerk of the cheque, 1 master-worker, 1 keeper of the magazines at Barking Creek. Portsmouth—One storekeeper, 1 clerk of survey, 1 clerk of the cheque, 1 barrack-master, 1 surgeon.

OFFICERS of the Royal Laboratory and restoring Houses at Portsmouth—

One assistant fire-master, 1 clerk. *Pridley's Hard*—One storekeeper, 1 clerk of the cheque. *Tipner Point*—One storekeeper, 1 clerk. *Plymouth*—One clerk of survey, 1 clerk of the cheque. *Keyham Point*—One storekeeper, 1 clerk of the cheque. *Picquet Field*—One storekeeper at Hungerford, 1 Pendennis, 1 Scilly Island, 1 Chester Castle and Liverpool, 1 the Isle of Man, 1 Carlisle, 1 Berwick, 1 Timmouth Castle, 1 Hull, 1 Yarmouth, 1 Languard Fort and Harwich, 1 Edinburgh Castle, 1 Stirling Castle, 1 Fort William, 1 Fort George, 1 Scarborough Castle. *Guernsey*—One storekeeper, 1 clerk of the cheque. *Jersey*, one ditto, 1 ditto. *Alderney*—One storekeeper.

OFFICERS belonging to the Depôts for small Arms. *Shrewsbury* 1 storekeeper. *Chelmsford* 1 ditto. *Bury St. Edmund's* 1 ditto. *Horsham* 1 ditto. *Derby* 1 ditto. *Lincoln* 1 ditto. *Bristol* 1 ditto.

OFFICERS belonging to the Inland Depôts—*Warley*, 1 barrack-master. *Canterbury*, 1 ditto. *Weeden Beck*, in Northamptonshire, 1 storekeeper, 1 clerk of the cheque.

OFFICERS belonging to the Royal Manufactory of small Arms—*Lewisham*, 1 storekeeper, 1 superintendant.

OFFICERS on Foreign Stations—*Gibraltar*, 1 storekeeper, 1 clerk of the survey, 1 ditto cheque, 1 of works. *Malta*, 1 storekeeper, 1 clerk of survey, 4 clerks. *Jamaica*, 1 storekeeper, 1 clerk of the cheque. *Antigua*, 1 storekeeper, 1 clerk of the cheque. *St. Christopher's*, 1 ditto, 1 ditto. *Dominica*, 1 ditto, 1 ditto. *St. Vincent's*, 1 ditto, 1 ditto. *Barbadoes*, 1 ditto, 1 ditto, 1 clerk. *Grenada*, 1 ditto, 1 ditto. *Tobago*, 1 ditto, 1 ditto. *St. Lucia*, 1 ditto, 1 ditto. *Trinidad*, 1 ditto, 1 ditto. *Demarara*, 1 ditto, 1 ditto. *Surinam*, 1 ditto, 1 ditto. *Bahama Islands*, 1 ditto, 1 ditto. *Bermuda*, 1 storekeeper. *Quebec*, 1 storekeeper, 1 clerk of the survey, 1 clerk of the cheque. *Halifax*, 1 storekeeper, 1 clerk of the cheque. *New Brunswick*, 1 ditto, 1 ditto. *St. John's, Newfoundland*, 1 ditto, ditto. *Placentia*, 1 storekeeper. *Curaçoa*, 1 storekeeper, 1 clerk of the cheque. *Martinique*—unknown.

OFFICERS belonging to the Ordnance in Ireland—One commanding officer of artillery, 1 ditto of royal engineers, 1 storekeeper, 1 clerk of survey, 1 clerk of the cheque, 1 first clerk in the storekeeper's department, 7 clerks; 1 first

clerk of the survey's department, 11 clerks; 1 first clerk in the clerk of the cheque's office, 6 clerks; 1 treasurer, 1 first clerk in the treasurer's office, 3 clerks.

OFFICERS belonging to the Laboratory and small Gun Department—One deputy fire-master of the royal laboratory, 1 superintendant of the small gun department, 1 master furbisher, 1 first clerk in the laboratory and armoury, 9 clerks; 1 second assistant in the gun-carriage department, 1 clerk of works, 1 first clerk in the carriage-yard department, 2 clerks; 1 clerk of works belonging to the engineer department, 1 first under ditto, 3 clerks ditto; 1 storekeeper.

Bullincolig Powder Mills—One superintendant, 1 storekeeper, 1 clerk of the cheque, 2 clerks, 1 clerk of works.—Storekeepers, at *Athlone 1, Bantry 1, Carrickfergus 1, Charlemont 1, Charles Fort 1, Cork 1, Cove of Cork 1, Clonmel 1, Duncannon Fort 1, Einniskillen 1, Kinsale 1, Limerick 1, Londonderry 1.*

OFFICERS belonging to the Military Branch of the Ordnance.—One colonel in chief, 1 colonel en second, 3 colonels commandant, 6 colonels, 12 lieutenant colonels, 27 captains, 28 second captains, 55 first lieutenants, 1 inspector general of fortifications, 1 deputy ditto, 1 brigade-major, 1 adjutant and quartermaster.

OFFICERS belonging to the Corps of Royal Military Surveyors, and Draftsmen in the Tower.—One chief surveyor and draftsman, 1 assistant, 1 second assistant, 10 belonging to the first class of draftsmen, 21 of the second class, 10 of the third ditto, 8 cadets.

OFFICERS belonging to the Commissary's Department to the Field Train of Artillery in Great Britain.—One commandant, 3 commissaries, 8 assistant ditto, 1 paymaster.

OFFICE of Ordnance Inspector of Barracks. The inspector of ordnance barracks is charged with the general superintendance and control of all barracks attached to that department in Great Britain, Ireland, and at the foreign stations. He is the immediate channel of communication between the master general and board, and the several barrack masters. The various weekly, monthly, quarterly, and half yearly barrack returns are inspected in this office; and the accounts of the expenditure of money, coals, candles, and other stores,

are also examined, and certified, by the inspector of ordnance barracks, prior to their being submitted to the board. This office was created in 1806, and consists of 1 inspector, 2 assistants ditto, with subordinate clerks, 1 messenger.

OFFICE of the Secretary to the Board of Ordnance. This office is kept in Pall-Mall, and consists of 1 principal secretary, in whose name all advertisements for ordnance contracts, &c. are issued, and through whom all sealed proposals for furnishing stores, forage, &c. or applications for arms, &c. must be transmitted, addressed, not nominally, but by official superscription, *To the Secretary of the Honourable the Board of Ordnance, Pall-Mall*; as is the case in other departments. This important situation, and place of trust, is generally filled by a person thoroughly acquainted with all the details of office, and who has gradually risen from the most subordinate appointment. He must, in fact, be a complete man of business, attached to no party, and swayed by no political bias whatsoever; principles, we humbly conceive, by which every honest and industrious servant of the public ought invariably to be governed. The secretary is a civil officer, as are likewise the subordinate clerks, and is supposed to be well acquainted with foreign languages, and foreign details, in order to prepare the necessary documents for the board, which are occasionally transmitted from foreign stations, and from the foreign artillery belonging to the establishment. His salary and allowances are, we presume, (as they ought to be,) worthy of so extensive a department, and adequate to so much trust and labour. He is assisted by 1 chief clerk belonging to the minuting branch, 7 senior clerks, 7 junior ditto, 1 chief clerk belonging to the corresponding branch, 7 senior clerks, 7 junior ditto, and 1 messenger.

OFFICE of Surveyor General of Ordnance. See SURVEYOR.

Army Pay-OFFICE. From this office the issues for the payment of every description of military service are made. Officers on half-pay forward their affidavits to this department, either themselves, or through their agents; the office is situated between the Admiralty and Horse Guards.

In consequence of the pay-office act,

the paymaster-general has been deprived of any profit that might accrue from the custody of the public money.

The paymaster-general has not any active controul over the public expenditure; it being his duty to make payments (ministerially and without discretion) in pursuance of the warrants directed to him by the secretary at war, or the treasury, or by both, as the case may be, or in payment of the drafts of the deputy paymasters abroad, for the ordinary services of the army. The pay-office must therefore be looked upon as an office of mere account; and as affecting the public expenditure only, so far as it performs its duty, as an office of account, with expedition and regularity.

The materials and documents, which compose a considerable part of the account of the paymaster-general, originate from persons over whose conduct he has no controul. There is a regular succession in preparing them from the regimental paymaster to the agent, and from the agent to the secretary at war, who finally delivers them at the pay-office. For further particulars see Pay-office Act.

Master Master General's OFFICE. In this office are collected nominative lists of all corps within the cognizance of the "army department." The particular services of each individual are here enrolled, together with any circumstances of discharge, or transfer from one regiment to another. The office is in Whitehall Yard, opposite the Admiralty, Charing Cross.

Money Order OFFICE. See MONEY ORDER.

Quarter Master General's OFFICE at the Horse Guards. The duties attached to this office, are, the regulating the quarters of the army; attending to the various movements of troops, issuing routes, affixing stations to corps of all descriptions. The quarter-master-general is presumed to be well acquainted with all the interior economy of an army, from the management of a company up to its several component parts: he goes hand in hand with the adjutant and commissary-general, and is very properly called the right arm of a commander in chief on service; for he should not only be well acquainted with strategy and tactics, but also be fertile in expedients, and well versed in all the chicanery

of war. The establishment consists of 1 quarter-master-general, 1 deputy ditto, 6 assistant ditto, 11 clerks, 1 office-keeper, 1 house-keeper, 3 messengers.

Royal Marine OFFICE, an office established for the convenience of the paymaster of the Royal Marines. The person who is entrusted with the management of this office is called paymaster, and he acts in that capacity as agent to the whole corps of marines. The distribution of public monies, for the use of the Royal Artillery, is governed nearly upon the same principles.

Ship-Letter OFFICE. During the continuance of the British army in Holland, in 1798, a mail was made up, every Tuesday and Friday night, and forwarded to Yarmouth, where two packets taken from the Cuxhaven station, were appointed to convey them to the Helder. A gentleman (the deputy comptroller of the foreign office) was sent to the head quarters as army postmaster, and in like manner made up two mails per week, but they were sometimes detained for dispatches.

On application from the Duke of York, the letters of soldiers (having the signature of the commanding officer upon the superscription) were suffered to pass at the reduced charge of one penny: although that sum was not paid at the time of the letter being put into the post-office as the Act of Parliament on the subject requires.

Storekeeper General's OFFICE, Duke Street, Westminster. All stores, supplied under contracts with the chief commissary, are deposited in this office, from which they are issued by the authority of the secretary at war to the troops; they consist of camp equipage, hospital stores, bedding, great coats, medicines, &c. &c.

Transport OFFICE. The transport office is a newly created board, and was instituted in July, 1794, at first for the superintendance of the transport service only; but to that employment has since been added the management of the prisoners of war in health, at home and abroad.

The immediate duty of this office, so far as related to the transport service, used to be performed by the commissioners of the navy; except in some instances, where the ordnance, or other departments hired the transports wanted for their immediate service. It is sub-

ordinate to the secretary of state for the home department, and has 6 commissioners, and 1 secretary, whose office is in Dorset Court, Cannon Row, Westminster, and consists of 1 chief clerk, 1 assistant ditto, 3 extra ditto, 1 clerk of the minutes, 1 clerk for keeping account of the appropriation and service of transports, 1 assistant ditto, 1 extra clerk. It is also subdivided into several departments.

Volunteer and Local Militia OFFICE is at No. 34, Great George Street, Westminster. The accounts, acceptance of bills, and correspondence relative to these branches of service, are here conducted under the immediate controul of the War-office.

War-OFFICE, Horse Guards. The establishment of the war-office, at Christmas, 1796, according to the last public document on that head, consisted of the secretary and deputy secretary at war, a first clerk, and three principal clerks, and eight persons or their assistants, placed at the head of different departments of the office. The following is the present establishment: 1 secretary at war, 1 deputy ditto, 1 chief examiner of army accounts, 1 first clerk, 34 senior clerks, 1 private secretary to the secretary at war, 1 first clerk for the department of accounts, 1 second ditto, 1 third ditto, 53 junior clerks, 1 first clerk for the department of the volunteers and local militia, 5 clerks, 10 ditto belonging to Mr. Stuart's department, 7 clerks of the foreign branch, 1 paymaster of widows' pensions, 1 deputy ditto, 1 office-keeper, 4 messengers, 18 assistant messengers, 1 librarian, 1 store-keeper. The duties of this office are the examination of army accounts, and corresponding thereon. The secretary at war decides upon the propriety of admitting charges against the public, which have been incurred under peculiar circumstances not justifying their admission without his authority. In other respects he acts ministerially. To this office is attached

A Foreign Department, where the business of the foreign regiments, or mercenaries, in the service of England, is transacted. This office is in Duke Street, Westminster; its establishment consists of 7 clerks, including 1 chief, 3 messengers.

With respect to the nature of the accounts which come into the War-office,

and the form of the examination which they undergo there, it has been stated to the House of Commons, that the first head consists of the annual accounts of the ordinary and accidental charges of established regiments; the second may not inaccurately be defined regimental extraordinaries, or incidental expenses more properly belonging to established corps than to the army in general, which latter are known by the term, "Extraordinaries of the Army." All claims, made by the regimental agents, come under the inspection of the "Examiner of Army Accounts," to whose office they are transmitted of course, in virtue of a general delegation of that duty to him by the secretary at war: after his examination and report, the secretary at war, in many instances, orders partial issues of money by letter, to the paymaster general. No final payment is made, except under the authority of a warrant countersigned by the secretary at war, and, in most instances, by three lords of the treasury. The regimental agents account finally to the secretary at war. They are likewise accountable to him, and to the commander in chief, for every species of mismanagement and misconduct with respect to the officers and soldiers, &c.

The forms under which all payments, derived from the establishment, are conducted, consist of the following papers:—

1. The establishment of a regiment.
2. The warrant from the War-office to make out debentures, with the state of charges annexed.
3. The debenture made up at the pay-office.
4. The final or clearing warrant.
5. The pay-office state.

The War-office department has no concern in framing or executing the interior and local regulations of the militia forces. These are made, altered and amended by the lord-lieutenants of counties, after having been submitted to Parliament.

Foreign OFFICE. This office is in Downing-Street, under the immediate direction of one of the principal Secretaries of State, who has the conduct and management of our affairs with foreign powers.

Home OFFICE, or Home Department, an office which is under the direction of one of the three principal Secretaries of

State. All military commissions are made out in the Home Department, and are countersigned by the Secretary of State who is the head thereof.

In cases where the public tranquillity is disturbed, the Secretary of State for the Home Department is in the habit of signifying the King's pleasure to the Commander in Chief for sending troops to act in support of the civil power. The office is at Whitehall.

OFFICE for the Entry and Distribution of Commissions in the Line, signed by His Majesty, and for the Receipt of Fees thereon. This office is at the Horse Guards, and holds a communication with the War-office, and the Commander in Chief's office, in all matters relating to commissions and warrants signed by the King. An Annual Official Army List, containing the names of all officers belonging to the British army, marines, and militia, is also issued from this office and published by authority. For the convenience of the army, a Monthly List is likewise given under the same sanction.

OFFICE of Secretary of State, Colony and War Department.—The office of secretary of state for the war department was first established on the 11th of July, 1794, the whole business of the war department having, from the commencement of the war in 1793, down to that period, been transacted by the late Lord Melville, in addition to the ordinary business of the home department.

The accumulation of affairs, occasioned by the war, had, however, as it is stated, rendered it necessary to add four clerks to the ordinary establishment, and to employ two others, belonging to particular branches, almost constantly and exclusively, and had in such manner overloaded every individual then existing in the office, that the necessity of a separate establishment, for managing the affairs of war exclusively, was soon felt, and produced the additional office of secretary of state for the colony and war department. The office is in Downing-Street.

Delays of OFFICE. The disappointments and embarrassments to which many individuals, but most especially military men, are exposed, through the tardy progress of official business, and which have obtained a sort of proverbial curse under this term, shew the necessity of regulations being made out in the

clearest manner; and when made out, of their being speedily and faithfully complied with. If procrastination be the thief of time, delays of office are secret abettors of it.

Insolence of OFFICE, a self-assumed importance, against which little minds are never proof, and of which great minds are almost always the unfortunate victims.

Casual OFFICES are such as are given for life by patent, commission, &c. and which become vacant by the death of the incumbent: as that of the constable of the Tower, &c.

The names of the persons belonging to the several appointments are annually printed in the *Royal Calendar*, commonly called the *Red Book*.

OFFICES (with architects.) All the lodges and apartments which serve for the necessary occasions of a palace or great house are generally so called.

OFFICES, in a figurative sense, kind acts, services rendered, and voluntarily offered; also unkind acts, and disservices done in the same manner.

OFFICER, (*officier*, Fr.) This word has a double signification: it is applied to a person acting in a civil or military situation under government.

Board OFFICER, a person belonging to a Board, either in a civil or military capacity, as in the Ordnance, &c.

OFFICER. Amongst the ancients, the profession of arms was not a distinct and separate avocation, to which men devoted the whole of their application and their lives: the great generals of the Greeks and Romans were the ministers of the state, and the leaders of popular assemblies. Pericles was the most distinguished orator of his time: Xenophon was excellent as an historian, and in every branch of prose composition. All the great generals of the different Grecian states appear to have been men highly endowed; strangers to no branch of literature or learning then known. The first Scipio was the protector of genius, the patron of the arts, the friend of talents. Pompey was distinguished as a public speaker; Quintilian says of Caesar, that he was the only man who could have rivalled Cicero in eloquence, and that *Tanta in eo vis est, id acumen, ea concitatio, ut appareat illum eodem animo dixisse quo bellavit*. It, therefore, does not appear to have been the opinion of those two, the greatest nations that have

ever trodden the earth, that military pursuits ought only to be followed by lesser and more ignoble minds; that a man might be little in the other avocations of human life, and great in the field of battle. The happy discovery had not yet been made, that an army was the sink of the state, a drain for the trash and refuse of its population of every description; the asylum of the idle, the ignorant and the profligate; the temple of blockheads, where the chief priest might be the most contemptible of the human kind.

OFFICER commanding a battalion. The duties imposed upon this officer, and the consequent responsibility which must result from them, induces us to give the following observations:

However vigilant the commanding officer of a regiment may be, it too frequently happens, that the grossest irregularities prevail, which are out of his power to discover and, of course, to correct.

It is, for instance, essentially necessary, that all the spare arms, appointments, &c. should be in a constant state of readiness, and that all the men should be completely armed and equipped, and, in every respect, fit for service.

In regiments where the commanding officers do not frequently and strictly inspect the several companies, gross deviations from the rules of real economy are too apparent. Yet, notwithstanding the inspection of a commanding officer, officers, having the charge of troops or companies, are enabled to conceal many deficiencies by causing, on the day appointed for inspection, such men as are not fit to fall in, to be put on some duty, and the faulty arms and accoutrements to be exchanged, and to be given to these men during the night. To avoid the possibility of this, and of similar practices, it would be advisable to make a rule throughout the British army, that one troop or company should, every day, be excused all species of duty. During this period, the books, spare arms, accoutrements, &c. should be brought into the barrack yard or front of the bell-tents in camp, the troop or company be turned out, and put through certain evolutions or manœuvres by the senior officer, in the presence of the commanding officer. By an arrangement of this sort, it would be in the power of every

colonel or officer commanding, to see the whole of his regiment, in the most minute way on a given day, according to the number of troops or companies, to judge of the degree of attention which every captain, having the charge of a troop or company, had paid, either to its drill or interior economy, and thus ascertain the fitness of the whole for immediate service.

Inspecting field OFFICER, an officer appointed by the commander in chief for the express purpose of attending to the exercise and discipline of the volunteer associations. The allowance and pay of this officer are very ample indeed.

Inspecting field OFFICER of a district, an officer appointed by the commander in chief, and subordinate to the adjutant general, for the express purpose of examining all recruits that appear within his district. He is allowed an adjutant and surgeon; but his pay and allowances are not equal to those of the volunteer inspector.

Recruiting OFFICER, (*officier recruteur*, Fr.) an officer sent, with a party, into some town or village, for the purpose of enlisting men. He must communicate with the inspecting field officers of recruits.

OFFICERS, in a military sense, are of several denominations and ranks, viz.

Commissioned OFFICERS in our service are those appointed by the king's commission; such are all from the general to the cornet and ensign, both inclusive; and in the Blues, or Royal Horse Guards, the quarter-master bears the king's commission. Those persons are also called commissioned officers, that act under the signature of the lord-lieutenants of counties, or under that of the colonel or commandant of a regiment, as in the militia, volunteer and yeomanry corps.

Warrant OFFICERS, those who have no commissions, but only warrants from such boards, or persons, who are authorized by the king to grant them.

Non-commissioned OFFICERS are serjeant-majors, quarter-master serjeants, serjeants, drum and fife majors, who are appointed by the commanding officers of regiments, and by them may be reduced without a court martial. But it is not in the power of any captain of a troop or company, or other subordinate officer, to reduce a serjeant without the

sentence of a general or regimental court martial.

General OFFICERS are those whose command is not limited to a single company, troop, or regiment; but extends to a body of forces, composed of several regiments: such are the general, lieutenant general, major general, and, in some armies, brigadier general.

General officers, having regiments, may be summoned to attend the board at the Horse Guards, either for the purpose of inspecting the patterns for clothing, or of deciding upon any other point which concerns the interior economy of the service. They are summoned from the judge advocate's office, to whom they must apply for leave of absence in case of sickness. Their letter of excuse is transmitted by him to the adjutant general, who lays it before the board.

Field OFFICERS are such as command a whole regiment; as the colonel, lieutenant-colonel, and major.

Staff OFFICERS are the quarter-master-general, and the adjutant-general, brigade officers and aides-de-camp, also the quarter-masters, adjutants, the physicians, surgeons, and chaplains.

Subaltern OFFICERS are lieutenants, cornets, and ensigns; and with respect to the grand total of an army, all officers under the rank of major.

Flag OFFICERS are admirals who hoist flags at the mast heads.

Sea OFFICERS are, in general, all those who have any command in the navy.

The following observations, which more specifically relate to guards, are so generally applicable to every other military situation on service, that we recommend them to the serious attention of every officer:—

It is the duty of all officers, to take notice of any negligence, or impropriety of conduct, in the men, whether on duty or off duty, although the person or persons offending should not belong to their particular regiments. They are immediately to report all neglects of duty to the officer commanding the guard; and they are enjoined to confine, and to report to the commanding officer of the regiment to which they belong, any non-commissioned officers or soldiers, they may detect in disorderly practices, or who appear out of their quarters, con-

ducting themselves, either in point of behaviour or appearance, in a manner unbecoming soldiers.—*Regulations and Orders.*

Brevet OFFICER, one who, in doing duty with other corps, takes rank according to the commission which he holds from the king, and which is superior to the one for which he actually receives pay, or by which he can do duty in his own. A captain for instance, in the sixty-second regiment of foot, who has the rank of brevet-major in the army, may, when that corps does brigade duty, command every captain on service with him. The word *brevet* is taken from the French, and in the instance before us means rank without pay. During the old French monarchy, there were various instances in which individuals held posts of honour during the king's pleasure, or during their own natural lives. Hence *duc à brevet*, dukes by brevet; or, to use an expression more familiar to us, persons who received the patent letter of a dukedom during their natural lives. *Brevet* likewise signified a sum attached by order of the king to the sale of a commission, or place, for the benefit of a deceased person's wife, heirs, or creditors: this was called *brevet de retenue*. So that the word *brevet*, though limited to one sense amongst us, was applicable to rank and emolument among the French. Hence, *breveter* signified to give a person a commission, place, or employment; to invest him with honorary rank; or to authorize him to receive a pension. *Brevet de capitaine* signifies the commission, or rank of a captain.

OFFICERS and Commissioners of the Royal Hospital at Chelsea:

The *civil department* consists of—The president of the council. First lord of the treasury. The two secretaries of state. The paymaster general of land forces. The secretary at war. The two comptrollers of army accounts. The governor and lieutenant governor. Salaries unknown.

The *military department* consists of governor, lieutenant governor, major, adjutant, treasurer, (who is the paymaster general for the time being,) deputy treasurer, 1 clerk, 2 chaplains, 1 secretary and registrar, 2 senior clerks, 2 junior ditto, 1 agent and paymaster to the out-pensioners, 1 magistrate to at-

test the invalids and out-pensioners, 1 physician, 1 comptroller, 1 steward, 1 surgeon, two surgeon's mates, 1 apothecary, 1 truss maker, 1 whitster, 1 wardrobe keeper, 1 compter of coal yard, 1 organist, 1 clerk of the works, 1 master lamp-lighter, 1 master butler, 1 master cook, 1 second cook, 2 under cooks, 1 scullery-man, 1 gardener, 1 master barber, 1 engine keeper, 1 clock keeper, 1 canal keeper and turncock, 1 sexton, 1 usher of the hall, 1 porter, 1 cellarman, 2 sweepers, 1 matron, 1 master mason, 1 master smith, 1 master painter, and 1 plumber.

The names and appointments may be seen in the Royal Calendar, commonly called the *Red Book*.

Field OFFICERS belonging to the several regiments of militia in Ireland:—

By an act passed on the 24th of March, 1801, the number of field officers of this description has been increased by adding one additional lieutenant colonel, and one additional major, to such of the Irish regiments as consist of eight companies, or upwards, and one additional major to such of the said regiments as consist of seven companies, or under. The following counties consist of eight companies and upwards:—*Antrim, Armagh, North Cork, South Cork, City of Cork, Donegal, City of Dublin, Galway, Kerry, Kilkenny, King's County, County of Limerick, Londonderry, Louth, Meath, Monaghan, Roscommon, Tipperary, Tyrone, Waterford and Wexford.* The *Carlow, Cavan, Clare, North Downshire, South Downshire, County of Dublin, Fermanagh, Kildare, Leitrim, City of Limerick, Longford, North Mayo, South Mayo, Queen's County, Sligo, Westmeath, and Wicklow* regiments, consist of seven companies, or are under seven companies.

All such additional field officers, if qualified, in manner as field officers of the same rank in the militia of Ireland are now by law required to be, and not disapproved of by the lord lieutenant, or other chief governor or governors of Ireland, within fourteen days after such certificate shall have been laid before him or them, shall, to all intents and purposes, be deemed and taken as field officers of the respective regiments in the respective ranks to which their commissions shall respectively appoint them;

and shall have the same powers according to such commissions respectively, that other field officers in the militia now have, and shall have rank, and receive pay according to such rank from the dates of their respective commissions, in manner and form as the field officers of the militia regiments of Ireland are now entitled thereto.

OFFICER in waiting. The officer next for duty is so called. He is always mentioned in orders, and ought to be ready for the service specified, at a minute's warning. He must not, on this account, quit the camp, garrison, or cantonments.

OFFICER of the day, an officer whose immediate duty is to attend to the interior economy and good order of the corps to which he belongs, or of those with which he does mixed duty. The following regulations will explain the nature of that duty when troops are encamped:

The officers for daily duty in camp, independent of guards, will be a general or generals of the day, according to the circumstances and strength of the camp. In large camps, there will be a lieutenant-general of the day, and a major-general of each wing, or one major-general of cavalry, and one of infantry; and majors of brigade in the same proportion: a field officer per brigade, and a captain and subaltern of the day per regiment, and an adjutant and quartermaster of the day per brigade.

The general of the day is to superintend the regularity and discipline of the camp, in every particular: he is to visit the guards of the camp and the outposts (unless the latter are put under the command of some particular officer): he is to call out and inspect the inlying piquets, as often, and at such times, as he thinks proper: he is to receive all reports in camp, and make immediate communication of any extraordinary occurrences to the commander in chief.

The captain of the day of each regiment superintends the cleanliness and regularity of the camp of the regiment: he attends the parading of all regimental guards, orders the roll to be called frequently, and at uncertain hours, and reports every thing extraordinary to the commanding officer.

The subaltern of the day assists the

captain in his various duties, and reports to him any irregularity, which may come to his knowledge.

The captain and subaltern of the day are each to visit the hospital at uncertain hours, the captain is to make his report of the state of the hospital to the commanding officer of the regiment.

The regularity of the men's messing is an object of primary importance.—The captain or subaltern of the day must visit, and inspect the kettles, at the hour appointed for cooking, and no kettle is to be taken from the kitchens till this inspection is made, and the signal is given by the drum for the men to dine, which should be at the same hour, throughout the camp. Independent of this regimental arrangement, the officers of companies must daily and hourly attend to the messing and every circumstance of the economy of their companies, in camp more particularly than in quarters.

The adjutant of the day of the brigade is to assist the brigade-major in the various details of it, and in the absence of the brigade-major is to receive and execute all orders: it may frequently be necessary for him likewise to attend for orders, at head-quarters. It is the duty of the quarter master of the day of the brigade, to attend to the cleanliness of the camp; to take care that all broken glass and filth of all kinds be removed, for which the quarter master of each regiment is responsible, as far as the camp of his regiment is concerned.

The officers on duty, and those in waiting as next for duty, who are always to be mentioned in the orders of the day, are constantly to remain in camp, or within the cantonments.—No officer is, on any account, to sleep out of camp, or cantonments, without leave.

Officers making written reports are to sign them, specifying their rank and the regiments to which they belong.

All orders relating to the men are to be read to them by an officer per company, at the next parade after such orders are given out.

When there is a field officer of the day, it is his duty to visit all guards frequently during the day and night. In the morning, on the dismounting of the guards, he will collect the reports, and carry them to the governor or comman-

dant, together with any observations he may himself have made, in the course of his duty in the preceding day. When there is no field officer of the day, the reports will be collected, and delivered to the governor, by the captain of the main guard. Each regiment must have an alarm post assigned to it, to which it will repair in case of fire, or any other extraordinary alarm, either by day or night.

The officer of the day (and indeed the officer in waiting) formerly wore his sash, to distinguish him from the officers on guard, &c. At present no such distinction can exist, as every military man, in commission, and regimentally dressed, must invariably wear his sash. This regulation has been necessarily resorted to on account of the volunteer corps; the privates of which, in several battalions or companies, are dressed like their officers. We still lament, that a rule should be wanting to render all armed establishments subject to one system, as far as relates to dress and discipline; we mean a rule of ostensible gradation, as in other services.

Marine OFFICERS, all those who command in that body of troops employed in the sea service, under the direction of the lords of the admiralty.

Well OFFICERED. A regiment is said to be well officered, when it has not only its full complement of officers and non-commissioned officers, but the several individuals entrusted with the management of it, are remarkable for good order and discipline. The French say *bien commandé*.

Civil-Law-OFFICERS. Officers so called from acting in civil causes, under peculiar regulations of their own, unconnected with the common courts of justice. They are as follow:

The *Advocate* is admitted into the Commons, after having regularly taken his degree of LL.D. He remains one year silent, attending the courts, and then is allowed to plead in all the different courts of Doctor's Commons. As soon as admitted, he must be appointed surrogate to the judges ecclesiastical, and of the Admiralty Courts. This is a representative of the judge in all legal acts; and sometimes he sits for him in his absence. He ranks after king's serjeants.

The *king's Advocate* is a civil law offi-

ter, appointed by the crown. He takes all causes when the crown is concerned, both in prisage and otherwise.

Martial is an officer belonging to, and attending the Admiralty Court, and ought always to be present. He receives all reports of sales, &c. he has all prisoners under his care, and has a considerable allowance out of all prizes condemned to the crown. This is a very lucrative place. In all naval courts-martial, he officially attends as the person who superintends the prisoner.

Proctors are officers established to represent in judgment the parties who empower them, by a warrant under their hands, called a proxy, to appear for them, to explain their rights, to manage and instruct their cause, and to demand judgment. The proctor in civil is nearly the same as the attorney in the common law. There are at present about 65, with the king's proctor. All causes in the Admiralty Courts, Doctor's Commons, are carried on by proctors. The officers of the navy are all obliged to refer their causes to the king's proctor. The proctors are not more concerned for the army, than the rest of their fellow citizens, excepting in joint capture cases, disputes of division of prizes between the army and navy, which sometimes occur, and are determined after hearing by the judge of the Admiralty. All wills go through the hands of the proctors, before they pass the seal; as also marriage licences are procured by them.

Registrar is an officer attached to every court in Doctor's Commons. It is necessary to observe there are several courts held in the Commons, the principal, however, are the Court of Arches, the Admiralty, and Prerogative for wills, alone. The principal Registrar is in the Admiralty Court, and is generally a nobleman of rank; the emoluments and salary are considerable. The Registrar has under him two deputies, who also share a very great income arising from the sales of prizes, &c.

Surrogate. See *Advocate*.

We have given this article, (although not strictly a military one,) because the navy and army, especially in matters of prisage, may have occasion to know the several officers through whom their claims must pass.

OFFICIAL. (*Officiel, elle, Fr.*) All orders, reports, applications, memorials,

&c. which pass through the regular channels of communication, are called official.

Non-OFFICIAL, matter which does not come within the routine of official duty or business.

Extra-OFFICIAL, any thing done beyond the limits of official duty.

OFFICIER, *Fr.* officer; also a servant and attendant in a house or palace.

OFFICIER du génie, *Fr.* an engineer.

OFFICIER sur terre, *Fr.* a land officer, or any commissioned person in the land service.

OFFICIER de marine, *Fr.* a sea officer.

OFFICIER de la marine Anglaise, *Fr.* an officer belonging to the British navy.

OFFICIER de la marine Française, *Fr.* an officer belonging to the French navy.

OFFICIER sur mer, *Fr.* a sea officer, or any commissioned person in the sea service. The term, however, is not confined to this class only, it likewise signifies the master, boatswain, pilot, &c. of a ship, in which case the latter are called *officiers maritimes*, in contradistinction to the former, who are styled *officiers de la marine*, or persons who have naval rank, and whose immediate business is to fight their ships. These consisted, in the old French service, of admirals, vice-admirals, lieutenant-generals, commodores, captains of ships, or post captains, majors, captains of light frigates, captains of fire ships, captains of stores or ordnance vessels, port captains, to which may be added, *capitaines en second*, together with the lieutenants and *enseignes de vaisseau*, whether actually employed, and bearing rank, or being only *en second*. There were, besides, various employments and situations under the old French government, which entitled individuals to the appellation of *officier*. Those of a military or naval nature were generally, or specifically, as follows:—

OFFICIER de guerre, *Fr.* a commissioned officer.

OFFICIER dans les troupes, *Fr.* any person holding a military situation in the army.

OFFICIER général, *Fr.* a general officer.

OFFICIER subalterne, *Fr.* a subaltern officer.

Les hauts OFFICIERS, *Fr.* commissioned officers.

Les bas OFFICIERS, *Fr.* non-commissioned officers.

OFFICIER de la garnison, *Fr.* an of-

ficer belonging to the garrison of a town, or fortified place.

OFFICIER *en garnison*, Fr. any officer in garrison.

OFFICIER *au régiment des gardes*, Fr. an officer belonging to the guards, familiarly styled with us a *Guardman*.

OFFICIER *dans la marine*, Fr. an officer in the marine service.

OFFICIER *marinier*, Fr. See OFFICIER *sur mer*.

OFFICIERS *à la suite*, Fr. During the existence of the old French monarchy a certain number of individuals were permitted to wear the uniform of a regiment, without being otherwise connected with it. These were divided into two classes, viz.

OFFICIERS *à la suite d'un régiment*, Fr. officers nominally attached to a regiment. Of this description were the gentlemen appointed by the German princes who were in alliance with France. It is mentioned, as a fact, that before the French Revolution took place, there were 42 lieutenant colonels *à la suite du régiment Deux Ponts*; the prince of that name having been permitted to extend this strange brevet to any number, provided the officers so distinguished, never went into the town where the regiment lay, or interfered with regard to quarters, &c.

The other class consisted of noblemen and gentlemen, who were appointed by the Court of Versailles, and received their brevets from the war minister, these were called *officiers à la suite de toute l'armée*; or officers bearing brevet rank without being attached, even nominally, to any specific corps.

Sous-OFFICIER, Fr. a subaltern.

OFF-RECKONINGS, (*décompte*, Fr.) a specific account so called, which exists between government and the colonels of British regiments, for the clothing of the men. This account is divided into two parts, viz. gross off-reckonings, and net off-reckonings.

Gross OFF-RECKONINGS consist of all the pay of the non-commissioned officers and private men, above the subsistence.

Net OFF-RECKONINGS are the produce of the gross off-reckonings, reserved for the clothing of the men, after the warrant deductions of one shilling in the pound, and one day's pay of the whole regiment for Chelsea hospital, and also the deduction of two-pence in the pound for the agent, have been made at the

pay-office. The balance of the pay of the officers, over and above their subsistence, after the warrant deductions are made, and the respited pay, if there is any, is charged to the officer, is called *clearings*; which are paid by the paymaster to the agent, who pays them to the officers, and there finds his two-pences.

OFFING, (sea phrase,) a space in which a ship may ride, or sail, having the shore near her, and having another a good way without her, towards the sea.

OFFRIR *son épée à quelqu'un*, Fr. to be ready to fight for another, or to engage in his quarrels.

OFFUSQUER, Fr. literally means to darken, or conceal. *Ce bâtiment est offusqué par les maisons voisines*, this building is darkened, or concealed from the eye, by the neighbouring houses. It likewise signifies, in a figurative sense, to be out-done, or out-matched. *Il se sent offusqué*, he feels himself outdone.

OGEE, } in pieces of ordnance, an

OGIVE, } ornamental moulding, in the shape of an S, taken from architecture, and used in guns, mortars, and howitzers. See CANNON.

OGIVE, (*ogive*, Fr.) In gothic vaults, those arches are styled ogives, or ogees, which cross one another diagonally. The French likewise call them *croisées d'ogives*.

OGNON, Fr. literally means an onion. The word is sometimes used in a familiar manner by the French to express persons standing in a row. *Ils étaient tous en rang d'ognon*, they all stood like onions in a row.

OIL. Every soldier is supplied with a given quantity of oil and emery, for the purpose of cleaning his arms, accoutrements, &c. This is paid for by the captains of companies, who charge the *actual* expenditure every half year, under the head, "Emery, oil, crocus, &c."

OISEAU, Fr. (in masonry,) a hod, or machine with two handles, which is used to carry mortar. See VOLET. Also a sort of pallet, or flat board which is used by masons; especially in stucco work.

Plan *à vue d'OISEAU*, Fr. any representation which is given from a bird's eye view of the object.

A Vol *d'OISEAU*, Fr. in a direct line.

OLD, a term used to distinguish any thing not new, or of any specific dura-

tion. As an *old regiment*, or one of long standing, and out of the break.

Old English March, a march of the foot which was formerly in high estimation, as well abroad as with us; its characteristic is dignity and gravity, in which respect it differs much from the French, which, according to Mersennus, is brisk and alert. Sir Roger Williams, a gallant low country soldier of Queen Elizabeth's time, had once a conversation on this subject with Marshal Biron, a French general. The marshal observed that the English march, being beaten by the drum, was slow, heavy, and sluggish. "That may be true," answered Sir Roger; "but slow as it is, it has traversed your master's country from one end to the other." The truth of this observation has been amply corroborated by the progress of the British arms in 1815.

Old Guard, a guard which has done its specified tour of duty, and is to be relieved by another, called the *New Guard*.

Old Guard, } words of preparative,
New Guard, } or notice which are used in mounting and relieving military guards. The French call these guards, *garde descendante* and *garde montante*, or *garde qui descende*, and *garde qui monte*.

OLIGARCHY, (*oligarchie*, Fr.) a government composed of a few individuals, who have generally an interest distinct from that of the public at large: a mixed power more detestable than that of despotism, or agrarian tyranny.

OLISANT, a small horn which was formerly used by the paladins and knights-errant, when they challenged their enemies to fight, and set them at defiance.

OLIVER and *ROLAND*, two famous heroes of romance, who are said to have lived in the time of Charlemagne. The maces which they carried have been thus described by Father Daniel:—One is a large ball of iron, fastened with three chains to a strong truncheon or staff, of about two feet long; the other is of mixed metal, in the form of a channelled melon, fastened also to a staff by a triple chain; these balls weighed eight pounds. At the end of both the staves are rings for holding cords or leathers to fasten them to the hand. Our familiar saying, "I'll give you a Roland for an Oliver," comes probably from these heroes.

OLYMPIAD, (in chronology,) the space of four years; for on the 5th the olympic games were celebrated in honour of Jupiter Olympius, near Olympia. The Greeks began to use this epoch a little before the building of Rome.

OLYMPIC Games were instituted by Hercules, A. M. 2856, in honour of Jupiter Olympius, at Olympia, a city of Elis, in Peloponnesus. They were celebrated every four years, about the summer solstice. The design of them was to accustom the young military men to running, leaping, and every other military exercise.

OMBRE, *sécher à l'ombre*, Fr. This term is in use among the French founders of artillery, when they put the clay or putty, which serves to form the cannon moulds, out to dry, without making any fire for the purpose.

OMRA, or *OMHRA*, *Ind.* plural of *ameer*, a lord: they are persons of considerable consequence in the dominions of the Great Mogul. Some of them are commanders of 1000 horse, others 2000, and so on to 12,000: their pay being regulated according to the number of their horses. The governors and great officers of state are chosen out of this body.

ON, (*en, sur, de*, Fr.) a word variously used in the English language, and applicable to many circumstances of military arrangement. It precedes those words of command which direct the change, or formation of bodies of men upon points that are fixed.

On duty, (*en faction*, Fr.) posted at some particular spot, and responsible for some military charge entrusted to one.

On service, doing duty abroad, or being subject to the different movements of an army in the field, actually employed. The French say *en activité*.

On guard, (*de garde*, Fr.) subject to some particular distribution of armed men, for the defence, or security, of any place, person, or thing.

ON, a word of command in the corps of drivers, signifying the same as *forward*, or *move on*.

O. H. M. S. Initials (frequently written without any effect) upon the superscriptions of letter, signifying *On his Majesty's Service*.

ONAGER, *ONAGRA*, (*onagre*, Fr.) a warlike machine, which was used by the ancients to throw stones. It is mentioned by Vegetius.

ONDECAGON, a figure of eleven sides and angles.

ONGLET, *Fr.* a sharp graver.

ONGLET, *Fr.* in geometry, that portion of cylindrical, pyramidal, or uniform body, which is cut so as to traverse its base obliquely.

Assemblage en ONGLET, *Fr.* more properly *en Anglet*. The joining two pieces of board together, whose extremities are so sloped as to make a right angle. Also a part of the dam or turret of a sluice.

ONSET, assault, storm, attack.

OPEN. In military movements and dispositions this word is frequently used, but is seldom applicable to any operations in face of an enemy; the ranks, &c. on such occasions being generally compact and close. In formation, the word *open* is opposed to *close*, viz. *open column*, *open distance*, *open order*. It also constitutes part of a word of command; as *rear ranks take open order*; in opposition to *rear ranks take close order*.

OPEN distance in column, (*distances entières en colonne*, *Fr.*) The intervals in these cases are always equal in depth to the extent in front of the different component parts of the column.

OPEN flank in *fortification*, that part of the flank, which is covered by the orillon. See **FORTIFICATION**.

OPENING of *trenches*, the first breaking of ground by the besiegers, in order to carry on their approaches towards the place.

OPERATION, (*opération*, *Fr.*) the act of exerting, or exercising some power or faculty, upon which some effect follows. Hence *Military Operation*.

Line of OPERATION. All the forward movements of an army for the purpose of attacking an enemy, penetrating into a country, &c. may be properly called a line of operation. There is so intimate and so necessary a connection between this line and the line of communication, that no army can be in security, let its temporary successes be what they may, unless a strict and unremitting attention be given to their relative points of continuity and correspondence. The line of operation in a siege is partial and extremely limited, so is that of communication; but upon the large scale of war, these two lines are of considerable extent and importance. No man, in fact, can be called a good general, or even an officer, who carries his views so far for-

ward as to venture upon a long line of operation, without having previously secured his line of communication, by a perfect knowledge of the countries through which he is to move, and having his flanks so thoroughly covered, that he may fall back, or retreat, according to circumstances.

Military OPERATIONS, (*opérations de guerre*, *Fr.*) consist in the resolute application of pre-concerted measures, in secrecy, dispatch, regular movements, occasional encampments, and desultory combats, or pitched battles.

OPHTHALMIA, (*ophthalmie*, *Fr.*) called *Egyptian*, from its having been first imported into this country by the British troops in 1801. In consequence of its general prevalence over all the continent of Asia, it might with more propriety be called the *Asiatic* inflammation of the eyes. The wandering tribes of Arabs, who inhabit the deserts between Egypt and Persia, and the natives of the latter country as well as those of India, are severely afflicted by it. In India it is called the *native sore eyes*, where the inhabitants almost uniformly suffer from it at certain periods of the year.

Its appearance and character are so peculiar that it can scarcely be confounded with any but with one species of ophthalmia. The most distinguished peculiarities are a copious discharge of a thick matter from the membrane which lines the inner surface of the eye-lids, and afterwards covers the ball called the *membrana conjunctiva*, together with a great swelling of the parts situated externally to it. The *conjunctiva* is the original seat of disease, and when other parts become affected, as happens in most instances, it is in consequence of the inflammation being permitted to extend itself from the want of proper treatment in the first instance. The species of inflammation to which the Egyptian, or Asiatic, bears so strong a resemblance, is the *Gonorrhœal*, but it nevertheless differs most materially from it, inasmuch as it is in the highest degree infectious, whereas the *gonorrhœal ophthalmia* is not so. This difference then will be sufficient to enable any medical, or military, officer to distinguish between the two diseases.

Various causes have been assigned for the production of this dreadfully painful and destructive disease. Some have at-

tributed it to the effects of the strong glare of light reflected into the eyes from the sands in Egypt. Others believe it to have been produced by the nitrous particles with which the air in Egypt is highly impregnated. The exposure to the heavy nightly dews too in Egypt has been mentioned, as well as the state of the atmosphere in that country, to account for its prevalence. The extensive manner in which the disease in question has propagated itself among all classes of society in this country, since the return of the Egyptian army, *where no such causes as those enumerated exist*, is sufficient to prove incontrovertibly that it is a disease *sui generis*, and consequently not to be produced, or propagated, except by the immediate application of the contagious principle. One fact mentioned by Sir J. McGregor in his Medical Sketches, is of itself sufficient, without any other evidence, to establish this position, namely, that no individual of the Indian army, under Sir David Baird, ever suffered from ophthalmia during several weeks march from the Red Sea to cross the sandy deserts to join the British army in Egypt, until some of the sick were put into a military hospital, where there were ophthalmia patients, after which this part of the army suffered as much as the European. Hence then, if the action of the supposed causes of the Asiatic ophthalmia could have produced it, this army during its march ought to have suffered from it, but this did not happen until the men had been exposed to the operation of the contagious principle.

A considerable difference of opinion prevails also among the faculty, as to the precise mode in which the disease propagates itself; some being of opinion that the absolute conveyance of the discharge from an infected eye to one which is sound is necessary to produce the ophthalmia in question; while others argue that this is not necessary, as, in common with other contagious disorders, the infectious principle is capable of being communicated through the medium of the atmosphere. The writer of this article is in the possession of facts to prove that the contact of the infectious matter is not necessary for the propagation of the disease, and he has even known it communicated to persons who occupied a room previously appropriated

to the use of infected persons, although the necessary precautions of washing the bedding, &c. had been taken. This fact then will in part explain the difficulty experienced in eradicating the disease when it has been introduced into a regiment; and may, perhaps, in some measure also account for its dissemination when it has been supposed that the men have infected each other for the purpose of obtaining their discharge. As the precautions usually adopted in the army to prevent the spreading of the ophthalmia in question, are directed under the impression that it is communicable solely by contact, it is not surprising that it should continue to spread in a regiment, when the other mode of its propagation has been entirely overlooked, together with the measures necessary for its prevention. These statements evidently shew the necessity of legislative interference to prevent this disease from eventually becoming as prevalent among the general population as any of the most frequent disorders met with in this country.

OPINIATRE, *Fr.* a term among the French, signifying obstinate; fool-hardy. They apply it to a governor of a town which is besieged by superior forces, and which cannot hold out.

OPINION. In military proceedings which regard the interior government of an army, this word signifies decision, determination, judgment formed upon matters that have been laid before a court-martial, or court of inquiry.—Hence, the court-martial having duly weighed the whole matter before them, are of *opinion* that ——— is not guilty of any part of the charge preferred against him.

The phrase *opinion* of a court-martial, or board of inquiry, corresponds, in substance and signification, with the term *verdict* in civil cases.

OPINION. Officers on courts-martial give their opinion in rotation, beginning with the youngest in rank.

OPINION, abstractly considered, may be defined an assent of the understanding.

A war of OPINION, (*guerre d'opinion*, *Fr.*) This expression has grown into familiar use, since the commencement of the French Revolution, and was never, perhaps, so strongly illustrated as by the perseverance or infatuation, call it which we please, of the French people. They

have shewn, that the influence of opinion is paramount to every consideration in life. Friend, parent, and relation, have given way to the superior calls of public duty, growing out of, and sanctioned by, public opinion.

OPIUM, a juice, partly of the resinous, partly of the gummy kind. According to Dr. Johnson's extract from Hill, it is brought from Natolia, Egypt, and the East Indies, produced from the white garden poppy, with which the fields of Asia Minor are in many places sown. The first effect of opium is making the person who takes it cheerful; it removes melancholy, and dissipates the dread of danger. The Turks always take it when they are going to battle: it afterwards quiets the spirits, eases pain, and disposes to sleep. A remarkable instance of the powerful influence of opium over the natives of the East is related by Mr. Orme, in his History of the Carnatic, page 270.

OPPORTUNITY. In addition to what has been said respecting Occasion, which is nearly similar to opportunity in its import, we shall extract the following account of the latter, which was also honoured as a goddess among the pagans. Opportunity was represented by them as a naked woman, with a long lock of hair, but bald behind, to intimate, that opportunity, if not laid hold on when it offers, soon slips away; also standing with one foot on a wheel, and the other in the air, holding a sail in one hand, and a razor in the other: her feet likewise being winged, and the wheel in continual motion, to shew that opportunity is always inconstant and in motion.

To **OPPOSE**, to act as an adversary against another, to resist, &c. It likewise signifies to place as an obstacle.

OPPOSITION, (in geometry,) the relations of two things, between which a line may be drawn perpendicular to both.

OPPOSITION, (in England,) a certain set of parliamentary men, among whom there are, at times, military characters, whose almost uniform system is to oppose the measures of government. These persons are also familiarly called the *Outs*, in contradistinction to the *Ins*, i. e. *out of place*, or *in place*. The French say, *Le Parti de l'Opposition*, or simply, *l'Opposition*.

OPPOSITION, hostile resistance; as, the

army did not experience any opposition in that quarter.

To **OPPRESS**, (*opprimer*, Fr.) to overburthen, to crush by authority and violence.

OPPRESSOR, (*oppresseur*, Fr.) Although the terms *oppressor* and *tyrant* may appear synonymous, there is, nevertheless, a shade of difference between them. Oppressor means more immediately that prince, general, or governing power, which levies contributions, and imposes taxes beyond the means of the wretched and degraded victims to superior force; a tyrant takes life as well as property.

OPPUGN. To oppugn, is to attack by force of arms. The term is not used. It also signifies to reject or confute an opinion; and, in a bad sense, to resist conviction; as, to oppugn the known truth.

OPTER, Fr. from the Latin *opto*, I chuse, I select in preference; to determine upon, to express a particular wish. Thus, in the conference which Bonaparte had with Ferdinand VII. of Spain, in 1801, he concluded his conversation by saying: *Prince! Il faut opter entre la cession et la mort*—Prince, you must chuse between the surrender of your dominions, or death.

ORANGE, a term applied to those persons who adhered to the stadtholder. Hence, Orange party; also a set of men in Ireland who are strongly attached to government.

ORB, a hollow sphere.

ORB, in tactics, is the disposing of a number of soldiers in a circular form of defence. The *orb* has been thought of consequence enough to employ the attention of the famous Marshal de Puysegur, in his *Art of War*, who prefers this position, to throw a body of infantry in an open country, to resist cavalry, or even a superior force of infantry; because it is regular, and equally strong, and gives an enemy no reason to expect better success by attacking one place, in preference to another. Cæsar drew up his army in this form, when he fought against Labienus. The whole army of the Gauls was formed into an *orb*, under the command of Sabinus and Cotta, when fighting against the Romans. The *orb* was generally formed 6 deep.

ORBE, Fr. (in geometry,) a spherical body which is terminated by two spherical superficies, one concave, and

the other convex. Thus when a small sphere is circumscribed by a larger one, and has the same center, the difference is an *orbe*.

ORDEAL, (*ordalie*, Fr.) a method practised about the time of Edward the Confessor, of trying criminal persons, by fire or water. This mode of trial also prevailed in France. It was there called *Jugement de Dieu*, or Judgment of God.

Simple ORDEAL was when the person accused carried in his hand a red hot iron of a pound weight.

Double ORDEAL was when he carried a hot iron of two pounds weight.

Triple ORDEAL was when he carried a hot iron of three pounds weight. If the person accused pleaded not guilty, he might either put himself upon God and his country, as at this day, or upon God only, presuming that he would free the innocent. In which case he was obliged to go through one of the above trials. Ordeal was by *fire*, if the person were of free estate; by *water*, if he were of servile condition.

ORDER, the arrangement, or disposition of things in their proper place; custom, or manner, rule, or discipline; as order of march, &c.

ORDER of battle, the arrangement or disposition of the different component parts of an army, in one or more lines, according to the nature of the ground, for the purpose of engaging an enemy, by giving or receiving an attack, or in order to be reviewed, &c. When the line is drawn out for battle, each man, in the infantry, is supposed to cover 22 inches of ground in breadth, and one pace in depth.

Parade ORDER. When a regiment of horse or foot, a troop, or company, is drawn up with the ranks open and the officers in front, it is said to be in parade order.

Close ORDER. When a battalion or company is commanded to take close order, at the word *march*, the ranks (supposing the men to stand three deep) close within one pace, marching one and two paces, and then halting. So that close order, in ranks, comprehends an interval of one pace between each.

Open ORDER. When a battalion, or company, is commanded to take open order, on the word *march*, the dressers front, and the center and rear ranks fall

back one and two paces, each dressing by the right the instant it arrives on the ground. So that *open order* comprehends an interval of two paces between each rank.

Extended ORDER is preparatory to rank entire, and is frequently practised in light infantry manœuvres. In order to execute this movement, the files of a battalion, or company, standing two deep, open from a given point, leaving just space enough for one man. Sometimes, (and indeed almost always, when the ground will permit,) extended order is taken by facing the battalion, or company, to the right, or left, and by marching to either flank, until the whole has gradually doubled its original front.— This mode is extremely simple, and consists in nothing more than open order of files from the right or left. The battalion or company, after it has obtained all its relative distances, and been halted, is fronted, and each rear rank man springs into the vacancy on the word of command—*Form rank entire*.

Entire, when applied to rank, means a straight line composed of half files.— See *RANK Entire*.

Extended ORDER may likewise be taken without facing to the right or left. This is effected by every file moving sideways to a given distance; say one pace, or twenty-two inches, (which extent of ground a man generally covers,) from the center file. The word of command in this case would be, battalion, or company, side step to the right and left, *march—halt*. The center file stands fast.

Loose ORDER, a certain extension of the files, in line, or column, in contradistinction to close order; which see.

Watering ORDER. In cavalry arrangements, the men are in their stable dresses; horse-cloths on the horses, and snaffle bridles; the horses are watered, walked and trotted for exercise.

ORDER Arms! a word of command, on which the soldier brings the butt of his musket to the ground, the barrel being held perpendicular in a line with the right side.

ORDERS, in a military sense, comprehend all that is lawfully commanded by superior officers. Orders are issued out every day, whether in camp, garrison, or on a march, by the commanding officer; which orders are afterwards

given to every officer in writing by their respective serjeants.

After-ORDERS, instructions which are given, subsequent to the regular communication of orders, through the brigade-majors, &c. All orders, whether general, garrison, or regimental, that are issued after the first distribution of military directions, are so called.

Beating ORDERS, an authority given to an individual, empowering him to raise men, by beat of drum, for any particular regiment, or for general service. It consists of a warrant which is originally signed by the king, and from which copies are taken and signed by the secretary at war, and countersigned by the under-secretary.

Brigade ORDERS, orders which are issued by the generals commanding, through the brigade-majors, to the several adjutants of regiments, for the government of corps that do duty together, or are brigaded.

Commander in Chief's ORDERS. Such orders as issue directly from the commander in chief's office for the government of the army at large, or for any specific purpose. These orders are sanctioned by the king, and are irrevocable elsewhere.

District ORDERS, orders which are issued by the general commanding a district.

Garrison ORDERS, such orders and instructions as are given by the governor, or commanding officer, of a town or fortified place.

General ORDERS, are such as are issued out by the general who commands, who gives them in writing to the adjutant-general, who first sends exact copies to the general officers of the day, and distributes them at his own quarters to all the brigade-majors, who daily go to head-quarters for that purpose; where they write down every thing that is dictated to them: thence they go and give the *orders*, at the place appointed for that purpose, to the different majors or adjutants of the regiments which compose that brigade, who first read them to their colonels and lieutenant-colonels, or majors, and then dictate them to the serjeants of companies. This is more frequently done by the serjeant-major. The different serjeants write them correctly down in their respective orderly-books, and bring them to all the

officers belonging to the troop or company.

Pass ORDERS, written directions to the sentries, &c. belonging to outposts, &c. to suffer the bearer to go through the camp, or garrison, unmolested.

Regimental ORDERS, such orders and instructions as grow out of general or garrison orders, or proceed immediately from the commanding officer of a regiment.

Sailing ORDERS, final instructions which are given to ships of war.

Standing ORDERS, certain general rules and instructions which are to be invariably followed, and are not subject to the temporary intervention of rank. Of this description are those orders which the colonel of a regiment may judge fit to have inserted in the orderly books, and which cannot be altered by the next in command, without the colonel's concurrence.

Station ORDERS, orders issued by the commanding officer of some particular station or military post, for its interior government.

Military ORDERS, companies of knights, instituted by kings and princes: either for defence of the faith, or to confer marks of honour on their military subjects. They are chiefly as follow:

ORDER of the Bear, a military order in Switzerland, erected by the Emperor Frederick II. in 1213, by way of acknowledgment for the service the Swiss had done him, and in favour of the Abbey of St. Gall. To the collar of the order hung a medallion, on which was represented a bear, raised on an eminence of earth.

ORDER of the Amaranth, instituted in the year 1645, by Christina queen of Sweden, in honour of a lady of the name of Amarantha, equally celebrated for beauty and virtue. It did not survive the founders of it. The ensign of the order was a jewel of gold, composed of two great A's, one erect, the other inverted, and interwoven together, enriched on both sides with diamonds, and set within a wreath of laurel leaves, banded about with white, wherein was this motto, *Dolce nella memoria*.

Argonauts of St. Nicolas was the name of a military order instituted by Charles III. king of Naples, in the year 1382, for the advancement of navigation, or, as some authors say, merely for preserv-

ing amity among the nobles. They wore a collar of shells, inclosed in a silver crescent, whence hung a ship with this device, *Non credo tempori*.

ORDER of Calatrava, a Spanish military order. It was instituted in 1158, by Don Sancho, of Toledo. The habit of these knights is a black garment, with a red cross upon the breast.

ORDER of Alcantara, a Spanish military order. It was established by Ferdinand II. king of Leon and Castile, in 1170. The badge of the order is a gold cross, enamelled green, and worn pendent to a broad ribbon on the breast.

ORDER of St. James, instituted by Ferdinand II. in 1175. These knights had the privilege of wearing their hats in the chapter, in the presence of their sovereign.

ORDER of St. Michael, (*Ordre de St. Michel*, Fr.) instituted at Amboise, in 1469, by Lewis XI. in the ninth year of his reign, in honour of the important services done to France by that archangel at the siege of Orleans, where he is supposed to have appeared at the head of the French troops, disputing the passage of a bridge, and to have repulsed the attack of the English, whose affairs ever afterwards declined in that kingdom. The order is a rich collar, with the image of that saint pendent thereto; with this inscription, *Immensi tremor oceani*.

ORDER of the Holy Ghost, instituted by Henry III. of France, in 1579. The number of knights is 100, besides the sovereign, who is always grand master.

ORDER of St. Louis, instituted by Louis XIV. in the year 1693. Until the revolution of France, this order remained entirely in the possession of military men, ever since its institution, and was of singular use in keeping up the spirit, and rewarding the services, of those who had distinguished themselves. The number of knights was unlimited, being given to every man of merit. The order was a golden cross, with eight points, which hung pendent to a broad crimson ribband. The motto *Bellicæ virtutis præmium*. It was worn by the exiled emigrants, and was occasionally bestowed by Louis XVIII. before his restoration.

ORDER of Mount Carmel. The time of its institution is uncertain; but it was revived by Henry IV. in 1607.

ORDER of St. Lazarus is of a very

early institution, but has been often neglected, and as often revived, till Louis XV. united the order of Mount Carmel and St. Lazarus in April, 1722.

ORDER of the knights of Malta. See MALTA.

ORDER of the knights of the Garter. See GARTER.

ORDER of the Bath. This order was instituted in England, at the coronation of king Henry IV. 1399, and made a statutable order by king George I. in 1725, to consist of the Sovereign, a Prince of the blood royal, and thirty-five Companions, making 38 stalls.

In consequence of our recent signal successes by sea and land, it was found expedient to increase this number by the appointment of *extra* or *supernumerary knights*; and at length H. R. H. the Prince Regent was pleased on the 2d January, 1815, to decree that the order should thenceforward consist of three classes, viz. 1st. *Knights Grand Crosses*, —2d. *Knights Commanders*, and 3d. *Companions*.

The number of the Knights Grand Crosses was limited to 72, (exclusive of the Sovereign and of the Princes of the blood royal, and Honorary Members,) and of these, 12 were to be for civil or diplomatic services. No officer can be made a Grand Cross who has not previously been a Knight Commander. The Knights Commanders are not to exceed 130, exclusive of Honorary Commanders. The Companions are not limited in number, and must all be nominated for military or naval services.

The 1st class, or Grand Crosses, wear a Star of silver rays, having in the center a cross of eight points, and thereon within the circle, motto and wreath of the order, three imperial crowns, and a broad crimson ribband from the right shoulder to the left side, and pendent therefrom the Badge of the Order, viz. a cross of eight points, enamelled argent, edged gold, having in each of the four angles, a Lion passant guardant crowned or, and in the center of the said cross, three crowns gold within the circle and motto of the order, surrounded by two branches of laurel issuing from an escrol azure, thereon inscribed, *Ich dien*.

The Civil Knights Grand Crosses wear the former insignia of the order.

The Commanders wear a similar ribband round the neck, and pendent there-

from, the Badge smaller in size, and on the breast a star in the form of a cross patte, in the center thereof three crowns within the circle and motto of the order, surrounded by two branches of laurel issuing as before described.

The Companions wear a Badge as

above described, but smaller, pendent from the button hole by a narrow red ribband.—Ribband of the Order *Red*. Motto *Tria juncta in Uno*.

N.B. No officer under the rank of major-general or rear-admiral can in future be nominated a knight commander.

INSIGNIA OF THE MOST HONOURABLE MILITARY ORDER OF THE BATH.

STAR OF A MILITARY KNIGHT GRAND CROSS.

BADGE OF THE ORDER.

STAR OF A MILITARY KNIGHT COMMANDER.

Royal Hanoverian Guelphic ORDER. This order was instituted 12th August, 1815, by H. R. H. the Prince Regent, to commemorate the fidelity and bravery of his Hanoverian subjects.—It consists of three classes, Knights Grand Crosses, Knights Commanders, and Knights.—Each class is divided into *military* and *civil* members.—The Star of the Grand Crosses is of silver rays, having in the center on a red field a horse courant, argent, within a light blue circle thereon the motto *Nec aspera terrent*, surrounded by a wreath.

The Military Grand Crosses have the wreath of *Laurel*, and over the rays two swords in saltire gold.

The Civil Grand Crosses have a wreath of *Oak*, but no swords.

The Badge is worn in the same manner as the Badge of the Garter, pendent from a light blue watered ribband, and is a cross of eight points of gold, having in the four angles a Lion passant, and enamelled in the center, on one side the horse within the circle, motto and wreath as above described, and on the reverse within the said circle, motto and wreath, the royal cipher and crown. The whole Badge is surmounted by the Royal Crown of Hanover.

The Commanders wear the same Badge pendent from a narrow light blue ribband round the neck, and on the breast a star of eight points having the same

center as that of the Grand Crosses; and the military Commanders, in addition, bear the swords in saltire.

The Knights wear the Badge pendent from a narrow ribband of the same colour, from the button hole.

ORDER of the Golden Fleece, instituted by Philip duke of Burgundy, surnamed the Good, in 1429. See FLEECE.

ORDER of the Annunciation, (*Ordre de l'Anonciade*, Fr.) instituted by Amadeo, Count of Savoy, surnamed the Green, in memory of Amadeo, the first earl, who had valorously defended the island of Rhodes against the Turks. The collar of the order is composed of golden roses, enamelled red and white, with lover's knots of the same, but not enamelled: between the knots are interlaced the letters, *F. E. R. T.* alluding to the defence of Rhodes by Amadeo, and signify *Fortitudo ejus Rhodum tenuit*: To the end of the middle rose of the collar is pendent the badge, which consists of three chains of gold, encircling an oval, and disposed in knots; on the oval is represented the Salutation, as related by St. Luke.

ORDER of the Knights Templars, instituted at Jerusalem about the year 1119. At first there were but nine of the order, and the two principal persons were Hugo de Paganis, and Jeoffroy of St. Omer's. The knights of this order, after having performed many great exploits

against the infidels, became rich and powerful over all Europe; when, on the 22d of May, 1311, the pope, Clement V. by his bull, pronounced the extinction of the order, and united their estates to the order of St. John of Jerusalem. They took the name of Templars, because their first habitation stood near the temple, dedicated to our Saviour, at Jerusalem. The first settling of this order in England (according to Dugdale) was in Holborn, in London; but their chief residence in the reign of King Henry II. was the Temple, in Fleet-street, which was erected by them, and the church (built after the form of the temple at Jerusalem) dedicated to God and our blessed Lady, by Heraclius, patriarch of Jerusalem, in the year 1185.

ORDER of the knights of St. Jago, instituted by king Ramico, of Spain, in commemoration of a victory obtained against the Moors, A. D. 1030. Their ensign is a red cross in form of a sword.

ORDER of the knights of the band, erected by Alphonso XI. king of Spain, in the year 1330. Their name proceeded from the knights wearing a red scarf, or lace of silk, the breadth of three inches, which hung on their left shoulder.

ORDER of the knights of the Redemption, erected in the kingdom of Arragon, by king James, who conquered the island of Majorca in the year 1212. Their garments are white, with a black cross thereon.

ORDER of the Teutonic knights, established towards the close of the 12th century, and thus called, as chiefly consisting of Germans, anciently called Teutons.

ORDER of the knights of St. Stephen, instituted in the year 1561, by Cosimo, duke of Florence. They wear a red cross with a border of gold.

ORDER of merit, instituted by Frederic III. king of Prussia, in 1740, as a reward to those officers whose behaviour deserved some marks of distinction. The ensign of this order is a cross of eight points, enamelled blue, and edged with gold, having in the center a cypher of the letters F. R. and in each angle an eagle displayed black, on the two upper points the regal crown of Prussia. This badge is worn by the knights pendant to a black ribband, edged with silver, round the neck: the motto, *Pour le mérite*.

ORDER of the white eagle, instituted in the year 1325, by Uladislaus V. revived by Augustus, elector of Saxony and king of Poland, in 1705, after having a long time lain in oblivion. The badge is a gold cross of eight points, charged on one side with an eagle white displayed, having over its head an imperial crown, and on the other the king's cipher, with this motto, *Pro fide, rege, lege*.

ORDER of St. Alexander Neuski, or the red ribband, which was instituted by Peter I. emperor of Russia; but the czarina Catharine I. conferred it in the year 1725. Lord Duncan received this order from the Emperor Paul.

ORDER of the stole, an order of knights instituted by the kings of Arragon.

ORDER of the golden stole, a Venetian military order, so called from a golden stole, which those knights wore over their shoulder, reaching to the knee, both before and behind, a palm and a half broad. None are raised to this order but patricians, or noble Venetians. It is uncertain when this order was instituted.

ORDER of Stanislaus, instituted by the king of Poland, in 1765. The badge is a gold cross enamelled red, with the image of St. Stanislaus in a medallion on the center of it. The star of the order is silver, and in the center is the cipher of the letters, S. A. R. *Stanislaus Augustus Rex*, encircled by the motto, *Premiando incitat*.

ORDER of Maria Theresa. This order was instituted in June, 1757, by the Empress Queen of Hungary. In 1765, an intermediate class, styled knights commanders, was added to the two classes that originally composed the order. See THERESA.

ORDER of the crescent, (*Ordre du croissant*, Fr.) This order was first instituted by Mahomet II. emperor of the Turks, who declared himself chief and head of it. It is given by the emperors to those only who have filled important places of trust, or who have distinguished themselves in battle. The insignia or marks consist of a gold crescent, with sinople or green enamel, encircled by precious stones or diamonds. The motto is *Donec totum impleat orbem*, Until it shall fill the whole universe. The motto which is attached to the order of Malta, exhibits a modest and ingenious contrast to this ostentatious sentence. The cross

is placed between the two horns of the crescent, with these words, *Ne totum impleat orbem*, Lest it should fill the whole universe. Admiral Lord Nelson, Lord Hutchinson, Lord Keith, &c. received this order from the Grand Signor, in consequence of their naval and military exploits in Egypt.—There was also an order of this description in the early periods of France. It was called *l'ordre militaire du croissant et de l'étoile de Sicile*, the military order of the crescent and star of Sicily. Two princes belonging to the House of Anjou, viz. Charles, brother to Louis, the ninth king of France, and René, duke of Anjou, count of Provence, and king of Sicily, each separately created an order of this description. The insignia or marks consisted of a gold chain, in which were interwoven stars and fleurs de luces, and from which was suspended a gold crescent, with this motto, *Donec totum impleat*, until it shall fill the whole.

ORDER of the iron crown, (*Ordre de la couronne de fer*, Fr.) This order of knighthood was instituted by the late French emperor Napoleon, on his coronation at Milan, as king of Italy. It consisted of five hundred knights, one hundred commanders, and sixty great officers. The honorary degrees were as follow: two hundred of the order of knighthood, and twenty-five places of commanders conferred upon an equal number of those French officers and soldiers, by whose courage and perseverance, in a succession of battles, the kingdom of Italy was said to have been established.

The motto was, *Dicu me l'au donné, gare à qui la touchera*, God has given it unto me; woe to him who shall touch it.

This crown, which belonged to the ancient kings of Lombardy, had been carefully preserved in a small town called Monza on the Lambro, ever since the dissolution of the old kingdom of Lombardy, and during the different revolutions which occurred in Italy. According to Busching, the ancient kings of Lombardy, and after them, the emperors of Germany, were usually crowned in this place. The iron crown was merely put over the head of the sovereign, as it was too small to be worn. The lower circle or hoop, inside, was iron, and was said to have been originally made out of one of the large nails taken from the cross,

on which Jesus Christ was crucified.—The rest is solid gold, ornamented with diamonds and precious stones. Theodelinde, one of the queens of Lombardy, built a church, dedicated to St. John, where this crown was deposited, together with her majesty's fan and hair-comb.

The republican armies of France uniformly spared this remnant of ancient royalty. To those readers who would wish to go more minutely into the history of this article, we recommend the perusal of the several works which treat of Lombardy. Among the different authors may be found the following: *Jornandes de Getarum sive Gothorum Origine*; *Paulus Warnefred, de Gestis Lanobardorum*; *Hugo Grotius, &c.*

ORDER of the genet, (*Ordre de la genette*, Fr.) instituted in 728, by Charles Martel, grandfather of Charlemagne, to commemorate a glorious victory which he gained at Tours over a numerous army of Saracens that had made an irruption into Spain. Genet is the name of a little animal, with fur superior to ermine, with which the Saracens lined their cloaks. The order is now out of date.

ORDER of the holy phial, (*Ordre de la sainte ampouille*, Fr.) instituted in 590, in consequence of a miracle which took place at the baptism of Clovis, the first Christian king.

ORDER of St. Matilda, instituted by Christian VII. of Denmark, in honour of the Princess Caroline Matilda, (sister to his Majesty George III. of Great Britain,) whom he married in 1766.—The ill-fated Count Struensee was one of the first persons invested with this order! The circumstance of his subsequent catastrophe is a melancholy instance of the difficulty of ascertaining what gradations of courtly promotion ought to be most rejoiced in.

Architectural ORDERS are rules for the proportion that is to be observed in the erecting of pillars or columns, and for the form of certain parts belonging to them. And thence buildings are said to be of several *Orders*, when the proportion between the thickness of the columns and their height, and all things requisite thereto, are different. The principal *Orders* are five: the *Doric*, *Ionic*, *Corinthian*, *Tuscan*, and *Composite*.

Vitruvius, Barbaro, and Scamozzi

have given various definitions of orders in architecture; but they are too obscure to be inserted here.

The Doric ORDER (*Ordre Dorique*, Fr.) has its columns eight diameters in height and should not have any ornament, either in its capital or base: the *astragal* and *listel* below the capital constituting part of the shank or body of the pillar.

The Ionic ORDER, (*Ordre Ionique*, Fr.) at its first invention, had its columns only eight models in height; but afterwards the ancients augmented the height of its pillars in order to make it more beautiful, and also added to it a base that was not used before; so that then, with its capital and base, it contained nine diameters of its thickness taken below: the pedestal of it is two diameters and about two thirds in height, and the *capital* is chiefly composed of *volutas* or scrolls, and they are commonly channelled with 24 flutes.

Michael Angelo, contrary to all other authors, gives the *Ionic* a single row of leaves at the bottom of the capital.

The Corinthian ORDER (*Ordre Corinthien*, Fr.) is the finest and richest of all. The length of its columns, with its bases and capitals, is usually about nine and a half or ten diameters, and the capitals are adorned with two rows of leaves, and eight *volutas* or scrolls, which support the *abacus*. This order was invented by *Calimachus* of Corinth.

The Tuscan ORDER (*Ordre Toscan*, Fr.) is the most simple and most destitute of ornaments, so that it is seldom made use of except in vaults, in some rustic edifices, vast piles of building, as amphitheatres, &c.

The Composite ORDER, or *Roman ORDER*, (*Ordre Romain*, Fr.) is one, the capitals of whose pillars are composed of two rows of leaves, like those of the *Corinthian Order*, and of the *volutas* or scrolls of the *Ionic*. These columns are commonly ten diameters in height, and wholly like the *Corinthian* in all their dimensions and numbers, except the capitals, which have only four *volutas* that take up the whole space which is filled both by the *volutas* and stems of *stalks* of the *Corinthian Order*.—To these some add the *Attic* and *Gothic*.

The Attic ORDER is a small order of pilasters of the shortest proportion, hav-

ing a cornice raised after the manner of an architrave for its entablature; as is the case at the castle of Versailles over the *Ionic*, on the side of the garden.

Rustic ORDER, (*Ordre rustique*, Fr.) is one adorned with rustic quoins, bossage, &c.

French ORDER, an order that is of new invention, the capitals of which consist of attributes agreeing to the people, as *fleurs de lis*, cocks' heads, &c. The proportions of this order are *Corinthian*. Such is that of *M. Le Brun*, in the grand gallery of Versailles, and that of *M. Le Clerc*.

M. Le Clerc defines an order to be a column charged with an entablature, and supported on a pedestal.

Gothic ORDER, (*Ordre Gothique*, Fr.) This order deviates from the ornaments and proportions of the antique, the columns of which are either too massive in manner of pillars, or too slender like poles; its capitals out of all measure, and adorned with leaves of wild *acanthus*, *thistles*, &c.

Caryatic ORDER (*Ordre Cariatique*, Fr.) is that whose entablature is supported with figures of women instead of columns.

Persian ORDER (*Ordre de Perse*, Fr.) is that which has figures of Persian slaves to support the entablature, instead of columns.

ORDERLY officer. See **OFFICER of the day.**

ORDERLY serjeant, } are appointed to
ORDERLY men, } attend general or other officers that are entitled to have them.

ORDERLIES, non-commissioned officers and private men who do orderly duty.

Orderly serjeants when they go for orders are sashed.

Orderly corporals and orderly men wear their side arms, and carry a small osier switch or cane in their hands.

In the dragoons, orderly men, on foot, have their sword-belts and bayonets; and on horseback, are dressed the same, only with gloves and boots, and (spurs, of course,) with the sword-belt and sword. They likewise have their pistols. When an orderly dragoon or foot soldier is sent from one quarter to another, the time of his setting out must be specified on the back of the letter which he carries; the dragoon must take care to bring his horse

in cool, unless he has been sent on any pressing occasion.

ORDERLIES *in general*. It is the duty of the serjeant-majors to see that the orderlies are properly dressed and accoutred, before they are inspected by the adjutant, who parades them every morning in front of the main guard, &c. When private soldiers are chosen for orderlies in mixed duty, the credit of the corps from which they are taken, requires that they should be the best set up, and the best behaved men belonging to it. All orderlies, whether horse or foot, must return to quarters perfectly sober.

ORDERLY *non-commissioned officers*, are those who are orderly, or on duty for the week; who, on hearing the drum beat for orders, are to repair to the place appointed to receive them, and to take down in writing, in the orderly book, what is dictated by the adjutant or serjeant-major; they are then immediately to shew those orders to the officers of the company, and afterwards warn the men for duty.

ORDERLY book. Every company has such a book in which the serjeants write down both general and regimental orders, for the specific information of the officers and men. This book is provided and paid for by the captains of companies.

ORDERLY drum. The drummer that beats orders, and gives notice of the hour for messing, &c. is so called.

ORDINAIRE, *Fr.* The soldiers messing together is so called among the French. Hence our term Ordinary, when several persons dine at the same table, and each pays his bill or quota.

ORDINAIRE du soldat, *Fr.* the two daily meals which soldiers are obliged to take at established hours, and at messes.

ORDINAIRE des guerres, *Fr.* the fund established for the payment of troops.

Trésorier de l'ORDINAIRE, *Fr.* the paymaster.

ORDINAIRE, *Fr.* courier, post, mail. *Il y a trois ordinaires de dus*, there are three mails due.

Gentilhomme ORDINAIRE de chez le Roi, *Fr.* a gentleman of the king's bed-chamber in ordinary.

ORDINARY, what is usually done.

ORDINARY guards, the usual com-

plement of men doing duty at certain prescribed spots. See **GUARDS**.

ORDNANCE, (*Ordonnance*, *Fr.*) a name given to all that concerns artillery, or engineering; thus, the commander in chief was originally called master-general of the *ordnance*; and the next officer, lieutenant-general of the *ordnance*, instead of *artillery*. This post is of much greater antiquity in France than with us; for history informs us, that the first masters in chief of all the artillery were appointed in 1477, under Louis the XIth; those appointed before that epoch were—

Guillaume de Dourdan, master of the ordnance in the Louvre, under Philip IV. who was appointed in 1291.

Guillaume Châtelain, master of the ordnance in Montargis, in 1291.

Guillebert, master of the ordnance in the Louvre, in 1294.

Étienne Amigard, in 1297; Jean Amigard, in 1298, at the Louvre; Jean Gautier, in 1299; Etienne de la Chambre, in 1295; Pierre la Vaché, in 1296; Benoit Fabry, in 1307; Adam, in 1314; Lambert Amigard, in 1322; Jean du Lion, in 1394, who was, in 1358, called sovereign master of the artillery under king John, surnamed the Good.

In 1397, John de Soisy was appointed master-general of artillery; and in 1599, Maximilian de Bethune, marquis de Rosny, duke of Sully, and marshal of France, was nominated first grand-master and captain general of artillery. In 1755, the functions of the grand-master of the artillery were united to those of the war-minister, and fell under the immediate authority of the king. The war-minister undertook the civil department of the ordnance, and M. De Valiere was the last general director.

Board of ORDNANCE is of a very early, but uncertain date; however, in the year 1548, we find Sir Philip Hoby styled master of the ordnance; and in 1588, Ambrose Dudley, earl of Warwick, was master of the ordnance. In 1683, the care of the board of ordnance was committed to five principal officers, besides the master-general, then George lord Dartmouth, viz. a lieutenant-general, surveyor-general, clerk of the ordnance, storekeeper, and a clerk of deliveries. At present the board of ordnance consists of the same. This board regulates and orders every thing relating

to the artillery and garrisons. Monies are paid from the Ordnance by bill and debenture, and the payment is ordered three months after the commencement of the quarter in which the bill was issued.

Master-General of the ORDNANCE is an officer of the greatest trust, honour, and dignity: his employment is one of the most laborious in war, and requires the greatest ability, application and experience. This officer has the sole command of the royal regiment of artillery, assisted by a lieutenant-general. By the great power invested in the master-general by the king, he alone constitutes a board. The master-general is also a component part of the administration, and belongs to the privy council, but is removable at the pleasure of the king.

Honours due to the master-general of the ORDNANCE. The same respect shall be paid to him from the troops, as is paid to generals of horse and foot. He is, on all occasions, to have the march beat to him; and to be saluted by all officers, the colours excepted.

Lieutenant-general of the ORDNANCE is an office of great trust, honour, and dignity; is the next in command under the master-general, and always an officer of the greatest abilities. This office is not of such early date as that of the master-general; for in 1597, it was first established.

Surveyor general of the ORDNANCE, (Intendant d'Artillerie, Fr.) a situation of great trust and much labour, requiring the soundest judgment, the keenest calculation, and the most unimpeachable integrity. This situation, like that of the master-general, was formerly given to persons in civil capacities; but it is now generally filled by a military man. See SURVEYOR.

Clerk of the ORDNANCE, an officer whose business it is to record the names of all officers, and all orders and instructions issued for the government of the department.

Civil Secretary to the ORDNANCE. See OFFICE OF ORDNANCE.

ORDONNANCE, Fr. ordinance; order; prescription. Our word *Ordnance* is taken from this, and signifies generally the whole department of the royal artillery. It also signifies cannon; great guns. *Ordinance* was formerly

used to express the same, but the word is now obsolete.

ORDONNANCE, Fr. a warrant.—This word is variously used among the French, viz.

ORDONNANCE, Fr. the disposition, or arrangement, of troops for battle.

Compagnies d'ORDONNANCE, Fr. particular troops, or companies which were independent of any regiment, and which existed under the old French monarchy. The *gendarmes du roi* formed the first troop or company of this description. The *chevaux-légers de la garde*, or the light horse of the body guard, were also of the same class.

Homme d'ORDONNANCE, Fr. an orderly man.

ORDONNANCE d'une armée pour la disposer au combat, Fr. See ORDER OF BATTLE.

Habit d'ORDONNANCE, Fr. the regimental dress, or uniform of an officer, soldier, &c.

ORDONNANCE, Fr. (in architecture,) the giving to all the parts of a building the just quantity and dimensions, which they ought to have according to the model. This term is also applicable to the shades, masses, &c. in painting.

ORDONNANCE, Fr. size, bulk, or bore; as, *engin de telle Ordonnance*, an engine or piece of ordnance of such a size, or bore.

Épée d'ORDONNANCE, Fr. regulation sword.

ORDONNANCES, Fr. orderly men, whether on foot, or horseback.

ORDONNANCES, Fr. See MILITARY REGULATIONS.

ORDONNÉE, (in geometry,) a term used by the French, to express straight lines which are drawn parallel to the tangent of a curve, and which are terminated on one side by the axis, or diameter of this curve, which corresponds with the tangent, and on the other by the curve itself. *Ordonnée* also signifies any perpendicular raised upon the diameter of a semi-circle, and terminated by the circumference.

ORDONNER, Fr. This word not only signifies to ordain, direct, &c. but it also means to range troops in order of battle. Hence *Ordonnance d'une armée*.

ORDRE, Fr. parole and countersign so called.

Aller à l'ORDRE, Fr. to go for the parole, or countersign.

Recevoir l'ORDRE, *Fr.* to receive, or get the parole, or countersign.

ORDRE que l'on donne à la tranchée, *Fr.* parole and countersign together with specific orders, which are given out every night in the trenches.

Donner l'ORDRE, *Fr.* to give out the parole, or countersign.

Prendre l'ORDRE, *Fr.* to receive the parole, or countersign.

Envoyer l'ORDRE, *Fr.* to send or transmit the parole, or countersign.

Porter l'ORDRE, *Fr.* to carry the parole, or countersign.

Surprendre l'ORDRE, *Fr.* to surprize or way-lay the person who is entrusted with the parole or countersign.

Livrer l'ORDRE, *Fr.* to give the parole, or countersign.

ORDRE de bataille, *Fr.* See ORDER OF BATTLE.

ORDRE mince, *Fr.* a disposition, or order of battle, in which troops make an extended line with little depth.

ORDRE profond, *Fr.* a disposition, or order of battle in which troops take up a short space in extent, and occupy great depth; as in column, &c.

ORDRE oblique, *Fr.* a disposition in which troops are so ranged that they can give or receive battle from one of the wings, by refusing, or throwing back, the other. This is most readily obtained by a movement in echelon.

ORDRE des lignes courbes, *Fr.* (in geometry,) the distribution, or arrangement of curved lines into appropriate classes, according to the number of points, into which they may be cut by a straight line. Thus every straight line is a *line of the first order*. The circle and the conic sections are the *second order*. The cubical parabolas, the cissoide of the ancients, &c. are of the *third order*.

ORDRE de chevalerie, *Fr.* order of knighthood.

ORDRES Militaires, *Fr.* military orders.

ORDRES de Général, *Fr.* general orders.

Nouveaux ORDRES, *Fr.* fresh orders.

ORDRE de mouvement, *Fr.* marching orders.

ORDURE, *Fr.* filth; dirt. The French say figuratively, *C'est l'ordure de l'armée Française*, they are the very off-scourings of the French army.

ORÉE, *Fr.* the side of a river, the skirt, edge of any place.

OREILLE, *Fr.* ear.

L'OREILLE d'un soulier, *Fr.* the latchet, or strap of a shoe.

Mouth ORGAN, (*orgue*, *Fr.*) an instrument corresponding in shape and form with Pan's pipes, and consisting of several pipes which are played upon with the mouth. This instrument has been introduced into regimental bands.

ORGANICAL description of curves is the method of describing them on a plane, by the regular motion of a point.

ORGANIZATION of troops, the act of putting troops into such uniform state of discipline, as may fit them to co-operate on any service.

ORGUES, (*orgues*, *Fr.*) thick long pieces of wood, pointed and shod with iron, clear one of another, hanging perpendicularly each by a rope, over the gate of a strong place, to be dropped in case of an emergency.

Their disposition is such, that they stop the passage of the gate, and are preferable to *herse* or *portcullises*; because these may be either broken by a petard, or stopped, by different contrivances, in their falling down. But a petard is useless against *orgues*; if it break one or two of the pieces, others immediately fall down, and fill up the vacancy.

ORGUE, (*un orgue*, *Fr.*) a term used to express that arrangement, or disposition of a certain quantity of musket barrels in a row, which, by means of a priming train of gunpowder, may be subjected to one general explosion.— This machine has been found extremely serviceable in the defence of a low flank, a *tenaille*, or to prevent an enemy from crossing the ditch of a fortified place.

ORGUEIL, *Fr.* in mechanics, the appui, or rest, round which a lever turns.

ORGUEIL, *Fr.* a roller, or a round truncheon laid under a great stone, or piece of timber, for the more easy removing thereof.

ORIENTÉ, *Fr.* the East.

ORIENTÉ, *Fr.* that faces the East.

Carte bien ORIENTÉE, *Fr.* a map correctly drawn.

ORIENTER, *Fr.* in fortification, to mark with the compass, either on paper, or on the ground, the relative situation of any place, or map, with regard to the four cardinal points of the globe.

SORIENTER, *Fr.* to examine the situation of any particular spot, in order

to draw a plan of the same. *Figuratively*, to consider maturely one's own position.

ORIFLAMME, *Fr.* the ancient banner belonging to the abbey of St. Denis, which the Counts du Vexin, who possessed the perpetual advowson of the abbey, always bore in the different wars, or contests, that formerly prevailed between the abbot and some neighbouring lords. When the Vexin country fell into the hands of the French kings, they made the oriflamme the principal banner of their armies, in honour of St. Denis; whom they chose for the patron and tutelary saint of France, as St. George is of England.

ORILLON. See FORTIFICATION.

ORKNEY-ISLANDS, (*Les Orcades*, *Fr.*) a cluster of small islands in the north of Scotland.

ORLE, *ou ourlet*, *Fr.* (in architecture,) a fillet, or hemming under the round moulding of a capital. When it is above or below the shaft of a pillar, it is called *ceinture*.

ORLO, (in architecture,) the plinth or square of a column, or under the base of its pedestal.

ORLOP-Deck, that part of a transport or man of war, in which the bedding of soldiers is hung.

ORME, *Fr.* elm. This wood was considered of so much consequence by the old French government, that a specific order was made out in 1716, enjoining all persons, letting or holding land in French Flanders, Artois, and Hainault, to plant elm trees, in order that there might be a constant supply in future of carriages and wainage for the artillery.

ORME blanc, *Fr.* the white elm, oak elm, horn beam, hard beam tree.

ORME champêtre, *Fr.* the ordinary elm.

ORME de montagne, *Fr.* the mountain elm, or the great broad leaved elm. It is also called *Orme sauvage*, or wild elm.

Un avocat-dessous l'ORME, *Fr.* a figurative phrase among the French, signifying an obscure lawyer; a prattling attorney, or paltry pettyfogger; one who, in this country, acts in several capacities as scrivener, conveyancer, money-lender, and pretends to dabble in politics, by writing bad pamphlets, in order to delude the unwary, and to get into notice without one honest principle to steer

by. Officers cannot be too much guarded against a reptile of this sort; who is always an usurer of the worst description, and, where he can, a mean and pitiful extortioner.

ORNAMENTS (*military*), those parts of the dress of a soldier which are more for appearance or distinction than for absolute use; as gorgets, plates for cross belts, pouch ornaments, &c.

ORNAMENTS, (in architecture,) are the *architraves*, *frizes*, and *cornices* of the several orders; also leaves, channellings, &c.

ORTEIL. See *Berm* in FORTIFICATION.

ORTHOOGON, any rectangular figure.

ORTHOGRAPHY, (*orthographie*, *Fr.*) the art of drawing, or sketching out a work according to its breadth, thickness, elevation and depth.

ORTHOGRAPHY, (in architecture,) is the elevation of a building, and is either *external*, or *internal*.

OSCILLATION, (in mechanics,) is the swing, or reciprocal ascent or descent of a pendulum.

OSCILLATION, in military movements, a wavering of the line, an unsteady direction of a battalion, &c.

OSIER, a young willow twig, with which hurdles are made.

OSSELET, *Fr.* a splent, a little hard substance arising on the inside of a horse's knee, among the small bones.

OSTAGE, *Fr.* See HOSTAGE.

OSTRACISM, (*ostracisme*, *Fr.*) a banishment which the Athenians inflicted on such persons whose over great power was suspected by the people, fearing that they should degenerate into tyrants, so called of *οστρεον*, an oyster; because they wrote the name of him they intended to banish upon shells. In this manner the virtuous Aristides was driven out of Athens.

OTTOMAN, a name generally given to the Turks, and to the Turkish empire, from Othman, who was one of their most celebrated emperors.

OVAL, (*ove*, *Fr.*) a member so called in architecture, from its figure resembling an egg. See *OvoLO*.

OVAL, (*ovale*, *Fr.*) in geometry, a sort of ellipsis, being round and rather long. It resembles an egg, from which the name is derived.

OVATION, the offering of a sheep in sacrifice, instead of a bull, for some victory obtained. It was an inferior

sort of triumph allowed by the Romans to the generals of their armies for lesser victories, as over slaves, &c. or when the war had not been declared pursuant to military usage. According to Kennett, in his *Roman Antiquities*, page 224, the word ovation is said to have derived its name from shouting *Evion!* to Bacchus; but the true original is *ovis*. The show generally began at the Albanian mountain, whence the general, with his retinue, made his entry into the city; he went on foot with many flutes, or pipes, sounding in concert as he passed along, wearing a garment of myrtle as a token of peace, with an aspect which excited love and respect rather than fear.

Gellius has observed, that this honour was conferred on the victor, when either the war had not been proclaimed in due method, or not undertaken against a lawful enemy, and on a just account; or when the enemy was but mean and inconsiderable. But Plutarch has delivered his judgment in a different manner: he believes, that, heretofore, the difference betwixt the *ovation* and the *triumph* was not taken from the greatness of the achievements, but from the manner of performing them; for they who, having fought a set battle, and slain a great number of the enemy, returned victors, led that martial, and, as it were, cruel procession of the triumph; but to those commanders who, without force, by benevolence and civil behaviour, had done the business, without shedding human blood, custom gave the honour of this peaceable ovation. For a pipe is the ensign, or badge of peace; and myrtle, the tree of Venus, who, beyond all other deities, has an extreme aversion to violence and war. Vide *Plut. in Marcell.*

OVE, *Œuf, quart de rond, ou échine*, Fr. in civil architecture, a round moulding, the profile of which is commonly one quarter of a circle.

To OVERCOME, to subdue; to conquer; to vanquish. It also signifies, according to Shakspeare, to invade suddenly; but this term is not in use.

To OVERDRESS, in a military sense, to load an officer, or soldier, with superfluous and tawdry apparel, at the expense of comfort and real economy.

To OVERDRIVE, to drive too hard, or beyond strength. Too much attention cannot be given to this object, as far as it regards the conveyance and draught of heavy ordnance.

OVERFLOW. See **INUNDATION**.

To OVERLAP, to overspread any preceding object. In marching by echelon, for the purpose of forming upon any given point, but particularly in wheeling from column into line, troops may lose their relative distances by not taking ground enough; when this occurs, the rear division, company, or section, unavoidably crowds upon its preceding one, and it is then said to overlap. When this happens on service, the troops, so shut out, must remain as serretiles, or reserve, to fill up the intervals that will necessarily present themselves in action. But whether so or not, the line must, on no account, be deranged by moving it to right or left.

OVERLANDRES, *Fr.* small barges that ply upon the Rhine and the Meuse.

To OVER-RUN, in a military sense, to ravage, to lay waste. A country which is harassed by incursions is said to be over-run.

OVERSEER, an officer in the ordnance department, who superintends the artificers in the construction of works, &c.

Serjeant **OVERSEER**, a non-commissioned officer belonging to the royal staff corps, whose duty is to superintend, as in the ordnance department, any particular work, or subordinate branch of service.

OVERSEER, an officer who has the care of the parochial provision of the poor. The overseers of the poor of every parish or place, are directed by Act of Parliament, to certify and return to the justices of the peace, at the next Michaelmas quarter session, the several quotas that every parish or division within a city, town, or place, pays to the land tax for that year. From these several quotas, a fund is annually established to defray part of the expenses for raising the militia.

OVERSLAGH, as a military phrase, which is derived from the Dutch, to skip over, will be best explained by the following table.

Table of Explanation.

Regiments.	No. of Capts.	Heads of each Column.							
		1	2	3	4	5	6	7	8
Royal	8	1	5	8	12	15	19	23	26
Queen's Royal	8	2	6	9	13	16	20	24	27
Old Buffs	8	3		10	14	17	21	25	28
King's Own	3	4	7	11		18	22		29
Total -	32								

N.B. The three blanks shew where the overslags take place.

OVERT-act, (in the sense of the law,) an open aid, an advance or step made towards compassing an enterprize; an act capable of being manifested or proved; and is distinguished from an intentional act. Thus writing to, or talking with, officers or soldiers, for the manifest purpose of indisposing them against the king and the government of the country, and plotting some direct measures of insurrection, constitutes an overt-act, and becomes high treason under the Seduction Bill.

OVERTHROW, total defeat, discomfiture, rout.

OUEST, *ou occident*, Fr. the West, one of the four cardinal points of the world.

OVOLO, (in architecture,) so called from its likeness to an egg, usually placed for ornaments in the mouldings of cornices, and in a pillar next the *abacus*, or the uppermost member or capital of a column, which serves as a sort of crowning both to the capital and column, though some erroneously make it to be the capital itself.

OURAGAN, *Fr.* a violent tempest.

OURDAGE, *Fr.* (in hydraulic architecture) pile-work suddenly constructed with a talus in front. It is used to support piles, &c. and to afford them the necessary slope when they are to be driven down for the purpose of making quays and wooden jetties.

To **OUTBAR**, to shut out by fortification.

To **OUTBRAVE**, to silence, dash, or outdo any person by vaunting, &c.

OUTCRY, a noise, a tumultuous

sound. It is also used to express general disapprobation; as an outcry against ministers, &c.

OUT-FIT, the necessaries, uniform, &c. which an officer provides when he is appointed to any commission.

OUT-GUARD. See **OUT-POSTS**.

OUTILS, *Fr.* tools of every description that are used by the artificers and workmen belonging to the artillery, &c.

OUTILS à mineur, *Fr.* miners' tools.

OUTILS à pionnier, *Fr.* pioneers' tools.

OUTLINE, the line by which any figure is defined; also a rough sketch of any thing.

To **OUTNUMBER**, to bring more effective, or fighting men into the field than your rival.

OUTPART, at a distance from the main body. See **OUT-POSTS**.

OUT-POSTS, a body of men posted beyond the grand guard, called outposts, as being without the rounds or limits of the camp. See **POSTS**.

OUTRANCE, *à outrance*, *Fr.* to the utmost, to the last extremity. Hence *combat à outrance*, a contest, or fight, which is maintained to the utmost point of exertion. The French still say, *Se battre à outrance*, to fight to the last extremity.

D'OUTRE en outre, *Fr.* through and through.

OUTRÉ, *Fr.* exhausted, spent, overdone.

Cheval outré, *Fr.* a horse that is spent or knocked up.

OUTSIDE, in fencing, that part which is to the right of the line of defence.

OUTSIDE GUARD, a guard used with the broad sword and sabre, to defend the outside of the position. See **BROADSWORD**.

OUTWALL. See **REVETEMENT**.

OUTWARD FACE! a word of command for troops to face to the right and left from their center.

To **OUTWING**, to extend the flanks of an army, or line, in action, so as to gain an advantageous position against the right, or left, wing of an enemy. This manœuvre, or evolution, is effected by the *movement on an oblique line*. See **MOVEMENT**.

OUT-WORKS, in fortification, are works of several kinds, which cover the body of the place, as ravelins, half-moons, tenailles, horn-works, crown-

works, counter-guards, envelopes, swallow tails, lunettes, covert-ways, &c.

These outworks not only cover the place, but likewise keep an enemy at a distance, and hinder his gaining any advantage of hollow or rising grounds; as such cavities and eminences may serve for lodgments to the besiegers, facilitate the carrying on approaches, and enable them to raise their batteries against the town. When out-works are placed one before another, you will find a ravelin before the curtain, a horn-work before the ravelin, and a small ravelin before the curtain of the horn-work; those works which are nearest to the body of the place must be the highest, though lower than the body of the place, that they may gradually command those without them, and oblige the enemy to dislodge, if in possession of them.

OUVERT, *Fr.* open.

Pays OUVERT, Fr. A country is so called when there are neither rivers, mountains, nor forts, &c. to defend it.

Ville OUVERTE, Fr. a town which has no gates or fortifications, or which has had them demolished.

Force OUVERTE, Fr. main strength, or open arms.

Guerre OUVERTE, Fr. open war.

OUVERTURE, *Fr.* an opening in a wall, which is made for persons to go through, or to give light; also a flaw occasioned by bad workmanship, or decay. It likewise signifies the first digging for a foundation, trench, &c.

OUVERTURE *des portes, Fr.* the opening of the gates in a fortified town or place, according to specific military rules. This method, in all regular governments, is too well known, to require any particular explanation.

OUVERTURE *et fermeture des portes chez les Turcs, Fr.* There are certain laws and regulations among the Turks, by which the janizaries are entrusted with the keys belonging to the gates of every fortified town, or place, in which they do garrison duty. The gates are always opened at day-break by two or four janizaries. There is a capigy or porter stationed at each gate. Whenever he opens the gates, he repeats, in an audible tone of voice, certain words in the praise of God and the sultan, after which he returns the key or keys to the janizaries, who carry them to the governor, or commandant, of the place.—

The closing of the gates is done with the same solemnity.

OUVERTURE *de la tranchée, Fr.* the opening of the trench, or trenches.

OUVRAGE, *Fr.* This word is applicable, as *work* is with us, to all that is done in the construction of houses, &c. as mason's work, carpenter's work, joiner's work, &c.

Gros OUVRAGES, *Fr.* (in masonry) the foundation and partition-walls, &c. together with the arches, &c.

Légers et menus OUVRAGES, *Fr.* (in masonry) all sort of plaster-work, chimney-pieces, ceilings, &c.

OUVRAGES *de sujétion, Fr.* works of a particular form or elevation, and more or less expensive according to the materials used, and the difficulty of execution.

OUVRAGE *à corne, Fr.* hornwork.— See FORTIFICATION.

OUVRAGE *à couronne, Fr.* crowned work. See FORTIFICATION.

OUVRAGES *avancés, détachés, pièces détachées, Fr.* See DEHORS.

OUVRAGES *de campagne, Fr.* field-works.

OUVRAGES *détachés et de circonstances, Fr.* outworks which are suddenly erected by way of parapets, &c. over practicable breaches, and which are continued inwards when the garrison of a besieged place is resolved to hold out.

OUVRAGES *dégradés, Fr.* works belonging to the besiegers, or to the besieged, which have suffered, or been demolished, by the artillery.

OUVRIR, *Fr.* to open.

OUVRIR *les rangs, Fr.* to take open order.

En arrière OUVRER vos rangs! Fr. rear ranks take open order.

Saligner à rangs OUVERTS, Fr. to aligne, or dress in line, at open order.

A jour OUVRANT, Fr. at break of day.

A portes OUVRANTES, Fr. at the opening of the gates.

OUVRIERS, *Fr.* all sorts of artificers and workmen employed in fortification, &c.

OWLERS, persons who convey wool, our staple commodity, to the sea-side, in order to export it. This is a capital offence, particularly if they neglect to surrender, after proclamation has been made for that purpose. These men are liable, at all times, to be taken up by

the parties of light dragoons who watch the coast.

OWRI! OWRI! a war-cry among the Russians, signifying Kill! kill!

OXFORD BLUES. See HORSE GUARDS.

OXYCRAT, *Fr.* a certain portion of vinegar to five or six times its quantity of water. This mixture is frequently used on service, and in hot weather, to allay the burning heat of any inflamed part. It is likewise employed to cool cannon, during an engagement, in very hot firing.

OXYGENE, the chemical base of vital air, with which nitre is found to abound, and to which gunpowder owes its rapid and perfect combustion.

King's or Queen's OWN, a term which has been attached to some particular regiments ever since the Revolution in 1688. Thus the Fourth, which landed with William III. is always called the Fourth or King's Own, and the Second Regiment of Foot, the Queen's Own.

P.

PAAT, *Ind.* a promissory note.

PACE, a term used to signify the relative distance in the formation of a battalion at close or open order. See REGULATIONS.

To PACE, as a horse does, (*aller au pas, Fr.*) There are four kinds of paces in the manège, the walk, trot, gallop, and amble, or canter. The last, more particularly, is called a pace, or easy motion, wherein the horse raises the two feet of the same side together.

PACHA. The captain pacha, among the Turks, is the chief admiral and superintendant general of the marine.—He generally commands in person. The sailors and soldiers of the military marine were formerly called *Lavans* or *Lavantis*; the soldiers are now called *Galiondjis*. The sailors are Turks from the maritime towns, or Greeks from the Archipelago: they are in constant pay. The soldiers, or *Galiondjis*, are all Mussulmans, and only receive pay when they are in actual service. We recommend to our military readers an important work, from which they will derive considerable information respecting the Turks, entitled, *Travels in the Ottoman Empire, Egypt, and Persia*, by Citizen Olivier, member of the French National Institute.

PACHOLECK. See ULAN.

PACK, necessaries which are carried by a foot-soldier. The dragoons call it *kitt*. The French say *havresac*.

PACKET-BOATS, small vessels that

sail from the different sea-ports in England, and carry passengers, mails, &c. to and from our foreign possessions; and keep up a regular intercourse with foreign powers that are at peace with Great Britain.

PADDY, *Ind.* rice in the husk, whether dry or green. Also a familiar term or nick-name, which is given to a native of Ireland; as John Bull is applied to an Englishman, and Sawney to a Scotchman.

PADSHAH, *Ind.* a king.

PAGEANT, in ancient military history, a triumphal car, chariot, arch, or other like pompous decoration, variously adorned with colours, flags, &c. carried about in public shows, processions, &c.

PAGES, (*mousses, ou garçons, Fr.*) Young lads of the description of English cabin boys, who learn navigation, and do the menial offices, on board a French ship.

PAGOD, *Ind.* a general name given by the Portugueze to the temples in the east. It also denotes a coin.

PAGODA, *Ind.* the place of worship among the Hindoos. It is likewise an Indian coin equal to 20 shillings English. The English and Dutch coin pagodas. There are also silver pagodas struck at Marsingua, &c. with the figure of some monstrous idol.

PAILS, made of wood, with iron hoops and handles, holding generally four gallons, and serving in the field to fetch water for the use of artillery works, &c.

PAILLASSES, *Fr.* straw beds, commonly called *palasses*. These are furnished by the barrack department for the accommodation of British soldiers in barracks.

PAILLASSON, *Fr.* a layer of straw quilted between two pieces of canvass, to keep off the sun, or noise from a chamber; also a rug, or mat to wipe the feet on.

PAILLE, *Fr.* straw.

PAILLE de couchage, *Fr.* long straw such as is used in *paillasses*, and is given out for the litter of horses, and the bedding of soldiers.

Les soldats vont à la PAILLE, *Fr.* the soldiers are going to the forage yard or dépôt. This term is likewise used to signify the indulgence which is occasionally granted to soldiers for exercise or necessary evacuations. Thus when a battalion has gone through its manual, &c. the commanding officer gives the word *A la paille!* We use the term *Pile arms!*

Rompre la PAILLE avec quelqu'un, *Fr.* a figurative term, signifying to quarrel or fall out with any body, in an open and unreserved manner.

PAILLE, *Fr.* likewise signifies any flaw in metals. *Cette lame est fine, mais il y en a quelques pailles*; this blade is finely tempered, but there are some flaws in it. *La lame de son épée se cassa à l'endroit où il y avait une paille*, the blade of his sword broke where there was a flaw.

PAILLER, *Fr.* (*Palearius*), an ancient body of French militia. The soldiers belonging to it were probably so called, either from the circumstance of their wearing straw in their helmets, in order to know one another in action, or because they were accustomed to set fire to their enemy's habitations, &c. with bundles of straw, which they always carried with them for that purpose. The inquisitive may be more fully satisfied on this subject by referring to *Ducange's Glossary*.

PAIN de munition, *Fr.* ammunition bread. This means, literally, bread that is furnished by government. Hence ammunition bread, or bread given to the soldiers, as gunpowder is, free of all expense to the individual. In the folio edition of Marshal Saxe's *Rêveries*, page 16, we find the following important observations on the subject of ammunition

bread. He states that bread never should be given to soldiers on active service, but that they should be accustomed to eat biscuits, for the following reasons:—Biscuits will keep a considerable number of years, and every soldier can conveniently carry with him in his haversack a sufficient quantity for seven or eight days. Those officers who have served among the Venetians, will readily prove the justness of this remark. But there is a species of biscuit, or hard-baked bread, that never crumbles, (called *soukari* by the Russians,) which is preferable to any thing of the kind. It is square, and about the thickness of a nut, and takes up less room than either bread or biscuit.

Purveyors, who are interested in the business, maintain a different opinion. They tell you that bread is best for troops. Every man of experience knows the contrary; for it is notorious, that contract, or ammunition bread, is not only made of unwholesome ingredients, but that it is seldom more than half baked; which, together with the water it contains, increases the weight, and consequently enhances the value.

PAINTING in oil, (*peinture en huile*, *Fr.*) The art of painting in oil was not known to the ancients, and was first discovered and put in practice, in the beginning of the 14th century, by a Flemish painter named *John Van Eyck*, or *John de Bruges*. Painting, before his time, was all performed in *fresco*, or water colours.

PAINTING of Timber. The manner of colouring all sorts of timber-work, particularly of gun-carriages, wagons, &c. as well as wainscot, doors, windows, posts, rails, pales, gates, border boards for gardens, &c. which require either beauty or preservation from the violence of rain, or injury of seasons, is so well known, that we shall not enter into any particulars on that head. The curious, however, may be gratified by referring to the *Builder's Dictionary*, published in 1733-4; a work which is still in good repute.

PAIR, *Nombre PAIR*, *Fr.* equal. An epithet which is given to any number that can be divided into two equal parts, as numbers 2, 4, 6, 8, &c.

PAIX, *Fr.* See **PEACE**.

PAL, *Fr.* See **QUINTAINE**.

PALACE, (*palais*, *Fr.*) a royal house,

a house eminently splendid. Among other popular sentiments, which were used at the commencement of the French revolution to excite the lower orders against the nobility, &c.

La guerre aux palais, et la paix aux hameaux!

War against palaces, and peace to cottages!

was peculiarly happy, and became a sort of war-whoop in 1792, 1793, &c. It was suggested, and promulgated, by General Dumourier, when he commanded the revolutionary army, and by his victory at Jemmappes, gave a fatal blow to the House of Bourbon.

Un PALADIN, *Fr.* a knight-errant. The followers of Charlemagne were first so called; and we have since applied it to the generals who serve under Bonaparte.

PALALALAN, *Fr.* the sound of the French march.

PALANQUEEN, *Ind.* a kind of oblong covered couch, with a rattan-bottom, having a mattress covered with chintz, and a sort of bed chair to recline upon, with a pole in front and in rear, to be carried by eight Hindoo bearers; four of whom support it, (two behind and two before,) and are relieved by the other four, alternately, who run behind. Each of these bearers requires four rupees per month. A palanqueen costs about 200 rupees. Every officer in India should have this article. Dr. Johnson writes the word *Palanquin*.

PALEAGAS, *Ind.* See *POLYGARS*.

PALANQUE, *Fr.* a kind of fortification so called in Hungary. It is made of stakes driven into the ground, interlaced with twigs, and covered with earth, and serves to stop the progress of an advancing enemy.

PALÆSTRA, in Grecian antiquity, a public building, where the youth exercised themselves in the military art, wrestling, running, playing at quoits, &c.

PALAS. See *CLICK*.

PALATINATE, (*palatinat*, *Fr.*) the county or seat of a count palatine, or chief officer in the palace, or court of an emperor, or sovereign prince.

PALATINE, (*palatin*, *Fr.*) This post or dignity has various significations—In Germany, electors, princes, and counts are sometimes so called. Hence an elector palatine. In Hungary the viceroy is termed palatine; and in Poland it

is usual to distinguish the governor of a town by this title. Several great noblemen and lords were likewise called palatines under the first kings of France. Some counties in England are also distinguished by this word, as county palatine of Cheshire, &c. &c.

PALE, in carpentry, a little pointed stake of wood, used in making inclosures, separations, &c.

PALÉE, *Fr.* the row of piles upon which a wooden bridge is constructed, is so called.

PALESTRE, *Fr.* a wrestling-place, or exercising ground. It comes from the Latin, and was originally derived from the Greek.

PALFRY, (*palefroi*, *Fr.*) Before carriages were invented, the horses on which ladies rode for pleasure were called palfries. The French also say, *palefroi*, *cheval de parade*.

PALIER, *ou repos*, *Fr.* the landing in a staircase.

Demi PALIER, *Fr.* a landing in a staircase, whose breadth is equal to the length of the step.

PALIER de communication, *Fr.* the space upon the top of a staircase which separates two apartments, and has a communication with each.

PALIS, *Fr.* the rows of small pointed stakes, which serve for any species of inclosure, are so called. The term *palisade* is derived from it.

PALISSADER, *Fr.* to surround any spot with stakes, or palisades.

PALISSADES de camp, *Fr.* several pieces of wood, so arranged and tied together, that they may with great dispatch be fixed in the ground which is marked out for the encampment of an army.

PALISSADES ferrées, *Fr.* palisades that are shod with iron. They are used in shallow streams and marshes, to prevent small craft from plying, or persons from crossing them on foot.

PALKEE, *Ind.* See *PALANQUEEN*.

PALL, (*drap mortuaire*, *Fr.*) a covering thrown over the dead. It is always used in military burials; and is hired at the expense of the captains of troops, or companies, in the British service.

PALLAS, a name, in heathen mythology, given to Minerva, who was looked upon as the goddess of war.

PALLIER, } *in building*, is some-
PAILLIER, } times used for a landing place, in a stair-case; or a step,

which being broader than the rest, serves to rest upon.

PALLIFICATION, in architecture, is the piling of the ground work; or strengthening it with piles, or timber driven into the ground; which is practised when they build upon a moist or marshy soil.

PALONNIER, (*palonneau*, Fr.) the spring-tree bar of a coach.

PALPLANCHES, Fr. planks, or boards made out of all kinds of wood, and sometimes out of red fir, particularly in those places where that tree is common. They are usually six inches thick, one foot broad, and of a length that corresponds with the nature of the soil into which they are to be driven. They are cut sharp at the bottom, in order to make them go into the ground with greater ease.

PALTRY. Dr. Johnson brings this word from the French *poltron*, a coward, a scoundrel, and *paltrocco* the Italian for a low whore; worthless, contemptible, mean.

A **PALTRY** *undertaking*, any thing unworthy of the means employed against it, as a *paltry* expedition, a *paltry* attack, a *paltry* siege, *paltry* foes. We also say a *paltry* fellow, a low-minded drudge, that will say and unsay any thing for hire.

PALUDAMENTUM, *Chlamys*, among the ancients, a garment worn in time of war, by the principal men of Rome, especially the generals, who were called for that reason *paludati*. The soldiers, having only short coats, called a *sagum*, were denominated *sagati*.

The *paludamentum* was open on the sides, coming down no lower than the navel, and had short sleeves. It was either of a white, purple, or red colour, and sometimes black. Kennett, in his Roman Antiquities, page 313, says, the old *paludamentum* of the generals was all scarlet, only bordered with purple; and the *chlamydes* of the emperors were all purple, commonly beautified with a golden, or embroidered border. Some writers have erroneously confounded this word with the *lorica humata*, which was a long cloak.

PALVESATE, Fr. a target fence, under which soldiers are screened when they make approaches, or enter a breach.

PAMPHLET, a small book; pro-

perly a book sold unbound, and only stitched. Dr. Johnson derives it from the French *par un filet*, i. e. kept together by a thread.

Military PAMPHLET, a pamphlet written upon military subjects.

PAMPHLETEER, a scribbler of small books; almost always a venal and contemptible wretch. Swift says—*with great injustice, I have been pelted by pamphleteers*. Indeed there are few persons exempt from this mode of paltry attack, especially if they should have firmness enough to pursue solid learning and useful knowledge, without being diverted from their task, by petty malevolence, and mean jealousy.

PAN, (*pan*, Fr.) the side of a rectangle, or irregular figure; also the flat front, or face of any building; a pane, piece, or pannel of a wall, of wainscot, of a window, &c.

PAN likewise means the distance which is comprized between the angle of the *épaule* and the flanked angle in fortification. See *Face of a BASTION*.

PAN de devant, Fr. the foreside.

PAN de mur, Fr. the pannel of a wall; also any proportion of a decayed wall which is to be replaced, or built up.

PAN de bois, Fr. in building, the piece of timber which sustains a gutter between the roofs of two fronts, or houses.

PAN, a name well known among the shepherds of antiquity, and frequently used by modern writers in their rural fictions. In military history, it signifies a man who was lieutenant-general to Bacchus in his Indian expedition. He is recorded to have been the first author of a general shout, which the Grecians practised in the beginning of their onset in battle. See **PANIC**.

PAN, that part of the lock of a musket, pistol, &c. which holds the priming powder.

PAN-tiles. See **TILES**.

PANACHE, } Fr. a plume, or

PANNACHE, } bunch of feathers.

PANACHES *flottans*, Fr. nodding plumes.

PANACHE likewise signifies, in architecture, the triangular part of an arch that contributes towards the support of a turret, or elevation, which is raised above the dome of any particular edifice.

PANCARTE, *Fr.* an ancient exercise, or tournament, which was performed in the Roman amphitheatre, when strong athletic men were opposed to all sorts of enraged animals.

PANCARTE, *Fr.* a paper containing the particular rates of tolls, or customs, due to the king. So called from being publicly stuck up.

PANCERNES, a body of Polish cavalry, which is divided into hussars and pancernes. These troops constitute, almost wholly within themselves, the strength of that country.

PANDEMONIUM, according to Bailey, with the authority of Milton, the great hall or council chamber of devils. Figuratively, any place where men meet to do evil.

PANDOURS, Slavonians who inhabit the banks of the Drave, a considerable river of Germany, which rises in the Tyrol, and empties itself into the Danube, near Effect, in Hungary; and those of the Save, a river of Germany, which rises in Carniola, and falls into the Danube at Belgrade. They wear a long coat, have four or five pistols placed in a belt round their waists, and they are armed with a sabre and a poniard. They always act as irregulars, when employed on service. They derive their name from a village called Pandut, in Lower Hungary. The Pandours were originally a corps of infantry named Ruitza; and their chief occupation, or duty, was to clear the high roads of thieves, &c. They first made their appearance in Germany, under the command of Baron Trenck, in 1741.

PANICK, **PANICK fear**, (*terreur panique*, *Fr.*) sudden consternation which seizes upon men's fancies without any visible cause; a needless, or ill grounded fright. The reason why these terrors are attributed to Pan, was, as some say, because when Osiris was bound by Typho, the appearance of Pan and the satyrs threw him into a fright; or because he frightened all the giants that waged war against Jupiter; or as others say, because when Pan was Bacchus's lieutenant-general, in his Indian expedition, and was on the point of being encompassed in a valley, with an army of enemies, far superior to them in number, he advised the god to order his men to give a general shout, which so surprized the opposite army, that they immediately

fled from their camp. And hence it came to pass, that all sudden fears impressed upon men's spirits without any just reason, were, by the Greeks and Romans, called *panic terrors*. (See Polyænus Stratag. book 1.) The custom of shouting seems to have been used by almost all nations, barbarous as well as civilized; and is mentioned by all writers who treat of martial affairs. Homer has several elegant descriptions of it, particularly one in the fourth Iliad, where he likens the military noise to torrents rolling with impetuous force from mountains into the adjacent vallies. We have likewise had our war-whoops, and still have our shouts.

PANIER à mine, *Fr.* See **BOURRIQUET**.

PANIER, *Fr.* baskets. Figuratively, *un panier percé*, a leaky vessel, or one who cannot keep a secret. A dangerous man in society; and in military concerns, one who ought to be particularly guarded against, where discretion and confidence are necessary.

PANNADER, *Fr.* to prance, curvet, or bound as a horse does.

PANNADES, *Fr.* the prancings, curvettings, and boundings of a lusty horse.

PANNE, *Fr.* literally means shag, plush, &c. and is properly a sea term, signifying to *lie to*, *mettre en panne*. It is likewise used in a military sense, to express the steady posture of troops who are drawn up for battle, and wait an enemy's attack. *La troupe est restée en panne*, the squadron remained immovable.

PANNE, *Fr.* the beam that supports the rafters of the roof.

PANNEAU, *Fr.* trap, snare.

Donner dans le PANNEAU, *Fr.* to be ensnared, entrapped, or outwitted.

PANNEAU de selle, *Fr.* the pannel of a saddle.

PANNEAU likewise signifies any plank of oak.

PANNELS, in artillery, are the carriages which carry mortars and their beds upon a march.

PANNEL, (in joinery,) is a tympanum, or square piece of thin wood, sometimes carved, framed, or grooved in a larger piece between two montants, or upright pieces, and two traverses, or cross pieces.

PANNEL, (in masonry,) is one of the faces of a hewn stone.

PANNELS, or panes, of glass are compartments, or pieces of glass.

PANNIER, (in architecture,) a piece of carved work, in the form of a basket, full of flowers or fruit, serving in architecture to finish some ornament.

PANNERESSE, *Fr.* a flat stone, or square piece of wood, which has more breadth than depth in its superficies.

PANNONCEAU, *Fr.* an ancient term, which was used to signify ensign, or banner.

PANOPLY, complete armour, or harness.

PANSEMENT, *Fr.* the act of dressing a wound, or rubbing and dressing a horse.

PANSER, *Fr.* See to DRESS.

PANSER, *Fr.* in farriery, signifies to rub down, and otherwise to take care of a horse.

PANTHEON, (in architecture,) a temple of a circular form, dedicated to all the gods. The name has been adopted among modern nations from the pantheon of ancient Rome, built by Agrippa in his third consulate, and dedicated to Jupiter Ultro, or Jupiter the Avenger. There is a chapel in the Escorial in Spain, called the pantheon, of marble and jasper inlaid: the whole inside is of black marble, excepting the luthern, and some ornaments of jasper and red marble. The pantheon at Paris, during the progress of the French revolution, was appropriated to national purposes; the names and busts of the most distinguished statesmen and generals being preserved therein as marks of public gratitude, and objects of public emulation. There is a building in London that bears the name of pantheon, but that is all. It is private property, and the only public use to which it has been appropriated, has been that of operatical speculation, masquerades, or frivolous entertainments.

PANTS, *Fr.* men on foot.

PANTOGRAPHIE, *Fr.* a mathematical instrument, which serves to copy all sorts of drawings. The French have paid great attention to the improvement of this instrument, of which a minute description may be found in *Cours de Mathématiques*, by Père Deschalles. But the Sieur Panglois brought it to such perfection in 1750, that it is become universally used.

PANTOMETER, (*pantomètre*, *Fr.*)

an instrument used to take all sorts of angles, distances, and elevations. It was invented by the ancients, but has been greatly improved since.

Se **PAONNER**, *Fr.* to make an outward display of one's self; to be vain-glorious; to be more attentive to the body than the mind. See **GLORIOLE**.

PANTON, (in farriery,) a shoe contrived to cover a narrow and hoof-bound heel.

PAPER-money, (*papier-monnaie*, *Fr.*) a substitute for coin, represented by legal notes of hand which are issued from the Bank of England.

PAPIER de cartouche, *Fr.* paper used for cartridges.

PAPIER gris, or **PAPIER brouillard**, *Fr.* whited-brown paper.

PAPIERS et enseignemens, *Fr.* All the papers and manuscripts which are found on board a ship are so called.

PAQUEBOT, *Fr.* a modern French term, derived from *packet-boat*, which see.

PARABOLA, (*parabole*, *Fr.*) in geometry, a figure arising from the section of the cone, when cut by a plane parallel to one of its sides.

From the same points of a cone, therefore, only one parabola can be drawn; all the other sections, within these parallels, being ellipses, and all without, hyperbolas.

Properties of the PARABOLA. The square of an ordinate is equal to the rectangle of the abscissa, and four times the distance of the focus from the vertex.

The perpendicular on the tangent, from the focus, is a mean proportional between the distance from the vertex to the focus, and the distance of the focus from the point of contact.

All lines within the parabola, which are drawn parallel to the axis, are called diameters.

The parameter of any diameter is a right line, of such a nature, that the product under the same, and the abscissa, are equal to the square of the semi-ordinate.

The squares of all ordinates to the same diameter, are to one another as their abscissas.

Cartesian PARABOLA is a curve of the second order, expressed by the equation $xy = ax^3 + bx^2 + cx + d$. containing four infinite legs, being the 66th

species of lines of the third order, according to Sir Isaac Newton; and is made use of by Descartes, in the third book of his geometry, for finding the roots of equations of six dimensions by its intersections with a circle.

Diverging PARABOLA, a name given by Sir Isaac Newton to five different lines of the third order, expressed by the equation $yy = ax^3 + bx^2 + cx + d$.

PARABOLAIN, *Fr.* a name formerly given to the boldest gladiator. It is now applied to every person who runs the hazard of his own life, particularly in visiting hospitals, for the relief of another.

PARABOLIC pyramidoid is a solid figure generated by supposing all the squares of the ordinates applicates in the parabola, so placed as that the *axis* shall pass through all their centers at right angles, in which case the aggregate of the planes will be arithmetically proportional; whose solidity is gained by multiplying the base by half the altitude.

PARABOLIC spindle is a solid made by the revolution of a semi-parabola about one of its ordinates, and is equal to $\frac{8}{15}$ of its circumscribing cylinder.

PARABOLIC space is the area contained between the curve of the parabola and a whole ordinate.

PARABOLIC cuneus, a solid mentioned by Dr. Wallis, which is thus formed; multiply all the DB's into DC's, or which is all one, upon the base AFB erect a prism, whose altitude shall be AS, and this shall be the parabolic cuneus, which is equal in solidity to the *parabolic pyramidoid*.

PARADE originally consisted of a square court before cathedrals, surrounded by piazzas or porticoes for persons to walk under, being supported with pillars. It is now used, in a military sense, to signify any place where troops assemble, in corps, troops or companies.

To PARADE. This word is frequently used as an active verb, with respect to military matters, viz. *To parade the guard*, &c. It has likewise been adopted in the united kingdom to express the act of calling out a person in an affair of honour. The Irish familiarly say—*I shall parade the gentleman, to-morrow morning, in the Phanix Park*.

A PARADE officer, (*officier de parade*, *Fr.*) an officer who attends to the minu-

tiæ of regimental duty, but who is not remarkable for military science. See *OFFICER*.

PARADE, *Fr.* The French make use of this term in various ways.

PARADE, *Fr.* show, ostentation.

Lit de PARADE, *Fr.* bed of state.

Cheval de PARADE, *Fr.* a horse finely caparisoned, and kept for show.

PARADE, *Fr.* in fencing, the act of parrying a thrust, or blow.

PARADE, *Fr.* the place or ground where soldiers parade.

Se mettre en PARADE, *Fr.* to take one's ground.

Faire la PARADE, *Fr.* to do parade duty.

Monter la PARADE, *Fr.* to take part in the regular line of parade.

Manquer sa PARADE, *Fr.* in fencing, to miss one's parry.

Etre hors de PARADE, *Fr.* to parry wide, or stand exposed.

PARADIS, *Fr.* that part of a harbour in which vessels may ride with the greatest safety.

PARADOS, an elevation of earth which is effected behind fortified places, to secure them from any sudden attack that may be made in reverse. Parapet and parados come from terms signifying, *in the front*, or *in the rear*, of any thing.

PARALLELEPIPED, (*parallelepède*, *Fr.*) one of the regular bodies of solids, comprehended under six rectangular and parallel surfaces, the opposite ones whereof are equal.

PARALLELISM, (*parallelisme*, *Fr.*) the situation or quality by which any thing is denominated parallel; that, whereby two things, viz. lines, or rays, become equi-distant from one another.

PARALLELISM of a march. In order to preserve the parallelism of a march in the movement of troops, each battalion must be kept perpendicular to the direction it marches upon, the whole of the several battalions in one straight line, and their several marching directions parallel to each other.

PARALLELISM and distance to be observed in the formation and movement of any considerable body of troops. In the Rules and Regulations, it is laid down as a general maxim, that no considerable body should ever be formed without a proportion of it being placed in *reserve*, or in *second line*, and more or less ac-

cording to circumstances. The movements of such second line will always correspond with those of the first, and it will always preserve its parallelism and distance.

Movements PARALLEL with a line of fire. Movements are said to be parallel with a line of fire, when one or more lines march, either in the rear of troops engaged with an enemy, or in face of an enemy, who is advancing to attack. The greatest accuracy and order are required on both occasions, particularly on the latter; for if the second line, which is the line of support, does not preserve its perpendicular direction with respect to every leading point, and its relative parallelism and distance with the line engaged, according to circumstances, it will not only run the risk of becoming useless itself, but will, in all probability, endanger the line it covers, should any sudden necessity occur for a change of position.

PARALLELOGRAM, (*parallogramme*, Fr.) a plain figure bounded by four right lines, whereof the opposite are parallel one to the other. It likewise means an instrument composed of five rulers of brass or wood, with sliding sockets, to be set to any proportion, for the enlarging, or diminishing any map or draught, in building, surveying, &c.

PARALLELOGRAMMIC *protractor*, a semi-circle of brass with four rulers, in the shape of a parallelogram made to move to any angle; one of which rulers is an index, which shews on a semi-circle, the quantity of any inward, or outward angle.

PARALLELS, (*parallèles*, Fr.) at a siege, the trenches, or lines made parallel to the defence of the place besieged. There are usually three in an attack; the first, about 300 toises, or 600 yards, from the covert-way; the 2d and 3d, nearer to the glacis. The deep trenches, 15 or 18 feet wide, that join the several attacks together, are also called *parallels*, or *places of arms*. They serve to place the guard of the trenches in readiness to support the workmen when attacked. See **BOYAU**, or *Line of communication*.

Tirer une PARALLÈLE, Fr. verbatim, to draw a parallel. To make a direct communication between one trench and another.

PARALLELET *planes* are those

planes which have all the perpendiculars drawn betwixt them equal to each other; that is, when they are equally distant every where.

PARALLELET ruler, an instrument of wood, brass, &c. consisting of two parallel rules which open and shut parallel to one another. This instrument is particularly useful in mathematics.

PARALYSER, Fr. to paralyse; a term frequently used by the French since the revolution, to express the bad effects of a factious spirit, &c. *Un seul factieux quelquefois paralyse tout une administration*; one factious man will sometimes render the designs of a whole administration abortive.

PARAMETER, (*paramètre*, Fr.) See **GUNNERY** and **PROJECTILES**.

PARAPET, in fortification, an elevation of earth, designed for covering the soldiers from the enemy's cannon, or small shot: its thickness is from 18 to 20 feet; its height 6 on the inside, and 4 or 5 on that side next the country; it is raised on the rampart, and has a slope called the superior talus, or glacis of the parapet, on which the troops lay their arms to fire over. The slope renders it easy for the soldiers to fire into the ditch. It has a banquette or two on the inside for the troops who defend it, to mount upon, in order to discover the country, the ditch, and counterscarp, and to fire as they find occasion.

PARAPET of the covert-way is what covers that way from the sight of the enemy; which renders it the most dangerous place for the besiegers, because of the neighbourhood of the faces, flanks, and curtains of the place.

PARAPET comes from the double Italian word *para—petto*.

PARAPETS en forme de crémaillère, Fr. parapets which are so constructed within, in the form of a saw, that one of the faces of the redans, or teeth, is perpendicular, and the other parallel, to the capital. The Chevalier Clairac, in his *Ingénieur de Campagne*, has given a particular account of these parapets: but the merit of invention does not entirely rest with him, since the Marquis de la Fond, director of the fortified places upon the coast of French Flanders, and M. de Verville, chief engineer at Rocroi, have likewise mentioned them.

PARASANG, (*parasange*, Fr.) an ancient Persian measure, containing usu-

ally thirty, sometimes forty, and sometimes fifty stadia, or furlongs.

PARASITE, (*parasite*, Fr.) one that frequents rich tables, and earns his welcome by flattery. A creature sometimes found in military life, but always considered as unworthy of the character of an officer.

PARASTATA, (*parastates*, Fr.) in architecture, an impost, or kind of *centa*, or *pilaster*, built for the support of an arch. According to some writers, *pilasters* which stand alone, not adjoining to the wall. *M. D'Aviler* makes *parastata* the same as *impost*; but *Evelyn* the same as *pilaster*.

PARC, Fr. See **PARK**.

PARC d'artillerie, Fr. See **PARK** of artillery.

Le commissaire du Parc, Fr. the commissary belonging to the park.

Le Parc des munitions et des vivres, Fr. the park of stores and provisions.

PARC de l'hôpital, Fr. See **HOSPITAL**.

PARC des vivres, ou quartier des vivres, Fr. park of provisions.

PARCOURIR, Fr. in a military sense, to run over the ground during an action. This word is particularly applicable to those movements which are made by general officers, officers commanding brigades, &c. for the purpose of encouraging their soldiers in the heat of an engagement.

PARCOURIR de rang en rang, Fr. to run up and down the ranks, or from rank to rank.

PARDON, forgiveness, remission. In military matters this word must be understood in two senses, viz. in a limited one, when it affects a culprit who has been sentenced by a general court-martial, to receive bodily punishment; and in a more extensive one, when the punishment is the consequence of a regimental decision. In the former case, the king only, through the commander in chief, can pardon, or remit the punishment; in the latter, the colonel, or commanding officer, has a discretionary power.

PARDON des injures, Fr. See **FORGIVENESS**.

PAREMENS, Fr. ranges of broad freestone in a building; the large stones that border the sides of a road, or street; also the large sticks of a faggot.

PAREMENT, Fr. the front, or facing of any thing, all that appears on the

outside of a stone, or wall; also the facings of an uniform coat.

PAREMENT de menuiserie, Fr. all that appears on the outside of a piece of carpentry, or joiner's work, &c.

PAREMENT de pavé, Fr. See **PAREMENS**.

Chambre de PAREMENT, Fr. the presence-chamber.

Lit de PAREMENT, Fr. a bed of state.

Muraille à deux PAREMENS de pierre de taille, Fr. a wall having two courses of, or being covered on both sides with freestone.

PARER, Fr. to keep off; to parry; to ward off. The French say as we do, *Il est impossible de se parer d'un ennemi couvert*, it is impossible to be upon one's guard against a secret enemy.

PARER à toutes feintes, Fr. to parry to all feints.

PARER un coup, Fr. to ward off a blow; also to parry in fencing, as *parer une botte*, *parer une estocade*, to parry a thrust; *parer et porter en même temps*, to parry and thrust at the same time: it also means to weather; as *parer le cap*, to weather or double the cape.

PARER, Fr. in riding, to stop. *Cheval qui pare bien*, a horse that stops well.

PARER le pied d'un cheval, Fr. to pare the hoof of a horse before he is shod.

PARER sur ses hanches, Fr. to be well upon his haunches. This term is applicable to the movements of a horse.

PARESSE, Fr. laziness; sluggishness.

PARESSEUX, Fr. lazy; idle; unfit to have the charge of any military operation.

PARGETTING, (in building,) is used for the plastering of walls; sometimes it signifies the plaster itself. It is a corruption of the Latin word *spargere*, to spread, to sprinkle, &c.

PARING, that which is pared off any thing.

Cheese PARINGS, a phrase adopted by a late secretary at war, to express paltry savings. See **PRODIGALITY**.

PARIS, (*Paris*, Fr.) the capital of France.

PARISH, according to Johnson, the particular charge of a secular priest. Our realm was first divided into parishes by Honorius, Archbishop of Canterbury,

in 636. The several parishes are obliged to furnish a certain number of men for the militia, &c.

PARISH-business. Although this phrase is generally understood to mean every species of conversation which may relate to military matters, and is consequently discountenanced at regimental messes, we are nevertheless of opinion, that, in strictness, it ought only to comprehend the details of any particular regiment. It must be obvious to every thinking man, that however ill-placed a discussion of the private concerns of a regiment at table may be, especially in the presence of strangers, a total exclusion of military subjects is equally to be condemned; for on what topics can officers converse with more satisfaction at a military mess, than on those which relate to the higher branches of their profession?

PARK of Artillery should always be placed, if possible, within a short distance of water carriage; and have the most ready communication with every part of the line of the army. Its form must depend on its situation. Ten feet are usually allowed in front for one carriage and its interval, and near 50 feet from the hind wheels of the front row to the fore wheels of the second; this interval should allow sufficient room for putting the horses to the carriages, and for a free passage along the line. In parks not on immediate service, it is customary to range the guns with their muzzles to the front; but where the guns are likely to be wanted at a short notice, appearances must not be studied, and the gun-carriages must be parked with their shafts to the front, ready to receive horses to them. A quarter guard is placed in front of the park, and the non-commissioned officers and gunners' tents on the flanks, at about 20 paces distance; and 40 paces to the rear, the subaltern officers; at 10 more to the rear, the captains, and 10 more the commanding officer. The mess tent is 15 in the rear of the officers. At a convenient distance, in the rear of the whole, are the horses picketed in one or more lines, with the drivers on their flanks. The horses are sometimes picketed in lines perpendicular to the front, and on the flanks of the carriages, between the men and the carriages.—*Bombardier.*

PARK of provisions, a place in a camp, in the rear of every regiment, which is taken up by the sutlers who follow the army with all sorts of provisions, and sell them to the soldiers.

PARLEMENTER, *Fr.* to parley. The French familiarly say, *Ville qui parlemente est à demi rendue*; a town whose governor parleys may be said to be half given up.

PARLER, *Fr.* to speak, to talk.

PARLER à cheval, *Fr.* to talk arrogantly.

PARLER à volée, *Fr.* to talk at random.

PARLEY, oral treaty; talk; conference; discussion by word of mouth.

To PARLEY, in military matters, to enter into conference with your enemy. This is done by means of a flag of truce. See **TRUCE**.

To beat a PARLEY is to give a signal for holding such a conference, by beat of drum, or sound of trumpet. See **CIAMADE**.

PARLIAMENT, (*parlement*, *Fr.*) the assembly of the king, and the three estates of the realm; namely, the lords spiritual, the lords temporal, and commons; which assembly, or court is, of all others, the highest, and of greatest authority. This authority was, in fact, so great, that when Charles I. was supposed to have infringed upon the rights of Englishmen, parliament rose in opposition to him, asserted that power, raised its own army, and, after having met him in the field, brought him before the tribunal of the country, and sentenced him to death.

PAROI, *Fr.* a machine made in the shape of a table, which is nailed upon planks four inches thick and ten feet long, to six feet in breadth, with its side, or edge, six inches thick, towards the country, into which are driven, horizontally, long stakes with sharp points. This machine is used in sieges, being placed upon rollers so as to have it run up and fixed upon the parapet, for the purpose of resisting a scaling party.

PAROI, *Fr.* a farrier's buttress.

PAROI, *Fr.* a wall; a partition.

PAROI blanche, *Fr.* a whitened wall.

PAROLE, in a military sense, the promise made by a prisoner of war, when he has leave to go any where, of returning at a time appointed, or not to take up arms, if not exchanged.

PAROLE. An apology almost appears

to be necessary for giving an article under this head in an English dictionary, addressed to English officers; for it is impossible that any individual of so respectable a profession, could throw such a stain upon himself, his country, and his service, as to forfeit his parole, or word of honour, after it has once been given. Surely it must be inscribed on all their hearts, that the word and honour of an officer are sacred, and that once pledged, they cannot be recalled. Governments are concerned in inculcating these principles, because they tend to soften the horrors of war, and to fortify that sense of rectitude and truth, which, though it is the duty of the man, is still the fringe and ornament of the real soldier's character. A breach of parole in European armies, amongst civilized nations, has always been held to be infamous. A person who has once been guilty of it, has no right to be treated as an officer, or to expect quarter, should he again fall into the hands of the enemy.

PAROLE means also a word given out every day in orders by the commanding officer, both in camp and garrison, for the purpose of knowing friends from enemies.

To PAROLE an officer, (*mettre un officier sur sa parole*, Fr.) to take the word and honour of an officer, who has been taken prisoner, or may otherwise be in a state of arrest, that he will not exceed certain limits, and be always forth-coming when called for.

PAROLE *d'ordre*, Fr. a pass-word given in camp or garrison.

PAROLE *sur parole*, Fr. a military phrase among the French, meaning the mutual word which is given by two persons who come to a parley, though opposed to one another in the war, whereby they promise not to attack, or take any advantage during the intercourse.

Faire PAROLE, Fr. to equal.

PARPAIN, Fr. a pillar, buttress, or supporter, of stone-work, serving to bear up a beam, or summero in a wall.

PARPAIN *d'échiffre*, Fr. the winding wall of a building, into which the stone, wooden, or iron steps of a staircase run. It is called *échiffre*, or *chypered*, because the different steps are first measured, and marked along this wall.

PARQUER, Fr. this word, which signifies to lodge and place any thing in

a convenient and safe manner, is frequently used by the French, both in an active and passive sense. Perhaps it may not be improper, at least in military matters, to adopt it with the same latitude amongst us, viz.

On PARQUA l'artillerie, ou l'artillerie fut parquée en tel endroit, Fr. They parked the artillery in such a quarter, or the artillery was parked in such a quarter.

Les gens d'artillerie se parquèrent, ou furent parqués, du côté de la rivière, Fr. the train of artillery parked itself on the banks of the river, or was parked upon the banks of the river.

L'artillerie parquait en tel lieu, Fr. the artillery parked on such ground.

PARQUET, Fr. the bar of a court of judicature; the inclosure within which the members of a court-martial sit.

PARQUET, Fr. an inlaid floor.

PARQUET *militaire*, Fr. an inclosure in the theatres abroad, between the orchestra and the pit, to which the officers of a garrison town have access, for a moderate price of admission.

PARQUETER, Fr. to inlay a room or place.

PARRAIN, Fr. means, literally, a godfather. In a military sense, it formerly signified a second, or witness, who attended at single combats to see fair play. *Les combattans se trouvèrent dans le lieu du combat, chacun avec son parrain*; the combatants met upon the ground, each attended by his second or witness.

PARRAIN, Fr. in military orders, the person who introduces, or presents a newly elected knight. The term is also used to signify the comrade who is selected by a soldier, condemned to be shot, to bind the handkerchief over his eyes.

PARRYING, the action of warding off the push, or blow, aimed at one by another.

PART, Fr. a part; share; concern.

Etre à la PART, Fr. a marine term among the French, signifying, to share in the prizes which are made against an enemy.

PARTAGE, *Point de PARTAGE*, Fr. in hydraulics, the highest pitch to which water can rise, and from which it may be made to run one way, or the other.

Etre en PARTAGE, Fr. to be dividing;

a term in law, and of courts-martial, &c. *Les juges, ou les membres, sont en partage*, the judges, or the members, are dividing.

Faire PARTAGE du butin, Fr. to divide the plunder, or to take one's share of it.

PARTEMENT, Fr. in navigation, the course which a ship holds towards the east, or west, with respect to the meridian whence it sailed; or the difference of longitude between the meridian under which a vessel actually is, and the one it was under, when the last observation was taken.

PARTHENIÆ, a word derived from the Greek, signifying virginity. In military history, it refers to a particular circumstance which occurred among the ancients. The Spartans, having been at war with the Messenians for twenty years, and having by those means very much depopulated their country, and apprehending that if this war continued, it might eventually strip Sparta of all its male inhabitants, they sent some of their young men from the army into the city, with licence to be familiar with as many unmarried women as they would; and the children begotten by them in this manner were called Partheniæ, on account of the uncertainty who were their fathers. At the end of the war these children were deemed bastards, and were denied the bearing of any office in the government, &c. This unjust exclusion enraged them so much, that they conspired with the slaves to destroy all the nobility; but on the discovery of their plot, they were driven out of the city. After which, being headed by Phalantus, a bold and enterprising son of chance, they travelled into Magna Græcia, in Italy, and built Tarentum.—*Bailey*.

PARTI, Fr. a particular detachment or body of troops, horse or foot, which is destined for some specific expedition. Hence *partisan*. See **PARTY**.

PARTI-bleu, Fr. any party of armed men who infest a country, and have no regular permission to act offensively.

Prendre le PARTI, Fr. to take a part.

Prendre son PARTI, Fr. to come to a determination.

Prendre son PARTI dans les troupes, Fr. to enlist; or, to use a familiar phrase, to go for a soldier.

Tirer PARTI, Fr. to take advantage.

Ne point prendre de PARTI, Fr. to remain neuter, or not to take any part.

Esprit de PARTI, Fr. party spirit.

Se déclarer d'un PARTI, Fr. openly to avow some particular party. The French say, figuratively, *Il faut être toujours du parti de la vérité*; we should always side with truth.

Parti likewise signifies profession or employment, viz. *Le parti de l'épée, le parti des armes*; the military profession.

Prendre PARTI dans l'épée, Fr. to embrace a military life.

Tirer PARTI, Fr. to reap or derive advantage from any thing.

Tirer PARTI de ses talens, Fr. to make the most of one's natural, or acquired abilities.

PARTI, Fr. expedient; means.

PARTI, Fr. contracting; farming the public revenues. *Il s'est enrichi dans les partis*; he has grown rich by contracts.

Quel PARTI prendre? A phrase expressive of indecision, signifying, how am I to act, or which side shall I take? This term having been used by an officer in command during the French revolution, a blunt soldier exclaimed, *Décidez, ou allez vous pendre!* See **UNDECIDED**.

PARTIALITY, unequal state of the judgment, and favour of one above the other, without just reason. If any member of a general court-martial expresses a previous judgment, in partiality either to the prisoner or prosecutor, before he is sworn, it is to be deemed a good cause of challenge; and he should not be allowed to sit in judgment on the case.

PARTIE Secrette, Fr. a secret and confidential service which is entrusted to one, or more individuals.

PARTIE secrète de l'armée, Fr. that important branch of military service, which is entrusted to able and active officers, for the purpose of obtaining intelligence.

PARTIE civile, Fr. in criminal matters, the person who accuses is so called; the prosecutor.

PARTIE publique, Fr. the attorney-general, or those acting in his room.

Prendre son juge à PARTIE, Fr. to accuse a judge of prevarication.

Pour fin de toutes PARTIES, Fr. in full of all demands.

PARTIR, Fr. to come out, to go out. *La bombe PART du mortier*; the bomb is shot from the mortar.

Le PARTIR d'un cheval, Fr. the motion of a horse when he is pushed forward.

PARTIES *Off-reckonings*. It is conceived that this was a compensation to discharged men, in lieu of clothing; 5s. 8d. per month for a serjeant, and 2s. 9d. ditto for a rank and file.

PARTISAN, *Fr.* partisan, adherent, or favourer of a party; a stickler.

PARTISAN, *Fr.* any person who contracts with government.

PARTISAN has been applied to a halberd or pike, and to a marshal's staff. See **BATON**.

PARTISAN, in the art of war, a person dexterous in commanding a party; who, knowing the country well, is employed in getting intelligence, or surprising the enemy's convoys, &c. The word also means an officer sent out upon a party, with the command of a body of light troops, generally under the appellation of the partisan's corps. It is necessary that this corps should be composed of infantry, light horse, and hussars, and occasionally with light, or portable artillery.

PARTISAN-party, a small body of infantry, commanded by a partisan, to make an incursion upon an enemy, to lurk about his camp, to disturb his foragers, and to intercept his convoys.

PARTRIDGES, very large bombards which were formerly used. Froissart describes a very singular one which was used at the siege of Oudenarde, and was made by the people of Ghent, under the direction of D'Arteville. Bomb and bombard come from the Greek *bombos*, expressing the noise made by them in firing. Some of the large bombards were jocularly called *bourgeois* from their constant residence in one place, their weight rendering them inconvenient to move.

PARTY, in a military sense, a small number or detachment of men, horse or foot, sent upon any kind of duty; as into an enemy's country, to pillage, to take prisoners, and oblige the country to come under contribution. Parties are often sent out to view the roads and ways, get intelligence, seek forage, reconnoitre, or amuse the enemy upon a march; they are also frequently sent upon the flanks of an army, or regiment, to discover the enemy, if near, and prevent surprize or ambuscade.

Recruiting PARTIES, a certain number of men, under an officer or non-commissioned officer, detached from their respective battalions, for the purpose of

enlisting men. See **Recruiting DISTRICT**.

Watering PARTY. See **WATERING**.

Firing PARTY, those who are selected to fire over the grave of any one interred with military honours. For the specific number of which the party is to consist, &c. see **BURIALS**.

Working PARTIES. These consist of small detachments of men, under the immediate command and superintendance of officers, who are employed on fatigues which are not purely of a military nature. They are generally called fatigue duties, being different from those of parade, or of exercise in the field. They principally consist in digging canals, repairing roads, working on fortifications, except such as may be constructed in the field, or upon actual service. An addition is made to their pay, as a reward for their labour, and a compensation for their extraordinary wear of necessaries; half of which should always be paid into the hands of the captains, and commanding officers of companies, for this latter purpose. It has been judiciously observed, in a note to the treatise on Military Finance, that British troops might in time of peace be employed much oftener than they are on works of this nature, with equal advantage to the public and to themselves. This remark becomes more forcibly apposite since the adoption of canals through the country.

PARTY-spirit, (*esprit de parti*, *Fr.*) a blind devotion which an individual pays to some particular set of men; almost always losing sight of the general good. Party-spirit may be truly called the curse of the British army, and if it could hurt the navy, the curse of that also. Lord Bolingbroke has said, that party-spirit would, some time or other, prove fatal to Great Britain!

PARTY-Jury, (*jurés mipartis*, *Fr.*) a jury consisting of half foreigners and half natives.

La PARURE du pied d'un cheval, *Fr.* the horny substance which has been cut from the hoof of a horse in order to shoe him; also paring in general.

PAS, *Fr.* pace; a measure in fortification. The French divide their *pas*, or pace, into two kinds—*pas commun*, or ordinary pace, and *pas géométrique*, or geometrical pace. The ordinary pace consists of two feet and a half; and the geometrical pace contains double that

extent, being five royal feet, or five *pieds de roi*. The itinerary distance which the Italians call a mile, consists of one thousand geometrical paces; and three miles make a French league.

Un Pas de clerc, Fr. literally, a clerk's pace; figuratively, any error or mistake which is made through ignorance, or imprudence.

Plaindre ses PAS, Fr. to be lazy or indolent; to make much ado about nothing.

Passer le PAS, Fr. to die; also to do something which it is impossible to forego.

PAS de côté, Fr. side-step. This step is not to be found in the exercise established by authority in 1755. Monsieur de Bombelles mentions the *pas de côté* in his *Evolutions Militaires*. We do not agree with the author of a Plan of Discipline composed for the use of the Militia of the county of Norfolk, when he says that Mons. de Bombelles meant the oblique step.

PAS d'âne, Fr. a sharp bit, or upset in the mouth of a bit; also a sword-guard which covers the whole hand, or basket hilt; hence *une garde à pas d'âne*.

PAS oblique, Fr. oblique step.

PAS ordinaire, Fr. ordinary time.

PAS ordinaire direct, Fr. front step, in ordinary time.

PAS précipité, Fr. double quick time.

PAS de charge, Fr. charging time.

PAS cadencé, Fr. cadenced step.

PAS de course, Fr. the quickest step that is taken in military movements; as in charging bayonets, &c.

PAS intermédiaire, Fr. in cavalry movements, an easy trot; corresponding with the ordinary step in infantry manœuvres.

PAS de salut, Fr. the step used in marching by, or saluting.

Doubler le PAS, Fr. to double a step, or pace; to go faster.

Forcer le PAS, Fr. to make a forced march.

PAS alongé, Fr. a lengthened step.

Alonger le PAS, Fr. to step out.

Diminuer le PAS, Fr. to step short.

Hâter le PAS, Fr. to step out; to quicken one's pace.

Marcher à grands PAS, Fr. to move rapidly.

Marcher à petits PAS, Fr. to step short, or move leisurely.

Retourner sur ses PAS, Fr. to go back.

Avoir le PAS, Fr. to have the precedence.

PAS de souris, Fr. degrees or steps which are made in different parts of the circumference of the counterscarp.— They serve to keep up a communication between works when the ditch is dry, and are generally made in the reentrant angles of the counterscarp, and in the reentrant angles of the outworks. There are likewise steps or degrees of this sort at some distance from the glacis.

PAS, Fr. any strait or channel of water between two separate lands.

PAS de Calais, Fr. the straits between Calais and Dover.

PAS likewise signifies any narrow pass. *Le pas des Thermopyles*; the straits of Thermopylae.

Défendre le PAS, Fr. to defend the pass or strait.

Franchir le PAS, Fr. to determine upon a thing after some hesitation.

PAS, Fr. in mechanics, a stay in the vice or spindle of a press, or of other instruments of the kind, by means of which large weights may be gradually raised up, or be kept close together.

PAS géométrique, Fr. in French measurement, a length of five feet.

PAS commun, Fr. two French feet and a half.

PAS, Fr. in carpentry, small notches or jags in the timber-work of a roof which are made to receive the ends of the rafters.

PAS de porte, ou seuil, Fr. the outside step of a door, in contradistinction to *seuil*, or threshold.

Aller à PAS mesurés, Fr. to proceed with caution.

PASHA, (*Pacha*, Fr.) This word ought to be written and pronounced *Bashaw* (*Bacha*, Fr.) It is a title or mark of distinction which is annexed to the situation of grand-vizier in the Ottoman empire. There are bashaws of a subordinate class, who are governors of provinces, and who formerly assumed the title of king; being nevertheless tributary to the grand sultan. There are likewise degrees of distinction among these subordinate bashaws.

PASS, (*passage chemin*, Fr.) in a military sense, a strait and narrow passage, which renders the entrance into a country extremely difficult.

PASS, a voucher for the absence of a non-commissioned officer or soldier.

PASS, PASSADO, in fencing, a push or thrust upon your adversary.

PASS, (*passade*, Fr.) in fencing, a leap or advance upon the enemy.

To PASS, to march by open order of columns, for the purpose of saluting a reviewing general.

To PASS *a defile, a bridge, &c.* to advance with a narrow front for the purpose of crossing a river, or getting through narrow ground.

PASS *of arms*, in ancient chivalry, a bridge, road, &c. which the knights undertook to defend, and which was not to be passed without fighting the person who kept it. He, who was disposed to dispute the pass, touched one of the armories of the other knight who held the pass, that were hung on pales, columns, &c. erected for the purpose; and this was a challenge which the other was obliged to accept. The vanquished gave the conqueror such a prize as was agreed on.

A PASS-*billet*, a written or printed paper which is signed by an individual, who has the authority to do so, for the purpose of enabling the bearer to pass and repass unmolested.

PASS-*parole*, a command, or word which is given out at the head of an army, and thence passed from mouth to mouth, till it reaches the rear.

PASS-*port*, a letter of licence which is given by a prince or governor, granting safe conduct to travel, enter, and go out of his territories without molestation: this is properly given to friends and neutral persons; and the safe conduct to enemies.

PASS-*word*, a secret parole or countersign which is given out to enable persons to go through military stations, &c.

PASS, *All's Well*, a term used by a British sentry after he has challenged a person that comes near his post, and has received from him the proper parole, watchword, or countersign. See ROUNDS.

PASSADE, Fr. See PASS.

PASSADE, in the *manège*, is a horse's walking, or trotting in such a manner, that he raises the outward hind leg and the inward fore leg together; and, setting these two on the ground, raises the other two alternately, never gaining above a foot of ground at a time.

Demander la PASSADE, Fr. This term is used among the French to express

the act of soliciting charity out of the usual way of persons begging, or who have not been accustomed to ask alms. *Donner la passade à un pauvre soldat*; to give alms to a poor soldier. *Il y avoit sur le chemin beaucoup de soldats qui demandoient la passade*; there were many soldiers on the road who asked charity.

PASSAGE, (*passage*, Fr.) This word, as to its general import, does not require explanation. It is familiar to every body. In a military sense it may be variously understood for passages made over rivers, or through defiles, which should always be secured when an army is on its march. Dragoons, or light cavalry, are generally employed upon this service; being, by the celerity of their motions, better calculated to get the start of an enemy. Passes through mountainous countries, and passages over rivers, may likewise be secured by means of light field pieces and flying artillery. The latter are particularly calculated for defiles. Entrenching tools, &c. must be carried with them.

PASSAGE, Fr. a term which relates to the reception of a knight, in the Order of Malta.

PASSAGE of bridges or defiles when a battalion or line stands on narrow ground.

A battalion, standing in narrow ground, may sometimes be ordered to march in file for the purpose of forming open column, and passing a defile either before, or behind that flank, before, or behind the other flank, or before, or behind any central point of that line.

PASSAGE *of the traverse*, an opening out in the parapet of the covert-way, close to the traverses, that there may be a ready communication with all parts of the covert-way.

PASSAGE, *in the manège*, an action wherein the horse raises a hind and a fore leg together; then setting these two on the ground, he raises the other two; and thus alternately, never gaining above a foot of ground at a time.

PASSAGER, Fr. to passage. See PASSAGE *in the manège*.

PASSAGER *un cheval*, Fr. to make a horse passage. It is likewise used as a neutral verb, viz. *un cheval passage*, a horse passages.

PASSANDEAU, Fr. an ancient piece of ordnance, which carried an eight

round ball, and weighed three thousand five hundred pounds.

Chemin PASSANT, Fr. a thoroughfare.

PASSAVANT, Fr. a pass. This term is not used in a military sense, but relates chiefly to commercial matters.

PASSE, Fr. See *PASS*.

Un PASSE droit, Fr. the act of getting over another by undue promotion. Thus a person who steps over another without having gone through the regular routine of service, is said to have had *un passe droit*.

PASSE-Mur, Fr. This is the same as *coulevrine*, and signifies a piece of artillery which is longer than common ordnance. There was a remarkable one at Nancy, which was upwards of 22 French feet in length, and carried an 18-pound shot. The *passe-mur*, or *coulevrine*, has been laid aside some time, because it was found not to carry so far as ordinary cannon. The one above-mentioned is still to be seen at Dunkirk.

PASSE-Vogue, Fr. Any extraordinary effort that is made in rowing, is so called.

PASSE-par-tout, Fr. a large saw, the teeth of which are irregularly made for the purpose of cutting forest trees asunder.

PASSE-par-tout, Fr. a master key. The French say figuratively, *l'argent est un bon passe-par-tout*, money gets admission any where.

PASSE-Parole, Fr. This expression is used among the French in an absolute sense, and signifies to give the parole, order, or countersign. When troops are on service, or upon duty, they have frequent occasion to adopt it, especially during the rounds. *Avance, passe-parole*. Advance, and give the parole, or countersign.

PASSE-Volant, Fr. any man that is not really in the service, and who stands to be mustered for the purpose of completing the supposed number of effectives in a regiment, or on board a ship of war. They are likewise called *soldats prêtés*, borrowed soldiers.

PASSE-Volant is also called *faux soldat*.

PASSE-Volans likewise mean those wooden pieces of ordnance which are made to resemble real artillery, and fill up the vacant places in a ship. These were first adopted by the French, in consequence of a regulation which was made by M. de Fontchartrain, when he

became minister of the marine department. He gave orders that no vessels, except such as carried 16 guns, should sail to and from America. In order to comply, at least in outward appearance, with this regulation, the merchants had recourse to *passe-volans*, or wooden substitutes. More advantages than one are indeed derived from this invention, which has been adopted in every civilised country.

PASSE-chevaux, Fr. ferry for horses, or horse boat.

To be PASSED over, to lose the advantage of any particular standing in the army, and to have a person junior in rank put over one.

PASSER, Fr. to pass. This word has various significations both in French and English, but chiefly in the former language.

PASSER en revue, Fr. to muster.

PASSER à compte, Fr. to allow in reckoning.

PASSER au fil de l'épée, Fr. to put to the sword; to kill man, woman, and child.

PASSER par les baguettes, Fr. to run the gauntlet.

PASSER à la revue, Fr. to pass muster; or to be eligible as a recruit, or soldier.

PASSER par les armes, Fr. to be shot at the head, or in front of a regiment drawn up in battle array.

PASSER par les courroies, Fr. to be belted, or to be punished by running the gauntlet when every soldier strikes with his cross-belt, canteen or stirrup strap; also to be strapped or leathered.

PASSER par les verges, ou par les baguettes, Fr. to be flogged, or whipped up and down two ranks of soldiers faced inwards; each soldier having his musket grounded, and giving the culprit a lash upon his naked shoulders as he passes.

PASSER à la montre, Fr. to pass muster.

PASSER par la main du bourreau, Fr. to be flogged, or otherwise punished, by the public hangman.

PASSER la rivière, passer la ligne, Fr. to cross the river, to cross the line.

PASSER un homme à un officier, Fr. to allow an officer the pay and subsistence of a private soldier for the maintenance of a servant. The term is also used to express the receipt of any public allowance for sinecure places.

PASSER *sur le ventre à une armée*, Fr. to defeat an army; to overthrow it.

PASSER, Fr. to go; as, *passer dans l'Inde*, to go to the Indies.

The **PASSES**, particular passages, or roads, by which persons, especially armed bodies of men, may go from one country into another. Of this description are the passes through the Pyrenees, which separate Spain from France. They are five in number, viz. First pass at Bayonne, an episcopal city of Gascony, in France, which is always passable, leading to Fontarabia, in the Bay of Biscay. Second pass at Perpignan, a town of Roussillon, in France, which is also passable at all times, leading through Bellegarde to Figueras, in Catalonia. Third pass, passable from May to October, leading to Pampeluna, the capital of Navarre in Spain. Fourth pass, passable for muleteers only, leading through Verdun, a strong town of Armagnac, in France, to Jacca, or Xacca, and Saragossa, in Arragon. Fifth pass, very difficult and little used, leading through Venasque, into Catalonia. It may, however, be said, that there are only two military passes of material consequence to both countries, viz. **PERPIGNAN** in France, on the side of the Mediterranean sea, leading to Figueras, Rosas and Barcelona, and **PAMPELUNA**, which is covered by Fontarabia, from Bayonne, on the Atlantic.

PASSES-balles, Fr. boards, or machines made of iron, or brass, used in disparting cannon, and fitted to every species of calibre.

PASSEUR, Fr. a ferryman.

PASSION, (*passion*, Fr.) a quality that affects the senses; any effect caused by external agency.

PASTERN of a horse, (*pâturen de cheval*, *râle de cheval*, Fr.) the hollow of a beast's heel; that part of a horse's foot, under the fetlock, to the heel; also, a shackle for a horse.

PATACHE, Fr. This word sometimes means an advice boat; but it more generally signifies an armed tender, or a revenue cutter.

A **PATACCOON**, a Spanish coin, in value 4s. 3d. English.

PATATES, Fr. potatoes. They are also called *pommes de terre*, or earth apples; which term is used in Germany, Holland and Flanders.

PATAUGER, Fr. This word literally means to walk in muddy water.

An army is said to do so when its route is through hollow swamps and marshy grounds.

PATCH, a small piece of greased leather, &c. which is put round the ball of a rifle before it is driven down, in order to fill up the interstices of the grooves, which, without this precaution, would occasion too great a windage.

PATE, Fr. in fortification, a sort of horse-shoe, that is, a platform, or terrepleine, irregularly built, yet generally constructed in an oval form. It is surrounded by a parapet, without any thing to flank it, and having no other defence than what is front or fore right. *Pates* are usually erected in marshy grounds to cover the gate of a fortified town, or place.

PATE, Fr. in mining, the end of a board which is nailed to the timber work that forms a sort of floor in excavations, and by which one floor is attached to another.

PATE de grenades, Fr. an earthen pot filled with gun-powder and grenades, with iron spikes upon them.

PATERERO, a small cannon managed by a swivel.

PATH, way; road; track.

Towing **PATH**, a path which is made on the side of a river, and which is carried under the arch or side arches of a bridge, for the convenience of dragging barges or vessels along.

Minc **PATIBULAIRE**, Fr. a hanging downcast look, unlike that of a soldier.

PATIENCE, the power or faculty of suffering; indurance; the power of expecting long, without rage or discontent; the power of supporting faults or injuries without revenge; long suffering. In military life, patience is an essential requisite. Without patience half the toils of war would be insupportable; with patience there are scarcely any hardships but what coolness, courage, and ability may overcome. It is one of the greatest virtues, indeed, in an officer or soldier patiently to support, not only the rigour of discipline, but the keen and vexatious circumstances of disappointment. Rousseau says, *la patience est anère, mais son fruit est doux*.

PATIN, Fr. in hydraulic architecture, flat pieces of wood which are laid upon pile-work, and on which platforms are made, in order to establish a foundation in the water.

PATOMAT, *Ind.* a two mast vessel: each mast carries one sail of four unequal sides. It likewise means a messenger.

PATRICIAN, from the Latin *Patricius*, one descended from a noble family. The term was used among the Romans, to distinguish the higher class of the inhabitants of Rome from the lower, who were called plebeians. See Kennett's Roman Antiquities, pages 97, 98, &c.

Order of St. PATRICK, instituted by King George III. Feb. 5, 1783. The installation of the first knights was in the cathedral of St. Patrick, Dublin, on the 17th of March following, being the festival of that saint. It consists of the sovereign and fifteen other knights companions. The lord-licutenant of Ireland for the time being officiates as grand master of the order. The archbishop of Armagh is the prelate, the archbishop of Dublin, the chancellor, and the dean of St. Patrick, the register of the order. The knights of the order are always installed in the above-mentioned cathedral. Their robes are splendid, and the badge is three crowns united together on a cross, with the motto round, *Quis separabit*, 1783, fastened by an Irish harp to the crown imperial; a star of eight points fastens it on the coat. This is the only order belonging to Ireland, and is one of the most magnificent in all Europe.

PATRIOT, a sincere lover of his country; a term generally used, little understood, and seldom practised.

PATRIOTISM, (*patriotisme*, Fr.) A French writer observes, that patriotism is a virtue which many men affect to possess, without having one single attribute that forms its character. Real patriotism confines the whole of its views through life, whether civil or military, to glorious and good actions, but it never descends to cruelty or injustice.

Macchiavelian, or modern **PATRIOTISM**, that sort of patriotism, which, under the mask of public spirit, frequently conceals the most selfish private views, and sticks at nothing, spiritual or temporal, to attain its object.

PATROL, any party or round of soldiers, to the number of five or six, with a serjeant to command them.—These men are detached from the main guard, piquet, or quarter-guard, according to circumstances, to walk round the streets of a garrison town, &c. for the

purpose of taking up disorderly persons, or such as cannot give an account of themselves. It is their duty to see, that the soldiers and inhabitants of the place repair to their quarters and dwelling-houses, (in conformity to specific directions which are given out to that effect) and that ale-houses and sutlers' booths are shut up at a seasonable hour. They are likewise to take up every person they meet without a light, and that cannot give the watchword or countersign when he is challenged. All such persons must be conducted to the guard-house, and a report be made of them to the commandant or governor of the place, by the town-major.

PATROLES are formed out of the infantry as well as the cavalry. When a weak place is besieged, and there is reason to apprehend an assault, strong patrols are ordered to do duty; those on foot keep a good look out from the ramparts, and those that are mounted take care of the outworks.

PATRON, one who countenances, supports, or protects.

Kennett, in his Roman Antiquities, page 97, has the following passage, on the origin of the word:—

Romulus, as soon as his city was tolerably well filled with inhabitants, made a distinction of the people according to honour and quality; giving the better sort the name of *patres* or *patricii*, and the rest the common title of *plebei*.—To bind the two degrees more firmly together, he recommended to the patricians some of the plebeians to protect and countenance; the former being styled *patroni*, and the latter *clientes*.— (*Vide Dionys. lib. 2. Liv. lib. 1, Plutarch in Romulo.*)

PATRON de la barque, Fr. a familiar phrase among the French, signifying the person who has the lead in any particular society, club, or company.

PATRON, Fr. This word also means any person of inferior condition; hence *Gare à vous, patron*; *Rangez vous, patron*. Take care, fellow; Make way, fellow.

PATRON, Fr. among the French, the captain of a trading vessel is so named. There were likewise sea-faring men called *officiers mariniers*, who served on board the French ships of war, and who were entrusted with the management of sloops and barges. These were generally called patrons.

PATRONNE, *galère patronne*, Fr. The galley which was second in rank at Marseilles was so called.

PATROUILLE, Fr. See **PATRON**.

PATROUILLEURS *des deux côtés*, Fr. flankers, or patrols detached on each side of a column, battalion, &c. to prevent surprizes.

PATTE, Fr. a term used in mining. When a well or excavation is made in loose or crumbling earth, and it becomes necessary to frame it in, the rafters must be laid horizontally to support the boards in proportion as the workmen gain depth. The ends of the rafters that are first laid, run ten or twelve inches beyond the borders of the well, for the purpose of sustaining the platform.—These supports are called *oreilles*; consequently, that every subsequent frame may be supported, the second is attached or made firm to the first, by means of the ends of boards which are nailed together. In this manner the third is joined to the second, and the fourth to the third. These ends are called *pattes*, or handles.

PATTE d'oie, Fr. a term used in mining to describe three small branches which are practised, or run out, at the extremity of a gallery. They are so called from their resemblance to the foot of a goose.

PATTE d'oie de pavé, Fr. a curb stone, or any extremity of pavement which runs sloping towards the gutter.

PATTERN, (*échantillon*. Fr.) a part shewn as a sample for the rest.

A PATTERN regiment, a phrase of distinction, which is applied to a corps of officers and soldiers, who are remarkable for their observance of good order, and discipline.

PATURE, Fr. See **FORAGE**.

PATUREUR, Fr. forager, one who goes on a foraging party.

PATUREURS, Fr. men who take their horses to grass, or go for green forage.

PAU, Fr. When the Mogul-Tartars conquered the northern part of China, in the year 1232, they are said to have invariably used at the several sieges, a battering or propellant machine of this name. There were two sorts: one served to throw large stones, and was called *ché-pau*, or *stone-pau*; and the other *ho-pau*, or *fire-pau*, Father Gaubil, the jesuit and missionary in China,

seems at a loss to determine whether these *pais* were real pieces of ordnance, similar to those used in Europe, or merely stone mortars: yet he appears satisfied, that the Chinese knew the use of gunpowder 1300 years before it was discovered in Europe. They had at first pieces of hollow wood in the shape of cannon, out of which they shot stones. Father Gaubil says, "I have read in several authors, that the Chinese made use of gunpowder from time immemorial; and as the faculty of invention has never been called in question with respect to the Chinese, it is not improbable, that the Europeans should have taken advantage of their discovery, and acted upon it."

PAVAIS, or *pavacke*, or *tallevas*, a large shield, or rather a portable mantlet capable of covering a man from head to foot; and probably of sufficient thickness to resist the missile weapons of old times.

PAVACHE, coverings or large shields supported by props; they were also used at sea to defend the sides of the vessels, like the present netting of our ships of war. This defence was called a *pavisade*. The *pavais* were rectangular at the top, the sides consequently parallel, but the angles were rounded off at the bottom.

PAVISORS, men who carried the *Pavais* as a weapon of defence. In the list of the army that accompanied king Edward III. to Calais, we find many *Pavisors*; these were probably men trained to the use of the *pavais*, which must have required dexterity as well as courage.

PAVALUNGE, *Ind.* the name of a year.

PAUDSHAU, *Ind.* king.

PAVÉ, Fr. Under this word are comprehended not only the pavement and road upon which we tread, but also the materials which compose and strengthen it, such as flint, gravel, pounded stone, &c.

Etre sur le PAVÉ, Fr. a figurative expression, signifying, to be out of employment.

PAVÉ de grés, Fr. a pavement which is made of large free-stones of a given dimension, with which the high roads, &c. are paved in France, and in other countries upon the continent.

PAVÉ fendu, Fr. a pavement made

of free-stone, of half the given dimension, for high-ways, and such as is used in small courts and stables.

PAVÉ *d'échantillon*, Fr. a pavement made in the ordinary way, without regard being had to the size or dimension of the stones.

PAVÉ *de pierre*, Fr. a pavement made of stone cut into square even pieces, or of a losange figure, which are cemented by mortar, or kept together by iron cramps.

PAVECHEUR, or PAVESIER, Fr. an old militia which was formerly so called, from the men who composed it being armed with *pavois*, or large shields.

PAVEMENT, a lay of stone or other matter, serving to cover and strengthen the ground of divers places.

PAVEMENT *of a terrace* is that which serves for the covering of a platform, whether it be over a vault or on a wooden floor. Pavements over vaults, are usually made of stones squared and bedded in lead. Those on wood, are either stones with beds for bridges, tiles for ceilings in rooms, or lays of mortar made of cement and lime with flints or bricks, laid flat, as is still practised by the eastern and southern people, on the tops of their houses.

Random PAVEMENT, pavement made of all sorts of materials taken out of a quarry.

PAVESADE, } Fr. a sort of sail-
PAVOISADE, } cloth or tarpauling,
PAVISADE, } which is hung round
a galley during action, to cover the slaves that row on the benches.

PAVESADES, Fr. large portable hurdles, behind which the archers and bowmen were formerly posted. According to Froissart, these hurdles were used long before the reign of Philip Augustus, king of France. Father Daniel, the jesuit, in his *Histoire de la Milice Française*, describes them as bearing the figure of a shield; but the chevalier Folard, in his *Commentaire sur Polybe*, informs us, that they were mantlets which were disposed in parallel or oblique lines, from the camp to the nearest works belonging to the *corps de place*; behind which the soldiers and artificers, &c. could, in safety, make a small fossé or ditch that was sufficiently deep to preserve them straight and firm. Hurdles constructed in this manner were used during the operations of a regular siege;

but when it was found expedient to insult a place, those of less dimension were adopted. Father Daniel describes the *retranchement portatif*, which was used many centuries before the days of Philip Augustus, under the latter head.

PAVILION, in military affairs. See TENT.

PAVILION, in architecture, a building which generally stands alone, and is of a square figure under one roof. It is also an advanced part in the middle of a façade; and when it flanks the corner of a building, it is called an *angular pavilion*, *parillon angulaire*; also the main part of a building.

PAVILLON, (among sailors) the flag of a general officer in the fleet. It also signifies the national flag which is displayed at the mast head of a vessel, shewing the rank of the person who commands on board.

PAVILLON, Fr. pavilion, tent, &c. It also signifies that particular quarter in a barrack which is occupied by the officers.

PAVILLON, Fr. flag, standard, or colours.

PAVILLON, Fr. the flag ship.

Baisser le PAVILLON, Fr. to strike, to yield; to lower the colours, as the ships of all nations are accustomed to do when they meet a British man of war.

Vaisseau PAVILLON, Fr. flag ship.

PAVILLON, Fr. This word likewise signifies the swell or broad part of a speaking trumpet.

PAVILLON *d'amiral*, Fr. an admiral's flag.

PAVILLON *marchand*, Fr. the flag carried by a merchantman.

PAVILLON *Anglais*, Fr. the British flag.

PAVILLON *Français*, Fr. the French flag.

PAVING, the laying a floor with stones, bricks, or tiles.

PAVING *with Riegate stones*. This kind of pavement is good for chimney fire hearths, ovens, stoves, &c. See FIVE STONE.

PAVING *with marble* is of all other the most beautiful. There are several sorts, as white, black, and grey.

PAVING *with rough or rag stone* This is the cheapest of all pavements. See STONE.

PAVING *with statute bricks*. Pave-

ments made of bricks whose dimensions of the mould, according to the statute, ought to be 9 inches in length, $4\frac{1}{2}$ in breadth, and $1\frac{1}{4}$ in thickness.

PAVING with square tiles. These tiles are of several sizes, viz. 6, 8, 10, and 12 inches square. In order to know how many of these sort of tiles will pave any floor.

Note, that $\left. \begin{array}{l} 36 \\ 21 \\ 16 \\ 13 \\ 9 \end{array} \right\} \text{ Tiles of } \left. \begin{array}{l} 6 \\ 8 \\ 9 \\ 10 \\ 12 \end{array} \right\} \text{ Inches square will pave a square yard.}$

PAVIOR, (*paveur*, Fr.) the person who cuts or lays stones for a pavement.

PAULETTE, *Fr.* a certain tax or pecuniary consideration, which all persons, who held public situations under the old government of France, were obliged to pay at the commencement of every year to the king. This enabled them to sell or dispose of their appointments, and to leave the amount to their heirs, if they happened to die in the course of the year. It is so called from *Paulet*, the name of the person who first suggested the measure.

PAULS, *Ind.* tents.

Sepoy-PAULS, *Ind.* the tents of the sepoys distinguished from those of the native officers.

PAVOIS, *Fr.* a large shield, similar to the clypeus, or broad shield of the Greeks and Romans.

PAUSE, a stop, cessation, or intermission. It is essentially necessary for all officers to accustom themselves to a most minute observance of the several pauses which are prescribed during the firings.

PAY, or *pay of the army*, (*solde*, Fr.) is the stipend or salary allowed for each individual serving in the army: first established by government in the year 1660.

Full PAY, the pecuniary allowance which is made to officers and non-commissioned officers, without any deduction whatsoever. Since the abolition of arrears, which took place in 1797, commissioned and warrant officers, &c. (those belonging to the guards excepted) receive their full pay, or daily subsistence. The private soldiers are subject to temporary deductions, for the purpose of appropriating part of their pay and allowances to the expense of their messes, including vegetables, &c. and

to a stoppage, not exceeding 1s. 6d. per week, for necessaries; which stoppage is to be accounted for monthly, as stated in the Regulations of 1st September, 1795, and the remainder being 1s. 6d. must be paid weekly to each soldier, subject to the accustomed deduction for washing, and for articles to clean his clothing and appointments.

The full pay of the British army is given in advance on the 25th of every month (in the artillery on the 1st), and accounted for to government by the several district and regimental paymasters through army agents appointed for that purpose.—Non-commissioned officers and private soldiers, serving as marines, are not liable to any deduction whatsoever from their full pay, on account of provisions.—See Warrant, dated 6th of February, 1799. It will be further observed, that although the army is now paid its full pay, in consequence of the abolition of the distinction between subsistence and arrears, that pay is nevertheless subject to the usual deductions on account of poundage, hospital, and agency.—See Warrant, dated 25th of January, 1798. This will explain the mutilated appearance of the different rates of pay. Thus, a captain of infantry, who is nominally supposed to receive 10s. per diem, gets only 9s. 5d. the 7d. going for the above deductions. The full pay of the subaltern officers has been very judiciously increased, but that of the captains, &c. remains as it was in the reign of Queen Anne.—For the several rates of full pay, &c. See *Military Finance*.

PAY of the army in India. The payments are made at Bengal, in Sonaut rupees at 2s. 6d. Madras, in pagodas at 8s. Bombay rupees at 2s. 6d.

[N. B. 80 cash = 1 fanam; 40 fanams = 1 pagoda.] For further particulars see *Arrangement of the Army in India*, published by Stockdale in 1796.

Half-PAY, (*demi-solde*, *demi-paye*, Fr.) a compensation or retaining fee which is given to officers who have retired from the service through age, inability, &c. or who have been placed upon that list in consequence of a general reduction of the forces, or a partial drafting, &c. of the particular corps to which they belong. The half-pay becomes due on the 25th of June, and on the 25th of December, in each year, but it is seldom

issued until three months after the expiration of each of those periods. The only public deduction from the half-pay is the poundage, two and a half per cent.

Irish HALF-PAY. This half-pay, when paid in Irish currency, is less than the British. Every officer upon the Irish establishment, when reduced to half-pay, must swear to, and sign the following certificate:—

County of } ————— of foot, came
 } this day before me, and made oath, that he is no otherwise provided for by any commission or employment, civil or military, in his majesty's service, than by half-pay on the establishment of Ireland, and is on no other establishment of half-pay.

Officer's } Sworn before me this
 Name. } Day of

N.B. To be sworn in January, April, July, and October, in every year.

It is at present equalized; but if officers receive it in Ireland, they will be subject to the course of exchange. By special commission from the secretary at war, they may receive it in England.

Vacant-PAY. When an officer sells out of the British army, and takes what are called commissions in succession as part of the purchase-money, he becomes entitled to pay and interest on the same for six months, or until they have been disposed of, within that period. This pay or allowance is called *vacant* pay; and it is necessary for the person who holds such commissions, to write a letter to the agent of the regiment, directing him to apply to the secretary at war for the same. The form of this letter may be seen in the Regimental Companion.

N.B. The increase of the subaltern's subsistence by warrant, does not affect the vacant pay.

Staff-PAY, (*solde, ou allowance de l'état major, Fr.*) the pay and allowances which are made to officers serving on the staff of an army, or in any particular district.

Colonial-PAY, a certain allowance which is made to troops serving in the colonies, particularly in Jamaica.

A Command PAY, a term used in the ordnance department, to express a pecuniary allowance which is frequently made to engineers, who are ordered abroad with expeditions, or to command on fo-

reign stations. This is over and above their subsistence, or extra pay. A command pay is 10s. per diem.

Extra PAY, an allowance which is given to an officer over and above his regular rate.

Field-duty-PAY, an allowance which is given to the artillery, over and above the common pay.

Army PAY-office. See OFFICE.

Navy PAY-office. See OFFICE.

PAY-Bills. These bills are distinguished according to the nature of the service for which they are given. Every captain of a troop or company receives a regular weekly account from his serjeant, of money to be advanced for the effectives of such troop or company; and on the 24th day in each month he makes out a monthly one for the paymaster, who makes out a general abstract for the agent. The paymaster-general's estimate is likewise called the pay-bill.

PAY-Lists. The monthly accounts, which are transmitted by the several regimental and district paymasters to their agents on the 25th of each month, are so termed.

PAY-Rolls, the same as *PAY-Lists.*

PAY-Serjeant. See SERJEANT.

PAY-MASTER, (*quartier-mâitre, trésorier, Fr.*) is he who is intrusted with the money, and has the charge of paying the regiment. He has no other commission in the line. His pay is 15s. per day, half-pay 7s. 6d.

When a person is recommended by the colonel of a regiment to be paymaster, the following form is necessary:—

A. B. situation in life,

2 surties, and 4 referees.

District PAYMASTER, an officer appointed for the better management of the interior concerns of the army, when the regiments, &c. are on home service.

PAYMASTER-General of the forces. See OFFICE.

PAYMASTER of Marines. We have already mentioned, under the article *Marine*, that there is one paymaster appointed to superintend the distribution of all monies which are issued for the corps of marines.

Deputy PAYMASTER of Marines. The deputy paymaster, at each division, is to pass his accounts with the paymaster at the end of every month, and to deliver a general account of all monies received

and paid within that time, accompanied by vouchers, except in such instances where the nature of the disbursements will only allow of quarterly vouchers.

Commissary and PAYMASTER, a situation of trust under the board of ordnance, for the regular distribution of stores, money, &c. to the artillery on service.

PAYE, *Fr.* the pay of the troops; the money which every captain of a troop or company receives, at the close of the month, for the non-commissioned officers and privates under his command;—we call it monthly distribution.

PAYER-Gaut, *Ind.* the lower pass. **Gaut** is the general term for pass.

PAYEUR, *Fr.* a term used in the French armies to signify paymaster.

PAYEUR-général, *Fr.* paymaster-general.

PAYS, *Fr.* country, locality, ground.

PAYS, *Fr.* This word is variously applied by the French in a figurative sense: *parler, ou juger, à vue de pays*, to speak, or decide at random.

Gagner Pays, vider le pays, *Fr.* to leave a country; to go voluntarily into exile. *Gagner pays* likewise means to gain ground. *Avancer pays* may be used in the same sense.

Battre Pays, *Fr.* to speak wide of the subject.

Tirer Pays, *Fr.* a familiar phrase among the French, signifying to escape.

PAYS conquis, *Fr.* This term was applied by the French to those countries and tracts of territory which had been ceded to France by treaty; as Lorraine: or had been conquered by force of arms; as Ypres, Tournay, Gaul, Bruges, Ostend, and several other towns, from the reign of Louis XIII.

PAYS coupés, *Fr.* confined, inclosed, or intersected countries.

PAYS reconquis, *Fr.* Those provinces which were formerly in the possession of the English, such as Brittany, Normandy, Calais, &c. &c. and were afterwards retaken by the French, have been so called.

PAYS somme, *Fr.* a low piece of land or ground; but which has, nevertheless, no water.

PAYSANS, *Fr.* peasants.

PEACE has been represented allegorically as a beautiful female, holding in her hand a wand or rod towards the earth, over a hideous serpent, and keeping her other hand over her face, as un-

willing to behold strife or war. By some painters she has been represented holding in one hand an olive branch, and leading a lamb and a wolf yoked by their necks, in the other; others again have delineated her with an olive branch in her right hand, and a cornucopia, or horn of plenty, in her left.

A very celebrated temple was erected for the goddess of peace at Rome, which was furnished with most of the rich vases and curiosities taken out of the temple of the Jews at Jerusalem. In this temple she was represented as a fine lady, endowed with a great deal of sweetness and good-nature, crowned with laurel interwoven, holding a caduceus, or Mercury's snaky staff, in one hand, and a nosegay of roses and ears of corn, in the other.

The temple of Peace, built by Vespasian, was 300 feet long, and 200 broad. Josephus says, that all the rarities which men travel through the world to see, were deposited in this temple.

PEACE, (*pair, tranquillité*, *Fr.*) rest, silence, quietness; the direct opposite to war; and when the latter prevails, the ultimate object of every contest.

PEACE establishment signifies the reduced number of effective men in the British army, according to the various formations of corps. Thus one regiment may be 1200 strong in time of war, and only 600 in time of peace; whence arises the distinction between *war* and *peace* establishments. The standing army of Great Britain, according to law, consists of that force only which is kept up in time of peace, and which is confined to a specific number of regiments. Every regiment, beyond the regulated number, during a war, is liable to be reduced; and all within it are said to be out of the break.

PEAGE, *Fr.* a toll; a turnpike.

PEAGER, *Fr.* a turnpike-man; also a publican.

PEASANTS, persons who till the ground, and are otherwise employed in agricultural occupations. Many advantages may be derived to an army by a proper attention being given to this class of men. They can, in general, afford excellent information respecting the situation, soil, and resources of a country; and they make excellent guides, provided you can secure their fidelity by paying them well, and by taking proper hostages. Peasants are very useful in

apprehending deserters, especially when an army is in the neighbourhood from which recruits may have been drawn.—They are likewise of the greatest utility in fatigue duties; in the formation of lines, &c.

PECTORAL, (*pectoral*, Fr.) a breast plate. This word is derived from the Latin, *pectorale*. Among the Romans the poorer soldiers, who were rated under a thousand drachms, instead of the lorica, or brigantine, (a leather coat of mail,) wore a pectorale, or breast plate of thin brass, about 12 fingers square. Some modern troops, such as the cuirassiers, &c. wear pectorals for the direct purposes of defence and bodily protection; but, in general, small ornamental plates with clasps have been substituted.

To PECULATE, to rob the public.

PECULATION, (*péculat*, Fr.) the crime of pilfering any thing, either sacred, or public, particularly public money, by a person who has the management, or custody thereof. This crime is punishable in the heirs of the original delinquent. Under peculation may be considered not only the monies which are embezzled, or misapplied, by commissioned, non-commissioned, and warrant officers, but the public stores, provisions, arms, and ammunition, &c. which may be sold for private emolument. The articles of war are very specific on this head, (see Sect. XIII.) and the occasional examples which have been made by government, of a crime that cannot be too scrupulously watched, or too heavily punished, ought to deter individuals from sacrificing public integrity to private views. They ought to remember, that, like the sword of Damocles, an exchequer writ hangs over the head of every man whose accounts have not been finally audited and passed, and that it may fall on the next generation, although he may escape himself, unless he or his descendants get their quietus.

PECUNIA, money; a deity in the heathen mythology; and (though not a goddess personified among them) the most powerful ascendant the moderns know. The Romans held that she presided over riches, and that she had a son named *Argentinus*, whom they adored in the hopes of growing rich.

PECUNIA. The Roman officers and soldiers were accustomed to leave their pecuniary savings where the eagles were

lodged, conceiving that spot to be the most secure, because it was held to be the most sacred among soldiers. From this conception, Vegetius has drawn the following conclusion:—*Miles deinde qui sumptus suos scit apud signa depositos, de deserendo nil cogitat, magis diligit signa, pro illis in acie fortius dimicat*. The soldier, of course, who has lodged his property, or savings, with the standards, never thinks of deserting: but is, on the contrary, more attached to those standards, and fights for them in battle with increased strength and intrepidity. The standard bearer had always the charge of these pecuniary deposits; but as this standard-bearer, to use the words of a French author, was not always proof against corruption, these sacred deposits sometimes shared the fate of other pledges which were equally sacred, or ought, at least, to be so. Modern agents and paymasters may learn, from this article, that if a soldier is honestly done by, his courage and fidelity will always equal, nay, frequently exceed, the duties of his profession. We cannot help adverting, in this place, to a practice which, however governed by principles of right and honesty, has always proved injurious to the British soldier:—we mean the practice of giving men, who are going upon service, a regulated sum in lieu of necessaries, &c. which may be due. The consequence has invariably proved to be this, the soldier has laid out his money in liquor, (as was the case before the Walcheren expedition,) and if he escaped, he has returned penniless and shirtless, and of course commenced his home duties by being in debt. This money should have been placed to account.

PECUNIUS, a deity of the ancient Prussians in honour of whom they kept a fire lighted with oak perpetually burning. A priest constantly attended, and if the fire happened to go out by his neglect, he was instantly put to death. When it thundered, they imagined that their grand priest conversed with their god, and for that reason they fell prostrate on the earth, praying for seasonable weather.

PEDEA, *Ind.* a foot soldier.

PEDERERO, **PATTARERO**, a Portuguese term, signifying a small sort of cannon, which is particularly used on the quarter deck of ships, to fire, or throw forth stones, or broken iron, upon

boarding parties. This word has been adopted both by the French and English.

PEDIMENT, (in architecture,) a kind of low pinnacle, serving to crown an ordnance, or finish a frontispiece, and is placed as an ornament over gates, doors, windows, niches, altars, &c. It is generally of a triangular form; but sometimes makes an arch of a circle. The French use the word *fronton*.

The parts of a *pediment* are the *tympanum* and the *cornice*.

The most beautiful form of pediment, according to *D'Aviler*, is where its height is about 1-5th of the length of its base.

It has been observed by *Salmasius*, on *Solin*, that *Casar* was the first who obtained leave to roof his house with a ridge, or descent, after the manner used in those times to cover temples.

A *pointed pediment* may crown three arches; but a *circular pediment* can only crown agreeably.

It has been remarked, that the placing of two pediments over one another, as is the case in the old Louvre, at Paris, is perfectly absurd and ridiculous, though done by an architect of reputation.

PEDESTAL, (*pièdestal*, Fr.) in architecture, the lowest part of an order of column; being that which sustains the column, and serves it as a foot, or stand.

The pedestal which the Greeks call *stylobates* and *stereobates*, consists of three principal parts, viz. a *square trunk*, or *die*, which makes the body; a *cornice*, the head; and a *base*, the foot of the pedestal.

The pedestal is properly an appendage to a column, not an essential part of it; though *M. Le Clerc* thinks it is essential to a complete order.

There are as many kinds of pedestals, as there are orders of columns, viz. *five*. The *Tuscan*, *Doric*, *Ionic*, *Corinthian*, and *Composite*. The persons who have chiefly written upon this branch of architecture, are our own countryman, *Sir Henry Wootton*, *Jacobo Baroccis*, the Italian, *Vignola*, *M. Perrault*, *Vitruvius*, *Palladio*, *Scamozzi*, *Serlis*, *Le Clerc*, *D'Aviler*, *Philander*, &c.

Square PEDESTAL is one whose height and width are equal.

Double PEDESTAL is that which supports two columns, and has more breadth than height.

Continued PEDESTAL is one which supports a row of columns without any break, or interruption.

PEDESTALS of *statues* are such as serve to support statues, or figures.

PEDOMETER, (*pédomètre*, Fr.) a mathematical instrument, composed of various wheels with teeth, which by means of a chain fastened to a man's foot, or to the wheel of a chariot, advance a notch each step, or each revolution of the wheel, and the number being marked at the edge of each wheel, the paces may be numbered, and the distance from one place to another be exactly measured.

PEER, *Ind.* Monday.

PEER, in building. See PIER.

PEERS, (*pairs*, Fr.) equals; persons of the same rank and condition as ourselves. When this word is applied to the privileged orders, it signifies something more than mere equals. Hence, in French, *pairs* is a word that is used with more propriety than *égaux*.

To be tried by our PEERS, (*être jugé par nos égaux*, Fr.) to have a jury composed of persons of our own rank and condition. This principle is partly adhered to in our military courts of inquiry, with respect to officers; but not so in regard to privates. During the old Prussian government, it was strictly observed in the latter instance. Our troop and company courts-martial are also conformable to it.

PEGS, (*chévilles*, Fr.) pointed pieces of wood, used to fasten the cords of a tent.

PEIADAK, *Ind.* a guard to accompany a prisoner at large.

PEISA, *Ind.* cash.

PEISHWAI, a minister, or supreme magistrate in the Mahratta empire, to whom the civil authorities of the state are delegated.

PELE-MELE, Fr. a French adverb, from which is derived the English term *Pellmell*, signifying, confusedly, in disorder, in heaps, &c.

PELICAN, Fr. an ancient piece of artillery which carried a six pound weight of ball, and weighed two thousand four hundred pounds.

PELLE *de bois simple*, Fr. a wooden shovel.

La PELLE au cul, Fr. literally, the spade, or pick-axe at the posteriors. A figurative expression used by the French

when an army runs away. *L'armée est revenue la pelle au cul*, the army returned in complete disgrace.

PELLETS, small globular substances made of paste or bread; mock duels have sometimes been fought with these harmless instruments of fraud.

PELLICOIDES, (in geometry,) a figure which resembles a hatchet.

PELOTE à feu, Fr. Pelote literally means the bottom of a pincushion, a ball, &c. It is here used to signify a species of combustible ball, which serves to throw light in a fosse, or elsewhere. The composition is pitch one part, sulphur three parts, to one pound of saltpetre. The whole is well mixed together, and incorporated with tow, from which the pelotes are made. The words *peloton* and *platoon*, are formed from *pelote*, signifying any thing collected, or put together, as a worsted ball, &c. may be.

PELTON, Fr. platoon.

Rompre le PELTON, Fr. A platoon being generally considered as a subdivision, *rompre le peloton* signifies to break into sections.

Former le PELTON, Fr. to double up or form subdivision.

PELTON de modèle, Fr. a platoon, or company set up as a model to others.

PELÔTONNE, Fr. formed into a platoon.

PELTONNER, Fr. to gather together, to get into groups.

Se PELTONNER, Fr. to form into a platoon.

PELTA, in antiquity, a kind of buckler, small, light, and more manageable than the Parma which was used by the Amazons, according to Virgil; and resembled the moon in its first quarter, according to Servius.

PELTA. This small shield, or buckler, was also used by the Macedonians, Cretans, Africans, and ancient Spaniards. Those who carried shields of this description were called Peltati.

PEN, (*plume*, Fr.) an instrument well known for writing. The strongest and most effective weapon in the hands of a man of sense, and the weakest and most impotent in those of a fool.

PEN and ink men, a phrase used in the army, to mark those persons who are employed in civil capacities; such as military secretaries, commissaries, &c. The French say, *gens de plume*.

To PEN, to write down what is deli-

vered by word of mouth. Thus Frederick of Prussia had several secretaries who *penned out* what he said, or spoke.

To PEN, to coop; to shut up. As, the garrison, in Flushing, was penned up by the navy on one side, and by the army on the other.

PENAL, (*pénal*, Fr.) any decree, or law which subjects individuals, &c. to penalties. Hence *code pénal*; *les lois pénales*: the penal code; the penal laws. Of late years the British service has been considerably relieved from the inconveniencies and injuries which it suffered in consequence of an unnatural exclusion of a great proportion of the native strength of the country, on account of religious notions, and we trust that a general emancipation will, sooner or later, put these islands upon a footing with other enlightened nations.

PENALTY, in a military sense, signifies forfeiture for non-performance, likewise punishment for embezzlement, &c. An officer found guilty of embezzling his Majesty's stores is cashiered, and forfeits one hundred pounds: any person who harbours, conceals, or assists a deserter from his Majesty's service, forfeits five pounds for each offence.

La PENDAISON, Fr. the punishment which is inflicted on an individual for some atrocious crime, by keeping his body suspended from a rope tightened round his neck until he expires. In plain English, the act of hanging.

PENDENTIVE, (*pendentif*, Fr.) in architecture, the whole body of a vault suspended out of the perpendicular of the walls and bearing against the arc-boutant. *D'Ariler* and *Bélicor* describe it as a portion of a vault between the arches of a dome, usually inscribed with sculpture; and *Felibien* takes it for the plain of a vault, contained between the double arches, the forming arches and the ogives. The *pendentives* are usually of brick, or soft stone, but care is to be taken that the couches, or beds of masonry, be always laid level, and in right line, proceeding from the sweep, whence the rise was taken; the joints, too, must be made as small as possible, to save the necessity of filling them up with wood, or of using much mortar.

PENDULUM, in mechanics, any heavy body suspended in such a manner that it may vibrate backwards and forwards, about some fixed point, by the force of gravity.

A pendulum is any body suspended upon, and moving about, a point as a center. The nature of a pendulum consists in the following particulars: 1. The times of the vibrations of a pendulum, in very small arches, are all equal. 2. The velocity of the bob in the lowest point, will be nearly as the length of the cord of the arch which it describes in the descent. 3. The times of vibrations in different pendulums are the square roots of the times of their vibrations. 4. The time of one vibration is to the time of descent, through half the length of the pendulum, as the circumference of a circle is to its diameter. 5. Whence the length of a pendulum, vibrating seconds in this latitude, will be found to be 39 inches and 2-10ths; and of one half second pendulum 9.8 inches. 6. An uniform homogeneous body, as a rod, staff, &c. which is 1-3d part longer than a pendulum, will vibrate in the same time with it.

From these properties of the pendulum we may discern its use as an universal chronometer, or regulator of time. By this instrument, also, we can measure the distance of a ship, of a battery, &c. by measuring the interval of time between the fire and report of the gun; also the distance of a cloud, by counting the seconds or half seconds, between the lightning and the thunder. Thus, sup-

pose between the lightning and thunder we count ten seconds; then, because sound passes through 1142 feet in one second, we get the distance of the cloud=11420 feet. Again, the height of any room or other object, may be measured by a pendulum vibrating from the top thereof. Thus, suppose a pendulum from the height of a room, or other object, vibrates once in three seconds; then say, as 1 is to the square of 3, viz. 9, so is 39.2 to 352.8 feet, the height required. Lastly, by the pendulum we discover the different force of gravity on divers parts of the earth's surface, and thence the true figure of the earth.

PENDULUM. Pendulums for military purposes are best made with a musket ball, and a piece of silk, or other small line. Their length must be measured from the center of the ball to the end of the loop on which they are to swing. In a cylinder, or other uniform prism or rod, the center of oscillation, whence they must be measured, is at the distance of one-third from the bottom, or two thirds below the center of motion.

Pendulums length in latitude of London, to swing

Seconds	—	—	39.1-8th
$\frac{1}{2}$ Seconds	—	—	9.8
$\frac{1}{4}$ Seconds	—	—	2.46

Length of Pendulum to vibrate Seconds at every Fifth Degree of Latitude.

Degrees of Latitude.	Length of Pendulum.	Degrees of Latitude.	Length of Pendulum.	Degrees of Latitude.	Length of Pendulum.
	Inches.		Inches.		Inches.
0	39.027	35	39.084	65	39.168
5	39.029	40	39.097	70	39.177
10	39.032	45	39.111	75	39.185
15	39.036	50	39.126	80	39.191
20	39.044	55	39.142	85	39.195
25	39.057	60	39.158	90	39.197
30	39.070				

Rule—To find the length of a pendulum to make any number of vibrations, and, vice versa. Call the pendulum, making sixty vibrations, the standard length; then say, as the square of the given number of vibrations is to the

square of 60; so is the length of the standard to the length sought. If the length of the pendulum be given, and the number of vibrations it makes in a minute be required; say, as the given length is to the standard length, so is

the square of 60, its vibrations in a minute, to the square of the number required; the square root of which will be the number of vibrations made in a minute.

PENE, *Fr.* the bolt of a lock.

PENETRATION, *line of penetration*. When an army advances against another, or into a country, its first movements constitute a line of penetration.

PENINSULA, (*Péninsule, Presqu'île, Fr.*) any space of ground, which has water on all sides, except one; and which is joined to the continent by a slip of land called an isthmus. Thus Spain, from its situation, is generally called, by way of distinction, the *Penninsula*.

PENNANT, PENNON, a small flag or colour.

PENNETON, *Fr.* the bit or nib of a key.

Gentlemen PENSIONERS, (*gentilshommes pensionnaires, Fr.*) a band of gentlemen, who guard the king's person in his own house, and for that end wait in the presence chamber. They were first instituted by Henry VII. They are usually forty in number. Their officers are, a captain, lieutenants, standard bearer and clerk of the cheque. Their ordinary arms are gilt pole axes. Their pension is 100*l.* per annum.

PENSION, (*pension, Fr.*) a salary.—An allowance given for present or past services, revocable at the will of the donor, in some instances, and, in others, extended to families.

Military PENSIONS, (*pensions militaires, Fr.*) annual allowances or pensions which are given to officers for military services, and which are frequently continued to their widows and children. With us, these pensions are sometimes accompanied by other marks of public gratitude: in which cases they are voted by parliament, or given by bodies corporate.

PENSIONS for Officers' Widows.—*Regimental, not Brevet*:

Widow of a general officer, <i>per ann.</i>	120
Colonel of a regiment not a general officer	90
Lieutenant colonel	80
Major	70
Captain	50
First lieutenant	40
Second do. cornet and ensign	36

Paymaster, previous to the 24th August 1811	40
Ditto, subsequent to ditto	50
Adjutant and surgeon	40
Quarter-master and assist. surgeon	36
Veterinary surgeon	30

STAFF.

Widow of a commissary general	120
Deputy commissary general	60
Do. after having been 3 years upon full-pay	70
Assistant commissary general	50
Deputy ditto,	40
Director and inspector of hospitals	70
Deputy inspector of hospitals	50
Physician (after having served abroad as such)	50
Do. (not having served abroad)	40
Purveyor, district paymaster, and surgeon	40
Deputy purveyor	30
Apothecary	36
Hospital assistant (after having served abroad as such)	30
Chaplain general	90
Chaplain to the forces	50

N.B.—The above pensions are payable every four months, viz. April, August, and December, at the Pay Office, Whitehall, except those that relate to the Commissariat Department, which are payable every three months, at the office of the Commissary in Chief, No. 35, Great George Street, Westminster.

The widows of all commissioned officers belonging to the British service, are entitled to receive a certain annual allowance, according to the several ranks of their husbands. Instructions to this end are signed by the king, and lodged with the paymaster general. The widows of warrant-officers are not included in the regulation. It has sometimes, however, happened, that the king has granted a pension of 16*l.* a year to the widow of a quarter-master of dragoons, who is a warrant officer, when His Majesty has thought such widow a proper object of his bounty.

PENSIONS to Officers having lost (or having sustained an injury equal to losing) an eye or a limb on service.

Field Marshal; General, or Lt.-General, commanding chief at the time	} To be specially considered.
Lieutenant General	
Major general; or Brigadier general commanding a brigade; and commissary general at the head of department.	} 350

Veterinary surgeon				
Deputy purveyor				

The officers marked thus * to have the allowance according to their *army* rank, if they prefer it.

Note—From the date of the battle of Waterloo, 18th June, 1815, the above pensions increase with the rank.

The payments are made half yearly, at the Pay Office, Whitehall.

PENSTOCK, a flood-gate, placed in the water of a mill-pond.

PENTACAPSULAR, having five cavities.

PENTADORON, a kind of bricks

anciently in use among the Greeks, being three feet nine inches long and one foot broad, with which they built their public buildings.

PENTAEDROÛS, having five sides.

PENTAGON, in fortification, a figure bounded by five sides, or polygons, which form so many angles, capable of being fortified with an equal number of bastions. It also denotes a fort with five bastions.

PENTAGRAPH, (*pentagraphe*, Fr.) an instrument whereby designs, &c. may be copied in any proportion, without the person who uses it being skilled in drawing.

PENTANGLE, a figure having five angles.

PENTANGULAR. See PENTAGON

PENTAPOLIS, in geography, a country consisting of five cities. This name was given, particularly, to the valley wherein stood the five infamous cities destroyed by fire and brimstone in Abraham's time. The most celebrated Pentapolis was the Pentapolis Cyrenaica in Egypt, whose cities were Berenice, Arsinoe, Ptolemais, Cyrene, and Apollonia.

PENTASPAST, (*pentapaste*, Fr.) an engine that has five pullies.

PENTATHLON, the five exercises performed in the Grecian games, viz. *leaping, running, quoiting, darting, and wrestling.*

PENTE, *Fr.* slope; declivity.

PENTHOUSE, a shed hanging forward, in a sloping direction, from the main wall of a place.

PENTILE, a tile formed to cover the sloping part of the roof; they are often called, collectively, pantiles; are thirteen inches long, with a button to hang on the laths; they are hollow and circular.

PENTILE likewise signifies any shed or covering upon which tiles are laid.

PENTURE, *Fr.* the hinge of a door.

PENULE, *Fr.* a long cloak for rainy weather.

PEONS, *Ind.* foot soldiers. People of colour, so called in the Spanish islands; a set of vagabonds who casually visit the islands from the continent, and who are ready to join in any disorder that affords a prospect of plunder. The majority of the slaves in Trinidad, &c. consist of these people. These men are chiefly employed to assist in collecting the revenues. Most persons in India

keep servants, who wear a belt with the master's name : these are likewise called Peons, or Puns.

PEON also means an allowance which is paid in money to the troops at Madras only. It is called Peon and Oil Money.

PEOPLE of Colour, blacks, and mulattoes, &c. so called. They form part of the British territorial army, and are distributed, in corps, among our West India islands.

PEPINIÈRE, *Fr.* nursery. Thus the collieries in Northumberland and Durham are called the nurseries for British seamen.

PEPLEGMENON, an order of battle which was used among the Greeks, and consisted in a centre being so formed by the two wings of an army, as to stand advanced against an opposing enemy.

PÉQUIN, a sort of half-military, half-civil character.

PERAMBULATOR. See PEDOMETER.

PERCER, *Fr.* to pierce. This word has various significations in the French language. It also means to make one's way, or to rise from the lowest, to the highest station. Hence, *Il a percé tout le régiment; toute l'armée*: he rose or made his way through the whole regiment, the whole army.

PERCER *l'ennemi*, *Fr.* to cut through the enemy. See TO CUT.

PERCH, a measure of five yards and a half; a pole.

PERCUSSION, the impression which a body makes in falling or striking upon another, or the shock of two moving bodies. It is either direct, or oblique.

Direct PERCUSSION is where the impulse is given in the direction of a right line perpendicular to the point of contact.

Oblique PERCUSSION, when it is given in the direction of a line oblique to the point of contact.

Center of PERCUSSION, that point wherein the shock of the percussive bodies is the greatest.

PERCUTIENT, striking against or upon.

PERDREAUX, *Fr.* a quantity of grenades, which are cast out of a mortar with one shell.

PERDU, a word adopted from the French, signifying to lie flat and closely

in wait. It likewise means the forlorn hope.

A corps PERDU, *Fr.* desperately.

A coup PERDU, *Fr.* at random.

Coup PERDU, *Fr.* random shot.

Cloux à tête PERDUE, *Fr.* nails driven into wood, so as not to shew the head, commonly called *sunk nails*.

PEREMPTORY, whatever is absolute and final, not to be altered, renewed or restrained. *Peremptory execution*, that which takes place immediately.

PERE, *Ind.* See PEER.

PERFIDIOUS, (*perfidie*, *Fr.*) treacherous, false to trust, guilty of violated faith.

PERFIDIOUSLY, treacherously, falsely, without faith.

PERFIDY, want of faith, treachery.

PERFORATED *Shield*, a shield having a pistol projecting from its center, and a small grated aperture above for taking aim.

PERGUNNA, *Ind.* a district.

PERIL-*éminent ou imminent*, *Fr.* eminent or imminent danger. The French sometimes use the words eminent and imminent in the same sense, viz. to signify great or ready to come upon us, hanging over us.

PERIMETER, (*périmètre*, *Fr.*) in geometry, the extent that bounds any figure or body. The perimeters of figures or surfaces, are lines; those of bodies are surfaces. In circular figures, &c. we use circumference or periphery instead of perimeter.

PERIOD. This word is frequently used in military accounts, to express the intermediate time for which money has been issued to officers or soldiers.

Broken PERIOD, a term used in the returns and financial statements of the British army, when the regular distribution of pay is interrupted, or the effective force is lessened by the absence of one or more individuals, or by any other cause. A correct and faithful statement of broken periods is essentially necessary in every well regulated regiment, as not only the service, but the public purse may be materially injured by the neglect, or embezzlement, of individuals.

Intermediate PERIOD, any space of time allowed between the departure of a person from one place or commission, and his entrance into another.

PERIPHERY, the circumference, as of a circle.

PÉRIR, *Fr.* This word is used to

express the calamitous situation of an army, which has been frequently defeated, or otherways injured and broken down. Hence *les combats ont fait périr une partie de l'armée*, part of the army perished, or was destroyed in action.

PERISTYLE, a circular range of pillars for the support or ornament of any building, &c. used in the ancient amphitheatres.

PERKERNUCKA, *Ind.* petty officers are so called in India.

PERJURY, (*parjure*, Fr.) forswearing; taking a false oath. If the slightest deviation from the truth prove a stain upon the character of a soldier, what must perjury or prevarication be? The Romans respected as the firmest bond of society, the useful persuasion, that, either in this or in a future life, the crime of perjury is most assuredly punished by the avenging gods.

PERMANENT Fortification, is defined to be the art of fortifying towns, &c. so as to resist the attacks of an enemy that makes regular approaches.

PERMANENT Rank, a rank in the army, which does not cease with any particular service, or locality of circumstances; in opposition to *local* or *temporary rank*.

PERMISSION, *Fr.* leave.

Etre en PERMISSION, *Fr.* to be on leave of absence.

PERPENDER, (*perpigne*, Fr.) a coping stone.

PERPENDICULAR, in fortification, (*perpendiculaire*, Fr.) according to Vauban's system, it is a line raised in a perpendicular direction on the center of the exterior side of any given polygon. In mean fortification, which prevails more than any other system, the perpendicular contains 30 toises in the hexagon, and in polygons that have a greater number of sides; but it contains fewer when the polygons have a less number. The perpendicular is used by this engineer to determine the other lines and angles belonging to a fortification. In proportion as the perpendicular is increased, the extent of the flanks is augmented.

PERPENDICULAR Fortification is that in which all the component parts flank each other at straight angles. Pagan, and other engineers, made the flanks perpendicular to the lines of defence.

PERPENDICULAR, (*perpendiculaire*, Fr.)

When any star is vertical, it is said, in astronomy, to be perpendicular, because its beams fall directly upon us.

PERPENDICULAR, in geometry; when any right line is perpendicular to all the lines it meets with in a plane, it is said to be perpendicular to that plane.

PERPENDICULAR direction, in marching, is the regular and straight progress of one or more men over given points. When several columns, divisions, or companies, advance, the different pivots must be strictly perpendicular and parallel to each other, otherwise the distances will be lost, and the ultimate object of forming a correct line must be defeated.

PERPENDICULE, *Fr.* a plummet.

PERPETUAL screw, a screw which is acted upon by the teeth of a wheel, and which continues its action for an indefinite length of time; or so long as the teeth of the wheel continue to act upon it.

PERPLEXE, *Fr.* perplexed; at a loss what to do.

PERQUISITES, all manner of profits arising from an office or place, independent of the actual salary or revenue.

PERRIÈRE, *Fr.* an iron bar, which is sharp at one end, and which is used in casting ordnance.

PERRIÈRES, *Fr.* See **CLIDE**.

PERRON, (*perron*, Fr.) is a flight of stairs lying open, or on the outside of a building.

PERRUQUE, *Fr.* wig.

Grosses PERRUQUES, *Fr.* big wigs. An expression of contempt, which was used by Bonaparte in 1806, when he spoke of the Prussian generals.

PERSEVERANCE, (*persévérance*, Fr.) persistence in any design or attempt; steadiness in pursuits; constancy in progress; not to be diverted from its object by good or bad fortune. It is applied alike to good and ill. In the life of Q. Sertorius, as told by Plutarch, we find the following illustration of this inestimable quality.

“But to give them the strongest lesson of patience and perseverance, he (i. e. Sertorius) one day assembled the whole army, and then caused two horses to be brought before them, the one old, feeble, and lean, the other large, sleek, and vigorous. Near to the lean horse he placed a strong, tall man, and near to the strong horse, a little man, of poor

despicable figure; he then gave orders that each should pull off the horse's tail next him; the strong man took hold of the weak horse's tail with both his hands, as if willing to pull it off by force at once; the little man, in the mean time, began to pluck off the great horse's tail, hair by hair. When the strong man had, for some time, fruitlessly endeavoured to effect his purpose, to the amusement of the spectators, he desisted; the little man, however, in a short time, with great ease, pulled off every hair from the great horse's tail. *My fellow soldiers, then cried Sertorius, PERSEVERANCE is more efficacious than force; let us use judgment and wait for opportunity, and the greatest powers must yield to us.* He thus restrained the temerity of the barbarians, and joined prudence to their natural ferocity."

PERSEVERANCE. In addition to what we have already said relative to this inestimable quality, we feel no common pleasure in being able to mention the opinion of our immortal Nelson, upon the same subject. In page 4, vol. 2, of his life, we find the following sentences.

"Thus may be exemplified by my life, that perseverance, in any profession, will most probably meet its reward. Without having any inheritance, or having been fortunate in prize money, I have received all the honours of my profession, been created a peer of Great Britain, &c." and I may say to the reader, go thou and do likewise.

PERSIAN Language, Ind. There are two sorts; the ancient, called Zeban-e-Pehlavy; the modern, called Zebaun-edery. Our countryman the late Sir William Jones has written largely upon the subject.

PERSIAN Order, PERSIC Order, (Persique, Fr.) In architecture, an order of columns which has the figures of Persian slaves to support the entablement instead of columns, as *caryatic* order has the figures of women for the same purpose. This order was first used by the Athenians in token of a victory which their general *Pausanias* gained over the *Persians*. *M. Le Clerc* says, that Persian columns are not always made with the marks of slavery, but are frequently used as symbols of virtues and vices, of joy, strength, valour, &c.

PERSPECTIVE, is the art of draw-

ing the resemblances or pictures of objects on a plain surface, as the objects themselves appear to the eye, &c.

PERSPECTIVE Elevation. See SCENOGRAPHY.

Military PERSPECTIVE, (*perspective militaire, Fr.*) or the art of drawing objects for military purposes, by sketching them on paper from any point, taken at will, from the distance of the perspective, with which all the lines that are drawn on the horizontal or inferior part of the plane must correspond at equal distances. In a figurative sense, military perspective may be considered as containing those remote but enticing points of human emulation, towards which every military man directs his views and talents, in order to secure, by good conduct and brilliant actions, high rank and unblemished reputation in arms.

PERSONAL, relating to one's private actions or character. It ought invariably to be impressed upon the minds of officers, that nothing tends so much to disunion, &c. as personal remarks, or applications.

PERSONAL insult, (injure personnelle, Fr.) a direct affront which is given to a person in such a manner, that it is impossible to misconstrue the intention. Insults of this description seldom occur in the army, as their consequences are generally fatal.

PERSONAL courage, an innate valour, or contempt of danger, growing out of one's natural disposition.

To be PERSONAL, to say, or write, anything which affects the private actions or character of an individual.

PERSONNALITÉ, Fr. The French use this word to express the character and quality of what may be personal—*Juger sans personnalité,* to judge without personal prejudice. It also signifies self-conceit, self-occupation, egotism: *cet officier est d'une personnalité odieuse,* that officer is full of himself even to disgust.

PERSONNEL, Fr. The French use this word variously, viz. *mérite personnel,* personal merit: *qualités personnelles,* personal qualities; *injure personnelle,* personal injury: *personnel,* selfish, or self-occupied; as *cet officier est très personnel,* that officer is extremely selfish, or full of himself. They also say, *les fautes sont personnelles,* every one is answerable for his own defects.

PERSONNEL, *Fr.* that part of an army which consists of men only, opposed to *matérielle*, which includes horses, cannon, wagons, &c. See **MATÉRIELLE**.

PERSONNEL, *Fr.* a substantive used to express the good or bad appearance of a person; as *son personnel est très odieux*, his appearance is very disgusting or odious.

PERSUASION, (*persuasion*, *Fr.*) the faculty of influencing; the act of gaining, or attempting the passions.

We find a remarkable instance of this faculty in the conduct of Julius Cæsar, when he not only quelled the mutiny of one of his best legions, but also made the deepest impression on their minds.

When the mutineers appeared in his presence, they were so struck with the awe and respect which his victories inspired, that even the boldest among them could not utter a single word. Then Cæsar, mounting his tribunal, exhorted them to speak, and lay their complaints before him. Hereupon they took courage, and begged him to discharge them, alledging their age, their wounds, and their long service. As Cæsar was entering on a new war, they expected he would have courted them, and, with large presents, enticed them to follow him. They were therefore thunderstruck, when he answered, without shewing the least surprise or concern, "*Your demand is just; I do discharge you, and you may be gone.*" Cæsar, perceiving the consternation and surprise these words occasioned among them, after having kept silence for some time, added—*I do not, however, design to rob you of your rewards; these I will give you, when I shall have triumphed over the rest of my enemies.*

At these words, they crowded round his tribunal, begging that since he intended to reward them, he would suffer them to deserve the promised recompense with further services. But Cæsar, without seeming to take notice of their demand—*Go, fellow citizens*, said he, *return to your houses and families.* The word, *fellow citizens*, instead of *fellow soldiers*, was like a clap of thunder in their ears. They all cried out that they were soldiers; that they had not accepted of their discharge; and that they would follow him into Africa. But Cæsar, pretending to despise both their offers and their submissions, turned his back upon them, and came down from his tribunal; then the legionaries, throwing themselves

at his feet, conjured him rather to inflict such punishments upon them as their insolence deserved, than to disband them in so shameful a manner. He continued, however, inflexible for a considerable time; but at length, pretending to be overcome by the importunities of his friends, he ascended the tribunal once more, and, addressing himself to them, told them, that the revolt surprised him the more, because it came from a legion, which he had always distinguished above the rest; that, nevertheless, he could not prevail upon himself to punish those whom he had once so tenderly loved; that, on his return from Africa, he would give them the rewards he had promised, and lands too for their subsistence; but that he would not by any means suffer them to attend him in the expedition he was now undertaking, in order to convince them, that he could conquer without them. This speech made so deep an impression on their minds, that, with tears in their eyes, they begged he would rather decimate them, than debar them from sharing with him the glory of his victories. *We will follow you as volunteers*, they all cried out with one voice, *if you refuse to admit us in the number of your legions.* These words, which were manifestly spoken from a true sense of their crime, and a sincere repentance, touched Cæsar: he could no longer dissemble; but stiling them again *fellow soldiers*, he not only freely forgave them, but declared, that they should share with him both the glory and advantages of all his victories. See Appian, Hert. Liv. Dio.

PERTE, *Fr.* loss.

La PERTE d'une bataille, *Fr.* the loss of a battle.

Pure PERTE, *Fr.* pure loss, i. e. downright loss.

A PERTE de vue, *Fr.* almost out of sight; as far as the eye can reach.

A PERTE d'haleine, *Fr.* out of breath.

PERTUIS, *Fr.* a narrow pass. See **DÉTROIT**.

PERTUIS, *Fr.* a narrow passage which is made in the shallow parts of a river, for the facility of navigation. This passage is sometimes confined with flood-gates, in order to raise or lower the waters according to circumstances.

PERTUISANE, *Fr.* a halbert which has a longer and broader iron at the end than the common halberts have.—

Pertuisanes were formerly given, in the French service, to the infantry, in order to enable them to withstand the shock of cavalry. They were laid aside in 1670, and confined to the invalids, who continued, and, perhaps, still continue, to use them in France, during the monarchy.

PERUST, *Ind.* a small weight or measure, equal to four koodups or puls.

PERWANNA, *Ind.* an order, warrant, or letter, signed by a navaub or nabob.

PESANTEUR, *Fr.* gravity. The French also use the word *gravité*.

PESANTEUR *absolue d'un corps*, *Fr.* absolute gravity.

PESANTEUR *relative d'un corps*, *Fr.* relative gravity.

PESANTEUR *spécifique*, *Fr.* specific gravity.

PESATE, or *Pesado*, or *Posade*, *Fr.* in horsemanship, is when a horse in lifting or raising his fore-quarters, keeps his hind-legs upon the ground without stirring, so that he marks no time with his haunches, till his fore-legs reach the ground. This motion affords the true means of fixing his head and his haunches, to make him ply and bend his fore-thighs, and to hinder him from stamping and clattering with his feet.

PESER, *Fr.* to weigh; to consider.

Tout PESÉ, *Fr.* all things considered.

PESHTWA, or PAISHWA, *Ind.* prime minister, the acting head of the Morat-toe states.

PESON, *Fr.* See STEELYARD.

PESSAIRES *pour les Hernies*, *Fr.* trusses; such as are worn for ruptures. See TRUSS.

PESSIÈRE, *Fr.* a dam that is raised for the purpose of confining a sufficient quantity of water in a reservoir, by which any machine may be worked, or kept in motion. The overflowing of the river may run over this dam, without doing any injury to it.

PËSTLE, an instrument used in the fabrication of gunpowder. See GUNPOWDER MILL.

PETARD, or PETARDO, a machine in the shape of a cone cut in two, made of cast or wrought iron; its depth and breadth must be in proportion to its thickness. There are four handles to this machine, with which it is firmly fixed to a plank, by means of iron hoops or bands; there is also a strong iron

hook in the plank, for the purpose of fixing it to the spot against which the petard is to act. The business of the petard is to burst open gates, barriers, and even walls, by being loaded with ball and gunpowder, and after it has been fixed to a plank, by lighting the touchhole. Its invention is ascribed to the French Huguenots in 1579, who, by means of petards, took Cahors, in the same year.

Petards are of four different sizes: the first contains 12lbs. 13ozs. second 10lbs. 11ozs. third 1lb. 10ozs. fourth 1lb. The blind fuse composition for them is of mealed powder, 7lb. wood ashes 3ozs.

PËTARDE, *Fr.* a word chiefly applicable to war-horses, when they kick, wince, and fart.

PËTARDEAUX, *Fr.* pieces of wood covered with wool and pitch, which are used to stop the holes that are made in the sides of a ship by cannon-balls, during an engagement.

PËTARDER, *Fr.* to fire petards.

PËTARDIER, *Fr.* the man who loads, fixes, and fires the petard. It likewise signifies, among the French, the man who makes or throws a petard.

PËTARDIER, *Fr.* also means an artillery officer, who is ordered to blow up the gates of a fortified place.

PËTAUX, *Bibaux*, *Tuffès*, *Fr.* according to Montrelet and Froissard, two French writers, these were foot soldiers armed with large pikes, who lived on plunder. A. T. Gaigne, author of the *Nouveau Dictionnaire Militaire*, published in 1801, says, that the name of *pétaux* was formerly given to those peasants who were enlisted by force.

PËTEL, *Ind.* the head of a village.

PËTER, *Fr.* in a military sense, to explode, to make a loud noise.

PËTEROLLES, *Fr.* squibs, such as children make and use in the streets for their diversion.

PËTILLER, *Fr.* to sparkle: to shine with a vivid light. Hence, *pétiller d'esprit*, to be full of wit.

PËTITE-guerre, *Fr.* See GUERRE, for its definition.

PËTITE-guerre, or a war of posts, is carried on by a light party, commanded by an expert partisan, and which should consist of 1000 or 2000 men, separated from the army, to secure the camp, or to cover a march; to reconnoitre the enemy or the country; to seize their posts, convoys, and escorts; to plant ambuscades,

and to put in practice every stratagem for surprising or disturbing the enemy; which is called carrying on the *petite-guerre*. The genius of these days, and the operations of the last war, have placed the service of such a corps in a most respectable light, as it is more fatiguing, more dangerous, and more desultory than any other.

To form a corps capable of carrying on the *petite-guerre* to advantage, prudence requires, that it should consist of 1000 men at least, without which a partizan cannot expect to support the fatigues of a campaign, and seize the most important occasions that every where offer, and which a too great inferiority must make him forego.

It is no less important, that this corps should be composed of infantry and cavalry; and as it is incontestible that the cavalry would be the most active in carrying on the *petite-guerre*, it were to be wished, that they were likewise the strongest, so as to have 600 cavalry and 400 infantry in a corps of 1000 men, making four companies of infantry, and twelve troops of cavalry. Each company of infantry to consist of 1 captain, 1 first and 2 second lieutenants, 4 serjeants, and 96 men, including 4 corporals, 4 lance-corporals, and 2 drummers. Each troop of cavalry to consist of one captain, 1 first and 1 second lieutenant, a quarter-master, two serjeants, and 48 horsemen; including 4 corporals, a trumpeter, and farrier.

The commanding officer should have the naming of the officers of this corps, or at least the liberty to reject such as he is convinced are not qualified for the service. To support the honour of this corps, upon a solid and respectable footing, the strictest subordination must extend from the chief to all the officers, and the most rigid discipline, vigilance, patience, bravery, and love of glory, ought to pervade the whole corps. Of this description, we presume, was the Portuguese legion, which acted so much to the credit of its leader, Sir Robert Wilson, in the Peninsula.

PETITION. See MEMORIAL.

PETBARIA. See MANGON.

PEÛRE. See NITRE, SALTPETRE.

PÛTRI *d'eau froide*, Fr. effeminate; cowardly; literally, petrified or rendered callous by the mere touch of cold water; incapable of bearing the least hardship.

PETRINAL, PETRONEL, or POITRINAL, *Fr.* a species of fire-arm between the arquebuse and the pistol, which was used among the French, during the reign of Francis I. There is mention made of it in an account of the siege of Rouen, which was undertaken by Henry IV. in 1592. It was shorter than the musket but of a heavier calibre, and not unlike our blunderbuss; being slung in a cross belt, so as to rest upon the chest of the person who discharged it. From this circumstance it obtained the name of *Poitrinal*.

PETRONEL. See PISTOL.

PETTAH, *Ind.* a town adjoining to a fort, which is in general surrounded by a fence of bamboos, a wall, and a ditch.

PETTICOAT, the loose piece of garment, which hangs from the waist of a Highlander; also a material part of female drapery.

PETTICOAT-interest, a figurative expression, in common usage among the civil, as well as the military, servants of government. The influence of woman, (if tradition be correct,) is coeval with the first origin of man, and the primary cause of his first fall. From that period down to the present day, female ascendancy has never ceased to prevail. Sometimes, indeed, it has been the medium of much good; at others, of incalculable mischief to mankind: but at no time has it ever been wholly inactive. Even in those countries, and under those laws, particularly under the salique law, where, one would imagine, the interposition of woman could have little or no weight, the secret spring of the most important movements may be traced to this mistress of the human heart; nor is even the seraglio a stranger to its influence. How many brave men, because they have either not been known, or if known, have not proved agreeable to the mistress of a king, or of a minister, or to the dirty pander of them both, have been doomed to obscurity; whilst an unledged stripling, perhaps, has stepped into the situation which nature and talents had destined for the former. This is, indeed, a melancholy perversion of the *allowed* influence which the fairest part of creation ought to have in human affairs; but it must be acknowledged, on the other hand, that there have been women, and probably there may still be some, who have employed their powers

for purposes the most refined, and the most honourable. With such women, *petticoat*-interest becomes a blessing to community.

PEUPLER, *Fr.* literally means to people. This expression is used in a military sense by B elair, author of *El emens de Fortification*, in the following manner:—*Il faut peupler la surface d'un glacis de pierriers*, the surface of a glacis ought to be well covered with pedereros.

PEUPLER, *Fr.* in carpentry, to fill up vacant spaces with pieces of wood, which are placed at equal distances from one another.

PETITION, request, entreaty, supplication, prayer.

Every subject, civil or military, belonging to the British empire and its dependencies, has an inherent and unalienable right to state his grievances by way of petition. This is done in various modes. Sometimes by a personal tender of the petition to his Majesty at a levee; sometimes through a third person; and at others, through the medium of Parliament. Any member of the Commons may move to have the special case of an individual taken into consideration; and every officer, non-commissioned officer, and private soldier may have recourse to Parliament; but this is seldom or ever done, until the commander in chief, for reasons best known to himself, has refused to lay a memorial before the king. A petition to the king, in military matters, is however an extreme case; and should be well weighed before it is submitted.

PHALANX, a word taken from the Greek. In antiquity, a square, compact battalion, formed of infantry, set close with their shields joined, and pikes turned across. It consisted of 8000 men, and Livy says, it was invented by the Macedonians; and hence called the Macedonian phalanx.

PHALANX, (*phalange*, *Fr.*) According to Mauvillon, in his *Essai sur l'influence de la poudre   canon dans l'art de la guerre moderne*, the phalanx, among the Greeks, consisted of heavy armed troops, called the Hoplites, who stood in the center. A complete phalanx consisted of 16,384 men drawn up in sixteen ranks, and each rank containing 1024 files. This phalanx, in order of battle, occupied 3072 feet in front, and 48 in depth, consisting of 16,000 odd hundred men. Mauvillon

describes the ancient phalanx as having been executed in three different ways: the Macedonian phalanx, by the leading file coming to the right about, and remaining stationary. The other files moved behind him by the right, and as soon as they had marched a given number of paces, in order to arrive at a proper distance, they stood in their original order, after having faced about.

The second kind of phalanx was called the Lacedaemonian, and was thought preferable to the first; because the phalanx, instead of filing to the rear, marched forwards to the direction where it was to face. The leading file in facing, marched by those that were in his rear; and they, as their turn came, also faced and followed their leading files. When the head file had thus gone over twice the depth of ground that was occupied by the phalanx, it halted. The serre-file came to the right about, and the whole stood in their proper direction.

The third evolution, which was called the Cretan, Persian, or Choreus, was performed in this manner: the leading file faced to the right and counter-marched: each succeeding file did the same, turning upon their own ground; and when they had marched over the depth of ground which was occupied by the phalanx, and stood where the serre-files had been stationed, the whole halted, and the evolution was thus completed. This was reckoned the best mode, because, in addition to all the advantages of the Lacedaemonian, it was executed in half the time that was necessary to the other two.

PHALARICA, a javelin, or long dart, of a particular construction, which was formerly used by the inhabitants of Saguntum, when they so valiantly stood the siege of it. Saguntum was the ancient site of Murviedro, an old town of Valencia, in Spain, which was taken by Lord Peterborough in 1706. The phalarica was very thick, and had a sharp piece of iron, four feet long, attached to it. It was used either as a weapon of close attack and defence, or as a firearm; being, in the latter case, wrapped up in tow and pitch, and when set fire to, cast out of the balista against the enemy's wooden towers and other machines, for the purpose of consuming them. They were sent with so much force, that they pierced through armed bodies of men, and rendered all attempts

to extinguish the flames useless and un-ailing. It is also mentioned by Virgil as a pike or dart to be thrown by the hand.

PHALERA, a collar which was worn by the Romans as a mark of distinction. It was different from the *torques*; the latter being round, and close to the neck, and of massive gold; whereas, the former was flat, hung upon the breast, and was merely adorned with a few gold knobs. The phalera was indiscriminately given to all officers who had distinguished themselves in action. According to Persius, phalera also signified the trappings and ornaments of a horse.

PHÆTON, (*phæton*, Fr.) The allegorical history of this young god contains one of those instructive lessons, which ought always to be present to the mind of every man, who either aspires to rule a country, or is ambitious to command an army: nor is the fable without a moral applicable to most public characters.

PHAROS, (*phare*, Fr.) a light-house or pile raised near a port, where a fire is kept burning in the night to direct vessels near at hand. The Pharos of Alexandria, built at the mouth of the Nile, was anciently very famous; whence the name was derived to all the rest.—Ozanam says, Pharos anciently denoted a strait, as the Pharos or Pharo of Messina.

PHARSALLA, so called from Pharsalus, anciently a town in Thessaly, now Turkey in Europe, which lies a little to the south of Larissa. This spot was rendered memorable in history by the battle that was fought between Pompey and Cæsar, when they contended for the empire of the world.

PHATUK, *Ind.* a gaol or prison. It likewise means a gate.

PHAGUN, *Ind.* a month which in some degree agrees with February and March.

PHILEBEG, or *Kilt*, from the Gaelic, *Filleath beg*, which signifies a little plaid. This part of the Highland dress corresponds with the lower part of a belted plaid, and is frequently worn as an undress by Highland officers and soldiers. The philebeg, or kilt, may be considered as a very good substitute for the belted plaid, as it is not, at present, thought necessary for the Highlander to carry his clothing for the night, as well as

by day, about his person. This was the case in ancient times, when the breachcan answered both purposes. The philebeg is a modern invention, and is the garment which some, who have endeavoured to establish the antiquity of *Trais*, confound with the *Breachcan Filleadh*.

PHIRMAUND, *Ind.* This word is sometimes written *Firmaun*, and signifies a royal commission, mandate, or allowance.

PHIOUSDAR, *Ind.* the same as *Fousdar*, the superintendent of a large district. It more immediately signifies the commander of a large body of forces.

PIACHE, *Fr.* piazza, covered arched walks, such as in Covent-garden, the Royal-Exchange, &c.; a portico.

PIAFFEUR, (from *Piaffer*, *Fr.* to carry it proudly, to strut it,) a proud stately horse full of fire, that is trained to passage upon a straight line, and is very showy.

PIARA, a Spanish term, signifying a drove of 10 mules led by 2 men.

A PIC, *Fr.* perpendicularly.

PIC-hoyau, *Fr.* a mattock, pickaxe, an instrument used by pioneers, artificers, &c.

PICE, *Ind.* a copper coin, used in most parts of India, but differing greatly in value.

PICAROON, a pillager, one who plunders.

To PICK, to select; to chuse.

To Pick a hole in one's coat, a proverbial phrase, signifying to find fault with another.

PICK, PICK-AXE, PICKER, a sharp pointed iron tool, used in trenching, &c. to loosen the ground.

To Pick off, or **Pick out**, to aim at some particular individual in a body of troops; thus riflemen and tirailleurs are selected for the purpose of picking off officers at the commencement of an engagement, or during a reconnoissance, &c.

PICKER, horse-PICKER, an iron instrument used by farriers and grooms to clear a horse's foot of any adhesion.

PICKER likewise means a small pointed piece of brass or iron wire, which every soldier carries to clear the touch-hole of his musket. The brass pickers are the best, because they are not liable to snap or break off.

PICKET, (*piquet*, *Fr.*) an out-guard posted before an army, to give notice

of an enemy approaching. In parks of artillery, there is always a certain number of artillery and driver horses ready harnessed and equipped for the shortest notice; these are called picket horses, *les chevaux de piquet*. See **GUARD**.

PICKET, a kind of punishment so called, where a soldier stands with one foot upon a sharp pointed stake: the time of his standing is limited according to the offence. This has been for some time discontinued.

PICKETS, in fortification, stakes sharp at one end, and sometimes shod with iron, used in laying out the ground about three feet long; but, when used for pinning the fascines of a battery, they are from 3 to 5 feet long.

PICKETS, in artillery, are about 5 or 6 feet long, shod with iron, to pin the park lines, and to lay out the boundaries of the park.

PICKETS, in the camp, are also stakes of about 6 or 8 inches long, to fasten the tent cords, in pitching the tents; also, of about 4 or 5 feet long, driven into the ground near the tents of the horsemen, to tie their horses to.

PICKET ropes, commonly called breast lines: these are ropes which are twisted at given intervals round the several picket stakes, and serve to confine the horses within a proper space of ground. They are called breast lines, because the pickets or stakes should always be long enough to adhere firmly to the soil, when driven in, and to stand breast high. When the pickets are too short, unruly horses, or any horses indeed not accustomed to stand at picket, will either drag them up, or throw their legs over the breast lines, and get entangled. Heavy cavalry ought to have pickets of 6 feet; the common stakes are from 4 to 5 feet.

PICORÉE, *Fr.* an obsolete French term, signifying a party of soldiers who go out in search of plunder.

PICORER, *Fr.* to go out in search of plunder.

PICOREUR, *Fr.* a marauder.

PICQUEERING, **PICKERING**, **PICKEROONING**, a little flying skirmish, which soldiers make, when detached for pillage, or before a main battle begins.

PICTS, a people which in ancient times inhabited a part of Scotland, and, together with the Scots, made frequent

incursions into England. Their depredations were checked by the Romans, when the emperor Severus landed an army in Britain, and delivered the poor natives from their miserable tyranny. An excellent historian calls this act of the Roman emperor, the greatest honour of his reign. See *Rise and Progress of the Roman Empire*, in Kennett's *Antiquities*, p. 22.

PICTS Wall, in antiquity, a celebrated piece of Roman work, begun by the emperor Adrian, on the northern bounds of England, to prevent the incursions of the Picts and Scots. At first it was only made of turf, strengthened with pallasadoes, till the emperor Severus, coming in person, into Britain, built it with solid stone, reaching eighty miles from the Irish to the German sea, or from Carlisle to Newcastle upon Tyne, with watch towers garrisoned at the distance of one mile from each other. It was ruined several times by the Picts, and as often repaired by the Romans. At last, Oetius, a Roman general, rebuilt it of brick; and the Picts ruining it in the year following, it was no longer regarded but as a boundary betwixt the two nations. It was eight feet thick, and twelve high from the ground; it ran on the north side of the rivers Tyne and Irthing up and down several hills. The remains of it are, to this day, to be seen in Cumberland and Northumberland.

PIE, *Ind.* the smallest current coin in India.

Time-PIECE. See **TIME**.

PIECE, (*pièce*, *Fr.*) This word is variously used, in a military sense, by the French and English.

PIECES of ordnance are all sorts of great guns and mortars.

Battering PIECES are the large guns which serve at sieges to make breaches, such as the 24-pounder, and the culverin, which carries an 18lb. ball.

Garrison-PIECES are mostly heavy 12, 18, 24, 36, and 42-pounders, besides wall guns.

Field-PIECES are twelve pounders, demi-culverins, six-pounders, sakers, minions, and three-pounders, which move with an army, and are parked behind the second line when it encamps, but are advanced in front, in the intervals of battalions, &c. and on the flanks in the day of battle.

Regimental PIECES are light six-pounders; each regiment has generally two of these pieces.

PIECE is likewise used to express a soldier's musket.

PIECE, *Fr.* a word generally used in architecture to express all the different apartments belonging to a building, such as the saloon, hall, parlour, chamber, cabinet.

PIECE *de charpente*, *Fr.* any piece of shaped wood which belongs to a frame of timber.

Maîtresses PIECES, *Fr.* literally the master pieces, those of the largest dimensions, as beams, rafters.

PIECE *de bois*, *Fr.* a piece of wood which is cut and shaped according to the Parisian measure, viz. six feet long, 12 inches broad, and 6 thick.

PIECE *à pommette*, *Fr.* a small pleasant rowel in the mouth of a bit.

La grande PIECE, *Fr.* a broad piece of armour which is placed between the bottom of the helmet and the pouldron.

La haute PIECE, *Fr.* the pouldron, or upper part of the helmet.

Gens de toutes PIECES, *Fr.* men of all descriptions, tag-rag, &c.

Un homme armé de toutes PIECES, *Fr.* a man armed at all points, or cap-a-pie.

PIECES *d'honneur*, *Fr.* the insignia or marks of honour; these consist of the crown, sceptre, and sword.

Une PIECE *d'artillerie*, *une* PIECE *de canon*, *Fr.* These terms are used by the French to signify cannon in general.

PIECES *de batterie*, *Fr.* See BATTERING PIECES.

PIECES *de campagne*, *Fr.* See FIELD PIECES.

PIECES *de vingt-quatre*, *Fr.* twenty-four pounders.

PIECES *de trente-six*, *Fr.* thirty-six pounders. When pieces are not specifically named, the term is used in the same general sense by the English, as, one hundred pieces of cannon, or artillery, *cent pièces d'artillerie*; but when the calibre is mentioned, we substitute the word pounder for piece: as, *une pièce de vingt-quatre*, a four and twenty pounder.

Démonter les PIECES, *Fr.* to dismount cannon.

Enclouer les PIECES, *Fr.* to spike cannon.

Rafrâchir les PIECES, *Fr.* to sponge, or clean out cannon.

PIECE *de canon brisé*, *Fr.* The French formerly made use of cannon that could be taken to pieces, and so rendered more portable. This species of ordnance was distinguished as above.

PIECE *versée en ponier, ou en cage*, *Fr.* A piece of ordnance is said to be in this situation, when it is so completely overturned, as to have the wheels of its carriage in the air. Various methods have been proposed by able engineers to raise cannon that have been overturned. See *Saint Remi, Manuel de l'Artilleur*; and a late publication, intitled, *Aide Mémoire à l'usage des Officiers d'Artillerie de France*.

PIECES *légères*, *Fr.* light pieces. See FIELD PIECES.

PIECES *à la Suédoise*, *Fr.* field pieces originally invented, and since used among the Swedes.

PIECES *nettes*, *Fr.* ordnance pieces or fire-arms, which have been proved, and are found perfectly sound.

PIECES *de chasse*, *Fr.* a marine term, signifying the cannon that is placed on the stern and fore-castle of a ship. We call them chase guns.

PIECES *détachées, Travaux avancés en dehors*, *Fr.* those works which cover the body of a fortified place, towards the country; of this description are ravelins, demi-lunes, horn-works, tenailles, crown-works, queues d'hironde, enveloppes, &c.

PIECES *de recharge*, *Fr.* arms kept in store for the purpose of keeping up the number of effective pieces.

To be cut to PIECES, (*être taillé en pièces*, *Fr.*) The French also say, *Un tel régiment a été écharpé*; such a regiment has been cut to pieces.

Side-PIECE, a brass plate let into the opposite side of the lock, in order to receive the side-nails which hold on the lock.

Thumb-PIECE, a piece of circular brass let into the hand or grasp of the stock, having a pin which goes through the wood to the back part of the guard to secure it. This is intended for engraving numbers or letters on.

A PIED, *Fr.* on foot.

Pied à pied, *Fr.* foot by foot; gradually. *Faire un logement pied à pied*; to establish a lodging foot by foot. *Forcer les ouvrages pied à pied*; to make regular approaches, or to besiege a town by opening trenches, &c. instead of insulating it by a direct attack.

Troupes retenues sur PIED, Fr. troops kept upon full pay, or on foot.

Etre en PIED, Fr. to be kept upon full pay, in contradistinction to *réformé*, or being reduced.

PIED, Fr. foot. As there is a foot of given dimension, or length, which is universally used throughout France, and which formerly was prescribed by Royal Authority, and therefore called,

PIED de Roi, or Royal Foot, we shall only describe that sort of foot, under its French word, which is particularly applicable to the use that is made of it by mathematicians, engineers, and architects throughout France. This foot, as with us, is divided into 12 inches, and the inch into 12 lines, and each line into 12 equal parts called *points*.

Le PIED quarré, Fr. The *foot square* is the same measure both in length and breadth, containing 144 square, or superficial inches.

Le PIED cubique, Fr. cubic or solid foot, which is the same measure in all the three dimensions, containing 1728 cubic inches. This measure is used for measuring solids.

Le PIED de toise quarrée, Fr. This is the sixth part of the square toise; and as this toise contains 36 square feet, the toise foot square contains six, and must be considered a rectangle, which has one foot base on one toise of elevation.

PIED de toise cube, Fr. This is the sixth part of the cubic toise; and as this toise contains 216 cubic feet, French measure, the cubic toise foot comprehends, of course, 36, and must be considered as a parallelepiped, which has one square toise of base upon one foot of elevation.

Le PIED de solive, Fr. which is the sixth part of the rafter or girder, is a parallelepiped, whose base is a rectangle twelve inches long, one inch broad, and one toise high.

Le PIED cube d'eau, Fr. cubic foot of water, that is, of common water, weighs seventy pounds, and contains 35 pints, Paris measure; the Paris pint weighing two pounds, it is necessary to have eight cubic feet to make up one hoghead of water, or 280 pints. Salt or sea-water is heavier than fresh or river water; its cubic foot weighs 72 pounds. Belidor observes, that a ship full-laden coming from the sea into a river or stream, would sink the instant it got into soft water, because the specific gravity of

soft water is one thirty-sixth less than that of salt water.

PIED de biche, Fr. the gaffle of a cross-bow, or the end of it; also an iron bar, one end of which is fastened by a clamp to the wall, and the other is so contrived as to cover the wicket of a gate, to prevent it from being forced.

PIED Rhenun or Rhinlandique, Fr. the German foot. See MEASURE.

PIED courant, Fr. the extent of a foot considered as to length only.

PIED marin, Fr. literally, sea leg.— See *Marin*.

PIED de mur, ou de muraille, Fr. that lower part of a wall which is otherwise called *Escarpe*, and is contained between its base and top.

Pousser, ou mettre quelqu'un au PIED du mur, Fr. to drive another to the wall.

PIED de rempart, Fr. that extent of ground which lies between the fosse and the houses, in a fortified town or place.

PIED droit, Fr. a side post or stay made of stone or wood, which is used by miners, in order to keep up or support any thing with effect.

PIED ferme, Fr. This word literally signifies firm foot. *Attendre l'ennemi de pied ferme*; to expect the enemy, or wait his attack with steadiness and composure. They also say, figuratively, *Combattre de pied ferme*; to fight steadily without quitting ground, or giving way; to keep firm to any thing.

Lâcher le PIED, Fr. to give way.

Gagner au PIED, Fr. to take to one's heels, or to run away.

PIED poudreux, Fr. literally a dusty foot, an expression of ridicule among the French, which is applied to any soldier that deserts from one regiment to another.

Au PIED de la lettre, Fr. literally.

PIED de chèvre, Fr. the end of a gaffle of a cross-bow; also the stay or prop of a ladder, whereby it is both held steady, and kept from bearing too much on what it is set against; also a lever, pointed like the foot of a goat, from which it takes its name.

Sur PIED, Fr. See *On FOOT*.

Le coup de PIED, Fr. the instep.

Gens de PIED, Fr. foot soldiers.

PIED, Fr. the foot or bottom of any thing. See *FOOT*.

PIED cornier, Fr. the main pillar of a coach.

Prendre quelqu'un au PIED levé, Fr.

to take advantage of every word a person drops.

PIED-plat, Fr. a contemptible fellow.

PIED-sente, or *PIED-sante*, Fr. a narrow path; foot-path.

PIED de chat, Fr. the port or upset of some bits, made like the foot of a cat.

PIÉDESTAL, Fr. See *PEDESTAL*.

PIÉ-droit, Fr. a kind of square pillar, part of which is hid within a wall. It is used to support arches.

PIEDOUCH, in architecture, is a little stand or pedestal, either long or square, enriched with moulding; serving to support a bust, or other small figure.

PIEGE, Fr. snare.

PIER, (in building,) is a mass of stone, &c. opposed by way of fortress, against the force of the sea, or a great river; for the security of ships that lie at harbour in any haven, as *Dover Pier*, the *Pier* at Great Yarmouth, &c.

PIERS are also a sort of square pillars, part of which is hidden within the wall; the only thing wherein it differs from a pilaster, being this, that the latter has a base and capital, which the former has not. According to the Act of Parliament, for the rebuilding of London, after the fire in 1666, the *scantlings*, or size of *piers* were ordered to be for the first sort of houses, *corner piers* 18 inches square; *middle and single piers* 12 and 14 inches; *double piers* between house and house, 14 and 18 inches.

In the second and third sort of houses, *corner piers* 2 feet 6 inches square; *middle or single piers* 18 inches square; *double piers* between house and house 14 and 19 inches square.

PIERCED, (*percé*, Fr.) in the navy, to be capable of receiving; as *pierced* for one hundred guns. The French use the same term.

PIERCED, (*percé*, Fr.) In the distribution of a town it applies to the streets, as *A town well pierced*, or having its streets in parallel lines, or at right angles, *Une ville bien percée*.

PIEKRAILLE, Fr. a heap of large stones.

PIERRE, Fr. a stone.

PIERRE à feu, Fr. flint.

PIERRE à fusil, Fr. a flint.

PIERRE aiguisoie, Fr. a whetstone, or grindstone.

PIERRE vive, Fr. a flint.

PIERRE de tuffe, Fr. a white sand-

stone, or a soft and brittle stone, which is easily crumbled into sand.

PIERRE herculienne, Fr. a load-stone.

PIERRE de canon, Fr. a cannon bullet.

PIERRE ponce, Fr. the pumice-stone.

PIERRE brute, Fr. rough stone.

PIERRE d'évier, Fr. gutter-stone.

PIERRE navienne, Fr. a hone; a whetstone.

PIERRE d'éponge, Fr. pumice-stone.

PIERRE fondamentale, Fr. foundation stone.

PIERRE de pratique, ou à joints incertains, Fr. This is also called *Pierre de moilonnage*, or rough stones, and are such as may be used as they come out of the quarry. Care, however, must be taken to have them irregularly laid in a bed of mortar, with lime and sand. These stones are principally used for quays.

PIERRE à chaux, Fr. lime-stone.

PIERRES perdues, fondement à pierres perdues, Fr. stones which are sunk into the water, for the purpose of establishing a foundation, when it is impossible to effect a necessary drainage. See Book iii. *De la Science des Ingénieurs*, and the Second Part of *Belidor's Architecture Hydraulique*, where the manner of building, or raising, superstructures in water is amply discussed.

PIERRES sèches, Fr. unmortared stones which are laid sideways to pave the compartments of grills or gratings that cover fascine-work. No mortar is used in these cases; on which account, the work is said to be *à pierres sèches*, or done without mortar or cement.

PIERRE d'attente, Fr. corner-stones.

PIERRE de cant ou de champ, ou pierre debout, Fr. a method of laying stones or bricks differently from the usual way; for instead of placing them flat, or according to their natural position, they are laid sideways (*de cant ou de champ*) or upright (*debout*.)

PIERREE, Fr. a drain, a water-course; so called from being generally made with dry stones.

PIERRIER, Fr. a swivel, a pedero.

PIERRIÈRE, Fr. a quarry.

PIERRIÈRES, Fr. heaps of large stones which are hastily collected together near a fortified place, and are covered with earth in order to conceal them from a besieging enemy. If grass should have grown upon it, the enemy

will, in all probability, consider it as a mere eminence or commanding spot of ground, and will, of course, endeavour to get possession of it. The instant he makes the attempt, a heavy discharge of ordnance must be directed from the rampart against this heap for the purpose of scattering the stones amongst the assailants, and necessarily forcing them to retire. Perhaps it might add to this species of defence, were temporary works thrown up in front of the heap, and a mine laid underneath.

PIERROITTE, *Fr.* a small stone; also a stony, flinty, or gravelly soil.

PIERS, the columns on which the arch of a bridge is raised.

PIES, *Fr.* knights that were created by Pope Pius IV. in 1560, with the titles of Counts Palatine. They took precedence, at Rome, of the knights of the Teutonic order, and of those of Malta.

PIÉTINER, *Fr.* to move the feet with great quickness. It likewise signifies to *mark time*, but not technically so.

PIÉTON, *Fr.* a foot soldier.

PIEUX, *Fr.* palisades.

PIEUX, *Fr.* large piles which are made of oak, and serve for the railing of wooden bridges, &c. The difference between *pieux* and *pilots* consists in the former not being driven into the earth, and the latter being so.

PIGNON, *Fr.* the gable end; also a final cap, or small pinnac, on the ridge, or top of a house.

PIGNON à redans, *Fr.* a pinnacle or gable end which is in front of a roof that has two gutters or outlets, and whose sides are indented, or have a sort of steps, by which, in former times, persons used to get to the ridge of a roof, in order to repair it. This custom still prevails in cold countries, where the roofs of the houses are very pointed; but they are more for ornament than use.

PIGNON entrapeté, *Fr.* The end or extremity of a wall in front of a roof, whose profile is not triangular, but shews five fronts, as is the case in a mansard, (so named from M. Mansard, a French architect,) or even four, as in that of a trapeze.

PIGNON, *Fr.* in mechanics, a watch-pinion, or any small wheel, or a long round piece of metal, which is grooved

for the purpose of admitting the teeth of a wheel which catch in the grooves.

PIGEON, (*pigeon*, *Fr.*) a bird well known.

Carrier PIGEON, (*courier pigeon*, *Fr.*) a sort of pigeon, used, when properly trained, to be sent with letters from one place to another. According to an article in the Encyclopædia Britannica, under the letter C. or Carrier-Pigeon, it is observed, that though you carry these birds, hoodwinked, 20, 30, nay 60 or 100 miles, they will find their way in a very little time to the place where they were bred. They are trained to this service in Turkey and Persia; and are carried first, while young, short flights of half a mile, afterwards more, till at length they will return from the farthest part of the kingdom. See also, *Columba*, in the same excellent work.

PIKE, in *war*, an offensive weapon, consisting of a wooden shaft, 12 or 14 feet long, with a flat steel head, pointed, called the spear. This instrument was long in use among the infantry; but now the bayonet, which is fixed on the muzzle of the firelock, is substituted in its stead. The Macedonian phalanx consisted of a battalion of pikemen.

The Morris or Moorish PIKE was much used in the reigns of Henry VIII. and Queen Elizabeth, both by sea and land.

PIKEMEN, soldiers armed with pikes.

PIKESTAFF, the wooden pole or handle of a pike.

PILA, a small standard which was used among the Romans when the shields were piled together, over which it floated.

PILANI, Roman soldiers who were armed with a sort of spontoon, the iron of which was thick and long, called *pilum*.

PILASTER, (*pilastre*, *Fr.*) in architecture, a sort of square column, sometimes insulated, but more frequently let into a wall, so that only one fourth or one fifth part of its thickness is visible. The pilaster is different in different orders, after which it is separately called, and has the same proportions, and the same capitals, members, and ornaments with the columns themselves. In *pilasters* which support arches, *Palladio* shews, that the proportions must be regulated by the light they give, and at

angles, by the weight they sustain. As to their sight and situation, our countryman, Sir Henry Wootton, tells us, that *pilasters* must not be too tall and slender, lest they resemble pillars, nor too dwarfish and gross, lest they imitate piles or piers of bridges. He also says, that smoothness does not so naturally become them as a rustic superficies; for they aim more at state and strength than elegance; that in private buildings they ought not to be narrower than one third, nor broader than two thirds of the vacuity or inter-space, between pilaster and pilaster. But as for those that stand at the corners, they may have a little more latitude allowed them, in proportion to the strength of the angles.

PILASTER-bricks, called also *buttress-bricks*, are made of the same length, breadth and thickness, with the *great bricks*, six and nine. The only thing in which they differ from them, is this: they have a notch at one end, which is half the breadth of the brick, and made of the same mould with the *great bricks*, only in making *pilaster-bricks*, they put a cube of wood of three inches square into one corner of the mould, which piece makes the notch in the bricks in the moulding. For further particulars respecting this article, we refer our readers to the observations of *M. Mansard*, *M. Perrault*, *Vitruvius*, *Palladio*, *M. Le Clerc*, and *Sir Henry Wootton*.

PILE, in antiquity, was a pyramid built of wood, on which the bodies of persons deceased were laid, in order to be consumed, hence called Funereal Pile. This custom still prevails in the East.

PILE, any heap; as a pile of balls, shells, &c.

PILES of shot or shells, are generally piled up in the king's magazines, in three different manners: the base is either triangular, square, or a rectangle; and thence the piles are called triangular, square, and oblong.

RULES for finding the Number in any PILE.

Triangular PILE.

Multiply the base by the base + 1, this product by the base + 2, and divide by 6.

Square PILE.

Multiply the bottom row by the bottom row + 1, and this product by

twice the bottom row + 1, and divide by 6.

Rectangular PILES.

Multiply the breadth of the base by itself + 1, and this product by three times the difference between the length and the breadth of the base, added to twice the breadth + 1, and divide by 6.

Incomplete PILES.

Incomplete piles being only frustums, wanting a similar small pile on the top, compute first the whole pile as if complete, and also the small pile wanting at top: and then subtract the one number from the other. *Bombardier*.

PILE de boulets, Fr. See *PILE of shot or shells*.

PILE, a mass of body or building. The French say *édifice*.

PILE, the head of an arrow. The French call it *pointe*.

PILE de pont, Fr. a mass or body of strong mason-work, whose plan is generally an hexagonal parallelogram, which divides, and sustains the arches of a stone bridge, or the scaffolding of a wooden one.

PILES, in architecture, are great stakes, rammed into the earth to make a foundation to build upon in marshy ground. Amsterdam and Venice, as well as many other cities, are wholly built upon piles.

Dovetail-PILES, piles which may be mortised into one another, by a dovetail joint.

PILE-worms are a kind of worms found in the piles of the sea-dykes in Holland. They have heads covered with two hard shells, with which they bore into the wood.

PILE-engine, a very curious machine invented by Mr. Vaulone, for driving the piles of Westminster Bridge. See particulars under *pile-engine*, in the Encyclopædia Britannica.

To PILE arms, to place three muskets, with or without, fixed bayonets, in such a relative position, that the butts shall remain firm upon the ground, and the muzzles be close together in an oblique direction. This method has been adopted to prevent the injury which was formerly done to musketry, when the practice of grounding the firelock prevailed. Every recruit should be taught how to pile arms before he is dismissed the drill.

PILIER, *Fr.* a pillar; post.

PILIER *boutant*, *Fr.* a buttress.

PILIER *de manège*, *Fr.* riding posts; also posts which divide the stalls.

PILLAGE, (*pillage*, *Fr.*) the act of plundering.

To **PILLAGE**, (*pillar*, *Fr.*) to spoil, to waste, to plunder.

PILLAGE, in architecture, is a kind of irregular column, round and insulated, deviating from the proportions of a just column.

PILLAGER, a plunderer; one who gets a thing by violent, or illegal means.

PILLAR, in a figurative sense, support. A well-disciplined army may be called the pillar of the state; an ill-disciplined one, the reverse.

A *butting* **PILLAR** is a buttress, or body of masonry, raised for the purpose of propping or sustaining the shooting of a vault, arch, or other work. The French say *colonne arc-boutant*.

A *square* **PILLAR** is a massive work of masonry, called also a *pier* or *peer*, or *pedroit*, serving to support arches, &c.

PILLARS and **ARCHES**. It was customary among the ancients, particularly among the Romans, to erect public buildings, such as arches and pillars, for the reward and encouragement of noble enterprizes. These marks were conferred upon such eminent persons as had either won a victory of extraordinary consequence abroad, or had rescued the Commonwealth from any considerable danger at home. The greatest actions of the heroes they stood to honour, were curiously expressed on the sides, and the whole procession of a triumph was sometimes cut out. The arches built by Romulus were only of brick; those of Camillus of plain square stone, but those of Cæsar, Drusus, Titus, Trajan, Gordian, &c. were all entirely marble. As to their figure, they were at first semicircular, whence probably they took their names. Afterwards they were built four square, with a spacious arched gate in the middle, and little ones on each side. Upon the vaulted part of the middle gate hung little winged images, representing victory, with crowns in their hands, which when they were let down, they put upon the conqueror's head as he passed under the triumph.—*Fabricii Roma*, cap. 15.

The columns or pillars were converted

to the same design as the arches, for the honourable memorial of some noble victory or exploit, after they had been a long time in use for the chief ornaments of the sepulchres of great men, as may be gathered from Homer, *Iliad* 16.

The pillars of the emperors Trajan and Antoninus have been extremely admired for their beauty and curious work. We find them thus particularly described in page 53, of Kennet's *Roman Antiquities*.

The former was set up in the middle of Trajan's forum, being composed of 24 great stones of marble, but so curiously cemented, as to seem one entire natural stone. The height was 144 feet, according to Eutropius, (*Hist. lib. 8.*) though Martian (*lib. iii. cap. 13.*) seems to make them but 128. It is ascended by 185 winding stairs, and had 40 little windows for the admission of light. The whole pillar is incrustated with marble, in which are expressed all the noble acts of the emperor, and particularly the Decian war. One may see all over it the several figures of forts, bulwarks, bridges, ships, &c. and all manner of arms, as shields, helmets, targets, swords, spears, daggers, belts, &c. together with the several offices and employments of the soldiers; some digging trenches, some measuring out a place for the tents, and others making a triumphal procession, (*Fabricius*, cap. 7.) But the noblest ornament of this pillar, was the statue of Trajan on the top, of a gigantic bigness, being no less than 20 feet high. He was represented in a coat of armour proper to the general, holding in his left hand a sceptre, in his right a hollow globe of gold, in which his own ashes were deposited after his death, (*Cassalius*, par. I. C. 2.)

The column or pillar of Antoninus was raised in imitation of this, which it exceeded only in one respect, that it was 176 feet high; (*Martian*, lib. vi. cap. 13.) for the work was much inferior to the former, as being undertaken in the declining age of the empire. The sculpture and the other ornaments were of the same nature as those of the first; and on the top stood a colossus of the emperor, naked, as appears from some of his coins.—See *Martian* idem.

Both these columns are still standing at Rome, the former almost entire. But

Pope Sixtus I. instead of the two statues of the emperors, set up St. Peter's on the column of Trajan, and St. Paul's on that of Antoninus.—Casal. Part I. C. 11.

Among the columns and pillars, we must not pass by (to use Mr. Kennett's words) the *Milliarium aureum*, a gilded pillar in the forum, erected by Augustus Cæsar, at which all the highways of Italy met, and were concluded. (Martial, lib. iii. cap. 18.) From this they counted their miles, at the end of every mile setting up a stone; whence came the phrase *Primus ab urbe lapis*, and the like. This pillar, as Mr. Lascelles informs us, is still to be seen.

Pompey's Pillar, so famous in history, is also still to be seen in Egypt, notwithstanding the incursions of the French, and the subsequent victory of the English in that country. It is made entirely of granite, and measures from the earth (as it stands) to the pinnacle, ninety feet. Had Bonaparte conquered the country, he would probably have imitated what Paulus Æmilius did at Delphi, and ordered his statue to be placed upon it. The pillar at Delphi was square, and of white marble, and on it was to have been placed a golden statue of Perseus. When the latter was conquered, Æmilius observed, that the conquered ought to give way to the conqueror. Perhaps the gratitude of the Ottoman court will, some day, pay a fair tribute to the memory of Sir Ralph Abercrombie.

PILLE, *Fr.* a great mortar or trough of stone, or wood, &c. It is also written *Pile*.

PILLORY, (*pilori*, *Fr.*) an instrument of exposure, well known in modern times, and not much feared, considering the frequency of those crimes for which it was originally invented: viz. perjury, embezzlement of naval or military stores, &c.

PILON, *Fr.* a weapon, the use of which has been recommended by Marshal Saxe, in his plan for forming several battalions four deep. The two first ranks are to be armed with muskets, the third and fourth with large half pikes or pilons, having their muskets slung across their shoulders.

The authority of Marshal Saxe is certainly too respectable to be hastily called in question: we are nevertheless of

opinion, that a weapon which is eight or nine feet long, must be extremely cumbersome and unwieldy, not only in long marches, but likewise in the heat of battle. We may also ask, in conformity to that general's own sentiments, how any soldier (who must have his musket slung across his shoulders, whilst he uses the pilon) can act in broken and narrow passes?

PILON, *Fr.* a drumstick.

PILONS de moulin, *Fr.* large solid pieces of wood which are used in powder mills, for the purpose of pounding into dust the different materials of which gunpowder is composed, or for bruising any other ingredients. Pilon also signifies a pestle.

PILOT, (*pilote*, *Fr.*) the person who conducts a ship; a steersman.

PILOTAGE, *Fr.* pile-work. This is essentially useful in marshy grounds, &c.—See **PILES**, in architecture.

PILOTAGE, the duty or money paid for piloting.

PILOTER, *Fr.* to drive in piles; to strengthen with piles.

PILOTING, the art of conducting ships into roads or harbours, or over bars and sands.

PILOTIS, *Fr.* a pile; a large stake.

PILOTS, *Fr.* large wooden piles which are variously used in bridges, in piers, jetties, &c.

PILOTS de clefs, *Fr.* piles which serve to sustain the key-stones of wooden quays.

PILOTS de dormans, *Fr.* piles which support the sleepers in wooden quays.

PILOTS de remplage, ou de compression, *Fr.* those piles which are distributed along a given space of marshy or bad ground, upon which a foundation is to be made: they are so called to distinguish them from other piles, and literally signify piles to fill up, or to bind together.

PILOTS de bordage, *Fr.* piles, which are driven either in front of, or completely round, the grating of the mason-work or a bridge, or of any other structure, the foundation of which is laid in marshy or bad ground.

PILOTS de garde, *Fr.* large piles or stakes of wood which are driven in alongside the quays or basins of harbours, to shield the mason-work from the pressure or shock of vessels that come in, or are moored.

PILUM, a species of javelin which was used by the Romans. They darted these weapons with so much force, that according to tradition, two men have been pierced through, together with their shields or bucklers. The head of an arrow was likewise so called by the Romans.

PIMBÈCHE, *Fr.* an impertinent or silly woman. In military life, any officer's lady who meddles with regimental details.—See *White Serjeant*.

PIMONTELLE *de Milan*, a piece of ordnance which belonged to the Spanish army, commanded by the Marquis Pimontelli, and which was taken by the French. It was a 70-pounder.

PIMP, (*pinge*, *Fr.*) one who procures gratifications for the lust of others; a procurer, a pander.

PIN, an iron nail or bolt, with a round head, and generally with a hole at the end to receive a key: there are many sorts, as axle-tree pins, or bolts, bolster-pins, pole-pins, swing-tree pins, &c.

There are likewise *musket pins*, which are small pieces of iron or wire that fasten the barrel to the stock. Soldiers are very apt to take out these pins in order to make their pieces ring: but they should not, on any account, be permitted to do so.

Axle-PIN, **Linch-PIN**, (*aisse*, *Fr.*) a piece of iron which locks the wheel to the axle.

Breech-PIN, the screw or plug of a musket barrel, the tang part of which is let into the stock, and has a screw, called the breech-nail, which secures it, by going through to the trigger plate.

Bridle-PINS are the screws which steady the bridle to the lock plate.

Hammer-PIN is the screw which the hammer acts upon.

Seer-PIN, the screw which steadies the seer to its action, and goes through the bridle to the lock plate.

Seer spring-PIN, the screw which confines the seer spring to the lock plate.

Tumbler-PIN, the screw which fastens the cock to the tumbler.

A Thorough-PIN, (in horses,) a disease, which consists of a swelling in the hock.

PINCERS, an instrument by which nails are drawn, or anything is griped, which is required to be held hard.

PINCES, *Fr.* a horse's gatherers or fore-teeth.

PINCES, *Fr.* crōws; instruments which are used by miners. The French distinguish them in the following manner:—*Pince simple*; *Pince à tulon*; *Pince à pied de biche*; and *pince à main*. See *Miner's TOOLS*.

PINCE, *Fr.* pincers, nippers.

Avoir bonne PINCE, *Fr.* to take bribes.

PINCE, *Fr.* an iron crow with which an artilleryman points and guides a cannon. It is called *levier de fer*, iron lever.

PINCE, *Fr.* a pavior's twibill.

PINCE, *Fr.* the toe of a horse's foot. The French say figuratively, *un général ou un juge qui a bonne pince*, a general or judge who takes bribes.

To PINCE, to squeeze the flesh, to gall, to fret; as a saddle does when it pinches a horse's back.

PINDAREES, *Ind.* plunderers and marauders who accompany a Mahratta army.

PINDARONS or *Marauders*, *Ind.* armed men in the East Indies, who serve without pay, and subsist entirely by plunder.

To PINION, to bind the hands or arms of a person so as to prevent his having the free use of them.

PINION, (*pinion*, *Fr.*) in mechanics, is an arbor or spindle, in the body whereof are several indentures or notches, which catch the teeth of a wheel that serves to turn it round; or a *pinion* is a lesser wheel which plays in the teeth of a larger.

PINK, a sort of heavy, narrow-sterned ship, masted and ribbed like other ships, except that she is built with a narrow stern, the bends and ribs compassing, so that her sides bulge out very much.

To PINK, to pierce in small holes. Among swordsmen, to wound an adversary with the point of the sword; as, *I pinked him in the body*.

PINNACLE, (*pinacle*, *Fr.*) in architecture, is the top or roof of a house which terminates in a point. The *pediment* is said to have taken its rise from the pinnacle.

PINNACE, (*pinasse*, *Fr.*) a boat belonging to a ship of war. According to Dr. Johnson, it seems formerly to have signified rather a small sloop or bark attending a larger ship.

PINNING (with bricklayers) is the fastening of tiles or slates together with

heart of oak for the covering of a house.

PINTE, *Fr.* pint. The Paris pint contains two pounds of water of sixteen ounces each.

PINTLE, in artillery, a long iron bolt fixed upon the middle of the limber-bolster, to go through the hole made in the trail-transom of a field carriage, when it is to be transported from one place to another.

PINTLE-plate is a flat iron through which the pintle passes, and nailed to both sides of the bolster, with eight diamond headed nails.

PINTLE-washer, an iron ring through which the pintle passes, placed close to the bolster for the trail to move upon.

PINTLE-hole is of an oval figure, made in the trail-transom of a field-carriage, wider above than below, to leave room for the pintle to play in.

PINULES, *Fr.* two small tablets in the alhidada of an astrolabe, having in them two small holes, through which the height of the sun, &c. is taken; some call them the lights of the alhidada.

Pinule also signifies the sight of an instrument used in surveying. Belidor writes the word with two n's.

PIOBRACH, the Gaelic word for an air played upon the bagpipe. It is now more strictly applied to the ancient Highland martial music. It is allowed by all persons who have heard the piobrach, that it exceeds every other sort of music known in these kingdoms. It speaks forcibly to the mind, and is wonderfully descriptive of the various feelings to which the human heart is subject.

PIOBRACUS are either simple or compound; some of them consist of a march, &c. and are beautifully varied, and highly characteristic.

PIOCHE, *Fr.* a mattock, pick-axe.

PIOCHER, *Fr.* to dig.

PION, a peasant in South America.

PIONEERS, (*pioniers*, *Fr.*) in war-time, are such as are commanded in from the country, to march with an army, for mending the ways, for working on entrenchments and fortifications, and for making mines and approaches: the soldiers are likewise employed in all these things.

Most of the foreign regiments of artillery have half a company of pioneers, well instructed in that important branch

of duty. Our regiments of infantry and cavalry have 3 or 4 pioneers each, provided with aprons, hatchets, saws, spades and pick-axes.

The negroes, or blacks, in our colonies, instead of being formed into dangerous battalions, might have been distributed, with great effect, among the white regiments, to act as pioneers, and to do fatigue work.

PIPE, a tube; a musical instrument: a liquid measure containing two hog-heads.

PIPE, from the Gaelic *piob mhor*, which signifies great pipe. The Highland bagpipe is so called, and is an instrument well calculated for the field of battle.—When the bagpipe is skilfully performed, its martial music has a wonderful effect upon the native Scotch, particularly the Highlanders, who are naturally warlike. The pair of pipes which were presented by Sir Eyre Cooto to the 71st regiment, during its gallant services in the East Indies, are a memorable instance of the high estimation in which this native instrument has been uniformly held.

Small PIPE, the one above the tail pipe. It assists in the direction of the ramrod.

Small Trumpet-PIPE, that next to the upper trumpet-pipe, and on which the upper swivel rests that receives the gun sling.

Tail PIPE, a small brass pipe fixed at the swell of the musket, which receives the ramrod. It has a spring fixed in it to secure the ramrod.

Trumpet PIPE, a small brass pipe near the muzzle of the firelock, through which the ramrod is let down to secure it. It is called the trumpet pipe from its resemblance to the mouth of a trumpet. The Prussians have no pipes to their muskets; the ramrod being received into a cylinder which runs parallel with the barrel.

Old PIPE-Clay, a familiar expression used, in British regiments, to signify a man of routine; an old adjutant, or any officer who adheres minutely, perhaps ridiculously so, to mere military forms and dress.

PIPE-Clay and *Whiting*, a composition which soldiers use for the purpose of keeping their cross-belts, &c. clean. Every soldier belonging to the infantry of the line, and to the fencible infantry

servant at home, is stopped 4s. 4d. per annum to supply himself with pipe-clay and whitening.

PIPE, *Fr.* deceived, cozened, overwrought, gulled; and hence—

Cartes-Pipées, and *Dés Pipés*, false cards and dice.

La Pipee du soir, *Fr.* the edge of the evening, when the weather freshens, or grows cool.

PIPES, (in building,) canals or conduits for the conveyance of water, &c.

PIPES for water are usually of lead, iron, earth, or wood; those of wood are commonly oak or alder.

Iron PIPES are cast in forges. Their length is about 2 feet and a half, several of which are placed together by means of four screws at each end, with leather or old hat between them, to stop the water.

Earthen PIPES are made by potters. Their length is commonly two feet and a half. They are fitted into one another, one end being always wider than the other.

Wooden PIPES are trees bored with large iron augers of different sizes, beginning with a less, and then proceeding with a larger successively.

Leaden PIPES are of two sorts, the one soldered, the other not soldered. The French use the following words:—*A conduit-pipe, tuyau, canal*; a wooden pipe for water, *amezau*; pipe of a sink or gutter, *goulet*; pipe of a fountain, *tulebute*.

PIQUE, *Fr.* a pike. Before the use of fire-arms, it was customary, among the French, to make use of this word by way of command or designation:—Hence, *faire defiler les piques*, to make the pikes, or a body of men armed with pikes, break off or defile; *le regiment est de tant de piques*, the regiment consists of so many pikes, or men armed with pikes, as we say firelocks.

PIQUE, *Fr.* pique; low grudge; petty malevolence, unworthy of a great mind.

PIQUE-NIQUE, *Fr.* clubbing at a reckoning.

PIQUENAIRE, *Fr.* a pikeman.

PIQUE-Bœuf, *Fr.* an ox driver.

PIQUE, *Fr.* an old word for pikeman.

PIQUE, *Fr.* In masonry, stones pointed and dressed outside are so called.

To PIQUEER, to skirmish. According to Dr. Johnson, (who writes the word *pickeer*, from *Hudibras*), to make a flying

skirmish. Thus Smollett in his history of England from the revolution, vol. 4, page 275, says:—The French edging to the left, took possession of the hill, from whence they *piqueered* with the advanced posts of the English.

PIQUER *le bois*, *Fr.* in carpentry, to chalk out with the tracing line a piece of wood, for the purpose of cutting and shaping it.

PIQUER *l'avoine*, *Fr.* to ride a horse very hard; to make him earn his provender.

PIQUER *un cheval*, *Fr.* to spur a horse; to put on.

PIQUER *la mazette*, *Fr.* to ride a jade, or bad horse.

PIQUER *les absens*, *Fr.* to take down the names of absentees.

Se PIQUER à la guerre, *Fr.* to continue a war, notwithstanding one loses.

PIQUET, *Fr.* a stake. See PICKET.

PIQUET, *Fr.* picket; a punishment so called in cavalry corps. See PICKET.

PIQUET, *Fr.* a certain number of men, horse and foot, who do duty for 24 hours to prevent surprizes. See PICKET.

PIQUET *ferré par le bas et bien pointu*, *Fr.* a picket or stake with a sharp iron ferrel at the end of it. It is used by engineers when they trace a plan, and wish to mark out the angles.

Lever le PIQUET, *Fr.* to call in the picket. It also signifies, figuratively, to decamp or march off the ground.

PIQUER, *Fr.* a man employed in the different workshops belonging to the artillery to superintend the works, and to keep an account of the several materials. There are other persons subordinate to these, whom the French call *chasseurs*, from *chasse-en-avant*, a sort of overseers, whose business is to see the jobs expeditiously finished.

PIQUICHINS, *Fr.* irregular and ill-armed soldiers, of whom mention is made in the history of the reign of Philippe Auguste. They were attached to the infantry.

PIQUIER, *ou Piquenaire*, *Fr.* a pikeman, or one who is armed with a pike.

PIRAMIDE, *Fr.* See PYRAMID.

PIRAMIDES *de feu*, *Fr.* See *Jets de feu*.

PIRATE, (*pirate*, *Fr.*) a robber on the high seas.

PIROUETTE, *Fr.* literally, a whirling; any thing going round upon one

point or axis. The French say, figuratively, *Qui a de l'argent a des pirouettes*, money makes every thing go on.

PIROUETTER, *Fr.* literally means to turn upon one leg; to whirl about. Thus, in many of our military evolutions, divisions and companies may be said to whirl, or to pirouette round their different pivots.

PISSE-chaude, *Fr.* the venereal flux, or contagions running, commonly called a clap, which brings on a painful scalding of the urine.

PISSING of blood in a horse. This may be occasioned by riding him beyond his strength, by some vein breaking in the body, or by some stone or gravel fretting upon his kidneys.

PISTE, *Fr.* the track or tread a horseman makes upon the ground he goes over; also the print of a foot.

PISTOL, a species of small fire arms, of which their are various sorts and sizes, viz.

Highland PISTOL. The old Highland pistol appears singular enough in the present day. Some, that have been preserved, exhibit marks of excellent workmanship. The stock is metal, and the butt end so shaped, that when fired off, the pistol can be used as a very serious weapon at close quarters. The Highland pistol, though never used by any of the British regiments, is still worn by every person who wishes to be considered as fully dressed and accoutred in the ancient garb. It is suspended from the left side of the waistbelt.

Horse-PISTOL, so called from being used on horseback, and of a large size.

Management of the PISTOL on horseback for military purposes. Every recruit, when he joins the horse-drill, should be made perfectly acquainted with the handling of his pistol according to rule, and of firing correctly at a mark. To this end, he must be taught to draw, load, fire, and return his pistol, by word of command, viz.

1st. The right glove is to be taken off, and the goat-skin thrown back.

Draw your right PISTOL. This is done at two motions; 1st. The man must seize the handle of the pistol with his right hand, the back towards the body. 2d, Draw it out of the holster with a brisk motion, dropping the butt of the pistol on the right holster, and keeping the muzzle upwards.

Load your PISTOL. The pistol is to be dropped smartly into the left hand; open the pan, prime, cast about, and load; as soon as loaded, seize the pistol by the butt, and come to the same position as in the second motion in drawing; the bridle hand must be kept as steady as possible. In loading the pistol, the barrel is to be kept to the front.

Return your PISTOL. This is done in two motions: 1st, turn the muzzle into the holster, with the back of the hand towards the body, and press home the pistol. 2d, Quit the right hand briskly.

Cock your PISTOL. Drop the pistol into the left hand, cocking with the thumb of the right, and as soon as done come to the second position, viz. muzzle upwards.

To the Right Present. Come smartly to a *present*, looking well along the barrel to the object you are presenting at, and turning your body as much as is necessary to aim well, but taking care not to displace your bridle hand.

Fire! Pull briskly at the word, and as soon as fired go on with the loading motions; when loaded, come to the position as in the first direction, viz. *muzzle upwards*.

Cock your PISTOL, as already explained.

To the Left Present. This requires particular attention, as the men will be apt to bring their right shoulders too forward, and by that means displace their bodies and the bridle hand.

Fire!—as already explained.

Cock your PISTOL. **To the Front Present.** You must raise yourself in your stirrups, in order to take a proper aim; you must then look well along the pistol, and wait for the *fire*.

Fire! As soon as you have fired, you must drop into your seat, and go on with the loading motions, as before directed.

Return your PISTOL,—as already explained.

Draw your left PISTOL. See *Draw your right PISTOL*.

Pocket-PISTOL, a small pistol, which may be conveniently carried in the pocket.

PISTOLADE, *Fr.* the shot of a pistol; the blow given by a discharged pistol.

PISTOLE, *Fr.* a pistol; also a great (horseman's) dag.

PISTOLE de saucerre, *Fr.* a sling.

PISTOLET, *Fr.* a pistol. It derives its name from *Pistoia*, an episcopal town of Tuscany, in Italy; about 30 miles N. W. of Florence, where the first pistols were made; in the same manner that bayonet takes its appellation from Bayonne, an episcopal city of Gascony, in France; or, as some pretend, from Bayon, a town of Lorraine in France; and as others again assert, from Bayona, a town of Galicia in Spain, seated on a small gulph of the Atlantic Ocean. The *Reitres*, who were armed with them, were called *pistoliers*, *pistoleers*, as musket-bearers were named *mousquetaires*, *musketeers*.

PISTOLET d'arçon, *Fr.* a pistol attached to the bow of a saddle, commonly called a horse-pistol, with a holster to it.

PISTOLIER, *Fr.* This word is used among the French to signify an expert marksman with a pistol.

PISTON, (*piston*, *Fr.*) is a part or member of several machines, as pumps, &c.

PISTON of a pump is a short cylinder of metal, fitted exactly to the cavity of the barrel or body, and which, being worked up and down alternately in it, raises the water, and when raised presses it again, so as to cause it to force up a valve, with which it is furnished, and to escape through the nose of the pump.

Canon à Piston, *Fr.* a certain bitt which gives the tongue liberty without a port.

PITANS, *Ind.* According to Mr. Orme, in his history of the Carnatic, the Pitans are supposed to be the descendants of the northern Indians, who were early converted to Mahomedanism. They have been reckoned the best troops, and, of course, the most dangerous enemies of the throne of Delhi. They are naturally fierce.

PITAN Nabobs, certain chiefs in India so called, viz. of Cudapah, Canoul, and Savanore.

PITAUX, *Fr.* This word is sometimes written *Petaux*, and was formerly used to distinguish those peasants that were pressed into the service, from soldiers who were regularly enlisted.

To PITCH, (*asseoir*, *Fr.*)

To PITCH a camp, (*asseoir un camp*, *Fr.*) to take a position, and to encamp

troops upon it according to the principles of castrametation.

To PITCH a tent, to place a certain regulated quantity of canvass upon poles, so as to afford a temporary cover against the inclemencies of the weather, for one or more officers or private soldiers. In order that the men may become expert in pitching and striking tents, they ought to be practised whilst in camp to do either.

PITCH, in architecture, is the angle, and gable end, of the roof of a building.

PITCHANDAH, *Ind.* a fortified pagoda, on the north bank of the Cobroon, one mile east of Seringham. It was taken possession of, and immediately abandoned by the English army, in July, 1751.—See pages 178, 179, of Orme's History of the Carnatic.

True-PITCHED. A roof is said to be *true-pitched*, if the length of each rafter be three-fourths of a building.

High or sharp-PITCHED. If the rafters are longer than three-fourths of a building, the roof is said to be *high or sharp-pitched*.

Low or flat-PITCHED. When the rafters are shorter than three-fourths of a building, the roof is said to be *low or flat-pitched*.

PITCHED Battle, (*bataille rangée*, *Fr.*) a battle, in consequence of preconcerted measures, when two hostile armies are drawn up in regular array, and upon the issue of which some important object depends, as was the case at the battle of Wagram, in 1809.

PITCHING, the same as *paving*.

PITONS d'affût, *Fr.* iron pins which are used to keep the plate-bands of the carriage of a gun tight and compact.

PIVOT, (*pivot*, *Fr.*) in a military sense, that officer, serjeant, corporal, or soldier, upon whom the different wheelings are made in military evolutions.—There are two sorts of pivots distinguished according to the position of the troops who are governed by them, viz. *standing pivot* and *moveable pivot*. When a battalion, for instance, stands in open column of companies, the *right in front*, the last man upon the left of the front rank of each company, is called the *inner*, or *standing pivot*; and the first man upon the right ditto, is called the *outer*, or *wheeling flank*. So much depends upon the accurate position of the different pivots, that no movement can

be thoroughly correct unless the most scrupulous attention be paid to them.—Officers in particular ought to recollect, (what is so sensibly pointed out in the General Rules and Regulations,) that when they are posted upon the flanks, they become essentially necessary to the preservation of that perpendicular and parallelism of a march, without which direction, the best digested manœuvres must be ultimately rendered useless.—They must constantly bear in mind, that it belongs to the mounted field officers to watch the aggregate, and that they themselves, being incorporated parts of the different divisions, are to move successively forward, with no other object in view than the perpendicular point before them. For if they once turn to the right or left, or become anxious about the movements of others, instead of being the means of insensibly correcting any errors that might casually occur, they will deviate themselves, and at every step increase the irregularity. On this account, the instant an officer has wheeled his division, he must resume his perpendicular position, look stedfastly on his leading pivot, preserve his relative distance, and keep his person perfectly square. He ought likewise to be particularly correct in stepping off when the wheel is completed.

Moveable Pivot, one which during the wheel of its division advances in a circular direction, instead of turning on the spot where it originally stood. Thus when divisions, &c. are successively wheeled, without being first halted, the pivot upon which they wheel is said to be *moveable*.

In the drill, single ranks are frequently wheeled on a moveable pivot. In which case, both flanks are moveable, and describe concentric circles round a point which is a few paces from what would otherwise be the standing flank; and eyes are all turned towards the directing pivot man, whether he is on the outward flank, or on the flank wheeled to.

Pivot-flanks, the flanks upon which a line is formed from column. When the right of the battalion is in front, the pivot flanks are on the left of its several companies, platoons, &c. and vice versâ, when the left is in front.

Pivot-flank officer, the officer who is on the first flank. In all wheelings during the march in column the officer on

that flank, upon which the wheel is made, must consider himself as the pivot.

Platoon Pivots, the men upon whom a battalion marches in columns of platoons, is wheeled up into line, or backward into column, when the line has been formed according to a given front.

Pivot, (*pivot*, Fr.) the tamplin of a gate or great door; a piece of iron or brass, made for the most part like a top, round and broad at one end, and sharp at the other, whereby it enters into the *crapaudine*, or *sole*, in which the pivot plays, and serves as well to bear up the gate (in whose bottom it is placed) as to facilitate its motion. It is also made, sometimes two-fold in the upper part, and nailed upon both sides of the *chardonnerau*; and sometimes like a spindle, sharp at both ends, the upper sticking in the *chardonnerau*, or bar of the door. Pivot also signifies the principal stay, support, or pillar, of a kingdom. Whence likewise the military term pivot, upon which the movements of columns, &c. are made, and by which they are supported.

PIVOTTER un huis, Fr. to hang a door on pivots.

PIZÉ, Fr. earthen, or made of mud, &c. whence *murailles de pizé*, earthen walls.

PLACAGE, Fr. in fortification, a kind of revêtement, which is made of thick plastic earth, laid along the talus of such parapets as have no mason work, and which is covered with turf.

PLACARD, } or, as it is in the ori-
PLACART, } ginal Dutch language,
placant, a term used abroad for a proclamation, edict, &c. put up in all public places, by the authority of government; whereby their subjects are ordered to do, or forbear, something expressed therein. See *MANIFESTO*.

PLACARD, Fr. any bill or public paper, that is posted up. It likewise means a libel.

To *PLACARD*, (*placarder*, Fr.) to stick up for public observation; also to libel another.

PLACARD, in architecture, the decoration of the door of an apartment, consisting of a chambranle, crowned with its frieze, or gorge, and its corniche sometimes supported with consoles.

PLACARDED, (*placardé*, Fr.) stuck up.

PLACCAR, Fr. a lock. *Huis qui se*

ferment à doubles placars, doors which are shut with double locks.

To PLACE, to appoint; as to place an officer in the 17th foot. It also signifies to post or distribute; as, to place a sentinel; to place a piquet. This word is confined to a particular situation, but it is not used as a general word amongst us. The French say, *Placer un jeune homme*, to provide for a young man: *Placer dans l'armée*, to provide for in the army; literally to place him.

PLACE, *Fr.* Every species of fortified place is so called.

PLACE, *Fr.* The French say, when any number of men have fallen in action, *Il est demeuré tel nombre d'hommes sur la place*; such a number of men remained, or were left, on the spot.

PLACE, *emplacement*, *Fr.* any spot or site which suits the plans of an architect to build upon.

PLACE, in fortification, signifies, in general terms, a fortified town, a fortress. Hence we say, it is a strong place.

PLACE of arms, (*place d'armes*, *Fr.*) This term has various significations, although it uniformly means a place which is calculated for the rendezvous of men in arms, &c.

1st. When an army takes the field, every strong hold or fortress which supports its operations by affording a safe retreat to its dépôts, heavy artillery, magazines, hospitals, &c. is called a *place of arms*.

2dly. In offensive fortifications, those lines are called *places of arms*, or *parallels*, which unite the different means of attack, secure the regular approaches, &c. and contain bodies of troops who either do duty in the trenches, protect the workmen, or are destined to make an impression upon the enemy's outworks.

There are *demi-places of arms* between the *places of arms*. These are more or less numerous in proportion to the resistance made by the besieged.

PLACE, *Fr.* This word is frequently used by the French, in a military sense, to signify ration, viz.

Une PLACE de bouche, *Fr.* one ration of provisions.

Deux PLACES de fourrage, *Fr.* two rations of forage.

PLACES of arms belonging to the covert way. These are divided into two sorts, viz. *salient* and *rentrant* places of arms. There are likewise places of arms

composed of traverses, which are practised or made in the dry ditches of military towns, in a perpendicular direction to the faces of the half moons and the tenaillons.

PLACE of arms in a fortified town, (*place d'arms d'une ville de guerre*, *Fr.*)

The place of arms is always in the middle of the town, generally in the market place, if it be central. The ground must be sufficiently spacious for the parade of the garrison, or at least for the greatest part of it; for it is there that the several guards are paraded, and the troops sometimes exercised; especially when the barracks are too confined, or when it is not thought expedient to march them beyond the gates for that purpose.

PLACE of arms of an attack, or of a trench, are deep trenches 15 or 18 feet wide, joining the several attacks together: they serve for a rendezvous and station to the guard of the trenches, to be at hand to support the workmen when attacked. It is customary to make 3 places of arms, when the ground will permit: the first, and most distant from the place, is about 300 toises, or 600 yards, from the glacis of the covert-way; the second is within 140 toises, or 280 yards; and the third at the foot of the glacis. See PARALLELS.

PLACE of arms of a camp was, strictly speaking, the bell tents, at the head of each company where the arms were formerly lodged; likewise a place chosen at the head of the camp, for the army to form in line of battle, for a review, or the like.

PLACE of arms of the covert way is a part of it, opposite to the re-entering angle of the counterscarp, projecting outwards in an angle.

PLACE marécageuse, *Fr.* a marshy place. A place of this description may be easily fortified, and at little expense; nor does it require many troops for defence. Among other advantages, that of not being exposed to an enemy's mines, is by no means the least considerable. On the other hand, piles must be sunk in almost every direction; and should it be invested, it is almost impossible to succour it. Add to these inconveniences, the danger to which the garrison must be constantly exposed of being visited by some contagious disorder; as was the case in Holland, particularly at Walcheren, that grave of British valour.

PLACE élevée dans un plat pays, *Fr.*

places that are put in a state of defence in a flat open country. These places are almost always secured by regular fortifications: the soil is good, and there is always plenty of earth adapted to every species of military work: there is abundance of water; and should an enemy attempt to carry them by insulting the works, entrenchments may be easily thrown up to check him. Add to this, that it would require two or three armies, at least, to cut off the various supplies which can be procured from the country round. On the other hand, the goodness and abundance of the soil are equally beneficial to the besieging army. For the troops are thereby enabled to throw up entrenchments, to build redoubts, erect batteries, and by thus securing their approaches, to annoy the besieged at all hours, and in all ways.

PLACE située sur le penchant d'une montagne, Fr. a place situated or built upon the declivity of a hill. It is very difficult to fortify a spot of this sort.—Whatever is erected upon it, must be commanded by the higher ground, and the body of the place be, of course, exposed to every attack.

PLACE située dans une vallée, Fr. a town, fortress, or hold, that is built in a valley. Places so situated must be in constant jeopardy, as by getting possession of the heights, the enemy can always command them.

PLACE située sur les bords d'une grande rivière, Fr. a place, &c. built upon the banks or borders of a large river. Places constructed in a situation of this sort, are preferable to all others, provided they have a free and uninterrupted communication with the principal quarter from which stores, provisions, and ammunition may be drawn. They may be regularly fortified towards the interior of the country, and it will require little or no artificial means to secure them on the side of the river.

PLACE de guerre, Fr. any town or place that is regularly, or irregularly, fortified.

PLACE basse, Fr. in fortification: the lower flanks, according to certain systems, are so called.

PLACE forte, Fr. a strong hold, or place, which presents at all points so many difficult obstacles against a besieging army, that it cannot be carried (except by surprize) unless the regular means of reducing it be resorted to.

PLACES contremînées, Fr. All fortresses, &c. are called *places contremînées*, or *counterminded*, which, independently of their open and visible means of defence, &c. have subterraneous fortifications that are alongside the revêtements of the works, under the glacis, or beneath the neighbouring ground, to interrupt the approaches, and destroy the works of a besieging army.

PLACE haute, Fr. According to the systems of some engineers (which have not been followed of late years) the *place haute*, or high place, is that which stands the highest of three platforms that were constructed in the shape of an amphitheatre along the flanks of the bastions. It stands on a level with the terrepleine of the bastion. The cannon which is destined to play against a besieging enemy is placed upon it. Pagan, Blondel, and others, who have copied from these systems, did so from an idea, that considerable advantages might be derived from a powerful and concentrated discharge of artillery and musketry. Not conceiving that it was possible to construct casemated flanks free of smoke, they built three or four open flanks, one above the other. But they were soon rendered useless and untenable by the shells that fell, and the fragments that flew about in consequence of the demolition of the mason work. Casemated ramparts, on the contrary, have been known to stand proof against the heaviest discharge of bombs, &c. to take up little room, and to afford ample space for a wide range of artillery, that is kept under cover.

PLACE-basse, Fr. See CASEMATE.

PLACE d'armes, Fr. any spot of ground upon which troops may be drawn up for the purpose of being marched off.

PLACES en première ligne, Fr. those parts of a country which are most exposed, and most likely to be attacked by an enemy.

PLACES en seconde ligne, Fr. those parts or places which lie between the center of a country and its borders. Those indeed which are again closer to the center, are called *les troisièmes places de ligne*.

PLACES d'armes du chemin couvert, Fr. salient and reentrant spaces which flank the branches belonging to the covert way, and in which men are posted for their defence. We call it also *place of arms without*, or that space of ground which

is allowed to the covert way, in order to have cannon planted on it, for the purpose of annoying the enemy in his approaches, and of forcing him to retire.

PLACES non-révêtues, Fr. All fortified towns or places are so called, when the ramparts that surround them are only lined with placage or simple turf. In this case, the ramparts, so lined or covered, ought to be fraised and palisadoed about the berme or foot path, to prevent surprizes. Hedges made of good quick-set, well interwoven with other wood, and carefully attended to, will save the expense of palisadoes, which in marshy soils soon rot, and require to be replaced.

PLACES revêtues, Fr. All fortified towns or places are so called, whose ramparts are lined or covered with brick or stone. It frequently happens, that the revêtement does not reach the terre-pleine of the rampart, especially when the parapets are thick and solid; in which case the revêtement is more easily covered by the glacis. Parapets are no longer lined.

To be PLACED. This expression is frequently used in naval and military matters, to signify the appointment or reduction of officers. Hence to be placed upon full or half pay. It is more generally applicable to the latter case.

PLACER, Fr. to fix, to settle. This word is used among the French, to express the act of providing for a person by appointing him to a desirable situation, viz. *placer un jeune homme dans un régiment*; to get a young man a commission in a regiment.

Un cheval bien PLACÉ, Fr. A horse is said, among the French, to be well placed, when his forehead runs perpendicularly down between the nostrils.

PLACET, Fr. a memorial, a petition.

PLAFOND, Fr. *plafound*, in architecture, is the ceiling of a room, whether it be flat or arched; lined with plaster or joiner's work, and frequently enriched with paintings or ornaments in sculpture.

PLAFOND, or *plafound*, is also more particularly used for the bottom of the projecture of the *larmier* of the cornice, called also the *soffit*.

PLAFONNER, Fr. to ceil or adorn the upper part of a room, &c.

PLAGE, Fr. flat shore, or extent of

coast, where there are no creeks, &c. for vessels to ride in.

Belted PLAID, the ancient garb of the Scotch Highlanders, and still worn by some of our Highland regiments.

The belted plaid consists of twelve yards of tartan, which are plaited, bound round the waist by a leathern belt, the upper part being attached to the left shoulder.

In the regulations relative to the clothing and half mounting of the British infantry, it is directed, that in a Highland corps serving in Europe, in North America, or at the Cape of Good Hope, each serjeant, corporal, drummer, and private man, shall have six yards of plaid once in two years; and a purse every seven years.

PLAIE, Fr. a wound.

PLAIE d'argent, Fr. an irregularity in money matters. The French say figuratively: *PLAIE d'argent n'est pas plaie mortelle*, pecuniary wounds are not mortal. We are, however, decidedly of opinion, that half the feuds and miseries in human life, particularly among military men, arise from pecuniary irregularities. See **MONEY-matters**.

PLAIN-tile. See **TILE**.

PLAIN scale is a thin ruler, either of wood or brass, whereon are graduated the lines of chords, sines and tangents, leagues, rhombs, and is extremely useful in most parts of mathematics.

PLAIN table, an instrument used in surveying land. The table itself is a parallelogram of wood $14\frac{1}{2}$ inches long, and about 11 inches broad.

PLAINNE, Fr. scutecheon of a lock; apron of a cannon.

PLAINNE campagne, Fr. the open field. Hence, *la bataille s'est donnée en plaine campagne*; the battle was fought in the open field.

PLAN, *ground plot*, or *ichnography*, in fortification, is the representation of the first or fundamental trace of a work, shewing the length of its lines, the quantity of its angles, the breadth of the ditches, thickness of the rampart, parapets, and the distance of one part from another; so that a plan represents a work, such as it would appear if cut equal with the level of the horizon, or cut off at the foundation: but it marks neither the heights nor depths of the several parts of the works: that is properly *profile*, which expresses only the heights, breadths, and depths, without

taking notice of the lengths. As architects, before they lay the foundation of their edifice, make their design on paper, by which means they find out their faults, so an engineer, before he traces his works on the ground, should make *plans* of his designs upon paper, that he may do nothing without serious deliberation.

Exact plans are very useful for generals or governors, in either attacking or defending a place, in chusing a camp, determining attacks, conducting the approaches, or in examining the strength and weakness of a place; especially such plans as represent a place with the country about it, shewing the rivers, fountains, marshes, ditches, vallies, mountains, woods, houses, churehes, defiles, roads, and other particulars, which appertain to it.

PLAN of comparison, a geometrical sketch of any fortress and adjacent country, within cannon shot, in which the different levels of every principal point are expressed.

PLAN, Fr. See *PLAN*.

Lever le PLAN de quelque place de guerre, Fr. to draw the plan of a fortified town or place.

PLAN relevé, ou plan en relief, Fr. a plan or representation of all the out-works, and inside buildings, belonging to a fortified town or place.

PLAN, Fr. plane, in geometry, a level surface without thickness, which has neither depth nor curvity.

PLANCHIER, Fr. a boarded floor. It also signifies a ceiling of boards, and sometimes a floor or bed of plaster.—The French say, figuratively, *plancher de vaches*, the earth.

PLANCHES, Fr. boards, planks.

PLANCHES d'entrevoux, Fr. boards or planks that are laid between the joists, or posts of a building.

PLANCHETTE, Fr. a small board or copper-plate, which is used in practical geometry.

Lever à lu PLANCHETTE, Fr. to give an exact representation of any space of ground, with its appurtenances, on copper, or on a piece of paper which is pasted upon wood. In order to do this, a person must be well versed in practical geometry.

PLANCHETTE, Fr. a woman's stirrup; also the plate or the bottom of the stirrup, upon which the foot rests.

PLANCHEYER, Fr. to board or floor.

PLANÇONS, in hydraulic architecture, small round stakes of oak, from 12 to 15 feet long, having four inches diameter at top, and being pointed below.

Geometrical PLANE in perspective, (plan en perspective, Fr.) a plain surface parallel to the horizon, placed lower than the eye.

Horizontal PLANE in perspective, (plan horizontal en perspective, Fr.) a plane which lies parallel to the horizon, and on which the eye is supposed to be placed.

Vertical PLANE in perspective, (plan vertical, ou plan à vue d'oiseau, Fr.) a plain surface which passes through the eye, and is perpendicular to the geometrical plane.

Inclined PLANE, (plan incliné, Fr.) in mechanics, an inclined surface, which makes an oblique angle with an horizontal plane.

To PLANE, (planer, Fr.) to smooth with a plane.

PLANE, (plaine ou plan, Fr.) in joinery, a sharp-edged iron instrument, by which the surface of boards is smoothed.

PLANET-struck, or *shrew-running*, as some horsemen call it, is a distemper in horses, being a deprivation of feeling or motion, not stirring any of the members, but that they remain in the same form as when the beast was first seized with it.

This disease frequently proceeds from extreme heat or cold. If it proceeds from heat it may be known by the hotness of the horse's breadth, and the frequent fetching of his wind; but if from cold, by a stuffing and poze in his head.

PLANIMETRY, (planimétrie, Fr.) that part of geometry which considers lines and plain figures, without any reference to heights, or depths, in opposition to stonometry, or the mensuration of solids.

PLANISPHERE, (planisphère, Fr.) a representation of the globe or sphere on paper, for geometrical and astronomical purposes.

To PLANK, to line or lay any thing with planks, as the sides and decks of vessels, or platforms for cannon, &c.

To PLANT, in a military sense, to place, to fix; as to plant a standard.—It likewise signifies to arrange different pieces of ordnance for the purpose of doing execution against an enemy or his works. Hence to plant a battery,

Johnson applies it to the act of directing a cannon properly. The French use the word generally as we do, except in the last mentioned sense. They say *mettre le canon en batterie*. In others the term bears the same signification, with occasional deviations when they apply it figuratively, viz.

PLANTER *le piquet chez quelqu'un*, Fr. to quarter one-self upon any body.

PLANTER *là quelqu'un*, Fr. to leave a person abruptly, or, as we familiarly say, to leave another in the lurch.

PLANTER *quelque chose au nez de quelqu'un*, Fr. to reproach a person with any thing, or, as we familiarly say, to throw it in his teeth.

PLANTÉ, Fr. to be fixed; to be stationary; to be erect; as, *Un soldat bien planté sur ses pieds*; a soldier that is well set up.

PLANTER *un bâtiment*, Fr. to lay the first stones, or the foundations of a building.

PLANTEMALIN, Fr. a caltrop.

PLAQUE, Fr. the shell of a sword. See PLACAGE.

PLAQUES *de plomb*, Fr. sheets of lead. These are used for various purposes. In the artillery, to cover the vent of a cannon; and on board ships of war, to stop the holes that are made by cannon shot.

PLAQUER, Fr. to lay one plank over another; to cover any space with earth, or turf, &c.

PLAQUET, an additional plate which was occasionally put upon the breast-piece of old armour; also a coin in Flanders equal to three-pence halfpenny English.

PLASM. See MOULD.

PLASTER, a piece of greased leather or rag used by riflemen, &c. to make the ball fit the bore of the piece.

PLASTER, or PLAISTER, a composition of slaked lime, sometimes with hair, sometimes with sand, &c. for pargeting or covering over the nakedness of a building; used by bricklayers in building walls, &c.

PLASTER *of Paris* is a fossile stone, of the nature of a lime stone, serving to many purposes in building. It is also used in sculpture, in moulding, and making of statues, basso relievos, and other decorations in architecture.

This plaster is found in quarries about Paris, whence it derives its name. The finest is that of *Montmartre*.

Crude PLASTER of Paris is the native, as it comes out of the quarry, in which state it is used as shards in the foundation of buildings.

Burnt PLASTER is the native calcined, like lime in a kiln or furnace, pulverized or diluted with water or other liquid in working it. It is used, in this state, as mortar or cement in building. When well sifted and reduced to an insipid powder, it is used in making figures in sculpture.

PLASTICE, or PLASTIC-art, a branch of sculpture, being the art of forming figures of men and other animals, in plaster, clay, stucco, &c.

The PLASTIC Art is now chiefly used among us in fret-work ceilings; but the Italians apply it to the mantlings of chimnies with great figures.

PLASTRON, a piece of leather stuffed, used by fencing masters, to receive thereon the pushes made at them by their pupils; also plaster.

PLASTRON, Fr. a breast plate, or half cuirass. In the old French service the gentlemen, the heavy cavalry, the light horse, &c. were obliged to wear breast plates on all occasions at reviews, &c. The hussars were an exception to this order, which took place on the 28th of May, 1733. In the original order, dated the 1st of February, 1703, it was particularly specified, that in order to be accustomed to their weight, the above-mentioned corps should wear half cuirasses in time of peace. The captains of troops were obliged to keep the half cuirasses belonging to their men in constant repair.

PLAT, *ate*, Fr. flat, level, low. The flat side of any thing; as, *plat de sabre*.

PLAT *de la langue*, Fr. mere talk, such as courtiers use.

PLAT *pays*, Fr. a flat or low country. It is generally used among the French to signify that extent, or space of a country, on which scattered houses and villages are built, in contradistinction to towns and fortified places. It is likewise used in opposition to a mountainous country: *Les soldats de la garnison vivaient aux dépens du plat pays*; the soldiers of the garrison lived upon the adjacent villages or country.

Punir à coup de PLAT de sabre, Fr. to punish a man by striking him with the flat side of a sabre blade. The French likewise say, *des coups de plat d'épée*; blows given with the flat side of a

sword.—This mode of punishing is frequently adopted in foreign services, particularly among the Germans. M. de St. Germain, minister of the war department under Louis XVI. attempted to introduce it in France, but it was resisted by the army at large.

Battre à PLATE couture, Fr. to gain a complete and decisive victory, or to beat an enemy so as to kill, or take, almost every man he had to oppose.—Hence, *Une armée battue à plate couture*; an army completely routed and undone.

PLAT de l'équipage d'un vaisseau, Fr. a dish or mess, consisting of seven rations or portions put together, and served out for the subsistence of seven men, on board French ships of war.

Etre mis au PLAT des malades sur mer, Fr. to be put upon the sick list on board a king's ship; or to receive such rations as are ordered to be served out to the sick.

Maison PLATE, Fr. a house which has neither towers nor moat; opposed to *château* or castle, which usually has.

PLAT, Fr. a term in carpentry. See *POSER sur le plat*; also *POSER de champ or cant*.

PLAT-band, in architecture, according to M. Perrault, is any flat square moulding, having less projecture than height. Such are the faces or fasciæ of an architrave, and the *plat-bands* of the modillions of a cornice.

PLAT-bord, bord-PLAT, Fr. in a ship, is the edge of the deck, from the mainmast to the fore-castle, upon which the great ordnance is placed; also the center board of the deck of a ship. It likewise generally signifies all the materials or pieces which constitute the upper part of the deck of a vessel or boat.

PLATAIN, Fr. flat-coast; a spot near the sea which is well calculated for a descent.

Heel-PLATE, a piece of thick brass let into the butt end of the stock, fastened with two screws at the toe and heel, in order to secure the wood from injury.

Trigger-PLATE, a piece of brass which is let into the stock under the guard or handle, and confines the action of the trigger.

PLATEAU, Fr. a flat piece of wood, which is sometimes used to place mortars on, &c. This word also signifies the moulding which goes round a piece

of ordnance, in three different places, to render its diminution towards the muzzle less abrupt to the eye.

PLATEAU, Fr. the bottom piece of wood on which any thing is laid for the purpose of being weighed in large scales.

PLATEAU, Fr. in the artillery, an elevated piece of ground, made level for cannon to be mounted on; a platform.

PLATEAU d'une montagne, Fr. the level surface of any hill or mountain. See *TABLE*.

PLATEAUX, Fr. flat and thin stones; flakes of stones.

PLATEBANDES, Fr. cap-squares; a particular part of a piece of ordnance, which, though of a flat form or figure, rises beyond the rest of the metal, and is always cast before the moulding. There are three sorts of platebandes upon a regular piece of ordnance, viz. cap-square and moulding at the breech: cap-square and moulding of the first reinforce; cap-square and moulding of the second reinforce.

PLATEBANDES d'affûts, Fr. iron cap-squares, which serve to keep the trunnions fast between the cheeks of a piece of ordnance.

PLATEBANDE de pavé, Fr. curb stones, or stones of a larger size than the ordinary ones, which serve to line roads.

PLATE-longe is a woven strap, four fathoms long, three fingers broad, and one thick, used in the manege for raising a horse's legs, and sometimes for taking him down, in order to facilitate the operations of the veterinary surgeon or farrier.

PLATÉE, Fr. the mass of a foundation, which comprehends the whole extent of a building.

PLATEFORME de pilotage, Fr. a platform made upon piles. When the pilework, in a piece of marshy ground, &c. has been completed, planks are placed upon it and secured together by iron pins; so that if it be necessary to establish a post or erect a battery, there may be foundation enough for the purpose. Fort-Rouge, at the entrance of Calais harbour, has been constructed in this manner; and it has been found sufficiently strong to withstand the explosion of the *catamaran*.

PLATEFORME de comble, Fr. flat pieces of wood laid together by overthwart rafters, so as to form two rows of beams, one of which supports the timber work of a roof, and which lie on the top of the

wall. When these platforms are narrow, as is the case in walls of moderate dimensions, they are called *sablères*.

PLATEFORME de fondation, Fr. flat pieces of wood which are fastened upon pilework by means of iron pins, in order to build upon them; or which are laid upon beam-ends in the bottom of a reservoir, for the purpose of constructing an inside wall.

PLATES, or *prise-plates*, in artillery, two plates of iron on the cheeks of a gun-carriage, from the cope square to the center, through which the prise-bolts go, and on which the handspikes rest, when used in raising the breech of the gun, &c.

Breast-PLATES, the two plates on the face of the carriage, on the other cheek.

Breast-PLATES, the clasps with ornamented heads, by which the cross-belts in the army are attached.

Train-PLATES, the two plates on the cheeks at the train of the carriage.

Dulidge-PLATES, the six plates on the wheel of a gun-carriage, where the fel-lies are joined together.

PLATFOND, a French word, used for ceiling or roof of a chamber or other room. The same as *soffit*.

PLATFORM, (*plateforme*, Fr.) The upper part of every brick or stone building which is arched and has more doors than one, is so called. Hence the platform of a tower, or of a redoubt. All pieces of ordnance that are planted on a rampart, or are disposed along the lines of a besieging army, &c. have their platforms.

PLATFORM, in gunnery, is a bed of wood on a battery, upon which the guns stand: each consisting of 18 planks of oak or elm, a foot broad, $2\frac{1}{2}$ inches thick, and from 8 to 15 feet long, nailed or pinned on 4, 5, or 6 beams, from 4 to 7 inches square, called sleepers.—They must be made higher behind than before by 6 or 9 inches, to prevent too great a recoil, and to advance the gun easily when loaded. They are from 18 to 20 feet long, 8 feet before, and 14 or 15 feet behind, and the direction left to the officers of the royal regiment of artillery.

Platforms are usually made of wood, and sometimes of stone. Platforms for mortars are made quite level.

Traversing PLATFORM. See TRAVERSING.

PLATFORM, (*plateforme*, Fr.) in ar-

chitecture, a kind of terrace walk, whence a full view may be taken in a garden. It is also used for a floor on the top of a building, whence a prospect may be taken of the adjacent country, as may be seen in Spain, Italy, and even in some of the southern provinces of France.

PLATINA, a metal used for touch-holes, and preferred, for that purpose, to gold. The platina or gold touch-hole has the advantage over the common one, of being less liable to become enlarged, because it is enabled to resist the chemical effect of the nitrous acid, produced by the combustion of the powder, which is not able to decompose either of these metals, so readily as iron, or any of the grosser species.

PLATINE de lumière, Fr. the same as *plaque de plomb*, as far as it regards cannon. With respect to muskets and other fire-arms, it means that part of the hammer which covers the pan.

PLATINE, (according to the author of the *Nouveau Dictionnaire Militaire*, published in 1801,) when applied generally, signifies the whole of a lock belonging to a musket or fire-arm.

PLATOON, in military affairs, was formerly a small body of men, in a battalion of foot, &c. that fired alternately. A battalion was then generally divided into 16 platoons, exclusive of the grenadiers, which formed 2 or 4 platoons, more or less, as occasion required. At present the battalion is generally divided into wings, grand divisions, divisions, (or companies,) subdivisions, and sections; and the word platoon is seldom used, except to denote a number (from 10 to 20) of recruits assembled for the purpose of instruction; in which case it may be considered synonymous with company.

PLATRAS, Fr. rubbish, such as ashes, pieces of broken bricks, mortar, &c. It is used by refiners, for the purpose of distilling saltpetre into proper vessels.

They likewise extract saltpetre out of this rubbish, after having pounded it well together, and pressed it through a wash.

PLATRE, Fr. plaster; parget; point; plaster made of lime for building, &c. *Battre quelqu'un comme plâtre*, to beat a person to mummy.

PLATRÉ, Fr. literally plastered; patched up.

PLATRER, *Fr.* to plaster; to patch; to daub over.

PLAT-*vein*, in a horse, is a vein on the inside of each fore thigh, a little below the elbow; some call it the *basilic vein*.

The bleeding of this vein may be stopped, when cut, by filling the orifice with the wool of a rabbit or hare, and afterwards sewing up the skin in two parts, upon which a little matter will collect; but by greasing the wound, it will be healed in a few days.

PLATS *de balance*, *Fr.* the two dishes, or plates, of a pair of scales.

PLAY is occasionally applied to military action; as the cannon *play* upon the enemy, &c.

To PLAY, to have the different instruments of a band sounded. Hence the band is ordered to play; a privilege which in many regiments is confined to the commanding officer, particularly at parades.

PLAY, game; practice of gaming; contest at a game. Also, gambling, or risking money.

Foul PLAY, a method of playing, by which undue advantage is taken; as by coggng, securing, &c. See JEU *de hasard*.

PLAY-debt, commonly called a debt of honour, debt contracted by gaming, and which must be discharged at the expense of every other obligation; fashionable honour being considered, in this case, as paramount to common honesty!

PLEBEIAN, from the Latin *plebeius*, any person of the situation or condition of the common people. The term is chiefly used in speaking of the ancient Romans, who were divided into senators, knights, and plebeians, or common people.

PLEDGE, in a military sense, any thing given as warrant or security. Officers who undertake commands, &c. tacitly give a pledge to their sovereign, and to their country, for the necessary talent and qualifications required; and no pledge should be admitted without a forfeit.

PLEDGET, the same as bolster, compress, in surgery, a kind of flat tent, which is laid over a wound to imbibe the superfluous humours that ooze out, and to keep it clean.

PLEIN *d'un mur*, *Fr.* the main part or body of a wall.

Cour PLENIÈRE, *Fr.* an open court,

to which every body has access. In the ancient times of France, when the *Grand Monarque* signified his intentions of being present at a solemn assembly of his nobles, &c. or having magnificent tournaments, public notice was given that a *cour plénière*, or open court, would be held. This was done, in order to allow sufficient time for foreign princes to appear in person.

PLESION, a particular formation of troops in close column, which was invented by Dumenil Durand, a French military writer, of whom Guibert speaks.

PLEUVOIR, *Fr.* to rain; to pour.—The French say, figuratively, (when there is a heavy discharge of musketry directed against any particular quarter,) *il y pleut des mousquetades; les coups de mousquet y pleuvent*; musket-shots pour upon that quarter; musket-shots rain or come down in torrents.

PLIER, *Fr.* to give way.

Une aile qui plie, *Fr.* in a military sense, the wing of an army which gives way. When this occurs, it behoves a wise and executive general to send immediate support, for the whole army is endangered by the least impression on that quarter. The French say figuratively of a general who drives every thing before him, *Tout plie devant lui*, every thing gives way before him.

PLIER also signifies to step out of the ranks, or to deform the alignment.—Hence *plier le pied*, to step out in a disorderly manner.

PLINTH, the square member which serves as a foundation to the base of a pillar; so called from the Greek *πλατῦς*, a brick. It is used as the foundation of columns, seeming to have been originally intended to prevent the bottom of the primitive wooden pillars from rotting.

PLINTH *of a statue*, a base or stand, either flat, round, or square, serving to support a statue.

PLINTH *of a wall*, a term used by bricklayers for two or three rows of bricks, which advance out from the wall; or it is used generally to signify every flat, high moulding, serving in a front wall to mark the floors, or to sustain the eaves of a wall, and the larmier or drip of a chimney. Vitruvius calls the Tuscan *abacus*, plinth, on account of the resemblance it bears to a brick: it is also called *orlo*.

PLOMB, *Fr.* lead; a plummet, or

small piece of lead, which is attached to some packthread, so that it may be suspended in a perpendicular direction. It is used by miners. The packthread by which it hangs is called *fouet*, or whipcord.

PLOMB also comprehends, in its signification, all sorts of shot, except cannon-shot, used in fire-arms. The French say, *la ville a été forcée de capituler, faute de plomb*, (i. e. *balles de mousquet*) *et de poudre*, the town was forced or obliged to capitulate through the want of shot and gunpowder.

A PLOMB, *Fr.* the perpendicular position of any body or substance. *Une muraille est à plomb*, a wall is in a straight perpendicular direction.

Donner à PLOMB, *Fr.* to fall vertically, as the rays of the sun do in certain latitudes.

Etre à PLOMB, *Fr.* to stand upright.

Marcher à PLOMB, *Fr.* to march with a firm, steady pace.

This word is sometimes used as a substantive, viz. *perdre son aplomb*, to lose one's balance.

Manquer d'aplomb, *Fr.* to be unsteady.

PLOMBANT, *Fr.* plumbing or trying the straightness of a work by a plumb-rule.

PLOMB de sonde, *Fr.* sounding-line.

PLOMB à chas, *Fr.* an instrument made of copper or brass. See **PLUMB-Rule**.

PLOMB de Mine, } *Fr.* black lead.
Mine de PLOMB, }

PLOMB noir, *Fr.* common or ordinary lead. The French say; figuratively, *Cet officier a du plomb dans la tête*, that officer is a deliberate, cool man.

PLOMB, *Fr.* bullets; shot. *Le plomb vole*, the bullets fly about. The French say, *Craindre ni plomb, ni fer*, not to fear either gun or sword.

PLOMBAGINE, *Fr.* lead and silver ore intermixed.

PLOMBATURE, *Fr.* solder of lead or tin.

PLOMBEAU, *Fr.* a plummet, or any weight of lead; whence *Le poids à plomb*, the Roman beam, or steele.

PLOMBEAU d'une épée, *Fr.* the pomel of a sword.

PLOMBÉE, *Fr.* a pellet of lead.

PLONGÉE, *Fr.* a term used in artillery to express the action of a bomb, &c. which from the highest point of the curve it describes, takes a downward direction to strike its object.

PLONGÉE du rempart, *Fr.* The slope of the upper part of the parapet, belonging to the rampart, is so called. The slope is likewise named *talus supérieur*, or upper talus.

PLONGEONS, *Fr.* artificial fireworks, which are shot into water, and rise again without being extinguished.

PLONGEONS, *Fr.* plungers or divers. Men of this description ought always to accompany an army, for the purpose of swimming under bridges of boats, &c. and making apertures in their bottoms.

PLONGER, *Fr.* literally to plunge: a term used to signify all discharges which are made by cannon, musketry, from any height, such as the rampart, &c. into the fossé, or upon the adjacent country.

PLÜG, or breech patent, called, also, *chambered plug*. In a book entitled *Scloppetaria*, there is, in page 115, the following observation relative to this article: "Patent breeches, or chambered plugs, are acknowledged to require less powder, and to be less liable to stop up, than the plugs commonly used. The excavation of the breech should be made to contain, as nearly as possible, the exact quantity of powder intended to be used. This excavation having been thus made to contain the charge of powder, in order to prevent the grains from being bruised by the force of the ramrod in driving down the ball, the upper part should be bored away, or countersunk, so as to be capable of receiving about a quarter part of the lower hemisphere of the ball."

PLUIE de feu, *Fr.* literally a shower or rain of fire. It signifies a certain quantity of artificial fireworks, whose discharge falls in regular sparks, without ever deviating into a serpentine direction.

PLUMASSIER, a word taken from the French, signifying a dealer or chapman in feathers.

PLUMÉ, the iron plates of which the pieces of ancient armour were composed, for the defence of the chest, arms, thighs, and legs. They were so called from their resemblance to the feathers of a bird. Hence the cuirasses themselves, or coverings for the thighs, &c. were called *plumata*.

PLUMB, **PLUMMET**, a leaden or other weight, let down at the end of a string or piece of catgut to regulate any work in a line perpendicular to the ho-

rizon, or to sound the depth of any thing. It is of great use to the artillerist, as well as to the engineer.

PLUMB rule, PLUMB line, (*plomb d'ouvrier, Fr.*) an instrument used by carpenters, masons, &c. to draw perpendiculars, in order to judge whether walls be upright, planes horizontal, and the like. It consists of a small piece of lead, or other metal, fastened to the end of a thread or cord, which descends along a plate of iron or brass, and when it is raised perpendicular on another, it becomes a level.

Pilots, at sea, likewise ascertain their soundings by it. In the forming of recruits it is particularly advantageous; as may be seen in the following extract from the Rules and Regulations.

Plummets which vibrate the required times of march in a minute, are of great utility, and can alone prevent, or correct uncertainty of movement; they must be in the possession of, and be constantly referred to by each instructor of a squad. The several lengths of plummets, swinging the times of the different marches in a minute, are as follow:—

	Steps in a minute.	In.	Hund.
Ordinary time -	75	24	96
Quick time -	108	12	03
Quickest, or wheel- ing time -	120	9	30

A musket ball, suspended by a string which is not subject to stretch, (and must of course be kept constantly dry,) and on which are marked the different required lengths, will answer the above purpose, may be easily procured, and should be frequently compared with an accurate standard in the adjutant's or serjeant-major's possession. The length of the plummet is to be measured from the point of suspension to the center of the ball.

Accurate distances of steps must also be marked out on the ground, along which the soldier should be practised to march, and thereby acquire the just length of pace.

PLUMB line also signifies, among artificers, a *perpendicular*, which is so called, because it is usually described by means of a plummet.

PLUMBATÆ, leaden balls which were shot out of cross-bows by the Roman soldiers.

PLUME, feathers worn by soldiers in the hat or helmet.

PLUNE, Fr. See **PEN.**

Coup de PLUME, Fr. stroke of the pen.

PLUMET, Fr. plume, feather. An ornament which is worn by military men in their hats. It succeeded the panache, or bunch of feathers, that formerly adorned the helmets.

PLUMP, an old word, now corrupted to clump, signifying a cluster; any number joined in one mass; as certain *plumps* of Scottish horsemen.

PLUNDER, hostile pillage, or spoils taken in war.

To **PLUNGE,** to rush rapidly down; as the artillery plunged from the heights.

PLUS, in algebra, commonly denotes majus, more: its character is +. Thus 5 + 7 is read 5 *plus* 7, and is equal to 12.

PLUSII, a kind of stuff, with a sort of velvet nap or shag on one side, consisting of a woof of a single woollen thread, and a double warp; the one of two woollen threads twisted, the other goat's or camel's hair; though there are plushes entirely of worsted, others of hair, and others again of silk, cotton, &c. White plush breeches have been often worn by English dragoons. They resist moisture, and are easily cleaned. Blue plush pantaloons are worn by the Royal Artillery Drivers.

PLUTEUS, a defensive machine, which was used by the ancient Romans. It was composed of wicker hurdles laid for a roof on the top of posts, which the soldiers, who went under it for shelter, bore up with their hands. Kennett, in page 238, of his Roman Antiquities, observes, that some will have them, as well as the vineæ, to have been contrived with a double roof; the first and lower roof of planks, and the upper roof of hurdles, to break the force of any blow, without disordering the machine. The *plutei*, however, were of a different figure from the vineæ, being shaped like an arched sort of wagon; some having three wheels, so conveniently placed, that the machine would move either way, with equal ease. They were put much to the same use as the *musculi*. Father Daniel, the jesuit, in his history of the French militia, makes mention of this machine. He quotes a passage out of a poem, intituled the Siege of Paris, by Abbon, the Monk; the meaning of which is, that the Normans brought up a large quantity of machines, that were called *plutei* by the Romans, and that

seven or eight soldiers could be put under cover beneath them. He further adds, that these machines were covered with bull hides.

The moderns have imitated these *plutei* by adopting *mantelets*. The Chevalier Folard mentions having seen one at the siege of Philippeville, of a triangular figure, made of cork, interlaced between two boards, and supported by three wheels that turned upon a pivot.

PNEUMATICS, (*pneumatique*, Fr.) the doctrine of the air, or the laws whereby it is condensed, rarefied, gravitated, &c.

PNEUMATIC Engine denotes the air pump.

PODESTAT, Fr. a magistrate in a free town or city; particularly in Italy.

POELE, or **POILE**, Fr. a stove.

PENÆ Militares, Lat. military punishments.

POETRY, (*poésie*, Fr.) See **MARTIAL SONGS**.

POGE, Fr. starboard; the right side of a ship.

POIDS, Fr. weight.

POIDS de Marc, Fr. avoirdupois weight.

POIDS Romain, Fr. troy weight.

POIDS à peser l'eau, Fr. waterpoise.

Etre de POIDS, Fr. to weigh.

Avec POIDS et mesure, Fr. with care and circumspection.

POIGNARD, Fr. dagger, poniard.

Coup de POIGNARD, Fr. a stab.

POIGNARDER, Fr. to stab.

POIGNÉE, Fr. handful. *Poignée d'hommes*, a handful of men; a small number.

POIGNÉE, Fr. handle of a sword.

La POIGNÉE, Fr. the handle.

POIL, Fr. hair about the body. The French make a distinction between the hair which covers animals and the bodies of human creatures, and that which grows upon the head of the human species. They say, *cheveux de la tête*, and *poil du corps*. They also apply the word *crins* to the hair of a horse, particularly to the mane and tail.

Monter un cheval à POIL, Fr. to ride a horse without a saddle.

Un brave à trois POILS, Fr. a figurative expression to describe a bully, or gasconading fellow.

POINÇON, Fr. a puncheon; bodkin. It is likewise an instrument which is used in the making of artificial fireworks, being called *poinçon à arrêt*, from a piece of iron running cross-ways

near the point, to prevent it from entering too far.

POINÇON, ou *Aiguille*, Fr. an upright piece of wood, whereat all the smaller rafters meet in a point. *Poinçon* also signifies the tree or spindle of a machine, upon which it turns in a vertical direction, as is the case in a crane.

POINÇON d'une tour, Fr. the ball, or middle of the top, of a round tower; that part whereon a weathercock is usually planted.

POING, Fr. the fist.

Coup de POING, Fr. a blow given with the fist.

POINSON, from the French *poinçon*, a little sharp pointed iron, fixed in a wooden handle, which the horseman holds in the right hand, to prick a leaping horse in the croupe, to make him jerk out behind.

POINT, a steel instrument, of various uses in several arts. Engravers, etchers, wood-cutters, stone-cutters, &c. use points to trace their designs on copper, wood, or stone.

POINT. This term is frequently used in a military sense, as *point of intersection*, *intermediate point*, &c.—The several applications of which may seen in the General Rules and Regulations.

POINT, particular place to which any thing is directed. Hence, to concentrate all your forces, and to bring them to bear upon one *point*.

POINT, in geometry, according to Euclid, is a quantity which has no parts, being indivisible; and according to others, that which terminates itself on every side, and which has no boundaries distinct from itself. This is a mathematical point, and is only conceived by the imagination; yet herein all magnitude begins and ends, its flux generating a line, that of a line a surface, &c. A line can only cut another in a point.

POINT, or points of distance, in perspective, is a point, or points, (for there are sometimes two of them,) placed at equal distances from the point of sight.

Accidental POINTS, or **Contingent POINTS**, in perspective, are certain points wherein such objects as may be thrown negligently, and without order, under the plan, do tend to terminate.—For this reason they are not drawn to the point of sight, nor the points of distance, but meet accidentally, or at random, in the horizon.

POINT of the Front, in perspective,

is when we have the object directly before us, and not more on one side than the other, in which case it only shews the foreside; and if it be below the horizon, a little of the top too, but nothing of the side, unless the object be polygonous.

Third POINT, a point taken at discretion in the line of distance, wherein all the diagonals, drawn from the divisions of the geometrical plane, concur.

Objective POINT, a point on a geometrical plane, whose representation is required on the perspective plane.

POINT of concurrence, in optics, is that wherein converging rays meet; more commonly called the focus.

POINT of dispersion, is that wherein the rays begin to diverge, usually called the virtual focus.

Covering POINT, a point which, in changes of position, materially concerns the movement of one line with another.

When a change of position is made on a flank or central point of the first line, the movement of its *covering point*, of the second line, determines the new relative situation of that second line.

POINT of Honour. See HONOUR.

POINT of Appui, the point upon which a line of troops is formed. When the right stands in front, and the column is marching to form, the first halted company, division, &c. is the point of appui; and when the right is in front, the distant point of formation is the left.

POINT of Intersection, (*point d'intersection*, Fr.) the point where two lines intersect each other.

Intermediate POINT, (*point intermédiaire*, Fr.) In marching forward that is called an intermediate point which lies between the spot marched from, and the spot towards which you are advancing. In forming line, the center point between the right and left is the intermediate point. It is of the utmost consequence to every body of troops, advancing or retreating, but especially in advancing towards the enemy, to find an intermediate point between two given, and perhaps, inaccessible objects. The line of march is preserved by these means in its perpendicular direction, and every column may be enabled to ascertain its relative point of entry in the same line.

POINT of alignment, (*point d'alignement*, Fr.) the point which troops form upon, and dress by.

POINT of formation, a point taken, upon which troops are formed in military order.

POINT of view, specific survey of a thing, intellectual or otherwise.

Military POINT of view, a survey of things or objects with reference to military operations only.

POINT of view, in architecture, is a point at a certain distance from a building or other object, wherein the eye has the most advantageous view or prospect, of the same. This point is usually at a distance equal to the height of the building.

A vague or indeterminate point has a different effect from the *point of view*, in that, in looking at a building from an indeterminate point, the eye can only form an idea of the magnitude of its mass, by comparing it with other buildings adjacent to it.

Perpendicular POINT, the point upon which troops march in a straight forward direction.

Relative POINTS, the points by which the parallelism of a march is preserved.

POINT of passing, the ground on which one or more bodies of armed men march by a reviewing general.

POINT to salute at, the spot on which the reviewing general stands. This, however, is not to be understood literally, as every infantry officer, when he arrives within six paces of the general, recovers his sword and drops it, keeping it in that situation until he shall have passed him a prescribed number of paces. The cavalry salute within the breadth of the horse's neck, the instant the object is uncovered.

POINT of war, a loud and impressive beat of the drum, the perfect execution of which requires great skill and activity. The point of war is beat when a battalion charges.

POINT-blank, in gunnery, denotes the shot of a piece levelled horizontally, without either mounting or sinking the muzzle. In shooting thus, the bullet is supposed to go in a direct line, and not to move in a curve, as bombs and highly elevated random shots do. We say *supposed* to go in a direct line, because it is certain that a shot cannot fly any part of its range in a right line strictly taken; but the greater the velocity, the nearer it approaches to a right line; or the less crooked its range. The French *point blank*, or *but en blanc*, is what the

British artillery call the line of *metal elevation*; which, in most guns, is between one and two degrees.

POINT of light, (*point de vue*, Fr.) }
POINT of the eye, (*point d'œil*, Fr.) }
 called also *principal point*, and *perspective point*, is a point in perspective, in the axis of the eye, or in the central ray where the same is intersected by the horizon. It is called the *point of the eye*, or *ocular point*, because directly opposed to the eye of the person, who is to view the piece or object.

Side-POINT, the point of oblique view, or of the side, is when we see the object aside of us, and only as it were aslant, or with the corner of one eye, the eye, however, being all the while opposite to the point of light; in which case, we view the object laterally or sideways, and it presents to us two faces.

POINT du jour, Fr. break of day; dawn.

De POINT en blanc, Fr. point-blank.

A POINT, Fr. in time.

A POINT nommé, Fr. seasonably.

De POINT en point, Fr. thoroughly; completely.

POINT de niveau, Fr. in levelling, the extremities or ends of an horizontal line seen by the eye.

POINT de partage, Fr. the highest pitch to which water may be raised, so as to let it flow one way or the other.

POINT physique, Fr. that object which is least visible, or of which the eye is least sensible, marked by a pen, or dotted by the point of a compass.

POINTAL, Fr. any piece of timber, or upright, which serves to support beams, or rafters that have given way; or which can be used to sustain any other object.

POINTE de terre, Fr. a point of land, a cape.

La POINTE, Fr. the point of the sword.

POINT de d'un bastion, Fr. the exterior angle of a bastion.

La POINTE de l'aile droite d'une armée, Fr. the head of the right wing of an army.

POINTER, Fr. to point: as *pointer un canon*, to point a cannon. The French also say, *affûter un canon*.

POINTER une troupe ennemie, Fr. to fall unexpectedly upon a body of the enemy, and to throw it into disorder by a sudden attack with the bayonet, pike, or sword.

POINTEUR, Fr. the man who points a gun.

POINTEURS, Fr. levellers; officers in the old French artillery, who were subordinate to the extraordinary commissaries; but who were never employed except upon field service.

POINTING of a gun or mortar is the placing either the one or the other, so as to hit the object, or to come as near it as possible.

POINTS, Fr. holes, as *Points des étrières*, stirrup holes.

POINTS of command, all the particulars of a military injunction or order.

Cardinal POINTS, (*points cardinaux*, Fr.) the North, South, East, and West. A tent cannot be properly pitched, unless these four points are minutely attended to. The weather-cords derive all their stay by being correctly carried to those points.

POINTS d'appui, Fr. basis, support. The general signification of this term expresses the different advantageous posts, such as castles, fortified villages, &c. which the general of an army takes possession of in order to secure his natural position. In a more limited sense, they mean those points which are taken up in movements and evolutions. See *Point of appui*.

Vertical POINTS, (*points verticaux*, Fr.) two points in the globe, one of which is directly over our heads, and the other under our feet. They are called in astronomy, the *zenith* and the *nadir*.

Collateral POINTS, (*points collatéraux*, Fr.) two points in the globe where the sun rises and sets, called East and West, which the French likewise name *orient* and *occident*, or *levant* and *couchant*.

POIRE à poudre, Fr. a powder-horn. It is sometimes called *Poire*, from its resemblance to a pear.

To POISON a piece, (*enclouer une pièce*, Fr.) in gunnery, to clog or nail it up.

POISSARDES, Fr. fish-women; Billingsgate sluts. These creatures were extremely active during the height of the French Revolution; particularly in Paris, where they were ironically called *Les dames de la Halle*.

In 1769, these ladies paid a visit to the King and Queen of France, at the court of Versailles, accompanied by some of the French guards, &c. and obliged

their Majesties to come to Paris. The famous Marquis de la Fayette was at the head of this motley crew.

POISSON *d'eau de vie*, Fr. a quartern of brandy; a spirit formerly exported to other nations by France, but since her revolution, chiefly consumed by her soldiery.

POITRAIL, (*poitrail*, Fr.) the *raison-picce*, or *master beam* in timber-buildings, by which a front wall is supported.

POÏTREL, Fr. armour for the breast of a horse. It is generally written *poitrail*, and signifies the breast or chest of a horse, as well as the armour for its defence. Also, in harness, the breast leather.

POITRINAL, *Pectoral*, in old armour, breast-plate for horses, which was formed of plates of metal rivetted together that covered the breast and shoulders of the horse; it was usually adorned with foliage, or other ornaments, engraved or embossed. Perhaps it might be better for the service, if, instead of loading our war-horses with enormous saddles and thick stinking sheep-skins, to the great annoyance and peril of the beast and his rider, this defensive armour were again adopted.

POIX, Fr. pitch.

POIX résine, Fr. rosin.

POLACRE, Fr. a lappelled coat.

POLACRE, or *Polaque*, Fr. a Levantine vessel, which carries a smack-sail on the mizen mast, and square sails on the main-mast and bow-sprit.

POLAIRE, Fr. polar.

POLE, in a four-wheeled carriage, is fastened to the middle of the hind axle-tree, and passes between the fore axle-tree, and its bolster, fastened with the pole-pin, so as to move about it; keeping the fore and hind carriages together.

POLE, (*pole*, Fr.) one of the two points upon which the globe turns:—One is called Arctic, and the other Antarctic pole; i. e. the Northern and the Southern.

POLEMICAL, (*polémique*, Fr.) controversial; disputative; in military matters, of or belonging to war or fighting.

POLES, in castrametation, long round pieces of wood, by which a marquee or tent is supported. There are three sorts, viz.

Ridge-POLE, a long round piece of wood, which runs along the top of an officer's tent or marquée, and is supported by two other poles, viz.

Front-POLE, a strong pole which is fixed in the front part of an officer's tent or marquée, and is kept in a perpendicular position, by means of two strong cords, called weather cords, that run obliquely from each other, across two other cords from the rear pole, and are kept fast to the earth by wooden pegs.

Rear-POLE, a strong pole which is fixed in the back-part of an officer's marquée or tent, and is kept in the same relative position as has been described above.

Fire-POLES, or *Rods*, artificial fireworks. They are generally of the length of ten or twelve feet, and of the thickness of two inches at most. One of the ends of the fire-pole is hollowed out with three or four flutes to the length of two or three feet. Into one of these flutes are fixed rockets or squibs. Paper crackers are fixed in the others. After holes have been bored through the body of the pole, in order that the rockets may have communication with the crackers, they must be neatly wrapped in paper, the more effectually to deceive the spectators.

Picket POLES, round pieces of wood, shod with iron, and driven firmly into the earth, to fasten cavalry by, when at picket. The poles for the heavy horse should be longer than those which are commonly used. See **PICKETS**.

POLEAXE, an axe fixed to the end of a long pole. Of this weapon there is a great variety, especially among the ancients. Many of these, as the author of a Treatise on Ancient Armour observes, have very little resemblance to a modern axe in any of their parts. This may be seen in the weapons still carried by the gentlemen pensioners, and still called axes. The Welch glaive has been sometimes reckoned among the pole-axes.

POLICE, Fr. In a military sense, among the French, this term comprehends the inspectors, the treasurers, the paymasters, the commissaries, the provost marshal, &c.

POLICE, (*police*, Fr.) the regulation and government of a city, or country, so far as regards the inhabitants. This word is also used to express general, or particular regulations for the interior government of troops in quarters, inspection and examination of guides, spies, &c.

POLICE soldiers. Under this denomination may be comprehended what is called the *gendarmérie* and *maréchaussée* in France, and the *Sbirri*, or thief-takers, in Italy.

POLICE d'assurance, Fr. a policy of insurance. See **INSURANCE**.

POLICY in war.—See **STRATAGEM**.

POLISSON, Fr. a blackguard.

Se battre en POLISSON, Fr. to fight without system or order, literally, like a blackguard.

POLITICAL, relating to policy, or civil government.

POLITICS, (*politique*, Fr.) a part of ethics which consists in the governing of states, for the maintenance of the public safety, order, and good morals.

POLITICS of a Soldier and a Sailor. These are comprized within a narrow compass: to fight for his country, let the administration of affairs be what it may, or let the governing power be what it will. Like the late Lord Nelson, and old Admiral Blake in Cromwell's time, every Englishman *knows his duty*, whenever the honour or the security of his native land requires exertion.

POLK, or **PULK,** a Polish term, signifying a regiment, from which is derived *Polkownick*, Colonel.

POLKOWNICK. According to the last published Military Dictionary in France, the colonel of a Polish regiment is so called.

POLLAM, *Ind.* a measure equal to twenty ounces: forty make a *viz* in weight in Madras.

POLL-Money, commonly called poll-tax, or capitation. A tax imposed by parliament on each person, or head, according to some known mark of distinction; thus, by Stat. 18 Car. II. every duke was assessed 100*l.* marquis 80*l.* baronet 30*l.* knight 20*l.* esquire 10*l.* and every single private person 12*d.* This was only a revived tax, as appears by former acts of parliament, particularly that anno 1380, when it was imposed upon women from the age of twelve, and men from fourteen.

POLSONNETS, Fr. two buttons with hooks at their ends, passing through the branch, and holding the water chain of a bit.

POLTRON, Fr. See **POLTROON**.

POLTRON de tête, Fr. The French use this phrase to signify a person, who, though physically brave, is politically timid, and indecisive.

POLTRON de cœur, Fr. a bully; a man of words, but not of deeds; a dog in forehead, but in heart a deer.

POLTRONISER, Fr. to play the coward's part.

POLTROON, a coward, a dastard, who has no courage to perform any thing noble. The etymology of *poltron*, or *poltroon*, as it is usually pronounced, is curious. Both in ancient and modern times, frequent instances have occurred of men, who had been forcibly enlisted, having rendered themselves unfit for service by cutting off their thumbs or fingers. When this happened among the Romans, they were called *pollice trunci*. The French (as they do in most of their words that are derived from the Latin) contract these two, and by an elision make *poltron* or *poltroon*, from which we have adopted the term. Another, and, in our opinion, a more correct derivation, comes from the Italian *poltrone*, which takes its derivation from *poltro*, a colt; because of that animal's readiness to run away; or *poltro*, a bed, as pusillanimous people take a pleasure in lying in bed. This last word is derived from the high Dutch *polster*, which signifies a bolster or cushion. This contemptible character is little calculated for a military life, as the slightest imputation of cowardice is sufficient to render an individual unworthy of serving among *real* soldiers. *Poltroon* and coward stand, in fact, foremost in the black catalogue of military incapacities. Every young man, therefore, ought well to weigh, examine, and digest the necessary qualifications for a profession, which, above all others, exacts a daring spirit, and an unqualified contempt of death. It is possible, however, that the very man who might have forgot himself in one action, and behaved disgracefully, should make ample amends by his future conduct. We have a strong instance of this sort in the life of Themistocles, as related by Plutarch:—"The brave Leonidas defended the pass of Thermopylæ with three hundred men, till they were all cut off except one man, who escaped to Sparta, where he was treated as a coward, and nobody would keep company or converse with him; but he soon after made glorious amends at the battle of Platea, where he distinguished himself in an extraordinary manner."

According to Tacitus, the old Ger-

mans were in the habit of smothering cowardly, and even sluggish soldiers. They were buried alive in mud, and covered over with a hurdle. Hence, perhaps, the general term of dirty or stinking coward.

POLIGARCHY, (*poligarchie*, Fr.) a government composed of many chiefs or leaders.

POLYGARS, *Ind.* chiefs of mountainous and woody districts in the Peninsula, who pay only a temporary homage.

POLYGON, (*polygone*, Fr.) is a figure of more than four sides, and is either regular or irregular, exterior or interior.

Regular **POLYGON** is that whose angles and sides are equal. It has an angle of the center, and an angle of the polygon. The center of a regular polygon is the center of a circle which circumscribes the polygon; that is, whose circumference passes through all the angles of the figure.

Irregular **POLYGON** is that whose sides and angles are unequal.

Exterior **POLYGON**, the outlines of all the works drawn from one utmost angle to another.

Interior **POLYGON**, the main body of the place, or works, excluding the outworks.

POLYÈDRE, *Fr.* See *Polyedron*.

Lunettes **POLYEDRES**, *Fr.* magnifying glasses.

POLYEDRICAL, } having many
POLYEDROUS, } sides.

POLYEDRON, a solid figure or body consisting of many sides.

POLIGRAPHY, (*poligraphie*, Fr.) the art of writing in various unusual manners, or ciphers; also of deciphering the same.

POLYGLOT, (*polyglotte*, Fr.) that which is written in several languages. Hence the name of the public school in Vienna for the education of youth.

POLYNOMIAL, (*polynome*, Fr.) an algebraical term, signifying a quantity made up of any others by means of the sign + and the sign -.

POLYORCÈTE, *Fr.* a term used among the French to distinguish great warriors. It literally signifies the takers of strong towns. Thus, Marshals Saxe and Lowendahl, *les grands Polyorcètes* of the 17th century.

POLYSPASTON, or what the French call *poulie multipliée*, a windlass which consists of several pulleys. It is also

named *corbeau d'Archimède*. Demetrius Poliorcetes made use of this engine at the siege of Rhodes. Diogenetus, the architect, who came after him, improved it considerably; and Collias, who had returned to Rhodes from Arado, brought it to the greatest perfection in those days. It had sufficient power to raise large turrets, and even whole galleys into the air.

POLYTECHNIQUE, } a word
Ecole **POLYTECHNIQUE**, } derived from the Greek, and used by the French to distinguish an establishment in which all sciences are taught. The military school, which existed during the French monarchy, is comprised in this institution.—See **MILITARY** School.

POMADA, an exercise of vaulting the wooden horse, by laying one hand over the pommel of the saddle.

POMERIUM, in ancient architecture, that space of ground which lay between the walls of a fortified town and the inhabitants' houses. The term is still used among modern architects, particularly by the Italians, as Peter Cataneo, and Alghisi, to describe the breadth of the terre pleine of the rampart, its inward talus, and the vacant space which is usually left between this talus and the houses of the town.

POMMEL, (*pommeau*, Fr.) a piece of brass or other substance, at top, and in the middle of the saddle bow, to which are fastened the holsters, stirrup leathers, &c. Also, the knob at the extremity of the handle that balances the blade of the sword.

POMMES, *Fr.* round pieces of wood which are variously used for ornament, &c.

POMME de pavillon et d'enseigne, *Fr.* the piece of wood which is fixed at the top of the colour staff, &c.

POMPE, *Fr.* See **PUMP**.

POMPE à feu, *Fr.* a steam engine.

POMPE de mer, *Fr.* a sea pump, or a pump used on board ship.

POMPE aspirante, *Fr.* See *common, or sucking pump*.

POMPE soulevante, expulsive, ou à étrier, *Fr.* See **Forcing-PUMP**.

POMPE forcoulante ou de compression, *Fr.* See **Forcing PUMP**.

POMPE mixte, *Fr.* a pump constructed upon the mixed plan of the sucking and the forcing pump.

POMPE à roue et à chaîne, *Fr.* a chain pump. It is also called *à chapellet*.

POMPER, *Fr.* to pump.

POMPES, *Fr.* armour called *pieces* for the knee; also bones.

PONANT, *Fr.* the west. In the French sea service, *ponant* signifies that part of the ocean which is separated from the seas in the Levant by the Straits of Gibraltar.

Officier PONANTIN, *Fr.* an officer who serves upon the ocean.

Armée PONANTINE, *Fr.* the army of the west.

PONCEAU, *Fr.* a small bridge of one arch, such as is thrown across a canal or rivulet.

PONCER, *Fr.* to rub pounce upon any thing.

PONCER, *Fr.* This word also signifies to impress any drawing, plan, or figure, upon a sheet of paper, by means of a needle and some charcoal, or coloured dust; which is effected by pricking through the different features, lines, &c. of the upper sketch or drawing, at small intermediate distances, and then forcing the charcoal, which is wrapped up in a piece of fine linen, through the different holes, upon the blank paper underneath.

PONIARD, a little pointed dagger, very sharp edged.

PONT, *Fr.* a bridge; a deck.

PONT d'or, *Fr.* a figurative expression which the French use, when they suffer an enemy whom they have defeated, to retire without molestation. Hence, *faire un pont d'or à son ennemi*, to suffer your enemy to escape.

Pont flottant, *Fr.*—See FLOATING bridge.

PONT-levis, *Fr.*—See DRAW bridge.

PONT-tournant, *Fr.* a moveable bridge. It is of the nature of a draw-bridge, with this difference, that it turns upon a pivot, and goes entirely round.

PONT de bois, *Fr.* a wooden bridge.

PONT de joncs, *Fr.* a bridge made up of large trusses of rushes or willows that grow in marshy spots, or upon the banks of a river. These are bound together, and with planks thrown upon them, serve to afford a passage over fosses, &c.

PONT de sortie, *Fr.* a sally-bridge.

PONT dormant, *Fr.* a wooden bridge, which is generally laid upon the fosse of a fortified town, for the purpose of maintaining a constant communication between the main body of the place and the outworks and country round. These

bridges are not thrown entirely across the fosses, but terminate within twelve or fifteen feet of the revetement; the space from thence is supplied by draw-bridges. When the *pont dormant* is very long, a swing bridge is constructed in the center of it. When the ditches are wet, and so constantly supplied with water, that the depth is generally the same, bridges of boats may be used instead of *ponts dormans*. And in cases of attack, floating bridges may be substituted in lieu of both.

PONT à bascule, *Fr.* a bridge which is supported by an axle-tree that runs through its center, and is lifted up on each side as occasion requires.

PONT à coulisse, *Fr.* Coulisse literally signifies a scene, such as is used in theatres, which can be shifted at will. We may, therefore, not improperly call it a sliding or shifting bridge. This bridge is used for the purpose of conveying troops, on foot, across a fosse or a river of moderate breadth. It must be very light and portable; constructed with boards, and measuring about six feet in breadth. The planks are numbered, so that the instant it is found necessary to effect a passage, they may be put together by means of running grooves. When the planks are thus arranged, the pontoneers, to whom these matters are always entrusted, throw two thick beams across the fosse or river, so as to be parallel to each other, and about five feet asunder, to allow the floor or platform half a foot on each side. Small iron wheels or casters are fixed underneath the two sides of the floor or platform, in such a manner, that the whole may be instantly slid into the deep grooves that have been previously made in the transverse beams. This construction is extremely simple, and very practicable in war. The sliding bridges may also be used to advantage, in crossing rivers of large dimensions. In these cases there must be two of the kind, and they are united in the middle by means of two piles, or strong stakes of wood, driven into the bed of the river, and upon which the transverse beams can rest from each side. It is here necessary to observe, that in a war of posts, and in a broken and mountainous country, an ingenious and active officer may, at the head of a body of pontoneers, be of the greatest service to a general,

and even sometimes determine the issue of a battle. When the Austrian and French armies first met, near the memorable village of Marengo, a large detachment of Bonaparte's army would have been drowned in the Scrivia, had it not been for the presence of mind and the activity of the officer who commanded a body of pontoneers. The republican troops, having been thrown into disorder, were flying in all directions; and as the Scrivia had been considerably swollen by the rain which fell the preceding night, they would have been cut off. *Ponts à coulisse*, or sliding bridges, with the assistance of some boats, were hastily established, and they not only escaped the pursuit of the victorious Austrians, but added to the strength of the French army, which had also given way. For the particulars of this transaction see Berthier's Report.

PONT à roulettes, Fr. a bridge on rollers or on casters — See *PONT à Coulisse*.

PONT à quatre branches, Fr. a bridge which consists of four abutments, and is constructed in such a manner as to unite, at one given point, the navigation of four different canals, by means of an arch that has four openings for the passage of barges and boats. A bridge of this description was erected in 1750, when the junction was made of the Calais and Ardres canals on the new road which leads from Calais to St. Omers.

PONT d'aqueduc, Fr. a bridge, over which a canal flows; as the *Pont du Gard* in Languedoc.

PONT de bateaux, Fr. a bridge of boats. When a river is either too broad, too deep, or too rapid, to allow stone or pile-work to be used, a number of boats or barges must be moored and lashed together, at given distances, over the whole breadth of the river: and when this has been done, a solid floor or platform is constructed on them for the passage of cannons, wagons, &c.

PONT à fleur d'eau, Fr. a bridge which lies upon the surface of the water. It is generally made for the purpose of keeping up a communication with the different works in a fortified place, when the ditches are filled with water. The floor is level with the water. The bridge is raised upon wooden trestles.

PONT de communication, Fr. a bridge, which serves to keep up a regular com-

munication between the different quarters or cantonments of an army, which is divided by a river, or by several strong currents. Several bridges of this description are built in time of war, in order to receive and to throw in supplies as they may be required.

PONT de fascines, Fr. a bridge made of hurdles or fascines. It is generally six toises in breadth, and is used at sieges when the fosses are filled with water. When the besiegers have resolved to storm a breach, the approach to which is interrupted by water, they throw one, two, or three beds of fascines across, fastened together and kept steady by means of wooden piles. Stones and earth are next thrown upon the fascines, to keep them steady in the water. An epaulement is then made towards the side of the revetement of the place, and the bridge is finally constructed with thick planks. The epaulement serves to protect the workmen or artificers from the fire of the besieged.

PONT de pontons, Fr. See *PONTOON-bridge*.

PONT de cordes, Fr. a bridge of ropes, or a bridge constructed with ropes. A French writer says, "I have not been able to discover, in any work, not even in the *Dictionnaire Raisonné des Sciences*, a description of this bridge; yet it is well known, that by the means of this construction, (which owes its origin to two Catalonian priests, and to which we are indebted for the knowledge of a passage over the Legra,) the Count d'Harcourt gained a victory over the Spaniards in the plain of Lorens, on the 22d of June, 1745. These bridges are made with strong ropes twisted and interwoven together; and they are extremely useful in passing deep ravines and hollow ways.

PONTS de tranchées, Fr. This term is used among the French to signify those parts of a trench which have been left unfinished through the flight or destruction of the artificers employed upon it; or because they have been too much wounded to continue at their work. In these cases, the persons who have the management of the sap, detach men from the quarters where they may be least wanted, in order to complete the undertaking.

PONT suspendu, Fr. a hanging bridge. This sort of bridge is generally made

for the purpose of securing a communication between two countries, which are otherwise separated by precipices or steep rocks. The bridge is supported by a quantity of strong chains, which are fastened at each of the two extremities. An undertaking of this kind must seem, at first sight, impracticable; but it has frequently succeeded in Europe, as may be seen in Piedmont and Savoy. In the latter country, indeed, there is a hanging bridge, which is built of stone on iron chains. See *HANGING Bridge*.

PONT volant, Fr. a flying bridge. This sort of bridge has a helm to it, by which the ferryman can guide it from one side of a river to the other. The one at Cologne, in Lower Germany, is large enough for four or five hundred men to cross at a time. See *FLYING Bridge*.

PONT-levis à bascule, Fr. a draw-bridge, swung in such a manner, that the frame (half of which is concealed within what is called *cage de la bascule*, or hold of the swipe,) and the other half (which is properly the *tablier du pont*, or frame itself,) covers all the exterior side of the gate, or entrance into the place.

PONTS-levis en zig-zags, Fr. draw-bridges constructed in a zig-zag manner, before the gates of fortified towns or places, to prevent the enemy from enlarging the entrance.

Tête de PONT. See *TETE*.

PONTAGE, PONTONAGE, Fr. money paid towards the maintenance and repairing of bridges.

PONTÉ, Fr. covered in, as a vessel is, which has a deck.

PONTLEVIS, in horsemanship, is a disorderly resisting action of a horse, in disobedience to his rider, in which he rears up several times successively, and rises so high up on his hind legs, that he is in danger of coming over.

PONTON, Fr. in the artillery, a sort of boat which has a flat bottom, and is of a rectangular form; the whole of which is made of wood, covered with large sheets of copper, closely nailed together. The boats are conveyed, when an army moves, by means of carriages, called *haquets*, and serve to form temporary bridges for the passage of troops, and conveyance of cannon.

PONTON, Fr. a lighter.

PONTONIER, Fr. a lighterman.

PONTON or PONTOON, a kind of flat-bottomed boat, whose carcass of wood is lined, within and without, with tin, serving to lay bridges over rivers for the artillery and army to march across. The French pontoons, and those of most other powers, are made of copper on the outside: though they cost more at first, yet they last much longer than those of tin; and, when worn out, the copper sells nearly for as much as it cost at first; but when ours are rendered useless, they sell for nothing. Our pontoons are 21 feet 6 inches long at top, and 17 feet 2 inches at bottom, 4 feet 9 inches broad, and depth within 2 feet 3 inches.

The common pontoons will support a weight of 4 or 5000 pounds. General Congreve's wooden pontoons are 26 feet long at top, 23 at bottom, 2 feet 8 inches deep, and 2 feet 3 inches wide.

PONTOON-carriage is made with two wheels only, and two long side-pieces, whose fore-ends are supported by a limber. It serves to carry the pontoon-boards, cross timbers, anchors, and every other thing necessary for making a bridge.

PONTOON-bridge is made of pontoons, slipped into the water, and placed about five or six feet asunder; each fastened with an anchor, when the river has a strong current, or to a strong rope that goes across the river, running through the rings of the pontoons. Each boat has an anchor, cable, baulks, and chesses. The baulks are about 5 or 6 inches square, and 22 feet 8 inches long. The chesses are boards joined together by wooden bars, about three feet broad, and 12 feet long. The baulks are laid across the pontoons at some distance from one another, and the chesses upon them joined close. 1 Gang board 22 feet long, 1 foot wide, 2½ inches thick.

POOLBUNDY, Ind. a dam to prevent inundations.

POONA, Ind. a day fixed for the zemindars to bring in their balances for the year.

POONEA, Ind. the Indian name of a month.

POOR or PORE, Ind. when it terminates a word, means city; as Viziapore, &c.

POOSE, Ind. the name of a month following *Ughun*: it in some degree accords with December and January.

POOSITAY *Bundee*, Ind. embankments of rivers. It likewise means bridges thrown over rivers.

POOSKUT, *Ind.* a small weight, measuring eight koonchys, or sixty-four handfuls; one koonchy being equal to eight handfuls.

POPON *rouge*, *Fr.* a red tuft, made of feathers or worsted, which is worn in the caps or hats of some particular corps: especially in those of grenadiers, &c.

POPULAR, (*populaire*, *Fr.*) belonging to the people; also in request among the common people.

A *POPULAR general*, a chief who, by his success in war, and good conduct towards his fellow soldiers, is beloved and esteemed by them.

POPULARITY, (*popularité*, *Fr.*) graciousness among the people.

POPULATION, *Populacy*, (*population*, *Fr.*) the state of a country with respect to numbers of people.

Tête de PORC, *Fr.* See *Coin de Manœuvre Militaire*: also *Tête*.

PORCH, (*porche*, *Fr.*) in architecture, a kind of vestibule, supported by columns, much used at the entrance of ancient churches.

In the ancient architecture, *Porch* was a vestibule, or disposition, of insulated columns, usually crowned with a pediment, forming a covert-place before the principal door of either a temple or palace. When they had four columns in front, they were called *tetrastyles*; when six, *hexastyles*; when eight, *octastyles*; when ten, *decastyles*; and so on.

PORÉE, *Fr.* See *Sécher à l'Ombre*.

PORIME, } in geometry, is a theo-

PORIMA, } rem, or proposition, so easy to be demonstrated, that it is almost self-evident, as that a chord is all of it within the circle. *Aporime*, on the contrary, is that which is so difficult as to be almost impossible to be demonstrated. As were formerly the *lunes of Hippocrates*.

PORISTICK *method*, in mathematics, is that which determines when, by what means, and in how many different ways, any problem may be resolved.

PORPHYRY, (*porphyre*, *Fr.*) a precious kind of marble, of a brownish red colour, frequently interspersed with white stains, anciently brought from Egypt, and exceeding all other in hardness. The French have found out a

method of cutting porphyry with an iron saw, without teeth, and a kind of free-stone, pulverized, and water. The authors of this invention, according to the Builder's Dictionary, pretend they could perform the whole contour of a column hereby, had they matter to work on.

PORT, *portée*, *Fr.* the tonnage of a vessel.

PORT *de l'arme*, *Fr.* the carriage of the firelock.

Fermer les PORTS, *Fr.* to lay a general embargo upon shipping. During the French monarchy, this practice frequently occurred for the purpose of securing able-bodied seamen.

PORT, a piece of iron, which belongs to the bit of a horse's bridle, and acts upon the inside of the mouth. It is also called *upset*. A restive horse is kept in subjection, more or less, according to the size of the port within, and the length of the branches which are outside.

PORT, (*port*, *Fr.*) a harbour; a safe station for ships. The French also use the word *havre* to signify *port*.

PORTABLE *Mantlets*, large shields, called *pavoises*, which were used by the ancients in the attack of fortified places.

PORTABLE *arms*, or *weapons*, (*armes portatives*, *Fr.*) such as muskets, carbines, swords, pikes, &c. which may be carried by an individual.

PORTAL, in architecture, signifies the face or frontispiece of a church, viewed on the side wherein the great door is; also, the great door or gate of a palace, &c.

PORTAL, (*portail*, *Fr.*) the front or façade of a large building, where the principal gate stands.

PORTAL, in architecture, a little square corner of a room, cut off from the rest of the room by a wainscot; frequent in ancient buildings.

It is also used for a little gate, where there are two gates of different sizes. It likewise sometimes signifies a kind of arch of joiner's work before a door.

PORTAL also means, generally, gates, openings, &c. According to Mr. Addison, as quoted by Dr. Johnson, the portal consists of a composite order, unknown to the ancients.

Tirer à bout PORTANT, *Fr.* to fire at an object which lies as far off as a cannon, or musket, can carry.

Tirer à bout PORTANT, *Fr.* to fire and

to kill at so short a distance, that the muzzle of the piece may be said to rest upon the object fired at.

To PORT, to carry.

PORT *arms!* a word of command which was adopted during the late war, and is universally practised in the British army. It consists in bringing the firelock diagonally across the chest from the Carry. This position of the musket affords a great facility to the person who inspects the touch-hole, &c. In dismissing guards, preparing to charge, &c. soldiers are ordered to *Port arms*.—The French, as we have already observed, do not practise this method. Their word of command, *Haut les armes*, corresponds with our *Recover*.

PORT-CLUSE, PORT-cullis, (*porte-coulisse*, Fr.) in fortification, is an assemblage of several large pieces of wood, joined across one another like a harrow, and each pointed with iron at the bottom. They are sometimes hung over the gateway of old fortified towns, ready to let down in case of a surprize, when the gates could not be shut.

PORT-fire, in artillery, a composition put in a paper case, to fire guns and mortars, instead of a lint-stock and match. See *Laboratory Works*.

PORTE, Fr. a gate. *Portes d'une ville*, the gates of a fortified town.

PORTE. This word is used, both in French and English, to signify the court, or residence of the Emperor of the Turks, and to distinguish it from that of the Grand Signor. The French say, *la Porte Ottomane*, the Porte, or Ottoman court.

PORTE *brisée*, Fr. a folding door.

PORTE *à deux battans*, Fr. a door with two folds, or a folding door.

PORTE *vitree*, Fr. a glass door; such as is sometimes made to an officer's tent or *marquée*, on home service.

PORTE *de devant*, Fr. a street, or front door.

PORTE *de derrière*, Fr. a back door. It also signifies, figuratively, a subterfuge.

PORTE-crayon, Fr. a pencil-case.

PORTE-dieu, Fr. the priest that carries the host to sick people in Roman Catholic countries: literally, the god-bearer.

PORTE *à deux ventaux*, Fr. a flood-gate, which has two folds, and is used, in dams, or sluices, with buttresses.

PORTE *à vannes*, Fr. This is some-

times called *porte à pelles*, and is used in square sluices. But as dams or sluices are frequently constructed with double gates, that which stands above the current of the water is called *porte de tête*, and that below it, *porte de mouille*. For particulars on this head, see the Second part of Belidor's *Architecture hydraulique*.

PORTE-*arquebuse*, Fr. the king's gun-bearer.

PORTE-*baguette*, Fr. the pipe of a musket or pistol, into which the ramrod runs. It also signifies the cylinder of a Prussian musket, which is parallel with its barrel.

PORTE-*drapeau*, } Fr. the person who
PORTE-*enseigne*, } carries the colours.

PORTE *d'écluse*, Fr. a flood-gate. The two folding parts are joined together, and form an angle in the center.

PORTE-*épée*, Fr. a sword-bearer. It likewise means a sword-belt.

PORTE-*étendard*, Fr. the standard-bearer.

PORTE-*feu*, Fr. a machine made of wood or copper, by which fire is communicated to gunpowder in a shell, fuse, or piece of ordnance. It is sometimes made of paste-board. Where there is any ground to apprehend that a cannon will burst, the priming, made of a certain composition, is put into the paste-board case, by which means the cannoner has time to retire before any accident can happen.

PORTE-*feu*, Fr. is likewise used among artificers, to signify all sorts of *fusées* or matches, by which fire is communicated to many quarters at once.—They last according to the nature of the composition with which they are made up.

PORTE-*feu brisé*, Fr. in artificial fire-works, a species of cartridge which is bent into a curve by means of a sloping piece of wood.

PORTE-*gargousse, ou lanterne de gargousse*, Fr. a wooden case, in which cartridges are conveyed to load ordnance pieces. There are two to each piece.

PORTE-*masse de la maison du roi*, Fr. mace-bearer, or tip-staff, belonging to the king's household; a situation which was held during the French monarchy, and signified the same as *huissier d'armes*, which see.

PORTE-*mousqueton*, Fr. a swivel.

PORTE-*oriflamme*, Fr. In the ancient

French armies, the officer who held the first post of dignity was so called. See ORIFLAMME.

PORTE-pipe, Fr. a pipe-bearer among the Turks.

PORTE d'une place de guerre, Fr. the gate of a fortified place. This gate is always made in the center of the curtain, in order to be well protected on the flanks and faces. See PORTES.

PORTE respect, Fr. a figurative expression which is attached to an armed body, whose appearance impresses terror, or inspires awe.

PORTE de secours, Fr. The gate in a citadel, which has an outlet towards the country, is so called. By means of this gate, the garrison can always receive succours or reinforcements, in cases of civil insurrection, or under circumstances of surprize.

PORTE-voix, Fr. a speaking trumpet.

A la PORTÉE, Fr. within the reach or range. Hence *à la portée d'un canon*, within the reach or range of a cannon; within gun-shot.

PORTÉE du fusil, Fr. By this expression the French generally understand the distance which a musket-shot goes to its ultimate destination. It is supposed to vary from 120 to 150 toises.

PORTÉE des pièces, Fr. the flight or reach of cannon.

PORTÉE à toute volée, Fr. the flight of a cannon shot, when it makes an angle of 45 degrees with the horizon, or level of the country. In this manner it completes the greatest possible range.

PORTÉE de but en blanc, Fr. the forward direction and flight, which a ball describes from the mouth of the piece to its ultimate object.

PORTÉE, Fr. in carpentry, that portion of a beam or rafter which lies upon the wall for support.

Etre à la PORTÉE du fusil, Fr. to be within musket shot.

Etre hors de la PORTÉE du canon, Fr. to be out of the range of a gun, or out of gunshot.

PORTEGUE, a gold chain of great value. We have taken this word from an old book published in 1731, called the "English Expositor improved." Had it been our original intention to have given the etymology of words, we should have been at a loss to explain *portegue*; unless it be derived from *porter*, to carry, to bear, and *gueux*, a scoundrel. Indeed so many rich scoundrels

are decorated with gold chains, instead of being done justice by with a halter, that we are disposed to adopt the etymology.

PORTER, Fr. to carry. It is a marine term; as *porter toutes ses voiles*,—to carry all her sails. It is likewise used as a word of command, viz. *Portez vos armes!*

PORTER, Fr. This word is also applied among the French, (and our word *carry* frequently corresponds with the various significations,) to the different directions or motions which belong to all fire-arms and missile weapons. They likewise say, in speaking of a gun-shot wound, that it is dangerous, because the ball (*a porté sur l'os*) has reached or hit the bone.

PORTER une botte; Fr. to make a thrust or pass.

PORTER, Fr. to carry, a term used in the French manège, for directing or pushing on a horse at pleasure, whether forwards, upon turns, &c.

PORTEREAU, Fr. a little or less gate adjoining unto a greater, for a palace, or house of state; also a floodgate, or kind of sluice, whereby the course of a river is diverted into a gut, on the one side thereof, cut out for the turning of some mill.

PORTES d'une ville de guerre, Fr. openings which cross the ramparts of a fortified town or place, and are generally arched over. These openings are usually made in the middle of the curtain, between two bastions. They are from nine to ten feet broad, and from thirteen to fourteen feet high. The gates are mostly decorated with trophies of war: and in some instances a very superfluous magnificence is exhibited.

Fausses PORTES, Fr. false gates, or imaginary inlets. These are almost always made in the reverse, or behind the orillon, in order to conceal and render easy any projected sallies against the besieging parties; or for the purpose of suddenly falling upon the advanced posts of an enemy.

PORTEURS d'eau, Fr. water carriers. In India, they are called *beasties*. Amongst the Turks, the *sakkas*, or water-carriers, are taken from the lowest rank of soldiers belonging to the *Capiculy* infantry. The number of these men depends upon the nature of the service on which the Turks are employed. They are under the orders of the officers

who command companies; and although their situation is not only the most degrading, but the most laborious in the army, they may, nevertheless, become soldiers. Their dress consists of brown leather; and, from the continual fatigue which they undergo, their appearance is wretched in the extreme.

The Turks have more men of this description in their service, than are found in any other; not even India excepted. For, independent of the state of their climate, and the consequent necessity of having water brought from distant parts of the country, they use large quantities in ablution; every Turk takes care to wash himself from head to foot before he says his daily prayers.

PORT-fire, a composition of meal-powder, sulphur, and saltpetre, driven into a case of paper, to serve instead of a match to fire guns.

PORTFOLIO, in a general acceptation of the term amongst us, is a species of large leathern case, made like a pocket book, and calculated to carry papers of any size. Among the French it not only signifies the same thing, but likewise a box made of paste-board, in which are contained the several papers that relate to any particular department. The adjutants, quarter-masters, &c. belonging to the staff, should be provided with portfolios for the purpose of keeping their reports, &c. in regular order.

PORT-glaive, from the French *porteur* and *glaiue*; one who carries the sword before a prince or magistrate.

PORT-holes, in a ship, are the embrasures or holes in the sides of a ship, through which the muzzles of cannon are run.

PORT-nails, nails used in nailing of hinges to the ports of ships.

PORT-ropes, in a ship, such ropes as serve to haul up and let down the ports on the port-holes.

PORTICO, (*portique*, Fr.) is a kind of gallery built on the ground; or a piazza supported by arches; as in Covent Garden.

Although the word portico be derived from the Latin *porta*, a gate or door, yet it is applied to any disposition of columns which form a gallery; without any immediate relation to gates or doors.

PORTIÈRES, Fr. two pieces or folds of wood which are placed in the embrasures of a battery, and which close the

instant the piece has been fired. They serve to cover the cannoneers from the aim of the enemy, and to resist the discharge of musketry. They are, however, seldom or ever used, except when the batteries stand close to the counter-scarp.

PORTION, part; any component number of men, as a portion of the army.

PORTLAND-stone, a stone much used in building, and much softer and whiter than Purbeck.

PORTMANTEAU, (*valise*, Fr.) a cloak bag to carry necessaries in a journey. It is generally made of leather or carpeting stuff.

PORTMOTE, a court held in port towns, as swanimote is in the forest.

PORTULAN, Fr. a book or chart which gives a description of the situation, &c. of sea-ports.

POSAGE, Fr. the laying stone, timber, &c.

POSCA. See **OXYCRAT**.

La POSE d'une pierre, Fr. the position or manner in which a stone is laid to remain.

POSER, Fr. to lay down. It is used as a word of command in the French artillery, &c. viz. *posez vos leviers*; lay down your levers.

POSER une sentinelle, Fr. to post a sentry.

POSER un corps-de-garde, Fr. to post or establish a guard in any quarter.

POSER les armes, Fr. to lay down arms.

POSER les armes à terre, Fr. to ground arms.

POSER, Fr. in masonry, to lay, as to lay a stone, or to place it where it is intended it should remain. The French say *déposer*, to take it out of its place.

POSER à sec, Fr. to build, or raise walls without mortar. In this manner were constructed most of the ancient edifices, as is also the grand façade of the Louvre towards St. Germain, à l'Auxerrois, at Paris.

POSER à cru, Fr. to place a pillar or stay, without any particular foundation, in order to sustain something.

POSER de cant, ou de champ, Fr. to lay a brick on its thinnest side.

POSER une pièce de bois sur son fort, Fr. to lay a piece of wood upon its narrowest face.

POSER de plat, Fr. to lay any thing flat.

POSER en décharge, Fr. to lay a piece

of wood or timber sideways or obliquely, in order to prop or support any thing.

POSES, *Fr.* the sentinels that are posted.

POSES, *grandes Poses, Fr.* a French military term, signifying the extraordinary sentinels or guards, which, after retreat beating, are posted in a fortified town or place, for the safety of certain specific quarters. The corporals who post the sentinels are directed to instruct them not to suffer any person to go upon the ramparts, unless he belongs to the night patroles or rounds, &c. These extraordinary guards are relieved at daybreak.

Priming POSITION, the position in which the musket is held at the time of putting the powder into the pan.

POSITION (*position, Fr.*) This word is variously used in a military sense, both by the French and English. It is applicable to locality; as *the army took an excellent position*, or drew up on very advantageous ground, and in a very advantageous manner. Frederick the Great of Prussia has laid it down as a maxim, that no army should take up a position in rear of a forest, since it is thereby prevented from observing the movements of the enemy, and from counteracting his plans.

POSITION *of the soldier without arms.* The equal squareness of the shoulders and body to the front, is the first and great principle of the position of the soldier: the heels must be in a line, and closed; the knees straight, without stiffness; the toes turned out, so that the feet may form an angle of about 60 degrees; the arms hang near the body, but not stiff: the flat of the hand, and little finger, touching the thigh, and the thumbs as far back as the seams of the breeches; the elbows and shoulders are to be kept back; the belly rather drawn in, and the breast advanced, but without constraint; the body to be upright, but inclining rather forwards, so that the weight of it may bear chiefly on the fore part of the feet; the head to be erect, and neither turned to the right nor to the left; the eyes alone will be glanced to the right. See page 3, Rules and Regulations.

POSITION *of the soldier with arms.* The body of the soldier being in the position above described, the firelock is to be placed in his left hand against the shoulder; his wrist to be a little turned

out; the thumb alone to appear in front; the fore fingers to be under the butt; and the left elbow to be rather bent inward, so as not to be separated from the body, or to be more backward or forward than the right one. The firelock must rest full on the hand, not on the end of the fingers; and be carried in such a manner as not to raise, advance, or keep back, one shoulder more than the other; the butt must therefore be forward, and as low as can be permitted without constraint; the fore part a very little before the front of the thigh; and the hind part of it pressed by the wrist against the thigh; it must be kept steady and firm before the hollow of the shoulder; should it be drawn back, or carried too high, the one shoulder would be advanced, and the other kept back, and the upper part of the body would be distorted, and not square with respect to the limbs.

POSITION *in marching.* In marching, the soldier must maintain, as much as possible, the position of the body as directed in Sect. I. page 3, of the General Rules and Regulations. See likewise MARCH.

Change of POSITION, the positive or relative movement of a body of troops on any given point. See Part IV. General Rules and Regulations, Page 303.

New POSITIONS that a regiment or line can take with respect to the old one, are,

Parallel POSITIONS, or nearly so to the old one.

Intersecting POSITIONS by themselves, or their prolongation, some part of the old line, or its prolongation.

New parallel POSITIONS being necessarily to the front, or rear of the old one, the regiment will, according to circumstances, take them up by the diagonal march; the flank march of divisions after wheeling into column; or the movement in open column to the new line, and its subsequent formation in it.

New intersecting POSITIONS, which themselves cut the regiment, will, in cavalry movements, be taken up by the diagonal march; or the flank march ranks by three's of divisions. All other new positions, which, in themselves, or their prolongation, will in general be taken up by the march in open column, and its subsequent formations, when it arrives at the line; some such positions will, however, allow of, and require

being made by the echelon march, or by the flank march of divisions. In general, the regiment will break to the hand which is nearest to the new position, be conducted to its nearest point in the new line, and form on it as directed.

POSITION of the officer. See *SWORD*.

POSITION du soldat sans armes, Fr. position of the soldier without arms.

POSITION du soldat avec les armes, Fr. position of the soldier with arms.

POSITION de l'extension, Fr. in fencing, position of extension.

POSSE, a low word, signifying armed power, called out on any particular emergency; as the *posse comitatus*, who in England are called out by the respective lord-lieutenants of counties.

POSSÉDER, Fr. to possess, to be in possession of.

POSSESSION. To take possession is the act of occupying any post, camp, fortress, &c. which might facilitate the operation of an army, or which previously belonged to the enemy.

POST, (*poste*, Fr.) The following observations, respecting the various means which ought to be resorted to by every officer whose design or instructions are to attack a post, may be found, with much additional matter, in p. 11, vol. ii. of *Guide de l'Officier*, published at Paris in 1805, under the immediate inspection of *M. Mellinet, adjudant commandant et sous inspecteur aux revues*, from the original work written by *M. Cessac Lacuée*, one of Bonaparte's favourite generals in Italy.

"The means are," to quote our author's own words; "1st, good topographical charts; 2d, examination and identification of things and circumstances, made with the greatest accuracy; 3d, the reports and intelligence brought by spies; 4th, the information given by runaways or persons coming over; 5th, the statements or declarations furnished by prisoners of war; 6th, the conclusions to be drawn from secret intelligence; 7th, the information and local knowledge which may be extracted from peasants, merchants, tradesmen, and even pedlars, smugglers, huntsmen, &c. 8th, the information which may be gathered by listening to the communications of such soldiers as may have acquired any knowledge of the country by an accidental residence in it, or by detention; 9th, finally, the precise observations which the officer makes himself,

and the consequent knowledge which he thereby obtains."

As the information which is given by spies constitutes one of the most important branches of military precaution, we think it right to quote from the same author the following reference to works on that head:

Dictionnaire des batailles, in which various modes are pointed out to ascertain the truth of each communication from what has occurred; among others, the description of the battle of Anglona, between the Romans and the Persians.

In the History of Bayard, recourse may be had to the account of the siege of Padua; particularly to the conduct which Bayard observed towards Captain Manfron, and all that relates to the surprize of Lignago.

In the History of France, the action of the Spurs, and the battle of Steinkirk. See *Memoirs of Feuquières*, vol. i. p. 86; also the word *Espion* in the *Encyclopédie Méthodique*, and Number 418 of *Guide de l'Officier*, and for further particulars our own article under *SPIES*.

Post, in war, a military station; any spot of ground, fortified or not, where a body of men can be in a condition of resisting the enemy.

Advanced Post, a spot of ground, seized by a party to secure their front, and the posts behind them.

Post of honour. The advanced guard is a post of honour; the right of the two lines is a post of honour, and is always given to the eldest regiment: the left is the next post, and is given to the next eldest, and so on. The center of the lines is the post the least honourable, and is given to the youngest regiments. The station of a sentinel before the colours, and the door of the commanding officer, is a post of honour.

Advantageous Post. Every situation is so called which an enemy occupies in such a manner, that not only mere force of arms, but great military skill, and many stratagems are required to dislodge him. We have various instances in history of how much may be done on both sides, when one army has taken up an advantageous post, and another finds it necessary to drive an adversary from it. This subject has been amply discussed in a French work, entitled, *Stratagèmes de Guerre*, page 71, &c.

Post of commanding officers on a march. On a march there is no par-

ticular post for a commanding officer. He ought to range on the front, flank, and rear of his regiment. His eye should be every where; and all straggling should be prevented by the activity of the officers. See Narrative of General Moore's Campaign in Spain, page 204, published by James Moore, in 1809.

Posts of exercise in the rear, the relative stations which officers take in the rear, when the ranks of a battalion are open for the purpose of going through the manual and platoon exercises. It is likewise a cautionary word of command, viz. *The officers will take post in the rear.*

To Post. In the disposition of troops, to place the officers, music, drummers, fifers, and pioneers, according to their several ranks and appointments, either for inspection, or exercise in the field.

To Post, to station; to place as a sentry, &c.

To Post up, (*afficher*, Fr.) to hold up to public censure, or ridicule. See **PLACARD**.

To be POSTED, in military tactics, to be formed ready for action. Thus when troops are brought up in column, and ordered to deploy, it frequently happens, that some part of the line is refused, in order to flank an enemy, or to cover a weak position; in which case, the part that is aligned is said to be posted.

To be POSTED, in a familiar sense, signifies to be publicly announced as an infamous or degraded character. Hence to post a man as a coward, is to stick his name up in a coffee-house or elsewhere, and to accuse him of a want of spirit, &c. The French use the phrase *afficher* in the same sense. They likewise say, figuratively, *afficher sa honte*; to publish or post up one's own disgrace; meaning thereby, that some persons are so totally regardless of decency and decorum, as to express sentiments which are becoming the character of an officer, or a gentleman.

POSTAGE of Letters. Non-commissioned officers and private soldiers are privileged to send or receive letters, from any part of the kingdom, on payment of one penny only for the postage.

POSTE, Fr. a word generally used in the plural number to signify small shot, viz. *Son fusil était chargé de douze ou quinze postes*; his gun or musket was loaded with twelve or fifteen shot.

POSTE, Fr. This word is always used

in the masculine gender when it relates to war, or to any specific situation; as *poste avancé*, an advanced post.—*Poste avantageux*, an advantageous post.—*Mauvais poste*, an unfavourable post.

POSTE avantageux, Fr. See **ADVANTAGEOUS** post.

POSTE jaloux, Fr. A military post is so called when it is likely to be surprized, from its situation.

POSTE d'alarme, Fr. alarm-post. See **ALARM**.

POSTE des invulnérables, Fr. See **MONT pagnote**.

POSTE, Fr. station; place. *Etre à son poste*, to be at his post or station. This word is always of the masculine gender.

POSTE, Fr. } In the feminine gen-
La POSTE, Fr. } der, post; post-office; post-boy.

POSTE d'un, deux, ou trois sous, Fr. the penny, two-penny, or three-penny post. It is also generally called, *La petite poste*.

A sa POSTE, Fr. at a prescribed time.

Vendre à POSTE, Fr. to sell on condition, that the articles delivered be paid for at a time agreed upon; as is the case with public stores.

POSTER, Fr. to place or post, as *poster des gardes*, to place or post sentries, or out-guards.

POSTES, Fr. machines which are made of osier branches, standing six feet in length upon three in breadth; about six inches thick, and covered on each side by two pieces of thick strong paste-board. Each machine is made fast to a large stake, which is fenced with iron, and driven deep into the earth. There are two openings or loop-holes in each post, through which sentries may fire upon the enemy, when he approaches towards a post which has been established on the high road, for the purpose of attempting a surprize or coup de main. This machine was invented by General Sernepont, then Governor of Boulogne sur mer, and it was used by the Duke de Guise, with great success, when he besieged and took Calais, in 1558.

POSTES de campagne, Fr. field-works. Every construction or group of buildings that will admit of being defended, and is consequently tenable, is called a *poste de campagne*, or field-work. Of this description are churches, houses, country-houses, farm-houses, villages, redoubts, &c. in which a sufficient number of men

may be stationed for the purpose of holding out against an enemy, until succours can arrive. Chevalier Folard has written upon this subject; and since him, F. Gaudi, with comments and illustrations by A. P. J. Bélair, chief of brigade in the Republican French army. We recommend the latter production, which appeared in 1793, to the perusal of every British officer. The work is entitled *Instruction adressée aux Officiers d'Infanterie pour tracer et construire toutes sortes d'ouvrages de campagne*. See likewise *Aide Mémoire pour les Officiers d'Artillerie*. We think it due to the exertions of an officer in our own service to mention a late work, entitled *Duties of an Officer in the Field*, &c. by Baron Gross, of the Dutch brigade. This gentleman seems to have availed himself of what has appeared in foreign treatises, and to have added some very sensible remarks of his own. M. Malorti de Martemont, French Professor at Woolwich, has also written upon the subject.

Officers should never lose sight of the many advantages which may be derived from a knowledge of field fortification, and a competent skill to choose a good position, and a tenable post. There is scarcely any building, especially in an intersected country, and in a war of posts, which may not be rendered highly serviceable to one side, and detrimental to the other. Acre, though dignified by the name of a town, when considered in a military point of view, was nothing more than a post: yet by the gallant defence which was made there, against Bonaparte and his whole army, Sir Sidney Smith and a few brave seamen and marines not only covered themselves with glory, but were the primary causes of the final rescue of Egypt out of the hands of the French. History is full of instances of valour, and of consequent success, on this head. The defence which Charles the XIIth of Sweden made, in his own dwelling, when he had only eight men to stand by him, is, perhaps, unexampled: that also of Marshal Saxe, in 1705, is equally memorable.

Petits POSTES séparés, Fr. small detached posts.

POSTES intermédiaires, Fr. intermediate posts, or men so stationed between different corps, that, in cases of urgency, they may, with ease, advance to the sup-

port of that which is more immediately threatened by the enemy.

POSTERN, more frequently called a sally-port, is a small door in the flank of a bastion, or other part of a garrison, to march in and out unperceived by an enemy, either to relieve the works, or make sallies.

POSTICHE, Fr. any thing fictitious put in room of something that has been real and natural. In military matters, among the French, it serves to distinguish supernumerary or auxiliary soldiers that are taken from one or more companies, to strengthen any particular body of men.

POSTILLON, Fr. an express-boat which is kept in French sea-ports for the purpose of carrying and bringing intelligence.

POSTS, (in building,) large pieces of timber placed upright in houses, &c.

Principal Posts are the corner posts of a house, and the posts framed into breast-summers, or pieces of wood in the outward parts of a timber building, between the principal *prick posts*, for strengthening the carcass of a house. Posts are preserved from rotting by burning the ends of such as are to be set into the ground.

POSTURE, state; situation; condition; as the posture of affairs.

POT, (*pôt*, Fr.) a vessel used in the making of artificial fireworks, &c.

Pot, an utensil of first necessity, either for culinary or private domestic purposes.

Stink-Pot, a vessel filled with combustible matter, used in boarding ships. The consequences of its explosion are sometimes fatal, and always dangerous.

Fire-Pot, (*pot-à-feu*, Fr.) in artillery, a machine made of potter's earth or clay, with two handles, in which a grenade with battle gunpowder is confined, and which is thrown against an enemy after the match has been lighted.

Pot à aigrette, Fr. an artificial fire-work, the center of which contains a certain quantity of powder, which, upon being inflamed, communicates itself to several other branches, and exhibits the appearance of an aigrette, or cluster of rays, such as issue from diamonds arranged in a particular manner. The aigrette takes its name from a bird so called, whose feathers serve to make up an ornament for the head. It was given

in diamonds, as a particular mark of distinction, by the Grand Signor, to Lord Nelson, after his glorious conduct in the battle of the Nile. General Lord Hutchinson and Sir Sidney Smith have deservedly received the same marks of distinction.

POT à brai, Fr. an iron pot in which pitch or tar is melted.

POT de chambre, Fr. literally means a chamber-pot; when applied to a town or village with respect to its situation, signifies, that it is situated in a deep plain, closely and completely surrounded by commanding heights.

POT d'une fusée volante, Fr. the carcass of a fusée.

POT en tête, Fr. a head-piece made of iron, which is proof against musket-shot. This head-piece is sometimes placed in the crown of the hat, and is otherwise used by sappers.

POT à deux anses, Fr. an equivocation; a word, or matter, whereof double construction may be made; literally a pot with two handles.

POTEAU, Fr. a stake, post.

POTEAU cornier, Fr. the corner-post of a house, or building.

POTEAU de cloison, Fr. an upright piece of timber, which is confined or kept by tenons and mortises, in a partition.

POTEAU de décharge, Fr. a post, or piece of timber, laid obliquely to ease or support any weight in a partition-work, or wooden pannel.

POTEAUX d'écurie, Fr. posts belonging to a stall in a stable.

POTEAU de fond, Fr. any piece of timber which stands upright upon another through all the stories of a wooden pannel.

POTEAUX de garde, Fr. large wooden piles, which jut out of the mason-work of basins and quays, that line sea-ports, in order to withstand the shock of the ships that are perpetually forced against them.

POTEAU d'huissierie, ou de croisée, Fr. the side post of a door, or window.

POTEAUX de lucarne, Fr. side posts of a dormer window.

POTEAU de membrure, Fr. a solid piece of timber, upon which the beams and rafters are supported, in partition work and wooden pannels.

POTEAU de remplissage, Fr. a piece of wood which serves to fill up; a wooden pannel.

POTEAU montant, Fr. a piece of timber which is used in the construction of a wooden bridge, and is kept upright under the bed of the water by two cramps, and by two supporters above the pavement, in order to keep the railing together.

POTÉE, Fr. putty.

POTELET, Fr. a small post, or rail.

POTENCE, Fr. Troops are ranged *en potence* by breaking a straight line, and throwing a certain proportion of it, either forward or backward, from the right or left, according to circumstances, for the purpose of securing that line. An army may be posted *en potence* by means of a village, a river, or a wood. The disposition *en potence* is frequently necessary in narrow and intersected ground. The derivation of the word may be variously explained, viz.—From *potence*, a gibbet; *potences*, crutches or supports. *Potence* likewise means a piece of wood which is thrown across two uprights; also a cross table, as *table en potence*; and a measure to ascertain the height of a horse or man.

Double-POTENCE, Fr. two sides of a square, of more or less extent, thrown opposite to each other from another side. Thus, in narrow grounds, the two flank companies may be fled from the battalion, and facing inwards, constitute together the *double potence*.

Triple POTENCE, Fr. if the term can be used, signifies three sides of a square, and is, in fact, the *double potence* taken collectively.

Quadruple POTENCE, Fr. the complete square.

Bâton de POTENCE, Fr. the staff from which a ring to be run at hangs.

POTENCE, Fr. an upright piece of timber which is used to strengthen another that is too long, or to support one that is split.

POTENTATE, (*potentat*, Fr.) a sovereign prince, whose power is rendered formidable by the various means of authority which are vested in him.

POTERNE, Fr. a postern gate, a sally port.

POTERNE, Fr. likewise signifies a secret gate. Gates of this description are made behind the orillons at the extremity of the curtain, in the angle of the flank, and in the middle of those curtains where there are no gates. The sewers generally run under the *poternes*.

Bélicor, in his Art of Engineering, recommends small arched magazines to be constructed on the right and left of the paths that lead to these gates.

POTESTAS, or *Imperium*, a command among the Romans, which came direct from the people, and without which authority no general could carry on the war. Of this description was the command given to Fabius, and afterwards divided by the people between him and Minucius. See PRESUMPTION.

POUCH, (*giberne*, Fr.) a case of black stout leather with a flap over it, which is generally ornamented by a brass crown, &c. for the battalion-men; a fuse for the grenadiers; and a bugle-horn for the light infantry. The pouch hangs from a cross belt, over the left shoulder, and is worn in that manner, by the infantry, for the purpose of carrying their ammunition. The pouches in use among the cavalry are smaller, which the French call *demie giberne*.

POUCH-flap, the outside covering of the pouch. It is made of the stoutest blackened calf-skin, and ought always to be substantial enough to turn the severest weather.

POUCE, Fr. an inch, or the twelfth part of a French foot; which is likewise divided into twelve parts, called *lines*. The superficial square inch contains 144 of these *lines*, and the cubic inch has 1728.

POUCE de pied cube, Fr. cubic foot inch is a parallelopiped whose base is a square foot, and whose height is one inch, and which is consequently worth 144 cubic inches.

POUCE de pied quarré, Fr. square foot inch is a rectangle, whose base has one inch upon one toise of elevation, and which contains 72 square inches.

POUCE de solive, Fr. a parallelopiped, whose base is one inch square, and which has one toise in height. Thus an inch of timber, or a wooden peg, is the same thing.

POUCE d'eau, Fr. a term used among diggers of wells, or searchers of springs. It consists of an opening of one inch diameter, which, according to M. Mariotte, must give fourteen pints of water, Paris measure, in a minute, 810 pints in an hour, and 20,160 pints in twenty-four hours. See Bélicor's article on this head, in the first part of his *Architecture Hydraulique*, vol. i. p. 135.

POUDRE à canon, Fr. See GUN-

POWDER. The reader is referred, for further particulars respecting the invention of this powder, to *Dictionnaire de Mathématique* de M. Saverien, under *Artillerie*; and, for its composition and manufacture, to the second part of Bélicor's *Bombardier Français*. See *Traité sur l'Influence de la Poudre à Canon*; Also, *Traité des Feux d'Artifice* de M. Frezier, new edition, printed at Paris in 1747.

POUDRE muette, *poudre sourde*, Fr. a species of gunpowder which is free from noise or detonation.

POUDRE fulminante, Fr. a species of gunpowder which makes a greater noise than the common sort. This powder is composed of three parts saltpetre, two parts salt of tartar, and one part sulphur.

POUDRE à gros grains, Fr. gunpowder which is used for artillery pieces. It is likewise called *poudre à canon*.

POUDRE à mousquet, Fr. gunpowder used for muskets, and other fire-arms.

POUDRIER, Fr. a gunpowder marker. It also signifies an hour-glass.

POVERTY, (*pauvreté*, Fr.) indigence, necessity, want of riches; which, by some fools, is reckoned a crime, although it be too frequently the concomitant of merit. *Poverty* also means mental defect; want of understanding.

POVERTY, a goddess adored by the Pagans, and familiar to Christians. She was revered, as a deity, by the heathens, because they feared her, and was very justly considered as the mother of industry and the fine arts. Among military men, poverty is seldom felt whilst the active duties of the profession are executed with zeal and good sense; and the individuals entrusted with them are not only paid with punctuality, but are secured in their honest hopes of promotion. Economy is the basis on which every soldier should build his views of personal comfort and independence; and if he attends to the perpetual calls of service, he will not fail to realize them. For a life of real service affords no scope to extravagance; and when a good soldier becomes unequal to the hardships it imposes, the nation should provide for him.

Badge of POVERTY. The military cockade is sometimes so called; and not without a wounding application to its wearer, especially if he have nothing but his pay to subsist upon.

POUF, *Ind.* a word used among the

Africans and blacks to describe the explosion of fire-arms.

POULAIN, *Fr.* See *HORSE colt.*

POULDAVIS, a sort of sail-cloth.

POULDRONS, *Fr.* part of the ancient armour which was contrived to defend the shoulders.

POULEVRIN, *Fr.* fine grains of gunpowder which have been pounded, and serve for priming.

POULIE, *Fr.* pulley. A machine which has only one pulley is called *monopaste*; that which has two, *dispaste*; that which has three, *trispaste*; that which has four, *tetrapaste*; that which has five, *pentaspaste*; and that which has several, *polypaste*.

POULIE *mouflée*, *Fr.* a pulley which acts conjointly with one or more pulleys.

A POUND *sterling*, a money in account value 20s.

POUND-note, a thin piece of printed paper, which is issued from the Bank of England, and is ordered to be taken at the current rate of twenty shillings, making one pound sterling.

POUND-nails, nails which are four-square in the shank, much used in Norfolk, Suffolk, and Essex, though scarcely elsewhere, except for paling.

POUNDAGE, a rate in the pound sterling, which is allowed for collecting money. Army agents, &c. are entitled to poundage, which consists in a certain deduction from the pay of officers, non-commissioned officers, and soldiers.—Agents are not allowed any poundage, on the pay of the privates in the militia. The French say *vingtième*, or the twentieth part.

POUNDER, a great gun or piece of ordnance, denominated according to the weight of the ball it carries, as a 6, 12, 24 pounder.

POUPPE, *Fr.* the poop, or hinder part of a ship.

POURBONDIR, *Fr.* to manage or prance a horse, to make him leap, &c.

POURIE, *Ind.* a wooden sandal, which is used in India during the wet season.

POURSUITE, *Fr.* pursuit.

POURSUIVANS *d'armes*, *Fr.* See *PURSUIVANTS at arms.*

POURSUIVRE, *Fr.* to pursue.

POURSUIVRE *l'épée dans les reins*, *Fr.* to pursue with unrelenting activity.

POURTOUR, *Fr.* the length or extent of a thing round any given space;

It also signifies the circumference of any round body, as of a dome, a column, &c. which, in geometry, is called *periphery*.

POURTOUR likewise means the extent of a building, or the proportions of any body whatsoever.

POURVOIR, *Fr.* to provide, to lay in store, &c.

POURVOYEURS *des rivières*, *Fr.* purveyors.

POUSSE-balle, *Fr.* a small cylindrical instrument, made of iron, which is used to ram down a ball in a rifle barrel.

POUSSÉE, *Fr.* the effort or straining which an arch or vault makes to drive its *piédroits* or *piers* out of the upright direction which has been given to them, and which are kept firm by props or counterforts. The flatter an arch is, the more violent will be its effort to push out the *piers*.

POUSSER, *Fr.* to push, to press upon, to drive before you, viz. *Pousser aux ennemis*; to advance rapidly against the enemy.

POUSSER *un cheval*, *Fr.* to make a horse go full speed.

POUSSER *les frontières d'un état*, *Fr.* to break through the frontiers of a neighbouring state, and to continue the incursion; so that it may literally be said, that the frontiers are pushed forward.

POUSSER *ses conquêtes*, *Fr.* to extend one's conquests.

POUSSER *ses succès*, *Fr.* to follow up a successful undertaking.

POUSSIÈRE, *Fr.* dust; the earth you tread on: it also signifies the dust which remains after the formation of gunpowder into grains; also the dust, or ashes, of the human body.

Mordre la POUSSIÈRE, *Fr.* literally to bite the dust. *Il a fait mordre la poussière à son ennemi*, *Fr.* he has made his enemy bite the dust, or he has destroyed his enemy.

POUTRE, *Fr.* a filley, or young mare.

POUTRE, *Fr.* beam; the largest piece of timber in a building, and which serves to support the principal rafters of a roof. They are of various lengths and sizes; and always lie cross the building or the walls.

POUTRE *armée*, *Fr.* a beam which has iron cramps, &c. in order to enable it to support any extraordinary weight.

POUTRE feuillée, Fr. a beam, with notches or gaps in it, for the purpose of receiving the ends of the joists, or girders.

POUTRE quartderonnée, Fr. a beam, on whose angular sides, or edges, a wave, or any other moulding, may have been carried, for the purpose of doing away a withered or defective part.

POUTRELLE, Fr. a small beam.

POWDER, commonly called gun-powder, (*poudre à canon*, Fr)

POWDER-horn, a horn flask, in which powder is kept for priming guns. Light infantry have frequently a powder horn for carrying spare powder.

POWDER-magazine, a bomb-proof arched building, to hold the powder in fortified places, &c. containing several rows of barrels laid one over another. See **MAGAZINE**.

POWDER-cart, a two-wheeled carriage, covered with an angular roof of boards. To prevent the powder from getting damp, a tarred canvass is put over the roof; and on each side are lockers to hold shot in proportion to the quantity of powder, which is generally four barrels.

POWDER-mill, a building in which the materials are beat, mixed together, and grained: they are placed near rivers, and as far from any house as can be, for fear of accidents. See **MILL**.

POWDERINGS, in architecture, a term sometimes used for devices, in filling up vacant spaces in carved work.

POWER, a natural faculty of doing or suffering any thing. Mr. Locke, in his Essay on the Human Understanding, considers power under two heads. One he calls active, and the other passive power.

POWER. This word sometimes signifies host, army.

POWER of Attorney, an authority given to a third person to act between one or more parties. When an officer is not on the spot to receive his half-pay, it is usual for him to empower some army agent to act for him, either in Great Britain or Ireland, according to circumstances. General officers, when they obtain regiments, grant powers of attorney to their agents; but they are, to all intents and purposes, responsible to the public for the trust so delegated.

To be in the POWER of any body, in a figurative sense, to have committed yourself in such a manner, as to be under the

necessity of keeping upon good terms with a person who might injure you by a disclosure of your secrets.

To be in the POWER of an enemy, to have taken up, injudiciously, such a position as to expose you to a defeat whenever the enemy may think proper to attack you.

POWERS of lines and quantities are their squares, cubes, &c. or other multiplications of the parts into the whole, or of one part into another.

Cow-POX, a disorder incident to cows, from which much benefit has been promised to the human race, by introducing what is called vaccine matter into the habit, and thereby preventing the fatal effects of the small-pox. See **VACCINATION**.

Small Pox, a disease to which most infants, adults, &c. are exposed; and which has been rendered less malignant by inoculation. When recruits join a regiment, they should be examined respecting this disease; and no time should be lost in inoculating them.

Great Pox, commonly called the French disease. Few men are more likely to catch this cruel disorder than soldiers; and in no case ought the attention of the regimental surgeon to be more imperiously engaged than in the speedy cure of it. In the navy, where the disease is often prevalent, the surgeons are entitled to receive a certain sum of money, which is stopped out of the pay of their venereal patients, for extraordinary trouble and attendance. No specific regulation exists in the army. Sometimes, indeed, the captains of companies have assumed a discretionary power with respect to their men, and the latter have submitted to the charge. One great evil has, however, grown out of both practices, namely, the men, to avoid the stoppage, have applied to country quacks, and very frequently taken nostrums of their own. Every officer of a company, who has the welfare of his soldiers at heart, should examine their linen at the weekly inspections, as the disorder generally manifests itself, particularly in its first stages, in stains upon the shirt.

It is generally believed, that the venereal malady was first brought into Europe in 1492, by the followers of Christopher Columbus, after his discovery of America. These people gave it to their countrywomen in Spain; the

Spaniards extended it to Naples, and the French caught it during the siege of the latter place in 1495; and from France it was rapidly spread over the rest of Europe; so that its original nursery, on the side of the Atlantic, seems to have been a camp.

POZZUOLANA, an earth of a reddish colour, which is used in Italy in lieu of sand, and when mixed with lime, makes excellent mortar that grows hard in water.

PRACTICABLE, a word frequently used in military matters, to express the possible accomplishment of any object. Hence, "a practicable breach."

PRACTICE, or *Gun-practice*. In the spring, as soon as the weather permits, the exercise of the great guns begins, for the purpose of shewing the gentlemen cadets at the royal military academy at Woolwich, and the private men, the manner of laying, loading, pointing, and firing the guns. Sometimes instruments are used to find the center line, or two points, one at the breach, the other at the muzzle, which are marked with chalk, and whereby the piece is directed to the target; then a quadrant is put into the mouth, to give the gun the required elevation, which, at first, is guessed at, according to the distance the target is from the piece. When the piece has been fired, it is sponged, to clear it from any dust or sparks of fire that may remain in the bore, and loaded; then the center line is found, as before; and if the shot went too high, or too low, to the right or to the left, the elevation and trail are altered accordingly. This practice continues morning and evening for about six weeks, more or less, according as there is a greater or less number of recruits. In the mean time, others are shewn the motions of quick firing with field pieces.

Mortar-PRACTICE is generally executed in the following manner: a line of 1500 or 2000 yards is measured in an open spot of ground, from the place where the mortars stand, and a flag fixed at about 300 or 500 yards: this being done, the ground where the mortars are to be placed is prepared and levelled with sand, so that they may lie at an elevation of 45 degrees; then they are loaded with a small quantity of powder at first, which is increased afterwards by an ounce every time, till they are loaded with a full charge: the times of

the flights of the shells are observed, to determine the length of the fuzes.—The intention of this practice is, when a mortar-battery is raised in a siege, to know what quantity of powder is required to throw the shells into the works at a given distance, and to cut the fuzes of a just length, that the shell may burst as soon as it touches the ground.

PRACTICE-Book. See BOOK.

To PRACTISE, in a military sense, to go through the manual and platoon exercises, or through the various manœuvres, &c. for the purpose of becoming thoroughly master of military movements. Hence, to practise the nineteen manœuvres. Practise is likewise used, in imitation of the French, to signify the act of effecting or executing any military operation, viz. to practise a mine beneath the covert way, &c.

PREFECTURÆ, *Lat.* During the time of the Romans, there were certain conquered cities in Italy, which were exclusively governed by Roman magistrates whose laws and regulations they were obliged to obey. These magistrates were called *prefecti*. In imitation of the Romans, the modern French established what they named *prefectures* and *prefets*. It also signifies, according to Adam Littleton, a lieutenantcy, or captainship, or place of rule; a government, a district, a province, or place of jurisdiction. See also *Lexicon Militare*.

PREFECTUS, *Lat.* See PREFECT.

PREFECTUS *Castrorum*, *Lat.* an officer among the Romans, whose rank and situation correspond with those of a *Marchal de camp* in the French service, and a quarter-master general in the British.

PREFECTUS *Classis*, *Lat.* the commander in chief of a naval armament among the Romans. His command lasted one year.

PREFECTUS *Prætorii*, *Lat.* the prefect, or chief officer in command, in the Roman prætorian bands, who had charge of the emperor's person; and who, from a very circumscribed situation, gradually rose into the most important stations.

PRETOR, *Lat.* After the expulsion of the kings, the consul was, at first, so called among the Romans. He possessed kingly power both for civil and military affairs. *Adam Littleton.* See also *Lexicon Militare*.

PRETORIANA CASTRA, *Lat.* the main guard.

PRÆTORIANI MILITARES, *Lat.* the general's body guard. They originally consisted of a cohort, and were first established as a guard by Scipio Africanus.

PRÆTORIAN BANDS, a select body of troops among the Romans, which gradually obtained so much ascendancy, that they elected emperors at will, and dethroned them at pleasure. They became enervated at last, and the power they had possessed was absorbed by the legions, or regular soldiers, who, as Junius somewhere says, came from the distant provinces and gave away the empire. These bands, indeed, were originally chosen on account of their merit, (as all life and body-guards ought to be,) and when first instituted, always accompanied the commander in chief, or the general, into action.

The consular guard and the legion of honour, established by the late Emperor Napoleon, were, in some degree, imitations of these bands; and the janissaries of Constantinople have sometimes followed their example, in disposing of the Grand Signor's title.

PRÆTORIUM, *Lat.* (*prétoire*, *Fr.*) the Roman general's tent or pavilion. It also signifies what we call *head-quarters*.

PRAÏRIE, *Fr.* meadow or field.

PRAME, *Fr.* This word is sometimes written *Praam*: it is a sort of flat-bottomed boat or barge which is used on the canals in France, &c.

PRAME, in military history, a kind of floating battery, being a flat-bottomed vessel, which draws little water, mounts several guns, and is very useful in covering the disembarkation of troops.—They are generally made use of in transporting the troops over the lakes in America. These vessels are well calculated for the defence of large havens and seaports. Belair, in his *Elémens de Fortification*, page 397, strongly recommends the use of prames in cases of inundation, &c. See the improvements proposed by him in page 316, where he speaks of "*Bateaux insubmersibles*."

Di PRATICA, *Ital.* free intercourse; admitted to pratique. Persons who, having performed quarantine, are permitted to land in Italy, and mix with the inhabitants.

PRATICABLE, *Fr.* See **PRACTICABLE**. This word is in general use among the French, viz.

Les chemins ne sont pas PRATICABLES, the roads are not passable.

Le gué n'est pas PRATICABLE dans ce moment-ci, the river is not fordable at this moment; verbatim, the ford is not practicable at this moment.

PRATIQUE, *Fr.* practice. The term likewise signifies, among the French, commerce, intercourse, traffic, &c.

Avoir PRATIQUE avec des insulaires, *Fr.* to trade, or have intercourse with the inhabitants of islands.

Une PRATIQUE éclairée, *Fr.* a project undertaken and put into execution upon solid principles.

Une PRATIQUE aveugle, *Fr.* a plan ill-digested, and executed without discernment or ability.

Donner PRATIQUE à un vaisseau, *Fr.* to allow a vessel to enter into port and unload. This expression is used in the Mediterranean under circumstances of quarantine, and comes from *Pratica*.

PRATIQUES, *Fr.* In the plural, this term signifies the same as mal-practices, or secret intelligence with an enemy, viz.

Entretenir des PRATIQUES avec le commandant d'une place, *Fr.* to hold communication, or keep up a secret correspondence with the commandant of a fortified place.

PRATIQUER des intelligences, *Fr.* to collect; to gather useful information.

Il avait PRATIQUÉ dans cette place des intelligences qui lui ont donné le moyen de la surprendre, *Fr.* he had gathered such information, by holding secret intelligence with the inhabitants, as to be able to surprize the place.

PRATIQUER, *Fr.* in architecture, to contrive, to make, to render convenient.

PRATIQUER, *Fr.* to practise. *Pratiquer une homme*, to try a man; to put his abilities to the test. It likewise signifies to gain over, to suborn.

PRÉ, *Fr.* meadow or field.

PRÉCHAT, *Fr.* payment made before hand; or anterior to any circumstance alluded to.

PRÉAU, *Fr.* a yard, a green.

PRECEDENCE, priority. Priority in rank, or precedence in military life, arises from the date of an officer's commission, or the corps in which he serves.

PRECEDENT. Any act which can be interpreted into an example for future times, is called a precedent. Persons in high official situations are extremely

scrupulous with respect to precedents, especially in military matters.

PRÉCEINTES, *Fr.* long pieces of timber, which bind together the outside of a ship from head to stern.

PRECEPT, a writ, or official document, which is issued to a department, or persons in office, directing them to make up the several branches and items of public expenditure that have been incurred under their management. Of this description was the precept sent out by the commissioners of Military Inquiry.

PRÉCIPITER, *Fr.* to precipitate; to urge or hasten on; to do any thing prematurely. This word appears to be used by the French in almost all the senses to which we attach it, especially in military matters.

PRÉCIPITER sa retraite, *Fr.* literally signifies, to precipitate one's retreat. It may be taken in a good or bad sense, to signify the act of flying away blindly or rashly, without judgment or discretion; or of urging your retreat under circumstances of imperious necessity, yet with proper caution and foresight. So that to precipitate, both in French and English, signifies, *faire très promptement, ou trop promptement*; to do any thing very promptly, or too promptly.

PRÉCIS, *Fr.* minute, abstract; analytical view of any thing.

PRÉCIS-Writer, a person employed in the foreign department to make abstracts from public dispatches, &c. for the information of the secretary of state.

PRECISION, exact limitation, scrupulous observance of certain given rules.

PRECISION of march. On the leading platoon officer of the column much of the precision of march depends; he must lead at an equal steady pace; he must lead on two objects either given to him, or which he himself takes up on every alteration of position; this demands his utmost attention; nor must he allow it to be diverted by looking at his platoon, the care of whose regularity depends on the other officers and non-commissioned officers belonging to it. The second platoon officer must also be shewn, and be made acquainted with the points on which the first leads; he is always to keep the first officer and those points in a line; and those two officers, together with the placed mounted officers, thus become a direction for the other pivot officers to cover. In marching in open

column, the covering serjeants are placed behind the second file from the pivot officers, that the officers may the more correctly see and cover each other in column.

PREDAL, or **PREDATOY**, *War*, } a war carried on by plunder and rapine; such as the French republic carried on against the continental powers, levying enormous contributions on all the conquered towns or states.

PREDESTINARIAN, a person who believes in predestination. Every Turk may be considered as a predestinarian. A Turkish soldier is taught to believe, that if he fall in battle he will instantly go to heaven. This is a comfortable idea even for a Christian soldier. How far it ought to be encouraged, doctors and able casuists must decide.

PREFECT, (*préfet*, *Fr.*) a governor or commander of any place or body of men. Among the Romans, this was a title of great importance, both in civil and military situations. During the existence of the republic the *Præfectus Legionis* had a considerable command. The two *Alæ*, or great divisions of the allies, had each a *Præfect* appointed them by the Roman Consul, who governed in the same manner as the *Legionary Tribunes*. See Kennett's *Roman Antiquities*; and for a more minute account of the term *præfectus*, as understood by the Romans, the reader is referred to *Lexicon Militare; Authore Carolo Aquino, Societatis Jesu.* There was likewise, during the time of the Roman Emperors, an officer called the *Præfect* of the *Pretorian Band*, or body guards. The French adopted the word in their new constitution at the Revolution.

PREFERMENT, the state of being advanced to a higher post.

PRÉFETS du Palais de la cour des premiers Rois Français, *Fr.* These persons were formerly called *comtes du palais et préfets du prétoire*. They had once the sole direction of the government; managing all state affairs, as well with respect to the exterior as to the interior relations of peace or war. A *Préfet du Palais* was also called *Major-dome*; under which title Charles Martel is mentioned by several old writers. It was afterwards changed into *Sénéchal*; in which capacity we find *Thibaud*, Count of *Blois*, who is sometimes styled *Major-dome*, and at others *Sénéchal*.

PREJUDICE, (*préjugé*, Fr.) prepossession, judgment formed beforehand without examination.

PRELIMINARY, (*préliminaire*, Fr.) previous, introductory, &c. Preliminary, as a substantive, signifies an introductory measure, a previous arrangement. Hence the "preliminaries of peace."

PRENABLE, Fr. that may be taken. There is no place but what may be taken by famine.

PRENDRE, a French military term. It is variously used, and accords generally with our word *to take*, viz.

PRENDRE une ville d'assaut; *par famine*, &c. Fr. to take a town by assault; by famine, &c.

PRENDRE à droite, ou à gauche, Fr. to go to the right or left.

PRENDRE à travers, Fr. to run across.

PRENDRE les devants, Fr. to anticipate, to get the start of any body.

PRENDRE le pas, Fr. to take precedence.

PRENDRE la droite, Fr. to take the right.

PRENDRE terre, Fr. to land.

PRENDRE le large, Fr. a term used figuratively to signify the act of running away.

PRENDRE la clef des champs, Fr. literally, to take the key of the country, or to run over it; also to run away.

PRENDRE son élan, Fr. to dart forth, to spring forward.

PRENDRE le mors aux dents, Fr. to take head, as a horse does when he runs away; also to undertake a thing warmly.

PRENDRE un rat, Fr. a figurative expression used among the French when a musket or pistol misses fire, viz. *Il voulut tirer, mais son pistolet prit un rat*, that is, he would have fired, but his pistol only flashed in the pan. Hence **RATER**, which see.

PRENDRE du temps, Fr. to take time in executing a thing.

PRENDRE son temps, Fr. to do a thing with perfect convenience to one's self.

PRENDRE la parole, Fr. to speak first.

PRENDRE sa revanche, Fr. to make up for any past loss or disadvantage.—We familiarly say, to take one's revenge.

PRENDRE à partie, Fr. an expression peculiar to the French, in judicial matters, which signifies to attack a judge, for having prevaricated and taken the part of one side against another, without

any regard to justice. It likewise means to impute misconduct or criminality, and to make a person responsible for it.

Se PRENDRE de vin, Fr. to get drunk. Excess of drinking was so little known before the revolution, among French officers and soldiers, that the greatest disgrace was affixed to the habit. It is recorded, that when Marshal Richelieu had determined to storm a place in the Mediterranean, he gave out the following order—"Any soldier who shall appear the least intoxicated, shall be excluded from the honour and glory of mounting the assault to-morrow morning." Every man was at his post, and not a single instance of intoxication occurred. Such was the *esprit de corps* and the *amour propre* which prevailed in all ranks, that the dread of corporal punishment had less effect than the being deprived of an opportunity to shew courage and resolution.

PRENDRE langue, Fr. a figurative expression among the French, which signifies to get intelligence by secret means. Thus, a spy that is sent into an enemy's camp, may be said to go thither in order to hear what passes, and to pick up information.

Vaisseau PRENEUR, Fr. a term peculiarly applicable to a ship that has taken a prize.

PRÉNOM, Fr. any name which stands before a surname.

PRÉPARATIFS de guerre, Fr. warlike preparations. He is a wise man, and, of course, a wise king, who keeps the following maxim constantly in his mind:—*si vis pacem, para bellum*, if you wish to secure peace, be always ready to go to war. The Turks are, perhaps, the only people who adhere to this Roman adage. Their troops are always ready for action; or as a French writer says,—*Le biscuit est prêt, de sorte qu'ils n'ont qu'à se mettre en route*; the biscuit is at hand, so that they have nothing to do but to move, or begin their route.

PREPARATIVE, having the power of preparing, qualifying, or fitting. This word is used, in a military sense, to give notice of any thing about to be done. Hence

PREPARATIVE, a beat of the drum, by which officers are warned to step out of the ranks when the firings are to commence.

When the Preparative is beat, for the firings, the officers in the front rank step out nimbly two paces from the vacancies between the divisions, platoons, companies, or sub-divisions, face to the left without word of command, and look to right of companies, &c. When the Preparative has ceased, they severally commence the firing. When the general is beat, they fall back into the front rank.

To PREPARE, to take previous measures.

PREPARE *for action*, a word of command used in the British artillery.

PREPARATORY, antecedently necessary ; giving that knowledge in any art or science which is necessary to qualify individuals for a superior class or branch. Hence *preparatory* schools.

PREPARATORY *academies*. The junior department of the Royal Military College is *preparatory* to the senior. The first elements of military science are taught in the former, and officers get qualified in the higher branches of the profession when they enter the latter.

PRESENCE *of mind*, ready conception of expedients, producing promptitude of action under difficult and alarming circumstances. Archduke Charles, in 1796, when the Austrians were precipitately retreating, dismounted, and placing himself at the head of the grenadiers, exclaimed, "There is the enemy," pointing to the French, "you have mistaken the road—there shall be no retreat where I am."—And he beat the French, under the electrical communication of this feeling.

PRESENCE *of mind*. There is a very remarkable instance of that species of presence of mind which gives a sudden turn to public opinion, and, as it were, electrifies the human mind. When a dangerous mutiny broke out among the Roman legions, on a proposed expedition against the Germans, Cæsar suddenly exclaimed, "Let the whole army return ignominiously home, if it think proper, the tenth legion and myself will remain and combat for the republic." Having, as Plutarch observes, excited his troops to fresh ardour, he led them against the Germans ; and being informed that the enemy had been warned by their soothsayers not to engage before the next moon, he took an immediate occasion to force them to battle, in which he, as usual, obtained a victory. On a subsequent occasion, this great

man discovered a promptitude of conception and a presence of mind which have never been surpassed in ancient or modern history.

Having led his army against the Nervii, the most uncivilized, and the most fierce of all the nations bordering upon the Roman territory, he met a resistance, which, as it was not expected, somewhat shook the firmness of his troops. The Nervii, by a sudden onset, at first routed his cavalry ; but perceiving the danger to which his army was exposed, Cæsar himself snatched up a buckler, and forcing his way through his own men, he, with the assistance of his tenth legion, changed the fortune of the day, and cut the enemy almost entirely off. For, as Plutarch states, out of 60,000 soldiers, not above 500 survived the battle.

PRESENCE *of a corps*, the hostile appearance of a body of soldiers for the direct purposes of war.

En PRESENCE, *Fr.* in sight ; as in sight of the enemy.

All PRESENT, a term used when an officer takes his serjeant's report, and makes the necessary inquiry respecting the state of his troop or company.

To PRESENT, (*présenter*, *Fr.*) This word is used in various senses. Those which are more immediately applicable to military usage are as follow :—

To PRESENT, to offer openly ; to exhibit ; to give in ceremony ; as to present the colours.

To PRESENT *arms*, to bring the firelock to a certain prescribed position, for the purpose of paying a military compliment. See MANUAL.

To PRESENT, to level ; to aim ; to bring the firelock to a prescribed position, for the purpose of discharging its contents.—See PLATOON *Exercise*, under MANUAL. The French use the term *Present* in almost all the senses that we do. There is an exception in the phrase *Present, Fire*, instead of which they say, *Joue, Feu*. The word *Joue*, which signifies check, being expressive of the particular position of the musket when the soldier takes aim. It corresponds with *Present* in this particular case.

PRÉSENTER, *Fr.* among workmen, to lay or place a piece of wood, bar of iron, or any other article, in order to fit it to the spot where it is to remain.

PRÉSENTER *les armes*, *Fr.* to present arms, to bring the firelock to any posi-

tion that may be prescribed in military exercise. In the firings it signifies *make ready*, viz. *Présentez les armes*, make ready; *Joue*, ready; *Feu*, fire. In the manual and other exercises of the piece, it corresponds with our term.

PRÉSENTER la baïonnette, Fr. to charge bayonets.

PRESIDENCY. The seats of government are so distinguished in India.—There are four presidencies, viz. Bombay, Calcutta, Fort St. David, and Madras.

PRESIDENT of a court-martial, the principal member in a military court, whether of inquiry into grounds for accusation, or for direct prosecution on charges exhibited against a military offender.

The president of a court-martial resembles, in some degree, the chief judge of a civil court. It is his duty to take minutes of all that is deposed upon oath during the proceedings, and to sum them up at the conclusion; putting the question, *Guilty or Not Guilty?* to the youngest member, and so up to himself, as casting vote. In a general court-martial, the judge advocate, or his deputy, always attends for the purpose of recording the proceedings. His authority, however, does not appear to be sufficiently defined, for in some instances he is not allowed to interfere with the president or members, unless applied to, and in others he assumes, or has, a right to explain the law.

The commander in chief, for the time being, is, by virtue of his appointment, perpetual president of the supreme board of the royal military college in Great Britain. And the resident governor, or, in his absence, the lieutenant-governor of that establishment, is perpetual president of the collegiate board.

PRESTÈSSE, Fr. quick-perception; *prestesse d'esprit*, presence of mind.

PRESTIGE, Fr. magic; illusion; fascination. Thus, at the battle of Waterloo, Bonaparte was said by the French to have lost *sa prestige*, i. e. that he was not invincible.

PRESQU'ILE, Fr. See **PENINSULA**.

PRESS-money, money given to the soldier when taken or pressed into the service: but as the entrance into the British service is a voluntary act, it is now more properly called bounty or enlisting money.

Portable printing PRESS. A machine of this sort ought always to accompany each brigade at least, of an army, if not every regiment, for the purpose of distributing general orders with expedition. The French always use printing machines on these occasions.

PRESS-gang, a body of armed sailors, who, under the authority of the Impress Act, parade the streets, and seize persons for the service of the navy.

To PRESS, in horsemanship, is to push a horse forwards by assisting him with the calves of your legs, or by spurring him into speed.

PRESTANCE, Fr. appearance, demeanour, port of body. Hence *prestance militaire*, military look, gait and deportment.

Belle PRESTANCE, Fr. a handsome appearance; a dignified look, &c.

PRESTATION de serment, Fr. the taking an oath.

PRESUMPTION and VANITY, (*présomption et vanité*, Fr.) Under the latter word Bailey very justly includes emptiness, unprofitableness, vain-glory, and pride; and of all follies, bordering upon vice and crime, it is, perhaps, the most dangerous in a military character. We lament that the limits of this publication will not allow us room to illustrate the truth of this observation, by transcribing out of Plutarch, in the life of Fabius Maximus, what is given respecting the conduct of Minucius, who was his colleague, and who fought conjointly with him against Hannibal.

PRET, Fr. the subsistence or daily pay which is given to soldiers. The French say,

Payer le PRET, to pay subsistence.

Recevoir le PRET, to receive subsistence.

Toucher le PRET, to touch subsistence.

PRET also signifies a loan of money.

PRETENDER, (*prétendant*, Fr.) one who pretends to any thing, whether it be his own or the property of another. Hence the Pretender, who thought the Crown of England his own, on the ground of hereditary right; but whose lineal claim was set aside by the Parliament of Great Britain, in favour of a collateral Protestant branch.

PRETER, Fr. in military tactics, to expose, as

PRETER son flanc à l'ennemi, to expose one's flank to the enemy; to march

in so unguarded a manner, or to take up one's ground so disadvantageously as to stand in continual danger of being out-flanked.

The French likewise say, figuratively, *préter le flanc*, to put one's self in the power of another.

PRETER le collet à quelqu'un, Fr. to fight body to body; or at close quarters.

See *PRETER au collet*, Fr. See *To TAKE to*.

PRETEXT, (*prétexte*, Fr.) a colourable excuse, pretence, shew. Persons employed on secret service should have various pretexts at hand.

PRETOR, (*préteur*, Fr.) among the Romans, the governor of a province, who had served the office of Pretor, or chief minister of justice in ancient Rome. The provinces so governed were called pretorian.

PRETORIAN, (*prétorien*, *ne*, Fr.) appertaining to a Pretor; as *Pretorian Band*, the general's guard among the ancient Romans.

PRETORIUM, (*prétoire*, Fr.) the hall or court wherein the Pretor lived and administered justice. It also denoted the tent of a Roman general, in which councils of war were held. The place where the Pretorian guards were quartered or lodged, was likewise called Pretorium.

PREUX, Fr. brave; courageous.—This word is used both as a substantive and an adjective, viz. *Un ancieu preux*. *Un preux et hardi chevalier*.

To PREVARICATE, (*prévariquer*, Fr.) to shuffle and cut, to play fast and loose, to make a shew of doing a thing, and to act quite contrary.

PREVARICATION, in a general sense, deceit, double dealing; imposition upon the understanding.

PREVENIR l'ennemi, Fr. to get the start of an enemy, or to anticipate his movements.

PRÉVENTION, Fr. prejudice, prepossession; anticipation; hindrance.

PRÉVOT, Fr. provost.

PRÉVÔT d'une armée, Fr. provost-marshal belonging to an army.

PRÉVÔT de l'artillerie, Fr. an officer under the old government of France, who only exercised the duties of his situation during actual service, and who always came in rear of the baggage—There were some cases in which the power of life and death was absolutely

vested in him; and in others, he was obliged to refer the sentence to the high bailiff belonging to the royal arsenal in Paris, as a last resort.

PRÉVÔT général de la connétable, gendarmerie, et sauréchaussée de France, camps et armées du roi, Fr. provost-general belonging to the jurisdiction of the high constable of France, &c. This place or commission is of very ancient date, having first taken place during the second race of French kings, and being as old as that of *connétable*, or constable, of France; with this only exception, that the appellation of *maréchaussée* was added after the suppression of the *connétable* in 1667. The company, which immediately was attached to the provost-general, and which was the colonel's, or *la colonelle*, took precedence over all others of the same description. This superior officer was, in his own right, provost-general throughout the king's camps and armies in war time. An independent company always attended the provost, in order to execute his instructions, as well as those of the most ancient Marshal of France, who represented the constable since the suppression of that title. There was also a guard at the marshal's head-quarters, which was constantly mounted by a given number of cavalry, and which was subject to the orders of the provost-general. The provost-general was always present whenever a council was assembled by the Marshal of France, to settle disputes and differences which might arise between persons of distinction, noblemen, or private gentlemen; and to determine generally upon points of honour. The sentence or opinion of this tribunal was final and decisive.

PRÉVÔT général de mounais, Fr. provost-general, or what we call master of the mint. Under the old monarchy of France, this person was vested with the same powers that were annexed to the title of *Prévôt des Maréchaussées*, and had a seat at the council of the Marshals of France.

PRÉVÔT général de l'île de France, Fr. provost-general of the Isle of France, (so called from an insular spot formed by the Seine in the center of Paris.)—This officer had under his command a body of horse, divided into eight brigades, which were distributed about the neighbourhood of Paris, to secure the

country round from the depredations of the capital. He had, like the other prévôts, a separate tribunal of his own. It were devoutly to be wished that, among our manifold imitations of the Germans, we could condescend so far to imitate the French, as either to employ some of our useless cavalry in and about the skirts of London, or to form some specific body of men, whose duty should be to patrol within the bills of mortality at least. In time of peace this plan might easily be adopted; and we could point out a corps which might be rendered very serviceable. But we think such an establishment ought to be carried on on a large and liberal scale. The community would be benefited by it; and if public money is to be expended, in time of peace or in time of war, how can it be more rationally employed than for the safety of those who contribute towards the public purse?

PRÉVÔTS généraux des maréchaussées, Fr. provosts-general of the different marshals of France.

PRICES of commissions. See **REGULATION**.

To **PRICK**, or **PINCH**, (in horsemanship,) is an aid; but to bear hard with the spur is correction.

To **PRICK out**, an expression used among engineers, &c. signifying to mark out the ground where a camp, &c. is to be formed.

To **PRICK out the line of circumvallation.** This is done by the chief engineer and quarter-master-general whenever an army entrenches itself before a town, or takes possession of any given lot of ground, and begins to hut.

PRICK-posts, (among builders,) are such as are framed into the breast summers, between the principal parts, for strengthening the carcass of the house.

PRICKING, among mariners, to make a point on the plan or chart, near about where the ship then is, or is to be at such a time, in order to find the course they are to steer.

PRICKER, a brass wire used for clearing the touch-hole of a musket, &c. A light horseman was formerly so called.

PRIEST's CAP, (*bonnet de prêtre*, Fr.) See **FORTIFICATION**, and **BONNET**.

PRIME, a word of command used in the platoon exercise. See **MANUAL**.

PRIME and load, a word of command used in the exercise of a battalion, company, or squad. See **MANUAL**.

PRIME parade, in fencing, is formed by dropping the point of your sword to the right, bending your elbow, and drawing the back of your sword hand to within a foot of your forehead, in a line with your left temple, so that your blade shall carry the thrust of your antagonist clear of the inside, or left, of your position.

PRIME thrust, a thrust applicable after forming the above parade, and delivered at the inside of the antagonist.—To obtain an opening for this thrust, it is sometimes necessary to step out of the line to the right as you parry, or else to oppose the sword of your antagonist with your left hand. The first method is most eligible.

PRIME Hanging Guard, with the broadsword, a position in which the hand is brought somewhat to the left, in order to secure that side of the face and body. See **BROADSWORD**.

PRIME numbers, in arithmetic, are those made only by addition, or the collection of units, and not by multiplication; so that an unit only can measure it: as 2, 3, 4, 5, &c. Some call it a *simple*, and others an *uncompound number*.

PRIME figure, in geometry, is that which cannot be divided into any other figures more simple than itself; as a triangle into planes, a pyramid into solids; for all planes are made of the first, and all bodies or solids are compounded of the second.

PRIMING, in gunnery, the train of powder that is laid, from the opening of the vent, along the gutter or channel, on the upper part of the breech of the gun, which, when fired, conveys the flame to the vent, by which it is further communicated to the charge, in order to discharge the piece. This operation is only used on ship-board, at the proof, and sometimes in garrison; for on all other occasions, tubes are used for that purpose.

PRIMING, or prime of a gun, is the gunpowder put in the pan or touch-hole of a piece, to give it fire thereby.

PRIMING-case, a small tin case, about the size and shape of a cartridge, for the purpose of keeping a certain quantity of gunpowder, for priming, constantly ready and dry. It is to be hoped, that this rational and economical invention, which has been seen by the Commander in Chief, will be universally adopted.

PRIMING position. See *Platoon Exercise*, under **MANUAL**.

PRIMING wire, in gunnery, a sort of iron needle, employed to penetrate the vent or touch-hole of a piece of ordnance, when it is loaded, in order to discover whether the powder contained therein be thoroughly dry, and fit for immediate service; as likewise to search the vent and penetrate the cartridge, when the guns are not loaded with loose powder.

PRIMIPILARI, PRIMOPILARI, or PRIMIPILARES, (*Primipilaire*, Fr.) among the Romans, were such as had formerly borne the office of Primipilus of a legion. The banner was entrusted to his care. Among other privileges which the Primipilarii enjoyed, they became heirs to what little property was left by the soldiers who died in the campaign. See *Lexicon Militare*.

PRIMIPILUS, the centurion belonging to the first cohort of a legion. He had charge of the Roman eagle.

PRIMITIVES, *Fr.* Primitive colours are distinguished by this term among the French. They are the yellow, the red, and the blue; white and black being the extremes.

PRINCIPAL, (*chef*, Fr.) the person who has the chief management of any thing—as principal of the riding department at Woolwich, &c.

PRINCIPES, (*princes*, Fr.) Roman soldiers. They consisted of the strongest and most active men in the infantry, and were armed like the Hastati, with this difference, that the former had half pikes instead of whole ones.

PRINCIPAL, in the militia, a person who has been regularly balloted for, and is chosen to serve for a limited period. The act directs that every such person shall be enrolled (in a roll to be prepared at a subdivision assembled for that purpose) to serve as a private militia-man for a limited period. But every person, so chosen by ballot, may produce for his substitute a man of the same county or riding, or of some adjoining county or riding, able and fit for service, who shall not have more than one child born in wedlock, and who shall be approved by any two or more deputy lieutenants. The necessities of the times have rendered it expedient to deviate from the strict letter of the law with respect to substitutes. Any able bodied man, Welch, English, Scotch, or

Irish, Protestant, or Roman Catholic, may serve for a principal who has been regularly chosen and balloted for.—That part of the oath, which confined the services of the individual to an exclusive acknowledgement of the established religion of Great Britain, is now wholly omitted. The oath runs:—"I A. B. do sincerely promise and swear, that I will be faithful and bear true allegiance to his Majesty King George, and I do swear *I am a Protestant*, &c." By means of this omission, (which is done by courtesy, and ought to be sanctioned by law,) persons of *all* persuasions may join their country's standard. Principals in the militia, who have served five years, may claim their discharge; but substitutes are obliged to continue as long as the militia remains embodied, receiving one guinea at the expiration of the term for which they originally enlisted.

PRINCIPAL Secretary of State. See **SECRETARY OF STATE**.

PRINCIPLE, according to the schools, is that from which any thing is done or known.

PRINCIPLE also denotes the foundations of arts and sciences.

Military PRINCIPLES, the basis or ground-work upon which every military movement is made, and by which every operation is conducted.

PRIS, *Fr.* This word is variously used by the French, in a figurative and proverbial sense. *C'est autant de pris sur l'ennemi* is an expression signifying that some advantage, at least, has been gained.

Une ville PRISE, *Fr.* a town which has been taken.

PRISE des dehors d'une place, *Fr.* the taking possession of an enemy's out-works.

PRISAGE, that share which belongs to the king or admiral out of such merchandises, &c. as are lawfully taken at sea. See **Civil Law OFFICERS**.

PRISE de possession d'une place conquise par les armes, *Fr.* the taking possession of a place which has been conquered by force of arms. When a town surrenders under these circumstances, the walls of the place and a bell belonging to each parish, become the property of the conqueror. The bells are intended to replace the damage which may have been done to the ordnance in carrying on the siege; but the inhabitants

are always at liberty to redeem them, by paying down a stipulated sum of money. See *RACHAT des Cloches*.

PRISE de corps, Fr. arrest.

PRISE sur soi, Fr. The French say, *donner prise sur soi*, to let another take the advantage of one. Ignorant, presumptuous, and unexperienced officers, are much exposed to this fatal error.

Lâcher PRISE, Fr. to lose one's hold. This expression is used, when a general of an army, from his forces being either not sufficiently strong, or from having himself omitted to take the best advantage of ground, &c. is obliged to give way. Whenever this happens, it may be said, with much truth, that such a general ought not to be entrusted with the command of an army. The circumstances must be very peculiar indeed, which could exculpate him in the judgment of military men.

Avoir PRISE sur quelqu'un, Fr. to be able to attach any thing to an individual derogatory from his character; or, in any way affecting his interest.

PRISES, Fr. See *PRIZES*.

PRISES sur l'ennemi, Fr. Every thing taken from the enemy is so called.

PRISM, (*prisme*, Fr.) in geometry, a solid contained under several planes, which has commonly for base, a triangle, a quadrilateral, or a polygon, the solid content of which consists of as many parallelograms as there are sides to its base, and which is crowned by a plane that is equal and parallel to the base. It is called right prism, *prisme droit*, when it is contained under rectangular parallelograms; oblique prism, *prisme oblique*, when it is inclined towards its base; triangular prism, *prisme triangulaire*, when its base is a triangle; quadrilateral prism, or parallelepiped, *prisme quadrilatère, ou parallélepède*, when its base is a parallelogram, or a right angle. In short, a prism of five, six, or seven sides, &c. when its base is a polygon consisting of five, six, and seven sides, &c.

PRISMOID (in geometry) is a solid figure bounded by several planes, whose bases are right angled parallelograms, parallel, and alike situated. Also a body approaching to the form of a prism.

PRISONERS of war, (*prisonniers de guerre*, Fr.) those of the enemy who are taken before, in, or after a battle, siege, &c. they are deprived of their liberty at large, until exchanged, or sent on parole.

Pain des PRISONNIERS, Fr. the bread which each state furnishes by contract for the support of prisoners of war.

PRIVATE, a term used in the British service to express a common soldier. Thus, though a corporal constitute one of the rank and file, he is not a private; but every man under him is so called.

PRIVATE is likewise a word frequently placed at the corner of a letter to distinguish it from a mere official document; or rather, to confine the communication to the perusal of one person only.

PRIVATE, and Confidential, a term frequently used in private communication among men in office, or attached to public situations.

PRIVATE conversation, confidential communication with one or more persons; any thing said which is not to be made public. Hence, to repeat private conversation has, at all times, and by all civilized persons, been reckoned a gross breach and violation, not only of good manners, but of every principle of rectitude and honour.

PRIVATEER, a ship fitted out by one or more private persons, with a licence from the prince, or state, to take or make prize of an enemy's ship, or goods.

PRIVATION, absence; removal, or destruction of any thing, or quality; lack, want. Among other necessary and indispensable qualities which officers and soldiers should possess in actual warfare, the being capable of enduring privations of almost every kind, is perhaps the most estimable.

PRIVILEGE is any kind of right, or advantage, which is attached to a person or employment, exclusive of others.

PRIVILEGES of the Guards. Among the different privileges which prevail in the British army, we ought to notice, that the Life Guards receive their promotions direct from the king, without passing through the Commander in Chief, as all other corps do. The appointment of colonel in the life guards gives the honorary title of Gold stick, and the field officer of the day is the Silver Stick, through whom all reports, &c. are conveyed to the king. The foot-guards enjoy the privilege of ranking, from the ensign, one step higher than the line. A lieutenant, for instance, ranks as captain, and can purchase as

such into any marching regiment without having waited the regulated period; and a captain, having the brevet rank of lieutenant-colonel, may leap over all the majors of the line, by getting appointed to a marching regiment. The promotions of the Guards, *among themselves*, are, however, extremely slow; yet, strange to say, the only indemnification they have must be at the expense of the line.

PRIVILÈGES des régimens, Fr. certain privileges attached to regiments.

PRIVILEGE of franking letters, an exclusive right which is given to peers of Great Britain and Ireland, to send and to receive by their signatures, a prescribed number of letters free of the charges of postage, (we believe ten in the first, and fourteen in the second instance); also a temporary right enjoyed by members of parliament to do the same; both classes being subjected to a given weight, of two ounces. Certain persons in official situations have the same privilege, with this exception, that they are not confined to weight. Letters of private soldiers and seamen, superscribed by their commanding officers, are also included in this *privilege*.

PRIVILEGED orders, certain classes of men and women, who have rank and precedence in community, with exemptions from particular laws, &c. and who are sometimes the ornament, but very often the disgrace of the stations they hold. The offspring of these creatures—we mean of the latter description—frequently get promoted at the expense of unprotected merit, in all countries. With us it has happened, though rarely, that comets and ensigns might lie inactive in the womb, and gradually rise into unfledged heroes from the cradle. The salutary rules and regulations, however, of his Royal Highness the Duke of York, the commander in chief—and to him this praise is due—have put a stop to so disgraceful a practice.

PRIVY council, (*conseil privé*, Fr.) a council of state held by the king in person, with his counsellors, or by his orders, to concert matters for public service.

PRIVY seal, a seal which the king uses previously to such grants, &c. as are afterwards to pass the great seal; as also in matters of less consequence, as payments of money, &c. which do not pass the great seal.

Lord PRIVY seal, the fifth great officer of the crown. He is a lord by office, and a member of the privy council.

PRIX des emplois, ou charges militaires, Fr. the price of commissions, or military employments.

PRIZE-agent, a person appointed for the distribution of such shares of money, as may become due to officers of the navy, or army. He is authorized to act by means of a licence granted from the treasury, for which he pays five shillings stamp duty.

PRIZE-fighter. See *GLADIATOR*.

PRIZE-money. Officers and soldiers of the line doing duty on board ships of war, are entitled to prize-money as marines.

PRIZE-money, share of, (*part de prise*, Fr.) the proportion which is paid to the several individuals belonging to the navy or army, who, on the capture or surrender of a place, &c. become entitled to the produce of what is seized upon, according to the laws of war.

PROA, Fr. A sailing vessel is so called in India.

PROBABILITY, (*probabilité*, Fr.) likelihood; appearance of truth; evidence arising from the preponderation of argument. It is less than moral certainty.

Calculation of PROBABILITIES, (*calcul des probabilités*, Fr.) a calculation upon which the mind depends for the issue of an event. A treatise has been written upon the subject, entitled *L'Essai sur les Probabilités*, par M. Desparcieux.

PROBAT, the proof of wills and testaments of persons deceased, in the spiritual court, either in common form by the oath of the executor, or with witnesses.

PROBE-scissors, scissors used to open wounds, of which the blade thrust into the orifice has a button at the end.

To PROBE, to search; to try by an instrument. We say, figuratively, to probe any thing to the bottom; to get at the real and unsophisticated state of a business.

PROBLEM, (*problème*, Fr.) in geometry, is a proposition wherein some operation or construction is required, or it is a proposition which refers to practice, or which proposes something to be done; as to divide a line, to construct an angle, to draw a circle into three points, not in a right line, &c. A problem consists of three points. 1st, The

Proposition, which contains what is to be done. 2d, The *Resolution* or solution, wherein the detail or several steps, whereby the thing required is to be effected, are severally made or rehearsed. 3d, The *Demonstration*, which clearly shews, that every thing required or prescribed in the resolution, having been done, the result must inevitably be such as was looked for in the proposition. There are two sorts of problems, viz.

PROBLEM determinate, (*problème déterminé*, Fr.) is that wherein all that appertains to its resolution or solution, is determined, nothing consequently remains but a resolution, or solution.

PROBLEM indeterminate, (*problème indéterminé*, Fr.) is that, on the contrary, wherein every thing appertaining to the solution is not expressed. The solution of these kinds of problems may be done in various ways.

PROCÉDURE militaire, Fr. military process. It consists of the investigation of all crimes and offences committed by soldiers which come under the cognizance of a military tribunal; in contradistinction to the authority which is vested in the civil magistrates.

PROCÈS, Fr. See *LAW SUIT*.

PROCÈS verbale, Fr. a recital of facts taken down from word of mouth.

To *PROCLAIM*, (*proclamer*, Fr.) to promulgate or denounce by a solemn or legal publication. Hence, to proclaim peace, which is used in contradistinction to the term *to declare*, which denounces war. Both the French and English say, *déclarer la guerre*, to declare war; *proclamer la paix*, to proclaim peace.

PROCLAMATION, an instrument which is published by the king, with the advice of his privy council, whereby the country at large is advertised of something, and whereby the people are sometimes required to do, or not to do, certain things. A proclamation has all the efficacy of law, because it is supposed to be in concord with the law already in being.

PROCLAMATION of Peace, a declaration of the king's will openly published by the herald at arms in the most public places of London and Westminster.

PROCONSUL, among the Romans, a magistrate who was sent to govern a province with consular authority.

PROCRASTINATION, delay; dilatoriness; an evil of the greatest magnitude in military operations.

PROCTOR. See *PRIZES*.

PROCURATION. See *POWER of Attorney*.

PRODIGALITY, (*prodigalité*, Fr.) extravagance; profusion; waste; excessive liberality.

PRODITON. See *TREACHERY*.

PRODUCE, } (*produit*, Fr.) effect,

PRODUCT, } fruit. In arithmetic, it is the quantity which grows out of the multiplication of two or more numbers or lines, one by another: 5 for instance multiplied by 4 will give the produce 20; and the produce of two lines, multiplied one by the other, is called the rectangle of these lines.

PROFESSION, business or calling; as the profession of arms: also declaration, opinion, promise.

PROFESSOR, an instructor; a professed teacher.

PROFESSOR of fortification, one who teaches the science of fortification.

PROFESSIONAL jealousy, (*jealousie de métier*, Fr.) the envy borne by one person to another of the same profession.

PROFILE, in drawing, side-ways, or side view. A picture in profile represents a head or face set sideways.

PROFILE, (*profil*, Fr.) in architecture, the draft of a building, fortification, &c. wherein are expressed the several heights, widths, and thicknesses, such as they would appear were the building cut down perpendicularly from the roof to the foundation. It serves to shew those dimensions which cannot be represented in plans, but are yet necessary in the building of a fortification: they are best constructed on a scale of 30 feet to an inch. It is also called *Section*, *Orthographical Section*, and by *Vitruvius*, *Sciagraphy*. It is sometimes used in opposition to *Ichnography*.

PROFILER, Fr. the act of profiling, or designing with rule and compass.

To *PROFIT*, (*profiter*, Fr.) to gain advantage; as, the English profited by the sudden panic which their appearance along the enemy's coast produced.

PROFITER, Fr. to take advantage of.

PROFLIGACY, the act of being abandoned or shameless.

PROFLIGATE, abandoned; lost to virtue and decency; shameless.

PROFONDEUR, Fr. See *DEPTH*.

PROGRAM, (*programme*, Fr.) a word derived from the Greek, signifying any public edict, notice, or declaration.

Any paper which is stuck up for public information. The French make use of the word on occasions of national ceremony.

PROGRESS, (*progrès*, Fr.) a proceeding or going forward in any undertaking; also a journey taken by a prince or nobleman. In a military sense, it signifies a series of conquests or advantages gained over an enemy.

PROGRESSION, (*progression*, Fr.) in mathematics, is either arithmetical or geometrical. Continued arithmetic proportion is where the terms do increase and decrease by equal differences, and is called *arithmetical progression*. *Geometric*, or *continued geometric progression*, is when the terms do increase, or decrease, by equal ratio. Belidor adds a third, and calls it *harmonic progression*, *progression harmonique*, referring to the word *Progression* in the *Dictionnaire de Mathématique de M. Saverien*.

PROJECTED, in mathematics, drawn upon a plane.

PROJECTILES, (*projectiles*, Fr.) are such bodies as being put in motion by any great force, are then cast off, or let go from the place where they received their quantity of motion; as a shell or shot from a piece of artillery, a stone thrown from a sling, or an arrow from a bow, &c. This line is commonly taken for a parabola, and the ranges are computed from the properties of that curve. The assumption would be just, in case the ball, in its motion, met with no resistance: but, the resistance of the air to swift motions being very great, the curve described by the shot is neither a parabola, nor near it: and by reason of the resistance, the angle which gives the greatest amplitude is not 45 degrees, as commonly supposed, but something less, probably 43½. Hence the sublime mathematics are absolutely necessary in the investigation of the track of a shell or shot in the air, known by the name of *military projectiles*.

PROJECTION, (*projection*, Fr.) in mechanics, the action of giving a projectile its motion. It is also used to signify a scheme, plan or delineation.

PROJECTURE, *Fr.* in architecture, signifies the out-jetting, prominency, or embossment, which the mouldings, and other members have, beyond the naked wall, column, &c. and is always in proportion to its height.

PROJET, *Fr.* a rough draft; a sketch

or plan of fortification, with its relative works. Among engineers, it is any work which may be deemed necessary to be made for the security of a place, inside, or out. These projects are exhibited by means of plans and profiles which are washed over with yellow colour, in order to shew that they are works recommended for construction. It likewise signifies, in diplomacy, a plan or statement of terms and conditions, which one country makes to another, for a final adjustment of differences.

Contre-PROJET, *Fr.* a rescript or answer to terms proposed.

PROLATE, in geometry, an epithet applied to a spheroid produced by the revolution of a semi-ellipsis about its larger diameter.

To PROLONG, (*prolonger*, Fr.) to lengthen out, to extend.

PROLONGATION, (*prolongation*, Fr.) an extension of leave of absence, or a continuation of service. Militiamen, after having served their five years, are entitled to a fresh guinea, for prolongation of service. When a truce between two armies is prolonged, it is called *prolongation d'une trêve*, the prolongation or extension of a truce.

PROLONGATION of the Line. This is done by parallel movements at the right or left of any given number of men on a front division.

PROLONGE, *Fr.* a long thick rope which is used to drag artillery; hence called a drag-rope.

PROMENADE, *Fr.* walk; walking.

PROMENER, *Fr.* to walk, or move on leisurely.

PROMENER un cheval, *Fr.* to walk a horse up and down.

PROMENOIR, *Fr.* a walk.

PROMONTORY, (*promontoire*, Fr.) an elevated piece of land, or a high rock which hangs over the sea.

PROMOTION, (*promotion*, Fr.) This word signifies, in military matters, the elevation of an individual to some appointment of greater rank and trust than the one he holds. See **STANDING**.

Undue PROMOTION, an individual exaltation to rank without a legitimate claim to preferment.

PROMOUVOIR, *Fr.* to promote.

PROMPTITUDE, (*promptitude*, Fr.) readiness; quickness; a most necessary qualification in every officer who has the charge or command of an enterprise. Procrastination and indeci-

sion are the mortal enemies of promptitude.

PROMU, Fr. promoted.

PRONONCÉ, Fr. decided; marked.

Un caractère PRONONCÉ, Fr. a decided character; what every commanding officer should possess.

PROOF, in arithmetic, an operation whereby the truth and justness of a calculation are examined and ascertained.

PROOF of artillery and small arms is a trial whether they will stand the quantity of powder allotted for that purpose.

Government allows 11 bullets of lead in the pound for the proof of muskets, and 29 in two pounds for service; 17 in the pound for the proof of carabines, and 20 for service; 23 in the pound for the proof of pistols, and 34 for service.

When guns of a new metal, or of lighter construction, are proved, they are then, besides the common proof, fired 2 or 300 times as quick as they can be, loaded with the common charge given in actual service. Our light 6 pounders have been fired 300 times, in three hours, 27 minutes, loaded with 1lb. 4oz. without receiving any damage.

PROOF of powder is the trial of its goodness and strength. There have been different inventions proposed and put in practice heretofore, for the proof of powder. See *Gunpowder*, also *Epreuve*.

PROOF of cannon is made to ascertain their being well cast, their having no cavities in their metal, and, in a word, their being fit to resist the effort of their charge of powder. In making this proof, the piece is laid upon the ground, supported only by a piece of wood in the middle, of about five or six inches thick, to raise the muzzle a little; and then the piece is fired against a solid butt of earth.

Tools to PROVE cannon are as follow, viz. *Searcher*, an iron socket with branches, from four to eight in number, bending outwards a little, with small points at their ends: to this socket is fixed a wooden handle, from eight to twelve feet long, and $1\frac{1}{2}$ inch in diameter. This searcher is introduced into the gun after each firing, and turned gently round to discover the cavities within: if any are found, they are marked on the outside with chalk; and then the

Searcher with one point is introduced, about which point a mixture of wax and tallow is put, to take the impression of the holes; and if any are found of 1-9th of an inch deep, or of any considerable length, the gun is rejected as unserviceable to government.

Reliever, an iron ring fixed to a handle, by means of a socket, so as to be at right angles: it serves to disengage the first searcher, when any of the points are retained in a hole, and cannot otherwise be got out. When guns are rejected by the proof-masters, they order them to be marked \times which the contractors generally alter to *WP*, and after such alteration, dispose of them to foreign powers for Woolwich proof.

A most curious instrument for finding the principal defects in pieces of artillery, has been invented by lieutenant-general Desaguliers, of the royal regiment of artillery. This instrument, grounded on the truest mechanical principles, is no sooner introduced into the hollow cylinder of the gun, than it discovers its defects, and more particularly that of the piece not being truly bored; which is a very important one, and to which most of the disasters happening to pieces of artillery, are in a great measure to be imputed; for when a gun is not properly bored, the most expert artillerist will not be able to make a good shot.

PROOF of mortars and howitzers is made to ascertain their being well cast, and of strength to resist the effort of their charge. For this purpose the mortar, or howitzer, is placed upon the ground, with some part of its trunnions or breech sunk below the surface, and resting on wooden billets, at an elevation of about 70 degrees.

The mirror is generally the only instrument to discover the defects in mortars and howitzers. In order to use it, the sun must shine; the breech must be placed towards the sun, and the glass over-against the mouth of the piece: it illuminates the bore and chamber sufficiently to discover the flaws in it.

PROOF armour, armour hardened so as to resist the force of an arrow, a sword, or other weapons in use before the discovery of gunpowder; and sometimes of shot itself.

PROOF charge, the quantity of gunpowder which is used in trying the several pieces of ordnance.

PROPER, in military matters, stands as a reduplicative, serving to mark out a thing more expressly and formally, viz.

PROPER *front of a battalion*, the usual continuity of line, which is given to the formation of a battalion, and which remains unaltered by the countermarch, or wheelings, of its divisions; or, if altered, is restored by the same operation.

PROPER *right*, the right of a battalion, company, or subdivision, when it is drawn up according to its natural formation.

PROPER *pivot flank*, in column, is that which, when wheeled up to, preserves the divisions of the line in its natural order, and to their proper front. The other may be called the *reverse flank*. In column, divisions cover and dress to the proper pivot flank: to the left when the right is in front; and to the right when the left is in front.

PROPHET, (*prophète*, Fr.) The French say, as we say also, *nul n'est prophète en son pays*, no man is a prophet in his own country; that is, every person is more respected and better thought of in a foreign country than in his own.

PROPLASM. See MOULD.

PROPORTION, (*proportion*, Fr.) comparative relation of one thing to another. The quality of the different members of each part of the works of architecture, as well as of fortification, and the relative harmony of all the parts put together.

PROPORTION, (in mathematics,) the equality or resemblance of two or more ratios. As these ratios may be of three different kinds, *arithmetical*, *geometrical*, or *harmonic*; so there are three different sorts of proportions comprehended under these three epithets.

PROPORTION, (in the ordnance,) an instrument by which stores were formerly issued, and which was prepared in the office of the clerk of the deliveries, and signed by three board officers. Since the year 1795, the orders for the issues have been given by the board in the first instance.

PROPORTIONAL, (*proportionnel*, Fr.) having a settled comparative relation, as a quantity has in lines or numbers which have a certain degree of any quality compared with each other.

PROPOS, Fr. loose observations; vague expressions.

Des PROPOS, Fr. insinuations; liberties taken by a person when he speaks of another.

A PROPOS, Fr. belonging to; having a connection with. The French say familiarly, *quereller à propos de bottes*, to quarrel about nothing. This phrase has probably arisen from the disputes which frequently take place respecting the hits given in fencing; *botte* signifying a thrust with a foil.

To PROPOSE, to offer for consideration.

PROPOSER *une personne pour une charge*, Fr. to recommend a person for a situation.

PROPOSITION, (*proposition*, Fr.) in geometry, the declaration of a truth which is proved by demonstration. Such are the propositions in Euclid's Elements. Propositions are divided into *Problems* and *Theorems*.

PROPREFECT, among the Romans, the prefect's lieutenant, whom he commissioned to do any part of his duty in his place.

PROPRETÉ *des soldats*, Fr. cleanliness required in soldiers.

PROPRETOR, the same in his relative capacity as proconsul, among the Romans. He was a magistrate who, after having discharged the office of pretor at home, was sent into a province to act in the same capacity.

PROQUESTOR, among the Romans, the questor's lieutenant, who discharged his office in his stead.

To PROSECUTE, to carry on.— Hence to prosecute the war.

PROSECUTOR, (*accusateur*, Fr.) the person who exhibits charges against a delinquent. When the king is concerned, the advocate-general assumes that character, in military matters.

PROSPECTIVE, appertaining to viewing.

PROSTILE, (in architecture,) a range of columns in the front of a temple.

PROTECTOR, (*protecteur*, Fr.) a person who patronizes another, or has his interest at heart. The word *protecteur* corresponds with our term *patron*. The word sometimes denotes the Regent of a kingdom. Oliver Cromwell assumed the title on the death of Charles I.

PROTECTORES DOMESTICI,— body guards which were instituted about

the decline of the Roman empire: they did duty both on horseback and on foot.

Un PROTÉGÉ, *Fr.* an individual who is patronized by another.

To *PROTEST*, to object; to oppose; to declare illegal.

An officer has a right to enter his protest on the minutes of a board of inquiry, or on those of a court-martial.

PROTESTANT, a person belonging to the Church of England, or who has rejected the mysteries, and supposed errors, of the church of Rome, yet believes in the Trinity. The appellation of Protestant was given in Germany to all who adhered to the doctrine published by Luther, in opposition to the Roman Catholic religion.

PROTESTANT religion, the established religion of Great Britain.

PROTHYRUM, (in architecture,) a porch at the outward door of a house.

PROTHYRIS. According to *Vignola*, a particular sort of a key of an arch, which consists of a roll of water leaves between two riglets, and two fillets crowned with a Doric cymatium; its figure resembling that of a *modillion*. It also means, in ancient architecture, a quoin, or corner of a wall; and sometimes a cross beam and overthwart rafter.

PROTOCOL, (*protocole*, *Fr.*) a register; the original entry or writing of any thing.—*Protocole*, in French, also signifies any particular form in which princes or noblemen are addressed.

PROTOCOLISER, *Fr.* to take down; to enregister.

PROTOSPATHAIRE, the principal officer in the guards that did duty over the Emperor at Constantinople. The guards themselves were called *Spathaires*, on account of the long swords with which they were constantly armed.

PROVEDITOR, (*provéditeur*, *Fr.*) The Venetians had two appointments of this description before the revolution occasioned by the French.—One gave the supreme command of the armies on shore, the other that of the fleets.

Of these proveditors, there were three who had the direction of matters relating to policy throughout the Signory.

PROVEDITOR-general of the sea, an officer in Italy, whose authority extended over the fleet, when the captain-general was absent. He had particularly the disposal of the cash.

PROVENU, *Fr.* product; amount, &c.

PROVERS, or *TRYERS*. There was formerly in the army, particularly in Queen Anne's time, a set of officers in most corps, who were called *Provers*, or *Tryers*; these, upon a young officer joining the regiment, constantly and without a cause picked a quarrel with him; when if the young man acquitted himself with honour, and escaped with life, he passed the rest of his time quietly enough; but if the unhappy youth, just come from school and unacquainted with the nice *punctilios of honour*, did not in a proper manner resent the injury, or declined the combat, he led so miserable a life, that he was obliged to quit the army. This practice, even among civilians, still prevails in certain Irish counties, especially on the arrival of a fresh regiment.—The author from whom we have quoted this passage, concludes thus:—The duties of the service are surely the most certain trials of an officer; there if he does not behave as he ought, he will be cashiered for cowardice—but the other is a most uncertain method of trying a man's courage, because there have been many instances of officers refusing the duel, who have marched intrepidly to the attack of a battery, where these *Provers* would have trembled to have followed them.

PROVIAnt-Master-General, in old time, the official denomination of what we now call commissary general, or commissary in chief.

PROVINCIALS, certain bodies of troops which were raised in America, during the contest with the natives, for the royal cause.

To *PROVISION*, properly, to victual; to furnish with provisions. This word is of very modern adoption and evidently grows out of the French term *approvisionner*.

PROVISIONS are properly those articles of food and sustenance which soldiers receive from the public, and which are paid for by deductions from their pay.

PROVISIONAL, (*provisionnel*, *Fr.*) temporarily established.

PROVISIONAL Cavalry, a kind of militia cavalry, first raised by act of parliament in 1797; each county or district being divided into classes of ten householders in each. The person on whom the ballot fell was constrained to

find a man and horse, &c. Like the militia they were commanded by officers having commissions from the lord lieutenant of the county.

PROVISIONALLY, (*provisoirement*, Fr.) by way of provision, or temporary arrangement. This word is frequently used, both in French and English, to distinguish the exercise of temporary functions from that of permanent appointments.

PROVOCATOR, (*provoqueur*, Fr.) a challenger. Among the Romans there was a particular gladiator of this appellation. He was armed with a sword, shield, head-piece, and cuissarts, made of iron.

PROVOQUER, Fr. to provoke; to draw on.

PROVOQUER au combat, Fr. to provoke or challenge to battle.

PROVOQUER à se battre, Fr. to provoke any body to fight.

PROVOST-Marshal, of an army, is an officer appointed to secure deserters, and all other criminals; he is often to go round the army, hinder the soldiers from pillaging, indict offenders, execute the sentence pronounced, and regulate the weights and measures used in the army, when in the field. He is attended by a lieutenant's guard, has a clerk, and an executioner.

PROW, (*proue*, Fr.) the foremost part of a ship.

PROWESS, valour, bravery in the field, military gallantry.

To PROWL, to wander about for prey; to maraud.

PRUCE, an old word for Prussia. Hence shields of Pruce, or shields made of Prussian leather.

PRUDENCE, (*prudence*, Fr.) Wisdom (applied to practice, as a moral quality) is within the scope of every individual, civil or military; and as the latter character is hourly exposed to temptations, Juvenal's maxim, *nullum numen abest si sit Prudentia*, cannot be too strongly inculcated; in contradistinction to Churchill's sweeping declaration, — give me all the world can span,

I would not be that *thing*, that prudent man.

But the prudence which is required in a public and political character, embraces so much, that to be a prudent, and at the same time, a successful general or politician, it is necessary to possess, and to be able to unite, almost all the contra-

dictory qualities of the human mind by their amalgamation with uncommon skill. The French very wisely say, *Le Général d'une prudence consommée sait risquer sa réputation*, a general of consummate prudence knows how to risk his reputation.

Worldly PRUDENCE, (*prudence mondaine*, Fr.) This quality seldom governs a high and adventurous mind, and is generally prevalent in that class of selfish beings whose views are confined to themselves, and who never think of posterity either as christians or heroes.

PRUDERY, over-much nicety in conduct.

Official PRUDERY, affected delicacy in matters of business; sometimes arising from ignorance and pride.

To PRY, to peep narrowly, to inspect officiously, curiously or impertinently; as many assiduous and low-minded reporters do in civil and military life, in order to acquire credit among persons of rank or situation, whose minds are equally groveling and debased.

PRYLADES, a military dance which was practised among the Greeks.

PRYTANÉE, Fr. from the Latin Prytaneum, and originally from an institution at Athens for the support of those persons who had deserved well of their country. The name of the *Ecole Militaire* was altered by Napoleon, when he was first consul of France, to that of *Prytanée*.

This institution is situated in the Rue St. Jacques, in the Fauxbourg St. Marcel. The grand building, which may be seen in the maps of Paris, serves as barracks for the flying artillery.

The Prytanée, as an establishment for the education of military characters, is remarkable for the liberality of its regulations with respect to religious tenets. Protestant as well as Catholic boys, &c. are received and educated there without being molested on the score of religion.

P'SENT, an abbreviation of the word *present*. It is used in platoon frings.

PSEUDO-DIPTERE, in ancient architecture, a temple having eight columns in front, and a single row of columns all round.

PSILOI, light armed men among the Greeks, who fought with arrows and darts, or stones and slings, but were unfit for close fight. They were, in honour and dignity, inferior to the heavy armed. Next to these were the *Peltastai*, a

middle sort of foot soldiers between the Hoplitai and the Psiloi, being armed with spears, but far inferior in size to those of the heavy armed; their name is taken from their narrow shields, called *Pelta*. Potter's Greek Antiquities, vol. ii. c. 3.

PTEROPHORES, heralds or messengers among the Romans who brought tidings of a declaration of war, of a battle having been lost, or of some check sustained by the army. They generally wore feathers at the end of their pikes.

PTISAN, (*ptisanne*, Fr.) a medical drink, made of barley decocted with raisins and stick-liquorice. It is much recommended in fevers, and particularly during the progress of a certain disorder which is very common among young officers and soldiers. Linseed tea is also very beneficial in the latter case.

PUBLIC, (*public*, Fr.) the general body of mankind, or of a state or nation; the people.

PUBLICANS, persons who keep ale-houses, &c. for the accommodation of travellers. Troops upon the march, or in quarters, may be billeted on them, under certain regulations.

PUCKA, *Ind.* a putrid fever, generally fatal in twenty-four hours.

PUCKALLIES, *Ind.* leather bags for carrying water. They are placed on the backs of oxen. The word is also used for water-carriers.

PUDLAYS, pieces of stuff to serve as levers or handspikes.

PUFF, an inflated account of oneself, or of another person, whose good-will or money is aimed at by such unmanly means. Hence paid-for paragraphs and puffs in newspapers.

To PUFF, to swell or blow up with praise. *To swell or elate with pride.*

PUFFER, a creature that doles out senseless encomiums, sometimes without knowing why or wherefore, but generally from motives of self-interest.

PUGILISM, (*pugilat*, Fr.) the art of boxing, which was held in high repute among the Greeks, and was constantly practised by them. Except in England, this art is not known among modern nations. With us it has had its parliamentary advocates.

PUGIO, a dagger which was used by the Romans; a species of that weapon, called the hand-seax, was worn by the Saxons, with which they massacred the English on Salisbury Plain in 476.

PUHUR *Din*, Ind. watches kept in the day; of which there are four; a similar number is kept in the night, called *Puhur rat*.

PUISAGE, *Fr.* the drawing up water.

PUISANT, *Fr.* a well built of dry stones, or made in a wall to serve as a reservoir for water.

PUISART, *Fr.* a reservoir or drain well, where water that has been raised by means of a machine, is again taken up by fresh pumps and carried higher. Thus at the machine of Marli near Paris, there are two reservoirs on the declivity of the hill.

PUISARTS de sources, *Fr.* certain drain wells which are sunk at intermediate distances in order to discover springs, all of which communicate together by means of drains that convey their waters to one reservoir, whence they flow into an aqueduct.

PUISER, *Fr.* to draw up. *Puiser à la source*, figuratively, to go to the fountain head of any thing.

PUISOIR, *Fr.* a copper vessel which is used in making saltpetre.

PUISSANCE, *Fr.* in algebra and geometry, powers of lines and quantities.

PUITS, *Fr.* a well.

PUITS perdu, *Fr.* a well with a loose sandy bottom through which the water passes.

PUITS de mineur, *Fr.* a perpendicular opening, about four feet square, which is made in the earth for miners to let themselves down, as deep as may be judged expedient, in order to push the subterraneous galleries beneath the covert way, or under any other works constructed by the besieged or besieger.

PULK, a tribe, a particular body of men. This word is chiefly used in Russia; as a *Pulk* of Cossacks.

PULLEY, in military mechanics.— See **MECHANICS**.

PULVINATA, a frieze, a swelling or bulging out like a pillow.

PULSE, (*pour*, Fr.) the motion of an artery as the blood is driven through it by the heart, and as it is perceived by the touch.

To feel one's PULSE, (*tâter le Pour à quelqu'un*, Fr.) to try or know one's mind artfully.

PULVERIN, *Fr.* priming powder.

PULVIS fulminans, the same as *poudre fulminant*, thundering powder, a mixture of three parts of saltpetre, two of tartar, and one of brimstone; all

finely powdered. A small part, even a single dram of this being put into a shovel over a gentle fire, till it melts by degrees and changes colour, will go off or explode as loud as a musket. But it will not do any injury, because its force tends chiefly downward.

PULWAR, *Ind.* a light boat for dispatches.

PUMICE-stone, a spongy, light, crumbling stone which is cast out of mount *Ætna*, and other burning mountains. It is used in graving, polishing, &c.

PUMMEL.—See **POMMEL**.

PUMP, (*pompe*, Fr.) in hydraulics, a machine formed for the purpose of raising water.

Pumps are distinguished into different kinds, according to the manner in which they severally act.

The common pump, sometimes called the *sucking pump*, which acts by the pressure of the air, and whereby water is raised out of a lower into a higher place, not exceeding 31 French feet, or 32 English.

Hand-PUMP, (*pompe à bringebale*, Fr.) a pump that is less than the common pump, and generally used on board a ship.

Head-PUMP, (*pompe hors du bord*, Fr.) a pump which is put over the side of a ship to throw off water.

Hood of a PUMP, the lid or cover which is laid upon a chain-pump. The French call it, *Capot pour recouvrir la roue d'une pompe à chapelet*.

PUMP-dale, the wooden handle of a pump.

PUMP gear, (*garniture de pompe*, Fr.) the necessary apparatus of a pump.

Forcing PUMP, a pump which acts by mere impulse and protrusion, and raises water to any height at pleasure.

Ctesebes's PUMP, a remarkably fine pump which acts both by suction and expulsion.

PUNCH, (*poisson*, Fr.) an instrument for making holes. Every serjeant of a company, at least, and indeed every corporal of a squad, should be provided with a punch, as there is frequent occasion to fit on the cross-belts, &c.

PUNCH, a *well-set*, *well-knit* horse, that is, short-backed and thick-shouldered, with a broad neck, and well lined with flesh.

PUNCHEON, (*poisson*, Fr.) a com-

mon name for all the iron instruments used by stone-cutters, sculptors, locksmiths, &c. for cutting or piercing their different articles. *Puncheon* is also a piece of timber raised upright, under the ridge of a building, wherein the little forces, &c. are joined. *Puncheon* likewise means the arbour or principal part of a machine on which it turns vertically, as that of a crane, &c.

PUNCHINS, in architecture, are short pieces of timber placed upright between two posts to support some considerable weight.

PUNCTILIO, a small nicety of behaviour; a nice point of exactness, as *punctilio of honour*, for which men frequently fight with more desperation than they would for their country.

PUNCTO, the point in fencing.

PUNCTUALITY, (*punctualité*, Fr.) exactitude in performing any thing in time and place. A very respectable friend of the author's, who has seen most parts of the world, and served in the foot-guards, in America, has, from experience, imbibed so strong a sense of the propriety and necessity of punctuality, that his familiar phrase is, better *never* than late; being the reverse of our common term, better *late* than never. It is needless to add, that among naval and military men, this sentence ought to be proverbial.

PUNIC, (*punique*, Fr.) from *punicus*, of *Pœni*, the Carthaginians, who were reckoned a perfidious people.

PUNIC-faith, (*la foi punique*, Fr.) falsehood, treachery, perjury. The modern French, during the late war, thought proper to attach this term to honest old England; and, in order to prove the absurdity and injustice of the application, (especially towards their prisoners) exemplified, in every act, the adage themselves.

PUNISHMENT, in the army, in general, signifies the execution of a sentence pronounced by a court-martial upon any delinquent; but in particular it means that kind of punishment which is often used by inflicting a certain number of lashes upon a reduced non-commissioned officer, or private man. There are various methods in different countries which have been adopted for the punishment of officers and soldiers, without ultimately depriving the public of their services. Those in the British are

simple, and in general very summary; especially with regard to officers. In some foreign services it is usual to send an officer from his regiment to do duty in a garrison town, during which period he loses all the advantages of promotion. Hence *être envoyé en garnison*, to be sent into garrison, implies a species of military chastisement. Perhaps the method adopted in our navy, of putting an officer at the bottom of the list of his own rank, might be beneficial in the army.

PUNITIONS corporelles, Fr. corporal punishments. In the old French service, military punishments or chastisements, which were not of a capital nature, were of two kinds. The picket was for the cavalry, and the gauntelope, or passing through the rods, for the infantry. The rods, or *baguettes*, (which properly mean small sticks, or switches,) were generally osier or willow twigs. Previous to the execution of the sentence, a corporal, with two privates of the company to which the culprit belonged, were sent to get the rods. These they brought in a bundle to the guard-house, or to any place of security which was near the spot where the punishment was to be inflicted. The criminal, under an escort of two serjeants and four grenadiers, with fixed bayonets, went for the bundle, and as he passed through the interval of the line which was faced inwards, each soldier drew out one twig. The grenadiers at the head of the line took off their slings, which they used instead of rods. When the culprit reached the end of the line, he undressed himself naked to the waist. The right and left openings of the double line, faced inwards, were closed by the grenadiers that had escorted the prisoner, viz. two with one serjeant at the head of the right, and two with ditto at the head of the left. It sometimes happened, that a serjeant or corporal marched backward in ordinary time; keeping the point of his pike directed at the chest of the man who received the lashes. The culprit was, however, generally allowed to make the most of his legs. Whilst he was receiving his punishment, the drummers of the regiment, who were equally divided and stationed behind the grenadiers that had formed the escort, beat the charge. If a French soldier was convicted of theft, or any flagrant dishonourable practice

that injured the military character, he not only underwent this punishment, but he was conducted, in the most ignominious manner, to the outward gate of a frontier town; there expelled the country, and cautioned never to be found within its limits under pain of suffering death. The nicety of military honour and reputation, among French soldiers, used to be proverbial. They never survived a blow, even among themselves, nor would a private soldier exist under the disgrace of having been struck by an officer.

When a girl of the town, or a notorious prostitute, was taken up, and ordered to be punished in a camp or garrison, she went through the same process; the drums beating the *marionnetes*, a sort of rogue's march, during the execution of the sentence.

In the life of Gustavus Adolphus of Sweden, it is observed, that he was remarked for being strict to his officers and mild to the private men. It was a principle with him, that even a common soldier should rarely, if ever, receive corporal punishment; fully persuaded, that such a disgrace cast a damp afterwards upon his vivacity, and agreed not well with the notions which an high spirit ought to entertain of honour. It was his idea that a man of bravery would sooner forgive a sentence of death, inflicted upon him by a court-martial, than pass by the scandal of corporal chastisement. His general rule, therefore, was to degrade, or banish.—*Essay on the Military State of Europe in the former part of the 17th century*; vol. i. page 6, *Life of Gustavus Adolphus*.

PURBECK-stone is a hard greyish stone, almost like *Sussex-Petties*, which is used for pavements.

PURCHASE. Although the sale and purchase of commissions are countenanced by government, and the prices of those commissions are regulated by the King's authority, yet there are various ways through which young men of fortune and connexions may get over the heads of veteran officers. Notwithstanding the avowed existence of this deplorable system, it must be acknowledged, that its abuses have, in some degree, been provided against by a specific regulation, which says, that the names of the officers who intend to purchase, shall be regularly transmitted, upon the back of each regimental return,

every six months at least, to the Commander in Chief, in order that the same may be laid before his Majesty.

Purchase and sale are terms unknown in the navy. We should be happy to have it in our power to say, that in the course of time, the word *purchase* will be erased from the vocabulary of military terms; as far, at least, as it regards the British service.

PUREAU, *ou échantillon*, Fr. the whole outside, or all that appears of a slate or tile which is laid for use.

PURLINS, (in building,) those pieces of timber which lie across the rafters on the inside, to keep them from sinking in the middle of their length.

Highland PURSE, from the Gaelic *Sporan*, and sometimes called *Check-purse*, is a part of the Highland dress, which claims great antiquity. Something similar to it is to be found in the early history of those nations that inhabit the temperate regions.

The purse which is at present worn by our Highland regiments, consists of goat skin, and the tassels hanging from them are of the long hairs or bristles.

The Highlanders seem formerly to have displayed great ingenuity in making their purses, both with regard to the pockets, and to the different heads of animals with which they decorated the fronts.

PURSE, (with the Grand Signor,) a gift, or gratification of five hundred crowns.

PURSE of money, (in the Levant,) about one hundred and twelve pounds sterling. It is so called, because all the Grand Signor's money is kept in leather purses, or bags of this value, in the seraglio.

PURSE-proud fellow, (*gros richard*, Fr.) a term in common use among the generality of mankind, but seldom known in military life; a creature whose only value is his weight of gold.

PURSEVANT, PURSUIVANT, from the French *poursuivant*, a sort of serjeant at arms, who is ready to go upon any special occasion, or to carry any special message. His general office is to apprehend a person who has been guilty of an offence.

PURSINESS, } (*poussé*, Fr.) a dis-
PURSIVENESS, } ease in horses; a shortness of breath.

PURSUIT, (*poursuite*, Fr.) the act of following with hostile intention.

PURVEYOR, a person employed in the quarter-master or commissary-general's department. Likewise one belonging to a military hospital, whose duty it is to provide food and necessaries for the sick.

PURVEYOR of oats to the army, a person who is employed as agent by the contractors for the supply of oats to the army. By a war-office order, dated the 15th August, 1801, all contractors are to have an agent, of this description, in every market town, with his name, and the words "*Purveyor of oats to the army*" painted over his door.

To PUSH, (*pousser*, Fr.) to make a thrust.

To PUSH back, to force an enemy to retreat.

A PUSH, (*un coup*, Fr.) as a push of the bayonet, *un coup de la baïonnette*.

PUSILLANIMOUS, cowardly, wanting spirit.

To PUT a horse, in horsemanship, signifies to break or manage him.

To PUT a horse upon his haunches, to force him to bend them in galloping in the manege, or upon a stop.

To PUT a horse to the walk, trot, or gallop, is to make him walk, trot, or gallop. The French say, *Mettre*, as *Mettre un cheval au galop*.

To PUT in march, (*mettre en marche*, Fr.) to move bodies of troops.

To PUT to death, to kill.

To PUT up, to pass unrevenged; as to put up an injury, &c.

To PUT in the tompions, (*mettre les tappes au canon*, Fr.) to stop the mouth of a cannon.

PUTLOGS (in carpentry) are short pieces of timber, about seven feet long, used by masons in building scaffolds to work upon. The putlogs are those pieces that lie at right angles to the wall, or horizontal to the building, with one of their legs resting on the ledges of the poles, which are those pieces that lie parallel to the side of the wall of the building.

PUTTING - Stone, a great stone, which formerly was laid at the gate of a laird in Scotland, and by which he tried the bodily strength of each man in his clan.

PYCNOSTYLE, } in ancient ar-
PYCHNOSTYLE, } chitecture, is a building where the columns stand very close one to another; one diameter and

a half of the column being allowed for the intercolumniations. *Pycnostyle* is the smallest of all the intercolumniations mentioned by *Vitruvius*.

PYE-BALD Horse is one that has white spots upon a coat of another colour.

Thus there are pye-bald bays, pye-bald sorrels, and pye-bald blacks, and so of the rest.

PYKE, Ind. a person employed as a guard at night.

PYLING, (in building,) the ground for foundation.

PYRAMID, (*pyramide*, Fr.) This word is originally derived from the Greek, and takes its name from a resemblance to the spiral ascendancy of fire. It is the same as obelisk.

PYRAMID, in geometry, a solid terminating at top in a point, and formed by three, four, five, and six triangles or more, that is, by as many triangles as there are sides at the basis of the pyramid. If the base have only three sides, its surface is composed of three triangles, and it is called a *triangular pyramid*; if it have four, its surface contains four triangles, and is called a *quadrilateral triangle*; when its top is not inclined more on one side than another, it is called a straight pyramid, *pyramide droite*; and when it inclines towards its base, an oblique pyramid, *pyramide oblique*.

PYRAMID, (in architecture,) a solid massy edifice, which from a square, triangular, or other base, rises in gradual diminution to a vertex or point.

PYRAMIDAL numbers, (in arithmetic,) the sums of polygonal numbers, collected after the same manner as the polygon numbers themselves are extracted from arithmetical progressions.

PYRAMIDAL, } appertaining to, like
PYRAMICAL, } to a pyramid.

PYRAMIDE tronquée, Fr. a pyramid whose top has been taken off in cutting the pyramid into two parts by a plane parallel to its base; in which case the part that corresponds with the base, is called *pyramide tronquée*.

PYRAMIDOID, from the Greek, is what is sometimes called a parabolic spindle, and is a solid figure formed by the revolution of a parabola round its base, or greatest ordinate.

The **PYRAMIDS** of Egypt are enormous piles of building, within three leagues of Grand Cairo, and are called one of the seven wonders of the world.

The pyramids of Giza, the largest of which was originally built by Cheops, are supposed to have been erected about 14 years after the building of Solomon's temple, about 2661 years ago. The pyramids are known by various names, viz.

PYRAMIDS of Giza, (five in number,) which are those already mentioned, and near which the French established a camp in 1799.

PYRAMIDS of Saccara, (three in number.) These stand in the plain of Mummies, and are about 600 feet high.

Dashour PYRAMIDS, (six in number,) stand in the same plain, and appear somewhat lower. The French General Friant, in 1799, pursued Murad Bey across this plain, leaving the pyramids on his left.

The Southern, or Great PYRAMID.— This pyramid has been called by Bruce, the traveller, the false pyramid. It stands in the plain of Mummies, and appears to be about 600 feet high.

PYRAMIDS, in ruins. Two pyramids of smaller size, which stand near the Fioume Mountains, close to Joseph's canal.

Battle of the PYRAMIDS, so called from having taken place, July 21, 1799, close to the large pyramids in the plain of Mummies, at Waardam, within a few miles of Grand Cairo.

PYRENNEAN Mountains, or *Pyrennees* from the French *Pyrenées*, a ridge of mountains which divide France from Spain. Except the Alps, they are the most celebrated in Europe. They extend about 212 miles in length. The safety of Spain, when in a state of hostility with France, depends greatly, if not wholly, upon the possession of the principal passes in the Pyrennees. See **PASSES**.

PYROBOLY, the art of gunnery, &c.
PYROBOLIST, (*pyroboliste*, Fr.) a maker of fire-balls, &c.

PYROETS, in horsemanship, are motions either of one tread or pist, or of two treads or pists.

PYROETS of one tread, or what the French call *de la tête à la queue*, from the head to the tail, are entire and very narrow turns made by a horse upon one tread, and almost at one time, so that his head is placed where his tail was, without putting out his haunches.

PYROETS of two pists, are turns of two treads upon a small compass of

ground, almost of the length of the horse.

PYROTECHNIC, of or appertaining to pyrotechny.

PYROTECHNY, (*pyrotechnie*, Fr.) in military matters, the doctrine of artificial fireworks, and fire-arms, teaching the structure and service, both of those used in war, for the attacking of fortifications, &c. as cannons, bombs, grenades, gunpowder, wildfire, &c. and those made for diversion, as serpents, St. Catherine's wheel, rockets, &c.

PYRRHICA, a dance invented by King Pyrrhus. It was performed by the soldiers striking their shields together, and in cadence, so as to resemble the noise and action of a battle. This amusement was practised by the Greeks and Romans; on which occasions the men and women were armed with wooden swords.

PYXIS nautica, (*boussole*, Fr.) a mariner's compass. It was invented by Goja of Amalphis, in the year 1300.

Q.

QUACK, a boastful pretender to arts which he does not understand. This word is often applied to artful practitioners in physic, but it generally signifies any vain pretender. The French use the word *charlatan*.

To **QUACK**, to chatter boastingly; to brag loudly; to talk ostentatiously.

QUADRA (in building) is any square border, or frame, encompassing a basso relievo, pannel, painting, or other work.

QUADRANGLE, } a square figure having
QUADRANGULAR, } four right angles. To the class of quadrangles belong the square, parallelogram, trapezium, rhombus and rhomboids.

QUADRANT, (in gunnery,) an instrument made of brass, or wood, divided into degrees, and each degree into ten parts, to lay guns or mortars to any angle of elevation.

The common sort is that whose radii project the quadrant about twelve inches, and whose plummet suspends in its centre, by means of a fine piece of silk; so that, when the long end is introduced into the piece, the plummet shews its elevation.

The best sort has a spiral level fixed to a brass radius; so that, when the long end is introduced into the piece, this radius is turned about its center till it is level: then its end shews the angle of elevation, or the inclination from the horizon; whereas the first shews that angle from the vertical.—See **LEVEL**.

QUADRANTAL triangle is a spherical triangle, one of whose sides, at least, is a quadrant and one right angle.

QUADRATE, or to *quadrata a gun*,

is to see it duly placed on its carriage, and that the wheels be of an equal height.

QUADRATE, a square having four equal and parallel sides.

QUADRATIC equations are such as retain, on the unknown side, the square of the root, or the number sought.

QUADRATRIX, (*quadratrice*, Fr.) in geometry, is a mechanical line by the means of which we can find right lines equal to the circumference of a circle or other curve, and the several parts belonging to it. This line was discovered by *Dinostratus*.

QUADRATURE, (*quadrature*, Fr.) a square, or the squaring of any thing. The French pronounce this word *cadature*.

QUADRATURE of the circle, in mathematics. See **MENSURATION**.

QUADREL, (in building,) a sort of artificial stone perfectly square, whence its name, made of chalky, white, pliable earth, and dried in the sun for a considerable time.

QUADRILATERAL, (*quadrilatère*, Fr.) having four sides.

QUADRILATERAL figure, (*quadrilatère*, Fr.) is a figure whose sides are four right lines, and those making four angles, as *parallelogram*, *trapezium*, *rectangle* or long square, *rhombus* and *rhomboid*.

QUADRILLE, *Fr.* This word is pronounced *cadville*. Small parties of horse, richly caparisoned, &c. which used formerly to ride, &c. in tournaments, and at public festivals. The quadrilles were distinguished from one another by the shape, or colour of the

coat which the riders wore. This word is derived from the Italian *Quadriglia*, or *Squadriglia*, being a diminutive of *Squadra*, a company of soldiers drawn up in a square.

QUADRILLE, *Fr.* a troop of horse for a tournament, or carousal. According to Richelet, Quadrille also signifies a troop of soldiers not less than 25 in number.

QUADRIPARTITION, a dividing by four.

QUADRIREME, among the ancients, a ship of war, which, besides its sails, had four banks of oars on each side.

QUADRIVIAL, having four roads or ways meeting in a point.

QUÆSTORES *provinciales*, *Lat.* officers in high trust among the Romans, who always accompanied the consuls and the prætors into the different provinces. Their immediate business on these occasions, was to supply the troops with provisions and money.

QUÆSTORES *urbani*, *Lat.* These were also officers of high trust, among the ancient Romans, who not only received foreign tributes and domestic imposts, but also took charge of the Roman Eagles, which were lodged in the public treasury. Whenever the consuls undertook a military expedition, the standards were delivered to them by the *Quæstores urbani*. Foreign ambassadors were likewise provided with appropriate places of residence, under their direction, and afterwards personally introduced to the Roman senate.

QUÆSTORES *candidati*, *Lat.* During the reign of certain Roman emperors the *Quæstores candidati*, who were officers that always attended their persons, stood proxies for, or delivered the sentiments of the consul, when the latter did not chuse to attend the senate.

QUÆSTORIUM, the Exchequer, among the ancient Romans; also the tent, pavilion, or head quarters of the *quæstor*. It was there likewise that the military chest belonging to the army was deposited.

QUAL, *Fr.* See QUAY.

QUAICHE, or CAICHE, *Fr.* a decked vessel, a ketch.

QUALIFICATION, that which makes any person, or thing, fit for any thing. It is a term particularly used with respect to the militia of the three united

kingdoms; the lords lieutenant, deputy lieutenants, and officers belonging to that establishment being directed, under a specific penalty, to give in their several qualifications, as far as they relate to property (landed or personal, as the case may be) within a prescribed period. For particulars see *Military Finance*.

Qualifications required to constitute an efficient soldier, are—bodily strength, activity, hardihood, active courage, passive courage, dexterity or skill, steadiness, discipline, watchfulness, cleanliness, good conduct, (in which is included sobriety,) enthusiasm, and contempt of death.

To QUALIFY, to fit for any thing; to furnish with qualifications; to make capable of any employment or privilege: as to give an individual, in any particular country, town, or place, a certain possession in land or tenements to enable him to hold a company, or to be a field officer, in a militia corps. In a general acceptation of the term, *To qualify* does not mean to give proofs of mental ability.

To QUALIFY, to abate, to soften, to diminish.

QUALIFIED *Oath for the British Army*, an oath in which the words, *I am a Protestant*, &c. are omitted. On the 9th of May, 1794, the following exemption was made in favour of such foreigners or persons, formerly of the Irish Brigade in France, who might enter into the British service, viz.

“Provided also, that no such person as aforesaid shall be liable to any pain or penalty for having enlisted as a soldier in any such regiments as aforesaid, (namely, corps of emigrants and the Irish Brigade,) by reason of his having professed the Popish religion, not having declared the same at the time of his enlisting.

QUALITIES *necessary in a Military Body*, (*qualités nécessaires dans la composition d'une armée*, *Fr.*) The most rare and valuable qualities in a military body have been so well described by the late General Sir John Moore, in his orders dated the 27th December, 1808, from Benevente, that we shall wave all comment, and briefly quote the words of that brave and honest soldier.

“These,” he observes, “are not bravery alone, but patience and constancy under

fatigue and hardship, obedience to command, firmness and resolution in every situation in which soldiers may be placed." —*Narrative, by James Moore, p. 179.*

Negative QUALITIES, qualities of the mind, which, however pure and good in its intention, fail of producing any beneficial effects, from the inert or feeble direction of its measures.

Positive QUALITIES, qualities which manifest themselves by direct exertions.

QUALM literally signifies a fainting fit; but it figuratively means a scruple of conscience; such as now and then, like the visitation of God, comes across the gorged senses of public men who have not acted fairly towards the country; but it seldom has sufficient force to make them disgorge their ill-gotten wealth; until an Exchequer Writ, or an Information *ex officio*, brings them before our Lord the King.

QUANTIÈME, *Fr.* a term used among the French to signify, not only the day of the month, as *quel quantième du mois avons-nous?* what is the day of the month? but likewise the numerical order in which an individual stands upon a muster roll, &c. *viz. Quel quantième êtes-vous dans votre compagnie?* how do you rank in your company? or, of what standing are you?

QUANTITY, amount; bulk; weight.

QUANTITY, (*quantité, Fr.*) in mathematics, the sole and principal object. Under this word may be comprehended all that may be augmented or diminished.

QUARANTINE, (*quarantaine, Fr.*) the time which persons, suspected of having any contagious disorder, are obliged to remain without mixing with the inhabitants of the sea port or town at which they arrive. It takes its name from *quarantaine*, the term of 40 days.

QUARRÉ, *Fr.* Although this word is written with a Q in all the French Dictionaries, (except in that published by the Academy at Paris,) it ought, nevertheless, to stand *Carré*. In the first hurry of our compilation we omitted to notice this error, so that *Bataillon carré d'hommes*, signifies a square battalion. The French say, *Partie carrée*, a party consisting of four people. See SQUARE.

QUARREAUX, *Fr.* darts or arrows which the bowmen anciently used, and which were so called from the iron at the end being square, with a sharp point.

These were sometimes corruptly styled quarrels, or quarrils.

QUARRELS, in a military sense, are disagreements between individuals of that serious nature, as to produce challenges, duels, &c. In Sect. the VIIth. Art. IVth. of the Articles of War, it is specified, that all officers of what condition soever, have power to quell all quarrels, frays, and disorders, though the persons concerned should belong to another regiment, troop, or company, and either to order officers into arrest, or non-commissioned officers or soldiers to prison, until their proper superior officer shall be made acquainted therewith; and whosoever shall refuse to obey such officer, (though of an inferior rank,) or shall draw his sword upon him, shall be punished at the discretion of a general court-martial.

A German QUARREL, (querelle d'Allemand, Fr.) a misunderstanding about trifles; a gratuitous offence which is given for the express purpose of quarrelling.

QUARREL, } an arrow with a square
QUARRY, } head. See QUARREAUX.

QUARRELSOME, inclined to broils; easily irritated; irascible; petulant.

QUART, *Fr.* a fourth.

QUART *de cerele, Fr.* a quadrant, such as bombardiers use when they take the angles, and give what inclination they think necessary to a mortar. Also the fourth part of any given circumference containing ninety degrees.

QUART *de conversion, Fr.* a military movement by which a body of armed men are made to describe the quarter of a circle round the leading file of the right or left flank, and which becomes, of course, the point d'appui to the rest. See *Quarter Wheeling*.

Demi-QUART de conversion, Fr. half-quarter wheel.

The French say figuratively; *Conter ses affaires au tiers et au quart*, to tell or communicate one's private affairs to all persons indiscriminately. They likewise say, *médire du tiers et du quart*, to speak ill of every body.

Travailler un cheval de QUART en QUART, Fr. in the manège, to work a horse, or lead him three times over each line of the square.

QUARTDERONNER, *Fr.* to take off the edges or borders of a beam or joist by running a moulding along it.

QUARTE, *Fr.* in fencing. See CARTE.

QUARTER, in war, signifies the sparing of men's lives, and giving good treatment to a vanquished enemy.—Hence *To give quarter*.

To QUARTER upon, (*loger*, Fr.) to oblige persons to receive soldiers, &c. into their dwelling houses, and to provide for them.

QUARTERS. Military stations are so called; as head quarters, home quarters, regimental quarters, &c.

QUARTERS, at a siege, the encampment upon one of the most principal passages round a place besieged, to prevent relief and convoys.

Head QUARTERS of an Army, the place where the commander in chief has his quarters. The quarters of generals of horse, are, if possible, in villages behind the right and left wings; and the generals of foot are often in the same place; but the commander in chief should be near the center of the army.

General Head QUARTERS, (*quartiers généraux de l'armée*, Fr.) any town, place, or station, which the commander in chief of an army may occupy, for the time being, with his staff.

Regimental Head QUARTERS, (*état major d'un Régiment*, Fr.) any town, place, or station, where the colonel, or commanding officer of a regiment, may be quartered with his staff, consisting, usually, of his adjutant, paymaster, surgeon, and quarter-master.

QUARTERS of Refreshment, the place or places where troops that have been much harassed are put to recover themselves, during some part of the campaign.

QUARTER of Assembly, the place where the troops meet to march from in a body, and which is the same as the place of rendezvous.

Intrenched QUARTERS, a place fortified with a ditch and parapet to secure a body of troops.

Winter QUARTERS sometimes means the space of time included between leaving the camp and taking the field; but more properly, the places where the troops are quartered during the winter.

The first business, after the army is in *winter quarters*, is to form the chain of troops to cover the quarters well: which is done either behind a river, under cover of a range of strong posts, or under the protection of fortified towns. Hussars are very useful on this service.

It should be observed, as an invariable maxim, in *winter quarters*, that your regiments be disposed in brigades, to be always under the eye of a general officer; and, if possible, let the regiments be so distributed, as to be each under the command of its own chief.

In QUARTERS, within the limits prescribed.

Out of QUARTERS, beyond the limits prescribed. Officers, non commissioned officers, and soldiers, who sleep out of quarters, without leave, are liable to be tried by a general or regimental court-martial, according to the rank they severally hold.

QUARTER-Master, an officer, whose principal business is to look after the quarters of the soldiers, their clothing, bread, ammunition, firing, &c. Every regiment of foot, and artillery, has a quarter-master, and every troop of horse one. These are only warrant-officers: but, in the Blues, the quarter-masters have the King's commission.

QUARTER-Master-General, a considerable officer in the army, and should be a man of great judgment and experience, and well skilled in geography; his duty is to mark the marches, and encampments of an army; he should know the country perfectly well, with its rivers, plains, marshes, woods, mountains, defiles, passages, &c. even to the smallest brook. Prior to a march, he receives the orders and route from the commanding general, and appoints a place for the quarter-masters of the army to meet him next morning, with whom he marches to the next camp; where, after having viewed the ground, he marks out to the regimental quarter-masters the space allowed each regiment for their camp: he chooses the head quarters, and appoints the villages for the generals of the army's quarters: he chooses a proper place for the encampment of the train of artillery: he conducts foraging parties, as likewise the troops to cover them against assaults, and has a share in regulating the winter quarters and cantonments.

QUARTER-round, (*quart de rond*, Fr.) among workmen in general, any moulding whose contour is either a perfect quadrant, or quarter of a circle, or what approaches to that figure. Architects commonly name it *Ovolo*; Vitruvius calls it *Echinus*.

Quarter-Staff, (*bâton à deux bouts*, Fr.) an old military weapon, made of strong wood, bigger and heavier than a pike: it is $6\frac{1}{2}$ feet long between the ferrules that keep fast the two spikes of iron stuck into the ends of the staff.

QUARTER, in the *manège*, as to work from quarter to quarter, is to ride a horse three times in upon the first of the four lines of a square; then, changing your hand, to ride him three times upon the second; and so to the third and fourth; always changing hands, and observing the same order.

A *false QUARTER*, in horsemanship, is when the hoof has a kind of cleft, occasioned by a horse's casting his quarter, and getting a new one, for then the horn beginning to grow is uneven and ugly, as also bigger and softer than the rest of the hoof; and such feet should be shod with half-Panton shoes; but, if the cleft be considerable and take up a quarter part of the hoof, the horse will not be serviceable, and is not worth buying.

QUARTER behind is when a horse has the quarters of his hind feet strong; that is to say, the horn thick, and capable of admitting a good gripe by the nails.

QUARTER-wheeling is the motion by which the front of a body of men is turned round to where the flank stood, by taking a quarter of a circle.

QUARTERS of a saddle are the pieces of leather, or stuff, made fast to the lower parts of the sides of the saddle, and hanging down below the saddle.

QUARTERS of a horse. The *fore quarters* are the shoulders and the fore legs; the hind quarters, are the hips and the hind legs.

QUARTERS of a horse's foot are the sides of the coffin, comprehended between the toe and the heel on one side, and the other of the foot: the inner quarters are those opposite to one another, facing from one foot to the other; these are always weaker than the outside quarters which lie on the external sides of the coffin.

QUARTER-cast. A horse is said to cast his quarters, when, for any disorder in his coffin, the farrier is obliged to cut one of the quarters off, and when the hoof is thus cut it grows and comes on a-new.

QUARTERS, in architecture, are those slight upright pieces of timber which are

placed between the puncheons and posts, used to lathe upon.

Single QUARTERS are sawn stuff two inches thick and four inches broad.

Double QUARTERS are sawn to four inches square.

QUARTERING, in carpentry, is the putting in of quarters. It is sometimes used for the quarters themselves.

QUARTERIZATION, part of the punishment of a traitor, by dividing his body into four parts besides the head, which quarters were formerly set up on poles over the gates of the city.

QUARTERLY return, a return which is made every quarter, taking the last day of each quarter inclusive, of the different allowances that are made to certain officers belonging to the ordnance department, under the several heads of forage for horses, fuel and lodging money.

QUARTERON, *one*, Fr. a quarter-room; one born of a white man and a mulatto woman, or of a mulatto man and a white woman.

QUARTIDI, Fr. the fourth day of the decade according to the distribution of the French republican year.

QUARTIER, Fr. This word not only signifies the ground of encampment for troops, but also the main body of the troops themselves, whence headquarters, *quartiers généraux*.

QUARTIER d'assemblée, Fr. the general parade, or spot where troops assemble for the purpose of being looked at or marched off.

QUARTIER de cantonnement, Fr. any space or extent of country in which troops are cantoned.

QUARTIER de précaution, Fr. a camp which is established on one of the chief roads or leading avenues of a besieged or masked place, for the purpose of intercepting any succours or provisions that might be brought to relieve it.

QUARTIER d'un siège, Fr. a station taken, or an encampment made in one of the leading avenues to a besieged town or place. When the *quartier d'un siège* was commanded by a general officer, during the old French monarchy, it was called *quartier du roi*, the king's quarters.

QUARTIERS de siège, Fr. the different spots or places within the lines which are occupied by troops that are en-

camped under the orders of a general officer, subordinate to the commander in chief. These quarters must be on the flanks or wings, and on the center of the lines.

QUARTIER des vivres, Fr. the park of stores, provisions, &c. any place where the stores and provisions of an army are deposited.

QUARTIER d'hiver, Fr. winter quarters. Count de Turpin has written largely upon this subject. See *Essai sur l'Art de la Guerre*; likewise, *Suite de la Science de la Guerre*, tom. iv. p. 170.

QUARTIER de rafraîchissemens, Fr. See *QUARTIERS of Refreshment*.

QUARTIER de fourrage, Fr. foraging quarters. When the active operations of a campaign are necessarily interrupted by the inclemency of the season, means are adopted to lessen the heavy expenses of winter quarters, by remaining a certain time in foraging quarters. A wise general will take care to live as long as he can upon his enemy's country, in order to draw as little as possible from his own.

QUARTIER du roi, ou du général, Fr. head quarters, or the spot where the king or commander in chief resides.

QUARTIER général de la tranchée, Fr. head quarters, or principal station of the trenches. That spot is so called in which the commanding officer of the trenches takes post, and to which all reports of progress, &c. are from time to time, conveyed. When the siege is somewhat advanced, it is usual to fix this quarter near the outline of the last parallel which leads to the head of the saps, in the principal line of attack.

Un QUARTIER bien retranché, Fr. a quarter that is well entrenched.

Un QUARTIER enlevé, Fr. quarters taken possession of by force.

Officiers de QUARTIER, Fr. officers who were upon duty for three months, or during the space of one quarter of a year. This term was used in the old French service, to distinguish such officers from those who did duty throughout the year.

Etre de QUARTIER, Fr. to be on duty for three months.

QUARTIER de dedans, } Fr. See
QUARTIER de dehors, } *QUARTIERS of a horse*.

QUARTIER neuf, Fr. See *QUARTER-cast*.

QUARTIERS d'une selle, Fr. See *QUARTERS of a saddle*.

QUARTIERS généraux, Fr. general head-quarters.

QUARTIER-mâitre, Fr. quarter-master. This term, with respect to foreign troops, corresponds with *maréchal des logis* in a French infantry corps.

QUARTIER-mâitre, Fr. The situation of *quartier-mâitre* among the French corresponds with that of regimental paymaster in the British service. Among the Germans he holds the rank of captain. The French also call him *quartier-mâitre trésorier*. When he is first appointed, he receives the rank of lieutenant, and after a certain number of years, holds that of captain. He never does any sort of military duty, or, to use a French phrase, *Il n'est pas en bataille*. He generally rises from the ranks.

The French make a distinction between *quartier-mâitre* and *quartier-mestre*: the former signifying a quarter-master or paymaster of a regiment, or a purser on board a ship; and the latter a quarter-master belonging to a foreign regiment of cavalry.

QUARTIER-Mestre-Général, Fr. quarter-master-general. Among foreign troops the same as *maréchal général des logis* in the old French service. There is a quarter-master-general in the Turkish service, whose immediate duty is to mark out the ground of encampment, the instant he has received orders to that purpose from the grand Vizir, or, in his absence, from the Seraskier, who is the general in ordinary, and who is always with the army, whether the Grand Vizir be present or not.

QUARTIER, Fr. This word is also used by the French in many other significations, viz.—

Mettre, donner l'alarme au QUARTIER, Fr. to give the alarm in quarters. This is either done by the enemy's advanced posts, or designedly contrived to keep soldiers on the alert.

Donner QUARTIER, Fr. to give quarter. See *Représailler*.

Prendre QUARTIER, Fr. to take quarter, or to surrender at discretion.

Demander QUARTIER, Fr. to ask quarter, or to throw one's self on the mercy of a conqueror.

Né point faire de QUARTIER, Fr. to give no quarter, or to put to the sword.

Promettre QUARTIER, *Fr.* to promise quarter, or to spare the life of an enemy that surrenders at discretion.

Pierres de QUARTIER, *Fr.* in masonry, large blocks of hewn stone which are taken out of the quarry, and of which one or two are sufficient for a common wagon drawn by three or four horses.

QUATRE, *Fr.* four.

QUAY, QUAI, *Fr.* a key; an artificial bank to the sea or river generally made sloping, and constructed with mason work upon large piles, for the purpose of keeping up an embankment, restraining the influx of water, or for goods to be conveniently unladen upon.

QUAYAGE, *Fr.* key-toll.

To QUELL, to crush; to subdue. Military force is sometimes resorted to by the civil magistracy to quell riots, &c. In which case, the riot-act must be read by a justice of the peace, and if the rioters or insurgents do not disperse, the magistrate may order the officer to do his duty, by firing, &c. upon them. When military law has been proclaimed, there is not any necessity for this preliminary caution.

Vider une QUERELLE, *Fr.* an expression among the French, which is used when two persons meet to determine their quarrel by fighting with sword or pistol.

QUERELLE *d'Allemand*, *Fr.* See QUARREL.

QUERELLE *d'inofficiosité*, *Fr.* a dispute or contest on the ground of informality or injustice done to one party at the expense of another. This is properly a law term, but may be applied to irregular or informal promotion.

QUERELLES, *Fr.* quarrels, feuds, &c.

QUERRY. See EQUERRY.

To go in QUEST of an enemy, to send out vedettes, patrols, &c. for the purpose of ascertaining an enemy's motions.

La QUESTION, *Fr.* a torture used in despotic governments to force an accused person to avow the crime alleged against him. See TORTURE.

QUEUE, from the French, which signifies tail; an appendage that every British soldier was formerly directed to wear. Regimental tails were ordered to be nine inches long; among the Guards they were fourteen.

La QUEUE de l'armée, *Fr.* the rear of an army.

QUEUE de pierre, *Fr.* the rough or squared end of a stone laid across.

QUEUE d'aronde, *Fr.* a corruption of *queue d'yronde*. It signifies a piece of wood which is so made that it resembles at each end a swallow's tail.

QUEUE d'yronde, ou d'yrondelle, *Fr.* See SWALLOW'S tail.

QUEUE d'un bataillon, *Fr.* the rear or serre-file of a battalion, when it is countermarched by files; the front files passing to the rear.

QUEUE du camp, *Fr.* literally means the tail or extremity of the camp. It is the line which is drawn in the rear of the camp, and which is directly opposite to the one in front, called the head of the camp.

QUEUE de paon, *Fr.* literally means a peacock's tail. It is used in architecture, to signify the different compartments or spaces which, in a circular figure, spread gradually from the center to the circumference.

QUEUE à queue, *Fr.* one after another.

Etre à la QUEUE, *Fr.* to be behind, or in the rear.

Avoir l'ennemi en QUEUE, *Fr.* to have the enemy close at one's heels.

QUEUE de la tranchée, *Fr.* that part where the opening of a trench first commences, and where the men are covered from the fire of the besieged. See Tail of the Trenches.

QUEUES de renard, *Fr.* literally fox's tails. Loose roots or branches which gather in conduit pipes, probably engendered by seeds that have been carried in by the water, and which have remained in the small holes or inequalities. They multiply so fast that they sometimes choak the pipes and cause them to burst.

QUILTED Linen, a covering which was anciently used for the defence of horses in battle.

QUI TAM, a species of action wherein a penalty is given half to the king, and half to the informer; this term is taken from a part of the declaration, which states that the party sues, *as well for himself* as for the king; but it more frequently happens, that notwithstanding such profession, informers are more strongly interested for their own private emolument, than for any general service they intend towards the state. The unguarded manner in which military men commit themselves to money-

changers and money-lenders, &c. renders this article, by way of caution, particularly necessary. See **USURY**.

QUIBERON, or *Quibron*, a small peninsula of France, in Bretagne, in the bishopric of Vannes, and to the north of Belleisle; as also a small island called the Point of Quiberon, separated from the peninsula by a channel, and the sea next it is called the Bay of Quiberon. This spot has been rendered remarkable by the expedition which took place in June, 1795. Upwards of 3000 regular troops (composed mostly of French emigrants that had served abroad, with the ill-judged addition of some French prisoners, taken out of English gaols) were landed upon the coast. This force was intended as a co-operation with the insurgents of La Vendée, and was afterwards to have been increased by the descent of an English army, under the command of the Earl of Moira. His lordship had, indeed, already been instructed to detach a covering body for that purpose; but the British did not land, having been driven from the French coast by stress of weather. See **CHOUAN**.

QUICK, with celerity. It forms the cautionary part of a word of command when troops are ordered to move in quick time; as Quick—march.

Quick step, or *quick time*, is 108 steps of 30 inches each, or 270 feet in a minute, and is the step used in all filings of divisions.

Quick-match, in *laboratory works*. See **LABORATORY**.

QUICKEST step or *quickest time*, is 120 steps of 30 inches each, or 300 feet in a minute. In this step all wheelings are performed, as also the doublings up of divisions, and their increase or diminution of front.

QUIETISM, apathy, indifference.

QUIÉTISME, *Fr.* the state of those persons who did not take an active part in the French Revolution.

QUIÉTISTE, *Fr.* a man who did not meddle with the Revolution.

QUIETUS, a term used in public accounts, signifying a complete settlement between individuals and the government by which they have been employed. Until this has taken place, no public accountant can be secure in the enjoyment of one farthing he has earned; nor are his heirs exempt from

the visitation of an exchequer writ. *Nullum tempus occurrit regi.*

QUILLON, *Fr.* the cross-bar of the hilt of a sword.

QUILTING *grape-shot*, in *gunnery*. See *Laboratory*, and *To make Grape Shot*.

QUINCONGE, or *Quinconce*, *Fr.* Quincunx order is a plantation of trees, disposed originally in a square, consisting of five trees, one at each corner, and a fifth in the middle, which repeated again and again, forms a regular grove, wood or wilderness; and when viewed by an angle of the square or parallelogram, presents equal or parallel alleys.

QUINCUNX, (*quinconce*, *Fr.*) an ancient order of battle, in which the legion stood with five or more fronts upon different lines, with intermediate distances. This formation was somewhat similar to a chess-board.

QUINDECAGON is a plain figure of fifteen sides and angles, which, if they are all equal to one another, is called a *regular Quindecagon*. *Euclid* shews how to describe it in a circle. Prop. 16. c. 4.

QUINQUANGULAR, having five corners or angles.

QUINQUËREME, among the ancients, a ship of war, which besides its sails, had five banks of oars on each side. The Quinquireme carried 120 soldiers, and 300 seamen, in all 420 men. See *Polybius*, book i. chap. 2.

QUINTAINÉ, an instrument used in the ancient practice of tilting. It consisted of an upright post, on the top of which a cross post turned upon a pivot; at one end of the cross-post was a broad board, and at the other a bag of sand. The practice was to ride against the board with a lance, and at such speed, as to pass by before the sand-bag could strike the tilter on the back. This word signifies the same as *pal*, *poteau*, or *jaquemart*. The latter word, according to the *Dictionnaire de l'Académie Française*, means a man in complete armour. It is also used by way of derision.

QUINTAL, *Fr.* one hundred weight. The quintal varies in different places, according as the pound consists of more or fewer ounces. The English quintal is 112 pounds.

QUINTANA, *Lat.* Among the Romans, the quintana signified that part

of an encampment, where the sutlers and camp followers remained. The Turks imitate this mode of encampment to this day.

QUINTE, *Fr.* a low thrust in fencing, delivered at the outside of the position, with the nails turned up, as in low carte. When this thrust is forced over the blade from the guard in carte, it is termed *flanconade*.

QUINTIDI, *Fr.* the fifth day of the decade in the French republican year.

QUINTUPLE, fivefold.

QUIRITES. In ancient Rome, the common citizens were so called, as distinguished from the soldiery.

QUIRK (with builders), a piece of ground taken out of any ground-plot or floor: thus, if the ground-plot were square or oblong, and a piece be taken out of a corner to make a court or yard, &c. that piece is called a *Quirk*.

QUIRK and QUIBBLE, shift and cavil; an attempt to overcome sound reasoning by low conceits depending on the sound of words; much practised by some lawyers, and almost always resorted to by low attorneys. The terms are here mentioned as unworthy of the high sense and honourable meaning of a soldier.

To QUIT, to leave, to abandon. This word is variously used in military phraseology, viz.

To QUIT your post, } to retire with-

To QUIT your ranks, } out having received any previous order for that purpose, from a station entrusted to your care. Any officer or soldier who, during the heat of an engagement, shall quit his ranks, may be shot, or otherwise dispatched upon the spot. A sentry who quits his post before he is regularly relieved, is ordered to suffer death, or such other punishment as may be inflicted by a general court-martial.

QUIT your Arms, a word of command which is not used, having been replaced by that of *Pile Arms*. It formerly signified to lay down the muskets; at which order the soldiers grounded their arms, then stood up and remained till they were directed to face *right about*, when they marched clear of their pieces, and dispersed. On the beat of the drum, they ran to their arms with a *huzza*; the officers having their swords drawn, and holding the point upwards.

To QUIT the siege of a place, (*aban- donner le siège d'une place, Fr.*) to leave the different positions which have been taken for the purpose of reducing a garrison, in a fortified place, to the necessity of surrendering, and to withdraw the troops that have invested it.

QUITTANCE, *Fr.* receipt, acquittance.

QUITTANCE *de finance, Fr.* a term formerly used among the French to express any sum paid into the king's treasury for an appointment or place.

QUITTER, *Fr.* to quit.

QUITTER *l'épée, Fr.* figuratively to leave the profession of arms; to leave the army.

QUITTER-BONE, a hard round swelling upon the coronet, between a horse's heel and the quarter, which most commonly grows on the inside of the foot. A quitter-bone is occasioned, and may be contracted various ways; sometimes by gravel underneath the shoe, and sometimes by a bruise, stub, prick of a nail, or the like, which being neglected, will turn to matter and break out about the hoof. Now and then a quitter-bone comes from foul humours, which descend to the hoof.

QUITTER, the matter of an ulcer or sore in a horse.

QUIVER, called also an arrow case, a machine which hung upon the shoulder of an ancient archer and served as a magazine for his arrows. Arrows for immediate use were worn in the girdle.

QUI vive? } *Fr.* literally, who lives

QUI va là? } there? Who goes there?

QUI est là? } Who is there? Terms used by the French sentries when they challenge. They correspond with our word, Who comes there?

Etre sur le QUI vive, Fr. to be upon the alert.

QUI trop embrasse mal étrecint, *Fr.* the man who undertakes too much, calculates badly. It literally signifies, he who embraces too much, binds or connects loosely. This proverb is much used among the French, and comprehends a serious lesson to those *would-be* great generals and officers, who falsely imagine, that military reputation consists in rank only.

A QUIZ. This cant word is frequently used as a substantive to describe a strange out of the way character. It is a term of ridicule.

To QUIZ, a cant word much in use among fashionable bucks or blades, as certain creatures are called. It signifies to turn another into ridicule, by some allusion to his dress or manners, some ironical word or quaint expression. In other terms, to take unwarrantable liberties with the natural defects or harmless habits of unoffending individuals. This absurd and childish practice (which grows out of ignorance, is supported by privileged assumption, and ought to be discouraged by every sensible man) has sometimes found its way into the British army. We need scarcely add, that it has frequently been the cause of the most serious quarrels, and is always contrary to good order and discipline. Commanding officers should, on all occasions, exert their authority, whenever there appears the least tendency to this unmanly, un-officer-like, and ungentleman-like custom. It ought constantly to be remembered, that the influence of evil is much stronger upon the commonalty of mankind, than that of good. If an officer suffer himself to be quizzed by a brother officer, he will, by degrees, become ridiculous to the soldiers; and if he resent it, as he ought to do *primo limine*, by a manly explanation with the weak fool who attempts to be witty, without possessing one spark of real wit, it is more than probable, that much ill blood will be engendered between them. The Articles of War have, in some degree, provided against this evil. In Sect. VII. Art. I. it is there specifically stated, That no officer, non-commissioned officer, or soldier, shall use any reproachful or provoking speeches or gestures to another, upon pain, if an officer, of being put in arrest, (or if a non-commissioned officer, or a soldier, of being imprisoned,) and of asking pardon of the party offended, in the presence of his commanding officer. The French use the word *mystifier*.

A QUIZZER, a creature who, without possessing any real wit or humour, affects to turn others into ridicule, by an insolent affectation of the talent. The *thing*, which is generally found among fashionable young men, (to use a very common, yet a very apposite expression,) has more money than wit, plumes itself upon birth or connexion, and endeavours to make up by noise, turbulence, and privileged contradiction, what it wants in real knowledge and solid understanding. It is sometimes seen at a military mess, and about the purlieus of St. James's; and in fashionable coffee-houses.

QUOIL, a round of a cable when the turns are laid one upon another; or a rope or cable laid up round, one turn over another, so that they may run out free and smooth without kenks, that is, without twistings or doublings.

QUOIN, (*coin*, Fr.) a wedge used to lay under the breech of a gun, to raise or depress the metal.

QUOINS, in architecture, stones set in the corners of brick or stone walls.

Rustic QUOINS are those which stand out beyond the brick-work; their edges being chamfered off.

Cantick QUOINS, short, three edged quoins, to put between casks.

QUOIT, the ancient discus—an Olympic game, still practised in some parts of England. It consists in throwing a large iron ring to a considerable distance, at a peg, driven into the ground.

QUOTA, share or contribution. Thus every county furnishing a certain number of men for the militia, &c. is said to give its quota.

QUOTE, *Fr.* part; proportion.

QUOTIENT, in arithmetic, the number resulting from the division of a greater number by a smaller, and which shews how often the smaller, or the divisor, is contained in the greater or dividend.

R.

R A C

RABBETTING, in carpentry, is the planing or cutting of channels or grooves in boards.

RABINET, formerly a name given to a small sort of ordnance between a falconet and a base, about one inch and a half diameter in the bore, five feet six inches long, and 300 pounds in weight, loaded with six ounces of powder, and carrying a shot one inch and three-eighths in diameter.

RABOT, *Fr.* in masonry, a plasterer's beater. The word *rabble* is also used for the same thing.

RABOT, *Fr.* in carpentry, a joiner's plane.

RABOT, *Fr.* a species of rough freestone, which is used for paving certain places, and to line the borders of paved roads.

RABOT, *Fr.* a whipsaw.

RACCOMMODER, *Fr.* literally, to mend, piece, patch, or botch. It signifies, figuratively, to reconcile, to make friends again.

Se RACCOMMODER, Fr. to be reconciled. The French say, proverbially, *Un mauvais raccommodement vaut mieux qu'un bon procès*; a bad or indifferent reconciliation is better than a good or successful lawsuit. This proverb is particularly applicable to military men, who, from their high notions of honour, are apt to differ, and subsequently to become the dupes of cunning and designing lawyers.

RACCORDEMENT, *Fr.* This word is derived from *raccorder*, which, in French architecture, signifies to join two pieces of building on one surface, or to unite an old building with a new one.

RACCORDER, *Fr.* to make a levelling.

RACE, (*race, Fr.*) a generation, a particular breed.

Mauvaise RACE, Fr. a bad breed. This term is frequently applied to the branches of several families, not one of which can discover a single good quality, or be betrayed, even by accident, into one solitary virtue. It is also said of soldiers, when they have been enlist-

ed from some particular county, town, or village, where the inhabitants are of a perverse and otherwise bad disposition. The French say, *Il n'est pas de race à faire une lâcheté*; he is not of a breed to act cowardly, or do a dirty action.

Chasser de RACE, Fr. to follow the footsteps of one's ancestors; alluding to the breed of well-scented dogs.

To RACE it, a new term among military men, signifying to make every possible exertion, by forced marches, &c. to get to some particular point or position. Thus, in the retreat to Corunna, in 1808, General Moore and his army may be truly said to have *racced it*, or to have made all the speed they could to get to Corunna before the French; who, on their side, made similar exertions, to prevent his arrival at that port.

RACHAT du pain, *Fr.* a certain pecuniary allowance which was made in the old French service, to the officers of each company, for the surplus rations of ammunition bread that were left in the purveyor's hands.

RACHAT des cloches, *Fr.* the ransom which is paid by the inhabitants of a besieged place, after it has been taken, for the redemption of the church bells. See *PRISES d'une place assiégée*.

RACHE, *Fr.* dregs of pitch and tar; scurf or scabs on the head.

RACHETER, *Fr.* in masonry, to join, as is the case in the sloping part of a cellar, when it regains the vault.

Soldat RACHEUX, *Fr.* a soldier with a scald head.

RACINAL, *Fr.* in hydraulics, the piece of wood in which is fixed the crapaudine or sole, that receives the pivot or iron bar of a flood-gate.

RACINAUX, *Fr.* large pieces of wood, such as the ends of beams, that are fixed upon poles, and upon which planks and platforms are laid, in order to support the inside walls of reservoirs; also pieces of timber that have more breadth than thickness, which are nailed to the tops of piles, and upon which platform rests.

R A C

RACINAUX de comble, Fr. wooden corbels or brackets, which support, upon cartridges of timber, the top of an old house.

RACINAUX d'écurie, Fr. the small posts upon which the manger is supported in the stall of a stable.

RACINAUX de grue, Fr. pieces of wood laid cross-ways, which make the ground-work of a crane, and in which are assembled the tree and buttresses: when they are flat, they are called girders, or joists.

RACINE, Fr. See **ROOT**.

RACK, a wooden frame, made to hold hay or fodder for cattle.

Arm-RACK, a place fitted up for the purpose of enabling troops to lodge their arms securely.

RACLOIR, Fr. a scraper; it is used in the artillery to clean out mortars.

RACOLER, Fr. to entice men to enlist.

RACOLEUR, Fr. a crimp, a bringer of recruits, one who entices others to enlist. Men of this description are to be found in all countries where military establishments prevail.

RADE, Fr. road for ships to ride in; road for anchoring.

RADEAU, Fr. a raft of timber.—Rafts are frequently used in sieges, for the purpose of crossing ditches, &c. Chevalier Folard enters largely into the nature of these rafts, particularly in his 4th volume, page 67. See **RAFT**.

RADIER, Fr. the lower part or bed in dams or sluices, which is between the two side walls, over which the water runs, and which is made of the same materials that constitute the dams themselves.

Avant-RADIERS, ou faux radiers, Fr. a succession of beds made only of fascine-work, covered over with stones without mortar.

RADIOMETER, (*radiomètre*, Fr.) This instrument is sometimes called Jacob's staff, *bâton de Jacob*. It is used by some to take the sun's altitude, and by others to ascertain elevations at sea.

RADIUS, the semi-diameter of a circle. In fortification, the radius is distinguished into *exterior, interior, oblique, and right radius*. The three former are noticed each under its initial letter. The latter is a perpendicular line drawn from the center of a polygon to the exterior side.

RADOTAGE, Fr. dotage, or the act of talking irrationally.

RADOTER, Fr. to talk irrationally.

RADOTEUR, Fr. a dotard; a person whose intellects are impaired by age or sickness.

RADOUB, Fr. literally a piecing, mending, or botching up of any thing. This word is chiefly used as a sea term, and signifies all the jobs done by carpenters and caulkers for the repair of a ship.

RADOUBER, Fr. to repair a ship, by caulking her; also to stop up the vents or fissures in the flood-gate or bed of a dam or sluice.

RAFFINAGE, Fr. a term used by the French to express the operation through which saltpetre passes after it has been boiled once. The literal meaning is refinement; the act of cleansing any thing from recrementitious matter.

RAFFINOIR, Fr. a wooden cask, or copper vessel, in which saltpetre is deposited after it has been boiled once. It usually remains thirty minutes, after which it is let out through a cock fixed for that purpose at the bottom of the vessel.

RAFFUTÉ, Fr. new stocked, as a musket may be; fitted with a new staff, as a pike; or a new carriage, as a gun.

RAFFUTER, Fr. to fit or furnish with a new stock.

RAFRAICHR, Fr. to cool; to sponge; as *rafiâchir le canon*, to sponge a canon.

RAFRAICHR une place, Fr. to succour a place by sending in fresh troops and provisions.

RAFRAICHR des troupes, Fr. to allow troops to repose; likewise to supply them with fresh provisions.

RAFRAICHISSEMENTS, Fr. This word literally signifies refreshments. It is used in a military sense among the French, for cantonments or quarters of repose, after troops have been much on service. See **QUARTER**. *Rafraichissements* also means fresh stores and provisions for the army.

RAFT, or *species of floating bridge*, (*radeau*, Fr.) a machine which is readily constructed, and is used for the passage of troops over rivers, or ground that may be overflowed. It consists of a certain number of planks that are fastened together, and form a sort of flat

deck or barge, upon which men and light artillery may be embarked.

Rafts are also used by miners, when the fosses are full, that they may be able to carry on their works at the foot of the revêtement belonging to the bastion which they have directions to blow up.

M. Philipps made use of rafts with considerable advantage in 1743, when he enabled the Marquis du Châtelet to pass the river Iser, after he had been forced to evacuate Ingeltingen, at the head of 1400 men. When Hannibal resolved to cross the Rhone, (a large river in France, which rises in Mount Fourche, on the confines of Switzerland, and falls by several mouths into the Méditerranéan,) and found it expedient to take his elephants with him, he constructed a quantity of double rafts, and effected his purpose.

Rafts are preferable to boats or barges, on account of the ease with which they may be put together. The Swedes, who call these rafts praams, make use of them on every occasion, and they unite the several pieces by means of a frame. Chevalier Folard does not hesitate to give a preference to the rafts, over bridges constructed on boats. Yet the French author, from whose work we have extracted this article, expresses his doubt by saying that a bridge of boats seems to him to be better calculated to resist the current of a rapid river, than any raft can possibly be. "Nevertheless," continues the same author, "the opinion of such a man as Chevalier Folard is unquestionably great; and the example of Charles XII. of Sweden, who excelled in every sort of movement which was connected with the passage of rivers, &c. is still more powerful."

RAFTERS, (*soliveaux, chevrons*, Fr.) in building, are pieces of timber, which stand by pairs upon the reason, or raising piece, meet in an angle at the top, and help to form the roof of a building.

Principal RAFTERS should be near as thick at the bottom as the beam, and should diminish in their length one-fifth or one-sixth of their breadth; the ring posts should be as thick as the principal rafters, and their breadth according to the bigness of those that are intended to be let into them; the middle part being left something broader than the thickness.

RAGATS d'eau, Fr. a great flood; inundation; ravage of waters.

RAGE-PUTES, Fr. Indian soldiers, who, during the days of the Emperor Tamerlane, were supposed to be invincible. According to P. Catrou, a French writer, the *Raspoutes* and *Rageputes* mean the same people.

RAGREER, Fr. to new front; it also signifies to put the finishing hand to any piece of building, or to carpentry work, &c. The term *faire un ragréement* is likewise used to signify the same thing.

RAJAH, *Ind.* This word means king. The Rajahs are generally tributary to the Mogul, but are suffered to follow their own modes of government.

RAJAPOOTES, *Ind.* a tribe of Hindoos, but of various denominations. They are soldiers by profession, and the most warlike of the Hindoos. They rank next to the Bramins. See Orme's History of the Carnatic, pages 6, and 40.

RAIE, Fr. properly means a seam, furrow, streak.

RAILLON, Fr. an arrow with a forked or barbed head; a broad arrow.

Fer de flèche à RAILLON, Fr. a forked or barbed head of an arrow.

RAIN de forêt, Fr. the purlieus or skirts of a forest.

RAINURE, Fr. a groove.

RAIS, Fr. a spoke of a wheel.

To RAISE troops. See LEVY.

To RAISE a plan of a fortress is to measure with cords and geometrical instruments, the length of the lines and the capacity of the angles, that by knowing the length, breadth, and thickness of all the different parts of a fortification, it may be represented upon paper, so as to find out its advantages and disadvantages.

RAISE. To raise a horse upon curvets, upon caprioles, upon pesades, is to make him work at those several motions. We sometimes say, *Raise the fore-hand of your horse.*

RAISE is likewise used for placing a horse's head right, and making him carry well; hindering him from carrying low, or arming himself; which is extremely dangerous, especially if the horse be hard mouthed, and not strongly bitted.

RAISER, in building, a board set on edge, under the foreside of a step, stair, &c.

RAISING *pieces*, in architecture, pieces that lie under the beams, on brick or timber, by the side of the house.

RAISING, one of the three actions of a horse's legs, the other two being the *stay* and the *tread*; which see.

RAISON, *Fr.* This word is used by the French, in a mathematical sense, to express the relation which one number has to another, and, in general, that which exists between one quantity and another. The term is distinguished into *raison arithmétique*, or arithmetical reasoning; and *raison géométrique*, or geometrical reasoning. French carpenters likewise use the term, to shew that pieces of wood, &c. are properly laid, viz. *Des pièces de bois en leur raison*.

RAIZ pié, *RAIZ terre*, *Fr.* even with the ground.

RAIZ de chaussée, *Fr.* the level ground, the ground floor.

RAKE. A horse rakes when, being shoulder-splait, or having strained his fore-quarters, he goes so lame, that he drags one of his fore legs in a semicircle, which is more visible when he trots than when he paces.

To RAKE a horse, to draw his ordure with one hand out of his fundament when he is costive, or cannot dung; in doing this the hand must be anointed with *sallad-oil*, *butter*, or *hog's grease*.

RALLIEMENT, *Fr.* rallying point. It is sometimes written *raliment*.

Mot de RALLIEMENT, *Fr.* a word or countersign, which is given to outposts, and to sentries that are stationed beyond the lines.

Point de RALLIEMENT, *Fr.* the rallying point; any spot particularly marked out, to which troops are directed to repair in cases of discomfiture or surprize.

RALLION. See **RALLON**.

RALLONGÉ, *Fr.* stretched, lengthened, pulled out; whence

Cercle RALLONGÉE, *Fr.* a certain instrument with which masons round and fashion pillars.

RALLONGEMENT d'arestier, *Fr.* See **RECULEMENT**.

RALLUMER, *Fr.* to light up again, to rekindle, to renew.

RALLY, one of the bugle horn soundings.

To RALLY, (*rallier*, *Fr.*) to bring

troops back to order that have been dispersed.

RALLYING, in war, re-establishing, or forming together again, troops broken and put to flight.

To RAM, to drive with violence, as with a battering ram.

To RAM down, to force any thing downwards, or to fill with any thing driven hard together, as in the charge of fire-arms.

RAM down cartridge, a word of command which is used in the platoon exercise. See **MANUAL**.

Battering RAM, in antiquity, a military engine used to batter and beat down the walls of places besieged.

The battering ram was of two sorts; the one rude and plain, the other compound. The former seems to have been no more than a great beam, which the soldiers bore on their arms and shoulders, and with one end of it, by main force, assailed the walls. The compound ram is thus described by Josephus: it is a vast beam, like the mast of a ship, strengthened at one end with a head of iron, something resembling that of a ram, whence it took its name. This was hung by the middle with ropes to another beam, which lay across two posts, and hanging thus equally balanced, it was by a great number of men drawn backwards and pushed forwards, striking the wall with its iron head.

Plutarch informs us, that Mark Antony, in the Parthian war, made use of a ram 80 feet long: and Vitruvius tells us, that they were sometimes 106, and 120 feet long: to this perhaps the force and strength of the engine was in a great measure owing. The ram at one time was managed by a whole century of soldiers; and they, being exhausted, were seconded by another century; so that it played continually and without intermission.

The momentum of a battering ram, 28 inches in diameter, 180 feet long, with a head of cast iron of one ton and a half, the whole ram, with its iron hoops, &c. weighing 41,112 pounds, and moving by the united strength of 1000 men, will be only equal to that of a ball of 36 pounds, when shot point blank from a cannon.

According to Pliny, Epeus, the son of Endymion, and brother of Paon, was the original inventor of this engine:

whereupon, perhaps, Virgil takes an occasion to report him the builder of the Trojan horse.

RAMADAN, *Fr.* a month so called among the Turks, during which period they observe fast days.

RAMASSE, *Fr.* a sort of sledge, in which travellers are conveyed from the tops of mountains that are covered with snow.

RAMASSER, *Fr.* to collect, to get together. *On a ramassé tout ce qu'on a pu trouver de soldats*; they got as many soldiers together as they could.

RAMASSÉ, *Fr.* gathered together, collected. This word is likewise used to distinguish men that are hastily raised and embodied, from soldiers who have been regularly disciplined, viz.—*Ce ne sont pas des troupes réglées, ce sont des gens ramassés*; they are not regular troops, but persons hastily got together.

RAMASSÉ, *Fr.* strong, vigorous. *Un homme ramassé*; a strong athletic man. *Ramassé*, in this sense, agrees with the English word tight-built, thick-set, &c.

RAMAZAN. See **RAMADAN**.

RAMBADE, *Fr.* wale of a galley.

RAMBERGE, *Fr.* an advice boat.

RAME, *Fr.* an oar. It is likewise called *Aviron*.

Balle RAMÉE, *Fr.* cross-bar shot.

RAMEAUX de la mine, *Fr.* branches belonging to a mine. See **GALLERY**.

RAMINGUE, from the French *Ramingue*, a restive sort of a horse, that resists or cleaves to the spurs; or rather defends himself with malice against the spurs, sometimes doubles the reins, and frequently jerks, to favour his disobedience.

RAMMER, an instrument used for driving down stones or piles into the ground, in military works; or for beating the earth, in order to render it more solid for a foundation.

RAMMLER, or **RAMROD of a gun**, (*Rejoudoir*, *Fr.*) the ramrod or gun-stick; a rod used in charging a gun, to drive home the powder and shot, as also the wad, which keeps the shot from rolling out. The rammer of a piece of artillery is a cylinder of wood, whose diameter and length are each equal to the diameter of the shot, with a handle fixed to it, at the end of which is another cylinder, covered with lamb skin, so as to fit the gun exactly, and called a sponge: it is used to clean the piece

before and after it is fired. The ramrod of a musket is one entire piece of iron. The ramrod was formerly called scourer.

RAMNENSIS, one of the three mounted centuria or centuries which were formed by Romulus. They retained the appellation of the three first tribes, consisting of the Rammusians, the Tatians, and the Luceres.

RAMPART, (*rempart, rampier*, *Fr.*) an elevated piece of ground, or a great massy bank of earth raised about a place to resist the enemy's great shot, and cover the buildings. A parapet is raised upon this bank or elevation which looks towards the country. It is generally about three fathoms high, and ten or twelve thick; but this depends upon the quantity of earth which may be taken out of the ditch, and cannot be otherwise disposed of. A rampart with half moons has advantages from being low, because the muskets of the besieged can better reach the bottom of the ditch; but care must be taken that it is not commanded by the covert-way. A rampart ought to be sloped on both sides; that is, the mass of earth which composes the rampart, ought always to be larger at bottom than at top; more or less so, according to the nature of the earth: it should be broad enough to allow the passing of wagons and cannon, independent of the parapet which is raised on it. As the earth, of which the rampart is composed, is taken from the outside of it, (because by so doing the rampart and the fosse are made at the same time,) it follows, that their several proportions must depend upon one another; for since the rampart is made of a certain size, the fosse must be dug deep enough to supply earth for the rampart, the parapet, and the esplanade. Sentinels are regularly distributed round the ramparts, and pieces of heavy ordnance are planted, at given distances, for the protection of the place.

RAMPE, *ou pente extrêmement douce qu'ont fait le long des talus des ramparts*, *Fr.* a slope, or declivity, which is extremely gradual along the talus or slopes of ramparts. These slopes contain two toises in breadth, and are cut upon the interior talus. They are made, according to circumstances and the exigencies of the place, sometimes within the angle of the rampart, opposite to the

entrance into the bastion, when the latter is full; sometimes along the flanks, or at the flanked angle when the bastion is empty. Pieces of ordnance, ammunition, &c. are conveyed up these slopes to the embrasures of the ramparts.

RAMPE d'escalier, Fr. the flight of a staircase; also a balustrade, &c.

RAMPE par ressaut, Fr. the flight or ascent of a staircase, which is broken or interrupted by a winding quarter, or by railing.

RAMPER, Fr. to incline or bend according to any given slope.

RAMPS, (*rampes*, Fr.) in fortification, are sloping communications, or ways of very gentle ascent, leading from the inward area, or lower part of a work, to the rampart or higher part of it.

Return RAMROD. See *Platoon Exercise* under *MANUAL*.

RAMS-HORNS, in fortification, are a kind of low works made in the ditch, of a circular arc; they were invented by M. Belidor, and serve instead of tenailles.

RANCHES, Fr. pegs of wood which are stuck into the ladder belonging to a crane, and run through it. They are used for the purpose of getting up to the top of the machine.

RANCHIR, Fr. a sort of long ladder with small steps, which is placed upright for the purpose of going down into quarries, and, with a rest, to get up to any engine, crane, &c.

RANÇON, Fr. ransom. It was likewise the name of an old French weapon, consisting of a long stake with a sharp iron point at the end, and two blades, or wings, bent backwards, and extremely keen.

RANÇONNER, Fr. to ransom.

RANÇUNE, Fr. grudge, rancour, spite, standing hate.

RANCUNIER, Fr. rancourous, spiteful: every thing that a brave and honourable man, especially an officer, ought not to be.

RANDOM Shot, in artillery, when the piece is elevated at an angle of 45 degrees upon a level plane. See *RANGE*.

RANDOM, done by chance, roving without a direction, as a *random shot*.

RANG, Fr. rank.

RANG de pavé, Fr. a line or row of pavement, of one size, which runs along a gutter.

RANG, Fr. a row. When piles are driven into the ground in a line close to

one another, that is called *un rang de pilots*; a row of piles.

RANG d'un escadron ou d'un bataillon, Fr. rank in a squadron of horse, or battalion of infantry. Any straight line which is formed by soldiers standing on the side of each other, is so called.

RANG, Fr. the relative rank which is observed in military corps with regard to precedence, tour of duty, &c. In some instances *rang* and *grade* mean the same thing.

De RANG, Fr. a-breast, side by side.

Parôître sur les RANGS, Fr. to enter the lists.

Etre sur les RANGS, Fr. to be numbered amongst any particular set of men.

Mettre au RANG, Fr. to class with, to associate.

Vaisseau de premier RANG, Fr. a first rate ship of war.

Vaisseau du second, ou troisième RANG, Fr. a second or third rate.

Placer par RANG de taille, Fr. to size.

Doubler les RANGS, Fr. to form rank entire, or to throw two ranks into one, and thereby diminish the depth of any given number of men, by extending their front. Hence to *double up*, or extend the front of any leading line.

RANGE, in gunnery, the distance from the battery to the point where the shot or shell touches the ground.

Point-blank RANGE. When the piece lies in a horizontal direction, and upon a level plane, without any elevation or depression, the shot is said to take a point blank range. See *POINT-BLANK*.

RANGÉ, Fr. drawn out or placed in regular order.

RANGÉE, Fr. a series of things placed upon the same line.

Bataille RANGÉE, Fr. a pitched or set battle, in which two armies are drawn up opposite to one another.

RANGER, Fr. to place in a certain line or order.

RANGER, Fr. to place under. The French say, *Ranger sous sa domination*, &c. to place a town or province under one's own government, or to make it subservient to one's own laws.

RANGER en ordre de bataille, Fr. to place in order of battle; to dispose troops for action.

RANGER la côte, Fr. to sail along the coast.

RANGEZ vous, Fr. a term in general use among the French when any number of persons are ordered to clear the way, by drawing up on one side or the other of a street or road.

RANGING, in war, disposing the troops in proper order for an engagement, manoeuvres, or march, &c.

RANK, range of subordination; degree of dignity; the relative situations which officers hold with respect to each other, or to military things in general. Hence *regimental rank, local rank, rank in the army*, &c.

By an order from the King, the officers belonging to the Life Guards are entitled to the rank of lieutenant colonel, when they obtain or purchase a majority, provided they have been seven years in the service. Their commissions in this case run major and lieutenant colonel: but if an officer should not have completed either of those periods, he obtains the rank of major only, until its completion. A lieutenant colonel receives the rank of full colonel if he has been seven years major, or twenty-one years in the British service. Cornets in the Life Guards rank as sub-lieutenants in their own corps, and as first lieutenants in the army. The English Fuzileers enjoy the same privilege. Sub-lieutenants in the Welsh Fuzileers rank only as second lieutenants in the army. Marines do the same.

With respect to rank in general, the following are the rules (as published by authority) by which the relative rank of the officers of His Majesty's regular forces, militia, fencibles, yeomanry, cavalry, and volunteer corps, is to be determined.

Officers of the regular forces command the officers of equal degree belonging to the other services; with the exception after-mentioned.

Officers of the militia, fencibles, yeomanry cavalry, and volunteer corps, rank together according to the dates of their respective commissions.

Notwithstanding the regulation contained in the two preceding articles, such officers of Fencibles as have commissions dated on or before the 27th of July, 1793, continue to rank with the officers of the regular forces of equal degree, according to the dates of their respective commissions: unless when acting in conjunction also with officers

of the militia; in which case, if the commission of the fencible officer be of a junior date to that of the militia officer, of the same degree, the regular officer of equal rank, although his commission be of a junior date to that of the fencible officer, commands both.

It will further be observed, that all commands in the regular forces fall to the eldest officers in the same circumstances, whether of cavalry or infantry, entire or in parties. In case two commissions of the same date interfere, a retrospect is to be had to former commissions. Should it happen, as it possibly may, that the original commissions interfere, the seniority of the corps, we presume, must determine the precedence of command; and if the officers belong to one corps, it must be decided by lot.

In page 49 of the Articles of War it is laid down, that the eldest officer is to command when any troops of the Horse Guards, and the regiment of Horse Guards, shall do duty together; or when any of the Life Guards, Horse or Foot Guards, shall do duty with any other corps. The regiments of Life Guards, doing duty unmix'd, are to be considered as one corps; and the officers are to take rank according to the dates of their commissions. The same holds good with respect to the Foot Guards. Regular officers, with whom militia officers take rank as youngest, command officers of equal degree in the Fencibles, Yeomanry Cavalry, and Volunteer Corps, who are to rank together according to the dates of their commissions.

RANK is sometimes given to persons holding civil situations in the navy and army, in order to secure to them the privileges and advantages, particularly in cases of capture, which military commissioned officers enjoy. Thus paymasters in the army, and surgeons in the navy, rank as captains youngest of the line. The surgeons in the navy obtained this privilege in 1793. We are not aware, that the surgeons in the army enjoy the same; nor do we understand that the pursers in the navy have any rank. We humbly conceive that the same principle which actuated government in favour of navy surgeons, ought to prevail in these instances.

To **RANK with**, to hold the same relative situation with regard to others.— Thus post captains of three years stand-

ing in the royal navy rank with colonels in the army; and lieutenants in the Guards rank with captains in the line or regulars. Officers in the militia rank generally with the regular forces as junior of their respective commissions. An ensign in the Guards ranks no higher than an ensign in the regulars.

To RANK *with*, in a figurative sense, to be in equal estimation, to bear the same character for skill and valour, &c.

Brevet RANK, rank without pay, nominal distinction, which sometimes entitles the holder of it to command in mixed service. The brevet rank in the militia is confined to the colonels and adjutants of the several corps in that establishment. The former receive the brevet rank of colonels in the army whilst actually embodied for service, and command all lieutenant colonels in the line when they do duty together. Adjutants in the militia may have the brevet rank of captain provided they have served five years as lieutenants in the militia, or in other forces on the British establishment. In the line, an adjutant who has the rank of captain, may command as such when there is no superior officer on the parade, or for duty. This is not the case in the militia.

Brigade majors rank with captains provided they have that rank in the army, independent of their staff appointment. But aides-de-camp do not possess any rank in that capacity with regard to the army. The latter constitute a part of the general's family, and are paid out of his allowance; they are in fact the mere carriers of his orders in the field, and his domestic inmates at home, &c. The former belong to the brigade, and are a necessary part of its effective force. It has been judiciously ordained, that both the one and the other should be regular officers. It were, however, to be wished, in imitation of our military neighbour and rival, that none but *experienced* officers should be selected for aides-de-camp.

There is likewise a sort of brevet rank which exists in the several regiments belonging to the British service, and is confined to the rank and file, or corporals and private soldiers. Thus a lance serjeant is a corporal who does the duty of serjeant, without the pay or emoluments of the latter; and a lance corporal is a private soldier, who does

the duty of corporal. So that *lance*, which comes from *lansquenet*, and ought therefore to be written lans-serjeant, &c. is the abbreviation of that word, which signifies a private soldier, and is derived from the German; and when put before serjeant or corporal, points out that a corporal or private soldier has the brevet rank of one of those situations. A captain of a company may appoint or reduce lance-serjeants or corporals, according to his judgment.

RANK and Precedence in the Army and Navy, are as follow:

Engineers RANK. Chief, as colonel; director, as lieutenant-colonel; sub-director, as major; engineer in ordinary, as captain; engineer extraordinary, as captain lieutenant; sub-engineer, as lieutenant; practitioner-engineer, as ensign.

Navy RANK. Admiral, or commander in chief of his Majesty's fleet, has the rank of a field marshal; admirals, with their flags on the main-top-mast-head, rank with generals of horse and foot; vice-admirals, with lieutenant-generals; rear-admirals, as major-generals; commodores, with broad pendants, as brigadier-generals; captains of post ships, after three years from the date of their first commission, as colonels; other captains, as commanding post ships, as lieutenant colonels; captains not taking post, as majors; lieutenants, as captains.

Court RANK. The rank or precedence which the British guards enjoy over the line of the marching army, is so called, by the author of an ingenious pamphlet, entitled, *Prevailing Abuses in the British Army*. See PRIVILEGES.

Nominal RANK, a rank continued to a person who has been in the service; and sometimes assumed by individuals who have never been in the service at all.

RANK in the army, a rank which opens to the individual possessing it, all the avenues to military promotion from an ensigncy in the line up to that of a full general, but by which he is not entitled to any certain additional pay.

RANK is a straight line made by the soldiers of a battalion, or squadron, drawn up side by side; this order was established for the marches and for regulating the different bodies of troops and officers which compose an army.

Doubling of the RANKS is the placing

two ranks in one, which is frequently done in the manœuvres of a regiment.

RANK and File. Men carrying the firelock, and standing in the ranks, are called rank and file. Thus corporals are included in the return which is made under that head.

RANKS and Files are the horizontal and vertical lines of soldiers when drawn up for service, &c.

RANSOM, (*rançon*, Fr.) a stipulated price given for the release of a prisoner of war. The ransom of prisoners of war, according to Grose, was one of the principal sources of emolument to military men of ancient days, similar to the prize money of the present time to the officers and seamen of the royal navy, many having thereby raised large fortunes; Sir Walter Manny, in the reign of King Edward III. is said to have gained 8000*l.* by prisoners of war in one campaign; an enormous sum for those days. Instead of ransom, the usual mode of liberating prisoners is now by exchange of man for man and officer for officer, of the same rank reciprocally, when there are such to exchange, otherwise it is arranged by a cartel; and there are resident commissioners from the powers at war to see it duly put in execution. In England the care of the prisoners is under the management of the Transport Board. In France, during the late revolution, the unfortunate prisoners were left to provide for themselves.

RAPE, Fr. a rasp; a file.

RAPE, a division of a county, as the county of Sussex, for instance, which is divided into six rapes.

RAPIDES, Fr. Falls in a river are so called; as the falls in the river St. Laurence, &c.

RAPIER, (*rapière*, Fr.) formerly signified a long, old-fashioned broadsword, such as those worn by the Scotch regiments; but now is understood only to mean a small sword, in contradistinction to a broad sword.

RAPINE, Fr. rapine, plunder.

RAPPAREILLER, Fr. to set sail again.

RAPPELER, Fr. to call back or to assemble. This is done by a particular beat of drum, when soldiers are directed to repair to their colours.

RAPPORT, Fr. report.

RAPPORT, Fr. in mathematics, a term frequently used among the French.

It bears the same import as *raison*, and signifies the relation which two quantities have one with another. Thus the *rapport* or relation between twelve and six is the same as between six and three.

RAPPORT commercial, Fr. balance of trade.

Pièces de RAPPORT, Fr. inlaid work.

RAPPORTEUR, Fr. judge advocate at a court-martial.—He is also called *Commissaire Rapporteur*.

RAPPORTEUR, in geometry, an instrument made in the figure of a half circle, and divided into one hundred and eighty degrees. It is used for the purpose of ascertaining the openings in angles, and to take plans upon paper.

RAPPORTEUR signifies also a reporter, a tale-bearer.

RAREFACTION, the extension of the parts of a body, by which it is made to take up more room than it did before. It is essentially connected with gunnery; for in proportion to the rapid combustion and consequent rarefaction of air, produced by the ignition of gunpowder confined in the chamber of a gun, so will be the force of expulsion with which the charge is propelled.

RAS, Fr. Every barge, or vessel, &c. which is without any deck or upward covering, is called by the French *bateau*, or *bâtiment ras*.

RASADE, Fr. a bumper. See **TOAST**.

RASANTE, Fr. See **LIGNE rasante**.

RASANT, } In fortification, rasant

RAZANT, } flank, or line, is that part of the curtain or flank whence the shot projected raze or glance along the surface of the opposite bastion.

To **RASE** (from the French *raser*, to rase, or glance upon the ground) is to gallop near the ground, as our English horses do, particularly race or blood horses.

RASE, Fr. pitch and tar mixed with tow for the purpose of caulking a ship.

Table RASE, Fr. any plain piece of copper, steel, stone or wood upon which no marks have been made, or letters, &c. engraven.

RASE campagne, Fr. an open country, which is extremely flat, and has not either wood or rivers in it; such as Salisbury plain. Hence *les deux armées se battirent en rase campagne*, the two armies fought against each other in the open ground.

RASER une place, Fr. to demolish

the fortifications of a town or place. This is often done by mutual compact between contending powers; but more frequently on the principle of retaliation, or by the effect of bombardment. Hence, *Raser les fortifications à coups de canon*, to batter or demolish the fortifications by cannon shot, or by the discharge of ordnance.

RASLE, *Fr.* This word is used in some parts of France to signify *rafter*, and means the same as *chevron*.

RASPOUTE, *Fr.* Father Catrou, the Jesuit, in his history of the Moguls, confounds this word with *Rage-puge*. They probably both mean the same as *Rujupoot*, which see.

RASSEMBLER, *Fr.* to collect together.

RASSEMBLER des troupes, *Fr.* to call troops or forces together.

RASSEMBLER les débris d'une armée, *Fr.* to collect together the broken parts, or scattered remnants of an army. It is likewise used with the personal pronoun, viz. *Tous les soldats dispersés se rassemblèrent autour du drapeau*, all the soldiers or troops that had been dispersed gathered together round the standard, or colours.

RASSEMBLER les forces d'un cheval, *Fr.* to put a horse well upon his haunches.

RASSIEGER, *Fr.* to besiege again.

RASSIS, *Fr.* stale; as *pain rassis*, stale bread.

RASSIS, *Fr.* putting fresh nails in a horse's shoe.

RASSURER, *Fr.* to restore confidence; to encourage; to invigorate.—*Quelques soldats commençaiènt à s'ébranler, quand l'exemple de leur capitaine les rassura*, some soldiers began to give way, when the example of their captain inspired them with fresh confidence.

RAT, (*rat*, *Fr.*) an animal well known in most countries.

Rats are sometimes used in military operations, particularly in enterprizes for the purpose of setting fire to magazines of gunpowder. On these occasions a lighted match is tied to the tail of the animal. Marshal Vauban recommends, therefore, that the walls of powder magazines should be made very thick, and the passages, for light, winding, and so narrow as not to admit him.

RAT-tails, a venemous disease in horses, not unlike the *scratches*.

RAT-tails, as well as *scratches*, sometimes proceed from the want of rubbing

and dressing, and sometimes from the horse being too well kept, without exercise. Large horses are most subject to this disease.

RAT-tail. A horse is so called when he has no hair upon his tail.

RAT, *Fr.* is used in a figurative sense, viz. *Une arme à feu a pris un rat*, a musket has missed fire.

RAT, *Fr.* a sort of floating platform made of planks which are tied together upon two or three masts. It is used in caulking ships, &c.

RAT-island, a place near Scilly, overrun with rats.

To RAT, a figurative term signifying to desert or abandon any particular party, or side of a question. The term itself comes from the well-known circumstance of rats running away from decayed and falling houses.

Trou de RAT, *Fr.* literally a rat-hole; a trap or snare laid for an enemy.

RATAN, a cane used by serjeants of companies, &c. in drilling the men, and with which, in other countries, the non-commissioned officers, and privates, are corrected for slight offences.

RATE, *price, rank, (taux, taxe, rang, volée, Fr.)* price fixed on any thing, allowance settled, degree, &c.

RATE of pay, a certain settled allowance by which the pay of the army is regulated.

Abated RATE, a deduction from the tax on property, (a tax that once bore so cruelly upon the British army,) which was made in favour of the subalterns of regiments, leaving on an average about $7\frac{1}{2}$ per cent. to be paid on their nett receipt.

RATELÉE du butin, *Fr.* the share of the booty.

RATELIER, *Fr.* a rack used in armouries, &c. for the purpose of keeping fire arms arranged in proper order.

RATELIER, *Fr.* a rack in a stable to put hay, &c. also a row of pegs or pins to hang any thing upon.

RATER, *Fr.* to snap, to flash in the pan, to miss fire. *Son pistolet a raté*, his pistol has missed fire.

RATER likewise means, figuratively, to be unsuccessful in an application.—*Il a raté sa charge*, he did not get the commission.

RATES of subsistence. See **PAY**.

RATH, an old word signifying a hill. It is used by Spenser.

RATIFICATION, (*ratification, Fr.*

the act of ratifying or confirming. Thus all treaties which are made between contracting parties, whether sovereigns or generals possessing full powers to execute, can never be valid until the ratification of each treaty has been reciprocally exchanged.

To RATIFY, (*ratifier*, Fr.) to confirm; to render binding.

RATION, a certain allowance which is given in bread, &c. or forage, when troops are on service,—for an officer or soldier.

Complete Ration of the small Species.

Flour, or bread	- - -	1½ lb.
Beef	- - -	1
Or pork	- - -	½
Peas	- - -	¼ pint.
Butter, or cheese	- - -	1 oz.
Rice	- - -	1 oz.

When the small species are not issued, 1½ lb. of flour or bread, with 1½ lb. of beef, or 10 oz. of pork, forms a complete ration: or 3lbs. of beef; or 2lbs. of cheese; or half a pound of rice, form a complete ration.

The deductions to be taken for provisions from the pay of officers, non-commissioned officers, or men, are the same for all ranks, and in all corps, under the like circumstances of service, when serving out of Great Britain, on stations where provisions are supplied by the public: also, when embarked in transports or other vessels (except when serving as marines); also, when prisoners of war are maintained at the expense of Great Britain; also when in general hospitals, whether at home or abroad, a deduction of *sixpence per day* is made.

A deduction of *three-pence halfpenny* is made from the pay of every non-commissioned officer and private in Jamaica, in New South Wales, and Gibraltar. Non-commissioned officers and soldiers serving as marines shall not be liable to any deduction from their full pay on account of provisions.

Ration for a horse on home service in 1796:—14 lbs. of hay, 10 lbs. of oats, 4 lbs. of straw; for which a stoppage is made of six-pence.

The French use the same term, viz. *Ration de foin*, a ration of hay. *Double ration*, double ration. *Demi ration*, a half ration.

RATION *d'un fantassin*, Fr. the ration or allowance which is given to a foot soldier.

RATION *de cavalerie*, Fr. the allowance given to each cavalry soldier.

RATION *de fourrage*, Fr. a ration of forage.

RATIONS *des officiers du régiment des gardes Françaises*, Fr. rations allowed in a regiment of French guards.

RATISSOIRS, Fr. graters used by the men employed in making saltpetre.

RATTLING *in the sheath*, a term used of a horse, when he makes a noise in the skinny part of his yard.

RATURE, Fr. an erasure; a scratch.

RATURE *écrière*, Fr. an erasure made with the pen.

To RAVAGE, (*ravager*, Fr.) to do all the mischief one can in a country by force of arms, or other ways.

RAVAGES *of war*, the spoil, plunder, or waste, made by contending armies in the theatre of war.

RAVALEMENT, Fr. a slight strengthening made in mason-work or carpentry, either with plaster or wood.

RAVALER, Fr. to plaster a wall, &c.

RAVELIN, Fr. See FORTIFICATION.

RAVELINS, in fortification, are works raised on the counterscarp before the curtain of the place, and serve to cover the gates of a town, and the bridges. They consist of two faces, forming a salient angle, and are defended by the faces of the neighbouring bastions. They are the most in use of all out-works, and are by the soldiers most commonly called half moons, or demi-lunes. They should be lower than the works of the place; that they may be under the fire of the besieged. Their parapets, as those of all out-works, should be cannon proof; that is, about 18 feet thick.

RAVIN, Fr. a hollow road; a broken pass, &c.

RAVINE, in field fortification, a deep hollow, usually formed by a great flood, or long continued running of water; frequently turned to advantage in the field.

RAVITAILLER *une place*, Fr. to throw stores, ammunition, and provisions into a fortified place.

Principal RAY, in perspective, is the perpendicular distance between the eye and the vertical plane, or table, as some call it.

RAYÉ, Fr. rifled.

Canon RAYÉ, Fr. rifle-barrel.

RAYÈRE, Fr. a loop-hole; a loag-

and narrow cleft in the wall of a prison, dungeon, or tower, whereby light and air are partially let into the rooms.

LES RAYÈRES d'un moulin d'eau, Fr. the arms or starts of a wheel of a water-mill.

RAYON, Fr. in geometry, radius.

RAYON, Fr. the spoke or staff of a wheel.

RAYON *extérieur*, Fr. in fortification, a line which is drawn from the center of the place to the flanked angle of a bastion.

RAYON *intérieur*, Fr. a line drawn from the center of the place to the center of the bastion.

RAW, in a military sense, unseasoned, unripe in skill, wanting knowledge in military tactics, &c.

RAW troops, unexperienced soldiers; men who have been little accustomed to the use of arms. This term is generally used in opposition to *veteran troops*. A cool and wise general will always know how to make the most of that part of his army which is composed of raw troops; and a rash, intemperate one will equally miss the proper application of the spirit and manhood, which ignorance of danger, and confidence of success, almost always give. Some of the most brilliant actions, and some of the greatest victories have been achieved and won by means of that daring impetuosity, which hurries raw troops into the thickest of an enemy. A thousand instances might be adduced from ancient and modern history, to prove the correctness of this remark. It may, perhaps, be sufficient for our purpose, to refer the curious reader to the bold and unexampled charge which was made against the French troops in Germany, by Elliot's new raised light horse. The laurels of Emsdorf are still the glory of the 15th regiment of dragoons, and every man who has the honour of belonging to this distinguished corps, looks back, with a spirit of exalted emulation, at the recorded valour of their raw and unexperienced predecessors.

RAZED. Any works or fortifications when demolished, are said to be razed.

RAZÉ, Fr. razed; ruined; cut close to the ground.

RAZEFORTS, Fr. forts-razing; bulwark-overthrowing.

REACTION, (*réaction*, Fr.) the action of one body which acts upon ano-

ther, whence it receives its action. For instance, when a billiard ball is driven in a certain direction, and hits against the cushion, that circumstance produces the action; and as it does not remain there, but rebounds of itself into another direction, the circumstance of so doing produces what is called *reaction*. The power of reaction is invariably equal to that of its action; and there is no such thing in nature as *action* without *reaction*.

READINESS, a state of alertness; a promptitude for action.

To hold one's self in READINESS, to be prepared, in consequence of some previous order, to march at a moment's notice.

READY, a word of command in platoon firing, being a contraction of *Make ready*. See MANUAL.

READY, prepared; prompt, or inclined to.

To make READY, to prepare. In the platoon exercise, as well as in all other firings by battalions or companies, &c. to take the first posture or position for firing.

REAFAN, the royal banner or flag of the Danes; so called from a raven embroidered upon it by King Ladbroke's daughter.

RÉALE, } Fr. The largest or
Galère RÉALE, } principal galley used in catholic countries, is so called. The first galley belonging to the Pope is called *réale*, because it takes precedence of all vessels, in the service of the different Roman catholic powers.

REAR, in a general acceptance, any thing situated or placed behind another. The term is variously used in military matters.

REAR of an army signifies, in general, the hindermost part of an army, battalion, regiment, squadron, or company, &c. Generally the third component part of a large body of forces, which consists of an advanced guard, a main body and a rear guard.

REAR guard, a certain proportion of an army or regiment, which acts, in various capacities, according to circumstances, and the extent of military operations. The rear guard of an army is often the reserve, &c. The rear guard of a regiment is usually appointed for the purpose of picking up stragglers, &c. The old grand guards of the camp always form the rear-guard of the army.

and are to see that every thing comes safe to the new camp. See **GUARD**.

REAR line, of an army encamped, is always 1200 feet at least from the center line; both of which run parallel to the front line, as also to the reserve.

REAR rank When a regiment, troop, or company, is drawn up two or three deep, the last line of men is called the rear rank.

REAR ranks, all the ranks of a line, regiment, troop, or company, which are ranged in order behind the front rank. When troops are drawn up three deep, the second rank is called center rank.

REAR rank take open order, a word of command which is given in the manual and other parade exercises. It is likewise used in marching by the general at a review, or on guard mounting, &c. See **OPEN Order**.

REAR half-files are the three hindermost ranks of the battalion, when it is drawn up six deep.

REAR front. When a battalion, troop, or company, is faced about, and stands in that position, it is then said to be rear front. It sometimes happens, that through oversight, forgetfulness, or ignorance and confusion, troops are so clubbed, that, on the deployment of a column, the different troops and companies not only lose their stations in the line of original formation, but the rear rank men stand where the front-rankmen ought to be; in the latter case, they appear rear-front. This error can be easily remedied, by counter-marching the several troops or companies.

REAR rank lengthening out a line. It is observed in Part the 1Vth, of the Rules and Regulations, that although a single battalion may, by opening its companies and files, *from 3 deep form 2 deep*, by introducing its rear rank into the other two, yet a considerable line posted, which is to be lengthened out to one or both flanks by its rear rank, must, to greater advantage, perform such operation, by each company wheeling the subdivisions of its rear rank backward, and facing to the hand they are to march to; the last rank of each company closes up to its first; the subdivisions of each battalion move up to open distances from their respective head ones, and from each other; officers from the rear are appointed to command them; those of each, or of

every two battalions, being considered as a battalion, they march on in column, and prolong the line. By this mode of lengthening out the line, the two front ranks remain undisturbed, and they protect the movement which is made unseen behind them.

REARWARD, the last troop or company.

REASON, or **RAISING piece**, in building, that part upon which the rafters rest.

RÉARPENTAGE, *Fr.* a second land survey.

RÉATÉLER, *Fr.* to put to again. *Etre en RÉATU*, *Fr.* to be impeached of a crime.

REBEEWAR, *Ind.* Sunday.

REBEL, (*rebelle*, *Fr.*) any one guilty of rebellion.

Se REBELLER, *Fr.* to rebel.

REBELLION, a traitorous taking up of arms against the king by his own natural subjects, or of those who are bound to bear faithful allegiance to him and to his government; hence called open rebellion.

REBOUND, the act of flying back in consequence of motion impressed and resisted by a greater power.

A REBOURS, *Fr.* in reverse.

Fortification à REBOURS, *Fr.* a fortification thrown up in reverse.

REBRIDER, *Fr.* to bridle again.

Le REBUT, *Fr.* the refuse, the scum, &c.

Le REBUT du peuple, *Fr.* the refuse, the dregs of the people.

REBUTANT, *Fr.* repulsing; repelling;—Hence

Air REBUTANT, *Fr.* a repulsing or repelling look.

RECEIPT, a voucher, given or taken for any thing received or given. Soldiers, who cannot write, subscribe their marks; in which cases the pay-serjeants, or some trusty persons, witness the signature. Captains of troops and companies should be particularly minute on this head, as illiterate minds are naturally full of suspicion; and, in many instances, soldiers have been found unprincipled enough to deny their marks. See **VOUCHERS**.

RECEIPTS of officers, soldiers, and seamen; for the purchase of stock, bank bills, or promissory notes legally stamped, or for releases on stamped deeds, are duty free. Acknowledg-

ments in letters of the receipt of any notes, bills, or securities for money, are not liable to duty.

To RECEIVE, in a military sense, to wait the approach of a friend or foe.

To RECEIVE *an enemy*, to make the best disposition possible of troops, for the purpose of meeting the attack of an enemy that is advancing against them.

To RECEIVE *a general or reviewing officer*, to be drawn up according to regulations which are laid down, for the purpose of paying the compliments that are due to the rank of a superior, or commanding officer. For the method in which a general is to be received by all cavalry corps and infantry regiments, on the British establishment, see Cavalry Regulations.

RECELEMENT *d'un déserteur*, Fr. the act of secreting or concealing a deserter.

RECEPER, Fr. See RESCEPER.

RECEPTACLE, Fr. a sort of basin into which several conduits of aqueducts, or conduit pipes, are collected for the purpose of being distributed through other channels. This work is also called *conserve*, Fr. conservatory.

RÉCEPTION *d'un officier dans un corps*, Fr. a ceremony which was performed in the old French service, when an officer first joined. This was done by beat of drum in front of the company. The officer, being dressed, accoutred, and armed, according to regulation, faced towards his men, and as soon as the drums had ceased, took off his hat to his commanding officer, who did the same to him, addressing the company in the following terms:—

De par le Roi. Soldats, vous reconnaîtrez M... pour votre capitaine, ou pour lieutenant de la compagnie, et vous lui obéirez en tout ce qu'il vous ordonnera pour le service du Roi en cette qualité.

From the king! or pursuant to the king's will.—Soldiers, you will acknowledge M... to be captain, or lieutenant, of the company, and you will obey whatever orders or commands he may issue, in that capacity, for the good of the king's service.

When a colonel or major was received at the head of a corps, the word *Soldats, soldiers*, was altered into *Messieurs, gentlemen*; the latter term including both officers and men. On this occasion,

the corps of captains and subalterns formed a circle; round them stood the serjeants drawn up in the same manner, and beyond the serjeants, the drummers, &c. The different circles being concentrical to each other. The field officer, who was to be admitted or to take command, stood in the center of the whole, surrounded by the principal officers of the regiment.

RECETTE, Fr. a trough, which persons employed in preparing saltpetre, &c. place beneath tubs filled with broken rubbish, ashes, &c. for the purpose of receiving the liquid that is filtered through.

RECHANGE, Fr. reserved; kept for occasional need; in store; hence *des armes de rechange*, arms kept in store.

RECHARGE, a renewal of the charge or attack.

RECHARGE *d'une arme à feu*, Fr. a second charge or loading of a fire-arm immediately after the first has been fired. In proportion as these charges increase, the quantity of powder is lessened; and when the piece has been fired ten or twelve times successively, it must be cooled or refreshed.

RECHAUD, Fr. a chaffing dish, or pan used for various purposes, particularly during a siege. They are filled with burning materials, and hung in different parts of the wall, so as to throw light into the ditches, and to prevent surprizes.

RECHERCHE *de couverture*, Fr. the repair which takes place when fresh tiles or slates are put upon a roof, and the plaster work, &c. is restored.

RECHERCHE *de pavé*, Fr. the repairing of a pavement, or paved road, by putting fresh stones where the old ones are broken.

RECHERCHER, Fr. to seek after; to court; hence *rechercher l'alliance d'un prince, ou d'une nation par des voies honnêtes, et non par la corruption*; to seek or court the alliance of a prince, or of a nation, in a fair and open manner, without having recourse to the base tricks of corruption.

RECHUTE, Fr. literally means a second fall; but in fortification it signifies a greater elevation of the rampart in those spots where it is likely to be commanded.

RÉCIDIVE, Fr. the act of doing any thing wrong a second time.

RÉCIDIVER, *Fr.* to relapse, or commit a crime or fault twice.

RÉCIF, *Fr.* note or voucher given for a deposit.

RECIPERE *ferrum*, *Lat.* to receive the weapon or sword. This expression signified, among the ancient Romans, the sentence of death which was pronounced, by the people, against a vanquished gladiator. The instant he fell under it, he voluntarily exposed his chest to have the dagger plunged into him.

RÉCIPIANGLE, *Fr.* recipient angle. A geometrical instrument, which is much used among the French, for taking the quantities of angles, especially in drawing plans of fortification. It consists of two moveable rules made in the shape of a square rule. The center of one of its hands is marked by a semi-circle, which is divided into 180 degrees.

RÉCIPIENDAIRE, *Fr.* one who offers himself for any office or appointment.

RECIPROCAL figures, in geometry, are such as have the antecedents and consequents of the ratio in both figures.

RECIPROCAL proportion is when, in four numbers, the fourth is lesser than the second, by as much as the third is greater than the first, and *vice versa*.

RECKONING, computation, calculation; accounts of debtor and creditor; also money charged by an host.

Short RECKONINGS. According to

Sully, minister of Henry the Fourth of France, short reckonings are accounts with the man, and not with his executors. This wise legislator (who recovered the finances of his country by an honest application of private rules to public regulations) always considered, that it was much easier to obtain an account of one thousand pounds than of one million; and that in the event of defalcation, securities were more accessible after twelve months than after twelve years. No nation ever stood more in need of the rigid exercise of these sound principles than poor Old England!

RECOGNISCING, an old term, used by some English military writers, signifying reconnoitring, which see.

RECOIL, (*recol*, *Fr.*) a falling back. The retrograde motion made by any piece of fire arms on being discharged, which is occasioned by the rarified air pressing on all sides, in order to expand itself with freedom. This term is generally applicable to fire-arms, especially to pieces of ordnance, which are always subject to a recoil, according to the sizes and the charge they contain, &c. Guns, whose vents are a little forward in the chase, recoil most. To lessen the recoil of a gun, the platforms are generally made sloping towards the embrasures of the battery.

To RECOIL, (*reculer*, *Fr.*) to fall back, to run back in consequence of resistance or repercussion.

The following particulars are extracted from the Little Bombardier,

RECOIL of Field Guns on Travelling Carriages, on Elm Planks.

Nature.	Charge.	1 Shot, at 1° 30' Elevation.	2 Shot, at 1° 30' Elevation.	Case Shot, at 3° 45' Elevation.
	lbs. oz.	Feet.	Feet.	Feet.
12 Pr. Med.	4 0	12	25	8½
6 Pr. Heavy	2 0	7	11	7½
6 Pr. Light	1 3	12	21	10
3 Prs. Heavy	1 0	3	5	3½

RECOIL of Land Service Iron Mortars, on Iron Beds.

	Ft. In.
13-Inch, with a charge of 6lbs	—4 2½
10-Inch, ————— 3lbs.	—2 10
8-Inch, ————— 1lb. 9oz.	3 10

RECOLLECTION, a mode of thinking, whereby those ideas sought after by the mind, are brought again to view. A retentive memory and a cool collected presence of mind are necessary qualities in every good officer; and

military men should often exercise the faculty of thinking, in order to become instantly familiar with what they have formerly studied, and occasionally practised. For memory, like every thing else, acquires strength, and is increased, by cultivation. *Memoria, ut in cæteris rebus, colendo augetur.*

Necessary **RÉCOLLECTIONS** for the exercise of a battalion, as laid down in the Rules and Regulations.

It appears, that the front of any division or body is, in ordinary paces of 30 inches, nearly 3-4ths of the number of files of which it is composed.—That the circumference of the quarter circle which it describes, is in wheeling paces of 33 inches, the same as the number of files of which it is composed.—That the number of files being once ascertained in each division, the officer commanding it must, on all occasions, recollect the number of paces that are equal to his front; also the number of wheeling paces which the flank man must take to complete the quarter circle; also the spare time, which he has to regulate the *halt, march*, of his division after wheeling.

The field officers and adjutants must always recollect the number of paces the front of the battalion and its divisions occupy, in order to take up ground exactly in all formations.

RECOLLEMENT, *Fr.* a re-examination of witnesses (especially when they have not deposed fully, or plainly enough) before they are confronted with those they have accused.

RECOLLER des témoins, *Fr.* to re-examine witnesses.

To **RECOMMEND**. When a young gentleman wishes to enter into the British army, his first object is to get well recommended for that purpose. It is a regulation, that none under the rank of field officer in the regulars can recommend a person so circumstanced. He must state, that from his own personal knowledge, he believes the young candidate to be perfectly qualified to hold a commission in his Majesty's service. The person who recommends is responsible to the Commander in Chief for the character and situation of the candidate.

RECOMMENDATION, in a military sense, a certificate, stating an individual to be properly qualified for a situation in the army. This certificate

must be signed by a field officer in the regulars, addressed to the commanding officer of the regiment, by whom it is forwarded to the Commander in Chief, who lays the name of the person recommended before the King.

Book of **RECOMMENDATION**, a book of entry which is kept in public offices, and by army agents, for the insertion of the names of such officers, or candidates for commissions, as have been recommended to the Commander in Chief for his Majesty's approbation.

RECOMPENSES militaires, *Fr.* See **MILITARY Rewards**.

RECONNAISSANCE, *Fr.* the act of reconnoitring.

RECONNAITRE une place, *Fr.* to reconnoitre a fortified town or place.

RECONNOTTRE, (*reconnaître*, *Fr.*) to view, to examine.

Parties ordered to reconnoitre are to observe the country and the enemy; to remark the routes, conveniences, and inconveniences of the first; the position, march, or forces of the second. In either case, they should have an expert-geographer, capable of taking plans readily; he should be the best mounted of the whole, that in case the enemy happen to scatter the escort, he may save his works and ideas.

All parties that go for reconnoitring only should be few in number. In general the number should not exceed 12 or 20 men. An officer, be his rank what it will, cannot decline going with so few under his command: the honour is amply made up by the importance of the expedition; which is frequently of the most interesting consequence, and the most proper to recommend the prudence, bravery, and address, of any officer that has the good fortune to succeed.

It is previously necessary, that the officer ordered on this duty should be well acquainted with the country, the roads, and the distance of the enemy. His party must consist of men of approved fidelity, part of whom should be disguised. This detachment must march off in the night. The men must have strict orders neither to smoke tobacco, make a noise, nor speak. The officer must be provided with two guides, who are to be strictly interrogated, but are to remain ignorant of the route in contemplation. A detachment of this kind should be furnished with subsistence

for two or three days. The horses are to be fed every two or three leagues, for it is absolutely necessary, that they should be always fresh and fit for duty. The officer will take care never to halt, but at a distance from any road, and also take every precaution to prevent his being surprized, whilst his horses are feeding, &c.

RECONNOITRING, (*la reconnaissance*, Fr.) *orders and instructions to be observed in.* We have been favoured by a very ingenious and intelligent correspondent, with the following directions, which were digested by the late Major-general Roy, and issued as instructions to be followed by officers and engineers in examining, describing, representing and reporting, any country, district, or particular spot of ground.

First, As the encampments, marches, and every possible movement, proper for an army to make in the field, entirely depend on a just and thorough knowledge of the country, the greatest care and exactness should be observed in examining minutely the face of that country, and, from time to time, to make proper memorandums of every variety of the ground; whether the face of the ground be flat and level, or interrupted with hollows and deep vales, always mentioning the nature of the soil in either, whether dry or wet, clay or sand, rocky, stony, or smooth, in tillage or in grass; if inclosed, the nature of the fences, and largeness of the enclosures; where woody, the nature of the wood, whether thick and impassable, copse, or grown timber, and open; the extent of the wood; or if cut by few or many roads.

If there are any bogs or morasses, to be particularly exact in expressing the nature of either, both as to their size and extent, from north to south, and from east to west; if deep and impassable, or capable of being traversed, with very little labour, by foot or horse. Where there are meadows, to observe the above direction in describing them.

In all places, where the country is cut by valleys or hollows, to be as explicit as possible in conveying a perfect idea of the bottom and banks of the said valley.

Second, carefully to follow the line of the principal roads, in the several bendings and turnings, marking the breadth; and at every half mile's distance, mi-

nutely expressing every variation or change that happens in the road; if narrow or hollow, the depth of the hollow; if broken or impassable; leading through or near any road or cover, and how far it may continue through or close to that cover. If the ground on both or one side of the road will admit of shunning the above inconviency, by quitting the road, and making openings through the neighbouring fields. To be particularly attentive to mark every lane, cross-road, or communication, that either crosses the great road, or may lead from the right to the left of it; mentioning the distance where they run off in right or left, with what place or places they communicate, and how far they go. When you come to a farmhouse, small village, or country town, to be particular and exact in describing the situation and extent of either, by mentioning the number of houses and barns, and how supplied with water.

Third, All rivers or waters, great or small, to be examined with the greatest attention and exactness; marking every where their breadth and depth, in floods and ordinary water, nature of their bottom, height of their banks, nature of the soil on both sides, and the access to the banks, if easy or difficult.

The above directions to be strictly observed in mentioning and inserting every ford across any river or rivulet; and all bridges to be particularly described, whether stone, brick, or timber, number of arches, with the width of each; thickness of the parapet; if the communications to the bridge are free, and on commanding ground, and the nature of the command.

Fourth, If the surface of the country be mountainous, or only broken by gentle heights: to describe and minutely express the nature of the mountains, as to their ascent and height, in what direction they run, and how far; where broken, or cut by hollows and waters; where covered by woods or waters, or any other obstructions.

If the country be cut with rising grounds, to be very particular in observing the same mode in describing them.

Fifth, In reconnoitring, never to trust any thing to memory, but constantly to sketch and mark memorandums with method, and regularly in travelling the road, and from time to time,

at stated distances, to collect, digest, enlarge, and vary these memorandums and sketches before quitting the ground, so that every thing may be as correct, explicit, and expressive as possible. Great and many are the inconveniences that continually arise from not duly attending to this precaution, and trusting too much to one's own memory; which should therefore be avoided.

Sixth, At first setting out, if possible, to measure a long base, and intersect the most convenient objects, and, as frequently as the nature of the ground will permit, to make proper measurements and cheques to the series of triangles in their proper position.

In an inclosed country, the only exact and useful method to lay down such, is to trace the roads with the greatest exactness and accuracy; always remembering, that in military maps, nothing should ever be represented at guess or random; and that the space of one quarter of a mile truly laid down, is far more useful, than an imperfect and loose representation of an entire country.

Seventh, When ordered to survey a ground for an encampment, the survey should at least contain three miles diameter; in which ought to be expressed, with the greatest minuteness, every particular above-mentioned, the advantages and disadvantages of water; if easy to be come at, if plenty and good, in rivers, rivulets, springs, and ponds of water; if clear and soft, or muddy or hard.

Eighth, To be particularly attentive to the produce of each part of a country, and how inhabited; if abounding in grass or hay, or only for pasture; if chiefly in corn, and what quantities of hay and straw are generally thought to be in the country; of all which particulars you may be easily informed after some acquaintance with a judicious countryman.

Ninth, Every representation must be laid down to a particular fixed scale; when it is necessary to represent a spot of ground proper for an encampment or any particular manœuvre for the troops, the best scale is one of 500 yards to an inch, which is sufficient to shew every part in its just proportion, and to express distinctly the nature of the surface.

General sketches of a country may be laid down to a scale of two inches to a mile; and when the sketch is

finished, the miles must be constantly marked along the roads with red figures.

We cannot quit this important article without endeavouring to impress upon the mind and understanding of every officer in the British service, from the commander in chief of an army, to the head of a detached party, the necessity of taking the most minute information, respecting the state and condition of an enemy, before he is marched against or attacked. The act of reconnoitring requires not only great presence of mind, a knowledge of ground, and an accurate combination of circumstances, but also a daring and unshaken soul.—Previous to the assault of a place, it is, above all, indispensably necessary, that the different parts of its fortifications should be scrupulously examined. The depth of its ditches, and the height of its walls, must be ascertained; for although a breach may have been effected, it does not therefore follow that the assault is practicable. Had these particulars been attended to in India, we should not have had to lament the untimely fate of so many brave and gallant countrymen, who fell before Bhurtpore; nor should we have to lament the melancholy issue of our attack upon Walcheren, had an extended system of reconnoitring been adopted. It is not our province to enter at large into the operations of our generals; but it is certainly our duty to point out, to the best of our ability, the means which can be adopted to forward the business of war, at the least expense of human blood and industry.

RECONQUÉR, (*reconquérir*, Fr.) to regain; to retake by force of arms.

RECONQUEST, (*reconquête*, Fr.) any thing regained by force; hence *pays reconquis*, a reconquered country.

RÉCOUPEMENT, *Fr.* a large recess made in a wall or building.

RECOUPES, *Fr.* shards; waste or rubble of stones.

Poudre de RECOUPES, *Fr.* pounded rubble which is mixed with mortar to resemble the stone.

To RECOVER *arms*, a position of the firelock when the piece is held with the lock equal to the left shoulder, and the sling to the front. The steadiness of soldiers is frequently proved by bringing them to the *recover*, after the word *present*.

To bring to the RECOVER. See *Recover Arms*.

RECOUSSE, *Fr.* rescue; help. The French make use of this expression, when soldiers, contrary to law and the rules of war, have seized upon the cattle, grain, &c. and are carrying their booty away; in which case, an alarm is given, and the civil powers dispatch persons after the plunderers to rescue the property which has been thus taken by violence. The party sent on this business is said to be gone *à la recousse*.—Hence *aller à la recousse*, to go out for the express purpose of rescuing stolen goods out of the hands of the marauders.

Droit de Recousse, *Fr.* a right which is vested in every individual, to rescue or get back what has been unjustly taken from him.

RECOUVREMENT, *Fr.* a sort of hem or border which is made to a work in order to fit it to something else.

RECRUITING, a term prefixed to certain corps and districts, which are specifically established for the recruiting service.

The **RECRUITING corps**, professedly so called, and having place in the Army List, consisted of *Ogle's, Loft's, Bradshaw's, Nugent's, Sir Vere Hunt's, Macdonald's, and Armstrong's*. There formerly were several others during the course of the late war, viz. the *Hon. George Hanger's, Steele's, French's* levy, &c.

RECRUITING Districts. These were established in 1802, and consist of eighteen divisions, whose head-quarters are at specified towns and places in Great Britain. The object is to produce an uniform system for the better recruiting of his Majesty's forces in Great Britain and Ireland.

An inspecting field officer is stationed in each district for the purpose of commanding them.

These inspecting field-officers are authorised to give an intermediate approval of the recruits whom they may judge fit for service, except in cases where regiments are so quartered as to render it, in point of distance, equally convenient for the recruits to be sent at once to the head-quarters of the regiment to which they belong, for final approval, and special authority shall have been given for that purpose.

An adjutant is attached to each inspecting field-officer, for the purpose of ascertaining the height, &c. of each re-

cruit, together with a surgeon, for that of examining his state of health, &c.

RECRUITS, (*recrues*, *Fr.*) men raised for military purposes on the first formation of a corps, or to supply the places of such as are disabled, or have lost their lives in the service.

The recruits made for the regular army of this country are generally enlisted for life.

RECRUIT-horses are the horses brought up for completing the regiments of horse and dragoons, &c.

RECRUTER, *Fr.* to recruit.

RECRUTEUR, *Fr.* a person duly authorized to enlist men. This word is used in contradistinction to *racoleur*, a crimp, which see.

RECTANGLE, } See **ANGLE**.

RECTANGULAR, }

RECTILIGNE, *Fr.* rectilinear, or right-lined.

RECTILINEAR, } after the man-

RECTILINEOUS, } ner, or consisting of right lines. This term is applied to figures whose perimeter consists of right lines.

RECUIT, *Fr.* a term used in the French foundries of artillery, signifying the nealing or hardening of a cannon-mould.

RECU du canon, *Fr.* the recoil of a piece of ordnance. See **RECOIL**.

RECU LADE, *Fr.* the act of recoiling, or falling back.

RECU LER, *Fr.* to fall back. This expression is used by the French in a figurative sense, viz.

RECU LER pour mieux sauter, *Fr.* to fall back or retreat, in order to return and advance with more energy.

RECU LER les bornes d'un pays, *Fr.* a figurative phrase, signifying to enlarge or extend the boundaries of a country.

RECU LER, *Fr.* to give way; to yield. The French say of a brave man, who has often faced the enemy, and stood his ground, *Il n'a jamais reculé*, he has never given way. *On ne l'a jamais vu reculer*, no one has ever seen him give way.

A RECU LONS, *Fr.* backward.—Hence *travailler à reculons*, to work or get on by going backward, as rope-makers do.

RECU SANTS, a name generally given to such persons as dissent from the Established Church. Of this description are Roman Catholics, vulgarly called Papists; Presbyterians, com-

monly called Round-heads; Methodists, generally styled Field-preachers; Anabaptists, Quakers, &c. &c. These persons, if English or Scotch, cannot hold a situation above that of a troop or company, in the British army: foreigners may.

REDANS, in field fortification, are indented works, lines, or faces, forming sallying and re-entering angles, flanking one another; generally constructed on the sides of a river which runs through a garrison town. They were used before bastions were invented, and are by some thought preferable to them. They are likewise called *ouvrages à scie*, from their resemblance to a saw.

RED-COAT, a familiar term for a British soldier.

REDDITION *d'une place*, Fr. the surrender of a besieged place.

RED Hot Shot, (*boulets rouges*, Fr.) shot made red hot, and in that state thrown out of cannon, against the vessels or magazines of an enemy.

REDENTS, Fr. This term is used to express the several projections which, in the building of a wall upon a sloping ground, are made towards the recess, in order to keep it upon a level by intermediate spaces; also, in foundations, the different recesses which are caused by the unevenness or inequality of the ground, or by a steep declivity.

REDENTS also signify the teeth or indentures of any machine or instrument that enter into one another.

RÉDIGER, Fr. to draw out.

RÉDIGER *des mémoires*, Fr. to draw out memorials.

REDINGOTE, Fr. a corruption of the English word *riding-coat*, which is familiarly used among the French; literally, a great coat.

REDINTEGRATION, the act of restoring any single substance, from a damaged mixed body, to its former nature and properties. Thus General Congreve, of the Royal Artillery, by the *redintegration* of nitre from damaged gunpowder, has effected a vast saving to government in that article.

REDOUBT, (*redoute*, Fr.) in fortification, a square work raised without the glacis of the place, about musket-shot from the town; having loop-holes for the small arms to fire through, and being surrounded by a ditch. Sometimes they are of earth, having only a defence in front, encompassed by a pa-

rapet and ditch. Both the one and the other serve for detached guards to interrupt the enemy's works; and are sometimes made on the angles of the trenches for covering the workmen against the sallies of the garrison. The length of their sides may be about 20 toises: their parapets must have two or three banquettes, and be about nine or ten feet thick. They are sometimes (in a siege) called places of arms.

REDOUBT is also the name of a small work made in a ravelin, of various forms. See FORTIFICATION.

REDOUBT, *castle or donjon*, a place more particularly intrenched, and separated from the rest by a ditch. There is generally in each of them a high tower, whence the country round the place may be discovered.

Detached REDOUBT is a work made at some distance from the covert-way, much in the same manner as a ravelin with flanks. See ARROW.

Field REDOUBT, a temporary defence or fortification, which is thrown up in a war of posts, or under sudden emergencies. Field redoubts are highly useful. By them Peter the Great, of Russia, gained the battle of Pultowa, which was fought on the 8th of July, 1709.

REDOUTER, Fr. to be alarmed at. *Redouter les armes d'un ennemi*, to be alarmed at the strength of an enemy.

REDOUTES *en crémaillère* differ from all the rest, because the inside line of the parapet is broken in such a manner as to resemble a pot-hook, or the teeth of a saw; whereby this advantage is gained, that a greater fire can be brought to bear upon the defile, than if only a simple face was opposed to it, and consequently the passage is rendered more difficult.

REDOUTES *de terre*, Fr. redoubts that are hastily thrown up, and are made with earth, for the purpose of securing entrenchments, circumvallations, passage of rivers, &c.

REDOUTES *de maçonnerie*, Fr. redoubts made of mason-work. These are generally constructed in places where an enemy might derive advantage from establishing himself; they are likewise built upon the salient angles of the glacis.

REDOUTES *casematées*, Fr. casemated redoubts. These are arched over and are bomb proof. Those constructed for the defence of Gibraltar, and for the

security of Doyer Castle, are of this description.

REDOUTES à *machicoulis*, Fr. redoubts made of brick or stone-work, which are several stories high. The highest story juts out about one foot beyond the wall that surrounds, or fronts, the redoubt.

REDRESSER, Fr. in a military sense, to recover. To make straight again, viz.

Redressez vos armes! Fr. Recover arms!

Redressez la ligne! Fr. redress or reform the line.

REDRESSER les torts, Fr. In the days of ancient chivalry, this expression signified to redress the wrongs of the oppressed. The knights, on these occasions, underwent the greatest hardships and faced the most imminent dangers.

To **REDRILL**, to drill again. To put a soldier through the first elements of military training.

To **REDUCE**, to make a thing less than it was; as, to reduce a regiment, leaving the officers on half-pay.

To **REDUCE a place** is to oblige the governor to surrender it to the besiegers, by capitulation.

To **REDUCE the circle**, to restore or bring back a battalion or company, which has been formed in circle, to its original position in line.

To **REDUCE the square**, to restore or bring back a battalion or battalions, which have been formed in a hollow or oblong square, to their natural situation in line or column. In Part IV. of Infantry Regulations, Sect. 139, the following method is laid down, whereby the square is to be reduced. On the word, *Form close column*, the files that faced outwards will come to their proper front, and the files that moved into the intervals will face about. At the word *Quick March*, the grenadiers take one pace forward, and the two rear companies take one and two paces forward, and then face about; the files from the intervals take their proper places; officers, serjeants, &c. will quit the interior, move to their several stations, and the companies that composed the flank faces will be completed; the companies will close inwards by sub-divisions one pace.

To be **REDUCED**, in a military sense, to be taken off the establishment, to cease to receive pay as soldiers.—

When a regiment is reduced, the officers are generally put upon half-pay.— Sometimes the corps are reduced, and the officers remain upon full pay. This happens at the close of a war, when the standing army of the country is confined to a certain number of battalions.— Hence is derived the expression *in and out of the break*. *In the break* is the liability of being reduced; *out of the break* is the certainty of being kept upon the establishment.

To be **REDUCED to the ranks**, to be taken from a superior appointment in a regiment, and to be ordered to the duty of a common soldier. This sometimes happens by ways of punishment, when a serjeant or corporal misbehaves himself. A serjeant, however, cannot at present be reduced, except by the sentence of a regimental court-martial. Formerly this necessary class of men was at the mercy of every slipshod officer that happened to have the command of a company, without the knowledge or abilities to manage its interior economy. The army is indebted to the late Marquis Townsend, for his manly exertions in favour of non-commissioned officers. According to the Regulations, printed officially, April 9th, 1800, if a serjeant be reduced to the ranks, his clothing is to be given in for the use of his successor; and he himself is to receive private's clothing, equally worn (or as nearly as may be) with the clothing he has given in.

REDUCT. See **REDOUBT**.

REDUCT, in building, a quirk or little place taken out of a larger, to make it more uniform and regular; or for some conveniences, as for small cabinets on the sides of chimnies, alcoves, &c.

REDUCTION des troupes, Fr. a reduction of the armed force of a country. We make use of the same term.

REDUCTION, in arithmetic, is the converting monies, weights and measures into the same value in other denominations, as pounds into shillings and pence, &c.

REDUIRE, Fr. in drawing, to copy, to reduce a plan or picture. This operation differs from that of chalking out. The French use the expression in various senses, viz.

REDUIRE en grand, Fr. to copy an original drawing by giving it larger dimensions.

REDUIRE en petit, Fr. to copy an

original drawing by giving it smaller dimensions, which is, literally, to reduce it.

RÉDUIRE *un plan au petit pied*, Fr. to make a copy of a drawing, in which every part is faithfully represented, though on a small scale.

RÉDUIRE *un bataillon*, Fr. to reduce a battalion, or to diminish its quota of men.

RÉDUIRE *en poudre*, Fr. to reduce to ashes.

RÉDUIT, Fr. literally means a nook, or bye-place; in a military sense, it signifies a sort of citadel, which is extremely inconvenient to the inhabitants of the town, because it takes up more ground than those that are regularly built, and is, at the same time, uncomfortable to the troops, because they must be very much crowded. This word is explained by an English lexicographer, in the following manner: *Reduct* or *Reduit*, an advantageous piece of ground, intrenched and separated from the rest of the place, camp, &c. for an army, garrison, &c. to retire to in case of surprize. *Reduits* are sometimes made for the purpose of securing different posts in a town independent of its citadel. These have been proposed by the celebrated Vauban.

RÉDUIT, in architecture, a recess.

REED, an arrow; also a musical instrument which has lately been introduced into this country, and is used in some military bands.

RÉEDIFIER, Fr. to rebuild.

RE-ENTERING *angle*, in fortification, is that which turns its point towards the center of the place. See FORTIFICATION.

RE-EVACUATION, (*ré-évacuation*, Fr.) the act of evacuating a place more than once. As the re-evacuation of Bilboa, in Spain, by the French army, in 1803.

REFAIT. *Bois refait et remis à l'équerre*, an expression used among French carpenters, and by the artificers belonging to the train, to signify any piece of wood which has been planed, and made perfectly square and level.—The ingenious compiler of the *Dictionnaire Militaire* has observed, under this term, that although this, as well as many other words, which have been inserted, cannot strictly be called military, yet they are not to be deemed entirely superfluous, when it is considered, that wood is necessarily used in the artillery, &c. We must offer the

same apology for having given place to many expressions and words which may not be thought rigorously technical in military matters.

REFEND, Fr. in architecture, a partition wall, viz. *Mur de Refend*.

REFENDRE, Fr. in carpentry, to cut up large pieces of wood with a saw, in order to make rafters, &c.

REFENDRE, Fr. among locksmiths, to shorten a piece of red hot iron, with the trenching knife and mallet.

REFENDRE, Fr. among masons, to split or divide slate into thin sheets, before it is made square or even.

REFENDRE, Fr. among paviers, to divide large stones into two pieces, in order to pave courts, stables, &c. with the split pieces.

REFEREE, (*référé*, Fr.) a person referred to. Every candidate for a vacant regimental paymastership in the British service, must have four referees from whom the War-office obtains the necessary information respecting the responsibility of himself and his sureties.

REFLUX, Fr. the ebb tide.

REFONDRE, Fr. to put damaged pieces of ordnance in the foundry, for the purpose of melting them down; to new cast.

REFONTE, Fr. the melting down again or new casting.

To REFORM, (*réformer*, Fr.) generally speaking, (in military affairs,) is to reduce a body of men, either by disbanding the whole, or only breaking a part and retaining the rest.

REFORM, (*réforme*, Fr.) reforming, reformation; reduction; a disbanding some part of an army.

To REFORM, in a military sense, is, after some manœuvre or evolution, to bring a line to its natural order, by aligning it on some given point. This frequently occurs in the passage of lines, &c. viz. when a line of several battalions has passed another that remains posted, by retreating through by files, it may be reformed in the following manner:

To REFORM by a flank battalion, on a central battalion, in an oblique position.

When by a flank battalion, the line that has passed is fronted in column, and the several pivots are dressed correctly before wheeling up into line. To effect this, the commander of the head battalion will instantly place the pivots of his three first platoons in a true direction, and order the officers of his other

platoons to line on them; himself remaining with the head placed at the point d'appui will see that this is correctly done. The first battalion thus steadied will become a sufficient direction for the second, and every other one, to prolong it by their adjutants; and this operation, though successive from platoon to platoon, and from battalion to battalion, may be performed quickly and correctly; if the adjutants are timeously detached, and if the head of the column is quickly arranged.

To REFORM a first line on a central battalion.

In order to give the alignment from a central battalion, after halting and fronting, the platoon pivots of the given battalion are, from its head, to be accurately lined by its commander in the true direction. This battalion being placed, from which distances and dressings are taken, the others will instantly proceed to line their pivot flanks upon it: those that are behind it will readily do this; those that are before it will find more difficulty, as they must take their distances from the rear;—to facilitate this necessary object, their platoon officers will face to the directing battalion, and will then successively take their distances and covering from their then front; as soon as each has acquired his true position, he will face about, and make his platoon join to and dress to him. The line will then be ready to form, by wheeling up to the pivot flank.

To REFORM a first line,—that has passed through a second which remains posted,—in an oblique position.

When it is found necessary that the passing battalions, which constitute the first line, should take a new position not parallel to the second, or to their own original formation, the commander with his two leading platoons will first enter it (i. e. the new position) and direct the others to regulate their flanks by them; and if several battalions are passing the second line, the new alignment is thus made easier for them.

It frequently happens, that a height in the rear is to be crowned by a retiring line. In this case, each officer must not dress exactly to the platoon that precedes him, but in joining it he must halt, and arrange his own in such a manner, that the slope of the rising or ascent can be entirely seen and commanded, which

is here the great object, and would not be attained, if the troops were to adhere to a straight line.

To REFORM, (*réformer*, Fr.) is likewise to reduce a corps of men, by either disbanding the whole or only breaking a part, and retaining the rest: or sometimes by incorporating them with other regiments.

REFORMADO, or *Reformed*. Reduced or disbanded officers were formerly so called, and they sometimes carried arms as privates, till they could be re-instated. Sir James Turner says, they were in some places permitted to be without arms.

RÉFORMÉ, Fr. the reduction of an armed establishment, such as is generally made at the proclamation of peace.

Officier RÉFORMÉ, Fr. an officer put upon half-pay; or *seconded* according to the regulations of the old French service.

RÉFORMÉ Officer, one whose troop or company being broke, is continued on full, or half-pay. He preserves the right of seniority, and continues in the way of preferment, by brevet.

REFOULER, Fr. to ram down.

REFOULOIR, Fr. See RAMMER.

REFRACTION, in mechanics, in general is the incurvation or change of determination in the body moved, which occurs while it enters or penetrates any medium.

REFUGEE, (*réfugié*, Fr.) See EMI-GRANT.

REFUITE, Fr. This is said of a mortise that has too much depth; also of a hole which is too large for the insertion of a piece of wood.

REFUS, Fr. This is said of a stake or pile which is driven in as far as it can be by main strength, or by the force of the rammer, and when the top must be cut off. Hence

Enfoncé au REFUS du mouton; driven in so deep that the rammer will drive it no deeper.

REFUSE, a military phrase, signifying to throw back, or to keep out of that regular alignment which is formed when troops are upon the point of engaging an enemy. This often occurs in order to occupy a particular position; to prevent the enemy's designs on any particular part of a line, or at least to make him take a greater detour to effect his purpose; or that he may be obliged to aligne his own on a height which is occupied, and from which he

may be flanked. When a first line has passed through a second, and it is found necessary to refuse a wing, the several platoons of that line must pass according to the wing which is to be refused. If the left, for instance, is to be posted, and the right to be refused, the platoons may pass from their left; the column will thereby have its left in front, will be more readily directed on the point of appui, and the preservation of distances will be facilitated, as they will then be taken from the front. If the right is to be posted, the platoons may pass from their right.

It may happen, where the passing line is to post one flank and *refuse* the other, that the officers will have their distances to take from behind; the original remedy for this inconvenience has been shewn (page 346, Part IV.); another also may be applied, which is to halt the whole, at any time after passing, and to countermarch each platoon, which will then cause the future formation to be taken from the front of the column.

A retiring line may also *refuse* a wing, by forming in line very soon after passing, and then taking up an oblique position to the rear, by the echelon march, or some other of the modes already prescribed. See Rules and Regulations, from page 357 to page 360, Part IV. See also pages 287 and 297 of Saldern's Elements of Tactics, translated by J. Landmann.

Frederic, surnamed the Great, king of Prussia, who had attentively studied the tactics of the ancients, first adopted the method of refusing a wing in the forming of an attack. This method has been since successfully followed by the best modern generals. It answers to a partial reserve of a force which is always ready at command; and in point of security, it is the reverse of what the French mean by *prêter une aile*, to expose a wing, or post it in a precarious manner. The French, during the whole of the action which was fought in Egypt, on the 21st of March 1801, refused their right wing. Notwithstanding this precaution, they were defeated by the British.

REFUSER, *Fr.* For its application in a military sense, see *To REFUSE*.

REFUSER, *Fr.* This word is used among the French as a sea-phrase, viz. *le vaisseau a refusé*, the ship has missed the wind.

REGAIN, *Fr.* in carpentry and masonry, means the surplus of a piece of stone or wood when it proves too broad or too long for any particular use, and must of course be taken off. It likewise signifies after-grass or math.

REGALER, *ou aplanir*, *Fr.* in architecture, to level, to lay or make even.

REGALEURS, *Fr.* persons employed in levelling ground.

REGARD, in old times an additional douceur which was paid to the troops over and above their daily stipend. This was a kind of perquisite to the commanding officer, or chief contractor with the Crown, for every body of men, to enable them to keep a table for their officers, and to provide for the different contingent expenses: the amount differed according to the nature of the service or country in which the troops were to be employed. These *Regards* were sometimes augmented, and often doubled.

REGATTA, (*regate*, *Fr.*) a rowing-match; a procession by water. This word is taken from the Italian, signifying a species of water tournament, or exhibition, which took place on the grand canal at Venice. The conqueror, on these occasions, received a prize from the seaate.

REGENCY, (*régence*, *Fr.*) the government of a state or kingdom, during the minority or absence of a prince, by one or more subjects; also a post of dignity with which one or more persons are invested under visitations of disease or incapacity in the lawful sovereign.

Regency also means certain persons who are at the head of different states in Europe.

REGET, *Fr.* switch.

RÉGIE, *Fr.* government, administration.

REGIMENT, (*régiment*, *Fr.*) a terra applied to any body of troops, which, if cavalry, consists of one or more squadrons, commanded by a colonel; and, if infantry, of one or more battalions, each commanded in the same manner. The squadrons in cavalry regiments are divided, sometimes into six, and sometimes into nine troops. The battalions of British infantry are generally divided into ten companies, two of which are called the flanks; one on the right consisting of grenadiers, and another on the left formed of light troops. There is

not, however, any established rule on this head: as both cavalry and infantry regiments differ according to the exigencies of service in time of war, or the principles of economy in time of peace. We are humbly of opinion, that every regiment of foot should consist of 2400 men, making three battalions of 800 each. The German regiments frequently consist of 2000 men; and the regiment of Picardy in the old French service had 6000. The French made a distinction between the commanding officer of a regiment of cavalry, and the commanding officer of a regiment of infantry. The former was styled *Mestre de Camp*, the latter *Colonel*, as with us.

With respect to the derivation of the word, it appears, that the best etymology is from the French word *régie*, management, which comes from the Latin *regere*, to govern. Hence a regiment is said to be governed by a colonel. M. Beneton, a celebrated French etymologist, differs from this explanation. He traces it from the French *régime*, which signifies system, regimen, administration, and which is again derived from the Latin *regimen*, bearing the same import.

Regiments were first formed in France in the year 1558, and in England in the year 1660.

Dromedary REGIMENT, a corps raised by the French during their stay in Egypt. The men were mounted upon dromedaries. To quote the words of Mr. Morier, in his account of a campaign with the Ottoman army in 1800, the dromedaries composing this troop are made to go through a number of evolutions, and when attacked they are formed into a hollow square: they kneel, and by means of a cord which is thrown round one of the knees, they are prevented from getting up, and thus they afford a breast-work for the soldier.—The same author observes in a note, page 59, that the most convenient and only way of travelling in Egypt is upon dromedaries. The traveller need not encumber himself with food for his animal, as a very scanty allowance of beans suffices for many days' journey. Travellers ride upon convenient saddles; and the animal is so docile, that he is guided only by touching him with a small stick on the side that he is to turn. Some have a ring through each nostril, which serves

as a bit to a bridle fastened to them. They walk very fast; and their trot is swift, but very inconvenient.

Cape REGIMENT, a corps which was raised during the late war for the specific purpose of doing duty at the Cape. It was originally suggested by Colonel King. See HOTTENTOTS.

Malay REGIMENT, a corps raised for the specific purpose of doing duty in the island of Ceylon.

Literary REGIMENT, (*Régiment Littéraire*, Fr.) a corps formed of the students of Salamanca during the Spanish struggle for independence in 1808.

REGIMENT, a figurative term signifying an association of particular persons, who are under the influence of particular principles, for the execution of particular purposes.

Standing REGIMENT, (*régiment entretenu sur pied*, Fr.) one out of the break.

REGIMENTAL, any thing belonging to a regiment.

REGIMENTAL-staff. See STAFF.

REGIMENTAL courts-martial. See COURTS-martial.

REGIMENTAL band. See BAND.

REGIMENTAL book. See BOOK.

REGIMENTAL parade. See PARADE.

REGIMENTAL orders. See ORDERS.

REGIMENTAL leave, (*congé régimentaire*, Fr.) permission granted by the commanding officer of a battalion.

REGIMENTAL necessaries. By the Mutiny Act, it is declared, that any person buying, detaining, or exchanging any articles called regimental necessaries, or who shall cause the colour of the clothes to be changed, shall forfeit 5*l.* Soldiers selling or exchanging them, are liable to military punishment, &c.

REGIMENTAL receipts for forage on service, vouchers which must be produced by the contractors of an army to authorize them to have their claims discharged by the commissary-general or his deputies.

REGIMENTALS, the uniform clothing of the army; as a hat, coat, waistcoat, breeches, stocks, shoes, boots, gaiters, &c.

REGIR, Fr. to rule; to govern; to manage. Thus Frederick the Great of Prussia says in his Poem on the Art of War:

Dans des honneurs obscurs vous ne vieillirez pas;
Soldat! vous apprendrez à RÉGIR des Soldats.

REGISTRAR in the Commons. See PRIZES.

RÉGLE, *Fr.* rule; order; method.

Etre en RÉGLE, *Fr.* to be regular; to conduct one's self according to order.

RÉGLÉ, *Fr.* exact, punctual.

Vent RÉGLÉ, *Fr.* a trade wind.

RÉGLEMENT, *Fr.* regulation.

RÉGLET, *Fr.* in architecture, a flat narrow moulding which separates the various parts of pannels, &c. The Reglet, or flat moulding, differs from the lintel or fillet, in as much as its profile is every where like a ruler.

RÉGLOIR, *Fr.* a ruler.

RÉGLURE, *Fr.* ruling, lines made by a ruler.

REGRATTER, *Fr.* in architecture, to scrape the outside of a building.

Among engravers, this word signifies to re-touch a plate.

REGULAR, in geometry. A regular body is a solid, whose surface is composed of regular and equal figures, and whose solid angles are all equal. Such as the *tetrahedron*, *hexahedron*, *octahedron*, *dodecahedron*, and *icosahedron*. These are the only regular bodies that can be found.

REGULAR figures, in geometry, are those whose sides, and consequently their angles, are all equal to one another; whence all regular multilateral planes are called *Regular polygons*.

The area of such figures is speedily found, by multiplying a perpendicular let fall from the center of the inscribed circle to any side, by half that side; and then that product by the number of the sides of the polygon.

REGULAR attacks, in a siege, are such as are made in form; that is, by regular approaches. See **ATTACKS**.

REGULAR, when applied to the army, signifies well disciplined, and fit for any service. Hence regular troops, or regulars.

REGULARS, (*troupes régulières*, *Fr.*) those troops whose conditions of enrolment are not limited to time or place, in contradistinction to fencible, militia, or volunteer corps; called also *The Line*.

To **REGULATE**, to adjust by rule or method.

REGULATING battalion. See *Parallelism of a March*.

REGULATION, the act of regulating, or adjusting by rule or method.

REGULATION, a term generally used in the British army to signify the regulated

price at which any commission, or saleable warrant, is permitted to be disposed of. These prices have been fixed by the King. For particulars, see *Military Finance*.

To *buy or sell at the REGULATION*, to give or receive for a commission the exact sum that has been settled by the King's authority.

Cavalry REGULATIONS, a book published by Authority, so called. It contains specific instructions for the formations and movements of the British cavalry; which are, by his Majesty's commands, to be strictly observed and practised by the cavalry corps in general, in the British service, till further orders. The Commander in Chief has further directed, that every officer of cavalry shall be provided with a copy of these Regulations, and the commanding officers of corps are to take care that this order be duly observed.

Infantry REGULATIONS, a book published by authority, so called. This ingenious system of tactics has been translated and compiled from the best foreign authorities, and has been adapted to the British service by General Sir David Dundas, to whose indefatigable industry and perseverance not only the government of the country, but the army at large, stand considerably indebted.

General REGULATIONS and Orders, a collection of certain general rules published by authority, which are to be considered as the ground-work of those instructions that generals commanding districts, and officers in the command of brigades and regiments, forts and garrisons, may find it necessary to issue to the troops under their respective commands.

Military REGULATIONS, certain laws by which armies are governed, and the routine of service is preserved.

REHABILITATION, *Fr.* the act of restoring a person to his former rights or privileges, &c.; reinstatement.

RE-IMBODY is to embody again any regiment or corps that has been disbanded. Thus, the militia is disbanded, and partially re-imbodied for 28 days in every year, during peace.

REINCEAU, } *Fr.* in architecture,
RINCEAU, } foliage, such as is used for ornament in frizes, pannels, &c.

REINFORCE, that part of a gun next to the breech, which is made

stronger than the rest of the piece, in order to resist the force of the powder. There are generally two in each piece, called the first and second reinforce: the second is something smaller than the first, upon the supposition, that when the powder is inflamed, and occupies a greater space, its force is diminished; which is not the case. See **CANNON**.

REINFORCE-ring. There are three in each gun, called the first, second, and third: they are flat mouldings, like flat iron hoops, placed at the breech end of the first and second reinforce, projecting from the rest of the metal by about one quarter of an inch.

REINFORCEMENT to the army, an addition of fresh troops to strengthen an army, in order to enable it to go on with an enterprize, &c.

REJOINER. In military courts-martial the prisoner is entitled to a rejoinder; that is, when the prosecutor makes a reply to the defendant, the latter may answer again.

REINS, *Fr.* the loins, lower part of the back.

REINS de vouûte, *Fr.* mason work of rubble and plaster, which fills up the extrados of an arch up to its crowning.

REINS vuïdes, *Fr.* those parts of an arch which are not filled up, in order to render the weight less.

REINS, two long slips of leather fastened on each side of a curb or snaffle, which the rider holds in his hand to keep his horse in subjection. Also two straps or ropes of a cavesson, made fast to the girths, or pommel, of a saddle in order to bend, or supple, the neck of a horse.

False REIN is a lathe of leather passed sometimes through the arch of the banquet, to bend the horse's neck.

To REINSTATE, to place an officer or non-commissioned officer in the same rank and situation from which he had been removed.

To REJOIN, to meet again; to return; as, He left his regiment when it broke up camp, but rejoined it before the army marched into the enemy's country.

REJOINTOYER, *Fr.* in architecture, to put fresh mortar or cement into the chasms or holes which have been occasioned by wear and tear in an old wall.

RÉJOUISSANCES publiques, *Fr.*

public rejoicings or thanksgivings. Chevalier Folard makes a curious and interesting comment relative to this subject, in one of his notes upon Polybius. He therein asserts, that the *Te Deum*, or thanksgiving to God, was as much practised among the heathens as it is among the moderns.

REISTRE, *Fr.* a German horseman; also the large cloak which he wears.

REITRE, *Fr.* a term derived from the German, signifying a cuirassier or mounted soldier; a dragoon. It is used among the French to express derision and contempt. They say, for instance, *de quoi s'avise ce vicux Reitre de devenir amoureux à soixante et quatorze ans?* What can induce this old dotard to fall in love at seventy-four?

REITRES, a body of horse, of which the élite of the German cavalry was formerly composed. This corps was of infinite use to France during the regency of Catharine of Médicis. The king of Navarre had upwards of 35,000 of these troops in support of the Calvinists. During the reign of Henry III. they were incorporated with the carabineers of France.

RELAIS, *Fr.* a term used in fortification to signify a space, containing some feet in breadth, which is between the foot of the rampart and the scarpe of the fosse. It serves as a convenient receptacle for the earth that occasionally crumbles off.

Chevaux de RELAIS, *Fr.* horses kept in prescribed places on the high way, for the dispatch and convenience of such persons as ride express, &c.

A RELAIS, *Fr.* at rest; not used.

Par RELAIS, *Fr.* by turns; one doing something whilst another rests.

RELATION ou RECIT, *Fr.* any account or description which is given of a war, or battle, or warlike feat, &c.

RELAXATION, (*relâchement*, *Fr.*) remission of attention or application.

RELAXATION of discipline, (*relâchement de la discipline militaire*, *Fr.*) Plutarch, in his life of Caius Marius, very properly says, "The soldiers are more fond of the commander who will assist them in their work, than of him who encourages them in idleness."

RELAY, horses on the road to relieve others.

RELAY-horses, in the artillery, are spare horses that march with the artillery and baggage, ready to relieve others, or

to assist in getting up a hill, or through bad roads, &c.

RELAYER, *Fr.* to relieve; to lessen the labour of any particular set of men by occasionally sending fresh workmen.

RELEASE The commanding officer alone has the prerogative of releasing a prisoner from confinement, after he has once been duly given in charge to the guard, with his crime or crimes stated in writing; or of remitting after he has been adjudged to suffer military punishment; except in cases of a general court-martial, when the king alone can remit or mitigate.

RELEGUÉ, *Fr.* a retirement, or pension, which was formerly given to a veteran gendarme in the French service.

RELEVÉE, *Fr.* the afternoon.

RELEVER, *Fr.* to relieve. Hence,

RELEVER *une sentinelle*, *Fr.* to relieve a sentry, by posting another soldier in his room.

RELEVER *la garde*, *Fr.* to relieve guard.

RELEVER, *Fr.* This word is also used by the French to hold, or to have a right to. Thus, *Le roi ne relève que de Dieu seul*; the king holds of God alone.

RELEVER *les vieux fossés*, *Fr.* to cleanse or scour the old ditches.

RELEVER *la tranchée*, *Fr.* to relieve the troops that have been doing duty in the trenches.

RELIEF, *Fr.* an order, given by the minister at war, to authorize an officer to receive the arrears of pay which had accumulated during his absence from the regiment.

RELIEF, *Fr.* in architecture, means the same as the term does when used in English.

RELIEN, *Fr.* the broken grains of gunpowder which have not passed through the sieve.

To RELIEVE *the guard*, to put fresh men upon guard, which is generally done every 24 hours.

To RELIEVE *the trenches*, to relieve the guard of the trenches, by appointing those for that duty, who have not been there before, or whose turn is next.

To RELIEVE *the sentries*, to put fresh men upon that duty from the guard, which is generally done every two hours, by a corporal who attends the relief, to see the proper orders are delivered to the soldier who relieves.

RELIEVER, an iron ring fixed to a handle by means of a socket, so as to be at right angles to it; it serves to dis-

engage the searcher of a gun, when one of its points is retained in a hole, and cannot be got out otherwise. See SEARCHER.

RELIEVO, (*relief*, *Fr.*) in architecture is the projecture of any ornament. D'Aviler observes, that this ought always to be proportioned to the magnitude of the building it adorns, and the distance at which it is viewed.

RELIGION. Vauvenargues says very properly, in one of his maxims, (*viz.* 538.) *Le plus sage et le plus courageux de tous les hommes, M. de Turenne, a respecté la religion; et une infinité d'hommes obscurs se placent au rang des génies et des ames fortes, seulement à cause qu'ils la méprisent.*

The author of a small volume entitled: "Cautions and Advices to Officers of the Army, particularly Subalterns," makes the following observations upon this important and vital subject.

"I have in the course of my advice generally persuaded you from vices upon a principle of *morality* only; but I would fain arm you with a more sovereign, a more infallible antidote against them, and that antidote is religion; *whose yoke is easy, and the burden light.* Do not think that I am going to turn *preacher*, that is neither my province nor my intention; but as I was never yet ashamed of being known for a christian, I would recommend a religious life, not the rigidity of a *Carthusian*, or a *Methodist*, as the means of making you a better *man*; and of instigating you to the discharge of your duty as a soldier, upon the principle of *conscience*. I would have you brave from a sense of duty, and not from vanity, or interest; your pay will not be less *here*, for expecting a reward *hereafter*; nor will your actions be less illustrious, by rising on the basis of virtue. It will be well worth your while to raise your ambition to this noble height. I could never yet be induced to believe, that the duties of a *soldier* were incompatible with those of a *christian*. On the contrary, I am sure religious men must make the best soldiers. *Religion alone* can furnish them with the only true, the only real courage. *Religion alone* will cause them to have no dread, anxiety or fears for futurity, and consequently will make their behaviour in action, more regular and uniform, than the poor abandoned wretch whose *bad* life then stares him in the face, and whose behaviour

there sufficiently indicates the disturbance in his breast. With what serenity of countenance he faces danger, who has no reflexion, but that of having done his duty to God and man, to the utmost of his frail abilities; for it is sin alone arms death with terrors; innocence *dares* provoke it, and even charge *through hell*: for death can only take from pious *christians* a life they *must* surrender to nature, its power only reaches the body, and its dominion expires with our last breath.—With what dread, what anxiety and fears must he be possessed at such a time, whose mind is distracted with horrors accumulated for the ills he has committed: terrible must be his situation indeed! For you may as soon strike fire out of ice, as valour out of crimes. Keep therefore yourself clear of sin: you will fight with a good heart, if a good conscience follows you to the engagement, and will either come off a *conqueror*, or fall a *hero*; but if crimes draw upon the soul, whilst *muskets* and *artillery* play upon the body, fortitude will not long stand by you. Courage without a good conscience trembles at hell, and leaves a man dispirited when he most needs support: for who will charge an enemy through smoke and fire, that fears the next moment to plunge into everlasting torments? *If therefore you have a mind to fight well, resolve to live well.*

“I have read of a general,” continues the same writer, “who always used, when going on to action, to pull off his hat at the head of his troops, and with an audible voice pronounce this pathetic prayer: *O my God, if in the hurry of this day's duty I forget thee; forget not thou me, O Lord.* It is recorded of the late King William, and the Duke of Marlborough, that before an expected general engagement, they have passed the whole night in prayer; and before they went out to head their troops, have received the sacrament from the hand of their Chaplains. Did they fight ever the worse for this? or, was their courage, or military conduct ever called in question for it?—I think not. Religion, then, professedly makes the best soldiers: and if nothing else could make them religious, *this* of a conscientious discharge of duty ought to be sufficient encouragement to the practice of it; since he who obeys his God, to the utmost of his power, will exert that power also to the utmost, to *serve* and obey his King.”

REMAILLER, *Fr.* to piece a broken coat of mail or net, with new links or meshes.

A REMAIN, a term used among storekeepers belonging to the board of ordnance, &c. to express the actual quantity of stores which is found at an outpost, &c. when a new storekeeper is appointed.

REMAINS of stores are ordered to be taken at all places at home, once in seven years, as also at the expiration of a war. In foreign parts a *remain* is taken only on the appointment of a new storekeeper. See *OFFICE of Ordnance*.

To REMAND, to send back; as when a soldier who has been brought out of prison, or the guardhouse, for the purpose of being examined or tried, is sent back without any thing final occurring relative to his case.

REMANIER, *Fr.* See *MANIER à bout*.

To REMARK, to take note of any thing.

REMARKS. Army returns, regimental statements, guard reports, &c. have a column allotted for remarks and observations relative to extraordinary occurrences.

REMBARQUER, *Fr.* to re-embark.

REMBLAI, *Fr.* earth collected together for the purpose of making a bank, way, &c.

REMBLAYER, *Fr.* to collect earth together.

REMBOITEMENT, *Fr.* setting into joint again.

REMBOITER, *Fr.* the same as *emboiter*, to replace, to put together. The latter term is used by the French in artillery and cavalry manœuvres. It is the correlative to *déboiter*, to break off.

REMBOURSEMENT, *Fr.* reimbursement; repayment.

REMENÉE, *Fr.* a sort of small arch over a door or casement.

REMETTRE, *Fr.* to restore, to bring back again. It is frequently used in a military sense, viz. *Remettre un bataillon*, to restore, or bring back a battalion to its original formation.

Se REMETTRE, *Fr.* to take a former position, to return to the original ground.

REMETTEZ vous! This term agrees with the British phrase—*As you were!*

REMISE *de galère*, *Fr.* a particular place in a dock that is covered in, under which the gallees lie afloat.

REMISE, *Fr.* a coach-house; also a remittance of money.

REMIT, to lessen; as to remit a part of a soldier's punishment. See RELEASE.

REMMANCHER, *Fr.* to new haft.

REMOLADE is a less compounded *Honey charge* for horses.

To REMONSTRATE, to make a representation of a case or cases wherein one or more may consider themselves to be aggrieved. Military men may remonstrate through their superior officers; but where the duty of the service is concerned, that duty must be first performed with cheerfulness and fidelity.

REMONTER, *Fr.* to remount.

REMONTER *une compagnie de cavalerie*, *Fr.* to remount a troop of horse.

REMONTER *une rivière*, *Fr.* to sail up a river.

RÉMORA, *Fr.* This word is sometimes written *Rémore*, and signifies obstacle, hindrance. It comes from the Latin *Remora*, a small fish, which was supposed by the ancients to impede the progress of a ship.

RÉMORAL, *Fr.* an officer belonging to a galley who has charge of the oars.

To REMOVE, to change the situation of a person.

A REMOVE, a term used in farriery signifying the taking off a horse's shoe, for the purpose of paring, or doing something to the hoof or foot.

A REMOUNT, (*remonte*, *Fr.*) means a supply of good and serviceable horses for the whole or part of a cavalry regiment.

To REMOUNT, (*remonter*, *Fr.*) To remount the cavalry or dragoons, is to furnish them with horses in the room of those which have been either killed, disabled, or cast.

Se REMPARER, *Fr.* to seize suddenly; also to make a prompt and vigorous defence against any sudden attack.

Se REMPARER *d'une place*, *Fr.* to get possession of a place which has been in the hands of the enemy.

REMPART, *Fr.* a rampart.

REMPIÈTEMENT, *Fr.* the act of repairing the base of a wall, which has given way, or is grown defective.

REMPIÈTER *un mur*, *Fr.* to refit or repair the base or foot of a wall.

REPLACEMENT, *Fr.* the act of replacing, filling up, or succeeding.

En REPLACEMENT, *Fr.* in room of.

REPLACER, *Fr.* to succeed to; to fill up a place or situation originally occupied by another.

REPLIR *un poste*, *Fr.* to fill a post; to hold a situation.

REPLIR *son devoir*, *Fr.* to do one's duty.

REPLISSAGE *de muraille*, *Fr.* the inside of a wall which is filled up with rugged stone or materials.

REMPORTER, *Fr.* to carry away; to bear away.

RENARD, *Fr.* among well-diggers or spring searchers, a small fissure or opening which is made in the inside covering or lining of a basin, reservoir or dam, through which the water insensibly oozes out.

RENCONTRE, *Fr.* This word has been adopted amongst us, and signifies either a private quarrel, in which individuals accidentally meet and fight; or an unexpected or irregular combat between two bodies of armed men, who belong to armies that are in hostile opposition to each other. Thus, as in the former instance, it serves to distinguish the casual determination of a feud or difference from the pre-determined and settled plan of a duel; so in the latter it marks the difference between a skirmish, &c. and a regular battle.

Rouë de RENCONTRE, *Fr.* a balance wheel.

RENDER. See SURRENDER.

RENDEZVOUS, } in a military sense,
RENDEVOUS, } the place appointed by the general, where all the troops that compose the army are to meet at the time appointed, in case of an alarm.— This place should be fixed upon, according to the situation of the ground, and the sort of troops quartered in the village. In an open country it is easy to fix upon a place of rendezvous, because the general has whatever ground he thinks necessary. In towns or villages the largest streets, or market-places, are very fit; but let the place be where it will, the troops must assemble with ease, and be ready for the prompt execution of orders.

RENDRE, *Fr.* to surrender a fortified place upon terms of capitulation.

RENDRE *l'épée, les armes*, *Fr.* to deliver up sword and arms, or to submit to the discretion and humanity of an opponent.

Se RENDRE *sans coup férir*, *Fr.* to give up, or become prisoner of war without striking a blow.

Se RENDRE *à son poste*, *Fr.* to repair to one's station; to join.

RENDU, *Fr.* surrendered, given up.

Soldat RENDU, Fr. This term is used to express the difference between a soldier who deserts to the enemy, and one who lays down his arms. In the former instance he is called *Déserteur*; in the latter, *soldat rendu*. It is sometimes used as a substantive, viz. *un rendu*, a man who has surrendered.

RENEGADE, } a deserter; any one

RENEGADO, } who goes over to the enemy.

To RENEW, (*renouveler, Fr.*) to repeat; to begin afresh. Hence, To renew hostilities.

RENEWAL, the act of renewing; as, The *renewal* of hostilities.

RENFLEMENT *de colouac, Fr.* the belly or swelling of a pillar.

RENFONCÉMENT, *Fr.* any hollow space. In fortification it more immediately signifies the opening or passage which has been made in the glacis of the covert way, for the purpose of rendering the communication with the traverses more commodious to the troops.

RENFORCER, *Fr.* to reinforce; to strengthen; to fortify.

RENFORMIS, *Fr.* the repairing of an old wall in proportion to its decay.

RENFORMIR, RENFORMER, *Fr.* in building, &c to repair an old wall by putting in fresh stones, or shards, where they are wanted, and by stopping up the holes. It also signifies to make a wall, which is thicker in one part than another, equally strong throughout.

RENFORT, *Fr.* reinforcement.

RENFORT, *Fr.* a certain part of a cannon so called. See REINFORCE.

RENFORT, *Fr.* the joining of several pieces of wood together, for the purpose of strengthening any particular work.

RENIVELER, *Fr.* to measure again, or lay even with a level; to sound again with a plummet.

RENN-fane, the standard of a troop of horse,

RENOMMÉE, *Fr.* Fane (an allegorical figure, which has been so beautifully described by Virgil, with her hundred mouths) not only publishes to the world at large, all great and good actions, but also (sooner or later) gives an ample detail of all the bad and mischievous deeds by which vic-

torious are ultimately disgraced; and of all the crimes and vices by which the heroes of the day are dishonoured. The testimony she bears in both instances is so far indisputable, that she is beyond the reach of flattery or corruption, and consequently discloses every thing she sees or hears.

RENOWN, or Reputation, (*renom, ou réputation, Fr.*) the character acquired by means of great and good actions.

RENVOI, *Fr.* sending back; any thing returned.

Chevaux de RENVOI, Fr. returned, or cast horses,

REPAIR of arms, (*réparations d'armures, Fr.*) the keeping in constant good order the different fire-arms belonging to a troop, or company; such as muskets, pistols, &c.

RÉPAIRE, *Fr.* a mark which is made on a wall, in order to draw a straight line, or to stop a measurement at a given distance, or for the purpose of fixing certain points in levelling.

RÉPANDRE, *Fr.* to spread; to give out.

RÉPANDU, *Fr.* This word is applied to a person who is generally known, and who mixes much in society.

RÉPARATIONS *dans un régiment, Fr.* repair of arms, necessaries, camp equipage, &c.

RÉPARATION *d'honneur, Fr.* a reparation of honour. Under the word *Injure*, in the *Nouveau Dictionnaire Militaire*, by A. T. Gaigne, we have found an elaborate article respecting the notice which ought to be taken when injuries have been received, and insults offered. This article concludes with the following observation, which combats the prevailing practice of duelling. "In my opinion, true grandeur of soul is more shewn (*par une réparation publique*) by an avowal of one's wrong, and an open apology to the party aggrieved, than by an appeal to the sword in private combat. This rule of conduct is conformable to all the principles of honour and honesty; whilst a deviation from it is contrary to all human and divine institutions: so much so, that the very persons who lose sight of them, run into dark and retired spots for the purpose of gratifying a spirit of revenge." This language is certainly correct; but how far it will be followed, even by those who feel the justness of

it, daily experience must determine. For our own ideas on the subject, see HONOUR.

RÉPARER *une injure*, Fr. to apologise to another for an injury done, or an insult offered.

REPART, to put a horse on, or make him part a second time.

RÉPARTIR, Fr. to divide; to separate; to detach.

RÉPARTITION *des troupes*, Fr. distribution of troops in different quarters.

RÉPARTITION also signifies division, as in manœuvring.

To **REPEAT**, (*répéter*, Fr.) to say or do the same thing over again.

To **REPEAT** *signals*, (*répéter les signaux*, Fr.) to do over again any sign or token which is given for the execution, or the communication of a thing. Hence, the repeating signals in a fleet, &c. See **SIGNAL**.

To **REPEAT** *private conversation*. See **PRIVATE**.

REPERTORY. See **MAGAZINE**.

To **REPLACE**, to put back; to put in the room of. The French say in the latter sense, *remplacer, être remplacé*.

To be **REPLACED**, to be put back to an original situation, as to be replaced upon the half-pay establishment of a regiment, after having been brought to full pay: also to be superseded by the appointment of another.

REPLATRER, Fr. to plaster over again.

REPLIER, *Se replier*, Fr. to fall back; to retreat. In military movements, to take a rear direction towards any particular part of the line, viz. *Se replier sur la droite*, to fall back upon the right.

REPLIER is also used in an active sense; as, *Replier la première ligne d'une armée sur ses réserves*, to throw back the first lines of an army upon its reserved corps.

REPLY, (*réplique*, Fr.) answer; return to an answer. After the prisoner's defence before a court-martial, the prosecutor or informant may *reply*, but without noticing any matter foreign to the crime or crimes expressed in the charge.

REPOLON is a demi-volt; the croupe is closed at five times.

REPORT, sound; loud noise; as that made by the discharge of a musket or cannon.

REPORT of the *Military Commissioners appointed by Act of Parliament*, a report which was made for the information of his Majesty, the parliament and the nation at large, on the several establishments belonging to the British army, &c. with a specific statement of all monies that have been issued for the different services. These commissioners sat throughout the year, and their reports were laid upon the table of the House of Commons for the perusal and examination of the members. They were appointed by Mr. Pitt in 1805, and were abolished in 1813.

REPORT, specific statement of persons and things. Although this word may, in some sense, be considered the same as *Return*, yet it so far differs in military matters, that it is less comprehensive, and relates more immediately to persons and occurrences than to things.

General officers report to the Commander in Chief only.

The Commander in Chief's guard reports to himself by one of his aides-de-camp.

Reports of cavalry are given in to the senior generals of cavalry; and reports of infantry, to the senior general officers of infantry. On a march the field officer of the picket reports to the general of the day who leads the column; and in camp to the next superior officer to himself. A provost marshal gives in his return of prisoners, and reports to the general of the day.

Deputy judge advocates, acting in districts, or garrisons, &c. send in the minutes of courts-martial, and report to the judge advocate general, without going through any general officers. Regimental surgeons report to their commanding officers; and surgeons in districts, &c. to the medical board.

The Life Guards report, through the Gold Stick, to the King direct, from whom they receive the parole.

The Foot Guards report, through the field officer of the day, to the King direct.

All other troops belonging to the British service (the Marines excepted, who report to the Admiralty) report through their several commanding officers, &c. to the adjutant general and secretary at war, and to the Commander in Chief.

Special **REPORT**. A special report is

said to be made when the name of an officer is transmitted by his commander to the general of a district, independent of the regular returns; and some specific instance of good or bad conduct is laid before him. It must be generally remembered that every officer on his arrival from abroad with a regiment, or detachment of troops, must report himself to the governor, or commanding officer of the sea-port at which he arrives; and every officer who takes his passage for foreign service must do the same previous to his departure.

The senior officer in each recruiting quarter reports weekly to the field officer of the district, the number and strength of the parties therein. The field officers commanding recruiting parties in districts, report to the inspector general, to whom all returns and reports are to be transmitted by them, and not direct from the recruiting officers.

Reports are made daily, weekly, every fortnight, or monthly, according to circumstances.

The various subordinate reports consist of

Report of a rear guard.

Report of a barrack guard.

Report of a quarter guard.

Report of the sick, commonly called Sick Report.

Report of a main guard, and its dependencies, &c. &c.

In the column of remarks which must accompany each of these reports, it is necessary, for the person who signs, to specify all casualties and extraordinary occurrences according to the particular nature of each report. The different hours at which the grand rounds, visiting rounds, and patrols went, must likewise be put down.

REPORT of military operations, a statement of what has passed during campaigns, or on any particular expedition.

REPOS, *Fr.* rest; ease. It is used by the French as a word of command.

REPOS! *Fr.* Stand at ease!

Quartiers de REPOS, Fr. Those places are so called where troops remain for some days to refresh themselves. They correspond with our *halt-ing days*.

REPOS, *ou palier d'escalier, Fr.* landing place in a staircase. In large flights, where there are several landing places,

the latter must have the breadth of two steps at least. Those that are upon the winding part of the staircase must be square.

REPOS, *Fr.* in hydraulic architecture, the upright in a floodgate which remains stationary.

REPOS also signifies certain round pieces of wood, which are covered with brass, that bear the same name, upon which the floodgate turns with more facility.

Soldat REPOSÉ sur l'arme, Fr. a soldier standing at ease with ordered arms.

In REPOSE, (en repos, Fr.) This term, which is manifestly taken from the French, applies to troops, that are allowed to be stationary for any given period, during an active campaign, either through sickness, or from some other cause. Thus the 5th regiment being *in repose*, it was judged expedient to order the 28th to advance by forced marches.

REPOSER, *laisser Reposer, Fr.* to permit the garrison of a place, which has been closely and vigorously besieged, to relax from the severity of their former discipline. The same is said of troops, who, after having executed all the plans, orders, and measures laid down for the conquest of any town, &c. are allowed to be in repose.

REPOSEZ-vous sur vos armes! *Fr.* Order arms!

REPOSITORY, a place, or repository, in which any thing is preserved. Thus the Royal Repository, at Woolwich, contains models of every sort of warlike stores, weapons, and fortification; whether invented by officers of the army, or civilians, as well of other nations as of Great Britain and Ireland; receipts being given to preserve the title to the inventor. The Royal Repository is indebted to the ingenuity of General Congreve, for some of its most useful and important instruments of escalade, fortification and gunnery. It is under the immediate controul of one superintendent, and consists of 1 modeller, 1 clerk, and 1 draftsman.

REPOSOIRES *d'un escalier, Fr.* the rests or landing places of a half-pace stair; every fifth or sixth step being much broader than the rest.

REPOSTE is the vindictive motion of a horse that answers the spur with a kick of his foot.

REPOUS, *Fr.* a sort of small plaster which comes from old mason-work, and is made into mortar with brick dust, lime, &c. for the purpose of laying it upon moist soil.

REPOUSSER, *Fr.* to drive back, to repél.

REPOUSSOIR, *Fr.* an iron driver used by carpenters to force out wooden pegs, &c. a chissel.

REPOUSSOIR, *Fr.* a small stick which artificers and fireworkers use in making fire pots and other works.

REPRENDRE, *Fr.* to retake.

REPRENDRE *courage, haleine pour marcher de nouveau à l'ennemi*, *Fr.* to resume courage, or take breath in order to march afresh against an enemy.

REPRENDRE *un mur*, *Fr.* to repair a wall at the top.

REPRENDRE *un bâtiment sous œuvre*, *Fr.* to repair a building at its base, or to underpin it.

REPRÉSAILLER, *Fr.* in a military sense, to retaliate, or to subject the prisoners who may fall into our hands, to the same treatment which is experienced by our own troops. When an enemy violates, or breaks through the rights of nations, and the established rules of war, the vengeance which is taken by his opponent is called by the French *représailles*, retaliation. Great Britain is, perhaps, the only country in the world, in which the minds of the inhabitants are impressed with those natural principles of humanity, that make them rise superior to the dictates of private revenge. During the campaigns in Flanders, when His Royal Highness the Duke of York commanded the British army, there were several instances in which the clemency of the English character was eminently conspicuous. But on no occasion has it ever appeared in so bright and unquestionable a light, as when Robespierre, from a barbarous and mistaken policy, prevailed upon the members of the French Convention to issue a decree, that no quarter should be given to the British and Hanoverian prisoners. This decree, which was forwarded to the army under General Pichegru, was no sooner known at the British head quarters, than his Royal Highness the Commander in Chief immediately gave out

the following general order, which must ever do him honour as a gentleman, a soldier, and a christian.

“ *H. Q. Tournay, 7 June, 1794.*

“ His Royal Highness the Duke of York thinks it incumbent on him to announce to the British and Hanoverian troops under his command, that the National Convention of France, pursuing that gradation of crimes and horrors which has distinguished the periods of its government, as the most calamitous of any that has yet occurred in the history of the world, has passed a decree, that their soldiers shall give no quarter to the British and Hanoverian troops.

“ His Royal Highness anticipates the indignation and horror which will naturally arise in the minds of the brave troops whom he addresses, upon receiving this information.

“ His Royal Highness desires, however, to remind them, that mercy to the vanquished is the brightest gem in a soldier's character, and he exhorts them not to suffer their resentment to lead them to any precipitate act of cruelty on their part, which may sully the reputation they have acquired in the world.

“ His Royal Highness believes, that it will be difficult for brave men to conceive, that any set of men, who are themselves exempt from sharing the dangers of war, should be so base and cowardly, as to seek to aggravate the calamities of it upon the unfortunate people who are subject to their orders; it was, indeed, reserved to the present time, to produce to the world the proof of the possibility of the existence of such atrocity and infamy; the pretence for issuing this decree, even if founded in truth, could justify it only to minds similar to those of the members of the National Convention, that is, in fact, too absurd to be noticed, and still less to be refuted. The French must themselves see through the flimsy artifice of a pretended assassination, by which Robespierre had succeeded in procuring that military guard which has at once established him the successor of the unfortunate Louis, by whatever name he may choose to dignify his future reign.

“ In all the wars, which from the earliest times have existed between the English and French nations, they have

been accustomed to consider each other in the light of generous, as well as brave enemies; while the Hanoverians, for a century the allies of the former, have shared in this reciprocal esteem, humanity and kindness, which have at all times taken place the instant that opposition had ceased; and the same cloak has frequently been seen covering the wounded enemies, while indiscriminately conveying to the hospitals of the conqueror.

“The British and Hanoverian armies will not believe, that the French nation, even under their present infatuation, can so far forget their character as soldiers, as to pay any attention to a decree, as injurious to themselves as it is disgraceful to the persons who passed it.

“On this confidence his Royal Highness trusts, that the soldiers of both nations will confine their sentiments of resentment and abhorrence to the National Convention alone, persuaded that they will be joined in them by every Frenchman who possesses one spark of honour, or one principle of a soldier: and His Royal Highness is confident, that it will only be on finding, contrary to every expectation, that the French army has relinquished every title to the fair character of soldiers and of men, by submitting to, and obeying so atrocious an order, that the brave troops under his command will think themselves justified, and indeed under the necessity, of themselves adopting a species of warfare, for which they will stand acquitted to their own consciences, to their country, and to the world. In such an event, the French army alone will be answerable for the tenfold vengeance which will fall upon themselves, their wives, their children, and their unfortunate country, already groaning under every calamity which the accumulated crimes of unprincipled ambition and avarice can heap upon their devoted victims.

“His Royal Highness desires, that this order may be read and explained to the troops at their successive roll callings.”

REPRÉSAILLES, *Fr.* reprisals.

Droit de REPRÉSAILLES, *Fr.* letters of marque, such as are given to privateers, &c.

REPRIMAND, (*réprimande*, *Fr.*) a slighter kind of punishment sometimes inflicted on officers and non-commis-

sioned officers. It consists in reproving or reprimanding them at the head of their respective regiments, troop, or company, as the case may be. A reprimand is sometimes inserted in the orderly books.

REPRISE, *Fr.* renewal; often repeated. *Les troupes se sont battues, à plusieurs reprises, avec acharnement*, the troops engaged again at repeated intervals, with rancour, or redoubled fury.

REPRISE, a lesson repeated, or a manège recommenced; as, to give breath to a horse upon the four corners of the volt, with only one *reprise*; that is, all with one breath.

REPRISES *d'armes*, *Fr.* the taking up arms again for the purpose of going into action.

REPRISES *d'hostilités*, *Fr.* renewal of hostilities.

A diverses REPRISES, *Fr.* at different times.

REPROOF, (*repréhension*, *Fr.*) censure; blame to the face: Military reproof may however be conveyed through the orderly books, as in the following instance. “The misbehaviour of the troops in the column which marched by Valderas to this place exceeds what the commander in chief could have believed of British soldiers. It is disgraceful to the officers, as it strongly marks their negligence and inattention.” — *General Orders, Head Quarters Benavente, 27 Dec. 1808.*

REPUBLIC, (*république*, *Fr.*) a government where democracy has the ascendancy.

REPUTATION, (*réputation*, *Fr.*) credit; honour.

REQUETE *d'armes*, *Fr.* a public challenge.

REQUISITION, (*réquisition*, *Fr.*) a term peculiarly used by the French during the course of their revolution, and applicable to most nations in its general import. It signifies the act of exacting either men, or things, for the public service.

Jeunes gens de la RÉQUISITION, *Fr.* young men required or called upon to serve in the army.

RÉQUISITIONNAIRE, *Fr.* a person liable to be put in a state of requisition. This term has been adopted by one English writer, who says *requisitionary*; but we do not recommend such frequent recourse to Gallicisms. See *Siege of Genoa.*

RESAPER, RESAPPER, *Fr.* to underdrop, or underset a wall; to repair it at the foot, or after it has been undermined.

RESÉPAGE, *Fr.* the act of sawing, or cutting a second line.

RESÉPER, *Fr.* to saw or cut again; to take off with a hatchet, or saw, the head or top of a stake or pile, which cannot be driven deeper into the earth, in order to make it level with the rest of the pile work. Bêlidor writes the word *Reséper*.

RESERVE, (*corps de réserve*, *Fr.*) any select body of troops posted by a general out of the first line of action, to answer some specific or critical purpose, in the day of battle. The French likewise call that body a *corps de réserve*, which is composed of the staff of the army, and moves with the commander in chief, from whom it receives the parole or word; but in every other respect it is governed by its own general. In British operations, even forward ones, the reserve, instead of forming a select corps of support, and being, of course, behind the wings, or center of an army, is frequently in front. This is not the case among the French, &c.

Army of RESERVE. By an act passed on the 6th day of July, 1803, the King of Great Britain was enabled to raise and assemble in England, an additional military force, for the better defence and security of the United Kingdom, and for the more vigorous prosecution of the war. The number of men to be raised for the formation of this new army, to be styled the *Army of Reserve*, was as follows: for England and Wales 34,000, for Scotland 6,000, and for Ireland 10,000; in all 50,000.

RESERVOIR, (*réservoir*, *Fr.*) a place where water is collected and reserved for the purpose of having it occasionally conveyed through pipes, &c. or to be spouted up.

The Reservoir is a building, or large basin, usually made of wood lined with lead, in which water is kept to supply the occasions or calls of the house.

A RESERVOIR is also sometimes a large basin of strong masonry, the bottom being either covered with clay, or paved, where the water is reserved to feed *jets d'eau*, or fountains. Of this description is the *réservoir* on the top of *Mont Marti*, near Paris, called *Trou d'Enfer*,

the Hole or Mouth of Hell; whose surface, according to *D'Aviler*, contains 50 acres, and its depth such as under that superficies to contain 100,000 cubic fathoms of water.

RESIGN, to sell out; to give up the situation which one fills either by commission or warrant. In which case the individual must state his reasons by respectfully applying, through his commanding officer, for permission to retire from the service, and wait his Majesty's pleasure thereon. In commissions of the militia, and in cases of warrants given by the colonels of regiments, &c. the memorial must be made out to the latter, who will take the necessary steps. But in no instance whatever can an officer, commissioned or otherwise, presume to quit the service, without having previously obtained permission for so doing.

RESIGNATION, (*résignation, démission*, *Fr.*) in a military sense, the act of giving up any thing, post, or situation, voluntarily. The French say, *donner sa démission*, to resign, or give in one's resignation. *Recevoir sa démission*, to be dismissed, or to be forced to resign. Although it is in the power of an officer to send, or to give in his resignation, (which must always be done through his commanding officer,) he is not released from the service, or its incumbent duties, until his Majesty's approbation has been notified to him through the Commander in Chief. This holds good in the militia.

RESINE, *Fr.* rosin.

To RESIST, (*résister*, *Fr.*) to withstand; not to yield or give up.

RESISTANCE, (*résistance*, *Fr.*) the act of opposing, resisting, or withstanding.

RESOLUTION, in algebra, the solution of a problem.

RESOLUTION, in mathematics, a method invented, whereby the truth, or falsehood of a proposition, or the impossibility, is discovered in an order contrary to that of synthesis or composition.

RESOLUTION, (*résolution*, *Fr.*) fixed determination, settled thought, constancy, firmness, steadiness, high daring, great courage.

The difference between resolution and obstinacy consists in this—resolution is always accompanied by reason, honour,

and perseverance; obstinacy, on the contrary, is seldom guided by any thing but passion, and is generally of a changeable, vacillating character, under the specious appearance of firmness and stability. Resolution is the virtue of a wise man; obstinacy the vice of a fool.

RESPECT, *Fr.* respect; regard; awe. The French say of a fortified place, *cette place de guerre tient l'ennemi en respect*, that town or fortified place keeps the enemy in awe, or checks his operations.

RESOM, *Ind.* fees or dues.

A RESPITE, a term used in military accounts, signifying a certain sum of money which is directed to be withheld from the issue of pay, in order to make up the several stoppages in regimental distributions. For a more specific explanation, see *Regimental Companion*, vol. i. page 467, 6th edition.

To RESPITE, to suspend, to delay; from the French *Répiter*.

To be RESPITED on the muster roll, to be suspended from pay, &c. during which period all advantages of promotion, pay, &c. are stopped. It is originally derived from *respite*, which signifies delay, forbearance, &c. Thus in Clarendon's History of the Civil Wars we read, that an act passed for the satisfaction of the officers of the King's army, by which they were promised payment in November following; till which time they were to *respite* it, and be contented; that the common soldiers and inferior officers should be satisfied upon their being disbanded. At present, to *respite* means to deprive an individual of all the advantages attached to his situation; in which sense it signifies much the same as to suspend.

When an officer has exceeded his leave of absence, and has not sent a satisfactory account of himself to his commanding officer, the latter reports him, in an especial manner, to the general of the district, by whom he is returned *absent without leave*. It sometimes happens, that the colonel, or commanding officer, gives directions to have him noted on the muster-roll of the regiment; in which case, he is said to be respited or deprived of pay. This is the first step towards suspension from rank and pay, which ultimately terminates in a total exclusion from the ser-

vice, by the offending party being peremptorily superseded. The name of the person is laid before his Majesty, who directs the Commander in Chief to strike it off the list of the army.

The money which is respited upon the muster-roll is accounted for by the muster-master-general, and placed to the credit of the public by the paymaster-general.

RESPONSIBLE, answerable, accountable. Thus all commanding officers of regiments, as well as commanders in chief, &c. down to the corporal of a squad of recruits, are, more or less, responsible for the trust reposed in them. But in no instances are individuals more responsible than in those where the distribution of the public monies is entrusted to the wisdom and honesty of boards, or the heads of boards.

RESPONSIBILITY, (*responsabilité*, *Fr.*) the state of being answerable. All public officers, civil or military, are in a state of responsibility with respect to national concerns.

RESPONSION, *Fr.* a term used by the French, in military orders, signifying the same as *charge* or *redevance*, charge or service. Thus each commandery pays a certain sum, called *Somme de Responcion*, to its order, in proportion to its value.

RESSAC, *Fr.* the breaking of a wave upon the shore, together with its reflux into the sea.

RESSAUT, *Fr.* jutting; projection.

RESSAUT d'escalier, *Fr.* the winding or turning off of a balustrade.

RESSAUT, in architecture, is the effect of a body which either projects or sinks, that is, which stands more out or in than another, so as to be out of the line, or level of it.

RESSERRER, *Fr.* to hem in; to confine. *Une garnison fort resserrée*, a garrison narrowly watched by a besieging army, and kept within its walls.

RESSORT, *Fr.* spring; elasticity. This word is used in various senses by the French, viz.

Dernier Ressort, *Fr.* last shift.—When applied to trials or courts-martial, it signifies a sentence, a decision from which there is no appeal; as *Jugement en dernier ressort*.

Grand Ressort, *Fr.* main spring.

N'agir que par Ressort, *Fr.* to do nothing of one's own free will; to

be influenced, to be acted upon by others.

Manquer de RESSORT, Fr. to want energy, vigour, &c.

Un caractère qui a du RESSORT, Fr. a firm, determined character.

Cela n'est pas de mon RESSORT, Fr. that is not within my province.

RESSOURCE, *Fr.* resource, shift, refuge.

Un homme de RESSOURCES, Fr. a man that has resources within himself.

Un homme plein de RESSOURCES, Fr. a man full of resources, full of expedients.

REST, an instrument in the shape of a fork, which was formerly used to support the old heavy musket, when the men were ordered to present and fire. Sometimes these rests were armed with a contrivance called a swine's feather, which was a sort of sword blade, or tuck, that issued from the staff of the rest, at the head; this being placed before the musketeers when loading, served, like the stakes placed before the archers and the lancers, to keep off the cavalry: these preceded the use of the bayonet; the invention of which originated in the soldiers sticking the handles of their daggers in the muzzles of their pieces, when they had discharged all their ammunition. The muskets, having a rest, were used with the matchlock.

REST, the third motion of the firelock in presenting arms. The French present in two motions. Perhaps our method is the best, if we consider it as a mere motion of parade; but certainly not so for service.

To REST arms, to bring the firelock to the same position as in present arms.

To REST upon reversed arms. At military funerals the arms are reversed. The soldiers belonging to the firing party rest upon the butt ends of their firelocks, while the funeral service is performed, leaning with their cheeks, so as to look towards the corpse.

REST upon your firelocks reversed! is the word of command now ordered to be used at military funerals.

RESTANT, *Fr.* the remainder; what is left.

Poste RESTANTE, Fr. a term used among the French to signify that letters, &c. are to remain in the post-office until called or sent for. This term is always written at the foot of the superscription of a letter.

RESTAURATION, *Fr.* the entire repair which is made to a building that has fallen into decay through time, or from bad construction, so that it is not only restored to its original state, but considerably embellished.

RETE, *Fr.* remainder, viz. *le reste des troupes,* the remainder of the troops.

Etre en RESTE, Fr. to be in arrears.

RESTER, *Fr.* to remain behind.

RESTIVE, RESTY. A resty horse is a malicious, unruly horse, that shrugs himself short, and will only go where he pleases.

RÉTABLIR, *Fr.* to restore, or to bring back. Hence, *rétablir la discipline;* to restore to good order or discipline. It is wisely observed by a French writer, that the maintenance of good order, among troops, is far more easy than the restoration of it from a state of relaxation and indiscipline.

RETAPER, *Fr.* to cock up a hat.

RETENTIR, *Fr.* to resound; to re-echo; to repeat.

RESENTISSEMENT, *Fr.* the act of resounding, &c.

RETENUE, *Fr.* stoppage; any thing kept back.

RETENUE, *Fr.* This word is applied to any piece of wood which is so fixed in a wall, or elsewhere, as not to be moved one way or another. Hence *Avoir sa retenue,* to be immoveably fixed.

RETIARIUS, (*Rétiaire, Fr.*) a kind of gladiator who fought in the amphitheatre during the time of the Romans. He is thus described by Kennett, in his *Roman Antiquities*, page 274.

The Retiarius was dressed in a short coat, having a fuscina or trident in his left hand, and a net, from which he derives his name, in his right. With this he endeavoured to entangle his adversary, that he might then with his trident easily dispatch him: on his head he wore only a hat tied under his chin with a broad ribbon.

RÉTICENCE, *Fr.* the suppression, or voluntary omission of any thing which ought to be disclosed.

RETIRADE, or *coupure, Fr.* in fortification, a retrenchment, which is generally made with two faces, forming a reentrant angle, and is thrown up in the body of a work for the purpose of receiving troops, who may dispute the ground inch by inch. When the first means of resistance have been destroyed, others

are substituted by cutting a ditch, and lining it with a parapet. The *retirade* sometimes consists of nothing more than rows of fascines filled with earth, stuffed gabions, barrels, or sand-bags, with or without a ditch, and either fenced with palisadoes, or left without them.

Whenever it becomes absolutely necessary to quit the head or side of a work, the whole of it must, on no account, be abandoned. On the contrary, whilst some determined troops keep the enemy in check, others must be actively employed in throwing up *retirades*, which may flank each other, and in cutting a ditch in front. It is particularly incumbent upon the engineer officer to assist works of this sort, and every officer and soldier should zealously co-operate with him. A slight knowledge of field fortification will, on these occasions, give a decided advantage. The body of a *retirade* should be raised as high as possible, and several fougasses should be laid beneath it, for the purpose of blowing up the ground on which the enemy may have established himself.

RETRADES, as practised by the ancients. These were walls hastily run up behind breaches that were made by the battering rams. The able commentator upon Polybius observes, that in no instance did the skill of the great men of antiquity appear in so conspicuous a light, as in the various chicanes to which they resorted for the preservation of a town. Their ingenuity and resolution increased in proportion as the danger approached. Instead of offering to capitulate, as the moderns generally do, when a practicable breach has been opened by a besieging enemy, the ancients, in that emergency, collected all their vigour, had recourse to various stratagems, and waited behind their *retirades* or temporary retreats, to give the enemy a warm and obstinate reception. Cæsar, in his Commentaries, has given a minute description of the manner in which these *retirades* were constructed; and we find them mentioned by Josephus in his History of the War of the Jews against the Romans.

The intermediate periods, since the days of the Greeks and Romans, and before the modern era, furnished various examples on this head. In 1219, Genghis Khan set all his battering rams to work, for the purpose of effecting a breach in

the walls of Ottrar; but, to his great surprise, he no sooner entered the town, than he found a fresh line of entrenchments that had been thrown up in the very heart of the city. He saw every street cut asunder with temporary ditches, and every house presented fresh obstacles: so much so, that he experienced more difficulty in subduing the inhabitants after he had forced the walls, than had occurred in practising the breach.

When the Emperor Charles V. laid siege to Metz, in 1552, the Duke de Guise, who was governor of the town, instantly adopted the necessary precautions to defend it to the last. He built a new wall behind the one against which the principal attack was directed; and when the breach was made, the besiegers found themselves obstinately opposed afresh, within a short space of the ground they had carried. In consequence of this unexpected check, the enemy's troops grew disheartened; and their want of confidence soon convinced the emperor, that the place could not be taken. The siege was unexpectedly raised, and the preservation of the town was entirely owing to the wise precautions that had been adopted by the Duke de Guise.

In 1742, Marshal Broglio, being closely besieged in the city of Prague, threw up retrenchments within the walls, and prepared to make a most vigorous resistance. An occasion, however, presented itself, of which he took advantage, that rendered any further precautions useless. He made a vigorous sortie, and forced the enemy to raise the siege.

To *RETIRE*, (*retirer*, Fr.) to leave a situation, local or otherwise.

To *RETIRE under the protection of a fortified place*, &c. (*retirer sous une place fortifiée*, Fr.) to take up a position under some strong town or fortress, for the purpose of being entrenched. We also say to *Retire under the guns* of a town or place.

To *RETIRE from the service*, (*se retirer du service*, Fr.) to quit a military situation or place of trust. See to *RE-SIGN*.

To *RETIRE upon full pay*, to leave any particular regiment, department or office, with the full pay or subsistence which is attached to the actual exercise of its duties or functions. In cases of military retirement, the allowances do

not come within the meaning of full pay or subsistence.

Officers who RETIRE in the East India service. The India Company have resolved, that an officer, (in his military capacity,) after twenty years actual service in India, coming to Europe on leave, will be allowed to retire on the pay of his rank, provided he signifies his intention of so doing within twenty months after his arrival. Officers on leave who are desirous of retiring, and who declare their intention to that effect, within twelve months from their arrival, will be permitted to retire on the pay of the rank they may be entitled to at that period. An officer having completed 22 years actual residence in India, will be allowed to retire on the full pay of his rank directly on his leaving India.

RETIRED List, a list on the Ordnance and Marine establishment upon which superannuated, or deserving officers whose health or circumstances justify a retirement, are placed. Also a list of such officers as have retired from the army in general upon full pay.

Faire RETIRER, *Fr.* to force back; to drive away.

RETOMBÉE, *Fr.* the declivity of an arch.

Porte qui RETOMBE, *Fr.* a pulley door.

RETORS, *Fr.* twisted. The French say, figuratively, *homme retors*, a shrewd man.

RETORSOIR, *Fr.* a card wheel.

RETOURNER, *Fr.* among stone-cutters, to turn a stone, one side of which has been dressed, in order to shape or smooth the opposite one.

Se RETOURNER d'équerre, *Fr.* to raise a perpendicular upon the length or extremity of a real or supposed line.

RETOURS de la mine, *Fr.* returns of a mine. See **GALLERY**.

RETOURS de la tranchée, *Fr.* returns of a trench. In fortification, the several windings and oblique deviations of a trench, which are drawn, in some measure, parallel to the sides of the place attacked, in order to avoid being enfiladed, or having the shot of the enemy scour along the length of the line. On account of these different returns, a considerable interval is opened between the head and the tail of the trench, which (were the lines direct) would not be at any great distance from each other.

RETOURS d'équerre, *Fr.* coins or corners at right angles.

RETRAITE, *Fr.* See **To RETREAT**.

RETRAITE, *Fr.* in architecture, the diminution or lessening of the outward, or visible part of a wall, above its base, or course of hard stones, by which it appears to draw inwards from its foundation.

RETRAITE dans les montagnes, *Fr.* the act of falling back or retreating among the mountains.

This was practised with peculiar judgment and success by the Tyrolese in their contest with the French troops under the Duke of Dantzic, who, confident in their numbers, ventured through the passes of the mountains. The defenders had recourse to the following arrangements:—The largest trees were cut down, and fastened with ropes to the other trees which stood on the brink of the precipice; rocks, rubbish, and huge pieces of timber, were laid on these trees. As soon as the enemy approached, the ropes were cut, and trees, rocks, rubbish, and what they dragged with them in their fall, tumbled with a horrible crash upon the heads of the invading corps: this occurred in 1809.

Faire RETRAITE, *Fr.* to retire; to fall back.

Battre la RETRAITE, *Fr.* to beat the tap-too; also to sound the retreat.

Se battre en RETRAITE, *Fr.* to maintain a running fight; also to fight in retreating.

RETRAITE, *Fr.* an allowance which is given by the French government to officers, when they retire from the active duties of their profession, to afford them means of support.

RETRAITE, *Fr.* See **RELAIS**.

RETRAITS or *Pricks*. In farriery, if a prick with a nail be neglected, it may occasion a very dangerous sore, and fester so into the flesh, that the foot cannot be saved without extreme difficulty. When a farrier, in shoeing a horse, perceives that he shrinks at every blow upon the nail, it should be immediately pulled out, and if the blood follow, there is no danger; he must, however, be cautious not to drive another nail into the same place.

When a horse halts immediately after, he has been shod, you may reasonably conclude, that some of the nails press the vein, or touch him in the quick.

In order to ascertain where the pain really lies, take up his lame foot and

knock with your shoeing hammer on the sound foot (for some skittish horses will lift up the foot when you touch it, although it be not pricked) that you may be the better enabled to judge whether the horse be pricked when you touch the lame foot; then lift up the sound foot, and knock gently upon the top of the clenches on the lame foot; then lift up the others, and if you perceive that he shrinks in when you strike any of the nails, you may conclude, that he is pricked in that place.

RETRANCHE, *Fr.* entrenched.

RETRANCHEMENS, *Fr.* See RETRENCHMENTS.

RETRANCHEMENS *particulières qu'on fait sur la tête des brèches d'une place assiégée*, *Fr.* particular retrenchments, which are made in front of breaches that have been effected in the walls of a besieged town.

It is always necessary, that retrenchments of this description should have the figures of reentrant angles, in order that they may not only flank the breaches, but be capable of defending themselves.

A besieging enemy seldom or ever attempts a breach at the flanked angle of a bastion, because it must be seen by the two flanks of the neighbouring bastions, and be perpetually exposed to the fire of the casemates of the town. Nevertheless, should the breach be actually effected, retrenchments might be thrown up in the same inanner that horn-works are constructed, for the purpose of flanking it.

If the breach should be made in the face of the bastion, (which usually happens, because that quarter can be seen by the garrison from one side only,) retrenchments in the shape of reentrant angles must be constructed.

Breaches are seldom attempted at the angle of the epaulement, because that part of the bastion is the most solid and compact, and the most exposed to the fire from the curtain, to that of the opposite flank, and to the reverse discharge, or fire from the rear. Add to this, that the storming party would be galled in flank and rear, not only from the simple bastion, but likewise from the casemates. If, however, a breach should be effected in that quarter, it would be necessary to throw up retrenchments of a salient and reentrant nature.

In constructing these different retrenchments it must be an invariable

rule, to get as near as possible to the parapets of the bastions and to their ruins, in order to batter those in flank and rear, who should attempt to scale, and at the same time to be out of the reach of the besieger's ordnance.

When the head of the breach is so much laid open, that the besiegers' cannon can scour all above it, small mines must be prepared beneath, and a retrenchment be instantly thrown up in the body of the bastion.

RETRANCHEMENT, *Fr.* a byeroom; partition.

RETRANCHEMENT, *Fr.* This word is not only used among carpenters, to signify the cutting down any large piece of timber, or other article, in order to reduce it to a given proportion, but it also means the taking off projections, &c. from streets and high-ways to make them passable and even.

RETRANCIER, *Fr.* to entrench.

RETRANCHER *un camp*, *Fr.* to throw up works before and round a camp, in order to strengthen it, and to keep the enemy in check.

Se RETRANCHER, *Fr.* a figurative expression among the French signifying to curtail expenses.—They say: *Il vaut mieux se retrancher que de s'endetter.*

To RETREAT, to make a retrograde movement. An army or body of men are said to retreat when they turn their backs upon the enemy, or are retiring from the ground they occupied: hence, every march in withdrawing from the enemy is called a retreat.

RETREAT is also a beat of the drum, at the firing of the evening gun; at which the drum-major, with all the drums of the battalion, except such as are upon duty, beats from the camp colours on the right to those on the left, on the parade of encampment: the drums of all the guards beat also; the trumpets at the same time sounding at the head of their respective troops. This is to warn the soldiers to forbear firing, and the sentinels to challenge till the break of day, when the reveillé is beat. The Retreat is likewise called setting the watch. When the Retreat is ordered to be beat, four rank and file, with a corporal, should accompany the fifes and drums, distributed in the following manner: the corporal in the rear covering the drum-major, who marches in front, and one private upon each flank, front and rear.

To be in full RETREAT, (*être en pleine*

retraite, Fr.) to retire before a conquering enemy, &c.

Chequered RETREAT, (*retraite en échiquier*, Fr.) It is so called from the several component parts of a line or battalion, which alternately retreat and face about in the presence of an enemy, exhibiting the figure of the chequered squares upon a chess board.

RETRENCHMENT, (*retranchement*, Fr.) in the art of war, is any work raised to cover a post, and fortify it against an enemy; such as fascines loaded with earth, gabions, barrels, &c. filled with earth, sand-bags, and generally all things that can cover the men, and stop the enemy; but it is more applicable to a ditch bordered with a parapet; and a post thus fortified, is called a *retrenched post*, or *strong post*. *Retrenchments* are either general or particular.

General RETRENCHMENTS are a kind of new defence made in a place besieged, to cover the defendants, when the enemy becomes master of a lodgment on the fortification, that they may be in a condition of disputing the ground inch by inch, and of putting a stop to the enemy's progress, in expectation of relief. Thus if the besiegers attack a tenaille of the place—which they judge the weakest, either by its being ill flanked, or commanded by some neighbouring ground—then the besiegers make a great *retrenchment*, inclosing all that part which they judge in most danger. These should be fortified with bastions and demi-bastions, surrounded by a good ditch countermined, and higher than the works of the place, that they may command the old works, and put the besiegers to infinite trouble in covering themselves.

Particular RETRENCHMENTS, or *Retrenchments within a bastion*, (*retranchemens dans un bastion*, Fr.) Retrenchments of this description must reach from one flank to another, or from one casemate to another. It is only in full bastions that retrenchments can be thrown up to advantage. In empty bastions you can only have recourse to *retirades*, or temporary barricadoes above the ramparts. The assailants may easily carry them by means of hand grenades, for these retrenchments never flank each other. It is necessary to raise a parapet about five or six feet thick before every retrenchment. It must be five feet high, and the ditches as broad and as deep as they can be made. There must also be

small mines run out in various directions, for the purpose of blowing up the assailants, should they attempt to force the retrenchments.

RETROGRADE, going backward.

To **RETROGRADE**, to move backward; to the rear.

RETROUSSIS, Fr. turnbacks in an uniform.

RETURNS, in a military sense, are of various sorts, but all tending to explain the state of the army, regiment, troop, or company; namely, how many are capable of doing duty, on duty, sick in quarters, barracks, infirmary, or hospital; prisoners, absent with or without leave; total effective; wanting to complete to the establishment, &c.

The royal artillery make their returns to the master general and the Board of Ordnance.

Returns may be generally stated under the following heads.

General RETURN.

Regimental RETURN.

RETURN for forage, lodging money, fuel, &c.

RETURN to be given in to headquarters after an action by the several regiments that have been engaged.

Number of officers, sergeants, and rank and file	}	Killed,
		Severely wounded,
		Dangerously wounded,
		Badly wounded,
		Slightly wounded,
		Taken prisoners,
		Missing,
Deserted,		
		Gone over to the enemy.

Names of officers killed, wounded, missing, and gone over to the enemy.

False RETURN, a return which is not borne out by the real existence of the thing or person stated.

An officer ought to be so tenacious of his honour and character in this respect, that he should not put it in the power of his own conscience to accuse him, or even of his Maker to convict him, of a false Return. He should always remember, that every false return is a robbery committed against the public.

In Section V. of the Articles of War, page 14, it is expressed that every officer who shall knowingly make a false return to the King, to the commander in chief of the forces, or to any his superior officer authorised to call for such returns, shall, upon being convicted thereof before a general court-martial, be cashiered.

Whoever shall be convicted of having designedly, or through neglect, omitted sending such returns, shall be punished according to the nature of the offence, by the judgment of a general court-martial.

RETURN, in building, is a side, or part that falls away from the foreside of any straight work.

RETURNS *of a mine* are the turnings and windings of the gallery leading to the mine. See GALLERY.

RETURNS *of a trench*, the various turnings and windings which form the lines of the trench, and are, as near as they can be, made parallel to the place attacked, to avoid being enfiladed.—These *returns*, when followed, make a long way from the end of the trench to the head, which going the straight way is very short: but then the men are exposed; yet, upon a sally, the courageous never consider the danger, but getting over the trench with such as will follow them, take the shortest way to repulse the enemy, and cut off their retreat, if possible.

To RETURN, in a military sense, to insert the names of such officers, &c. as are present or absent on the stated periods for the identification of their being with their regiments, or detachment, or absent with or without leave.

RETURN *bayonet*. This term is sometimes used, but it is not technically correct, as the proper word of command is *unfir bayonet*.

RETURN *pistol*. See PISTOL.

RETURN *ramrod*. See MANUAL.

RETURN *swords*. See SWORD.

To be RETURNED, to have one's name inserted in the regular monthly, fourteen days, or weekly state of a regiment, according to circumstances; as *To be returned absent without leave*; to be reported to the Commander in Chief, or to any superior officer, as being absent from the duty of the corps; either from having exceeded the leave given, or from having left quarters without the necessary permission. When an officer has been returned absent without leave, or has never joined his regiment, the paymaster is directed to withhold his pay or subsistence. In such cases an application must be made to the Adjutant-General, through whose office all permissions or leaves of absence must pass, before the respite can be removed. To be returned upon the surgeon's list as unfit for duty, &c. from illness, &c.

RETURNED *next for purchase*. When vacancies occur in regiments upon foreign or domestic stations, the names of such officers as intend to purchase must be inserted in the muster-rolls: they are then said *to be returned next for purchase*. This serves as a government to the several agents, and prevents the introduction of persons into a corps with which they have not done duty, to the disparagement of those who have always followed the colours. Every officer that is returned next for purchase, must take care to apprise his agent, that the money will be lodged for that purpose.

REVEIL, *ou Diane*, Fr. See Réveillé.

REVEIL-matin, *double canon, brisemur*, Fr. an ancient piece of ordnance which is no longer in use; it carried a ninety-six pound shot.

RÉVEILLÉ is the beat of a drum, about break of day, to advertise the army that it is day-light, and that the sentinels are to forbear challenging.

REVENGE, an impulse in the human mind which excites it to acts that are scarcely ever excusable. Dryden writes thus:

Exalted Socrates, divinely brave!
Injur'd he fell, and dying he forgave,
Too noble for revenge; which still we find

The weakest frailty of a feeble mind:

It ought never to be forgotten, especially by high-minded men, such as *real* officers are, that the secret and vindictive malice of weak or wicked persons can only be conquered by the dignified silence of wise and good men.

REVERIES, (*rèveries*, Fr.) loose musings; irregular thoughts; desultory reflexions. The celebrated Marshal Saxe has given this title to a collection of military ideas, which, in many instances, have proved the most correct principles in war.

REVERS, Fr. behind, in rear, at the back of any thing.

Être vu de REVERS, Fr. to be overlooked by a reverse commanding ground. When a work, for instance, is commanded by some adjacent eminence, or has been so badly disposed, that the enemy can see its *terre-pleine*, or rampart, that work may be said to be overlooked, *être vu de revers*. The same term is applicable to a trench, when the fire of the besieged can reach the troops that are stationed within it. This was the case at Dover Castle, which, until the year 1796, was overlooked by a

commanding piece of ground on the north-east. A battery is now erected on the spot; but God only knows how long the Castle itself may be allowed to stand, considering the impolicy of its excavations.

REVERS *de la tranchée*, Fr. literally means the back part of the trench. It is the ground which corresponds with that proportion of the border of the trench that lies directly opposite to the parapet. One or two banquettes are generally thrown up in this quarter, in order that the trench guard may make a stand upon the reverse when it happens to be attacked by a sortie of the enemy.

REVERS *de l'orillon*, Fr. that part of the orillon in a bastion, which looks inwards, or towards the main body of a fortified place. Sally-ports are generally constructed in this quarter.

REVERS, Fr. This word also signifies a back stroke. Hence, *Abattre la tête d'un revers*, to give a blow on the head with a back stroke.

REVERS, Fr. facings of an uniform.

REVERS *de fortune*, Fr. reverse of fortune; disappointments, &c.

Prendre des REVERS, Fr. to take up a position so as to be able to fire obliquely into the rear of an enemy.

REVERSE, a contrary; an opposite; as the reverse or outward wheeling flank; which is opposite to the one wheeled to or upon. See **PIVOT**.

REVERSE, in movements of artillery, denotes that each gun, wagon, or car, goes about upon its own ground to the hand ordered, and produces a change in the relative position of the carriages.

REVERSE likewise signifies *on the back, or behind*: so we say, *a reverse commanding ground, a reverse battery*, &c.

REVERSED, upside down; as arms reversed.

REVERSED arms. Arms are said to be reversed when the butts of the pieces are slung or held upwards.

REVETEMENTS *passagers*, Fr. temporary revetements. These works seldom last more than three years.

REVETEMENT, (*revêtement*, Fr.) in fortification, a strong wall, built on the outside of the rampart and parapet, to support the earth, and prevent its rolling into the ditch.

Demi-REVETEMENT, Fr. a revetement which is made from the outward slope

of the fosse to the cordon or terrepleine of the rampart.

REVETEMENT *de saucisson*, Fr. a revetement which is hastily thrown up during a siege by means of saucissons, especially when breaches have been effected or practised in the outward works. Revetements of this sort are also formed of pointed fascines, &c.

REVETIR, Fr. literally to clothe or cover. This term is used, in fortification, to signify the mason-work which is made in the construction of fortified places, when no expense is spared, in order to render them more capable of resisting the force of cannon, and of lasting longer.

REVETIR *de gasons*, Fr. to lay turf upon the different parts of fortified works, such as the glacis, &c.

REVETIR, Fr. in carpentry, to fill up with small beams or posts the wooden partition or front of any thing. In joinery, to wainscot a wall, &c.

REVETIR, Fr. This word is also used to signify sanctioned, acknowledged, authorised. Thus in the last edition of the Dictionnaire de l'Académie Française, the Editor says, *Les Editions avouées seront revêtues de ma signature*.

REVETIR, Fr. to throw up revetements. The French also apply this term in the same general sense that we use the word *invest*, as applicable to commission, power, authority. Hence, *revêtir d'une commission; d'un pouvoir; d'un ordre important*; to invest or entrust any person with a commission, with certain powers, or with any important charge or order.

REVETUS, Fr. literally, clad, or covered over.

Ouvrages REVETUS, Fr. in fortification, works that are constructed with stone or brick.

Ouvrages non-REVETUS, Fr. in fortification, works that are made of earth, &c. and are not lined or covered with stone or brick.

REVIEW, (*revue*, Fr.) in the military acceptation of the term, an inspection of the appearance, and regular disposition of a body of troops, assembled for that purpose.

REVIRER, Fr. a marine term, signifying to tack about.

To REVISE, (*reviser*, Fr.) to review; to re-examine; to re-consider. This term is frequently used in military matters,

most especially in those which relate to the proceedings of a general or regimental court-martial. It sometimes happens, that the members are directed to re-assemble for the purpose of *revising* part, or the whole mass, of the evidence that has been brought before them, and of maturely weighing afresh the substance of the proofs upon which they have formed their opinion and judgment. Great delicacy and discretion are required in those who have authority to order a revision of this sort. A court-martial is, perhaps, the most independent court on earth. Interest, prejudice, or partiality, has no business within its precincts. An honest regard to truth, a sense of the necessity of good order and discipline, and a stubborn adherence to facts, constitute the code of military laws and statutes. Quirks, quibbles, and evasions are as foreign to the genuine spirit of martial jurisdiction, as candour, manliness, and resolute perseverance, in uttering what he knows to be the fact, are familiar to the real soldier. The King has the power of ordering the members of a general court-martial to revise their sentence; but he cannot oblige them to alter it. The same authority, subject to the same limitations, is vested in the commanding officers of regiments, with respect to regimental courts-martial.

REVOCABLE, (*révocable*, Fr.) that may be recalled. Commissions in the line, granted during the reign of one King and commissions in the militia, granted during the life of a lord lieutenant of a county, or deputy, are not revocable at the death of the grantor.

REVOLT, (*révolte*, Fr.) mutiny; insurrection.

REVOLTER, one who rises against lawful authority; a deserter, &c.

Se RÉVOLTER, *Fr.* to revolt; to rise in open rebellion. The French also say, *révolter*, to raise a rebellion.

RÉVOLTÉS, *Fr.* rebels.

REVOLUTION, (*révolution*, Fr.) a change in government, as the French Revolution. With us it denotes that particular change which was produced by the admission of William and Mary.

The most memorable revolutions which have occurred within the last three hundred years are:—In England in 1668; Poland 1704, 1709, and 1775, when it was divided by Frederic the Great of Prussia, Maria Theresa, Queen of Hungary, and Catherine, Empress of all the

Russias. Turkey in 1730; Persia in 1748, and 1755; Russia in 1668, 1740, and 1762; Sweden in 1772; America in 1775; and last, not least in the uncertain wheel of fortune, France in 1733, 1789, 1792, 1793, 1795, 1802, 1804, and 1809, when Bonaparte, as emperor, absorbed them all in his own person and family. Here, however, the wheel went round again, and we have lived to see this wonderful man first exiled to the island of Elba in 1814, then emerging from his obscurity, and assuming the chief command of the French armies in 1815, finally reduced to the necessity of surrendering himself a prisoner of war to the Captain of a British ship, and now closely watched in the island of St. Helena!

Jardin de RÉVOLUTION, *Fr.* revolution garden; a name which was given to the garden belonging to the Palais Royal; and which was called *Maison Egalité*, or Equality-House, during the paroxysm of the French Revolution. This garden is situated in Paris, and formerly belonged to the Duke of Orléans; to whose son, the present duke, it has been restored by Louis XVIII.

Place de RÉVOLUTION, *Fr.* revolution square, or place; a name given to the spot of ground on which the Bastile stood.

REVOLUTION, (*révolution*, Fr.) in geometry, the motion of any figure whatsoever round a fixed line, which is called the axis of the figure; thus a triangle rectangle, which revolves round one of its sides, as an axis, produces a cone by its revolution.

RÉVOLUTIONNAIRE, *Fr.* a friend to revolution.

RÉVOLUTIONNAIRE, *Fr.* an adjective of two genders; any thing belonging to the revolution. Hence—

Armée RÉVOLUTIONNAIRE, *Fr.* a revolutionary army; such as appeared in France during the bloody reign of Robespierre, when the troops were regularly accompanied by travelling guillotines—*des guillotines ambulantes*.

REVOLUTIONNER, *Fr.* to revolutionize; to propagate principles in a country which are subversive of its existing government.

RÉUSSITE, *Fr.* issue: it also signifies success.

REVUE, *Fr.* See REVIEW.

REWARD, (*récompense*, Fr.) a recompense given for good performed.

Military REWARDS, (*récompenses militaires*, Fr.) The original instances of

military rewards are to be found in the Grecian and Roman histories. The ancients did not, however, at first recompense military merit in any other way than by erecting statues to its memory, or presenting their chiefs with triumphal crowns. The warriors of that age were more eager to deserve public applause by extraordinary feats of valour, by temperance and moral virtue, than to become rich at the expense of the state. They thirsted after glory; but it was after that species of glory which was not in the least tarnished by the alloy of modern considerations.

The services which individuals rendered were distinguished by the kind of statue that was erected, and its accompanying decorations; or by the materials and particular formation of the crowns that were presented.

In process of time, the state or civil government of a country felt the propriety and justice of securing to its defenders something more substantial than mere show and unprofitable trophies. It was considered, that men who had exposed their lives, and had been wounded, or were grown infirm through age, &c. ought to be above want; and not only to have those comforts which through their exertions millions were enjoying, but to be placed in an independent and honourable situation. The most celebrated of their warriors were consequently provided for at the public expense, and they had regular claims made over to them, which were answered at the treasury.

Triumphal honours were likewise reckoned among the military rewards which the ancients voted to their best generals. Fabius Maximus, Paulus Emilius, Camillus, and the Scipios, were satisfied with the recompense for their services. With respect to old infirm soldiers, who were invalided, they were provided for by receiving, each a lot of ground, which they cultivated and improved. Lands, thus appropriated, formed part of the republican or national domains, or were divided amongst them in the conquered countries.

The Roman officer was rewarded for his services, or for particular acts of bravery, in three ways: 1st, By marks of honour or distinction, which consisted of two sorts, viz. Of that which was merely ornamental to their own persons, or limited to the investiture for life; and of that which may be called *rememora-*

tive, such as statues, &c. The latter descended to their posterity, and gave their families a certain rank in the republic. 2dly. By pensions or allowances; and 3dly. By a grant of lands which exceeded the lots given to private soldiers.

The French, who got possession of the country which was formerly occupied by the Gauls, had, at first, no other method of recompensing their generals than by giving them a certain proportion of land. This grant did not exceed their natural lives, and sometimes it was limited to the time they remained in the service.

These usages insensibly changed, and by degrees it became customary for the children of such men as had received grants of national territory, to continue to enjoy them; upon condition, however, that the actual possessors of such lands should be liable to military service. Hence the origin of fiefs in France, and the consequent appellation of *Milice des Fieffés*, or militia composed of men who held their lands on condition of bearing arms when called upon. The French armies were, for many years, constituted in this manner: and the custom of rendering military service in consideration of land tenure, only ceased under Charles VII.

By degrees those lands, which had been originally bestowed upon men of military merit, descended to their children, and were insensibly lost in the aggregate lots of inheritable property. Other means were consequently to be resorted to by the state, in order to satisfy the just claims of deserving officers and soldiers. The French, therefore, returned to the ancient custom of the Romans, and rewarded those, who distinguished themselves in war, by honorary marks of distinction.

Under the first race of French kings may be found several instances of men of low condition having, by their valour, obtained the rank and title of Count, and even those of Duke. These dignities, of themselves, entitled the bearers to places of high command in the armies. The title of Knight, most especially of *Knight Banneret*, gave very high rank during the reign of Philip Augustus; and in the reigns of one or two of his predecessors, it was bestowed upon individuals who behaved in a distinguished manner in the field.

This species of reward did not cost the public any thing. It was bestowed

upon the individual by the general of the army, and consisted in nothing more than a salute given by the latter on the field of battle, by which he became Knight Banneret, and was perfectly satisfied with the honour it conferred.

This mode of rewarding individuals for great actions, or long services, continued until men enlisted themselves for money, and the army was regularly paid, according to the several ranks of those who composed it. At this period, however, it became expedient to have recourse to the second method which was adopted by the Romans to compensate individuals for services rendered to the state. The royal treasury was either subjected to the annual claims of individuals, or to the payment of a specific sum, for having distinguished themselves under arms. Notwithstanding this, honorary rewards continued to be given; and knighthood, conferred in the field by the kiss or salute of a general, which the French style *acolade*, was practised until the 16th century.

It was usual, even during that century, to reward a soldier, who did a brave action, by some mark of distinction, that was given on the spot; by a crown made of grass or other verdure, which was placed upon his head by his comrades, or by a gold ring, which his commanding officer put upon his finger in the presence of the whole troop, or company, to which he belonged. It sometimes happened, as in the reign of Francis the First, that this mark of distinction was given by the general of the army.

Several brave men have been distinguished with titles of nobility and armorial bearings, which were conferred by princes, in consequence of some singular feat, or exploit. There have been instances recorded in the French history of extraordinary actions having been rewarded upon the spot by kings who commanded in person. A soldier of merit was peculiarly honoured by Louis the XIth, for bravery and good conduct in the field. That monarch took the collar of a military order off his own neck, and placed it round the neck of Launay Morvillier, as a reward for great prowess and intrepidity.

Besides the gramineous crown and gold ring, which were thus given as marks of honour and distinction, the private soldiers were frequently rewarded by small sums of money, when they per-

formed any particular feat, or act of bravery. They were likewise promoted from the ranks, and made serjeants or corporals.

Honorary rewards and compensations for service were not confined to individual officers and soldiers. Whole corps were frequently distinguished in the same manner. When several corps acted together, and one amongst them gave signal proofs of gallantry and good conduct, that one frequently took precedence of the others in rank, or was selected by the sovereign to be his personal guard. Sometimes, indeed, the king placed himself at the head of such a corps on the day of battle; thereby testifying his approbation of their conduct, and giving a proof of his confidence in their bravery.

It is now usual, in most countries, to confer marks of distinction on those corps, that have formed part of any army that has signalized itself. Thus the kettle-drums, under the appellation of *Nacaires*, were given to some regiments, as proof of their having behaved gallantly on trying occasions.

The military order of St. Louis, which was created by Louis the XIVth in 1693, and that of Maria Theresa, as well as many other orders in different countries, were only instituted for the purpose of rewarding military merit. The establishment of hospitals for invalids, such as Chelsea, &c. owes its origin and continuance to the same just sense of what is due to deserving officers and soldiers. Hence, likewise, our invalid companies, and retired lists.

The most recent order which has been instituted for the reward of military merit is that of the Legion of Honour in France.

No such instances, however, are to be found in ancient history. The Greeks and Romans satisfied themselves with honorary rewards, or occasional compensations. The moderns, particularly the French and English, have placed military claims upon a more solid footing. The gratitude of the public, particularly among the former, keeps pace with the sacrifices of individuals, and permanent provisions are made for those who are wounded, or rendered infirm, in the service.

The Athenians supported those who had been wounded in battle, and the Romans recompensed those that had

erved during a given period. The French kings reserved to themselves the privilege of providing for individuals who had been maimed in action, by giving them certain monastic allowances and lodging, &c. in the different convents of royal institution. Philip Augustus, King of France, first formed the design of building a college for soldiers who had been rendered infirm, or were grown old in the service. Louis, surnamed the Great, not only adopted the idea, but completed the plan in a grand and magnificent style. Charles the Second, on his restoration to the crown of Great Britain, established Chelsea, and James the Second added considerable improvements to this royal institution. During the present reign, military merit has been rewarded with titles and pensions; but what is still more creditable to the government, and reflects honour upon his Royal Highness the Duke of York, old and meritorious soldiers are taught to expect a secure retreat in the decline of life; and every rank is provided for, according to the claims and services of individuals.

REZ, *Fr.* a preposition which signifies close to, adjoining, level with. It is never used except with *pied* or *terre*, as *rez-pied*, *rez-terre*. *Démolir les fortifications, rez-pied, rez-terre*, to level the fortifications with the ground.

REZ-mur, *Fr.* the naked wall, or that which is seen outwardly.

REZ-de-chaussée, *Fr.* the ground-floor; the surface or floor of any building which is even with the ground on which it is raised.

RHAGOON, *Ind.* the twelfth month, which, in some respect, corresponds with February. It follows the month Magh, which agrees with January.

RHEUM is a flowing down of humours from the head upon the lower parts. This distemper, in horses, proceeds from cold, which makes the teeth loose, and seem long by the shrinking up of the gums, which will spoil their feeding, so that all the meat will lie in a lump in the jaws.

RHEUMATIC eyes, in horses, are caused by a flux of humours distilling from the brain, and sometimes by a blow; the signs are, the continual watering of the eye, and the close shutting the lids, and sometimes attended with a little swelling.

RHEUMATISM, (*rheumatisme*, *Fr.*)

a painful distemper supposed to proceed from acrid humours. It generally affects the muscular system; and is one of the dreadful concomitants of active warfare; especially in a wet season.

RHINEGRAVE, (*rhingrave*, *Fr.*) the Count Palatine of the Rhine. The judges and governors in the several towns situated on the banks of the Rhine were formerly so called.

RHINELAND Rod is a measure of twelve feet, used by all the Dutch engineers.

RHOMBUS, (*rhombe*, *Fr.*) in geometry, an oblique angled parallelogram, or a quadrilateral figure whose sides are equal and parallel, but the angles unequal; two of the opposite ones being obtuse, and the other two acute.

RIBAND, (*rubande, ruban*, *Fr.*) This word is sometimes written *ribbond*. A narrow web of silk which is worn for ornament.

RIBAND Cockade. The cockades which are worn by the British officers are made of black riband. The *riband cockade* which is given to recruits is commonly called *colours*, from being made of ribands of different colours. No deduction is to be made from the bounty or subsistence of the recruit on this head.

RIBAUD, *E, Fr.* irregular, noisy, ill-mannered. This term is likewise used as a substantive, viz.

Un RIBAUD, Fr. a noisy, ill-mannered fellow. It is an old French word, which at present is seldom spoken in the upper circles of life.

RIBAUD, Fr. adj. likewise means lewd, debauched, &c.

*Un Homme RIBAUD, } Fr. a licen-
Une Femme RIBAUDE, } tious man; a
licentious woman.*

RIBAUDEQUIN, *Fr.* a warlike machine or instrument, which the French anciently used. It was made in the form of a bow, containing twelve or fifteen feet in its curve, and was fixed upon the wall of a fortified town for the purpose of casting out a prodigious javelin, which sometimes killed several men at once.

According to Monstrélet, a French writer, *ribaudequin* or *ribauderin*, signified a sort of garment which was worn by the soldiers when they took the field.

A fire-arm containing one pound of balls or shot was also formerly so called. See *Nouveau Dictionnaire Militaire*.

RIBAUDAILLE, *Fr.* a term of reproach which was formerly attached to the character of a poltroon, or cowardly soldier. When Philip of Valois went to war with Edward King of England, he took into pay twelve thousand Genoese archers, and placed them in the front. During their march, these men had neglected to secure their bows against the inclemency of the weather, and when they came into action, they found them entirely useless, and were obliged to receive several British flights of arrows, without being able to return a single one against them; insomuch, that they were forced to give way. Philip, imagining he was betrayed by these mercenary troops, exclaimed to the French, *Et tôt, tuez cette ribaudaille qui nous empêche la voie!* Quick! kill this dastardly gang, that only stop the way!

RIBBING nails, nails which are used for fastening the ribbing to keep the ribs of ships in their place in building.

Ribbing nails are also very useful for fastening timbers that are to be put up for a time, and taken down again for further service.

RIBLER, *Fr.* to ramble, &c. was formerly the verb; *riblerie*, the act of rambling, &c. the substantive. Both terms are now obsolete, except among the lower orders.

RIBLEURS, *Fr.* vagabonds, debauched fellows that run about the streets, or spend their nights in disorderly houses. Soldiers who give themselves up to pillage, &c. in war time, are likewise called *ribleurs*, by way of reproach.

RICHEs, (*richesses*, *Fr.*) wealth in land or money.

Embarras des RICHEsSES, *Fr.* the care, trouble, and vexation, which are the unavoidable consequences of overgrown fortunes in civil or military life; the uneasiness of wealth.

RIcoCHER, *Fr.* to ricochet, to batter or fire at a place with ricochet shots. The author of a very valuable work, entitled *Essai Général de Fortification, et d'Attaque et Défense des Places*, observes, in a note to page 89, vol. i. that in strict analogy, we should say *ricocheter*; but use, which is above all rules, has made *ricocher* a technical term, whenever we speak of the ricochets of cannon-shot.

Une face RIcoCHÉE, *Fr.* the face of a fortification, which is fired at with ricochet shots.

RIcoCHET literally means a bound,

a leap, such as a flat piece of stone or slate makes when it is thrown obliquely along the surface of a pool; as is done by boys when they play at duck and drake.

RIcoCHET, (*ricochet*, *Fr.*) in gunnery, is when guns, howitzers, or mortars, are loaded with small charges, and elevated from five to twelve degrees, so that, when fired over the parapet, the shot or shell rolls along the opposite rampart. It is called *ricochet-firing*, and the batteries are likewise called *ricochet-batteries*. The method of firing out of mortars was first tried in 1723, at the military school of Strasburgh, and with success. At the battle of Rosbach, in 1757, the King of Prussia had several 6-inch mortars made with trunnions, and mounted on travelling carriages, which fired obliquely on the enemy's lines, and amongst their horse, loaded with eight ounces of powder, and at an elevation of one degree fifteen minutes, which did great execution; for the shells rolling along the lines, with burning fuzes, made the stoutest of the enemy not wait for their bursting.

RIcoCHET firing is not confined to any particular charge or elevation; each must vary according to the distance and difference of level of the object to be fired at; and particularly of the spot on which it is intended the shot shall make the first bound. The smaller the angle, under which a shot is made to ricochet, the longer it will preserve its force and have effect, as it will sink so much the less in the ground on which it bounds; and whose tenacity will, of course, present so much less resistance to its progress. In the ricochet of a fortification of any kind, the angle of elevation should seldom be less than 10°, to throw the shot over a parapet a little higher than the level of the battery. If the works should be of an extraordinary height, the piece must be removed to such a situation, and have such charge, that it can attain its object at this elevation, or at least under that of 13° or 14°, otherwise the shot will not ricochet, and the carriages will suffer very much. The first gun in a ricochet battery should be so placed, as to sweep the whole length of the rampart of the enemy's work, at 3 or 4 feet from the parapet, and the rest should form as small an angle with the parapet as possible. For this purpose the guns should be pointed

about 4 fathoms from the face of the work toward the interior. In the ricochet of ordnance in the field, the objects to be fired at being principally infantry and cavalry, the guns should seldom be elevated above three degrees; as with greater angles the ball would be apt to bound too high, and defeat the object intended. For ricochet practice, see the different pieces of ordnance, as gun, mortar, and howitzer. See also the Bombardier and Pocket Gunner, page 185.

Battre en RICOCHET, Fr. to put a sufficient quantity of gunpowder in a piece of ordnance to carry the ball, with effect, into the works that are enfiladed. This sort of firing is generally practised along the whole extent of a face or flank. The celebrated Marshal Vauban first invented the mode of firing *ricochet*-shots. He tried the experiment at the siege of Ath, in 1679.

Battre un rempart à RICOCHET, Fr. to batter a rampart with ricochet shots. We cannot forbear mentioning under this article (and we trust no presumptuous motive will be attributed to us for so doing) an anecdote which, at least, shews the necessity of a work of this description. An officer of rank visiting Woolwich for the purpose of seeing the Royal Arsenal and Laboratory, &c.; after having been shewn the different sizes of cannon-balls, very gravely asked, which were the ricochet ones? This also happened during the American war, when a general officer observed, that a particular position would be safe, for he knew the Americans had no ricochet shot! So much for military reading!

Faire des RICOCHETS, Fr. to make ducks and drakes; to throw at random, as spendthrifts usually do.

To RIDE, (*monter à cheval, Fr.*) to go on horseback.

To RIDE short, (*monter à cheval à la genette, Fr.*) to use short stirrups.

To RIDE long, to use long stirrups.

RIDEAU is a rising ground, or eminence, commanding a plain, sometimes almost parallel to the works of a place. It is a great disadvantage to have rideaus near a fortification, which terminate on the counterscarp, especially when the enemy fire from afar: they not only command the place, but facilitate the enemy's approaches.

RIDER, in artillery carriages, a piece of wood, which has more height than

breadth; the length being equal to that of the body of the axle-tree, upon which the side-pieces rest in a four wheel carriage, such as the ammunition-wagon, block-carriage, and sling-wagon.

Rough-RIDER. See ROUGH.

A RIDER, a figurative phrase, signifying an idle individual, who, through interest, or upon a trafficking principle, receives a certain proportion of the pay, or allowances, of another who does the duties of some official situation, and is held responsible for the trust reposed in him; in which case *he* is said to be saddled, and the drone is his rider.

RIDES, hinges for doors.

RIDGE, in building, the highest part of the roof, or covering, of a house.

RIDGE-pole. See POLE.

RIDGELING, the male of any beast that has been half-cut.

RIDGES of a horse's mouth are wrinkles in the roof, running from one side of the jaw to the other, with furrows between them.

RIDING, a division in Yorkshire. The militia regiments, and those of the line, which bear the name of the several counties, are distinguished in Yorkshire by the word riding, which, according to Dr. Johnson, is a corruption of *trithing*; but according to others, is taken from *radings*, districts or governments. *Radt* in Celtic signifies *ruler*, or provincial minister. A counsellor of state was of old called *Raadst*: the council was styled *The Raadst*. Thence whoever had the capital influence in council was said to rule the *Raadst*; or, in the present pronunciation, *to rule the roast*. The latter interpretation differs from Johnson, who says roast perhaps comes from *roist*, a tumult. The provincial corps, which are particularly known by the addition of Riding, consist of the 1st and 2d West Riding, the East Riding and the North Riding regiments. These regiments are likewise distinguished from each other, in the North, by an allusion to their facings: hence *Green Cuffs*, which are the 1st and 2d West Riding regiments; the *Beverley Buffs*, which are the East; and the *Black Cuffs*, which are the north Yorkshire Riding.

RIDING-Master, in the cavalry, an officer whose duty is to instruct the officers and soldiers in the management of their horses.

RIDING-house-establishment belonging to the ordnance. This establishment was

first formed in consequence of the organization of a corps of horse-artillery, under the Duke of Richmond, when Master General. It continued as a mixed department, with the Royal Artillery, until the year, 1809, when, by direction of the Earl of Chatham, it was made into a distinct establishment. All the Horse-Artillery and Corps of Royal Artillery Drivers are taught horsemanship under an officer appointed for that purpose.

The Riding House is at Woolwich; and the strictest attention is daily given to the exercise of those duties for which it was originally formed. Of its utility there cannot exist a doubt; and on the manner in which it is conducted, we have every reason to believe no invidious comments can be justly made.

RIDING the wooden horse. This was a punishment much in use, of old, in different services. The wooden horse was formed of planks nailed together, so as to make a sharp ridge, or angle, about eight or nine feet long; this ridge represented the back of the horse; it was supported by four posts or legs, about six or seven feet long, placed on a stand made moveable by trucks: to complete the resemblance, a head and tail were fixed to the machine. When a soldier or soldiers, who were chiefly from the infantry, were sentenced or ordered to ride this horse, they were placed on the back with their hands tied behind them, and frequently muskets were fixed to their legs, to prevent the horse, as was humourously observed, from kicking off.

RIFLART, *Fr.* a large plane.

To RIFLE, to plunder; to rob.

RIFLE, the thread, ray, or line, made in a rifled barrel.

RIFLED gun, } (*arquebuse rayée,*
RIFLED piece, } *Fr.*) a fire-arm which

RIFLED barrel, } has lines, or exiguous canals, within its barrel, that run in a vermicular direction, and are more or less numerous, or more indented, according to the fancy of the artificer.— With respect to the word itself, it does not appear to bear any other analogy to our common acceptation of the verb, than what may be vulgarly applied to the common practices of riflemen. It is, on the contrary, more immediately connected in sense and signification, with an old obsolete word, *to ray*; to streak: which comes from the French *rayer*.—

The rifled barrel possesses many advantages over the common one; which advantages are attributed to the threads or rays with which it is indented. These threads are sometimes cut in such a manner, that the line which commences on the right side of the breech, terminates on the left at the muzzle; by which means the ball acquires a rotary movement, revolving once and a half round its own axis before it quits the piece, and then boring through the air with a spiral motion. It is well known, that cannon balls, and shot out of common barrels, are impelled in a different manner.

The rifled barrels which were used during the war in America, contained from 10 to 16 rays or threads; some had as few as 4. Some persons have thought, that those of 16 rays were the best, from a supposition that by the air collapsing in the several grooves, the ball obtained more velocity. Mr. Robins, however, seems to differ in opinion, particularly with respect to the depth of the grooves. He observes, page 339 and 340, in his Tract on Gunnery, that whatever tends to diminish the friction of these pieces, tends at the same time to render them more complete; and consequently it is a deduction from hence, that the less the rifles are indented, the better they are; provided they are just sufficient to keep the bullet from turning round the piece. It likewise follows, that the bullet ought to be no larger than to be just pressed by the rifles, for the easier the bullet moves in the piece, supposing it not to shift its position, the more violent and accurate will its flight be. It is necessary, that the sweep of the rifles should be in each part exactly parallel to each other. See Robins on Gunnery, page 828.

Paradés, a gunsmith at Aix-la-Chapelle, who was reputed to be very ingenious in the construction of rifled barrels, used to compress his barrels in the center.

RIFLEMEN, marksmen, armed with rifles. They formed the most formidable enemies during the war in America, being posted along the American ranks, and behind hedges, &c. for the purpose of picking off the British officers; many of whom fell by the rifle in our contest with that country. They have proved equally fatal in the hands of the French during the late war, and they have been

wisely added to our establishment. Considerable improvements are daily made; and we shall hope to see not only additional corps of riflemen, but light infantry battalions, like the chasseurs of the French, form a considerable portion of the British army. This has been called a murderous practice, and some persons have questioned how far it ought to be admitted in civilized warfare; but is not war itself a murderous practice?

Mounted RIFLEMEN, a corps of riflemen formerly in the British service, dressed like hussars, and mounted on horseback; of which description was the German corps raised by Baron Ferdinand Hompesch.

RIFLOIR, *Fr.* a sort of file.

Bloody RIFTS in the palate of a horse, a disease which is cured by washing the sore place with vinegar and salt, till it be raw, then rubbing it with honey and the powder of jet.

RIG, a horse that has had one of his stones cut out, and yet has a colt.

RIGHT, in geometry, something that lies equally, without inclining or bending one way or the other.

RIGHT angled is understood of a figure, when its sides are at right-angles, or stand perpendicularly one upon another.

RIGHT, that which is ordered; that which justly belongs to one.

To the RIGHT about, (*demi tour à droite*, *Fr.*) Make a half face to the right, ship the right foot back, so that the ball of the right toe is in contact with the heel of the left foot; slightly holding with the right hand the cartouch box, and on the word *face*, come to the *right about*, that is, let your front be where your rear was.

To be sent to the RIGHT about, a figurative expression in the British service, signifying to be cashiered, to be dismissed.

RIGHTS, (*droits*, *Fr.*) certain, unalienable claims and privileges, which every individual, civil as well as military, possesses in a well regulated community. Although there is not any specific mention made of these rights in the Articles of War, (which constitute the military code of Great Britain,) yet they are manifestly known to exist, from the circumstance of a mode being pointed out, whereby an officer or soldier who thinks himself wronged may find redress.

RIGOL. See *CIRCLE*.

RIGOLE, *Fr.* a trench; gutter.

RING, circle, an orbicular line.

RING of an anchor, that part of an anchor to which the cable is fastened.

RING in a horse, a callous substance growing in the hollow of the pastern above the coronet.

RING-bone in a horse is a hard, callous, or brawny swelling, growing on one of the tendons, between the coronet and pastern joint, and sticks very fast to the pastern; so that if it be not removed in time, it will cause incurable lameness.

To RING, to make a sharp reverberating noise.

RING ramrod! a word of command sometimes used at private inspections, to try the bottom of the barrel of a musket.

RINGS, in artillery, are of various uses; such as the lashing rings in travelling carriages, to lash the sponge, rammer, and ladle, as well as the tarpaulin that covers the guns; the rings fastened to the breeching-bolts in ship-carriages; and the shaft-rings to fasten the harness of the shaft-horse by means of a pin.

RINGS of a gun, circles of metal, of which there are five, viz.

Base-ring, *reinforce-ring*, *trunnion-ring*, *cornice-ring*, and *muzzle-ring*. See Muller's Artillery, page 30, for a full explanation of the several rings.

RINGLEADER, the head of any particular body of men acting in a riotous or mutinous manner.

RINGORD, *Fr.* a strong iron bar used in forges. It likewise means a thick pole with an iron ferrel.

RINGRAVE, *Fr.* pantaloon breeches.

RIOT and Tumult, sedition, civil insurrection, disturbance, &c.; a breach of the peace committed by an assembled multitude. It frequently happens, upon breaking out of riots, or other disturbances, at a distance from the abode of any magistrate, that the officers commanding troops have expressed doubts how far, and under what circumstances, they should be justified in proceeding to suppress such riots and disturbances, without the directions of a magistrate, or such other peace officers as are specified in the Riot Act.

In consequence of these doubts, an opinion was taken upon the following case, which was laid before the At-

torney General, on the 1st of April, 1801, by order of his Royal Highness the Duke of York, then commander in chief.

Case.—Your opinion is requested whether in case of any sudden riot, or disturbance, a constable, or other peace officer, being under the degree of those described in the 1st Act, can call upon the military to suppress such riot, or disturbance; or how far, in the absence of any constable, or other peace officer at all, the military would be justified in proceeding to suppress any riot which might break out?

Opinion.—I understand the disturbances here meant to be such as to amount to the legal description of *riots*. The word *disturbance* has no legal and appropriate meaning, beyond a mere breach of the peace, which is not, however, the sense in which the word is used in this case; the case plainly importing a breach of the peace by an assembled multitude. In case of any such sudden riot and disturbance as above supposed, any of his Majesty's subjects, *without* the presence of a peace officer of *any* description, may arm themselves, and, of course, may use ordinary means of force to suppress such riot and disturbance.—This was laid down in my Lord Chief Justice Popham's Reports, 121, and Keyling 76, as having been resolved by all the judges in the 39th of Queen Elizabeth to be good law, and has certainly been recognized in Hawkins, and other writers on the crown law, and by various judges at different periods since. And what his Majesty's subjects may do, they also ought to do for the suppression of public tumult, when an exigency may require that such means be resorted to; whatever any other class of his Majesty's subjects may allowably do in this particular, the military may unquestionably do also; by the common law, every description of peace officers may and ought to do, not only all that in him lies towards the suppressing riots, but may, and ought to command all other persons to assist therein.

However, it is by all means advisable to procure a justice of the peace to attend, and for the military to act under his immediate orders, when such attendance and the sanction of such orders can be obtained; as it not only prevents any disposition to unnecessary

violence on the part of those who act in repelling the tumult, but it induces also, from the known authority of such magistrates, a more ready submission on the part of the rioters, to the measures used for that purpose; but *still*, in cases of great and sudden emergency, the military, as well as all other individuals, may act *without* their presence or *without* the presence of any other peace officer whatsoever.

(Signed) EDWARD LAW.
(Now Lord Ellenborough, Lord Chief Justice of the Court of King's Bench.)
Lincoln's Inn, 1st April, 1801.

RIOT-act, an act of parliament prohibiting riotous or tumultuous assemblies. This being read by a magistrate or peace officer to the mob, if they do not in a given time disperse, or if they commit any act of violence on the property or persons of others, the soldiery may fire on them, and reduce them by force of arms to quiet, and obedience to the laws.

RIOTERS, disturbers of the public peace; persons acting in open violation of good order; raising, or creating sedition, &c. Soldiers are not to fire on rioters until the Riot-act has been read by a magistrate, or peace-officer; unless martial law is proclaimed; or in extraordinary cases. See *Riot*.

RIPOSTE, *Fr.* a parry and thrust; it likewise signifies, in a figurative sense, a keen reply, a close retort.

RIPOSTER, or *RISPOSTER*, *Fr.* in fencing, to parry and thrust.

RISBAN, *Fr.* in fortification, a flat piece of ground upon which a fort is constructed for the defence and security of a port or harbour. It likewise means the port itself. The famous *Risban* of Dunkirk was built entirely of brick and stone; having within its walls excellent barracks, a large cistern well supplied with water, magazines for stores, provisions, and ammunition. A ready communication was kept up with the town by means of the jettee, which corresponded with the wooden bridge that joined the entrance into the fort. The rampart was capable of receiving forty-six pieces of ordnance, which were disposed in three different alignments, or tiers, owing to the triangular figure of the fort; so that a fire could be kept up on all sides.

RISBAN, *Fr.* a fort, or castle, which is built in the sea, at some distance

from the dry shore, upon a sand-bank; on which account it is called *Rispan*, a corruption of *Richepan*; alluding to the great expense which unavoidably attends the construction of a work of this sort. Fort Rouge, at Calais, is of this description.

RISBERME, *Fr.* a sort of glacis, which sometimes projects out, and rises by degrees. It is used in jetties made of fascine work, the sides of which, towards the sea, are constructed or laid down in the form of a *Risberme*, in order to withstand the violence of the waves.

To **RISE**, to break into commotions; to make insurrections.

To **RISE**, in a military sense, to make hostile attack; as, the soldiers rose against their officers.

To **RISE**, to obtain promotion.

To **RISE** from the ranks, to obtain promotion by degrees, after having been in the ranks as a private soldier; a circumstance which has happened to some of the best generals in the world.

Rise, increase of price; as the rise of commissions in the army upon the prospect of peace.

RISÉE, *Fr.* ridicule; laughing-stock. This word often signifies the object of laughter, or ridicule. *Ce Martinet fut la risée de toute l'armée*; that Martinet was the laughing-stock of the whole army.

RISK, (*risque, hasard, Fr.*) Every person who undertakes a military operation, especially of command and responsibility, ought well to weigh the powers of his own mind; to calculate the chances against him; and to know how to risk his reputation in them.

RISK is the touch-stone of human courage; and without resolution to encounter it, there can be no honour.

RISSALA, or **RUSSAULA**, *Ind.* an independent corps of cavalry.

RISSALDAR, *Ind.* the commander of an independent corps of cavalry.

RIVAGE, *Fr.* shore; bank.

RIVAGE élevé, *Fr.* strand; beach.

RIVAL, one who is in quest of the same thing which another pursues; a competitor.

RIVAL powers. Nations are so called when their relative situation and resources in men and money, &c. enable them to oppose each other; as Great Britain and France.

RIVALISER, *Fr.* to vie with ano-

ther; to rival him. *Rivaliser de courage, de célérité*, *Fr.* to vie in courage, in swiftness.

RIVALITÉ, *Fr.* See **EMULATION**.

RIVE, *Fr.* the sea-shore side or coast, the bank or side of a river.

RIVE de Gènes, *Fr.* that line of coast which runs along the country of Genoa.

La RIVE d'un bois, *Fr.* the skirt, edge, or side of a wood.

RIVER un clou, *Fr.* a figurative phrase, signifying to make a reply in point; literally to hit the nail upon the head.

RIVER, (*rivière, Fr.*) a land current of water larger than a brook.—Vessels used upon navigable rivers may be impressed in cases of emergency by a warrant from any justice of the peace. See **MUTINY-Act**, Sect. 46.

Fordable RIVER, a river which may be passed without the assistance of any floating machines. In order to sound the ford, and to ascertain the state of it, men on horseback are first ordered to cross. By that means it will be known whether any obstacles have been thrown in the way by the enemy; for nothing is more easily effected. The passage of a ford may be rendered impracticable by throwing whole trees in, by tables or platforms covered with nails, and by stakes. The two latter impediments are the most dangerous.—But stakes are not easily fixed, and are consequently seldom used. When fords are embarrassed by them, it requires some time and trouble to clear the river; and it is equally difficult to get rid of the inconvenience that arises when wells have been sunk. Whenever there is reason to apprehend such obstacles, it is always best to reach the ford at dusk.

When the Prince of Condé, in 1567, resolved to cross the river Seine, the royalists, who were on the opposite side, endeavoured to prevent his passage by throwing quantities of madriers, or thick planks that were nailed together, iron hoops and water-cats into the ford. The Huguenots or Protestants, however, were not diverted from their purpose. Anbigné, a French writer, says, that on that occasion they placed 400 arquebusiers upon the bank to protect the men that raked the ford.

This was certainly a singular method to clear a ford, nor could it be done

without much difficulty, and a considerable degree of danger. The Chevalier Folard has proposed a much safer, and a much easier way, by means of grappling hooks tied to long ropes, which might be thrown into the ford. Yet even in this case, observes that writer, the object could not be accomplished if the river were broad, unless the persons employed in the undertaking be under the cover of so heavy a discharge of ordnance and musketry, that the enemy would not be able to interrupt them, even from an intrenched position on the opposite bank.

With respect to caltrops, the removal of them, when properly distributed at the bottom of a ford, must be attended with great difficulty; for they must render the passage absolutely impracticable, unless they were to sink very deep into the mud and sand, and thus become useless. The men that first enter are, in this case, the only persons incommoded; the rest may follow without much hazard.

It sometimes happens, that the bottom of a stream, or rivulet, is firm and gravelly; when this occurs, the greatest precautions must be taken to escape the effects of caltrops. For this purpose, a good stock of hurdles must be provided. The soldiers will hand them to one another, force them into the water, and then cover them with stones.

When one or two fords in a river are so situated, that several battalions cannot cross them upon one front, it is then highly prudent to throw a bridge over, either above or below the ford; for a swell may intervenc, and render it otherwise impassable; add to which, you have the advantage of getting a greater number of troops over at once.

In order to effect a passage for his army over the river Segre, Cæsar gave directions that ditches, thirty feet broad, should be dug in such parts of the banks as might with ease receive the water out of the stream, and render it fordable. Having accomplished this object, he found no difficulty in reaching Petreius, who, being in the daily fear of wanting provisions and forage for his men, was on the eve of quitting his position and marching forward.

The passage of the Granicus by Alexander the Great is likewise mentioned in history, as an instance of bold enter-

prize. But however celebrated that act may be in ancient records, we shall not be thought partial to the moderns when we state, that the passage of the river Holowitz, by Charles XII. of Sweden, was equally bold and well managed.

RIVERAINS, *Fr.* persons who inhabit the banks of rivers. By a regulation, which was in force during the French monarchy, all persons so situated, were obliged to leave a space 18 feet broad at least, between their houses or huts, and the bank, for the convenience of navigation. A set of men, called *Baliseurs*, were paid to see this regulation strictly complied with.

RIVET, a fastening pin clenched at both ends, so as to hold an intermediate substance with more firmness.

RIVET, in farriery, is that extremity of the nail that rests, or leans upon the horn when you shoe a horse.

RIVETTING-plates, in *gun-carriages*, small square thin plates of iron, through which the ends of the bolts pass, and are rivetted upon them.

RIVIÈRE, *Fr.* This word is used by the French, in one particular instance, to signify coast or shore—As *la Rivière de Gènes*; the coast of Genoa.

RIX-dollar, (*risdale*, *Fr.*) a dollar worth 4s. 6d.

RIZAMEDAR, *Ind.* an officer commanding a small body of horse.

RO, *Ind.* in Indian music means quick.

ROAD, (*chemin*, *Fr.*) For the manner in which roads should be reconnoitred for military purposes, see **RECONNOITRING**; also page 231 of the **LITTLE BOMBARDIER**.

Military ROAD, a road calculated for the passage of troops, and the convenience of artillery, &c. Of this description is the road directed to be cut, by Act of Parliament, from Sussex into Kent. These roads are made of a certain breadth, and through a country susceptible of defence.

ROAN. A *roan* horse is one of a bay sorrel, or black colour, with grey or white spots, interspersed very thick. When this party-coloured coat is accompanied with a black head, and black extremities, he is called a *roan*, with a blackmoor's head; and if the same mixture be predominant upon a deep sorrel, it is called *claret roan*.

ROARER, a horse that makes a

noise similar to that of a broken-winded one, and who is generally a crib-biter.

ROBBER, one that plunders by force, or steals by secret means.

Public-ROBBER, one who betrays the trust reposed in him, either in a military or civil capacity, and enriches himself unlawfully, at the expense of the nation. This term is intrinsically the same as *public defaulter*. A public robber is the more infamous, because he not only betrays his trust, but pilfers from the hard earned pittance of every individual in the nation. The common highwayman is less criminal.

ROBINET, an ancient machine of war, which, like the Mute-griffon, threw both stones and darts.

ROC, *Fr.* a rock.

Roc de lance, *Fr.* in tournaments; the wooden part of a lance is so called.

ROCAILLE, *Fr.* a term of ornamental architecture, signifying the collection of shells, pebbles, and petrifications, &c. which are used in grottos.

ROCHE, *Fr.* By this word the French mean the hardest and the most difficult stone to be cut that is found. Such as flint, and other stones that can be broken into scales.

Roché à feu, *Fr.* a solid composition, which gradually consumes when it has been lighted, but which emits a very broad and lively flame, and is not extinguished by water.

ROCHE vive, *Fr.* such a rock as is all of stone, without any bed or mixture of earth.

ROCHER, *Fr.* a large rock; derived from *roc*, and generally bearing the same import.

ROCK, (*roc*, *Fr.*) stone which is extremely hard, and is difficult to be worked, the broken pieces of which are used to throw at the foot of a jetty, in order to strengthen it against the violence of the waves. This species of stone does not decay by being exposed either to air or water.

The Rock, a term familiarly used among military men, to signify the Rock of Gibraltar.

ROCKET *as used in India.* See **FOUGETTE**.

ROCKETS. See **LABORATORY**.

Signal ROCKETS are seldom more than one pound weight. They are used in the navy for signals, and are fired perpendicularly.

Indian ROCKETS are used by the native troops in India. These rockets are made of iron, and are lashed to a bamboo cane. The weight is seldom more than two pounds, or less than one. They were used with very destructive effect against the British during the siege of Seringapatam in 1799. See **FOUGETTE**.

Congreve's ROCKETS, so called from the name of the inventor, are of a peculiar internal structure and composition, by which the action of this principle of projectile force is so greatly increased, as not only to triple the flight of small rockets so formed, but also to allow of the construction of rockets of such dimensions as, on the ordinary principles of combination, would not even rise from the ground, and of such powers of flight and burthen as have hitherto been considered altogether impracticable.

On the basis of this increase of power, Mr. Congreve has succeeded in making **WAR ROCKETS** for various naval and military purposes, and of various descriptions and calibres, either for explosion or conflagration, and armed both with shells and case-shot; the 32 pr. rocket carcass, which is the nature hitherto chiefly used for bombardment, will range 3000 yards with the same quantity of combustible matter as that contained in the 10 inch spherical carcass, and 2500 yards with the same quantity as that of the 13 inch spherical carcass. The 12 pr. rocket case shot, which is so portable that it may be used with the facility of musketry, has a range nearly double that of field artillery, carrying as many bullets as the 6 pr. spherical case: and here it ought to be observed, that the projectile force of the rocket is peculiarly well calculated for the conveyance of case shot to great distances, because as it proceeds its velocity is accelerated instead of being retarded, as happens with every other projectile, while the average velocity of the shell is greater than that of the rocket *only* in the ratio of 9 to 8; independent of which, the case shot conveyed by the rocket admits of any desired increase of velocity in its range by the bursting powder, which cannot be obtained in any other description of case.

Of this description of rocket case shot, one hundred infantry soldiers will

carry into action, in any situation where musketry can act, 300 rounds, and 10 frames, from each of which four rounds may be fired in a minute. And of the same description of case shot for the use of cavalry, four horses will carry ninety-six rounds and four frames, from which may be fired sixteen rounds in a minute—each horse not having more than the ordinary burthen of a dragoon horse. Can any other species of ammunition give such powers and facilities?

The carcass rockets were first used at Boulogne in 1805, in consequence of a demonstration of their powers made at Woolwich by Mr. Congreve, in the presence of Mr. Pitt, and several other Cabinet Ministers, in the month of September. Sir Sidney Smith was appointed to command this expedition, but from the lateness of the season, it being the end of November, before the preparations were completed, nothing was done that year. In 1806, however, Mr. Congreve renewed his proposition for the attack of Boulogne by rockets, and it was ordered, in consequence of Lord Moira, then master general of the ordnance, and Lord Howick, then first lord of the Admiralty, having attended an experiment at Woowich, and having satisfied themselves by their own observation of the powers of the weapon. The attack was accordingly made under the command of Commodore Owen, late in October, 1806; having been put off during the summer months in consequence of the negociation for peace at that time pending. From this delay, however, instead of being carried on upon the great scale at first intended, it became a mere desultory attack, in which not more than 200 rockets were fired. The town, however, was set on fire by the first discharge, and continued burning for nearly two days: it is also believed that some of the shipping were burnt, but the greater part of the rockets certainly went over the basin into the town.

Since this period the rockets have been used in almost every expedition, and the importance of their effect in the ever memorable battle of Leipzig is in the recollection of all Europe. The use of this weapon is now extended to cavalry, as well as infantry and artillery.

The great general point of excellence of the rocket system is the facility with

which all the natures of this weapon may be conveyed and applied.

Its peculiar applicability to naval bombardment hinges on this property, that there is no re-action, no recoil in the firing of the largest rockets; so that by this means carcasses, equal to those projected from the largest mortars, may be thrown from the smallest boats. And its peculiar fitness for land service, is, that it is a description of extremely powerful ammunition without ordnance, so that the burthen of mortars and guns is dispensed with, and all that is to be carried is actual available missile matter, capable of the range, and of many of the most important effects, of the heaviest artillery.

There has been much misapprehension as to the expense of the rocket system; and it is therefore proper to explain, that, in fact, it is the cheapest of all ammunition depending on the projectile force of gunpowder; for the proof of which it will be only necessary briefly to state, that the 32-pr. carcass rocket costs only 1*l.* 11*s.* 0½*d.* complete in every respect for service; whereas its equivalent, the 10-inch spherical carcass, with the charge of powder necessary to convey it 3000 yards, which power is contained in the rocket, costs 1*l.* 2*s.* 7*d.* independent of any charge for the mortar, mortar bed, platforms, difference of transport, &c. &c. attaching to the spherical carcass and not to the rocket, which actually requires no apparatus whatever to use it in a bombardment, and has therefore no charge attaching to it, beyond the first cost, but that of transport; and a vessel of 300 tons will carry 5000 of them at least. We have indeed seen a calculation, by which it appears, that in every 10-inch carcass, so thrown, there is an actual saving of 3*l.* In fact, when our previous observation is carried in mind, that "the rocket system is a system of ammunition without ordnance," it cannot fail to strike every one reading the above statement, that, in all its applications, the rocket must be the cheapest possible arm.

ROCKET *Light Ball*, also invented by Mr. Congreve, is a species of light ball thrown into the air by means of one of his rockets, where having reached the summit of the rocket's ascent, it is detached from it by an explosion, and remains suspended in the air by a small

parachute to which it is connected by a chain. Thus, in lieu of the transient and momentary gleam obtained by the common light ball, a permanent and brilliant light is obtained and suspended in the air for five minutes at least, so as to afford time and light sufficient to observe the motions of an enemy by night either on shore, or at sea, where it is particularly useful in chasing, or for giving more distant and extensive night signals. It is to be observed that nothing of this kind can be obtained by the projectile force of either guns or mortars—because the explosion would infallibly destroy any construction that could be made to produce the suspension in the air.

Floating Rocket Carcass. This is another of Mr. Congreve's applications of his rocket, and of the parachute, for the purpose of conveying combustible matter to distances far beyond the range of any known projectile force: at the same time that it is cheap, simple and portable. The floating carcass, like the light ball, is thrown into the air, attached to a rocket, from which, being liberated at its greatest altitude, and suspended by a small parachute, it is driven forward by the wind, and will in a moderate breeze afford ranges at least double those of the common carcass, and may, therefore, for naval purposes, from a blockading squadron, be thrown in great quantities with a fair wind against any fleet or arsenal, without the smallest risk, or without approaching within range either of guns or mortars: thus, during the blockade of the Russian fleet at Baltic Port, it might have been continually used, at all events, with great prospect of success, and certainly where no other means of annoyance could have been applied. The rocket containing this carcass is not larger than the 32-pounder rocket carcass; and the whole expense added to the rocket does not exceed 5s.: nor are the approaches of the carcass itself necessarily visible by night, as it may be arranged not to inflame till some time after it has settled. It is evidently, therefore, capable of becoming a very harassing weapon, with a great chance of doing as much mischief as any other carcass amongst large fleets and flotillas, by lodging unperceived in the rigging, or lighting, in extensive arsenals, in situations where no

other means of annoyance whatever exist.

ROD. See MEASURING.

ROD, a switch carried by a horse-man, in his right hand, partly to represent a sword, and partly to conduct the horse, and second the effects of the hand and heels.

ROD, a measure of length, containing by statute, sixteen feet and a half English.

ROD of iron.—To govern or command with a rod of iron.—A figurative expression, signifying to treat those over whom we have command or rule, with unqualified severity; to act as tyrants.

RODS, or *rammers*, instruments either of iron or wood, to drive home the charges of muskets, carabines, and pistols.

Rods, sticks fastened to sky-rockets, to make them rise in a straight line.

RODOMONT, *Fr.* a bully; an un-military character.

Faire le RODOMONT, *Fr.* to bully; to talk loudly, without possessing the real spirit of a man, or soldier.

RODOMONTADE, *Fr.* *rodomontade*; the act of bullying, vain boasting, or arrogating to ourselves qualities which we do not possess. A French writer has very justly observed, that there cannot be a greater defect in the character of an officer than an over-weening display of real or fictitious talents. The word is derived from one Rodomond, the hero, or principal character in an old romance, who makes himself conspicuously ridiculous in this way.

ROGURES, *Fr.* shreds; scrapings; parings.

ROGUES's-march. See MARCH.

ROIHILLAL, *Ind.* a tribe of Afghans inhabiting the country north of the Ganges, as far as the *Suba* of Oude to the eastward.

ROI, *Fr.* king.

ROI d'armes, *Fr.* See KING AT ARMS.

Le ROI s'avisera, *Fr.* the King will consider. By these words written on a bill presented to the King by the Parliament, is understood his absolute denial of that bill in civil terms, and it is thereby wholly made null and void.

Le ROI le veut, *Fr.* the King is willing. A term in which the royal assent is signified by the clerk of the Parliament to the public bills; giving authority to

those, which before were of no force or virtue.

De par le Roi, Fr. by the king's order.

ROKER, *Ind.* cash.

ROLE, *Fr.* a muster-roll, state, or return. The word *rôle* is used among the French, indiscriminately, to signify, either the effective force of an army, or the actual quantity of stores and ammunition which the magazines contain.

To ROLL in duty, an old term which is seldom used at present, although extremely appropriate, and which corresponds with the French term *rouler*. It signifies to take one's turn upon duty, and to be subject to a fixed roster according to rank and precedence. When officers of the same rank take their turns upon duty, pursuant to some established roster, as captains with captains, and subalterns with subalterns, and command according to the seniority of their commissions, they are said to *roll in duty*.

To ROLL, to continue one uniform beat of the drum, without variation, for a certain length of time. When a line is advancing in full front, or in echelon, for any considerable distance, the music of one regulating battalion may, at intervals, be permitted to play for a few seconds at a time, and the drums of the other battalions may be allowed occasionally to *roll*; drums likewise *roll* when troops are advancing to the charge.

Long-ROLL, a beat of drum by which troops are assembled at any particular spot of rendezvous, or parade.

Muster-ROLL, a return, given by paymasters, on which are written the names of both officers and soldiers of the regiment, troop, or company, with their country, age, and service.

Squad-ROLL, a list containing the names of each particular squad. Every non-commissioned officer and corporal, who is entrusted with the care and management of a squad, must have a roll of this kind.

Size-ROLL, a list containing the names of all the men belonging to a troop, or company, with the height, or stature of each specifically marked. Every serjeant keeps a regular size roll, and every captain of a troop, or company, ought to have one likewise.

ROLL-call, the calling over the names

of the several men who compose any part of a military body. This necessary duty is done by serjeants of companies, morning and evening, in every well regulated corps. Hence *morning roll-call*, and *evening roll-call*. On critical occasions, and in services that require promptitude and exertion, frequent roll-calls should be made.

ROLLER, a small wheel placed at the foot of the hammer of a gun, or pistol lock, in order to lessen the friction of it against the hammer, or feather spring.

ROLLER, a stuffed bandage from 4 to 6 inches broad, which serves to keep the cloth upon a horse's back. It is fastened by means of leathern straps with buckles, and is made of woollen stuff, or Russia duck, to correspond with the winter or summer clothing. There are also very broad rollers used for the purpose of confining the carcass of a horse that may be running to belly.

ROLLER likewise means a long piece of wood which was formerly rounded and made taper to suit the regulated size of a military tail.

ROLLER, in surgery, a long and broad ligature, usually made of linen cloth, for binding, surrounding, and containing the parts of the human body, and keeping them in their proper situation, thereby disposing them to a state of health and redintegration.

ROLLERS are round pieces of wood of about nine inches diameter, and four feet long, used in moving pieces of artillery from one place to another.

ROLLERS, } with carpenters, masons,
ROLLS, } &c. are plain cylinders of wood, seven or eight inches in diameter, and three or four feet in length, used for removing beams, large stones, or other weights of a similar kind.

These *rollers* are placed successively under the fore part of the massives or heavy bodies that are to be removed; which at the same time are pushed forward by means of levers, &c. applied behind.

Endless ROLLERS are rollers used to remove blocks of marble, or other loads of excessive weight.

ROLLING, in mechanics, is a kind of circular motion, in which the moveable turns round its own axis or center, and continually applies new parts of it

surface to the body upon which it moves. The motion of *rolling* is opposed to that of *sliding*, in which the same surface is continually applied to the plane along which it moves.

The friction of a body in *rolling*, or the resistance made to it by the roughness of the plane upon which it moves, is found to be much less than the friction in *sliding*.

ROMAINE, *Fr.* a steelyard, or balance for weighing things of various weights by one single weight, as from one single pound to 112 pounds.

ROMANS. Before the establishment of the mess at the Horse Guards, which was formerly paid out of the King's privy purse, and is now charged in the extraordinaries of the army, the captain of the guard at St. James's kept a table for the subalterns attached to that duty. In order to enable the captains to support these expenses, a certain number of men were allowed to work in the metropolis, on condition that they left their pay in the hands of their officers: these men were called *Romans*.

ROMAN Catholics, a name given to all such Christians as acknowledge the Pope's supremacy. The English and Irish Roman Catholics were formerly subjected to very severe restrictions on account of their religious opinions. The penal code has, however, been gradually relaxed in their favour during the present reign.

ROMAN order, in architecture. This order is the same as the *Composite*. It was invented by the *Romans*, in the reign of *Augustus*, and placed above all others, to shew that the *Romans* were lords over other nations. It is made up of the *Ionic* and *Corinthian* orders.

ROMPRE, *Fr.* to break; to divide, &c.

ROMPRE *un bataillon*, *Fr.* in military evolutions, to break a battalion into a given number of parts for the purpose of defiling, &c.

ROMPRE *en colonne*, *Fr.* to break into column.

ROMPRE *la ligne*, *Fr.* to break the line; to advance against a force drawn up in battle array, so as to force through its continuity of line, and thereby occasion the greatest confusion. Admiral Sir George Rodney first practised this manœuvre at sea, and defeated the French fled under Count de Grasse, on

the 12th of April, 1778; Lord Howe did the same on the 1st of June, 1793, and after him Lord Nelson at the battle of the Nile, and at Trafalgar. No general, however, availed himself of the superiority of this manœuvre in land engagements, so much as the late Emperor of the French.

ROMPRE *un cheval*, *Fr.* to break a horse; to supple him, &c.

ROMPRE *vif*, *Fr.* to break alive upon the wheel. During the French inonarchy, soldiers conspiring against their sovereign, or concealing a conspiracy, were broken alive upon the wheel.

Chemin ROMPU, *Fr.* a cragged broken road.

ROMPU *aux affaires militaires*, *Fr.* well versed in military economy.

RONDACHE, *Fr.* a sort of shield which the French formerly used, and which is still carried by the Spaniards.

RONDEL, in *fortification*, a round tower, sometimes erected at the foot of a bastion.

RONDES, *Fr.* See ROUNDS.

RONDE-major, *Fr.* town-major's round; so called from the town-major visiting the different quarters of a garrison during the night. This round, in some degree, corresponds with our Grand Round. See ROUND.

RONDES *roulantes*, *Fr.* rounds that are made by officers, serjeants, or corporals, over a certain part of the ramparts. These agree with our visiting rounds.

RONDE *d'officier*, *Fr.* officer's round.

Chemin *des RONDES*, *Fr.* a path marked out for the convenience of the rounds.

RONDE *de gouverneur*, *Fr.* the governor's round.

The French method of ascertaining the nature of the several rounds is by challenging in the same manner that we do, viz. *Qui va là?* Who goes there? This must be said sufficiently loud for the main guard to hear. He is instantly answered—*Ronde de Gouverneur*, Governor's rounds; *Ronde-Major*, Major's rounds, or grand rounds, and so on, according to the nature of the rounds. The sentry who stands posted near the guard-house, after having cried out *De-meurez-là*, stop there, or, as we say, Stop round, cries out again, *Caporal hors de la garde*, Corporal from the guard. The corporal of the guard with

his sword drawn, according to the French custom, repeats, *Qui va là?* Who comes there? He is answered *Ronde*, round. He then says, *Avance qui a l'ordre*, Let him advance who has the parole, or countersign; or, as we say, Advance one, and give the countersign.

RONDE des officiers de piquet, Fr. piquet rounds.

RONDE pesante, Fr. a garrison trick which was formerly played on cadets in the French service, to try their tempers. It was a burlesque on the regular rounds, and was performed in the following manner: The cadet, accompanied by an officer, went the rounds with a sack on his back. He was challenged, *Qui vive?*—*Ronde*.—*Quelle ronde?*—*Ronde pesante*.—*Avance qui a l'ordre*.—Accordingly, the cadet advanced, and the sentry put a stone into the sack, saying *Passe, lourdaut*—Pass, sluggard. The sentries, as it will be readily supposed, were numerous on the occasion, being officers, and the cadet had 50 or 60 pounds of stones to carry home. The natural levity of the French character, and its apparent childishness in familiar intercourse, may account for this extraordinary mixture of grave and humorous conduct.

RONDES chez les Turcs, Fr. See *TURKISH ROUNDS*.

RONDELLE, Fr. a small round shield, which was formerly used by light armed infantry. It likewise means a part of the carriage of a gun.

RONDELIERS, Fr. Soldiers who were armed with rondelles, or small wooden shields, covered with leather, were anciently so called.

ROOF, in architecture, is the upper part of any building.

The roof contains the timber work and its covering of slate or tile, or whatsoever serves it as a cover, although carpenters usually mean by *roof*, the timber-work only.

Roofs are variously formed; being sometimes pointed; in which case the most beautiful proportion is, to have its profile an equilateral triangle.

ROULET, Fr. a watchword among the French clergy, during the civil wars of France, signifying a collection of the pensions of those eminent persons, who had undertaken to protect them.

ROOM, space, extent of space, great or small; any part of a building for

the accommodation of individuals; as barrack room, orderly room; viz. the orderly room at St. James's, mess room, guard room, officers' rooms, soldiers' rooms, and store room, for the duty of the regiment.

ROOMS, in a military sense, are those parts of a building or barrack which, by specific instructions, the different barrack masters must provide and furnish, for the accommodation of the King's troops in Great Britain or elsewhere. The schedule, as published by authority, describes the number of rooms allowed in barracks for the commissioned, warrant, and non-commissioned officers, and private men.

ROPE, a cord; a string; a halter; a cable; a hauler.

ROPE, *cord*, or *strap*, is a great strap tied round a pillar, to which a horse is fastened, when horsemen begin to quicken and supple him, and teach him to fly from the shambrier, and not to gallop false. In maneges that have no pillar, a man stands in the center of the ground, holding the end of the rope.

ROPE of sand, a phrase in familiar use, to signify disunion, want of adhesion and continuity.—Thus the colonel and the captains of a regiment disagreeing may be called a *rope of sand*.

ROPES are of various length and thickness, according to the uses they are made for; such as drags for the gin, for the sling-cart and wagon, &c.

ROPES of two pillars are the ropes, or reins of a cavesson, used to a horse that works between two pillars.

Drag-Ropes, in the artillery, by which the soldiers pull the guns backward or forward, both at practice and in an engagement, are of the following dimensions, viz.—For a 24-pounder, 54 feet long, with the loop-holes for the pegs included, and 5½ inches in circumference; for 18 and 12-pounders, 48 feet long, and 4 inches in circumference; for 6 and 3-pounders, 39 feet long, and 1¾ inch in circumference. For 13 and 10-inch howitzers, 45 feet long, and 6¾ inches in circumference; for 8-inch howitzers, 48 feet long, and 4 inches in circumference; for all other howitzers, 35 feet long, and 2 inches in circumference.

Picket ROPES. See *PICKET*.

Head-Ropes, ropes affixed to the heads of horses for any particular purpose.

Heel-ROPES, ropes affixed to the hind legs of horses for some direct purpose.

ROQUE, *Fr.* a blockhouse, or strong hold built upon a rock.

ROSACE ou ROSASSE, *Fr.* in architecture. See *ROSE*.

ROSE, in architecture, &c. is an ornament cut so as to resemble a rose.

The rose is chiefly used in friezes, cornices, vaults of churches, and particularly in the middle of each face of the Corinthian abacus. It is also used in the spaces between the modillions under the plafonds of cornices.

ROSE-buds. See *NAILS*.

ROSETTE, an ornamental bunch of black riband, or cut leather, which was worn both by officers and soldiers in the British service, on the upper part of their cues, when those appendages were deemed necessary.

ROSETTES, two small bunches of ribands that are attached to the loops by which the gorget of an officer is suspended upon his chest. The colour of the riband must correspond with the facing of the uniform. The French use the same word.

ROSETTE, *Fr.* molten copper, such as is used in the alloy or mixture of metals for cannon and mortars.

ROSIN. See *RESIN*.

ROSSE, *Fr.* a jade; a sorry horse.

ROSTER, in *military affairs*, is a plan, or table, by which the duty of officers, entire battalions, and squadrons, is regulated.

ROSTRAL Crown, (*couronne rostrale*, *Fr.*) a crown which was bestowed upon that Roman soldier who should first leap on board an enemy's ship. We wonder some honourable marks of distinction are not given to British sailors for feats of valour. Medals are bestowed upon the non-commissioned officers and soldiers in the army.

ROSTRUM, a Latin word which literally means the beak or bill of a bird, and figuratively the prow of a vessel. There was in a public place in ancient Rome, a tribunal ornamented with various prows of ships, which the Romans had taken from the Antiati. The orators, who harangued the people in public, mounted this Rostrum. Hence the Roman phrase; to speak from above the rostra or prows.

ROTATION, in geometry, is the

circumvolution of a surface round an immovable line called the axis of rotation.

ROTULE, *Fr.* the knee-ball.

ROUAGE, *Fr.* the wheel-work of a carriage, &c.

Bois de ROUAGE, *Fr.* timber to make wheels with.

ROUANNE, *Fr.* a concave iron instrument, which is used for the purpose of enlarging the hollow of a pump. It likewise signifies a mark. Bédidor writes the word *boinette*, and says it is a small tool with which carpenters and coopers mark wood.

ROUANNER, *Fr.* to bore; also to mark casks.

ROUÉ, *Fr.* a libertine; one whose principles of morality are considerably relaxed, but who is not sufficiently vitiated in his manners to be excluded from society. The French make a familiar use of the term, particularly among officers, and do not affix any degree of stigma to it. They say, on the contrary, *C'est un aimable roué*; he is an agreeable, gay fellow.

ROUE, *Fr.* See *WHEEL*.

Maitresse ROUE, *Fr.* great wheel.

ROUE de feu, *Fr.* an artificial fire-work. See *SOLEIL tournant*.

ROUELLE, or wheel spur. See *SPUR*.

ROUER de coups, *Fr.* to beat unmercifully.

ROUËT, *Fr.* a small solid wheel, made of steel, formerly fixed to the pans of blunderbusses and pistols, for the purpose of firing them off.

Arquebuses et Pistolets à ROUËT, *Fr.* blunderbusses and pistols to which a small wheel was attached. These fire-arms are now very little known; some, however, are still to be found in arsenals; being kept there merely for curiosity.

ROUËT, *Fr.* a circular assemblage of four or more platforms, of oak, to form the foundation of a well, &c. upon which is placed the first lay of dry rubble, stone, or bricks.

ROUËT de poulie, *Fr.* sheave of a pulley.

ROUËT de moulin, *Fr.* the cog wheel of a mill. It is called *rouet dentelé*.

ROUËT de serrure, *Fr.* scutcheon of a lock.

ROUËT d'arquebuse, *Fr.* lock of an arquebuse.

ROUGES, boulets Rouges, *Fr.* red-hot-balls.

ROUGH Rider, a person who is indispensably necessary in every cavalry regiment. He is a sort of non-commissioned officer, and should always associate with the serjeants in preference to the private men.

Rough Riders are the assistants of the riding master, and one should always be appointed to each troop. The necessary qualifications, for every rough rider, (independently of a thorough knowledge of horsemanship,) are activity, zeal, and good conduct.

No *Rough Rider* ought to be an officer's servant, as his situation puts him above the level of common men.

Rough Riders are generally paid five guineas a year as a compensation for their trouble; they likewise receive 10s. 6d. from every officer who learns to ride, and from every officer who has a horse broke at the riding school. This money is divided equally amongst them.

Every *Rough Rider* must provide himself with a proper jacket for the riding school business, according to the pattern fixed upon in the regiment.

When it is found absolutely necessary to employ non-commissioned officers as *Rough Riders*, they must do as much troop duty as they can.

To *ROUGH Horses*, a word in familiar use among dragoons to signify the act of breaking in horses, so as to adapt them to military purposes.

To *ROUGH it*, a cant phrase used among military men, signifying to face every sort of hardship.

To *ROUGH-ride a person*, to take advantage of the zeal or good-nature of another for one's own convenience or advantage, without any reciprocal feeling. This word agrees with our school-boy term to *fag*.

ROUGH casting. See PLASTERING.

ROUGH mortar, a mortar chiefly used in the county of Kent. It is made of a sort of sand, which, when mixed with lime, makes it look as red as blood. Powder of cinders is thrown into the mixture, which changes it to a bluish colour, with which they rough cast their houses.

ROULE, *Fr.* in navigation, course at sea.

ROULEAU, *Fr.* a cylindrical piece of wood with iron ferrels at both ends, and with mortises fitted to the end of the lever.

ROULEAU de cartouche, *Fr.* a cylindrical solid piece of wood used in making cartridges.

ROULEAUX, *Fr.* round bundles of fascines tied together. They serve to cover men, when the works are pushed close to a besieged town, or to mask the head of a work.

ROULEAUX sans fin, *Fr.* called also *tours terrières*, are wooden rollers, put together with cross-quarters of timber; they are used for the conveyance of heavy burthens, &c.

ROULEMENS, *Fr.* the several rolls or ruffles beat upon a drum, as preparatives for exercise, &c.

ROULER, *Fr.* to be subject to a fixed roster according to rank and precedence. See *To ROLL*.

ROULER, *Fr.* to be in motion; to be stirring. The French say, figuratively, *L'argent roule*, money is stirring, or in plentiful circulation. They also say, speaking of any particular point, *tout roule là-dessus*, that is the main point, or all turns upon that.

ROULIER, *Fr.* a wagoner, a carman. *Cheval ROULIER*, *Fr.* a large cart-horse.

ROULIS, *Fr.* large round stakes of wood.

ROUND, from the French *ronde*. In military matters, a visitation; a personal attendance through a certain circuit of ground to see that all is well. A round consists, in the ordinary way, of a detachment from the main guard, of an officer or a non-commissioned officer and 6 men, who go round the rampart of a garrison, to listen if any thing be stirring without the place, and to see that the sentinels be diligent upon their duty, and all in order. In strict garrisons the rounds go every half hour. The sentinels are to challenge at a distance, and to port their arms as the *round* passes. All guards turn out, challenge, exchange the parole, and present arms.

ROUNDS are ordinary and extraordinary. The ordinary rounds are three: the *Town-major's Round*, the *Grand Round*, and the *Visiting Round*.

Grand ROUNDS, the rounds which are gone by general officers, governors, commandants, or field officers. When there are no officers of the day on picket, the officer of the main guard in garrison may go the grand rounds.

Visiting ROUNDS, rounds gone by captains, subalterns, and the town-majors of garrisons.

The Grand Rounds generally go at midnight; the Visiting Rounds at intermediate periods, between sun-set and the *réveillé*. The Grand Rounds receive the parole, and all other rounds give it to the guard.

There are also a species of bastard rounds, (if we may be permitted the expression,) which are gone by a corporal and a file of men; and which are in reality nothing more than a patrol. When challenged, they answer, *Pat. Rounds*, i. e. *Patrole Rounds*.

The governor of a garrison can order the rounds to go as often as he may judge expedient. Extraordinary rounds are resorted to when any particular event or occurrence is expected, and in cases of tumult, &c.

The going the rounds, though generally considered among the inferior duties of military discipline, ought to be most scrupulously attended to; and we are sorry to have the opinion of many good officers with us, when we assert, that a specific regulation is wanted upon this head. It will be observed, that we call the duty when done by the town-major, &c. *round*, not *rounds*, as is erroneously practised.

Turkish ROUNDS. The Turks are in the habit of going the rounds like other nations, for the purpose of ascertaining whether sentries are alert and vigilant on their posts. They call the rounds *rol*. They start from the guard-house, and the person who goes with them has no other weapon of defence than a stick in his hand. He is accompanied by a corporal who carries a lantern. He observes whether at his approach the sentry instantly cries out, *Jegder Allah*, which signifies *Good God*. If any sentry should be found asleep, or he backward in crying out *Jegder Allah*, he is put into prison, and there severely bastinadoed. The Turks never give a parole or countersign, in camp or in garrison.

The design of *rounds* is not only to visit the guards, and keep the sentinels alert, but likewise to discover what passes in the outworks, and beyond them.

ROUND-Major, (*ronde-major*, Fr.) the round which the town-major goes in a fortified place. The officers of the guard

receive him with two musketeers, and give him the word once, when he goes that round.

When the governor of a town goes his *round*, the officers turn out the guard without arms, and send four musketeers to receive him at ten paces distance, and give him the word as often as he chuses to demand it. All other rounds, without exception, are obliged to give the word to the corporal of the guard.

ROUND-Parades. See *PARADES*.

ROUND-Robin, a compact of honour which officers enter into, (when they have cause of complaint against their superior officer,) to state their grievances, and to endeavour to obtain redress, without subjecting one individual more than another to the odium of being a leader, or chief mover. The term is a corruption of *ruban rond*, which signifies a round ribband. It was usual among French officers, when they signed a remonstrance, to write their names in a circular form, so that it was impossible to ascertain who signed first. Hence to sign a *round robin* against any person, is for a specific number of men to sign, one and all, a remonstrance against him. Colonels of regiments have been sometimes treated in this manner. Great judgment, operating upon motives grounded in strong facts, should always influence on these nice occasions. For it is possible, that on a serious investigation of the motives, &c. the *round robin* may be construed into, and proved to be, a conspiracy.

ROUND. A general discharge of cannon or fire-arms is so called. The French use the word *salve* on this occasion; *ronde* being confined to the act of visiting posts, &c.

ROUND, or *Volt*, a circular tread.

To *ROUND a horse*, or to make him *round*, is a general expression for all sorts of manege upon rounds; so that to round a horse upon a trot, gallop, or otherwise, is to make him carry his shoulders and his haunches compactly or roundly, upon a greater or smaller circle, without traversing or bearing to a side.

To round your horse the better, make use of a cord or strap, held in the center, till he has acquired the habit of rounding, and not making points.

ROUND-towers, buildings constructed

in ancient times at small distances from one another, with portions of wall between, for the defence of a town.

To *ROUND off*, to give a compact circular form to any thing. Thus, in the acquisition of territory, the accession of any particular portion of land or country in a given direction, is said to round the possessor off on that side. If Russia, for instance, had made herself mistress of Sweden, and incorporated that kingdom in her own vast empire, such an act would have *rounded her off* on the strongest part of Europe.

ROUNDELLE, or *Rondache*, a species of shield which was used by our Norman ancestors.

ROUPIE, *Fr.* rupee. An Indian coin, equal to two shillings and three pence British.

ROURA, *Ind.* a term used to express Lord, Sir, Master, Worship.

ROUSE, one of the hugh-horn soundings for duty. It is derived from the German word which signifies *To turn out*.

ROUSSEN, a strong, well-knit, well-stowed horse, which commonly goes into France from Germany and Holland.

ROUT, (*déroute*, *Fr.*) confusion of an army or body of men defeated or dispersed.

To *ROUT*, to put to the *ROUT*; to defeat, to throw into confusion, &c.

ROUTE, (*route*, *Fr.*) a term used in military matters to express the destination of one or more bodies of armed men. The destination of the troops originates in the Cabinet; their specific movements are planned by the quartermaster-general, who makes minutes thereof for the Secretary at War, the latter giving the stamp of office, and sending them into circulation: to him falls the task of accounting to parliament for the expenses of military movements in Great Britain.

Marche ROUTE, *Fr.* route of march. The French use this term in contradistinction to *marche manœuvre*, march in manœuvring.

Pas de ROUTE, *Fr.* stepping at ease, or marching with the least possible restraint. See **PAS**.

Feuille de ROUTE, *Fr.* a military pass.

ROUTIER, *Fr.* a ruttier. The

French say figuratively, *C'est un vieux routier*, he is an old stager.

ROUTIERS, } *Fr.* *Routier* signifies, literally, a }
BRABANÇONS, } ruttier, or a man }
COTEREAUX, } constantly plying upon the road. *Routiers*, according to the author of the *Nouveau Dictionnaire Militaire*, were formerly a gang of adventurers or banditti in Brabant; who by degrees formed themselves into armed troops and companies, and were hired by those who paid them best. These *Brabançons* were called *Cotereaux* and *Routiers*, because they were constantly lurking about the skirts and heights, &c. of places, and in the highways.

ROUTINE, *Fr.* This word has been adopted by us in the same sense that it is familiarly used by the French. It signifies capacity, or the faculty of arranging; a certain method in business, civil or military, which is rather acquired by habit and practice than by regular study and rule. We say familiarly, the routine of business.

ROUTINE also signifies general custom or usage, as the routine of any particular service. Thus the routine of the old Portuguese army was to have field officers, captains, and subalterns, who, out of their respective military duties, were liable to serve in menial capacities. We have a particular instance of this case in what occurred when the famous Count de la Lippe was dining with the Marquis of Pom-balle, then Prime Minister, at Lisbon. The Count had passed the troops in review, and when he dined at the Marquis's was not a little surprized to see a person in livery, whom he perfectly recollected to have reviewed at the head of a company of soldiers. After the servants had withdrawn, he expressed his surprize on this head. Pom-balle calmly replied, "O, this is the routine of our army! You might have seen my valet, who is a lieutenant-colonel in the army." This anecdote is the best proof we can furnish of the then degraded state of the Portuguese army.

ROUVERIN, *Fr.* brittle iron, such as easily breaks when it is committed to the forge.

Cheval ROUVIEUX, *Fr.* a horse that has the poll-evil, or dry mange.

ROWANNA, or *Rovinda*, *Ind.* a

passport or certificate from the collector of the customs.

ROWEL, the pointed wheel of a horseman's spur.

ROWEL, in surgery, a sort of issue which is made in man or horse, by drawing a skein of silk or thread through the nape of the neck.

ROWELLING of horses, an operation performed by a farrier or veterinary surgeon, or even by a groom, when a small slit is made through the skin, three or four inches below the part aggrieved, in order to let out some foul humour.

ROXANA, *Ind.* an Indian term expressive of great magnificence; resplendence.

ROY, *Ind.* a Hindoo priest.

ROYAL, (*royal*, *Fr.*) belonging to a king; kingly.

ROYAL assent, the assent of the King to an Act which has passed both Houses of Parliament.

The term *Royal* is likewise applied, by way of distinction, to corps and establishments, viz. Royal Train of Artillery, Royal Artillery Drivers, Royal Wagon Train, Royal Marines, &c.

ROYAL army, an army marching with heavy cannon, capable of besieging a strong fortification, &c.

ROYAL standard. See **STANDARD**.

ROYAL parapet, in fortification, a bank about three toises broad, and six feet high, placed upon the brink of the rampart, towards the enemy: its use is to cover those who defend the rampart.

ROYAL Academy. See **ACADEMY**.

ROYAL Arsenal. See **ARSENAL**.

ROYAL word, the word of a sovereign.

ROYAL Military School at Paris. See **SCHOOL**.

ROYALS, in artillery, small mortars, which carry a shell $5\frac{1}{2}$ inches in diameter. They are mounted on beds the same as other mortars.

The ROYALS. This term is applied to the First Regiment of Foot, which is likewise sometimes called *Royal Scotch Royals*. It is supposed to be the oldest regular corps in Europe. The men originally went out of Scotland, and entered into the French service. They afterwards returned to England in 1638, during the reign of Charles the First, and were styled, The First, or Royal Regiment of Foot.

ROYALISÉ, *éc*, *Fr.* brought over to

the royal cause; attached to the kingly dignity.

ROYALISER, *Fr.* An expression which has been made use of since the commencement of the French Revolution: it signifies to wean the mind from revolutionary principles; to attach it to legitimate sovereignty.

ROYALISME, *Fr.* an attachment to the royal cause. The French used to say, figuratively, *Ils sentent le royalisme*, they are attached to the royal cause.

A ROYALIST, (*Royaliste*, *Fr.*) one who is of the King's or Queen's party, and who maintains his or her interest.

ROZEENDAR, *Ind.* a person holding a yearly pension.

ROZENADAR, *Ind.* one who receives an allowance daily.

ROZENAMA, *Ind.* a day-book.

RUADE, *Fr.* a horse's jerking with his heels.

To RUB down, to clean or curry a horse.

RUBBLE, any loose materials, such as broken bricks, stones, &c. which are thrown into a confined space, for the purpose of resisting water, &c.

RUBBY, *Ind.* a division of the year containing the months of *Chaite* or 3d month, from the 11th of March to the 10th of April. *Bysac* or 4th month, from the 11th April, to the 11th of May. *Icet* or 5th month; *Assam* or 6th month, from the 12th of June to the 13th of July. *Sohan* or 7th month, in some manner, agrees with July and August. *Baudoon*, or the same as *Icet*, from the 11th of May to the 12th of June. The other half of the year is called *Dereef*.

RUBICAN colour of a horse is a bay sorrel or black, with a light grey, or white upon the flank; but so that the grey or white is not predominant in those parts.

RUDENTURE, in architecture, the figure of a rope or staff, sometimes plain, sometimes cut carved, with which the third part of the flutings of columns are filled up.

According to *M. Le Clerc*, *rudentures* are sometimes cut in the flutings, to strengthen their sides, and render them less liable to be broken.

RUDIMENTS, the first principles, the elements of any particular science. Hence—

RUDIMENTS of war, the first prin-

principles of war; as the drill, manual, and platoon exercises, manoeuvres, &c. &c.

RUE, *Fr.* street.

RUE passante, *Fr.* thoroughfare.

RUE de traverse, *Fr.* cross-street.

RUER, *Fr.* to fling; to jerk.

RUER de grands coups, *Fr.* to strike hard, or with violence.

Se RUER sur, *Fr.* to rush upon, as a valry do in a charge.

RUFFLE, (*roulement*, *Fr.*) a term used among the drummers of a British regiment, to signify a sort of vibrating sound, which is made upon a drum, and is less loud than the roll.

To beat a RUFFLE, to make a low vibrating noise upon the drum. It is generally practised in paying a military compliment to a general officer, and at military funerals.

A lieutenant-general is entitled to three ruffles.

A major-general to two ruffles.

A brigadier-general to one ruffle.

RUG, (*couverture velue*, *Fr.*) a coarse nappy coverlet. Each set of bedding which is provided for regimental hospitals has one rug.

RUGINE, *Fr.* an instrument with which a surgeon scales bones.

RUILLÉE, *Fr.* among *tilers* and *slaters*, a covering of plaster which is used to keep slates or tiles even with the walls, &c.

RUILLER, *Fr.* to establish marks for the purpose of rendering surfaces and places correct.

RUINE, *Fr.* literally signifies ruin. It is used by the French in a warlike sense.

Battre en RUINE, *Fr.* to defeat an enemy in such a manner as to destroy all his means of taking the field again.

RUINER un pays, *Fr.* to lay waste a country.

RUINES, *Fr.* ruins.

RUINURE, *Fr.* a jag, or notch made with a hatchet in the sides of joists, or rafters, in order to keep together brick or mortar pannels in a wooden front or partition, or to maintain the spaces between two joists or posts in a flooring.

RULE, in a general sense, government, sway, empire.—In a more confined one, canon, precept, direction. Hence, Rules and Regulations for the Government of the army.

To RULE over, to govern; to command.

RULE, a simple instrument, com-

monly made of hard wood, thin, narrow and straight, used in drawing lines, measuring distances, &c. There are different sorts of rules, all of which are necessary in many branches of military architecture, viz.

A *Mason's RULE* is 12 or 15 feet long, and is applied under the level for regulating the courses, and for making the piedroits equal.

A *Carpenter's RULE* is an instrument generally made of boxwood, 24 inches long, and one and a half broad; each inch being subdivided into eight parts. On the same side with these divisions, is usually *Gunter's line* of numbers. On the other side are the lines of timber and broad measure.

A *Stone-cutter's RULE* is commonly four feet long, and divided into feet and inches.

RULE called Coggleshall's sliding rule, a rule used in the mensuration of artificer's work.

RULE of Three, } commonly
RULE of Proportion, } called the
Golden Rule, is a rule which teaches how to find a fourth proportional number to three others given.

RULES and Articles. Under this term may be considered the military code of the British army. They comprehend 24 sections, divided into separate articles, and contain the substance of the Mutiny Act, which passes annually for the government of all the King's forces.

For rules relating to courts-martial, in cases where the Life Guards and Horse Guards, likewise where the Foot Guards are concerned, see *Articles of War*.

RULES and Regulations. Two books so entitled, which have been industriously and ably compiled by General Sir David Dundas, from Saldern, &c. and which are published by authority, for the discipline of the British army. One book specifically relates to the formations, field exercises and movements of the infantry; the other to those of the cavalry; and both are ordered to be strictly observed and practised, without any deviation therefrom.

RUMB de vent, *Fr.* point of the compass.

RUMB or rum, *Fr.* the hold of a ship.

RUMOUR, a desultory, loose report of what may, or may not be.

To spread false RUMOURS, to circulate things without the foundation of reality. Reports, &c. are sometimes circulated by means of spies, deserters, &c. for the purpose of covering some particular design, or intended operation. Rumours of this kind should be cautiously listened to by the commanding officer of the army through which they are spread. It sometimes happens, that individuals, through wantonness, or from some other motive, create alarms among their own people by anticipating some looked for, or dreaded event. This offence is not only punishable by the civil law, but, being contrary to good order and discipline, is rigidly so in every army.

To RUN the gantlope, to undergo a punishment which has been allotted for considerable offences in some foreign countries. When a soldier has been sentenced to run the gantlope, the regiment is drawn out in two ranks facing inwards; each soldier having a switch in each hand, lashes the criminal as he runs along, naked from the waist upwards. While he runs, the drums beat at each end of the ranks. Sometimes he runs 3, 5, or 7 times, according to the nature of the offence. The major is on horseback, and takes care that each soldier does his duty. This punishment is not known in the British service.

RUN. To run a horse is to put him to his utmost speed, and to keep him on a quick resolute gallop, as long as he is able to hold it. Galloping and running are not synonymous terms, though vulgarly thought so; for running implies a degree of velocity, which the mere action of galloping does not reach.

RUNNING-fire. See FIRE.

A RUNNING sentinel. See SENTINEL.

RUPEE, a silver coin which varies in its value according to the part of India in which it is current. Rupees struck by the English are generally worth two shillings and three-pence.

Sicca-RUPEE, a coin in India somewhat higher than the sonaut rupee.

Sonaut-RUPEE, *Ind.* a coin in India. When the pay of an officer belonging to the Company's service is issued in England, the sonaut rupee is valued at two shillings and sixpence. The army in Bengal, &c. is always paid in sonaut

rupees, which makes a difference of 4 per cent. between the sicca rupees in which coin the civilians are paid.

RUPTARII, *Routers* and *Ryters*, stipendiary foreign troops who were paid out of the privy purse by our ancient kings, or suffered to live upon free quarters. They were known by the various names of Ruptarii, Routers and Ryters: the last term comes from the German signifying a horseman or knight. They were also called Brabançons, or persons from Brabant, now Belgium, Provençales, Coterelli and Flemingings, and were really a set of freebooters of all nations, ready to embrace any side for hire.

RUPTURE, a disease which disqualifies a man from being admitted as a soldier; but as some men are capable of producing and reducing a rupture with great ease, they should not be discharged in slight cases, as by the use of a truss they may be enabled to do duty for a long time. See TRUSS.

RUPTURE. This word signifies the commencement of hostilities between any two or more powers.

RUPTURE, *incording, or burstness, in a horse*, is when the rim or thin film, or caul, which h'lds up his entrails, is broken or overstrained, or stretched, so that the guts fall down.

The signs which indicate a rupture in a horse, are his forsaking his meat, and standing shoring and leaning on the side where he is hurt.

RUSE, *Fr.* cunning, trick, ingenuity. It is applied to military matters, and signifies stratagem.

RUSER, *Fr.* to make use of stratagems. *Il est permis de ruser à la guerre*, it is lawful to make use of stratagems in war.

RUSES de guerre, *Fr.* stratagems of war. See STRATAGEMS.

RUSSOOT, *Ind.* a tribe of Hindoos, whose particular duty is the care of horses.

RUSSUMDAR, *Ind.* a person deriving a particular perquisite.

RUSTRE, *Fr.* According to the author of the *Nouveau Dictionnaire Militaire*, a lance which the ancients used in prize-fighting was so called. We have carefully examined our Latin authorities for its derivation, but the only word that seems to approach its meaning is,

RUTRUM, which Adam Littleton

thus interprets; an instrument where-with sand or such like is digged out. A mattock, a spade, a shovel, a pick-axe, a hoe; also an instrument where-with sand is mingled and beaten with lime, to make mortar with. Also a strickle.

In the Lexicon Militare, authore Carolo a Aquino, S. J. *Rutrum* was an-ciently written *Rutum*, a *rucendo*, seu *diruendo*. Idem instrumentum apud Liv. lib. 3, Bell. Punic. recensitur inter

arma militiæ naviæ. See vol. ii, under *Rus*.

RUTTIER, a direction of the road or course at sea.

RYAL, a Spanish coin, worth six-pence three farthings English money.

RYET, or *Ryot*, Ind. a general name given in India to the lower order of people, particularly the cultivators of the ground.

RYET, or *ryot lands*, Ind. lands farm-ed out, and cultivated by the tenant.

S.

S, an iron bar like the letter, used for fastenings in walls.

SABBATH, the seventh day; set apart from works of labour to be em-ployed in piety. See *DIVINE Service*.

SABLE, *Fr.* sand.

SABLIÈRE, *Fr.* a piece of timber in which rafters are inserted; the grooved wood of a partition.

SABLIÈRE *de plancher*, *Fr.* a piece of timber about eight or nine inches thick, commonly called the summer, that compasses the top or upper part of a room. *Sablères* also signify panel squares which are nailed to the sides of a beam, into which the joists are mortised.

SABLIÈRE, *Fr.* a sand-pit; also a gravel-pit.

SABLIÈRES, *Fr.* See *PLATEFORMES*.

SABLONIÈRE, *Fr.* a sand-pit.

SABORD, *Fr.* a port hole.

SABOT, ou *soulier*, *Fr.* a piece of sharp iron with which the ends of large piles are shod.

SABOT, *Fr.* a wooden shoe; horse's hoof; also a top. The French say figuratively: *dormir comme un sabot*, to sleep like a top. This was the case with one of our generals during the contest in America, when his camp was surprized by the insurgents, and he was found fast asleep in the arms of a strumpet.

SABRE, (*sabre*, *Fr.*) a kind of sword, or cimetar, with a very broad and heavy blade, thick at the back, and a little falcated, or crooked towards the point: it is generally worn by the heavy cavalry

and dragoons. The grenadiers, belong-ing to the whole of the French In-fantry, are likewise armed with sabres. The blade is not so long as that of a small sword, but it is nearly twice as broad. French hussars wear the curved ones somewhat longer than those of the grenadiers. The time will, perhaps, arrive when it may be thought advan-tageous to the service to arm the British grenadiers with this useful and formid-able weapon.

SABRE (*coup de plut àc.*) Under the old French monarchy, it was usual to punish dragoons for small offences, by giving them a certain number of blows with the flat side of a sword or sabre. A *coup de Sabre* likewise signifies any strike or blow, which is made with a sword or sabre.

SABRE-*tasche*, from the German *sable*, sabre, and *tasche*, pocket. An appoint-ment or part of accoutrement which has been adopted amongst us for the imaginary use and convenience of dra-goon officers. It consists of a pocket which is suspended from the sword-belt on the left side, by three slings to cor-respond with the belt. It is usually of an oblong shape scolloped at the bot-tom with a device in the center, and a broad lace round the edge. The colour of it always corresponds with that of the uniform. The sabre-*tasche* worn in the 10th regiment of light dra-goons, commanded by his Royal High-ness the Prince Regent, is of royal blue cloth, with an imperial crown and

feathers, the motto *Ich dien*, I serve; and the badge G. R. reversed. It is edged with white silver lace; the pocket under the flap of red leather, with red slings stitched with silver, waistbelt of the same, with silver buckles.

SABRER, *Fr.* to cut to pieces.

SABRER *une affaire*, *Fr.* to huddle up an affair; to cut matters short; to quash all minute inquiry; as is frequently the case in some unaccountable enterprizes and expeditions.

SABREUSE, *Fr.* a term used in the French armies to signify a bold and intrepid woman. Of this description was the young female who exhibited herself on the 10th of August, 1792; when the Marsellois attacked the Swiss guards and besieged Louis the XVIth. in his palace.

SAC *d'une ville*, *Fr.* the storming of a town.

Mettre une ville à Sac, *Fr.* to give a town up to the plunder of the soldiers.

Sac, *Fr.* a bag.

Sac à poudre, *Fr.* a bag of gunpowder. These bags are frequently used in war, for the purpose of intimidating an enemy, and setting fire to places. They are of different sizes and dimensions; some to be thrown by the hand, and others out of a mortar. A French work, entitled *Le Bombardier Français*, gives a full account of both.

Sac à terre, *Fr.* a sand-bag, or a bag filled with earth.

Sac à amorce, *Fr.* a small leathern bag, which is used for the purpose of carrying gunpowder to the different batteries, to prime the pieces.

Sac à laine, *Fr.* a bag made of, or stuffed with wool and other soft materials. It is larger than a sand-bag.—Every army should be provided with a certain quantity of these bags, in order to supply the want of soil on critical occasions.

Un havre Sac, *Fr.* a knapsack. See **HAVRESACK**.

Cul de Sac, *Fr.* a street or passage that has no outlet.

Un Sac à vin, *Fr.* a drunkard.

SACCADE, *Fr.* in the manege, a violent check or jerk, which the horseman gives his horse by drawing both the reins very suddenly. This is practised when the horse bears too heavy on the hand; but it ought to be done with great caution, as the frequency

of it must eventually spoil the horse's mouth.

SACCAGER, *Fr.* to sack, ransack, plunder; to break and destroy.

SACHET, *Fr.* a pouch. It likewise signifies a bag in the diminutive sense; a satchel.

SACHETS de mitrailles, *Fr.* small bags filled with grape-shot, which are afterwards fired from cannon, or thrown out of mortars.

SACHETS de balles de plomb, *Fr.* bags of bullets.

SACKS. See **BAGS**.

SACKERS, they who sack a town.

SACRAMENTUM, the oath which was taken by the Roman soldiers, when they were enrolled. This oath was pronounced at the head of the legion, in an audible voice, by a soldier who was chosen by the tribune for that purpose. He thereby pledged himself before the gods, to expose his life for the good and safety of the republic, to obey his superior officers, and never to absent himself without leave. The aggregate of the legion assented to the oath without going through the formal declaration of it. Another oath was then tendered, which related to the tribune only, and which was taken indiscriminately by every person that had access to the camp. Every individual bound himself by oath, not to take away any thing, and to carry to the tribune every article that might fall into his hands during the campaign.

SACRE *ou Sacret*, *Fr.* a name formerly given to pieces of ordnance that carried balls of 4 to 5lb. weight. Each piece weighed from two thousand five hundred, to two thousand eight hundred rounds. The same as Saker.

Saint SACREMENT, *Fr.* holy sacrament, or consecrated host. According to Bailey, a sign of an holy thing containing a divine mystery, with some promise annexed to it; an outward visible sign of an inward spiritual grace. In the acceptance of the French term, and in conformity to the tenets of the Roman Catholic religion, the holy sacrament, or consecrated host, is the symbol containing the real body and blood of Christ, and taken in remembrance of his crucifixion.

As a sense of religion (to use the words of Colonel Macdonald, the translator of the *Tactics and Discipline of the French army*) is the very best foundation of discipline in any country,

we shall, in this place, transcribe the article which describes the military honours that are paid to the holy sacrament, or consecrated host, in France; leaving to casuists the solution of those points which have occasioned the difference between the Protestant Lord's Supper, and the Roman Catholic's belief in the doctrine of transubstantiation.

In page 414, vol. ii. we find the following particulars:

"If a body of men are halted in line, at any time when the consecrated host approaches towards them, the commanding officer will order arms to be presented. He will then order, *Kneel*, (*Genou à terre!*) on which the drums will beat *Aux champs*, To the field.

"If the corps is marching, the commanding officer will halt and wheel it into line, so as to make front to the consecrated host. He will then order arms to be presented, and the corps to kneel; on receiving the word, *Kneel*, (*Genou à terre!*) the three ranks are to assume the position directed to be taken by the front rank when firing.

"Should the body of men consist of a regiment or battalion, all the officers, not only captains of companies, but the officers also in the supernumerary rank, must salute with their swords; the bearers of the colours must salute with the colours, at the same time that the troops present arms; and they are to kneel also along with the general body.

"All non-commissioned officers, whether covering serjeants, or belonging to the supernumerary ranks, and likewise those attached to the guards of the colours, are to present arms, and kneel at the same time that the general body kneels.

"The colonel will take post at the distance of six paces in front of the center of his regiment, and each lieutenant-colonel at the distance of six paces in front of the center of his battalion; they will face towards the consecrated host, after giving the word *Kneel*, (*Genou à terre!*) they must salute with their swords, and kneel afterwards, if they are on foot.

"The adjutant-major and adjutants stationed in the rear of the wings they respectively belong to, are to salute and kneel, at the same time that the battalion kneels to which they are attached.

"When the consecrated host is passing, the officers, non-commissioned officers, and soldiers, are to bow their heads.

"The consecrated host having passed, the commander of the troops will direct the drums to cease beating, and he will order Attention, (*Gare à vous!*) the officers, non-commissioned officers, and soldiers, will raise their heads. The commander of the troops will immediately order Rise, (*Debout!*) upon this word of command, the officers, non-commissioned officers, and soldiers are to rise up. The non-commissioned officers and soldiers are to resume the position of presented arms. The officers and bearers of the colours will keep, the former, the points of their swords, and the latter, the point of the spear of the colours, lowered, or in the saluting position, until the commandant gives the words *Shoulder arms*, (*Portez vos armes!*) When the corps has risen from the kneeling attitude, the commandant will order arms to be shouldered."

SACRILÈGE, *ou profanation*, Fr. sacrilege, or profanation. In the old French service this crime was reckoned capital. By an order which was issued on the 1st of July, 1717, it was decreed, that every soldier who should be found guilty of having robbed a church in time of peace; or who, in war time, should be proved to have taken away church property, such as chalices, &c. from any consecrated place within the kingdom, or belonging to the enemy's country, was to be hanged or strangled to death; and if the theft was accompanied by an act of profanation, such as drinking out of the chalices, and using irreverend expressions, &c. the culprit, or culprits were condemned to be *burned alive*.

SADDLE, (*selle*, Fr.) a seat upon a horse's back contrived for the safety and conveniency of the rider. The saddles in the British service are reckoned better, both in quality and for service, than those of any other nation. The Hungarian saddle has been lately adopted in some dragoon regiments.

It is observed in an old work called the *Sportsman's Dictionary*, from which we have frequently quoted terms in horsemanship, that a horseman who would sit a horse well, ought always to sit on his twist, and never on his buttocks, which should not touch the saddle; and whatever disorder the horse may commit,

the rider should never move above the saddle.

The late Lord Pembroke, in his method of breaking horses for the army, has some very excellent observations on this head, page 10; particularly with respect to a good seat on horseback.

The ancient Romans are supposed not to have made use of saddles or stirrups. According to the Greek historian *Zonaras*, saddles and stirrups did not come into use before the time of *Constantine the Great*, A. C. 340.

The saddles now chiefly in use are :

The *running Saddle* ; which is a small one with round skirts.

The *Burford Saddle* ; which has the seat and the skirts both plain.

The *pad Saddle* ; of which there are two sorts, some made with burs before the seat, and others with bolsters under the thighs.

The *French pad Saddle*, of which the burs come wholly round the seat.

The *portmanteau Saddle* ; that has a cantle behind the seat, to keep the portmanteau from the back of the rider.

A *war Saddle* ; which has a cantle and a bolster behind and before; also a fair bolster.

The *pack Saddle*, a saddle upon which loads may be carried.

The several parts of a saddle are too well known to require any minute description in this place. They consist chiefly of the *bars, buckle, civet, crupper, buckle* and *strap, girth, girth-web, &c.*

SADDLE recommended by Marshal Saxe, for the use of cavalry regiments.

“ The bow is to be made of iron, strong and well tempered, and fixed upon a pair of cloth or leathern pannels, stuffed with either wool or hair; to the end of which must be fastened the crupper; over these must be placed a black sheepskin, or one of any other animal, which will serve at once for housing, and as a covering for the pannels; this skin is to be brought across the horse's chest, and will have a graceful effect; underneath it also must go a surcingle, which, in that position, can never gall either the horse or his rider, who, at the same time, will have a very close and easy seat. The stirrups are to be the same as those used in the riding school, fastened at the bow of the saddle, and capable of being shortened or lengthened at pleasure.

SADDLE-backed, horses that have their backs low with a raised head and neck.

SADDLE-cloth, (*housse*, Fr.) See FURNITURE.

SADDLE-gall, a hurt upon a horse's back caused by the saddle. This is frequently cured by bathing the part with urine or warm wine, and sometimes, when the sore is large, with the second water, strewing over it the powder of an old rope or flax, and eating away the proud flesh with vitriol.

SADDLE horses let to hire may be impressed by warrant of a justice in cases of emergency. See MUTINY ACT, section 46.

To be *SADDLED*, a figurative term signifying the necessity, which an individual, who receives a salary conditionally, is under of paying a given sum to another person: in plain English, to be burthened or loaded with him.

SAFE conduct, (*sauf conduit*, Fr.) a security under the broad seal, which is given by the King, or by some other person in authority, to any individual, for his quiet coming into, or passing out of, the realm. It is also given by governors of fortified places, commanding officers, &c.

SAFE-guard, defence; security; a protection granted by a prince or general, for some of the enemy's lands, houses, persons, &c. to preserve them from being insulted or plundered. See GUARD.

SAFE-man, (*homme sûr*, Fr.) a person in whose discretion and prudence the greatest confidence may be placed; before whom anything may be spoken in private intercourse, without the hazard of repetition, and who is the direct contrast to the wretch that Juvenal has so well described in the following line:
Scire volens secreta domus, atque inde timeri!

A wretch of this description always owes his elevation in life to a possession of some dirty secret or other belonging to a prince or nobleman.

SAFYNAMA, *Ind.* a certificate or writing, specifying any matter of dispute, which it is found necessary to have settled or cleared up.

SAGACITY, (*sagacité*, Fr.) quickness of scent; acuteness of discovery. Sagacity, according to Locke, finds out the intermediate ideas, to discover what connection there is in each link of the chain, whereby the extremes are held together. A singular instance of sagacity is mentioned in the great Duke of Marlborough, when he was sent on a

particular mission to the King of Sweden, commonly called the Madman. On being introduced to His Majesty, the duke observed that a pair of compasses were laid on a map, and that their legs pointed towards Petersburg. He instantly concluded, that the intentions of the king were directed against Russia; which was the case. Weak and self-sufficient men frequently mistake low cunning for sagacity. The difference is, however, easily discovered by any man of real intellect and understanding.

SAGITTA, in architecture, an arrow, which the Italians call *saccta*, and with us the key piece of an arch.

SAGITTAL, belonging to an arrow.

SAGITTARIUS, or **SAGITTARY**.

See **ARCHER**, **BOWMAN**.

SAGO, *Ind.* a tree of the palm species. A flour is made from this tree, which, formed into bread and fresh baked, eats like hot rolls; when it grows stale it becomes hard, and requires to be soaked in water before it can be used. Three of these trees are found sufficient to give sustenance for one man during a whole year; and an acre properly planted, will supply food for one hundred for that period.

SAGUM, a woollen garment, which was formerly worn by the Roman soldiers when they took the field. It is said that the Gauls adopted the use of it.

SAH, *Ind.* a banker.

SAHEB, *Ind.* master, sir.

SAHOOKER, *Ind.* a merchant.

SAICK, (*saïque*, Fr.) a ship used among the Greeks. It has only one mast, which, together with its topmast, is extremely high, and on account of the quantity of timber it takes, it never sails well except with a leading wind.

SAIGNÉE du fossé, Fr. the act of drawing off the water which is in the ditch or fossé of a town or fortified place. When this has been executed, clays or hurdles covered with earth, or bridges made with reeds, must be thrown upon the mud, to establish a firm footing.

SAIGNÉE du saucisson, Fr. the act of cutting off a part of a linen saucisson, which is filled with gunpowder, for the purpose of introducing the *moine* or cylindrical tube, in order to set fire to a mine.

SAIGNER une pièce, Fr. an expression used in artillery, when a piece of ordnance, that is mounted on a carriage,

has its breech carried away by the violence of the explosion. This sometimes happens when the discharge is made directly downwards, or from top to bottom.

SAIGNER une rivière, Fr. to turn the current of a river, by partially drawing off some of its water. We also use the word *Saigner* as an English word in military matters; hence *saigner a mote*, to empty or take water out of it by conveyances under ground, that it may be passed over, after having laid hurdles, &c. over the mud.

SAIGNER du nez, Fr. literally to bleed at the nose. This is said by the French of a piece of ordnance which is fixed in such a manner, as to carry away its breech. This happens when the cylinder becomes crooked or bent, from the piece having been fired repeatedly, without being cooled or refreshed.

SAILLANT, Fr. salient. See *Salient Angle*. This word, as well as *Saillie*, signifies generally any part of a building that does not run up perpendicularly from its base, but projects or slopes out.

SAILLIE, ou *projecture*, Fr. See **PROJECTURE**.

SAILLIE de maison, Fr. any out-jutting room belonging to a house, or part thereof.

SAILOR, a name indiscriminately given to all persons when they go on board a ship, with the intention of following a sea-life, and in the course of time, of becoming able-bodied seamen. Dr. Johnson, for what reason we know not, calls a sailor a person acquainted with navigation, whereas this knowledge implies a seaman.

SAINT George's guard, a guard of the broad sword or sabre, used in warding off blows directed against the head. See **BROADSWORD**.

SAISIE des appointemens des officiers, Fr. the sequestration of officers' pay and emoluments. If, in consequence of any part of their pay being retained by the captain of a troop or company, the soldiers belonging to the old French service indemnified themselves by raising contributions, and the fact was made known to the war-office, the pay, &c. of such captain, or captains, was directed to be stopped in the hands of the treasurer-general belonging to that department; and the commissaries of war were ordered to make

good the several exactions, and to report the names of all such officers to the King, that they might be instantly cashiered. This regulation was issued on the 7th of February, 1661.

SAISIR, *Fr.* to seize, to take sudden possession of any thing.

SAKER, originally, signifies a hawk; pieces of artillery being often denominated from birds of prey. The saker carried a shot of five pounds and a quarter weight: the diameter of the bore was three inches and 9-16ths; the length eight or nine feet. See **CANNON**.

SALADE, *Fr.* This word literally means salad. It likewise signifies a head piece. The French use it frequently in a figurative sense, viz.

Donner une SALADE à quelqu'un, *Fr.* to give any one a good dressing.

Régiment de SALADE, *Fr.* a term of ridicule which the French frequently applied to small new made corps; such as our independent companies, which were levied for rank only.

The men belonging to these corps were also vulgarly called *mangeurs de salade*, salad-eaters.

SALAMANDRES et serpens, *Fr.* In the *Nouveau Dictionnaire Militaire*, published at Paris, in 1801, by A. T. Gaigne, this article is thus described: Brittle vessels, made of earthen composition, are filled with these venomous animals, care having been previously taken to let in the air by small apertures. When a storming party is on the point of ascending the breach, these vessels are suddenly thrown down by the besieged, and being broken, the enraged and hungry inmates are scattered among the soldiers, to their no small surprize and discomfort. In order to render them innocuous, the assailing party should have salt in their havresacks, by the application of which upon the serpent's back, he is immediately benumbed, and is ultimately destroyed.

SALE, state of being venal; price.

SALE of commissions. The sale and purchase of commissions, though not unknown in other services, is of general usage in the British: the navy, the marines, and the royal artillery excepted. Commissions in the British army are sold for various purposes; sometimes to indemnify individuals for their original purchase; sometimes as rewards for gallant and meritorious actions; sometimes

as a provision for the widows or children of deceased officers; and sometimes for the relief of an indigent gentleman, or lady. Such multiplied channels for the disposing of an article, which is always called for in a country abounding in young men of fortune and expectations, must naturally produce all the speculative commerce of bargain and sale; and as London is the grand emporium of every species of traffic, official or otherwise, it is not wonderful that a most lucrative system of brokerage should branch out of, or rather be spuriously connected with, the regular agency of regiments: Nor can it be prevented, so long as the partial agency of corps is suffered to continue. In Vol. I. 6th edition, of the *Regimental Companion*, a necessary caution is thrown out for the benefit of young purchasers. We wish it were within the limits of this undertaking to enter at large into the subject, and to couple our observations with what was proved in the House of Commons in 1809.

SALAMALEE, a Turkish salutation; a very low bow.

SALIAN priests, twelve persons, among the Romans, whose particular duty was to take care of the *Ancilium*, or sacred shield, which was believed to have been sent by the gods to Numa Pompilius. These priests were attended by a certain number of maids, who were called the Salian virgins. It is further said, in tradition, that when the shield fell from Heaven, a voice was heard to say, "Rome shall be mistress of the world, as long as she remains possessed of this shield." At the commencement of the month of March, in every succeeding year, three festival days were instituted, during which period no business could be transacted of any sort, nor any functions of a civil nature be performed. The author of the *Nouveau Dictionnaire Militaire* (from which we have chiefly extracted this article) observes, that many writers have mentioned ancilium as a javelin. "But I have satisfied myself," continues the same author, "by a reference to many old established authorities, that the ancilium was a shield which was worn by a particular sort of militia called Anciliste, that threw javelins."

SALIENT angle, in fortification, that whose points turn from the center of the place. See **FORTIFICATION**.

SALLE *d'armes*, Fr. a fencing school.

SALLE *d'armes dans un magasin, ou arsenal*, Fr. an armoury; a particular place (as in the Tower, or at Woolwich) where arms of all descriptions, for offensive or defensive purposes, are kept in store.

SALLESEF, *Ind.* arbitration.

SALLIS, *Ind.* an arbitrator.

SALLY. See SIEGE.

SALLY-ports, or *postern-gates* as they are sometimes called, are those under-ground passages which lead from the inner to the outward works; such as from the higher flank to the lower, to the *renailles*, or the communication from the middle of the curtain to the ravelin.—When they are constructed for the passage of men only, they are made with steps at the entrance and outlet. They are about six feet wide, and eight feet and a half high. There is also a gutter or shore made under the sally-ports that are in the middle of the curtains, in order that the water, which runs down the streets, may pass into the ditch; but this can only be done when they are wet ditches. When sally-ports serve to carry guns through them for the outworks, instead of making them with steps, they must have a gradual slope, and be eight feet wide.

SALMANAZER, *Ind.* the salutation of victory.

SALON, } in architecture, from
SALOON, } the French *Salon*, is a very lofty spacious hall, vaulted at top, and sometimes comprehending two stories, or ranges of windows, as is the case at Blenheim House.

The saloon is a grand room in the middle of a building, or at the head of a gallery, &c.

The faces or sides ought all to have a symmetry with each other; and as it usually takes up the height of two stories, its ceiling, according to d'Aviler, should be with a moderate sweep.

Saloons are frequently built square, and sometimes octagonal, or in other forms.

The bottom of the plafond of a saloon ought to be arched, as is the case in some of the Italian palaces.

SALOOTER, *Ind.* a farrier.

SALOOTEREE, *Ind.* the business of a farrier.

SALPETRE, *Fr.* See SALTPETRE.

Faire peter le SALPETRE, *Fr.* to fire repeated discharges of cannon, or mus-

ketry. The French say familiarly, *Cet officier est un salpêtre*, that officer is all fire and gunpowder.

SALPETRIÈRE, *Fr.* a particular spot in an arsenal where there are pits, &c. for the purpose of making saltpetre: also a place of confinement in Paris.

SALPETRIERS, *Fr.* men employed in making saltpetre.

SALTPETRE, a salt, out of which, by means of a chemical preparation, a fixed alkali and a volatile acid may be extracted. These constitute the principal ingredients, or properties, that distinguish saltpetre from other salts. This salt is collected from the surfaces of the earth, out of cellars, vaults, stables, and other places, above and under ground, which are covered in, and are impregnated with animal and vegetable particles, and to which the air has no access. Saltpetre is used in the composition of gunpowder after its third concoction or boiling.

SALTING boxes, in artillery, are boxes of about four inches high, and two inches and a half in diameter, for holding mealed powder, to sprinkle the fuzes of shells, that they may take fire from the blast of the powder in the chamber; but it has been found, that the fuze takes fire without this operation, so that these boxes are now laid aside.

SALVE, *Fr.* a volley: it generally means a discharge of heavy ordnance and other fire-arms in concert.

SALUER *de la mousqueterie*, *Fr.* to fire a volley, or a discharge of musketry only.

SALUER *du canon*, *Fr.* to salute by a discharge of ordnance.

SALUER *de la voix*, *Fr.* to huzza; to cry out, as *Vive le Roi!* God save the King! *Vive la République!* Long live the Republic! This manner of saluting generally appertains to the mob of a country, which lavishes its applause upon every man who happens to succeed. It has, however, been customary, in England, France, and other countries, for whole battalions of soldiers to salute *à vive voix*, or by exclamation, in which case they generally take off their hats, and give three huzzas.

SALUER *du pavillon*, *Fr.* to salute with the colours.

SALUER *à boulet*, *Fr.* to salute with ball.

SALUT, *Fr.* the salute.

SALUT *du sponton*, *Fr.* the spontoon salute.

SALUT *de l'épée*, Fr. the sword salute.

SALUT *de mer*, Fr. the deference and respect which are shewn at sea by ships of inferior force, to those of superior rate. This is done by lowering the flag. The British flag stands paramount to all others, and is always saluted by foreign ships at sea.

SALUTATOIRES, courtiers, saluters, or persons who pay homage or obeisance to others. The following article is from a publication (viz. *Dictionnaire Militaire*) which made its appearance in 1801, and has been extant in France during all the stages of her Revolution.

"It has been customary (says its author), from time immemorial, to cast a ridicule upon every species of attendance on persons in superior stations, without any reflexion being made, that such an intercourse must eventually be productive of considerable advantages to all parties. The custom itself has existed from the earliest times; and I am confident, that the very persons who, but a little while back, condemned the practice, are at this very moment sedulous in their attentions to some man in power; and they are so, not through accidental circumstances, but from their own reflexions, and from mental acquiescence. The Roman soldiers did not scruple to follow the example of courtiers. When they were encamped, they went every morning in a body to pay their respects to their centurion. The centurion waited upon the tribune: and, after that, the tribune, together with other courtiers, went to the general's tent. The only objection (observes our author) which I can make to this ceremony, is in the visit of the soldiers to their centurions. Yet these haughty citizens of Rome (who looked upon kings as their inferiors) carried the system of paying homage to a much greater extent. They spent a certain portion of the forenoon in waiting upon those of their fellow citizens, whose votes, or good will, could contribute to their attainment of any place, or situation, in the Republic. Some, out of respect and deference, remained in humble attendance in the anti-chamber; others stood in the vestibule, and when their patrons came forth, (in order to go through the same ceremony themselves elsewhere,) these saluters, or courtiers, very submissively crouded round their litters, and accompanied them to the spot where they alighted, paying fresh reverence as the concluding homage of the

morning.—This attendance became at last a heavy tax upon the several classes of dependent citizens; for they felt severely the consequences of the slightest neglect to their superiors. The mere empty parade of a court must be contemptible in the eyes of all thinking men; but there is certainly a middle track which may always be adopted. Whereas the Romans (with all their pride and apparent independence) went into two opposite extremes. They affected to despise kings, and yet almost every one amongst them condescended to play the part of a menial, and dependent servant;" and so have the French, even in the coarsest epochs of their revolution.

SALUTE, a discharge of artillery, or small arms, or of both, in honour of some person; also the ceremony of presenting arms. The colours salute royal persons, and generals commanding in chief; which is done by lowering the point, within one inch of the ground. In the field, when a regiment is to be reviewed by the King, or his general, the drums beat a march as he passes along the line, and the officers salute, pointing their swords downwards. The ensigns do so likewise, by lowering their colours, when his Majesty, or any of the royal family, are present. When the word of command, *Shoulder arms!* is given, the officers recover their swords, and the ensigns raise the colours together.

Royal SALUTE. This consists in the discharge of twenty-one pieces of ordnance, and is given on the approach of his Majesty at review days; and on solemn occasions, wherein their Majesties appear.

The other salutes are,—19 pieces to the commander in chief; 17 to a general; 15 to a lieutenant-general; 13 to a major-general; 11 to a brigadier-general.

These salutes are answered by one gun less from the body saluted, where troops, &c. approach one another.

To be SALUTED, to have the usual compliments paid, which are prescribed by the rules of the service. It also signifies to be hostilely opposed; as, the enemy was saluted with our guns as they rushed up the hill.

SAMATA. See CUTRASS.

SAMBUCUS, (*sambuque*, Fr.) an ancient musical instrument of the wind kind, resembling a flute. It probably derives its name from *sambucus*, the elder tree; being made of that wood.

SAMBUCUS was also the name of an

ancient engine of war used by Marcellus in besieging Syracuse. Plutarch relates that two ships were required to carry it. A minute description of this engine may be seen in Polybius.

SAMPIT, an instrument or weapon which is used by the inhabitants of the island of Borneo. They sometimes convert it into a sort of cross-bow, from which they shoot poisoned arrows; at others, into a javelin: and frequently into a hayonet, which they fix at the end of a firelock.

SAMPODAR, *Ind.* a treasurer, or cashkeeper.

SAND, (*sable*, *Fr.*) a fine hard gravelly earth of great use in building, and in other works.

There are three sorts of sand, which are distinguished by being called after the place out of which they are drawn, viz. *pit-sand*, *river-sand*, and *sea-sand*. Sand is used in building, as one of the ingredients in mortar. Pit-sand, for this use, is preferable to any other; and of pit-sand the whitest is always the worst.

Of River-SAND, that which is found in the falls of water is reckoned the best, because it is most purged. River sand serves for rough-casting.

Pit-SAND, as being fat and tough, is most used in building walls and vaults.

Sea-SAND is the worst that can be used. All sand is good in its kind, if, when squeezed and handled, it crackles, and, being put on paper, &c. it does not stain, or make it foul.

All sand is bad which mixed with water makes it dirty, or which has been long exposed to the air; for it will retain much earth and rotten humour. For this reason, some masons wash their sand before they use it.

De Lorine observes, that the sand of Pozzuolo is the best in the world, especially for maritime buildings.

Some distinguish sand into *male* and *female*. The *male* sand is of a deeper colour than another sort of sand, in the same bank or bed, called *female* sand.

Founders make use of fossile sand. It is properly a yellow fat earth, with which they make their moulds for the casting of small work, whence they call it *casting in sand*. Plumbers use sand in moulding several of their works, particularly large sheets.

SAND Bags. See **BAGS**.

SANG, *Fr.* blood. This word is used among the French in many senses. They

say, figuratively, *Se battre au premier sang*, to fight (as duellists do) until blood is drawn on one side or the other: *Mettre un pays à feu et à sang*, to commit every species of enormity in a country by destroying the human race, and burning their habitations: *Se faire la guerre à feu et à sang*, to carry on the war with fire and sword; or without the least regard to humanity.

SANG froid, *Fr.* a certain state of the mind, in which it is not ruffled or agitated. It also signifies cold blood. Hence, *Il l'a tué de sang froid*, he killed him in cold blood, or without emotion. We use the word *sang froid* to signify coolness, presence of mind.

SANGIAC, a Turkish dignity, which entitles the person, who is invested with it, to have a horse's tail carried before him. The Sangiac is governor of a province, and next in authority to the Beglerbeys, who are viceroys in that country, and give the name of *Beglerbat*, or *Beglerbey*, to a militia which they support at their own expense. Sangiac also means a standard which is used by the Turks.

SANGLANT, *Fr.* bloody. *Combat sanglant*, a bloody contest. The French also say, *Injure, offense sanglante*, an outrageous injury, or offence.

SANGLE, *Fr.* a girth.

SANGLER, *Fr.* to gird.

SANGUINARY, (*sanguinaire*, *Fr.*) one who loves blood, and delights in deeds of sanguinary devastation and spoil. A sanguinary chief may have his name mentioned in history, and be marked for extraordinary feats in war, but the tradition will only serve to hand him down to posterity as an object of horror and detestation. The true hero is he who gains a victory at the least expense of blood; for every wretch may be a butcher of his own species.

SANS-Culotte, *Fr.* a revolutionary term which was first given by the French to the most indigent class of the people, and which Robespierre, and other furious demagogues, endeavoured to convert into an honourable title. It means, literally, a man without breeches.

SANS-culotterie, *Fr.* the class consisting of what are called *Sans-Culottes*.

SANS-culottides, *Fr.* a name given, for some time, to the five complementary days which were added to the twelve months that formed the revolutionary year of the French Republic.

SAP, (*sape*, Fr.) a gallery sunk underground, through the center of which the soldiers may secretly advance towards some of the enemy's works, by covering or shielding themselves against the fire of the place with stuffed gabions, and a *mantelet*, which see.

The sap is different from the trench, inasmuch as the latter is openly effected, and because the sap is less broad; but when a sap is widened to the dimensions of a trench it then assumes that name.

There are several sorts of *saps*: the single, which has only a single parapet; the double, having one on each side; and the flying, made with gabions, &c. In all *saps*, traverses are left to cover the men.

Double SAP, (*sape double*, Fr.) is that which has two sides, and where the men work between two parapets. The double sap is undertaken in cases of imminent danger. By way of precaution, a picket or stake, which rises from 18 to 20 inches above the top, must be fixed in each gabion, for the purpose of keeping it firm and upright, when the gabion is filled. A berm or small path, about seven inches wide, must also be left at the foot of the gabion. When the gabions have been filled up with earth, a fascine must be laid on the borders or edges of it, and another above, through which the picket or stake is forced, so as to stand some inches higher than the gabion. After this, the whole is to be covered with earth, in order to form a parapet, which is sloped towards the point of attack. A trench, properly so called, is always from 3 French, or 4 feet English, deep, and 10 to 12 French, or 11 to 13 feet English, broad. Every species of work, which leads by way of communication upon these dimensions to a fortified place, is called a trench: that which fronts the place, is called the parallel, or place of arms, belonging to the trench, and is used for the lodgment or distribution of troops. The articles which are indispensably necessary to form or work a sap, consist of gabions, sand-bags, iron pitch-forks, poles with iron hooks, stakes, pick-axes, spades, mallets, *mantelets*. The chief of a brigade in a sapping party or detachment, or the leading sapper, should be particularly careful to prevent every appearance of intoxication among the workmen. For the manner in which saps

are conducted, see SAP, 2d edit. BOMBARDIER:

Flying SAP, (*sape volante*, Fr.) When a flying sap is undertaken, it is not necessary to fill up the gabions; these are merely conducted upon the plan or scale which the sap embraces. Flying saps are resorted to according to circumstances, during the night, and when the danger of being attacked is not immediate.

Half SAP, (*demie-sape*, Fr.) a trench which is sunk by degrees near some fortified place, and during the execution of which, the workmen are covered by gabions, sand bags, and *mantelets*. The difference between working at a demi or half sap, and at a trench, consists in the one being done in open day, and to a considerable extent, whereas the other is accomplished under circumstances of peculiar caution, and on a very confined scale.

Single SAP, (*sape simple*, Fr.) that which has a single parapet, on account of the work being on one side only.

Covered SAP, (*sape couverte*, Fr.) The covered sap consists of a gallery that is sunk into the earth, by means of which soldiers may secretly approach the work they have orders to surprize.

SAPPE, Fr. The French say:—*être commandé pour la sape*, to be in orders for the sap; *être de jour, aller à la sape*, to be officer of the day, to be on duty for the sap; *pousser, continuer la sape*, to forward, to get on with, or continue, the sap; *commander la sape*, to give orders for the opening, or commencement, of a sap.

Sappe not only signifies the opening which is made, but also the act of sapping. Richelet, Boyer, and others, write the word with one p, Trevoux and Belidor with two; but the mere-spelling of a word seems not to have been much attended to, even by the best French writers.

SAPPEUR, Fr. a sapper. See SAP, in the 2d edition of the BOMBARDIER, or POCKET GUNNER.

SAPIN, Fr. fir; deal.

Ais de SAPIN, Fr. deal boards.

SAPIN rouge, Fr. red fir.

Il sent le SAPIN, Fr. he has a church-yard countenance; literally, he smells of the coffin.

SAPPER, Fr. to demolish a wall peaceably with hammers, mattocks, and pick-axes, or to destroy a buttress;

taking care to prop it underneath with stays, &c. which are afterwards set fire to at the bottom, to make the whole fall down; also to blow up a rock by means of a mine.

SAPPERS, (*sapeurs*, Fr.) are soldiers belonging to the artificers or engineers, whose business it is to work at the saps, and for which they have an extraordinary pay. A brigade of *sappers* generally consists of eight men, divided equally into two parties. Whilst one of these parties is advancing the sap, the other is furnishing the gabions, fascines, and other necessary implements; they relieve each other alternately.

SARAT. The breaking up or ending of the rains, is so called in India.

SARCASM, (*sarcasme*, Fr.) a taunt; a gibe; keen reproach. A French author has observed, that although a sarcasm, or well pointed satirical remark, may sometimes cause a smile, the person who makes it, is always obnoxious to society. Instances of this species of wit are innumerable, particularly among the French.

In 1668, *M. D'Humières*, an officer in the French army, was unexpectedly raised to the dignity of Marshal, in consequence of an application which had been made in his favour, by Marshal Turenne, whose better judgment had yielded to the personal charms and fine wit of the Marchioness *D'Humières*. The very day on which the promotion took place, Louis XIV. asked the Chevalier De Grammont, if he knew the person whom he had just made a Marshal of France? Yes, *Sire*, answered the Chevalier, *it is Madame D'Humières*.

The commander in chief of an army, whose natural turn of mind, and acquired talents, rendered him more fit to shine in a ball-room, than at the head of an army, had ordered a marauder to be hanged. The captain of his company used all his interest to obtain a pardon; he represented to the General that this unfortunate man was the bravest soldier in his company; but he did so in vain; no argument or remonstrance could soften the General. *What a weak fool have I been!* exclaimed the Captain; *instead of pleading for my poor comrade on the score of bravery, I ought to have extolled his dancing, and by so doing, I should have secured his pardon from the General.*

During the French campaigns in Flanders, in 1672, an officer of rank, having been worsted, had made a most precipitate retreat. Some time after, several English horses were exhibited before Louis XIV. and said to be most excellent hunters, or fast runners: *Sire*, observed a nobleman present, I know a much swifter goer than any of these English race horses; I mean the Marquis of * * *; alluding to the general who had run away.

SARDER, *Ind.* a chief; a leader.

SARISSA, a weapon of offence, which was first used by the Macedonians, and afterwards by the Grecians. It was longer than the modern pike, measuring from 12 to 14 feet in length. The soldiers that carried this weapon were in complete armour, and when they went into action, they wore a shield on their left arm, and fought with the *sarissa*; to the end of which was attached a sharp cutting blade made of iron. The President Fauchet states, that the inhabitants of Flanders used this offensive weapon, which they called *godenhoc*. He further adds, that by means of this long pike, the Counts of Artois and Saint Pol were completely routed and overturned in a deep ditch or ravine, close to Courtray, in 1311.

SARK, a small island on the coast of Normandy, in France, subject to Great Britain. The Mutiny Act extends to that island in various instances. See MUTINY ACT, sect. 78.

SARRAU, *Fr.* a frock made of coarse linen or Russia duck, such as is generally worn by peasants, wagoners, carmen, &c. It more particularly signifies a loose coat, with a cuff and cape of a different colour. Of this description are the coats and frocks of our artillery drivers, and other camp followers.

SARRASINE, *Fr.* a herse; portculhis.

SARRE, *Fr.* a small piece of artillery anciently in use.

SAS, *Fr.* a space of ground with water in it, confined by means of sluices, into which barges and boats are admitted, in order to facilitate their passage over mountains, whence they go down by means of fresh sases which they enter. Of this description is the *Sas de Gand*, which connects the navigation of the canals in Flanders with those of Brabant: literally a lock.

SAS, *Fr.* sieve; searce. The French say figuratively: *Passer au gros sas*, to look over any thing in a loose, cursory way.

SASCE, *Ind.* the moon.

SASH, a mark of distinction, which, in the British service, is generally made of crimson silk for the officers, and with crimson mixed with white cotton for the serjeants. It is worn round the waist in most regiments; in some few, particularly in the Highland corps, it is thrown across the shoulder. Sashes were originally invented for the convenience and ease of wounded officers, &c. By means of which, (in case any of them were so badly wounded, as to render them incapable of remaining at their posts,) they might be carried off with the assistance of two men. They are now reduced to a very small size, and of course unfit for the original purpose. Both the sash and gorget, indeed, must be considered as mere marks of distinction, to point out officers on duty. In some instances they were worn together: in others the gorget is laid aside, and the sash only worn. The British cavalry tie the sash on the right, the infantry on the left side. According to Bailey, this word should be written *Shash*, from the Italian word *Sessa*.

SATELLITE, (*satellite*, *Fr.*) a person who attends on another, either for his safety, or to be ready to execute his pleasure.

SATELLITES, *Fr.* certain armed men, of whom mention is made in the history of Philip Augustus, king of France. The word satellite itself, which we frequently find in ancient historians, signifies a guard or attendant about the person of a Prince. It is derived from the Latin word *satelles*, which comes from the Syriac term for a companion. The satellites of Philip Augustus were men selected from the militia of the country, who fought on foot and horseback. The servants or batmen who attended the military knights, when they went into action, were likewise called *satellites*, and fought in their defence, mounted, or on foot.

SATISFACTION. When an officer or other person goes out to fight with one whom he has offended, or by whom he has been offended, he is said to give or take satisfaction. Hence to demand satisfaction is tantamount to challenge, to call to account, &c.

SATRAPA, (*satrape*, *Fr.*) the chief governor of a province in Persia, and in other parts of India. These men are commonly very rich, extremely haughty, much addicted to pleasure, and generally inhuman. The French frequently apply the term *satrape*; by way of irony, to the understrappers of a government.

SATRAPHY, the jurisdiction or government of a *Satrapa*.

SAUCISSE, } in *mining*, is a long
SAUCISSON, } pipe or bag, made of cloth well pitched, or sometimes of leather, of 1½ inch diameter, filled with powder, going from the chamber of the mine to the entrance of the gallery. It is generally placed in a wooden pipe, called an *auget*, to prevent its growing damp. It serves to give fire to mines, caissons, bomb-chests, &c.

SAUCISSON is likewise a kind of fascine, longer than the common ones: it serves to raise batteries, and to repair breaches. Saucissons are also used in making epaulements, in stopping passages, and in making traverses over a wet ditch, &c.

SAUCISSON de brulot, *Fr.* a machine made use of to set fire to the different compartments in a fire-ship.

SAUCISSON d'artifice, *Fr.* saucissons used in artificial fire-works.

SAUCISSONS volans, *Fr.* flying saucissons; a species of sky rocket.

SAULLE, *Fr.* a willow, or sallow tree.

Cheval SAURE, *Fr.* a sorrel horse.

SAUSSAIE, *Fr.* a willow plot.

SAUT, *Ind.* an hour.

SAUT, *Fr.* This word is used in hydraulics to signify a considerable fall of water, such as the fall of Niagara, &c.

SAUT, *Fr.* This word is often used among the French, to signify that a soldier has suddenly risen from the ranks to the situation of lieutenant or captain; we also say, in the same sense, to leap over; hence to leap over the heads of older officers.

SAUTER, *Fr.* to leap; to jump; also to rise without passing through the intermediate situations.

SAUTER à l'abordage, *Fr.* to leap upon the deck, or any part of an enemy's ship, for the purpose of boarding her.

SAUTER, *Fr.* The French also say, *Faire sauter un bastion*, to blow up a bastion, or to cause it to blow up; *faire sauter la cervelle à quelqu'un*, to

blow a person's brains out, or to fire a pistol at his head.

SAUTER à la gorge, Fr. a figurative expression among the French, which signifies to rush upon an enemy with rage and fury.

SAUTER un fossé, Fr. to leap a ditch or fossé.

SAUTER en selle, Fr. to get on horse-back; to spring into the saddle.

SAUTEREAU, Fr. a small piece of loose wood in a mortoise, which causes the cord of certain instruments to go off by means of a feather, which is placed in its tongue or languet. Also the jack of a spinnet or virginal.

SAUTEREAU, Fr. a piece of artillery which is not reinforced at the breech, commonly called a grasshopper.

SAUTERELLE, Fr. an instrument used by stone-cutters and carpenters, to trace and form angles, &c. It consists of two wooden rulers of equal breadth and length, kept together at one of their extremities, by means of a turning joint or linge; so that it opens and shuts like a compass.

SAUTEUR, Fr. a leaper. It also signifies a horse that makes regular volts in a manège. The French say figuratively: *c'est un habile sauteur*, he is an ingenious, or clever leaper; alluding to a person who boasts of being able to do, or having done, more than he really can, or could: i. e. a Rhodian leaper.

SAUVE-conduite, Fr. a pass. This word among the French signifies not only *safe-conduct*, but also a letter of licence; such as creditors frequently give to individuals who have failed in business, &c.

SAUVE-garde, Fr. safe-guard; protection.

Accorder des SAUVE-gardes, Fr. to grant protections.

Envoyer une garde en SAUVE-garde, Fr. to send out a party for the purpose of escorting persons, or of protecting any particular quarter.

SAUVE qui peut! Fr. let those escape that can! This expression is familiar to the French in moments of defeat and great disorder.

SAUVER, Fr. to save.

SAW, (*scie*, Fr.) an indented instrument which serves to cut or divide into pieces various solid matters, as wood, stone, marble, &c. Each pioneer is provided with one.

Pit-SAW, a large two handed saw, used to saw timber in pits.

The whip-SAW is also two-handed, and used in sawing such large pieces of stuff as a hand-saw is not capable of doing with any facility.

The hand-SAW is made for a single man's use. Of these there are various kinds.

The tenon-SAW is a very thin saw, and has a back to keep it from bending.

The compass-SAW is very small, and its teeth are not usually set; the use of it is to cut a round, or any other compass kerf; for which purpose the end is made broad, and the back thin, that it may have a compass to turn in.

SAWING, (*sciage*, Fr.) the application of the saw in dividing of timber, &c. into boards.

There are mills for sawing of wood, worked both by wind and water. These mills consist of parallel saws, which rise and fall perpendicularly, by means of one of the grand principles of motion.

M. Felibien, in his principles of architecture, makes mention of a kind of mill invented by one *Missien*, inspector of the marble quarries in the *Pyrénées*, by means of which, stones are sawed even in the rock itself, out of which they are taken.

SAWN, *Ind.* the name of an Indian month, which corresponds with July.

SAYON, Fr. a kind of coarse habit in which soldiers were formerly clothed among the French.

SBIRRE, Fr. from the Italian, *sbirro*, an archer; a name given to a particular class of serjeants or archers in Italy, and principally to those in Rome, where a large body is maintained for the public-service. Before the Revolution, the *maréchaussées* of France were, in different provinces, called *archers*; which indicates an analogy between the duties of the *sbirri* and those of the old *maréchaussée*, or police of that country, with this difference, that the latter was one of the oldest corps of French militia, whereas the former, or the *sbirri*, are more like a body of banditti, than men attached to the regular distribution of justice. The *sbirri* have a sort of uniform.—They march, or rather patrol, with a large cocked hat, armed with a fusil, pistols, and invariably with a poniard. They are under the immediate command, and subject to the orders, of

the different intendants or governors of provinces, and in small towns under those of the magistrates, who are usually called *podeste*, or *vicari*, somewhat like our country justices.

The *sbirri* are employed, like our Bow-street officers, in taking up thieves and assassins, whom they are authorized to lodge in the different prisons, and at whose execution they must personally attend. These men are, in general, despised, and not much feared by the people; they are often accused of being in connivance with the leaders of the various gangs of robbers and assassins that infest Italy, particularly the Apennine mountains.

When M. De Créqui was sent ambassador from France to the court of Rome in 1662, the *sbirri* joined the Corsican guards, and insulted that nobleman. The French treated them with contempt, and called them *sbirri*, or thief-takers: the latter said they were not *sbirri*, but soldiers! Upon which a Frenchman drew his sword, and slightly wounded one of the set. The Abbé Regnier, and the Imperial Cardinal, (i. e. the one in the interest of the house of Austria) encouraged the *sbirri* and the Corsicans to revenge this insult; and a dreadful massacre ensued. In consequence of which, Louis XIV. who was then all powerful, insisted upon the most public atonement being made, by causing the *sbirri* to be severely punished, and the Corsican guard to be broken and dismissed. In addition to which, he forced the court of Rome to erect a pyramid in a conspicuous part of the city, and to inscribe upon it, in large letters, the crime and the punishment. Several writers assert, and, indeed, appear to give good testimony in behalf of their assertion, that the *sbirri* and the Corsican guards had been designedly provoked and insulted by the French ambassador's suit.

SCAB, or *Itch*, a distemper in horses, proceeding from their being over heated, or from a corrupt state of their blood.

SCABBARD, (*foureau*, Fr.) a case commonly made of black leather, with a ferrel at the end, in which a sword, sabre, &c. may be sheathed.

Bayonet SCABBARD, a leathern sheath made in a triangular form to correspond with the shape of the bayonet.

To SCABBARD, to punish with the scabbard of a bayonet. Infantry sol-

diers are sometimes scabbarded under the sanction of the captains of companies, for slight offences committed among themselves. A court-martial is held in the serjeant's room or tent, to ascertain the culprit's guilt; it having been previously left to him to abide by the judgment of his comrades, in this manner, or be tried by a regimental court-martial.

SCABBARD-button, a brass button, or hook, by which the scabbard is attached to the frog of the belt.

The word *scabbard* has been sometimes used, in a figurative sense, to distinguish those persons who have obtained rank and promotion in the army, without having seen much hard service, from those who have fought their way through all the obstacles of superior interest, &c. Hence the favourite expression of a deceased English general—*Some rise by the scabbard, and some by the sword!* Which means more than we are at liberty to illustrate, but which may be easily applied to cases in point. However, these avenues to promotion are not peculiar to England. Petticoat interest has reigned in France, notwithstanding the salique law, and will reign again.

SCABBED *heels* in horses, a distemper called also the *frush*.

SCALADE, from the French *Escalade*, a furious attack upon a wall or rampart, contrary to form, and without any regularity. This is frequently done by means of ladders, to insult the wall by open force.

SCALE, (*échelle*, Fr.) a right line divided into equal parts, representing miles, fathoms, paces, feet, inches, &c. used in making plans upon paper; giving each line its true length, &c. See also *Balance*, *Escalade*, &c.

SCALES, a sort of armour consisting of brass plates laid like scales one over the other, to defend the glandular parts and the side-face of a dragoon. These scales are attached to the helmet, and can be buttoned up in front.

SCALENE, a term used in geometry, to express a triangle whose three sides and three angles are unequal to one another.

SCALING-ladders. See LADDERS.

SCALLOP, any segment of a circle.

To SCALP, to deprive the skull of its integuments; a barbarous custom, in practise among the Indian warriors, of

taking off the tops of the scalps of the enemies skulls with their hair on. They preserve them as trophies of their victories, and are rewarded by their chiefs, according to the number they bring in. In America it is vulgarly called *sculping*.

SCALPEL, *Fr.* a surgical instrument used in dissection.

To **SCAMPER**, (*escamper*, *Fr.*) to run away precipitately.

SCAPE-goat. This expression, which is in familiar usage among civilized nations, under different modes of description, is of very ancient origin. We read in chapter the 16th of Leviticus, that in the yearly feast of the expiations among the Jews; it was customary to have a goat, over whom certain ceremonies were performed in atonement for the sins of the Israelites; which was done in the following manner: The high priest laid both his hands upon the head of the live goat, and confessed over him all the iniquities of the children of Israel: and all their transgressions in all their lives, putting them on the head of the goat, and then sent him away by the hand of a fit man into the wilderness! There is also a fable in Phædrus, where the fox contrives to leave a foolish goat in a scrape, after having made the most of his ingenuity. Hence, *Scape-goat* with us signifies figuratively to be the passive instrument, or sufferer, for another's folly or delinquency in civil, military, or political life. The French use the term *Bouc émissaire*, alluding to the goat's mission into the wilderness; they also say *Bouc d'Israël*.

To **SCARE**, to fright; to frighten: to strike with sudden fear. Hence **SCARECROW**.

SCARF. See **SASH**.

SCARIFICATION, an operation whereby several incisions are made in the skin. Sedentary persons, and free livers, such as are frequently to be found in the army, particularly among dragoons, may receive considerable benefit by having recourse to this operation, under circumstances of repletion, or extravasation of blood and lymph.

SCARIFICATOR, (*scarificateur*, *Fr.*) an instrument used in cupping, &c. It is made in the form of a box, with twelve or more lancets, all perfectly in the same plane; which being, as it were, cocked by means of a spring, are all discharged at the same time, by pulling

a kind of trigger, and the points of the lancets are at once equally driven into the skin.

SCARLET, the prevailing national colour for the dress of the British. The artillery and cavalry are clothed chiefly in blue; rifle corps in dark green; and the cavalry for the East India service in light blue.

SCARPE. See **ESCARPE**.

SCATCH-mouth is a bitt-mouth, differing from a cannon-mouth in this—that the cannon is round, and the other more oval. The scatch-mouth is staid upon the branch by a coperon which surrounds the banquet, whereas the cannon is staid upon it by a fonceau only.

SCEAU, *Fr.* a seal. *Sceau* also signifies an inviolable secret, as *le sceau de la confession*, the secret of confession.

SCÈL, *Fr.* a seal.

Faire un SCÈLLEMENT, *Fr.* See **SCELLER**.

SCELLER, *Fr.* in building, to cramp iron hooks into a wall, to fasten them with molten lead or plaster.

SCENOGRAPHY, (*scénographie*, *Fr.*) the representation of a building, town, &c. as it appears in prospective or from without, with all its dimensions and shadows.

SCHEDULE, an inventory, a list; also something referred to by numbers or letters; as the oaths of the recruit and magistrate, marked A. and B. at the end of the Mutiny Act.

SCHOLIUM, (*scholie*, *Fr.*) with mathematicians, a remark by the bye, as after the demonstrating of a proposition, it is pointed out how it might be done some other way; some advice is given, or precaution afforded, to prevent mistakes, or some particular use or application thereof.

SCHOLIUM also signifies a note, annotation, or remark, made on some passage, proposition, &c. a brief exposition, a short comment.

SCHOOL, (*école*, *Fr.*) a house of discipline and instruction; a place of literary education; an university. It is a more general and comprehensive term than college or academy. The French have made a great distinction on this head with respect to their military institutions. Thus the great receptacle for military genius was called *L'École Militaire de Paris*, the military school of

Paris; whereas the subordinate places of instruction, and the preparatory houses, were termed colleges, viz. Collèges de Soreze, Brienne, Tivon, Rebais, Beaumont, Pont-le-voy, Vendôme, Elfiat, Pont-a-Mousson, Tournon.

Royal Military School. See COLLEGE.

The Royal Military School of Paris, (Ecole Royale Militaire de Paris, Fr.) This celebrated establishment, which so many years supplied France with superior talents and abilities, and to which Bonaparte was indebted for the ground work of that military knowledge which so long astonished and confounded Europe, owes its origin to Henry IV. who first erected a public building in Anjou, for the free education of the children of poor noblemen; it was called the college of *La Flèche*, wherein one hundred young boys of the above description were supported, &c. at the king's expense. They were there taught Latin and the liberal arts by the Jesuits; whose learning and aptitude at teaching others to learn, have been so deservedly admired in every quarter of the globe. This order, however, having been banished out of France in 1770, by Louis XV, the direction of the college was entrusted to the secular priests, and the number of students was increased to 350. On this occasion it was distinguished by a particular mark of royal favour, and was called the Royal College.

In addition to this provincial establishment, Louis XV. instituted the Royal Military School in the neighbourhood of Paris, where 250 young lads received a regular education under the most able masters; particularly in those branches which contributed to military knowledge. During their vacations, and at periods of intermission from classical pursuits, they were attended and instructed by experienced officers. They generally remained until the age of 18, and were, after that, distributed among the different regiments with appropriate commissions. They were then distinguished by being permitted to wear a cross, which was tied to a crimson piece of ribbon, and hung from a button-hole in their coat. The cross, on one side, represented the figure of the Virgin Mary; and on the other, there was a trophy adorned with three fleurs de lis. They had likewise an

annual pension of 200 livres, (about 8l. sterling) which was paid them without deduction, until they obtained the rank of captain; provided they had a certificate of good behaviour from the staff or état major of their corps. They received moreover, when they quitted the school, a small kitt of linen, a hat, sword, and an uniform coat. They were replaced in the military school by an equal number of youths who came from the college of *La Flèche*, for that purpose, at the age of 13 or 14.

Both these establishments underwent a considerable alteration during the administration of the Count de St. Germain, in April, 1776. This minister persuaded Louis XVI. that great public benefit might be derived from increasing the number of these colleges, and admitting youths from every class of his subjects. When these alterations took place in the Royal Military School, all the young men that were 18 years old were incorporated with the regiments of gentlemen cadets. These enjoyed all the advantages which their predecessors had possessed; with this exception, that they did not wear the uniform of their corps, nor the cross. Those lads that had not reached the period in question, were placed in different corps, and several remained in the military school who were afterwards provided for on another footing. The number of young men was gradually increased, not only by fresh arrivals from *La Flèche*, but by the admission of several others, for whom a yearly pension was paid by their parents. The latter were not, however, entitled to any advantage or indulgence beyond what was generally allowed.

On the 28th of March, 1776, the king gave directions, that ten colleges should be established, over the gates of each of which was written—*Collège Royal Militaire*; Royal Military College. These colleges were under the immediate care and instruction of the Benedictine monks, and other religious persons.

The secretary of state held the same jurisdiction over these colleges, that he possessed over *La Flèche*, and the military school at Paris.

Louis XVI. exclusively of the 600 students who were placed in the different colleges pursuant to the new regulations, restored the ancient foundation of *La*

Flèche, which had originally been established by Henry IV. for the benefit of 100 poor boys, who were of noble blood, and whose parents had rendered some service to the state in the civil, military, or ecclesiastical line. They were educated according to the bent of their talents and disposition, and fitted to any of those professions; provisions and regulations having been made in the college of La Flèche for these purposes, that differed from the general system pursued in the other military colleges.

The French had likewise a marine school, (*école de marine*), which was kept at the expense of government, and was regularly attended to in one of the departments. There was also a ship, distinguished by the name of school, (*école*), which was regularly manned and equipped for the instruction of young marines.

There were several schools of artillery, (*écoles d'artillerie*), distributed in different parts of the kingdom, and supported at the public expense. The five principal ones were at *La Fère*, *Metz*, *Grenoble*, *Strasburgh*, and *Perpignan*.

They were under the direction of an inspector general, who had the rank of a lieutenant-general in the army. Each school was superintended by three commandants, and was composed of ordinary and extraordinary commissaries belonging to the artillery, of officers who had the immediate direction of the levelling and pointing pieces of ordnance, and of volunteer cadets.

These schools were open throughout the year; advantage being taken of occasional fine weather during the winter months to practise and exercise the cadets. They were divided into schools of theory, *écoles de théorie*, and into schools of practice, *écoles de pratique*.

The theoretical establishments were for the immediate instruction of all officers belonging to the engineer and artillery departments.

The practical schools were open indiscriminately to all officers and soldiers. There was also a particular school for the information of those persons who directed their attention to mining and sapping; this school was called *L'école des Sapeurs*, the miners' school. There was likewise a school established at *La Fère*, to which none but artillery officers

could be admitted. The students consisted of one company, whose number never exceeded 50. They had the rank of sub-lieutenant, and received a monthly subsistence, amounting to forty French livres, a little more than 1*l.* 13*s.* English.

The school at Mézières, which was established before the additional one at *La Fère*, for the exclusive use and advantage of the artillery, was calculated to receive 30 officers; and those who went from *La Fère* had the rank of second lieutenants, with 60 livres, something more than 2*l.* sterling, as monthly subsistence.

On the 26th of July, 1783, an order appeared, by which the king directed, that the young gentlemen who, by a former regulation could only be admitted into the royal colleges between the ages of eight and eleven, should be received from the age of seven to that of ten. Orphans alone could be admitted as late as the full completion of twelve years. The parents of such children as had been approved of by his Majesty, were, without delay, to send in proofs and certificates of their nobility; in failure whereof, one year after their nomination, they were deprived of the situation which had been destined for them.

No family could solicit a letter of admission for more than one child at a time; and when it was granted, no application could be made in favour of another child until the first had completed his education, and was provided for in a regiment, or elsewhere.

The wisdom of this regulation is manifest. It was calculated to prevent every species of partiality and undue influence, and it kept the door open for many a meritorious youth, that might otherwise be deprived of the advantages of this useful institution.

It will naturally strike every observer, from these several establishments, which were all supported by government, and warmly patronized by the different reigning monarchs in France, that military science constituted one of the chief objects of French policy; and it is bare justice to say, that their encouragement was not fruitlessly bestowed. The only public military establishments in this country (which may be said to have sound theory and prac-

tice for their groundworks) are the Royal Academy at Woolwich, the institution at Sandhurst, near Windsor, and the Academy in Portsmouth. The Turks have a military school, called the School for the Agemolans, or young men attached to the corps of Janizaries. This institution was created by Amurat, for the purpose of enuring a certain number of persons to every possible hardship of military service.

Fencing SCHOOL, (*école d'armes*, Fr.) Every French regiment, when in barracks, or otherwise conveniently quartered, has a room allotted for the exercise of the small sword, the spadron, &c. Some active clever serjeant or soldier is authorised to teach his comrades, and to derive what benefit he can from giving lessons abroad. We need scarcely add, that some internal regulation of the kind would be highly advantageous to British officers.

SCHOOL-Master-Serjeant. See *SERJEANT*.

Bois de SCIAGE, Fr. wood that is proper to be sawed in planks, or to be made fit for any use in carpentry.

SCIAGRAPHY, (*sciographe*, Fr.) the profile or section of a building to shew the inside thereof.

SCIE, Fr. a saw.

SCIENCE, any art or species of knowledge; as military science, &c.

SCIENCE of war, (*science de la guerre*, Fr.) According to the author of the *Nouveau Dictionnaire Militaire*, the science of war, or the knowledge of military tactics upon an extensive scale, is, perhaps, the most comprehensive operation of the human mind, and demands the full exercise of all its powers. To be equal to the multifarious branches of this unbounded art, the strictest attention must be given to military discipline. The best authors, both ancient and modern, must be resorted to for information, and when the mind has been well stocked with the sound principles of theory, practice and experience must follow, in order to confirm what has been carefully selected from the first authorities, and maturely digested. Courage, zeal, prudence, and discretion, must likewise be the constant companions of those persons who would distinguish themselves in war; and it ought never to be forgotten, that a scrupulous adherence to morality, a rigid observance

of every social duty, and a manly subjugation of the many passions by which different men are differently agitated, must constitute the character of a real warrior. These are the qualifications by which the science of war is distinguished from every other pursuit in life; and without these qualifications, a conqueror can neither be called a hero, nor an able general, but only a lucky soldier. We have, indeed, our military colleges and institutions, and so had the Grecians and the Persians, not only for the instruction of the privates, but also for the education and formation of those individuals who were destined to be officers. These colleges and institutions were under the superintendance of persons, who had established their reputation by a knowledge, not only of the theoretical, but also of the practical branches of their profession. Nobody could be admitted in the capacity of master or professor, unless he had previously undergone several examinations respecting the science of war, both as to offensive and defensive operations. These professors were called *tacticians*.

SCIMITAR, (*Cimeterre*, Fr.) a short sword with a convex edge more or less incurvated.

SCRITES et Squirites, a body of cavalry which formerly made part of the Macedonian army. The men who chiefly composed it came from a small town in the neighbourhood of Lacedæmon, which was called *Sciros*.

SCITIE or SETIE, Fr. a small decked barge with Levant sails.

SCIURE, Fr. saw dust.

SCLOPPETARIA, from *Scloppetum*, Lat. a musket or gun, the title given to a modern work on the nature and use of a rifled barrel gun, to which we refer the military reader for some interesting particulars respecting that weapon.

SCONCE, in fortification, a fort; a bulwark.

SCOPETIN, Fr. a person armed with a *scopette*.

SCOPETTE, Fr. a fire arm, resembling, in shape and make, a small blunderbuss, which was formerly used by the *gens d'armes* under Henry the IVth and Lewis the XIIIth of France. It carried from four to five hundred paces.

SCORIA, (*scorie*, Fr.) dross; recrement of metals.

SCORPION, (*scorpion*, Fr.) a sort of long thick javelin or arrow, which was used among the ancients. For a specific description, see Vegetius and Justus Lipsius. The Cretans are supposed to have invented the scorpion.

SCOT, a north-countryman beyond the Tweed.

Scot, from the French *écot*, shot, payment.

Scot and lot, parish payments.

SCOTCH, a slight cut; a shallow incision. When placed before the substantive *man*, a native of Scotland, hence *Scotchman*.

Scotch Brigade, (*Brigade Ecosaise*, Fr.) a brigade which was formed in Holland after the abdication of James II. consisting chiefly of the adherents and followers of the Stuart family, who emigrated from Scotland to Holland in the same manner that several individuals did from England and Ireland to France. The Scotch brigade in Holland became partly absorbed in the revolutions of 1794, and partly followed the expelled Stadtholder, commonly called the Prince of Orange, whose descendant is now King of the Netherlands.

SCOTFREE, without scot or mulct; not liable to pay any thing.

SCOTIA, (*scotie*, Fr.) in architecture, a semi-circular cavity or channel between the tores in the bases of columns; or between the thorus and the astragal, and sometimes it is put under the drip in the cornice of the Doric order. The scotia has an effect just opposite to the quarter-round. English workmen frequently call it the casement. *Perrault* calls it a hollow obscure moulding between the tores of the base of a column.

In the Corinthian base there are two scotia, the upper of which is the smaller. According to Felibien, *cavetto* is a fourth part of the scotia; Belidor and others call it *trochilus*, from the Greek *trochylus*, a pulley, which it resembles as to form. Scotia is also commonly called a rundle.

SCOTLAND, once a kingdom of Europe, comprehending the north part of the island of Great Britain, and hence called North Britain. It was united to England in the reign of Queen Anne; so that both countries with the principality of Wales, form one nation. Ireland has been added to them, during the present reign.

Scotland has the sea on all sides, except the south, on which it is separated from England. It is about 380 miles long, and 190 broad. Exclusive of the main land, there are about 300 islands in its vicinity.

There are some laws respecting military matters which are peculiar to Scotland. Officers and soldiers, for instance, can only be quartered there, as they might have been quartered by the laws in force in Scotland at the time of the Union. No officer or soldier, however, is obliged to pay for his lodging, when he is regularly billeted, except in the suburbs of Edinburgh.

Carriages are to be furnished there in like manner as by the laws in force at the Union.

When any troops, or parties upon command, have occasion in their march to pass regular ferries in Scotland, it is lawful for the commanding officer either to pass over with his party as passengers, or to hire the ferry boat entirely for himself and his party, debarring others for that time, in his option. When he takes passage for himself and party as passengers, he is only to pay for himself, and for each person, officer, or soldier, under his command, half of the ordinary rate payable by single persons at any such ferry; and when he hires the ferry-boat for himself and party, he is to pay half of the ordinary rate for such boat or boats; and in such places where there are no regular ferries, but that all passengers hire boats at the rates they can agree for, officers with or without parties must agree for boats at the rate other persons do in like cases.

To SCOUR, (*battre à toute volée*, Fr.) This term is frequently used to express the act of firing a quick and heavy discharge of ordnance or musketry, for the purpose of dislodging an enemy. Hence, to scour the rampart, or the covert way. It likewise signifies to clear, to drive away, viz. to scour the seas, *écanner les mers*; to scour the streets, *balayer les rues*; to scour the trenches, *nettoyer la tranchée*: also to run about in a loose desultory manner, as, to scour the country.

To SCOUR a line is to flank it so as to see directly along it, that a musket-ball entering at one end, may fly to the other, leaving no place of security. See **NETTOYER**.

SCOURER. The ramrod was so called in old times. It formerly made a part in the exercise of the firelock, as, *Draw forth your scourer; Return your scourer.*

SCOUTMASTER, an ancient officer, whose duties are variously described by Grosse, page 222, vol. ii, in his History of the English Army, and who had the management and direction of a certain number of horsemen that were sent out to discover the enemy and to watch his movements.

SCOUTS, from the Saxon word sent out or forth.

SCOUTS are generally horsemen sent out before, and on the wings of an army, at the distance of a mile or two, to discover the enemy, and give the general an account of what they see.

SCRAMASAXES. According to the author of the Nouveau Dictionnaire Militaire, the Scramasaxes was an offensive weapon, made in the shape of a sword, but not so long. Grégoire de Tours observes, in the 21st chapter of the fourth book of his history, that *Frédigonde* caused *Sigisbert*, king of Austrasia, to be assassinated by two drunken valets, who were armed with this weapon.

SCREW, one of the mechanical powers, which is defined a right cylinder cut into a furrowed spiral. Wilkins calls it a kind of wedge, that is multiplied or continued by a helical revolution about a cylinder, receiving its motion, not from any stroke, but from a vectis at one end of it.

Male SCREW, a crew which works in a vermicular direction through another; it might properly be called an *entering screw*.

Female SCREW, a screw into which a smaller one is worked.

SCREWS, in gunnery, are fastened to the cascable of light guns and howitzers, by means of an iron bolt, which goes through a socket fixed upon the center transom, to elevate or depress the piece with, instead of wedges.

SCREW of direction, (*vis de pointage*, Fr.) The screw of direction, used in the artillery, is formed of a brass horizontal roller placed between the two cheeks of the carriage. The trunnions of the roller move upon two vertical iron pivots, which are fixed against the interior sides of the cheeks. By means

of this screw, the direction of pieces is either raised, or lowered, with a regular movement, and in the smallest space.

The screw of direction, or *vis de pointage*, is equally used for howitzers; as well as for heavy pieces of ordnance. It has been invented by the French, and serves in lieu of the *coins à crémaillère*, or indented coins.

Lock SCREWS, small screws which are attached to the lock of a musket.

SCROWLS or SCROLLS, in architecture. See **VOLUTE**

SCULL, in ancient armour, a head piece, without visor or beaver, resembling a bowl or basin, such as was worn by our cavalry forty or fifty years back.

SCULL, (*petit bateau*, Fr.) a small boat, which one man rows with two oars.

SCULLCAP.—See **HELMET**.

SCULLER, (*bateau à un rameur*, Fr.) a small boat with one man or boy to row it.

SCULPTURE is the art of cutting or carving in wood, stone, or other matter, to form various figures or representations. Sculpture also means the fashioning of wax, earth, plaster, &c. to serve as models or moulds, for the casting of metals in.

SCUPPER-nails, nails which are used in fastening leather and canvass to wood, and consequently require a broad head, that neither may work loose.

SCURVY, (*scorbut*, Fr.) a disease to which soldiers and seamen are peculiarly exposed, from eating salted meat and drinking bad water, &c. &c.

SCUTAGE, shield money, derived from the Latin *Scutum*. A tax granted to Henry III. to defray his expenses to the Holy Land.

SCUTAGIO habendo, an ancient writ to tenants who held by a knight's service, to attend the king to the wars.

SCUTE, or *Canot*, Fr. any small boat which is used in navigation for the accommodation of a ship; a skiff.

SCUTIFER, or *Shield-bearer*, a person who carried a shield to cover his master whilst he shot at an enemy with his bow and arrow. As this must have been a service of danger, the office of Scutifer, or Shield-bearer, was always called honourable.

SCUTUM, the Latin word for a buckler or a shield, with which the Ro-

man soldiers were formerly armed. It also signified a target. The scutum differed from the clypeus, in as much that the former was oval and the latter round. That which was used among the Grecians was sometimes round, at others square, and not unfrequently oval. The scutum, or buckler, which the Lacedæmonians used, was so large, that the dead and wounded were carried on it.

SEA-boat, commonly called *Lifc-boat*, a floating vessel of a particular construction, made for the preservation of persons.

SEA-fight, (*combat naval*, Fr.) a contest at sea, in which the ships of two hostile fleets come to action, and take, burn, sink, or otherwise destroy one another. To record the many sea-fights in which this country has been engaged, particularly with France, Spain, and Holland, would occupy volumes. It will be sufficient for us to state, that, although the majority of our military operations have not been equal to the valour of our troops, our naval contests have never failed to answer the most sanguine expectations of the country. And yet a nation, once as warlike as our own upon the ocean, was ultimately stripped of its proud ascendancy by the over-weening ambition of her rival. In the second naval action which the Romans had with the Carthaginians during the first Punic war, there were, on both sides, upwards of 290,000 men engaged; how trifling are modern sea-fights compared to such engagements!

SEAL, (*sceau*, Fr.) the print of a coat of arms, or some other device, made in wax, and set to any deed or writing; also the piece of metal on which the arms, or cypher, is engraven.

Privy SEAL, (*scel secret du roi*, Fr.) the King's seal, which is first set to such grants as pass the great seal of England.

The Lord Privy SEAL, a great officer who keeps the King's privy seal, and is, by office, next in dignity to the lord president of the council.

Flying SEAL, (*sceau volant*, Fr.) an impression made with sealing-wax upon the outside cover of a letter, under which fresh wax may be put to close the envelop. This frequently happens in letters of introduction, &c.

SEAMAN, } a sailor capable of taking both helm and lead, having served more

than seven years at sea. He is rated A. B. on board the ships of war. There is also another description of men rated on board ships of war, that is between a landsman and able-bodied, and an able-bodied seaman, called an ordinary seaman, who is paid more than the landsman, but not so much as the able-bodied seaman.

SEAMS, SEYMS, in horses, are certain clefts in their quarters, caused by the dryness of the foot, or by being ridden upon hard ground.

SÉANCE, Fr. place; seat; session.

Les quatre SÉANCES des cours de judicature, Fr. See TERM.

To SEARCH a wound, (*souder une plaie*, Fr.) to probe it.

To SEARCH a country, to examine minutely all the inlets and outlets, woods, rivers, &c. of a country through which an army is to advance. All columns ought to be preceded by an advanced guard; but, in a country near the enemy, in order to ensure the safety of it, a very strong and respectable one should be formed, particularly if there is any reason to imagine the enemy are ambuscaded, or mean to attack or harass you, so as to prevent the completion of the object of your movement. Mons. le Comte Drummond de Melford, a most able tactician, has, in a treatise of cavalry published by him, given a plan for the distribution of an advanced guard, shewing also how to search the country through which the column has to pass.

SEARCHER, an instrument used by founders to discover any flaws in the bore of cannon, &c. See PROOF.

To SEASON, in a military sense, to accustom; to enure. Soldiers are frequently sent to Gibraltar in order to be seasoned for a hot climate.

SEASONED troops, troops that have been accustomed to climate, and are not so liable to become the victims of any endemical disorder, as raw men must unavoidably be. The French use the word *acclimater*, to get accustomed to a change of climate. Hence *troupes acclimatées*, troops that have been seasoned.

SEASONING of timber is the preparing of timber for use, which is done in the following manner: the timber having been felled, &c. it must be laid up very dry in an airy place, yet free from extreme heat, from cold, and rain;

and that it may not cleave, but dry equally, it ought to be daubed over with cow-dung. It must not stand upright, but lie along, one piece upon another, interposing some short blocks between them, to preserve them from a certain mouldiness, which they usually contract while they sweat, and that often produces a kind of fungus, especially if there are any sappy parts remaining.

Water seasoning, among wheelwrights, is particularly attended to. As for the elm, though the tree be felled never so green, for sudden use, if it be plunged four or five times in water, especially salt, which is best, it acquires an admirable seasoning, and may be immediately used.

Timber is also seasoned by burying it in the earth, covering it with wheat, or scorching it by fire; especially if it be intended for piles, &c.

SEAT of war, the country in which war is actively carried on.

SECANT, (*sécante*, Fr.) a line which cuts another, or divides it into two parts.

SECANT of an arch, in trigonometry, is a right line drawn from the center of the circle to the extremity of the tangent.

SECANT of an angle. Supposing an angle to be terminated by a base that is perpendicular to one of the sides, and that the smallest side of the angle be taken for the radius, or whole sinus, the greatest of the two sides of that angle will be its secant.

SECOND, (*second*, Fr.) the next in order to the first; the ordinal of two; the next in dignity, place, or station. The French use the word *second*, in military matters, somewhat different from the English, viz.

Compagnie en SECOND, Fr. This literally means second company, but according to the old French regulations it signifies a company which consists of half the number of men that other companies are composed of. This was, however, applied to the cavalry only.

Capitaine en SECOND, ou réformé, Fr. an officer whose company has been reduced, but who does duty in another, and is destined to fill up the first vacancy. We have borrowed the expression, and say, *To be seconded*.

To be seconded. This word is generally pronounced *secound*. When an officer is *seconded*, he remains upon full pay, his rank goes on, and he may purchase the next vacant step, without being obliged to

memorial, in the manner that a half-pay officer must. Should the latter have taken a difference, he will find much difficulty in getting upon full pay, and he can only avail himself of his standing in the army when the last object is accomplished. So that a *seconded* officer stands in a more favourable light. He is, besides, likely to be appointed to the vacant commission of the regiment in which he is seconded.

SECOND, both in English and French, also signifies a witness in a duel; whence

Prendre pour son SECOND, Fr. to take for a second.

Les SECONDS de côté et d'autre se sont tués, Fr. both the seconds were killed, or the seconds on each side killed one another. It was very usual among the French for the seconds to make common cause with their principals, and to fight upon the decease of the former.—The practice is out of date. Seconds in duels are considered by the Law of England as principals to all intents and purposes, and liable to prosecution and indictment for murder as the case may be.

To SECOND, (*second*, Fr.) to aid or assist; to support.

SECOND covert way, that beyond the second ditch. See FORTIFICATION.

SECOND ditch, that made on the outside of the glacis, when the ground is low, and there is plenty of water.

SECOND flank, Fr. See *Flank Oblique* in FORTIFICATION.

Le SECOND, Fr. the second beat of the drum, when troops are to move.—See *La GÉNÉRALE*.

SECONDE, Fr. a thrust in fencing, which is delivered at the outside of the body beneath the arm, with the nails downward.

SECOURABLE, Fr. that may be relieved, or have succours thrown in. The French say of a fortified place, which is invested at all points, or so blockaded, that there is neither egress nor ingress, *qu'elle n'est pas secourable*, that it cannot be relieved, or have succours thrown in.

SECOURIR une place, Fr. to throw succours into a besieged town or place. It sometimes signifies to force an investing, or attacking, army to raise the siege.

SECOURS, Fr. See SUCCOUR.

Passer du SECOURS, Fr. to do without the aid or assistance of another.

SECRECY, a quality of the mind, by which men are enabled to keep to themselves anything reposed in trust, or de-

signs intended for execution. In the second volume of Polybius, page 131, the following sensible observations occur on this head:

“ Among the many precautions to which a commander should attend, that of observing *secrecy* is the principal: that neither the joy which springs from an unexpected prospect of success, nor yet the dread of a miscarriage; that neither friendship nor affection may prevail upon him, to communicate his design to any persons, except those alone without whose assistance it cannot be carried into execution: and not even to these, till the time, in which their services are severally required, obliges him to disclose it. Nor is it necessary only, that the tongue be silent, but much more, that the mind also make not any discovery. For it has often happened, that men who have carefully restrained themselves from speaking, have sometimes, by their countenance alone, and sometimes by their actions, very clearly manifested their designs.”

In military economy, this quality is peculiarly requisite. It signifies fidelity to a secret; taciturnity inviolate; close silence. Officers, in particular, should be well aware of the importance of it, as the divulging of what has been confidentially entrusted to them, especially on expeditions, might render the whole project abortive. The slightest deviation from it is very justly considered as a breach of honour, as scandalous conduct, unbecoming an officer and a gentleman. In official matters, the person, so offending, is liable to the severest punishment and penalty.

The following authentic anecdote cannot be uninteresting to a military reader, with respect to the morality of the thing.

A lieutenant in the Prussian service having ingratiated himself into the confidence of the late King of Prussia, (when he was crowned Prince of Prussia,) Frederick the Great sent for him, and accosted him in the following manner:

“ Sir, I am very happy my nephew has made so discreet a choice, as that of selecting you for his friend; but there is a matter in which you may oblige me essentially; and that is, to make me acquainted with the particulars of his conduct. This will gratify me much, and I will take care of your promotion.”

The lieutenant bowed very respectfully, and nobly replied, “ I am sensible

to your majesty's mark of approbation; but it would be dishonourable, and, of course, it is impossible for me to betray the prince's secrets.” He was then retiring, when old Frederick, in an altered tone of voice, exclaimed,

“ Mr. Lieutenant! as you do not know how to oblige me, I will now teach you to obey me. To Spandau!”

The young officer was immediately secured, and confined in a prison of that name, which is in the neighbourhood of Berlin.

We lament, that so great a man should have tarnished the splendour of his character, by descending into the low temper of a prying courtier.

An ancient philosopher has very justly considered *secrecy* as one of the most holy and sacred of mysteries. Mysteries were originally certain feasts which were celebrated in honour of the goddess Ceres; and as the greatest *secrecy* prevailed on those occasions, the word *mystery* has been applied to everything hidden, or concealed.

The greatest generals have always been persuaded that those counsels and decisions are the best, which are so managed as never to reach the enemy. Demetrius, son of Antigonus the Great, once asked his father, on what day he meant to give the enemy battle: “ Art thou afraid of not hearing the trumpet sound?” was the king's reply.

A general officer having once put an indiscreet question to Peter the Third of Arragon, that monarch hastily exclaimed: “ If I knew that my shirt were privy to the slightest thought which passes in my imagination, I would burn it.”

The commander in chief of an army was on his march for the execution of a most important enterprize. One of his officers anxiously sought to know the ultimate object. The general, instead of answering him, put the following question: “ Were I to tell you, would you mention it to anybody?” The officer having solemnly declared he would not, the general calmly replied: “ I also know how to keep a secret, as well as you.” This wise answer checked the indiscretion of the officer.

In the history of Athens, there is a remarkable instance of this virtue recorded of a woman named Lioanna, who, having been taken up as one of the conspirators against the reigning tyrant,

refused to betray her accomplices. She was put to the torture; and after having undergone the most excruciating pain, began to doubt her own resolution and strength of mind, and in order to render it impossible for her to break the secret, she cut out her own tongue. After the expulsion of the tyrants, the Athenians, in grateful remembrance of so heroic an action, erected a statute to her memory, in the shape of a lioness without a tongue, with the following sentence inscribed upon its base: "Virtue has triumphed over the sex." Which sentence, however honourable to one distinguished female, is a tacit lesson to mankind with regard to the caution which ought to be observed in all communications, on business, with women. Commanders in Chief, and all officers, civil or military, cannot be too much guarded in this respect. See SYREN.

SECRET, (*secret*, Fr.) Under this word may be considered the caution and circumspection which every good general should observe during a campaign; the feints he may think proper to make for the purpose of covering a projected attack; and the various stratagems to which he may resort to keep his own intentions concealed, and to get at those of others.

SECRET, kept hidden, not revealed. Hence secret expedition, secret enterprise, &c. Secret articles of a treaty are the correlative words to patent articles.

SECRET, Fr. The French use this word in the same sense that we do, which signifies, figuratively, a certain skill or aptitude in one general, to discover and penetrate into the latent designs of another, who may be opposed to him. This also holds good in politics. Hence, *Le plus grand secret de l'art militaire et de la politique, est de savoir bien étudier, et bien pénétrer, les actions et les desseins de son adversaire*; the greatest secret in war, as well as in politics, consists in being able to study with correctness, and to penetrate with certainty, not only the actions, but also the designs of an adversary.

La partie SÉCRÉTTE d'une armée, Fr. that particular branch of correspondence and communication in an army, by which secret intelligence is obtained respecting the movements and operations of an enemy, &c.

This species of service constitutes an

important branch of military policy among the French. Although the natural bluntness, we may say honesty, of an Englishman, may revolt at the very idea of acting with duplicity, it should nevertheless be remembered, that when nations are brought into hostile contact, and their very existence may depend upon the issue of their strength, the morality of individuals has nothing to do with the policy of nations.

SECRET, Fr. the spot chosen by the captain of a fire-ship to apply the saucisson of communication.

SECRET *expedition*. Those are often called such, which in fact are known to the enemy before they are put into execution; they should never be communicated to any other than the commander of the troops and the first naval officer, until they are in absolute readiness to act, and but a few hours before the enterprise is put in execution; no officer being allowed to open his instructions until he is either at his destination, or at sea. See EXPEDITION.

SÉCRÉTAIRE, Fr. The clerk belonging to the Swiss regiments in the old French service was so called. He acted likewise as quarter-master serjeant, and was styled *musterschieber*.

SÉCRÉTAIRE *général d'artillerie*, Fr. a place of trust, which, during the old French monarchy, was in the nomination of the grand master.

SECRETARY *at war*, (*secrétaire de guerre*, Fr.) the first civil officer next to the minister of the war department. All military matters that are of a pecuniary nature, rest with the secretary at war.

Military SECRETARY, at the Horse Guards, a confidential person, who is attached to the Commander in Chief of the British forces, and who does the official business of the army, as far as respects the rank and precedence of officers, &c. It is his duty to receive communications, memorials, and other documents appertaining to the executive branches of the service, and to lay them before the Commander in Chief, without favour or affection. He has also fixed days and hours for the reception of military men; whose cases he listens to with candour, and to whom he behaves with the becoming firmness of a soldier, without deviating from the conciliating manners of a gentleman. A military secretary should be well versed in every sort of

military reading, thoroughly conversant with every species of military duty, and capable of the most ready combination of theory and practice. All memorials, &c. to be addressed for the Commander in Chief, are to be sent under cover to his public or official secretary, at the Commander in Chief's office, Horse Guards.

Military SECRETARY on expeditions, an experienced officer, who is selected from the staff of the line, or from the army at large, to accompany a general officer who has the charge of some important expedition. He ought, in addition to the qualities above recited, to be also well versed in foreign languages, and have a thorough knowledge of geography, &c.

SECRETARY and aide-de-camp. The confidential aide-de-camp of a Commander in Chief, or general officer, is usually so called.

SECRETARY of state, (*secrétaire d'état*, Fr.) This officer, independent of his civil capacity, has so far an intimate connexion with the administration of the army, that many of its essential branches must necessarily pass through him. It is his duty, in particular, to lay before the King the names of all persons recommended to hold commissions in the militia. He must likewise cause copies of the several qualifications, which have been transmitted to him by the clerks of the peace, or their deputies, to be annually laid before both houses of Parliament. This clause, we believe, has lately been dispensed with, as well as a foregoing one, which enacts that the clerk of the peace of every county, riding, and place, shall enter the qualifications transmitted to him upon a roll, and shall cause to be inserted in the London Gazette, the dates of the commissions, and names and rank of the officers, together with the names of the officers in whose room they are appointed; in like manner as commissions in the army are published from the War-office. The expense of such insertion in the Gazette, for each commission, is likewise directed to be charged to the treasurer of the county, riding, or place. For particulars, see the last edition of the *Regimental Companion*.

To *SECRET*, to hide; to keep private; to harbour; to conceal, &c. By the Articles of War it is provided, that if any person shall harbour, conceal, or

assist any deserter from his Majesty's service, knowing him to be such, the person, so offending, shall forfeit, for every such offence, the sum of five pounds.

Faire SECTE à part, Fr. to maintain singular opinions respecting military or civil things.

SECTION, (*section*, Fr.) from the Latin word *sectio*, which is derived from *seco*, to cut, a part of a thing divided, or the division itself. Such particularly are the subdivisions of a chapter, called also paragraphs and articles. Sometimes we find the term section divided into articles; as in the Articles of War. - The Rules and Regulations for the discipline of the British army are divided into parts, and each part subdivided into heads or sections of explanation. So that when an officer reads the higher tactics under Battalion and Line, and wants any specific explanation, he must refer to the section. The Drill, or instruction of the recruit, is explained in forty sections which constitute the 1st part. The instructions and various operations of the Company are explained in 265 sections, which form the 2d part.

The several operations, &c. which belong to a battalion when it acts singly, or in line with others, are explained in 108 sections, which form the 3d part. And the principal circumstances relative to the movements of a considerable line, are explained in 32 sections, which constitute the 4th part, or the line. All of which have been compiled and arranged, with much skill and accuracy, by General Sir David Dundas.

SECTION, a certain proportion of a battalion or company, when it is told off for military movements and evolutions. It is stated in the Rules and Regulations, that a section should never be less than five files. This rule, however, is not absolute, as we find in another part of the Regulations, that a section may consist of four files. This relates to the infantry; the cavalry is not told off into sections, but into ranks by threes. The French use the word section for the same purpose; but their sections are stronger than our's. We generally divide a company into two sub-divisions, and each subdivision into two sections; and for the convenience of marching through narrow ground, these sections are frequently reduced to three, or even two, files in front. The French form their

companies into platoons, and divide their platoons into two sections, so that their sections are equal to our subdivisions.

SECTION, in mathematics, signifies the cutting of one plane by another; or a solid by a plane.

SECTION of a building, in architecture, is understood of the profile and delineation of its heights and depths, raised on a plane, as if the fabric were cut asunder to discover the inside.

Conic SECTION, (*section conique*, Fr.) is the figure made by the solid body of a cone being supposed to be cut by a plane. These sections are generally distinguished by four separate names, viz. *circle*, *ellipsis*, *hyperbola*, and *parabola*.

SECTOR, (*secteur*, Fr.) a mathematical instrument of great use in finding the proportion between quantities of the same kind; as between lines and lines, surfaces and surfaces, &c. for which reason the French call it the compass of proportion.

The great advantage of the sector, above common scales, &c. is, that it is adapted to all radii, and all scales. The sector is founded on the fourth proposition of the sixth book of Euclid. The sector consists of two equal legs, or rules of brass, &c. riveted together, but so as to move easily on the rivet; on the faces of the instrument are placed several lines; the principal of which are, the line of equal parts, line of chords, line of sines, line of tangents, line of secants, line of polygons, and line of rhumbs.

SECTOR of a circle, (*secteur de cercle*, Fr.) a portion comprehended between two radii, or semidiameters, and the arc of the circle, making an angle at the center; and an arch or part of the circumference.

SECTOR of a sphere, (*secteur d'une sphère*, Fr.) is the conic solid, whose vertex ends in the center of the sphere, and its base is a segment of the same sphere.

SECULAR, (*séculaire*, Fr.) belonging to the space of one hundred years.

SECULAR games, among the Romans, solemn feasts, celebrated at the end of every age, or one hundred years.

SECUNDANS, in mathematics, an infinite series or rank of numbers, which begin from nothing, and proceed as the squares of numbers in arithmetical proportion; as, 0, 2, 4, 9, 16, 25, 36, 49, 64, &c.

SECUNDARY, an officer next under the chief officer.

To SECURE, in a military sense, to preserve, to keep, to make certain; as to secure a place, to secure a conquest. In the management of the firelock, it signifies to bring it to a certain position, by which the locks are secured against rain. Hence

SECURE arms! a word of command which is given to troops who are under arms in wet weather. To bring your firelock to the secure, 1st. throw your right hand briskly up, and place it under the cock, keeping the piece steady in the same position.

2d. Quit the butt with the left hand, and seize the firelock with it at the swell, bringing the elbow close down upon the lock; the right hand kept fast in this motion, and the piece still upright.

3d. Quit the right hand, and bring it down your right side, throwing the firelock nimbly down to the secure; the left hand in a line with the waist-belt. In order to *shoulder* from the secure, you must, 1st. bring the firelock up to a perpendicular line, seizing it with the right hand under the cock.

2d. Quit the left hand, and place it strong upon the butt.

3d. Quit the right hand, and bring it smartly down the right side.

Secure arms now forms a part of the new manual.

Government SECURITIES. Under this term may be comprehended the following negociable and convertible property:

Exchequer bills are issued by government under acts of parliament, in anticipation of the revenue of the current year. They bear an interest per diem, specified in the body of each bill. This interest has varied. Exchequer bills are usually either of 100*l.* 200*l.* 500*l.* or 1000*l.* value each; payable to bearer, and requiring neither assignment nor endorsement. They are usually paid off about one year after their issue; of this, due notice is given in the *Gazette* and newspapers. Upon these occasions, the owners of them, or their bankers and agents, attend at the Exchequer office where they receive the interest and the principal, either in cash, or new bills, at their own option. Exchequer bills are most eligible securities, on account of the certainty and expedition with which they can be converted into cash; and seem particularly worthy the notice of military officers, who are desirous of de-

positing in their agent's hands a sum applicable to the purchase of promotion, and capable of producing an intermediate interest.

It is here well to remark, that when an officer, who is possessed of exchequer bills, is ordered abroad, he should not omit depositing them in the hands of his agent, or of some person holding his power of attorney, in order that they may be cashed or renewed.

India bonds are not government securities, but scarcely less negociable than exchequer bills. They are granted by the East India Company, bear a nett interest of 5*l.* per cent. and regularly paid in March and September at the India House. They are never due, but are always taken as cash by the India Company in payment of duties, merchandise, &c.

Navy bills are bills of exchange drawn at 90 days date, on the treasurer of the navy. They bear an interest at the rate of 5*l.* per cent. per annum, which is expressed in the bill, and forms part of the total sum paid at maturity of the bill.

Victualling bills. See *Navy bills.*

Treasury bills, bills of exchange drawn on the lords of the treasury at various dates. They are frequently drawn from foreign stations, by military or naval commanders, ambassadors, envoys, consuls, the head of the commissariat. They are usually accepted by the secretary of the treasury.

Bills on the paymaster general, bills of exchange drawn by officers, or others, for public services of a military nature, on the paymaster general of the forces, at various dates, and usually accepted by the accountant general, or cashier, at the Pay Office, Horse Guards.

The above four different descriptions of bills are all discountable, and seldom declined (when within 65 days of maturity) by the Bank of England, to any amount.

Ordnance debentures are securities of a very different description. They are not negociable or discountable. They are, in fact, nothing more than official acknowledgements of a debt payable at some remote time, when it may suit the arrangement of the Ordnance board. Notice is usually sent to the holders of debentures when they may attend for payment, but instances have occurred when such attendances have been fruitless. This, however, we presume, will be re-

medied; as it must be obvious to every man of common sense, that the mere admission of a claim does not constitute property, or afford those facilities of negotiation which are the main springs of commerce.

SECURITIES to be given for places of public trust. In consequence of some notorious defalcations, particularly in the Ordnance treasury department, and in the Marine Pay-office, a bill has been brought into Parliament, to render it impossible for any individual to receive, or hold in trust, public monies, without having given full security for the faithful discharge of his duty. We have often urged the necessity for such a bill, especially in the Regimental Companion, upwards of ten years ago.

SECUTORES, or *Sequutores*, a certain class of gladiators, among the ancient Romans, who, being armed with a helmet, a shield, and a sword, or a leaden mace, encountered the *Retiarii*. The latter stood always upon the defensive, and only watched an opportunity to throw a net over their antagonist, in order to destroy him with a pitchfork; which was the only weapon the *Retiarii* used.

SÉDENTAIRE, *Fr.* stationary.

Troupes SÉDENTAIRES, *Fr.* stationary troops. Thus the national guards in France, who do duty in the several garrison towns, are called *gardes nationales sédentaires*, in contradiction to *colonnes mobiles*, or moveable columns. The latter are sometimes called *troupes en activité*, troops on service.

SÉDITION, (*sédition, révolte, émeute*, *Fr.*) mutiny, strife, popular tumult, uproar.

Solon, the celebrated lawgiver, made a rule which rendered all persons infamous who stood neuter in a sedition. This good and wise man thought, indeed, that no individual ought to be insensible with regard to his country, nor value himself on providing for his own security, by refusing to share the distresses of the public; but in the defence of a just cause, he judged that a good citizen should bravely run all hazards, rather than remain an inactive spectator.

To SEE, in a military sense, to have practical knowledge of a thing; as to *see service*. The French use the word *servir* alone.

To SEE a regiment, to pass a regiment in review, as a general officer does.

SEELING. A horse is said to *seel*,

when, upon his eye-brows, there grows white hairs, mixed with those of his natural colour, about the breadth of a farthing, which is a sure mark of old age.

To have SEEN a shot fired, a figurative expression in the British service, signifying to have been in action; also to have been in fire.

SEER, a piece of iron which the trigger acts upon in the lock. This word is sometimes written *ear*, but we think it is more properly derived from the French *serrer*, to close, to hold fast, to keep firm.

SEER, *Ind.* a weight nearly equal to a pound.

SEESAR, *Ind.* the dewy season.

SEEARISH, *Ind.* a recommendation.

SEEPPEYA, *Ind.* a triangle to which culprits are tied to be flogged.

SEFFY, *Ind.* a dynasty of Persia.

SEGBANS, horsemen among the Turks, who have care of the baggage belonging to cavalry regiments.

SEGMENT, (*segment*, Fr.) generally signifies a piece cut off from something.

SEGMENT of a circle, (*segment d'un cercle*, Fr.) in geometry, is a figure terminated by a right line, less than the diameter and circumference; on it is a figure contained between a chord and an arch of the same circle.

SEGMENT of a sphere, (*segment de sphere*, Fr.) in mathematics: this is also called section of a sphere, and consists of a portion of it cut off by a plane, in any part except the center, so that the base of such segment must always be a circle, and its surface a part of that of the sphere; the whole segment being either greater or less than an hemisphere.

SEJA, *Ind.* a fenced terrace.

SELLURE, *sillage, eau, honage, ou ouiache*, Fr. terms used among the French to express the way a ship makes; it corresponds with our naval word *wake*.

SÉJOUR, Fr. a halting day; such as is usually marked out by the secretary at war, when troops are on their march in the interior of a country; or by the general of an army, when they are in the field. In a naval sense, it signifies the time that a ship remains in port.

SEIN, Fr. in the midst. The French say figuratively, *porter la guerre dans le sein d'un royaume*; to carry war into the heart of a kingdom. *Au sein de ses soldats*, in the midst of his soldiers; *au sein de sa famille*, in the midst of his family.

SEING *Manuel*, Fr. sign manual.

SEL, Fr. salt. Before the revolution of 1789, the French troops were allowed a specific quantity of salt, which was regularly accounted for at the back of the muster-rolls.

SEL, Fr. The salt used in the artillery is lixivial, and of a fixed quality. It is extracted from saltpetre, and must be thoroughly washed, as no saltpetre can be good which has the least saline, or greasy particle about it.

SELENDERS are chops, or mangy sores, in the bending of a horse's hough, as the malenders are in the knees.

To SELECT, to choose in preference to others rejected.

SELECTION, the act of choosing in preference to others rejected; hence selection of officers to act upon the staff, &c. in which case merit only ought to be the guiding principle.

SELF, (*soi-même*, Fr.) one's own person.

SELF-confident. See VANITY.

SELF-sufficient. See VANITY.

SELFISHNESS, a narrow, mean, and unmanly regard for one's own interest only; a quality incompatible with the fine feelings and the high notions of an officer.

SELICTAR, a Turkish sabre.

SELION, (*sillon*, Fr.) a ridge of land which lies between two furrows.

To SELL, to dispose of for a price.

To SELL out, a term generally used when an officer is permitted to retire from the service; selling or disposing of his commission or commissions. It is the correlative word to *buy in*. Officers who have purchased or bought, are usually allowed to sell. But much depends upon the interest or good luck of the individual, with respect to the advantages which are derived from this traffic. It sometimes happens, that an officer, who has only perhaps bought one commission, and has risen to the top of the regiment, is permitted to get the aggregate value of all the steps: and he is fortunate indeed, if the step he purchased was the first, and consequently the cheapest. During the administration of his Royal Highness the Duke of York, a great check has been put to the enormous abuses which were formerly practised.

To SELL at the Regulation, to receive the regulated price of a commission. A commission is sometimes allowed to be sold at the regulation for the benefit of an

individual whose children have fallen in the service; and it sometimes happens, that individuals are obliged to quit the army without being able to take advantage of the market.

SELLA *imperatoria vel castrensis*, a chair of state, made of carved ivory, which the Roman generals used in the field, and which was afterwards converted into the Imperial throne.

SELLANDER, a dry scab in a horse's hoof, or pastern.

SELLE, *Fr.* a saddle. See **BOUTESELLE**.

SELLE *rase*, *Fr.* a saddle without a bow.

SELLE à arçon, *Fr.* a bow-saddle.

Fût de SELLE, *Fr.* See **TREE of a Saddle**.

SELLERIE, *Fr.* a place appropriated for horse harness.

SELLETTE, *Fr.* a stool; also a pad, or saddle, for a cart-horse. Likewise a stool on which the prisoner sits, in foreign countries, during his trial.

SELLETTE, *Fr.* in mechanics, a piece of wood placed near the top of the pin of an engine, or machine, upon which two hold-fasts are fixed that sustain the cross beam which carries the pullics.

SEMBLABLES, *Fr.* in geometry, similar, alike, equal. This term is applied to any two figures, the sides of one of which correspond with the sides of the other, and are always in the same ratio. So that *semblable*, or alike, only means, in this sense, *equal*. Two circles, though unequal in their sizes, may still be alike; that is, their several parts may agree according to a certain ratio.

SEMELLE, *Fr.* lee-board.

SEMELLE, *Fr.* a sort of beam upon which certain parts of a roof are kept together, in order to prevent them from widening out.

SEMELLE d'étaie, *Fr.* a piece of timber, which is laid beneath the foot of a prop, &c.

SEMELLE, *Fr.* in artillery, the end of a thick plank, which is laid between the two checks of a gun-carriage, and upon which the cannon rests.

Les SEMELLES, *Fr.* the axle-trees belonging to the carriage of a gun. The French also call them *les aissieur*.

SEMESTRE, *Fr.* This word literally signifies a term of six months; but it is generally understood to express any term of leave of absence which is granted

to officers, or soldiers. With respect to the latter, it means furlough.

SEMESTRIER, *Fr.* This term comes from the word *Semestre*, and signifies the person who has leave of absence, or who goes on furlough.

SEMICIRCLE, part of a circle divided by the diameter.

SEMI-DIAMETER, half of the line which divides a circle into two equal parts.

SEMI-DIAMETER of the globe of compression, in mining. This is the distance from the center of the chamber of the mine, to the circumference of the excavation, made by the explosion, or springing, of the mine, and is estimated to be equal to the hypotenuse of a right angled triangle, whose other two sides are the line of least resistance, and the semidiameter of the excavation.

SEMIORDINATE, a line drawn at right angles to be bisected by the axis, and extending from one side of the section to the other.

Vieille SEMPITERNELLE, *Fr.* the old trot.

SENAU, *Fr.* a small skiff, or tender, calculated for quick sailing.

SÉNÉCHAL, *Fr.* This is the most ancient of all the titles or dignities which were attached to those individuals that undertook the command of armies, when the Kings of France, belonging to the second race, ceased to go in person. The *Sénéchal* was selected by the sovereign from among those vassals and subjects, who were highest in nobility, and were most distinguished for their rank, wealth, and talents. The title of grand *Sénéchal* of France was first created by Lotharius, in 928, and conferred upon Geoffrey, Count of Anjou, surnamed Griscognelle. This rank, or situation, continued to be attached to the Count of Anjou, until the reign of Philip Augustus, in whom it was extinguished, when he ascended the throne of France, in 1121. The grand *Sénéchal* likewise exercised the functions of Lord Steward of the King's household; having under him several subordinate *sénéchals*, who also held places of considerable trust. These were called *Sénéchaux de France*, *Senechals* of France.

SÉNÉCHALE, *Fr.* the seneschal's wife or lady.

SENS-dessus-dessous, *Fr.* topsy-turvy.

SENS-devant-derrrière, *Fr.* wrong way.

SENIORITY, in military matters, is the difference of time betwixt the raising

of two regiments, whereby the one is said to be so much senior to the other. All regiments take place according to seniority in numerical order. The difference of time betwixt the dates of two commissions of officers makes the one senior to the other; and all officers of the same rank roll by the seniority of their commissions.

The seniority of a regiment or battalion supersedes the standing of an individual in the army, being wholly distinct from each other with respect to rank. A regiment, for instance, may have three battalions, and be thus commanded;—1st battalion by a major-general, 2d battalion by a lieutenant-general, and the third again by a full general; or, to make the case as it really existed during the late war, the first and second battalions shall be commanded by a major-general and a lieutenant-general, the latter having the youngest battalion. Should the second battalion be reduced, the senior officer with respect to rank in the army goes to the right about, and the junior remains full colonel of the standing battalion; being senior in regimental rank. It must likewise be observed, that in the line of battle, officers are posted according to the seniority of their regiments: so that in the case adduced, the lieutenant-general would be commanded by the major-general.

SENSE, understanding; soundness of faculties; strength of natural reason.

Common SENSE, that genuine faculty of the mind which is not diverted from any rational pursuit, by refined ideas. According to Bailey, common sense consists of those general notions arising in the minds of men, by which they apprehend things after the same manner.

SENSE of duty, an affection of the mind which governs the actions of men, according to the principles of what they feel they ought to do.

SENSE of honour, a fine feeling, by which men of spirit and delicacy are governed, in contradistinction to those grovelling motives by which mean and selfish creatures are actuated.

SENSIBLE, *Fr.* susceptible; liable to take a quick impression, and to imbibe a spirit of resentment.

SENSE of Hereafter, a consciousness of something beyond the grave, where the highest and the lowest must be responsible for their conduct in this world.

SENSUALIST, one devoted to corporeal pleasures, generally at the expense of his mental faculties; an animal of this sort is, perhaps, less adapted to a military life, than almost any other in creation.

SENTENCE, decision; determination; final judgment. There is an appeal allowed from the sentence of a regimental court-martial to the opinion of a general one, in pecuniary matters.

To SENTENCE a thousand lashes, to pass judgment upon a man, by which he is liable to receive that specific number of lashes. When the sentence proceeds from a general court-martial, the King only can remit the punishment; in regimental cases the total remission, or mitigation, rests with the commanding officer.

SENTIER, *Fr.* a path; a by-way.

SENTINEL, } from the Latin *sen-*

SENTRY, } *tio*, or more properly from the Italian *sentinella*, a private soldier, placed in some post, to watch the approach of the enemy, to prevent surprizes, to stop such as would pass without order, or being discovered who they are. Sentries are placed before the arms of all guards, at the tents and doors of general officers, colonels of regiments, &c.

All sentries are to be vigilant on their posts; they are not, on any account, to sing, smoke tobacco, nor suffer any noise to be made near them. They are to have a watchful eye over the things committed to their charge. They are not to suffer any light to remain, or any fire to be made near their posts in the night-time; neither is any sentry to be relieved, or removed from his post, but by the corporal of the guard. They are not to suffer any one to touch or handle their arms, or in the night-time to come within ten yards of their post.

No person is to strike or abuse a sentry on his post; but when he has committed a crime, he is to be relieved, and then punished according to the rules and Articles of War.

A sentinel, on his post in the night, is not to know any body, but by the countersign; when he challenges, and is answered, *relief*, he calls out *stand, relief! advance corporal!* upon which the corporal halts his men, and advances alone within a yard of the sentry's firelock, first ordering his party to port arms, on which the sentry does the

same, and gives him the same counter-sign, taking care that no one hears it. See ROUNDS.

A *running* SENTINEL, a sentry who is upon the look out, at an advanced post, or near the gates of a fortified place, and is not confined to a particular spot.

SENTINELLE, *Fr.* sentinel; sentry. This word is likewise used to express the duty done by a sentinel. *Faire sentinelle*, to stand sentry.

SENTINELLE *perdue*, *Fr.* a sentry posted in a very advanced situation, so as to be in continual danger of surprize from the enemy.

SEPTANGULAR, having seven angles.

SEPTENTRION, *Fr.* the north.

SEPADAR, *Ind.* an officer of the rank of brigadier general.

SEPAHÉ, *Ind.* a feudatory chief, or military tenant.

SEPHARRY, *Ind.* afternoon.

SEPOYS, *Ind.* derived from Sepahe, natives who have enlisted themselves into the service of the East India Company, and are attached to the infantry. These troops have both native and European officers; but the Europeans at all times command. The Sepoys make excellent soldiers, are remarkably clean, and feel a natural predilection for arms.

SEPTEMBRISADE, *Fr.* a term used to express the general massacre which took place in Paris on the 2d and 3d of September, 1792.

SEPTEMBRISER, *Fr.* to septembris; to massacre; to kill without judge or jury.

SEPTEMBRISEURS, *Fr.* a name given to those who were concerned in the French massacres of September, in 1792, and to those who were suspected of having aided and abetted the perpetrators of those horrid acts. The latter were also called *Septembristes*.

SEPTIDI, *Fr.* the seventh day in the French Republican decade.

SEPTILATERAL, having seven sides.

SEPTUPLE, seven fold.

SERAKHUR, *Ind.* } native officers

SERANG, } who are employed in the artillery, and on board

ships of war, to command the Lascars.

SERASKIER, (*serasquier*, *Fr.*) among the Turks, the next in rank to the Vizier, in whose absence he commands, but to whose orders he is constantly subservient.

SERASKUR, *Ind.* This word is sometimes written Seraskier, and signifies the commander in chief of a Turkish army.

SERDANS, colonels in the Turkish service.

SERF, SERVE, *Fr.* a bond-man, bond-woman. Formerly those only were called bond-men and bond-women whose persons and property belonged, unconditionally, to some lord of a manor, to whom the property devolved in default of lineal inheritance. A bond-man, or serf, was, in fact, a slave. All the peasants in Poland are of this class, as well as those of Russia.

SERGENS *d'armes*, *Fr.* a distinguished class of military men, that constituted the body guard of Philippe Auguste of France. Under Philippe-le-bel, they only did duty every quarter, at the palace. Their weapons consisted of the *masse d'armes*, or mace, and the *arc* or bow. The company of *sergens d'armes* was, at first, composed of two hundred men; afterwards it was reduced to one hundred and fifty, and then again to one hundred. During the absence of his father John, who was a prisoner in England, Charles the Fifth, regent of France, reduced them to six individuals. And since the reign of Charles the Seventh, the *sergens d'armes* have not been spoken of.

SERGEANT, *Fr.* See SERJEANT.

SERGEANT *noble*, *Fr.* a post of honour which existed during the first periods of the French monarchy. The French compiler, from whose work we have occasionally translated much matter relative to the military history, &c. of France, has the following passage concerning the term itself. We shall give his words literally:—"This term does not come from *serviens*, as I imagined, in common with many other etymologists. Monsieur Beneton, in his *Histoire de la Guerre*, says, that the serjeant was a gentleman by birth, who during the prevalence of military fiefs, was liable to do military service, in consequence of the feudal tenure, called *fief de sergenterie*, by which he held his land. His superior officer was called *Suzerain*, the functions of whose situation corresponded with those of a modern adjutant general. It was the business of the *sergent noble*, or gentleman serjeant, to assemble all the vassals of the *Suzerain*, for the purpose of incor-

porating them under one standard, and of rendering them fit for war."

SERGEANT *de bande*, Fr. a serjeant in the common acceptation of the term.—The etymology of this word is different from that of sergent noble. It evidently comes from the French *serregent*, that close, or lock up, the same as *serrefiles*; shewing that this non-commissioned officer was placed to take charge of the rear files, whilst the commissioned one was in front. It was his business to see that the rear conformed itself to the orders which were given in the front; to make the files lock up, and dress, &c.

SERGEANT *de bataille*, Fr. field serjeant. This was an appointment of considerable trust in the old French armies. The *sergens de bataille* held commands, and did the duty of inspectors. They ranked next to a field marshal, or *maréchal de bataille*. The *sergens de bataille*, or field serjeants, existed under Francis the First. But these field serjeants were only at that time *sergens de bandes*, or train serjeants. There were likewise, under the same king, *sergens généraux de bataille*, general field serjeants. These were officers of rank, and did the duty of a modern major-general.

There were also officers of the same description in the reign of Henry IV. This appointment appears to have been dropped after the peace of the *Pyrénées*. The author of the *Histoire de la Milice Française*, observes, that the appointment and duty of the different officers, called marshals, or field serjeants, varied according to the will and pleasure of the French kings, and their war ministers. He agrees with us, that the situation of field serjeant was originally of great consequence, but that it gradually declined, and was eventually made subservient to a superior officer, who was called *maréchal de bataille*, whose duties corresponded with those of adjutant-general in the present times.

There have been officers of the same denomination both in Spain and Germany, who did the duty of *maréchal de camp*; another term, we presume, for major-general. But the general field serjeants, in those countries, were divided into two classes; one class was confined, in its functions, to the infantry, and the other to the cavalry; and both acted

independently of one another; whereas in France they acted together.

SERENTER, Fr. a word frequently used by the French, in a figurative sense, signifying to press, to importune. *On n'aime point à être sergenté*, one does not like to be pressed; or, as we familiarly say, to be dragooned into a thing.

SERUD, *Ind.* a boundary or frontier.

SERGEANT, } in *war*, is a non-
SERGEANT, } commissioned or
 (*Sergent*, Fr.) } inferior officer in a company or troop, armed with a pike, and appointed to see discipline observed; to teach the private men their exercise; and to order, straighten, and form ranks, files, &c. He receives the orders from the serjeant-major, which he communicates to his officers. Each company has generally three serjeants in the British service.

SERGEANT-MAJOR. The serjeant-major is the first non-commissioned officer in the regiment after the quartermaster. He is, in fact, an assistant to the adjutant.

It is his peculiar duty to be perfect master of every thing which relates to drills; and it is always expected, that he should set an example, to the rest of the non-commissioned officers, of manly, soldier-like, and zealous activity.

He must be thoroughly acquainted with all the details which regard the interior management and the discipline of a regiment. For this purpose he must be a good penman, and must keep regular lists of the serjeants and corporals, with the dates of their appointments, as well as the roster for their duties, and rosters of privates, orderly duty and commands, as far as relates to the number which each troop, or company, is to furnish. He is, in every respect, responsible for the accuracy of these details. He must look well to the appearance of the men, and order such to drill as he sees awkward, slovenly, or in any way irregular. If it be meant as a punishment, he specifies the time for which they are sent to drill; if only for awkwardness, they remain there until their faults are removed.

When he has occasion to put a non-commissioned officer in arrest, he must report him to the adjutant.

In most regiments, the serjeant-major, under the direction of the adjutant, is

ordered to drill every young officer who comes into the regiment, in the manual and platoon exercises; he is likewise to instruct him in the slow and quick marches, in wheeling, &c. He is paid for his trouble by each officer whom he instructs. In some regiments, especially of cavalry, one guinea and a half, and in others one guinea is given.

He reports regularly to the adjutant the exact state of the awkward drill, &c.

It is scarcely necessary to observe in this place, that the good or bad appearance of a regiment, with or without arms, depends greatly upon the skill and activity of a serjeant-major; and that he has every inducement to look forward to promotion.

Armourer-SERJEANT, the serjeant who has the care of the arms belonging to a battalion, troop or company. He is under the quarter-master.

Covering-SERJEANT, a non-commissioned officer, who during the exercise of a battalion, regularly stands or moves behind each officer, commanding, or acting with, a platoon or company. When the ranks take open order, and the officers move in front, the covering serjeants replace their leaders; and when the ranks are closed they fall back in their rear.

Drill-SERJEANT, an expert and active non-commissioned officer, who, under the immediate direction of the serjeant-major, instructs the raw recruits of a regiment in the first principles of military exercise. When awkward, or ill-behaved men are sent to drill, they are usually placed under the care of the drill-serjeant. This non-commissioned officer will do well to bear constantly in mind the following observations from page 135, vol. i. of the *Règlement pour l'Infanterie Prussienne*.

“In teaching young recruits their first duties, the greatest caution must be observed not to give them a disgust to the service, by harsh treatment, angry and impatient words, and much less by blows. The utmost mildness must, on the contrary, be shewn, in order to endear the service to them; and the several parts of exercise must be taught them by degrees; so that they become insensibly acquainted with the whole of the discipline, without having been disgusted in the acquirement. Rustics and strangers must be used with extreme lenity.”

Pay-SERJEANT, or *Paymaster-SERJEANT*, an honest, steady, non-commissioned officer, (who is a good accountant, and writes well) that is selected by the captain of a company in the infantry, to pay the men twice a week, and to account weekly to him, or to his subaltern, (as the case may be) for all disbursements. He likewise keeps a regular state of the necessaries of the men, and assists in making up the monthly abstract for pay allowances, &c.

Quarter-master-SERJEANT, a non-commissioned officer who acts under the quarter-master of a regiment; he ought to be a steady man, a good accountant, and to be well acquainted with the resources of a country-town or village.

Lance-SERJEANT, a corporal who acts as a serjeant in a company, but only receives the pay of a corporal.

School-Master-SERJEANT, the serjeant who has the instruction of the boys belonging to a regiment, where a school is kept up and supported by the colonels of regiments.

White-SERJEANT, a term of just ridicule in the British service, which is applied to those ladies, who, taking advantage of the uxoriousness of their husbands, neglect their household concerns, to interfere in military matters.

SERJEANT-at-arms, an officer appointed to attend the person of a king, arrest traitors, and persons of quality offending, and to attend the lord steward when he sits in judgment on any traitor.

SERMENT, *Fr.* oath.

Prêter SERMENT, *Fr.* to take an oath.

SERMENT de soldat, *Fr.* the soldier's oath, or oath of fidelity, and passive obedience, as far as lawful commands extend. For the oath which was taken among the Romans, see *SACRAMENTUM*.

SERPE, *Fr.* a bill hook.

SERPE d'armes, *Fr.* an offensive weapon; so called from its resemblance to a hedging bill.

SERPENS, *Fr.* See *SALAMANDRE*.

SERPENTEAU, *Fr.* a round iron circle, with small spikes, and squibs attached to them. It is frequently used in the attack and defence of a breach. It likewise means a fusée, which is filled with gunpowder, and is bent in such a manner, that when it takes fire, it obtains a circular rapid motion, and throws out sparks of light in various directions.

SERPENTEUX, *et serpenteaux brochetés*, *Fr.* a species of fusée, which is

garnished or loaded with a stick or spit, that is a third of the length of the cartridge.

SERPENTIN, *Fr.* the cock of a musket or firelock.

SERPENTIN, *Fr.* an old piece of ordnance which resembled a cannon, but is no longer in use.

SERPENTINE *line*, the same as SPIRAL.

Langue SERPENTINE, *Fr.* ill tongue. See LANGUE; also *Insinuative ABUSE.*

SERPILIERE, *Fr.* packing cloth.

SERRE-*file*, *Fr.* the last rank of a battalion, by which its depth is ascertained, and which always forms its rear. When ranks are doubled, the battalion resumes its natural formation by means of the *serre-files*. *Serre-file* literally signifies a *closer up*. Perhaps the term *serre-file* would be more appropriate than *supernumerary*, as both officer and sergeant are posted in the rear to keep the rear-ranks up.

SERRE-*demi-file*, *Fr.* that rank in a battalion which determines the half of its depth, and which marches before the *demi-file*. Thus a battalion standing six deep has its *serre-demi file* in the third rank, which determines its depth.

Capitaine de SERRE-*files*, *Fr.* an officer who commands a rear-guard, when a regiment is on its march.

SERRE-*papiers*, *Fr.* a place of security where papers may be deposited.

SERRER, *Fr.* to close up.

SERRER *la bride*, *Fr.* to pull in the bridle.

SERRER *la botte*, *Fr.* a term used in cavalry movements, when dragoons are ordered to close in, knee to knee.

SERRER *l'éperon*, *Fr.* to push the spur home, when the horse is required to go full gallop.

SERRER *les canons*, *Fr.* to house the guns.

SERREZ *la masse!* *Fr.* a word of command in the French service, signifying—Form close column!

SERREZ *vos rangs!* *Fr.* Take close order!

SERRURE, *Fr.* a lock.

SERRURES *renardes*, *Fr.* locks which may be opened inside and out.

SERRURERIE, *Fr.* This word not only signifies the lock-smith's work, but also the art of working iron.

SERRURIER, *Fr.* a locksmith.

SERVANS *d'armes*, or *Chevaliers Servans*, *Fr.* persons belonging to the third class of the Order of Malta are so called.

They are not noblemen, although they wear the sword and the cross.

SERVANTS, in a military sense, are soldiers taken from the ranks, for the purpose of waiting upon officers, and of accompanying them when they are with their respective corps. Among the standing orders for Prince William of Gloucester's regiment, namely, the 115th, which were printed during the last war, we find the following particulars respecting this class of men.

The officers' servants to be taken from the rear and center ranks.

No soldier to be permitted to act as an officer's servant, that is not perfect in his exercise, and whose conduct is not good.

Recruits on no account whatever to be suffered to attend officers as servants.

No soldier to be taken as a servant, without the consent of the commanding officer of his company; and if he is of a different company from that to which the officer belongs, he is to have the consent of both captains, or commanding officers. When a soldier is to be employed as a servant, by an officer who does not belong to the same company, his commanding officer will chuse out of the company to which such servant is transferred, another man in exchange, from the same rank, as that in which the servant has been accustomed to serve.

It is recommended, that every soldier who shall attend an officer in the capacity of a servant, may be allowed no more wages than one shilling British per week.

Servants to constitute, invariably, part of the detail with their masters on duty.

They are to be punctual in their attendance, at the time the non-commissioned officers and men are ordered for inspection.

No officer is, on any pretence whatever, to neglect reporting to the commanding officer instantly, when he discovers an act of dishonesty, either in his own servant, or in the servant of any other officer of the regiment. Any soldier, employed by an officer in the character of a servant, who either himself robs, or knowingly suffers others to do so, from his master, or from any body else, let the articles be ever so trifling, shall be brought to a court-martial, and if found guilty, be punished for a breach

of the standing orders of the regiment. We humbly presume to suggest, that under so serious a charge as that of theft, the delinquent should be tried for a breach of the specific article of war, before a general court-martial.

Whenever an officer dismisses a soldier from acting as his servant, such soldier is to return to his company complete in regimentals, necessaries, and appointments, without any expense to his captain; and if he is discharged on account of dishonesty, or irregularities of any kind, such servant is not afterwards to be employed by any other officer of the regiment.

In addition to these orders, we take the liberty to observe, (since the article of war, which says expressly, that no soldier shall wear a livery, is, through neglect and by custom, become a dead letter,) that if officers' servants were to be plainly dressed, with a cuff and cape to correspond with the facings of the several regiments, much ridiculous parade and show would be avoided. British soldiers would not be exposed to the galling necessity of submitting to the whim and caprice of many a *white serjeant*, or ostentatious fribble, and becoming the laughing stocks of their comrades, through their party-coloured dresses.

SERVANTS attached to officers, commonly called officers' servants. Every officer in the British service, being with his regiment, or on detachment, &c. is allowed one private soldier or more according to his rank, to act in the capacity of bat-man. It would exceed the limits of this work, were we to enter into the gross abuse of this indulgence. In order, however, to do away the possibility of it, we would suggest the following measure; namely, to allow every officer 20*l.* or more, to enable him to hire a servant, who would, of course, be amenable to military law, and to continue that allowance on a certificate transmitted through the regimental paymaster, that he had been so hired, and was not a soldier. This would throw a considerable body of effective good firelocks into activity, and it would also be the means of recruiting the army at large; as many boys would by degrees get attached to a military life, and enlist into their respective regiments.

As far back as the year 1695, an allowance for servants was made to every

officer in the British army. It appears by a MS. in the Harleian Library still extant in the Museum, that at the camp of Becclaer, in Flanders, a warrant was signed by William III. dated the 17th day of June, 1695, by which the following rate of pay was established for 47 infantry regiments; being the standing army of that period.

Colonel	12 <i>s.</i>	three servants			
		each 3 <i>d.</i>	as captain	8 <i>s.</i>	
		three servants	at 3 <i>d.</i>	Daily	<i>L. s. d.</i>
		pay (without deductions.)			1 4 0
Lt. Colonel	7 <i>s.</i>	as captain	8 <i>s.</i>		
		three servants	at 3 <i>d.</i>		0 17 0
Major	5 <i>s.</i>	as captain	8 <i>s.</i>	three	
		servants	at 3 <i>d.</i>		0 15 0
Captains	each 8 <i>s.</i>	three			
		servants	at 3 <i>d.</i>		0 10 0
Lieutenants	each 4 <i>s.</i>	one			
		servant	3 <i>d.</i>		0 4 8
Ensigns	each 3 <i>s.</i>	one			
		servant	3 <i>d.</i>		0 3 8
Chaplain	-	-	-		0 6 8
Adjutant	-	-	-		0 4 0
Surgeon	-	-	-		0 4 0
Surgeon's mate	-	-	-		0 2 6
Quarter-master	4 <i>s.</i>	one			
		servant	3 <i>d.</i>		0 4 8
Serjeants	-	-	-		0 1 6
Corporals	-	-	-		0 1 0
Drummers	-	-	-		0 1 0

This authenticated statement will not only bear us through our suggestion, but may also prove the partial hardship which the fighting officers suffer, not only from their pay being numerically less—but from being rendered still more inadequate to their wants, through the high price of every necessary of life.

To *SERVE*, (*servir*, Fr.) in a military sense, to do duty as an officer or soldier.

To *SERVE a piece*, (*servir une pièce*, Fr.) in the artillery, to load and fire with promptitude and correctness. The French use the term in the same sense, viz. *L'artillerie fut bien servie à ce siège*; the artillery was well served at that siege.

SERVICE, (*service*, Fr.) in a general sense of the word, as far as it relates to war, every species of military duty which is done by an inferior under the influence and command of a superior. It likewise means exploit, achievement. It also points out the particular profession to which a man belongs, as land service, sea service, and the degree of knowledge which he may have acquired

by practice, viz. He has seen a great deal of service.

SERVICE likewise means the period during which a man has done duty, or followed the military profession in an active manner.

SERVICE, *Fr.* in building, signifies the conveyance of materials from the timber-yard to the foot of the edifice which is being constructed, and thence up to the scaffolding.

To go, or enter upon SERVICE, to join a corps which is ordered into actual warfare.

To meet in SERVICE, to come in contact with a person who is engaged in the same state of warfare.

To see SERVICE, to be in actual contact with an enemy.

To be on SERVICE, to be doing actual duty with a corps, or detachment.

To enter into the SERVICE, to purchase, or receive without purchase, a commission in the army. In either case the individual must be recommended to the Commander in Chief, or to the secretary at war, (as the case may be,) stating him to be fully qualified to hold that situation. This is done for his Majesty's approbation; and no person, under the rank of a field officer, can recommend another. See **RECOMMEND**.

To retire from the SERVICE, to quit the army, or resign with or without the advantage of being benefited by the sale of one, or more commissions.

No officer can resign his commission, or retire from the service, without having previously obtained his Majesty's permission through the Commander in Chief, or the secretary at war, as the case may be.

To retire from the SERVICE, keeping one's rank. It has sometimes happened, that an officer has obtained permission to quit the army, keeping his rank; by which means he has been enabled to return into the service, and to take advantage of his original standing. A very meritorious officer, of high rank at present, was permitted to retire in this manner. There have been instances of officers retiring, not only with their rank, but with a certain allowance from the regiment. Few or none, however, of any description, have occurred during the administration of the army under His Royal Highness the Duke of York, who is said to be decidedly averse to every thing of the kind.

Infantry SERVICE, service done by foot soldiers.

Cavalry SERVICE, service done by soldiers on horseback.

General SERVICE. This term is applied to troops that are liable to be sent to any quarter of the habitable globe; hence, men raised for general service. Regiments composed of volunteers from the militia are not of this description; nor do the officers, who came from that establishment, enjoy progressive rank in the army. Stars are affixed to their names in the Army List.

A Letter of SERVICE. See **LETTER**.

Home SERVICE, in a military sense, and with us, the duty which is done within the limits of the three United Kingdoms, and the adjacent islands. This term is frequently used to distinguish such troops as are not liable to serve beyond specified limits, from those that have been raised for general service.

Foreign SERVICE, military duty, or service, done abroad.

Secret SERVICE, any service performed by an individual, in a clandestine secret manner. It likewise means intelligence, or information given by spies when countries are engaged in war, for which they receive pecuniary compensation.

Secret SERVICE (abroad), the act of obtaining and transmitting intelligence respecting the movements and measures of an open enemy, or of powers, &c. that may be more or less connected with him.

Secret SERVICE (at home), the act of watching the conduct of persons at home, for the purpose of giving information thereon to government.

Secret SERVICE money, the reward or compensation which is given for secret intelligence.

Hard SERVICE. This term is used, among the British, to signify the exercise of military duties in the presence of an enemy: we say, he has *seen much hard service*; which the French express thus: *Il a beaucoup servi*.

SERVICE of danger. Any duty, office, or undertaking, may be so called when the character or personal safety of an individual is involved. Thus to write for the public good, however pure the motive may be, is always a service of danger, especially in degenerate times, and under a system of corruption.

Limited SERVICE. A prescribed period by law, during which men enlisted

under that provision are bound to serve as soldiers, but at the expiration of which, they are at liberty to return to their respective homes. This rational suggestion, which has been pressed upon the attention of our representatives during several years in repeated publications, was brought forward by Mr. Windham in 1806, and passed into a law; so that, with all his eccentricities, that gentleman has done some good to the army.

Unlimited SERVICE, military service done abroad or at home, according to the exigencies of the state, without limitation or restriction.

SERVICES, pecuniary disbursements, or payments, made for military purposes.

Etre de SERVICE, *Fr.* to be on duty.

Etre de SERVICE chez le roi, *Fr.* to do duty at the palace.

Service likewise means tour of duty, or routine of service.

SERVICE de l'infanterie en marche, *Fr.* the regular duties or routine of service which an infantry regiment goes through, when it receives orders to march. These are the general, *la générale, ou le premier*; the assembly, *l'assemblée, ou le second*; the troop, *le drapeau, ou le dernier*.

SERVICE des places, *Fr.* the regular duty, or routine of service, which is performed in fortified towns or places: of which description are garrison duties. See *Essai sur la Science de la Guerre*, par Mons. le Baron D'Espagnac, tom. iii. p. 355, and *Elémens Militaires*, tom. ii, p. 116, where specific regulations on this head may be seen. We likewise recommend to the perusal of every engineer and artillery officer, a valuable publication, entitled *Essai Général de Fortification, et d'Attaque et Défense des places*.

SERVICE de campagne, *Fr.* field duties. This subject has been ably treated by several French writers, and among others by the author of *Elémens Militaires*, tom. ii. p. 1, &c. and in tom. iv. p. 68, &c. We likewise recommend to British officers, in general, a small treatise which has been published at the Military Library, relative to the duties of an officer in the field, and principally of light troops, whether cavalry or infantry; as containing much useful information, and preparatory knowledge.

Avoir du SERVICE, *Fr.* a vulgar term used among the French to signify, that a man has been in various situations without much credit to himself, or benefit to others. It is particularly applied to a soldier who has been in different services, or who has deserted and got into two or three different regiments.

SERVICE des Grands n'est pas héritage, *Fr.* an expression used among the French, which signifies, that attendance on the great seldom produces any permanent advantage. Every individual, who has talents, should, of course, depend upon his own exertions. He ought indeed never to lose sight of the French phrase, *Nage toujours, et ne l'y fie pas*; Keep swimming on, and do not trust to the stream.

Faire son SERVICE, *Fr.* to go through the functions or duties of a place or situation.

SERVICEABLE, capable of performing all necessary military duty; also fit for use, as serviceable arms.

SERVIENTES, in old times substitutes for tenants *in capite*, according to the feudal laws.

Time SERVING. See *TIME*.

SERVIR, *Fr.* to serve, to do duty.

Se SERVIR d'un autre, *Fr.* to make use of another. See *USE*.

SERVIR le canon, *Fr.* to serve the cannon, or bring it into action.

SERVIR l'artillerie, *Fr.* to serve the artillery or bring it into action.

SERVITEUR, *Fr.* The French use this word in the same way that we do *servant*; hence, *bon serviteur du Prince, de l'état, de la patrie*, a good servant of his prince or sovereign; a good servant of the state, of the country. By which is meant a rule of conduct marked by zeal and assiduity, together with unshaken fidelity; all of which are essential ingredients in the military character.

SESQUITERTIONAL proportion is when any number, or quantity, contains another once, and one third.

To SET a sentry, (*poser une sentinelle*, *Fr.*) to place a soldier at any particular spot for its security.

To SET on, to attack.

To SET at defiance, to defy; to dare to combat, &c.

To SET up, to make a man fit for military movements and parade. It is observed in the Rules and Regulations, that too many methods cannot be used to

supple the recruit, and banish the air of the rustic; but that excess of setting up, which stiffens the person, and tends to throw the body backward instead of forward, is contrary to every true principle of movement, and must therefore be most carefully avoided.

To SET up, to begin a scheme of life. Thus Bonaparte, who was first brought into notice by Barras, the French Director, like Eumenes, one of Alexander's captains, set up for himself. Christophe, the black Emperor, has done the same in St. Domingo.

SETENDY, *Ind.* the militia.

SETTER, in gunnery, a round stick to drive fuzes, or any other compositions, into cases made of paper.

To SETTLE, (in building,) to give way, to sink. This is said of a wall, that cracks, or is otherwise defective.

SETTLEMENT, the act of settling; the state of being settled; as the settlement of accounts. In order to arrive at this indispensable period of human transactions, officers, and paymasters in particular should never omit taking receipts for disbursements, however minute. In money matters, delicacy is a crime, because it is sure to involve one party, or the other, in eventual mischief; whereas a clear and undisputed record can never offend. See **VOUCHERS**.

SHAFT-rings. See **RINGS**.

SEUIL, *Fr.* a threshold.

SEUIL *d'écluse*, *Fr.* a thick piece of wood which is laid cross-ways between two stakes at the bottom of the water, for the purpose of supporting the flood-gate.

SEUIL *de pont levis*, *Fr.* a thick piece of wood with a groove, which is fixed on the edge of the counterscarp of a fossé or ditch, in order to bear the weight or pressure of the draw-bridge, when it is lowered. It is likewise called *sommier*, a *summer*, or principal beam.

SEVEL, *of the branches of a bridle*, is a nail turned round like a ring with a large head, made fast in the lower part of the branch, called *Garganille*.

SEVIR, one of the chief knights of ancient Rome, being six in all, and one to each ten; also a captain of a regiment of horse.

SEWER, (*égoût*, *Fr.*) a drain, conduit, or conveyance, for carrying off water, soilage, &c.

SEX-angled, having six angles.

SEXTANT, (*sextant*, *Fr.*) in mathe-

matics, an instrument which serves to measure angles. It is the segment of a circle, or an arch of 60 degrees, which makes the sixth part of a circle.

SEYMAR-Bassy, or *first lieutenant-general of the Janizaries*, an officer among the Turks, who not only commands the Janizaries that are called *Scymenis*, but when the Aga (which signifies chief guardian, and the Aga-si, chief or guardian of) takes the field, who further assumes the title of *Kaymekan*, or his lieutenant at Constantinople. He is authorized to put his own seal upon the different dispatches which he sends, and takes rank of all the sardans, or colonels, in his jurisdiction. He is likewise entrusted with the entire direction and management of all that concerns, or relates to, the interior government of the Janizaries.

SEXTIDI, *Fr.* the sixth day in the French republican decade.

SEXTILE, *Fr.* In the French republican almanack, a year is said to be *sextile*, when it contains 366 days; in which case there is a sixth complementary day.

SHABLE. The shable was formerly more in use amongst the horse, than other bodies of men; it is not altogether so long as the sword, but to make amends for that, the blade is twice as broad, and edged on both sides; and therefore it is more used for cutting than thrusting. The shable has a guard.

SHABRACK, an Hungarian term, generally used among cavalry officers, to signify the cloth furniture of a troop horse, or charger.

SHAFT, an arrow; a missive weapon.

SHAFT, (in architecture,) as the *shaft of a column*, is the body of it, so called from its straightness. But it is more frequently called by architects the *fust*.

SHAFT is also used for the spire of a church steeple.

SHAFT likewise signifies an artificial descent practised into the earth for the purpose of mining, making excavations, &c. as in coal pits, &c.

SHAFTS *of a carriage* are two poles joined together with cross bars, by which the hind horse guides the carriage, and supports the fore part of the shafts; the hind part turning round an iron bolt.

SHAFT-bars are two pieces of wood to fasten the hind ends of the shafts together, into which they are pinned with wooden pins.

SHAKEE, *Ind.* a small coin of the value of about three-pence.

SHAKER, *Ind.* city.

SHAIT, *Ind.* bridge, embankment.

SILAKY, } with builders, such stuff
SHAKEN, } as is cracked either with the heat of the sun, or the draught of the wind.

SHALLIE, *Ind.* the same as batty, which signifies rice in the husk.

SHALONS, an old word in Chaucer, signifying blankets.

SHAM, pretended; not real, as a sham-fight.

SHAM-jelons. See *MOUCHES et MOU-TONS*.

SAMMBRIE, (in the manege,) is a long thong of leather, made fast to the end of a cane or stick, for the purpose of animating a horse, or of punishing him if he refuses to obey the rider.

SHAMMIES for *chaise and harness*, dressed sheep-skins to clean the chaise and harness; one is always kept dry for the latter purpose.

SHAMOIS, a kind of wild goat. The hair of it is also so called.

SHAMPOOING, *Ind.* an expedient generally used in India and the Levant, as a luxury, and often resorted to by the inhabitants, as a remedy, in very high estimation. The operation is performed by people regularly trained to the office, called *Shampoo men*.

SHAMPOO-men, persons employed in shampooing.

Mounted SHARP-SHOOTERS. See *Volligeurs*.

SHAMROCK, the Irish word for three-leaved grass. It is worn by the Irish in their hats on St. Patrick's day; as the leek is by the Welch on St. David's, and the thistle by the Scotch on St. Andrew's.

SHANK, the long part of any instrument.

SHANK, in architecture, the body of a pillar.

SHANK, in a horse, is that part of the fore-leg, which is between the knee and second joints, next to the foot, called a fet-lock, or pastern joint.

SHAROCK, *Ind.* a silver coin, equal in value to about one shilling.

SHARP! a pass word which is given at Windsor among the attendants on royalty, to signify the approach of the King.

SHARP, keen, fierce, ardent, fiery.

SHARP-affair—the French use the

word *Vive*—a contest in war, such as skirmishing, disputing a post or passage, in which the combatants eagerly attack one another.

SHATTERED, broken to pieces; having the continuity of the parts destroyed; as a shattered limb.

SHAUMIARIS, *Ind.* a canopy of cotton cloth.

SHAW, *Ind.* a king.

SHAWZADA, *Ind.* the king's son.

SHEAF of arrows. In ancient times, arrows were reckoned by sheaves, and one sheaf contained twenty-four arrows.

SHEED, *Ind.* a witness.

SHEICK, a chief of a tribe among the Arabs. Mr. Morier, in his account of a campaign with the Ottoman army, relates, that in 1800, a fanatic sheick, who pretended to be inspired, headed the Fellahs, (the lowest class of inhabitants are so called among the Arabs,) of the district of Demenhor, and caused a detachment of 80 Frenchmen to be put to death in the night; this was effected by first securing the sentinel.

SHELL of a sword, (*plaque d'épée*, Fr.) a particular part of a sword, which serves as a shield to the hand when it grasps the hilt. The regulation sword, which is directed to be worn in a cross belt, has its shell so constructed that one side can fall down, by which means the hilt hangs more conveniently.

A spring-SHELL of a sword, (*plaque d'épée à ressort*, Fr.) a shell, which, by means of a spring, can lie flat against the hip, when the sword is worn in a cross-belt. The proper word is *coquille*, not *plaque*.

SHELL, the outward part of a tent or marquise.

SHELL, a short jacket without arms, which was worn by light dragoons, and in some instances by the infantry, before the new regulations took place respecting the clothing of the British army. At the commencement of the late wars, some militia colonels derived no inconsiderable emolument from this mode of dress.

SHELLS, in gunnery, are hollow iron balls to throw out of mortars or howitzers, with a fuze-hole of about an inch diameter, to load them with powder, and to receive the fuze: the bottom, or part opposite the fuze, is made heavier than the rest, that the fuze may fall uppermost; but in small elevations, this is not always the case, nor is it necessary;

for, let it fall as it will, the fuze sets fire to the powder within, which bursts the shell, and causes great devastation. The shells had much better be made of an equal thickness, for then they burst into more pieces.

Message-SHELLS are nothing more than howitzer shells, in the inside of which a letter, or other papers, are put; the fuze hole is stopt up with wood or cork, and the shells are fired out of a royal or howitzer, either in a garrison or camp. It is supposed that the person to whom the letter is sent knows the time, and accordingly appoints a guard to look out for its arrival. During the bombardment of Flushing, and while the communication with Cadsand was cut off, means were found to convey a letter from the garrison in the latter place. It was inclosed in a shell, which without being filled with inflammable materials, was discharged from a mortar planted on one of the sea-batteries. The shell was taken up in Cadsand and emptied of its contents, which were forwarded to Paris.

To find the weight of a SHELL. Rule. Double the difference of the cubes of the diameters of the shell and hollow sphere, and 7 times the result gives the weight in pounds, cutting off the two right hand figures of whole numbers.

Example. Let the diameter of the shell be 13 inches, and that of the hollow sphere 9.5. Then the cube of 13 is 2197, and that of 9.5, is 857.357; the difference is 1339.625, its double is 2679.25, which multiplied by 7, gives 18754.625, and cutting off two places in whole numbers, the result is 187lb. or 1 cwt. 2 qrs. 21lb. the weight of the shell.

To SHELL, among horses, to have the teeth completely bare and uncovered, which happens about the fifteenth or sixteenth year.

Shrapnel-SHELLS, shells of a peculiar construction, invented by Col. Shrapnel of the royal artillery. They were used with peculiar effect against the French army, which Sir Arthur Wellesley, now Duke of Wellington, fought on the 21st August, 1803; and also at the battle of Waterloo in 1815.

SHELL-toothed horse is one that from four years, to old age, naturally bears a mark in all his fore teeth, and there still keeps that hollow place with a black mark, which we call the eye of a bean, insomuch, that at twelve or fifteen he

appears with the mark of a horse that is not yet six.

SIERISCHERWAR, Ind. a word which corresponds with Saturday.

SHERISTA, Ind. an officer; a registry.

SH'DES, } in building, are small
SHINGLES, } pieces of wood or quartered oaken boards, sawed to a certain scantling, or more usually cleft to about an inch thick at one end, and made like wedges, four or five inches broad, and eight or nine inches long.

To SHIFT, in a military sense, to change place or station. Hence, to shift quarters. In the exercise, &c. of a battalion, officers commanding divisions are, upon particular occasions, such as marching past, &c. to shift from the right to the left, to conduct the heads of files, or the pivot flanks, in column or echelon. Whenever officers shift, they must pass briskly by the rear, and never along the front of the division. The covering serjeants always move with them.

SHIFTS, a term formerly used in England, to signify a certain per centage or douceur, which usurers exacted, and for which they were liable to fine and imprisonment, &c. before the interest for the use of money was fixed at a certain standard in the reign of Henry the VIIIth.

The SHILLINGS, a phrase in familiar use among army brokers, to express a certain profit, or per centage, which they gain in the sale, purchase, and exchange of commissions. The regulated price of a company in any regiment of foot being 1500l. that sum only can be lodged at an agent's, or a banker's; but if the company be (what is called) in the market, the broker who transacts the business, receives one shilling in the pound, and in order to produce this premium, the purchaser gives 1500 guineas, out of which the shillings, amounting to 75l. are paid to the broker, leaving the nett regulation untouched.

SHINGLE, a lath or cleft of wood to cover houses with.

SHINGLES, a disease, a spreading inflammation about the waist, which kills the patient if it get quite round. Horses are subject to this complaint.

SHIP, a general name given to all vessels navigated upon the ocean; in sea language, however, it is more particularly applied to a vessel furnished with

three masts, each of which is composed of a lower-mast, a top-mast, and a top-gallant-mast, with the yards and other machinery thereto belonging.

SHIP of war, (*vaisseau de guerre*, Fr.) a vessel belonging to the royal navy, and armed for action.

Merchant SHIP, (*vaisseau marchand*, Fr.) a ship of burthen, constructed for the purposes of trade.

Head-quarter SHIP, the ship on which the commander in chief of an expedition is embarked, and from which signals are made for the commanding officers, adjutants, &c. of corps, to attend.

Hospital SHIP, the ship in which the sick and wounded soldiers, &c. are taken care of on expeditions, and during sea voyages. The gun-deck is entirely appropriated for the reception of the sick, and is flush, without cabins or bulk-heads, except one of deal, or canvass, for separating those in malignant distempers.

Prison SHIP, a ship appropriated for the reception of prisoners of war, &c.

Slop SHIP, a vessel appointed as a de-pôt of clothes for the seamen.

Store SHIP, a vessel employed to carry artillery and stores for the use of a fleet, fortress, or garrison.

Troop SHIP, a vessel appointed to carry troops. It is also called a transport.

SHOCCA, *Ind.* any letter written by the king.

SHOCK, (*choc*, Fr.) conflict; mutual impression; violence; violent concourse; as the shock of cavalry.

To SHOCK, to meet with hostile violence.

To SHOE, to fit the foot with a shoe. This word is usually confined to a horse. The French say *ferrer un cheval*. An excellent regulation took place in 1812, by which every soldier belonging to a cavalry regiment is taught how to shoe his horse.

SHOEING-horn, (*chausse-pied*, Fr.) a horn used to facilitate the admission of the foot into a narrow shoe. Soldiers should always take care to have their shoes easy.

To be SHOOK in the shoulder. A horse may be shook in the shoulder, either from accident, or through hard riding; in which case, he never can be reckoned safe: his feet may be good.

SHOOKREWAR, *Ind.* a word which corresponds with Friday.

To SHOOT, to discharge a gun, &c.

To SHOOT, a term in carpentry, signifying to take off the edge of a board, &c. with the jointer-plane.

To SHOOT a bridge, to go through that part of a bridge through which the main current runs: as, to shoot London bridge.

SHOOTING. See **GUNNERY and PROJECTILE.**

SHORE, a coast of land near the sea.

SHORE, in architecture, a prop to support a building.

To SHORE up, in architecture, to prop; to support.

SHORTEN your bridle, a word of command used in cavalry, viz.

1st. Seize the upper end of the reins of the bridle, which is to lie on the right side of the horse, with the right hand.

2d. Bring it up as high as your chin, keeping your right elbow on a level with your shoulder.

3d. Slip your left hand along the reins of the bridle, and take hold of the loop or button, which is near the upper end of the reins.

4th. Slip the loop down with the left hand as low as the pommel of the saddle.

5th. Bring the right hand down with life on the right holster-cap, quitting the reins of the bridle with both hands.

SHORT-roll. See **SIGNALS.**

SHORT-jointed. A horse is said to be short-jointed that has a short pastern.

Short-jointed horses do not, usually, manage well; but out of the manage, they are the best for travel or fatigue.

SHOT, a denomination given to all kind of balls used for artillery and fire-arms; those for cannon being of iron, and those for guns and pistols, &c. of lead.

Grape }

Chain }

Case }

SHOT. See **LABORATORY.**

To find the weight of an iron SHOT, whose diameter is given; and the contrary. *Rule.* Double the cube of the diameter in inches, and multiply it by 7; so will the product (rejecting the 2 last or right-hand figures) be the weight in pounds.

Example. What is the weight of an iron shot of 7 inches diameter? The cube of 7 is 343, which doubled is 686, and this multiplied by 7 produces 4802, which, with the right hand figures rejected, gives 48 pounds, the weight required.

N. B. This rule is sufficiently exact for practical uses.

To find the diameter of the Shot, when the weight is given. *Rule.* Multiply the cube root of the weight in pounds by 1.923, and the product is the diameter in inches.

To find the diameter of a Shot, from the impression or cavity it makes, by striking a brass gun, or other object. *Rule.* Divide the square of the radius of the cavity by the depth of it, and add the quotient to the depth; so will the sum be the diameter of the shot required.

Langrel Shot, a sort of shot which runs loose, with a shackle, or joint, in the middle.

Spherical Case-Shot. Case-shot is so termed from the whole charge of the gun being contained in a tin case. The tin case is cylindrical, in diameter a little less than the calibre of the gun or howitzer. It is filled with iron balls, so as to make up the weight of the shot. These balls are seldom less than $1\frac{1}{2}$ oz. in weight. But little effect is to be expected from firing case-shot beyond 300 yards, from the very great divergency of the balls.

Although we could enter very fully into this destructive, and hitherto unparalleled, mode of annoying an enemy, we shall abstain from giving any of those particulars which might lead to a discovery of the invention. Colonel Shrapnel, of the Royal Artillery, has the exclusive merit of having added this formidable weapon to those already in use, with the acknowledged advantage of possessing the talent, as well as the inclination, to render it generally useful.

The following explanation of the effects and advantages that might be derived by firing this species of shot, is extracted from a book lately published. We should not, otherwise, have thought ourselves justified in saying as much upon the subject.

1st. The whole charge takes effect on the enemy at any distance. By the present mode of firing, the greatest part of the charge disperses as soon as it leaves the muzzle of the gun, and cannot be directed.

2d. Grape, or case, shot may be fired with an effect equally close and collected, to any distance within the range of the piece; and the artillery need not advance within musket shot of the enc-

my, to make use of this kind of fire with its full effect, and are not so subject to have their guns charged either by cavalry or infantry.

3d. It requires less precision and exactness to point a piece of ordnance charged with spherical case shot than with round shot, because case shot is a wide and dispersed fire, and the difficulty in elevation consequently less.

4th. Its comparative destruction with that of round shot will be, generally, as the number of shot within the shells to one; that is to say, a three pounder, twenty-two to one in its favour; a six-pounder, fifty to one, &c. in which calculation is not enumerated any effect from the splinters of the shell.

5th. Small balls cannot be projected to very considerable distances, unless inclosed in heavy spherical cases, which, from their form and weight, are not much influenced by the resistance of the air, or diverted from their direction.

6th. The explosion of the shell makes no change in the direction of the shot within it; they consequently complete the shell's track, or curve, which has sometimes been observed to be 400 yards.

7th. From the unevenness of the ground, such as hillocks, banks, fallow-fields, &c. all shot which graze most commonly lodge; whereas, by using this shell, the whole charge will be carried over these irregularities, and reach the object with its full contents of balls.

N. B. Firing these kind of shells from guns is managed with more facility than the ordinary howitzer practice, both as to the length of fuze, as well as the elevation required, and may be carried on in the field precisely the same as firing round shot.

Mode of Examining the different Natures of Lieut. Colonel Shrapnel's Shells in the Royal Laboratory.

1st. The shells are to be well examined with a pick hammer of a proper weight to the diameter of each nature, to find they are not damaged by sand holes, or other flaws.

2d. They are to be well scraped inside, with scrapers that will get under the dip of the fuze-hole, so that all the bore, sand, or gravel, may be cleaned out, which is to be done by rolling and shaking the shell with the fuze-hole downwards. It may be taken out of large shells with a proper ladle, that will go into the fuze-hole.

3d. They are to be proved with a strong bellows and water as usual; the shot being placed under in a tub or bucket, introduce the nose of the bellows into the fuze, and by blowing them the water will bubble, if the shell be porous.

4th. They are to be examined, by the new calliper instruments, round the side and at the bottom, to ascertain their thickness and concentricity.

5th. They are to be examined by a circular gauge, and appropriated to the respective ordnance they are found to answer. If any are too high by 03 of an inch, or too low by 03 of an inch, they are to be rejected.

6th. When each shell is ascertained to be perfectly dry inside, it is to be placed with its fuze-hole up, and the nose of a strong bellows, forming an angle downwards, being introduced into it, a few blasts being given, will blow the remaining particles of dust out of the shell.

7th. The shells are to be classed, by their fuze-holes, into different numbers, viz. 1, 2, 3, and 4; those of an equal size to be packed in boxes by themselves.

8th. A file to be used occasionally to try if the metal is soft, instead of breaking the shell.

9th. Each shell to be sounded, by striking it gently, as the ringing tone will be lost, should there be an imperceptible crack in it.

N. B. In the examination of spherical case shot shells, the thick side of the shell need not be taken into consideration, but the thinnest part only; for when the thinnest part is too thin by the rule given, the thickest part must be too thick, which needs no examination to discover.

Supposing an eighteen-pounder shell ought to be five inches thick in every part, subtract the non-concentricity allowed of 0.83 from it, and there remains 4.17 inches, for the thinnest part of an eighteen-pounder shell which can be received.

Method of making Fuzes of Colonel Shrapnel's Construction.

The fuzes, after being turned so as to fit the fuze-holes, are bored, and a deep thread grooved inside, to hold the composition firm; and, instead of being turned with cups, they are hollowed conical, and roughed with a tool that

cuts under, the better to receive the priming.

After they are driven, with fuze composition, one and one half inch, they are sawed across the top, about one fifth of an inch down, so as not to touch the composition, and divided into five equal parts, of two tenths of an inch each; after which a bit of quick match is placed across, and drawn tight in the same grooves; they are then primed, with mealed powder and spirits of wine, capped and packed for service.

To *Shot a gun*, to load a piece of ordnance with the necessary quantity of gunpowder and ball.

SHOVEL, an instrument for digging.

SHOULDER, the upper part of the blade of a sword is so called. The shoulders of regimental sword-blades, for the infantry, are directed to be one inch broad at least.

SHOULDER of a horse is that part of his fore-hand that lies between the withers, the fore-thigh, the counter, and the ribs.

Charged with SHOULDERS. A horse is said to be so, when he has thick, fleshy and heavy shoulders, and is, consequently, liable to trip, or fall.

SHOULDER-pegged horses are so called when they are gourdy, stiff, and almost without motion.

SHOULDER-splait, a horse is said to be so when he has given his shoulders such a violent shock, as to disjoin the shoulder-joint from the body.

SHOULDERS of a horse should be sharp and narrow at the withers, of a middle size; flat, and have little flesh upon them; for if a horse be charged with shoulders, he will not only be heavy on hand, and soon weary, but also trip and stumble, especially if, with such shoulders, his neck should be thick and large.

The shoulders of a well-shaped horse are compared to those of a hare, and the distance between them should be little more than half the breadth of his hind-quarters.

SHOULDER-pight is a malady in a horse, being the displacing the point of the shoulder by some great fall, rack, or pain, which may be known by one shoulder point sticking out farther than its fellow, and by his halting downright.

SHOULDER-pinching, a misfortune which befalls a horse by labouring or straining when too young, or by having been overloaded.

SHOULDER-splinting, } a malady
SHOULDER-torn, } which may heal
 a horse by some dangerous sliding,
 either at home or abroad, by which the
 shoulder is parted from the breast, and
 so leaves an open rift, not in the skin,
 but in the flesh, and the skin next under
 the outward skin, which renders the
 horse so lame, that he is not able to go;
 and this may be known by his trailing
 his legs after him.

SHOULDER-wrench is a misfortune
 which happens to horses several ways,
 sometimes by turning or stopping too
 suddenly upon some uneven ground,
 sometimes by running too hastily out of
 the stable door; at other times by slip-
 ping or sliding, either in the stable or
 abroad; and by various other accidents.

SHOULDER-shield, a part of ancient
 armour which was formed of plates of
 iron rivetted together, and served to pro-
 tect the breast and shoulders of a
 horse.

SHOULDER of a bastion, in fortifica-
 tion. See **ÉPAULE**.

SHOULDER-belt, so called because it
 hangs over the shoulder, to carry the
 bayonet or sword: it is made of strong
 buff leather.

To **SHOULDER**, in a military sense,
 to lay on the shoulder, or to rest any
 thing against it. Hence, to shoulder a
 musket.

SHOULDER arms! a word of command
 which is used in the British service.
 See **MANUAL**.

Right SHOULDERS forward, } two
Left SHOULDERS forward, } terms
 of command in the British service, when
 a column of march (in order to follow
 the windings of its route) changes its
 direction in general, less than the quar-
 ter of the circle. See Sections 22 and
 39 of the Rules and Regulations.

SHREADINGS, in carpentry, the
 making good of the rafter-feet in the
 cornice, that is, when rafters are cut
 with a knee. These *shreadings* (other-
 wise called *furrings*) go straight along
 with the rafter from the top of the
 knee to the cornice.

SHREWDNESS, according to Dr.
 Johnson, cunning, mixed with petu-
 lance and ill-nature. This word, how-
 ever, is often understood in a good sense,
 and signifies acuteness, quick discrimina-
 tion, &c. See **SAGACITY**.

SHROF, *Ind.* a banker, a money-
 changer, or one who keeps a shop for

the accommodation of the public in pe-
 cuniary matters, and who derives consid-
 erable advantage from the circulating
 medium of other people's property.

SIROFFING, *Ind.* the act of ex-
 amining and sorting money.

SHUMSURTREEPUT, *Ind.* avowal,
 acknowledgement, confession.

To **SHUT**, to close, to make not open.

SHUT pans! a word of command used
 in the inspection of arms. Place the
 inside of your fingers against the back
 part of the hammer, and bring it briskly
 to in one motion. In opening pans, you
 place the thumb against the inside of
 the hammer.

SIUTERNAUL, *Ind.* a sort of ar-
 quebuss, which is fixed upon the back of
 a camel.

SICK and Hurt, a Board so called, to
 which the agents, commissaries, &c. be-
 longing to the several military hospitals
 in Great Britain are responsible.

SICKLEGAR, *Ind.* a person whose
 business is to polish iron.

SIDE. To ride a horse side-ways, is
 to passage him, to make him go upon
 two treads, one of which is marked by
 his shoulders, and the other by his
 haunches.

SIDE-pieces of gun-carriages. See
CARRIAGES.

SIDE-straps, in a field carriage, are
 flat iron bands which go round the side-
 pieces, in those places where the wood
 is cut across the grain to strengthen
 them near the center and the trail.

SIDE-drum, the drum so called in for-
 mer times, from being borne on the side
 of the person who beats it.

SIDERATION, the same as *sphacelus*,
 (among surgeons,) an entire mortifica-
 tion of any part of the body.

SIEGE, (*siège*, Fr.) the position
 which an army takes, or its encampment,
 before a fortified town, or place, for the
 purpose of reducing it. The term comes
 from *siège*, which signifies seat, chair,
 &c. Hence, to sit down before a place,
 signifies, in a military sense, to chuse a
 position from which you may commence
 the necessary operations to attack and
 get possession of it. The French use
 the word generally as we do.

The first operation of a *siege* is in-
 vesting. The body of troops investing
 a town should, at least, be as strong
 again as the garrison; so as to be able
 to divide itself into several parties, in
 order to take possession of all the ave-

nues leading to the place. By day they should keep themselves out of cannon-shot; but as soon as it is dusk, they must approach much nearer, the better to be able to support each other, and to straiten the town.

To undertake the SIEGE of a town, (*entreprendre le siège d'une ville, Fr.*) to invest it, to form lines of circumvallation, to open trenches, &c.

To lay SIEGE to a town, (*faire le siège d'une ville, Fr.*) to draw your forces round a town, for the purpose of attacking it.

To carry on a SIEGE, (*continuer un siège, Fr.*) to persevere by regular approaches, &c. in gaining ground upon the garrison.

To lay close SIEGE, (*presser le siège, Fr.*) to approach close to the walls for the purpose of making a breach and storming, or of starving out the garrison. For a full and scientific explanation of the different methods which are adopted in modern times, for the attack and defence of places, particularly of sieges, see *Essai Général de Fortification et d'attaque et défense des places*, tom. i. page 61, &c. &c.

General phrases and terms used at a SIEGE are, *viz.*

To besiege a place. See SIEGE.

To accelerate the SIEGE, (*accélérer le siège, Fr.*) is when an army can approach so near the place as the covert-way, without breaking ground, under favour of some hollow roads, rising grounds, or cavities, and there begin their work.

An attack is when the besieging army can approach the town so near as to take it, without making any considerable works.

To form the SIEGE, or lay siege to a place, (*mettre le siège à une place, Fr.*) there must be an army sufficient to furnish five or six reliefs for the trenches, pioneers, guards, convoys, escorts, &c. and artillery, with all the apparatus thereto belonging; magazines furnished with a sufficient quantity of all kinds of warlike stores; and a general hospital, with physicians, surgeons, medicines, &c.

To raise the SIEGE, (*lever le siège, Fr.*) is to give over the attack of a place, quit the works thrown up against it, and the posts formed about it. If there be no reason to fear a sally from the place, the siege may be raised in the day time. The artillery and ammunition must have a strong rear guard, lest the besieged

should attempt to charge the rear: if there be any fear of the enemy in front, this order must be altered discretionally, as safety, and the nature of the country will admit.

To turn the SIEGE into a blockade, (*convertir le siège en blocus, Fr.*) is to give over the attack and endeavour to take it by famine; for which purpose all the avenues, gates, and streams, leading into the place, are so well guarded, that no succour can get in to its relief.

To insult a work, to attack it in a sudden and unexpected manner, with small arms, or sword in hand.

Surprise, the taking a place by a *coup de main*, by stratagem, or treason.

To esculade a place, to approach it secretly, then to place ladders against the wall or rampart, for the troops to mount and get into it that way.

To petard a place, privately to approach the gate, and fix a petard to it, so as to break it open for the troops to enter.

Line of circumvallation, a kind of fortification, consisting of a parapet or breast-work, and a ditch before it, to cover the besiegers against any attempt of the enemy in the field.

Line of contravallation, a breast-work, with a ditch before it, to cover the besiegers against any sally from the garrison, in the same manner that the line of circumvallation serves to protect them in the field.

Lines, works made to cover an army, so as to command a part of the country, with a breast-work and ditch before them.

Retrenchment, a work made round the camp of an army, to cover it against any surprise.

Line of counter-approach, a trench which the besieged make from the covert-way to the right and left of the besieger's attacks, in order to scour their works. This line must be perfectly enfiladed from the covert-way and the half moon, &c. that it may be of no service to the enemy, in case he gets possession of it.

Batteries at a siege cannot be erected till the trench is advanced within reach of the cannon of the place; that is, within what is generally understood to be a point-blank range, which is reckoned about 300 toises, 1800 feet.

Cannon is made use of at a siege for two

different purposes; the first to drive away the enemy from their defences; and the second to dismount their guns. To produce these two effects, the batteries should not be above the mean reach of cannon-shot from the place: therefore there is no possibility of constructing them, till the first parallel is formed; as that work is usually traced at 500 toises from the place: therefore the batteries must be on this line, or between it and the town.

The completion of the batteries is in some services left to the officers of the royal artillery, after the engineers have thrown up the mass of cover: but in the British service the engineers finish every part of them. They must be parallel to the works of the town which they are to batter. It is customary to place the mortar-batteries and gun-batteries side by side, and in the same line, to the end that they may batter the same parts. The use of both is to demolish the enemy's works, to dismount their guns, to penetrate into their powder magazines, and to drive the besieged from their works and defences; as also to ruin and destroy the principal buildings, by setting fire to the town; and to fatigue and distress the inhabitants in such a manner, that they shall press the garrison to surrender.

To sally at a siege is to go privately out of a besieged town, fall suddenly upon the besiegers, and destroy part of their works, spike their cannon, and do every other possible damage.

A sally, a secret movement which is made out of a besieged town or place, by a chosen body of troops, for the purpose of destroying an enemy's out-works, &c. Sallies are seldom made when the garrison is weak; for although they molest the enemy, and keep him on the alert, yet the chance of losing men renders it prudent to keep within the works.

Saps. *To sap, at a siege*, is the method of carrying on the approaches when so near the place as to be unable to work without cover. It is performed by men on their knees behind a mantlet or stuffed gabion: they make the sap 3 feet deep, and 3 feet 6 inches wide; then, common workmen widen it to the usual size, and it bears the name of trench. There are various sorts of saps, viz.

Single sap, that which is made on

one side only, or, which is the same thing, has only one parapet.

Double sap has a parapet on each side, and is carried on wherever its two sides are seen from the place.

Flying sap is that in which the working parties of the besiegers place their gabions themselves, and instantly fill them with earth, and continue to work under their cover: it is made where the workmen are not much exposed, and in order to accelerate the approaches.

Sap-faggots are a kind of fascines, only three feet long, and about six inches in diameter.

Saucissons are another species of fascines, from 12 to 19 feet long, and from 8 to 10 inches in diameter, and are used in making batteries, and repairing the breaches.

Sortie. See SALLY.

Tail, or rear of the trench, (*Queue de la tranchée*, Fr.) is the first work the besiegers make when they open the trenches.

Tambour, a kind of traverse, at the upper end of the trench, or opening made in the glacis to communicate with the arrows. This work hinders the besiegers from being masters of the arrow, or discovering the inside of the place of arms belonging to the covert-way.

Traverse in a siege, a kind of re-trenchment which is made in the dry ditch, to defend the passage over it.

Trenches are passages or turnings dug in the earth, in order to approach a place without being seen from its defences.

Wool-packs used in a *siege* differ from sand-bags, in this only, that they are much larger, and, instead of earth, they are filled with wool. They are used in making lodgments in places where there is but little earth, and for other similar purposes. They are about five feet high, and 15 inches in diameter.

Rear of an attack is the place where the attack begins.

Front, or head of an attack, that part next to the place.

Mantlets, are wooden fences, rolling upon wheels, of two feet diameter; the body of the axle-tree is about four or five inches square, and four or five feet long; to which is fixed a pole of eight or ten feet long, by two spars; upon the axle-tree is fixed a wooden parapet, three feet high, made of 3-inch planks, and four feet long, joined with dowelpins, and two cross-bars: this parapet

jeans somewhat towards the pole, and is supported by a brace, one end of which is fixed to the pole, and the other to the upper part of the parapet. Mantlets are used to cover the sappers in front against musket-shot.

Maxims in SIEGES, 1st. The approaches should be made without being seen from the town, either directly, obliquely, or in flank.

2. No more works should be made than are necessary for approaching the place without being seen; i.e. the besiegers should carry on their approaches the shortest way possible, consistent with being covered against the enemy's fire.

3. All the parts of the trenches should mutually support each other; and those which are farthest advanced, should be distant from those that defend them about 120 or 130 toises, that is, within musket shot.

4. The parallels, or places of arms the most distant from the town, should have a greater extent than those which are the nearest, that the besiegers may be able to take the enemy in flank, should he resolve to attack the nearest parallels.

5. The trench should be opened or begun as near as possible to the place, without exposing the troops too much, in order to accelerate and diminish the operations of the siege.

6. Care should be taken to join the attacks; that is, they should have communications, to the end that they may be able to support each other.

7. Never to advance a work, unless it be well supported; and for this reason, in the interval between the 2d and 3d place of arms, the besiegers should make on both sides of the trenches, smaller places of arms, extending 40 or 50 toises in length, parallel to the others, and constructed in the same manner, which will serve to lodge the soldiers in, who are to protect the works designed to reach the third place of arms.

8. Take care to place the batteries of cannon in the continuation of the faces of the parts attacked, in order to silence their fire; and to the end that the approaches, being protected, may advance with greater safety and expedition.

9. For this reason, the besiegers should always embrace the whole front attacked, in order to have as much space as is requisite to place the batteries on the produced faces of the works attacked.

10. Do not begin the attack with works that lie close to one another, or

with reentrant angles, which would expose the attack to the cross fire of the enemy.

Stores required for a month's SIEGE are nearly as follow:—

Powder, as the garrison is more or less strong	8 or 900,000lb.	
Shot { for battering pieces	- 6000	
{ of a lesser sort	- 20,000	
Battering cannon	- 80	
Cannons of a lesser sort	- 40	
Small field pieces for defending the lines	- 20	
Mortars for throwing { shells	24	
{ stones	12	
Shells for mortars	- 15 or 16,000	
Hand-grenades	- 40,000	
Lead bullets	- 180,000	
Matches in braces	- 10,000	
Flints for muskets, best sort	100,000	
Platforms complete for guns	100	
Platforms for mortars	- 60	
Spare {	carriages for guns	- 60
	mortar beds	- 60
	spunges, rammers, and ladles, in sets	- 20
Tools to work in trenches	- 40,000	

Several hand-jacks, gins, sling-carts, travelling forges, and other engines proper to raise and carry heavy burdens; spare timber, and all sorts of miners' tools, mantlets, stuffed gabions, fascines, pickets, and gabions.

SIÈGE brusqué, Fr. an expression used among the French to signify the prompt and immediate movement of a besieging army, against a fortified town or place, without waiting for the regular formation of lines, &c. In this case, the troops make a vigorous attack upon all the out-works, and endeavour to make a lodgement upon the counterscarp. When they have succeeded, they instantly throw up temporary lines, &c. behind them, in order to secure a retreat, should the garrison force them to quit their ground.

The following are some of the most important Sieges from the twelfth century to the year 1815.

ACRE, 1192; 1799, by Bonaparte.—The siege raised after 60 days open trenches. Agria, 1566, 1687.

Aiguillon, 1345.

Alba Regalis, (Stulweissenberg), 1543, 1601, 1602, 1683.

Alcantara, 1706.

Alessandria, (Italy,) 1801.

Algiers, besieged by an armament from Charles V. of Spain, in 1541.—Bombarded by order of Louis XIV. in 1682, on which occasion bomb vessels

- were first employed by a French engineer of the name of Renau.—Bombarded again in 1683; again in 1689, by the French; and finally by Lord Exmouth on the 27th day of August, 1816.
- Algesiras, 1341.
- Alhama, 1481.
- Alkmaar, 1573.
- Almeida, Aug. 27, 1810.—Lost by the accidental explosion of the principal magazine, and the after-treachery of Major Jose de Barreiros, the Portuguese artillery commander.
- Amiens, 1597.
- Ancona, 1799.
- Angely (St. Jean d'), 1569, 1621.
- Angoulême, 1345.
- Antequera, 1410.
- Autwerp, 1576, 1583; 1585, use of infernal machines; 1706, 1792, 1814.
- Aretino, 1800.
- Arras, 1414.
- Arisch (El), 1800.
- Astorga, April 12, 1810.
- Azoff, 1736.
- Asti, 1745, 1746.
- Atella, 1496.
- Ath, 1697, 1700; 1745.—First general adoption of firing with artillery à ricochet, at a siege.
- Avignon, 1226.
- Badajoz, March 11, 1811; besieged by Lord Wellington in May, the siege raised; a second time during May and June, again raised June 9th, from an insufficiency of means; besieged by his Lordship, the third time, in 1812, and taken by escalade on the night of April 6th. If the British had failed in this last attempt, the army must have gone back to the lines of Torres Vedras.—*Remark.*—After twenty days open trenches, three breaches were made; the assault of these failed, while an attack of the same walls by escalade succeeded.—Such were the exertions, and so daring was the intrepidity of the British troops during the escalade, particularly that made by General Leith, and the late lamented Sir Thomas Picton, K. B. that a few years hence they will scarcely obtain belief.
- Bagdad, 1248.
- Barcelona, 1697, 1705, 1706, 1714.
- Bastia, 1511, 1793.
- Bayonne, 1451.
- Beauvais, 1472.
- Belgrade, 1439, 1455, 1521, 1633, 1690, 1717, 1739, 1739.
- Bellegarde, 1793, 1794.
- Belle-Isle, April 7, 1761.
- Belvedere (Calabria), 1239.
- Bene, 1551, 1795.
- Bergerac, 1345.
- Bergen-op-zoom, 1583, 1622, 1747, 1814.—During one of the most obstinate sieges against this strong place, the Dutch, from the prevalence of a thirst for lucre, actually sold gunpowder and other materials to enable the enemy to destroy their own property.
- Berwick, 1293.
- Besançon, 1668, 1674.
- Bethune, 1710.
- Blisecastel, 1674, 1794.
- Bois-le-duc, 1603, 1629, 1794.
- Bologna, 1512, 1796.
- Bommel, 1599, invention of the covered way; 1794.
- Bonifacio, 1553.
- Bonn, 1587, 1689, 1703.
- Bordeaux, 1451, 1452, 1653.
- Bouchain, 1676; 1711,—last siege of the Duke of Marlborough.
- Boulogne, 1545.
- Bourbon (Ft.), Martinique, 1794; 18—Taken and blown up.
- Bourges, 1412.
- Braunau, 1744, 1805.
- Breda, 1590, 1625, 1793, 1794.
- Brescia, 1439, 1512, 1796, 1799.
- Breslaw, 1741, 1757, 1759; Jan. 8, 1807.
- Brest, 1373.
- Brieg, 1741, 1806, 1807.
- Brisac, 1638, 1703, 1704.
- Brussels (bombardment), 1695, 1746.
- Buda, 1526, 1528, 1541, 1684, 1686.
- Burgos, (Castle of,) Sept. 19 to Oct. 22, 1812.—The siege of this insignificant place was raised from the want of sufficient means of attack—there not being a miner, a sapper, hardly an artificer in the attacking party.—The fortifications were blown up by the French in 1813, in their retreat, June 13th.
- Cadiz, Feb. 10, 1810, raised Aug. 12th, 1812, in consequence of the defeat of Marmont at the battle of Salamanca.
- Caen, 1346, 1450.
- Calais, 1347, starved into a surrender by Edward III.; 1436, 1553, 1596.
- Calvi (Corsica), 1794.
- Campo-Mayor, March 23, 1811; April 15.
- Candia, 1667 to 1669.—The largest cannon at that time known in Europe cast by the Turks in their camp.—Parallels to support the approaches, invented by an Italian engineer, first used.

- Capua, 1501.
 Carignan, 1544.
 Carthage, 1706.
 Casal, 1534, 1629, 1630.
 Cassel, 1328.
 Cassel (Hesse), 1761.
 Castillon, 1452, 1586.
 Ceuta, 1790.
 Chalus, 1199.—Death of Richard Cœur-de-Lion.
 Charleroi, 1672, 1677, 1693, 1736, 1794.
 Chartres, 1568, 1591.
 Château-gaillard, 1203, 1418.
 Chaves, March 25, 1809.
 Cherbourg, 1450.
 Chincilla, Oct. 30, 1812.
 Chio, 1346.
 Ciudad Rodrigo, 1706; July 10, 1810; Jan. 19, 1812.
 Colberg, 1760, 1761, 1807.
 Colchester, 1645.
 Colliouri, 1794.
 Compiègne, 1430.—Joan of Arc taken prisoner.
 Condé, 1676, 1792, 1794.
 Coni, 1691, 1744.
 Constantinople, 1453.
 Copenhagen, 1700, 1801; Sept. 1807.
 Corbeil, 1590.
 Corfu, 1715.
 Courtrai, taken and re-taken twenty times, from 1302 to 1800.
 Racow, 1772.
 Cremona, 1702.—Surprized by Prince Eugene, who carried off Marshal Villeroy prisoner; but was finally driven out of the town, after a combat of several hours.
 Crève-cœur, 1672, 1794.
 Croye, 1442 to 1467.
 Damien (St.), 1617.
 Dantzic, 1734, 1793, 1807; 1813 to Jan. 12, 1814.
 Denia, 1707.—The siege raised by the Marquis d'Asfeld, to prevent the entire destruction of his army, after having given three general assaults.
 Dewinter, 1591.

- For interesting particulars respecting the operations in the Peninsula, we refer our readers to the very able and intel-

ligent publication by Colonel Jones of the Royal Engineers.

SIENS, *Fr.* the plural of *sien*, *his*, *her's*, or *one's* own. This word is used among the French, to signify the same as *gens*, men, people, soldiers; viz. *ce général fut abandonné par les siens*, *Fr.* that general was abandoned by his own soldiers.

SIERRA, a word used for hill in different parts of the world, particularly on the West coast of Africa, on the North coast of South America, and on the coasts of Chili and Peru; also in Spain, as the *Sierra Morena*.

SIERRILLO, the term for a little hill, being the diminutive of *Sierra*; in which sense it is used on the south-west coast of South America.

SIEVE, an instrument which by means of hair, lawn, or wire, is capable of separating the fine from the coarse parts of any powder.—See **GUNPOWDER**, **LABORATORY**, &c.

SIES or **SHIAS**, *Ind.* a tribe of people in the N. West of India.

SIFFLEMENT, *Fr.* literally means the noise of a whistle. It is used to express the sound which a ball or bullet makes when it cuts the air; as *sifflement des armes à feu*, the whistling, or whizzing noise of fire-arms.

SIFFLET, *Fr.* a whistle. The French make use of the whistle on board their ships in the same manner that we do. It answers the same purposes at sea, that the drum and trumpet do on shore. The boatswain's whistle pipes all hands up, as occasion requires in a ship: and the drum and trumpet collect troops together in camp, garrison, or elsewhere.

SIG, an old Saxon word, importing victory.

SIGHT, (*la mire*, *Fr.*) a small piece of brass or iron which is fixed near to the muzzle of a musket or pistol, to serve as a point of direction, and to assist the eye in levelling, and by which the bayonet is fixed on the barrel.

Folding notch SIGHT. According to the author of *Scloppetaria*, page 131, of all sights in use, none seem preferable to the common folding notch sight; it lies close on the barrel, and is thus less exposed to injury than such as are constantly fixed upright; and from the simplicity of the construction, it is seldom out of order, and is easily replaced if lost or worn out. The chief requisite in the construction of these sights, is

due attention to the hinges; for if they once begin to shift or shake to the right or left, the visual ray will no longer be parallel to the axis of the bore of the barrel, but *diagonal*, and consequently the shots cannot be depended on.

Military first SIGHT. See **COUP d'Œil**.

Second SIGHT, the power of seeing things future, or things distant: supposed inherent in some of the Scottish islanders; and often erroneously acted upon by ministers of state.

SIGLES, cyphers; initial letters put for the word; as O. H. M. S. i. e. on his Majesty's service.

SIGN, a sensible mark or character, denoting something absent or invisible. As the trace of a foot, the hand-writing or mark of a man; also the subscription of one's name.

SIGN, (*signe*, *Fr.*) in algebra, that which distinguishes positive from negative quantities. Such are the signs + (plus) — (minus) = (equal).

SIGN-manual. The king's signature is so called. All commissions in the regular army of Great Britain, army warrants, &c. bear the sign manual. The appointments of officers in the volunteers were so distinguished during the late war. Adjutants only, in the militia, have their commissions signed by the King; those of the field officers, captains, and subalterns, &c. are signed by the lords lieutenants of counties, or by their deputies for the time being, sanctioned by a previous intimation from the secretary of state, that the King does not disapprove of the names which have been laid before him.

SIGNAL, (*signal*, *Fr.*) any sign made by sea or land, for sailing, marching, fighting, &c. Signals are likewise given by the short and long rolls of the drum, during the exercise of the battalion.

SIGNAL, in the *art of war*, a certain sign agreed upon for the conveying intelligence, where the voice cannot reach. *Signals* are frequently given for the beginning of a battle, or an attack, usually with drums and trumpets, and sometimes with sky-rockets, &c.

SIGNAL of attack or assault, (*signal d'une attaque, ou d'un assaut*, *Fr.*)—This signal may be given in various ways. By the discharge of a lighted shell, by sky-rockets, by colours displayed from a conspicuous spot, &c.—In 1747, Marshal Lowendial made use of lighted shells or bombs, when he laid siege to the town of Bergen-op-zoom.—During the con-

sternation of the inhabitants, which was excited by a continual discharge of these signal shells, the grenadiers entered a practicable breach, and took the town by storm.

SIGNAL-flag, in ancient military history, was a gilded shield hung out of the admiral's galley; it was sometimes a red garment or banner. During the elevation of this signal the fight continued, and by its depression or inclination towards the right or left, the rest of the ships were directed how to attack their enemies, or retreat from them.

SIGNALS made by the colours of an army, (*signaux des enseignes*, Fr.) The ancients had recourse to all the various methods which could be used by signals, to express the particular situation of affairs, and to indicate measures that should be adopted. If, during an engagement, victory seemed inclined more to one side than another, the colours belonging to the victorious party were instantly bent towards its yielding antagonist. This signal was conspicuous to the men, and excited them to fresh efforts. They imbibed the most lively hopes of success, and eagerly pressed forward to reap the advantages of bravery and good conduct.

When an army was hard pressed by its enemy, the colours of the former were raised high in air, and were kept in a perpetual flutter and agitation, for the purpose of conveying to the soldiers, that the issue of the battle was still doubtful, and that nothing but courage and perseverance could determine the victory. If, in the heat of action, any particular regiment seemed to waver and give way, so as to cause an apprehension that it might finally be broken, its colours were instantly snatched out of the bearer's hands by the general or commanding officer, and thrown into the thickest of the enemy. It frequently happened, that the men, who were upon the point of yielding ground and flying, received a fresh impulse from this act, rallied, and, by a desperate effort of courage, recovered the colours, and restored the day. This method of reanimating their legions was generally resorted to by the Romans. We have had instances in modern times, in which the fortune of the day has been wholly decided by some sudden and unexpected act of an individual. In the reign of Louis XIV. a private soldier threw his

arm into the midst of the enemy, during a hard-fought and doubtful battle, expressing thereby that fresh succours were arrived to strengthen the French army. This circumstance, so apparently trifling, produced the desired effect. It threw the enemy into confusion, gave the French fresh spirits, and finally determined the victory in their favour. We read of various instances in which signals have been used to express the personal danger of a king or general, who was fighting at the head of a select body of men. The knowledge of the critical position in which their leader stood, excited fresh courage in the rest of the troops, and drove them to acts of the greatest intrepidity. In the course of the late war, some examples of the same sort might be adduced, both on the side of Austria, and on that of France. The action on the bridge of Lodi, the passage of the Tegliementi, &c. would illustrate any observations we could make upon the subject.

Nor are the advantages, which arise from the use of signals confined to these particular cases. Various circumstances grow out of the desultory nature of military operations, to render flags of communication indispensably necessary. The vast scope which is given to modern tactics makes it impossible, that the human eye or voice should take in all the critical manœuvres or evolutions that occur, when an extended line is actually engaged. The right wing may be giving way, while the left is gaining ground, and the center might be in danger, while the two flanks were rapidly advancing with apparent security against the enemy; as was the case in the battle of Marengo. Under these circumstances, a general, by means of communicating signals, would be enabled to provide for every contingency, without losing time by sending his orders verbally. Although signal flags, in modern engagements, have been generally laid aside, their use has been acknowledged in the adoption of warlike instruments, which, by the variety of their sounds, convey the necessary directions to an engaging army.

The ancients had signals which they called *mute signals*, (*signaux muets*.)—These consisted in certain actions or signs that were made by a general; such as waving the hand, brandishing a stick or sword, or by exhibiting to view any part of his dress, accoutrements, &c. Instances of the same kind have occurred

among the moderns. Under this denomination may likewise be classed the different signals which are made for the movement, marching and manœuvring of troops, in and out of quarters.

When troops are scattered, or separated from one another, it is usual to communicate by means of fires lighted upon eminences, during the night, and by smoke, during the day.

In former times, large pieces of wood were hung above the towers of cities or castles, which, by being drawn up or lowered, gave intelligence of what passed. This method has been succeeded by the invention of telegraphs, which answer every purpose of communication, when they can be established through any extent of country. Besides those signals, there are others which may be called *vocal* and *demi-vocal*. The vocal signals are those of the human voice, which consist in the necessary precautions that are adopted to prevent a guard or post from being surprized, to enounce words of command in action, &c. Of the first description are paroles and countersigns, which are exchanged between those to whom they are entrusted, and which are frequently altered, during the day and night, to prevent the enemy from receiving any information by means of spies. The demi-vocal signals are conveyed by military instruments; the different soundings of which indicate, instantaneously, whether an army is to halt or to advance, whether troops are to continue in the pursuit of an enemy, or to retreat.

The demi-vocal signals, directed to be observed in the British service, as far as regards the manœuvring of corps, &c. consist of signals for the government of light infantry, and of cavalry regiments, squadrons, or troops: the latter are properly called soundings. Light infantry signals are to give notice,—to *advance*; to *retreat*; to *halt*; to *cease firing*; to *assemble*; or call in all parties. In the Regulations, printed by authority, it is observed, that these signals are to be always considered as fixed and determined ones, and are never to be changed. The bugle horn of each company is to make himself perfect master of them. All signals are to be repeated; and all those signals which are made from the line or column, are to convey the intention of the commanding officer of the line, to the officer commanding the light

infantry, who will communicate them to the several companies, or detachments, either by word or signal.

SIGNAL staff. In matters of military parade it is usual to fix a red flag, somewhat larger than a camp colour, to point out the spot where the general, or officer commanding, takes his station in front of a line. This is called the signal staff.

SIGNALEMENT, Fr. the description of a man's person, his appearance, &c. It signifies not only the description of a man's figure, but an exact and specific detail of such marks and prominent features, that by comparing the copy taken on paper with the original, the latter may be instantly recognized. It is the custom, in all well regulated armies, for every regiment to have an exact description of each man that belongs to it, specifically drawn out in the adjutant's book: so that when a soldier deserts, a copy is instantly taken, and forwarded to those places to which he is most likely to resort.

Feuille de SIGNALEMENT, Fr. a paper containing the description of an individual.

SIGNS of health in a horse, a cold nose, moist tongue, cool mouth, warm ears, and good appetite. The latter may sometimes be rendered useless on account of the state of the mouth. Lampreys may have increased to such a degree that the animal's power of mastication will be destroyed, and the grinders may grow so sharp and cragged, that they will cut the tongue. In which cases the former must be burnt out, and the latter filed down.

SIGNUM, a standard, an ensign, a streamer, a flag. In the early days of Rome, the military ensign or standard consisted of a wisp or handful of straw, which was fixed at the end of a pike. It was then called *manipulus feni*, a bottle of hay. By degrees, the Romans adopted more respectable marks to move by. The wisp of straw, or bottle of hay, was changed into a piece of wood which lay crossways at the end of a pike, and underneath the traverse hung different small figures and representations of the gods. In latter periods, the likenesses of the different emperors were suspended in the same manner. The staff, in these cases, was made of solid silver, so that it required uncommon strength of body to be able to carry the *signum*. When the armies were encamped, each legion had

its signum erected in front of the pretorium; which was always close to the general's tent.

SIGNUM militare, the watch-word which was given among the Romans, to the tribunes that were on guard. The *signum militare* was changed every morning. The watch-word of the patrolle was also called *tessera*, which signifies a signal in war; any private sign or token.

SIGNUM profectiois. The signal for marching, which was given among the ancient Romans, was so called. It corresponds with our beat, the *general*.

SIGNUM pugna, the signal for battle which was used among the ancient Romans. When this happened, a red coat of arms was displayed above the general's tent, after which all the different warlike instruments sounded together, and proclaimed the signal of attack.

SIGURGIAL, *Ind.* a feudal tenure.

SIGUETTE, *Fr.* is a cavesson with teeth or notches, that is, a semi-circle of hollow and vaulted iron, with teeth like a saw, consisting of three pieces joined with hinges, and mounted with a head-stall, and two ropes; somewhat like the cavesson that in former times was put upon the nose of a fiery, stiff-headed horse, in order to keep him in subjection. There is a sort of *Siguette* consisting of a round iron, all of one piece, sewed under the nose-band of the bridle, that it may not be in sight.

SIKHS. Mr. Malcolm, in his Sketch of this tribe, has the following observations:—"The Sikhs have been reputed deceitful and cruel; but I know no grounds upon which they can be considered more so than the other tribes of India. They seemed to me, from all the intercourse I had with them, to be more open and sincere than the Mahrattas, and less rude and savage than the Afghans. They were indeed become, from national success, too proud of their own strength and too irritable in their tempers, to have patience for the wiles of the *former*; and they retain, in spite of their change of manners and religion, too much of the original character of their Hindoo ancestors, to have the constitutional ferocity of the *latter*."

"The Sikh soldier is, generally speaking, brave, active, and cheerful—without polish, but destitute neither of sincerity nor attachment. And if he often appears wanting in humanity, it is not so much to be attributed to his national

character, as to the habits of a life which, from the condition of the society in which he is born, is generally passed in scenes of violence and rapine. The Sikh merchant, or the cultivator, if he is a Singh, or follower of Guru Govind, differs little in character from the soldier, except that his occupation renders him less presuming and boisterous. He also wears arms; and is, from education, prompt to use them, whenever his individual interest, or that of the community in which he lives, requires him."

SILENCE, (*silence*, *Fr.*) This word is used by the French as a caution to soldiers to prepare for any part of the military duty or exercise.—The French have likewise another term which corresponds with our word Attention. See *Gare à vous*. We use *Attention* in both instances.

To SILENCE a battery, to attack it in such a manner, either by heavy discharges of artillery, or by dexterous manœuvres, as to render it impossible for the men to keep to their guns or to work them.

SILHATARIS, *Fr.* See *SPANIS*.

SILLADARS, *Ind.* armour bearers belonging to the Mahratta princes, who are obliged to furnish a certain number of men, composing the second class of their cavalry.

SILLAGE, *Fr.* the wake of a ship; the trace which a vessel leaves astern when she moves forward.

SILLON, in fortification, is a work raised in the middle of a ditch, to defend it when it is too wide. It has no particular form, and is sometimes made with little bastions, half-moons, and redans, which are lower than the works of the place, but higher than the covert-way. It is more frequently called *envelope*, which see.

SILVER-spoon head, among archers, the head of an arrow which resembles the head of a silver spoon.

SIMBLEAU, *ou cimbleau*, *Fr.* in carpentry, a cord used by carpenters to trace curves of a certain extent, that exceeds the capacity of the compass. This cord is made of hemp, or, what is better, of the rind of a young linden tree, which does not stretch as hemp will.

SIMILAR polygons are such as have their angles severally equal, and the sides about those angles proportional.

SIMPLE soldat, *Fr.* a private soldier.

SIMPLIFICATION, (*simplification*,

Fr.) the act of rendering plain, clear, and simple. The state of any thing that is made plain and simple. This substantive, like the verb, is evidently borrowed from the French; who say familiarly, *Travailler à la simplification d'une affaire*; to endeavour to make a matter plain and conspicuous. The simplification of army accounts is perhaps one of the most desirable objects in finance, especially during a war, when so many branches of service rendered them unavoidably complicated.

To SIMPLIFY. This word has been adopted amongst men of business and arrangement, from the French *simplifier*, which means to relate the bare matter of fact. This signification likewise reaches every species of analysis, &c.

SIMULATION, (*simulation*, Fr.) that part of hypocrisy which pretends that to be which is not; in contradistinction to *dissimulation*, which is the act of dissembling; downright hypocrisy; fallacious appearance; false pretensions; a vice in no shape pardonable, except to disseminate injuries.

SIMULTANEOUS, acting together; existing at the same time.

SIMULTANEOUSLY, at the same time; in conjunction.

SINE, (*sinus*, Fr.) a kind of geometrical line.

Right SINE, (*sinus droit d'un arc*, Fr.) in geometry, is a right line drawn from one end of an arc, perpendicular upon the diameter drawn from the other end of that arc, or is half the chord, or twice the arc.

SINE complement of an arc, (*sinus total, ou le sinus de l'angle droit*, Fr.) in geometry, the sine of what that arc or angle is less than 90° , or what it is greater than 90° , when it exceeds them.

SINE versed of an arc, (*sinus versé d'un arc*, Fr.) in geometry, an arc or angle less than 90° , being that part of the diameter which is comprehended between the arc and the right line.

SINECURE, from the Latin *sine curâ*, originally a benefice without cure of souls, or, of any employment. Dr. Johnson calls a sinecure an office which has revenue without any employment. Of this description, in a military sense, are those appointments which admit of deputies upon deputies: so that the original holder receives the public money without doing any public service; an abuse that has been very justly repro-

bated by the select Committee of the House of Commons.

SINEW. *To unsinew a horse*, is to cut the two tendons on the side of his head.

SINEW-shrunk. A horse is said to be sinew-shrunk, when he is over-ridden, and so borne down with fatigue, that he becomes gaunt-bellied, through a stiffness and contraction of the two sinews that are under his belly.

SINEW-sprung is a violent attaint, or over-reach, in which a horse strikes his toe, or hinder feet, against the sinew of the fore leg.

The SINEWS of War, monies are figuratively so called.

SINGE, Fr. in drawing, a tracing or copying machine. See **PANTOGRAPHY**.

SINGE, Fr. literally a monkey; a windlass, or draw-beam; in mechanics, when an axle-tree, or a capstan, instead of being supported by two jambs, is placed upon two pieces of wood in the shape of St. Andrew's Cross; it is called singe, or windlass. It is used to draw water out of wells, or to raise, or let down articles of weight or burthen.

SINGLE combat, a contest in which not more than *two* are engaged.

SINUS, Fr. See **LINE** for its geometrical acceptation.

SINUS, in English, signifies a bay of the sea, an opening of the land; any fold or opening.

SINUSOIDE, Fr. a geometrical curve, which has been imagined by Monsieur Bêlidor, for the purpose of balancing or preserving the equipoise of a draw-bridge. See *Science des Ingénieurs*, liv. iv. See likewise the specific construction of this curve as explained by the Marquis de l'Hôpital, in a book entitled, *Acta Eruditorum*, published at Leipsic, in 1695; and demonstrated by M. Bernouilli, who discovered, that this curve was nothing more than the epicycloid, which is formed by one circle moving upon another circle.

SIPHON, (*syphon*, likewise *siphon*, Fr.) in hydraulics, a crooked tube, one leg or branch whereof is longer than the other. It is used in the raising of fluids, emptying of vessels, and in various hydrostatical experiments.

SIRKAR, *Ind.* the government.

SIROC, from Sirius, the dog-star. The wind, which we call south-east, is so named in Italy.

SISTRUM, a musical instrument, of an oval shape like a racket, which was

used by the Egyptians in their armies. It also signifies, generally, an instrument used in battle instead of a trumpet. Likewise a brazen or iron timbrel much like to the kettle-drum.

To SIT, (*asseoir*, Fr.) in a military sense, to take a stationary position; as, *to sit before a fortified place*; to lie encamped for the purpose of besieging it. The French use the word *asseoir*, as an active verb, viz. *asseoir un camp*, to pitch a camp. *Il assit son camp hors de la portée du canon de la ville*; he pitched his camp out of the range of the town's cannon.

SIT-fast, } a hard knob, that grows

STICK-fast, } under a horse's skin, beneath the saddle, fast to his flesh, which is occasioned by a saddle-gall, or bruise.

SITUÉ, Fr. situated; placed; pitched. The French say, *un camp bien situé*, a camp well situated, or pitched.

SIXAIN. Sixth, Sexagena, in war, an ancient order of battle, wherein six battalions being ranged in one line, the second and fifth were made to advance, to form the *van* guard; the first and sixth to retire to form the rear guard; the third and fourth remaining to form the main corps. The word is derived from the French, which signifies the same thing. The sixain order of battle may be formed with all the battalions whose number is produced by the number six. Twelve battalions, for instance, may be ranged in order of battle, by forming two *sixains*; and eighteen battalions, by forming three *sixains*; and so on progressively.

To SIZÉ, in a military sense, to take the height of men for the purpose of placing them in military array, and of rendering their relative statures more effective. In all regiments, the sizing begins from flanks to center, the tallest men being placed upon the right and left of the several companies in the front rank, and the shortest in the center and rear ranks. The flank troops of a squadron must be sized in the following manner:—That of the right flank, from right to left; that of the left flank, from left to right; the center one from center to flanks: the tallest man must, of course, be always in the part where the sizing begins, excepting the corporals, one of whom must be on each flank of the front rank of the troop, or company, covered by a clever soldier in the rear

rank. If there be only two troops in a squadron, or companies in a battalion, they size the right from the left, the left from the right flank. A question has arisen among military men, especially among those who have seen service, respecting the propriety of placing the shortest infantry men in the center and rear ranks.

To SIZE, among artificers, to do or daub over with size.

SKATT, *Skate*, or *Scate*; *Skidor*, Swedish; *Skid*, Islandic; *Sceadða*, Saxon; *Skier*, Norwegian; *Patin*, Fr. a sort of shoe or sandal made of wood, and armed with iron for sliding on ice.

Skates are used by the inhabitants of all Northern nations, either for expedition in travelling, or for amusement. They are made of wood and iron, fastened to the feet by straps of leather, or by screws. The Dutch were probably the original inventors; but the English have greatly improved upon them, for by comparing them together, the preference must be given to the latter. Skates are so well known, that it is needless to describe them. It will be necessary, however, to remark that the Dutch skates are very long in the iron, of a flat broad surface, to enable them to run over rough ice with ease and expedition, while those that are used by the English are short and circular, so that not above two inches of it touch the ice, and all that is required, is for the skater to keep his body in a proper equilibrium. It has another advantage over the Dutch, the friction on the ice is considerably diminished. In Holland, it is not so much a diversion as an employment. Women, as well as men, practise it for the purpose of going from one place to another, and carrying provisions to market. But it is in England that skating has been brought to the highest perfection. An artillery officer, about 30 or 40 years ago, published a very ingenious treatise on it, which work is now seldom to be met with. In it he lays down rules for the art, which is still capable of great improvement.

In Norway, a kind of skate is used for travelling upon land. These are formed of planks of wood as broad as the hand, and nearly of the thickness of the little finger, the middle underneath being hollowed to prevent vacillation, and to facilitate the advancing in a direct line. The plank fastened under the left foot

is ten feet in length; that intended for the right is only six, or thereabouts; both of them are bent upwards at the extremities, but higher before than behind. They are fastened to the feet with leather straps attached to the middle of them, and for this purpose, they are formed a little higher and stronger in that part.

The plank of the right foot is generally lined below with the rein deer's skin, or at least, with skin of the sea-wolf, so that in drawing the feet successively, in right, or parallel lines, with skates thus lined with skin, and very slippery in the direction of the hair, the *skielober*, or skater, finds them, nevertheless, capable of resistance, by affording a kind of spring when he would support himself, with one foot, in a contrary direction, as by such movement he raises up the hair, or bristly part of the skin. With skaits on this plan, it is astonishing, (however loose, or compact, the snow may be,) to what a distance a Norwegian will travel in a day. In Canada, the Indians, and other inhabitants, make use of what are called *snow-shoes*, for a similar purpose: these are shaped something like a pear with a stalk. They are made of a hoop of wood bent to that form, and fastened at the narrow end by the sinews of deer, or small thongs of the skin of the same animal. Two cross pieces of wood are placed, one about three inches from the broadest end of the snow-shoe, and the other the length of a man's foot from it. These pieces are fixed into the outer frame. Between them a kind of net work is made from small thongs of deer skin, something like a racket. On this net work, the feet are placed and fastened by a pliable strap of smoked deer skin in a very simple manner; so that the feet may be extricated without untying the strap; which is sometimes necessary, particularly when the traveller accidentally falls in deep snow, or strikes his feet against the stump of a tree. During the first American war, the king's troops were practised in the use of these shoes, and could walk or run with them, as well as the natives. All the scouting parties sent out from the frontier posts, during the winter, were equipped with snow shoes, to enable them to travel through the woods, where the snow is frequently of astonishing depth.

In Norway there is a regiment of two

battalions of skaters; one stationed in the North and the other in the South. The corps consists of 960 men. The uniform is a short jacket, or waistcoat, a grey surtout, and grey pantaloons. The arms are a carbine, which is hung in a leather belt, passing over the shoulders, a large couteau de chasse, a staff of three yards and a half long, an inch and a quarter in diameter, to the end of which is affixed a piece of iron, which serves principally to moderate his speed in going down a hill; the skater then puts it between his feet, and contrives to draw it in that manner, or he drags it by his side, or uses it to help himself forward when he has occasion to ascend a hill; in short, he makes use of it according to the occasion and to the circumstances in which he may be placed; this staff, besides, affords a rest to the firelock when the skater wishes to discharge its contents. In the ordinary winter exercise, the skaters draw up in three ranks, at the distance of three paces between each file; and eight paces between each rank; a distance which they keep in all their movements, (whenever they do not disperse,) in order that they may not be incommoded in the use of their skates. When there is occasion to fire, the second and third ranks advance towards the first. The baggage of the corps (kettles, bottles, axes, &c.) is conveyed upon sledges, or carriages fixed upon skates, and easily drawn by men, by the help of a leather strap passing from the right shoulder to the left side, like that of a carabineer. In Canada, when the Indians travel in the winter, they make use of a similar conveyance, which is generally drawn by the synaws, by means of a broad strap across the forehead that passes the shoulders. The Norwegian skaters are of great use in winter campaigns, as from their velocity, and form of their skates, they are enabled to move, in every direction, over light or deep snow, rivers, or creeks covered with thin ice, and where cavalry, or regular infantry cannot act. Their use in harassing an enemy, in reconnoitring, or performing the office of couriers, must be obvious to every one. It may be conceived, that they find great difficulty in turning, on account of the length of their skates: this, however, is not the case; they make a retrograde motion with the right foot, to which the shortest plank is attached, and put it vertically

against the left. They then raise the left foot and place it parallel to the right, by which movement they have made a *half* face; if they would face about, they repeat the motion.

We have given these particulars, as furnished to us by an officer who has served in Canada, because we humbly conceive, that the knowledge of the art might be of use to our troops in America.

SKATERS, (*patineurs*, Fr.) persons who are expert in skating.

SKEAN. This word is sometimes written skene, skeyne, or skaine. It signifies a weapon, in the shape of a small sword, or knife, which was anciently used by the Irish.

SKELETON. This word is frequently applied to regiments that are extremely reduced in their number of men. Thus a regiment that went out to St. Domingo 1000 strong, and returned to England with 20 or 30 men only, was called a skeleton regiment. The French use the word *cadre*.

SKELETON *plan*. See *OUTLINE*.

SKETCH. See ditto.

SKETCH-book, (*livre d'esquisse, ébauche*, Fr.) In page 231 of the *Little Bombardier*, we find the following particulars relative to the use which may be made of a sketch-book, in military reconnoitring.

“ Before an officer sets out to reconnoitre a country, he should trace out, from the best map he can procure, its leading features, which will serve him as a guide, in his progress through the principal parts that are to be the subject of his observations, and will enable him to connect the whole into one grand plan. His observations should be expressed by written remarks, and by sketches. For this purpose, he must be provided with a *sketch-book*, on the right hand page of which he may express the appearance of the country by sketches; and on the left, the remarks made on particular parts, with the names of the towns, their distances asunder, &c. with proper references to the sketches. The scale best adapted to this purpose, is two inches to a mile; if therefore the sketch-book be made six inches wide, and the leaves divided by lines into three equal parts, each division will be one mile, which will be a sufficient scale for the purpose.”

SKEWBACK, (in architecture,) the levelling end of an arch.

SKILL, knowledge in any particular art—As,

Military SKILL, (*habileté militaire*, Fr.) M. Belleisle, the French general, after the example of Xenophon, the Greek, undertook in the month of December, 1742, to withdraw the French army from Prague, where it was at that time shut up, and to march over the enemy's country through a road of 38 leagues, upwards of 124 English miles, covered with ice, and over mountains whose precipices were concealed under the snow, having, besides, an army of between eighteen and twenty thousand men, under the command of Prince Lobkowitz, to fight with. For the particulars of this famous retreat, in which was evinced so much military skill, and which, in Count Turpin's words, deserves to be written by Xenophon himself, see page 2, Vol. I. of his *Art of War*.

SKINS. Sheep-skins are made use of to cover the mortars, or howitzers, between firing, to prevent any wet, or dampness getting into them.

SKINNER, (*coriace*, Fr.) a crimp.

SKIRMISH, in war, a loose desultory kind of combat, or encounter, in presence of two armies, between small parties who advance from the main body for that purpose, and invite to a general fight.

SKIRMISHERS, detached parties of light horse, or marksmen, sent out in front of a battalion, &c.

SKIRT, in a general acceptation, edge, border, extreme part; as the skirt of a country, the skirts of a wood. It also signifies the loose or hanging part of a coat, or garment. The whole of the British army formerly wore skirts to their coats. The non-commissioned officers and soldiers now generally wear jackets.

SKITALE, *Fr.* according to the *Nouveau Dictionnaire Militaire*, a staff, or stick of distinction, which was used by the Lacedemonian generals.

SKREEN, an instrument used by labourers, in sifting earth for making mortar. It is also called a riddle.

SKY-rocket. See *ROCKET*.

SLABBERING-Bitt. See *MASTIGADOUR*.

SLACK a leg is said of a horse, when he trips, or stumbles.

SLACK the hand is to slacken the bridle, or to give the horse head.

SLANDERER, one who belies an-

other; one who lays false imputations on another; a low-lived reptile that creeps into the confidence of weak princes and generals, and ought to be driven out of every military mess.

SLANG, cant terms; expressions peculiar to some particular class of persons; generally of a vulgar sort.

Garrison SLANG, (*ton de garnison*, Fr.) a low phraseology, not unfrequently mixed with oaths, which is prevalent in camps and barracks; also a coarse and abrupt mode of conversation.

SLASH, a cut; a wound; also a cut in cloth. It is used to express the pieces of tape, or worsted lace, which are upon the arms of non-commissioned officers and corporals, to distinguish them from the privates.

SLASHED, cut in stripes, or lines. Hence, *slashed* sleeves and pockets, which are peculiar to the British cavalry, when the officers or men wear long coats.

SLASHERS, a nickname which was given, during the American war, to the 28th regiment of foot, and which took its origin from the following circumstance:—One Walker, a magistrate, in Canada, having, during a severe winter, with great inhumanity refused to give comfortable billets to the women belonging to the 28th, and some of them having perished in consequence of the inclemency of the season, so great was the resentment of the corps, that some officers dressed themselves like savages, entered his house whilst he was sitting with his family, danced round the table, and suddenly pulling him back upon his chair, cut off both his ears. They instantly disappeared; nor was the deed discovered until after their departure. From this circumstance, and in consequence of various intrepid actions which the 28th performed during the course of the war, the men obtained the name of *Slashers*. Their conduct in Egypt, &c. has confirmed this character for intrepidity; so that a recruit no sooner joins the 28th, or *Slashers*, than he instantly feels himself equal to the most desperate enterprize; daring to *do* what some scarce dare to *think*.

SLATE, in military architecture, a kind of bluish fossil stone, very soft when dug out of the quarry, and therefore easily slit, or sawed into thin long squares, to serve instead of tiles for the

covering of all kinds of military buildings, &c.

SLAUGHTER, destruction by the sword, bayonet, and fire-arms.

SLEDGE, or *sledge hammer*, (*gros marteau*, Fr.) a smith's large iron-headed hammer, to be used with both hands in beating out iron upon the anvil.

SLEDGE, a sort of carriage without wheels, upon which a plough, or other weighty things, may be laid. It also signifies a machine, on which traitors are usually drawn to the place of execution. It means likewise a genteel carriage without wheels, which is used by the nobility and gentry in cold climates, to divert themselves in winter upon the snow. Likewise a machine which is hired by travellers in the North of Europe.

The *Dutch* have a sort of sledge upon which they can carry any burthen by land. It consists of a plank a foot and a half broad, and the length of the keel of a moderate ship, raised a little behind, and hollow in the middle, so that the sides go a little aslope, and are furnished with holes to receive pins; the rest is quite even.

SLEEPER, in architecture, is the oblique rafter that lies in a gutter.

SLEEPERS, the undermost timbers of a gun or mortar-battery. Small joists, or beams of wood, which are laid over a foundation, for boards, &c. to be placed upon them. See PLAT-FORM.

SLEETS are the parts of a mortar going from the chamber to the trunnions, to strengthen that part.

A SLIDER, a small leathern loop which runs upon the curb bridle, and serves to ease the hand.

SLIDING, passing without difficulty or obstruction, easily removed.

SLIDING, in mechanics, a motion when the same point of a body, moving along a surface, describes a line on that surface.

SLIDING of courage, an obsolete term, signifying easily daunted.

SLIDING knot, a running knot which is made in a rope, for the purpose of being stopped when required.

SLIDING rule, } mathematical instru-
SLIDING scale, } ments to be used
without compasses in gauging.

SLING, a leathern strap which is attached to a musket, and serves to sup-

port it across the soldier's back, as occasion may require.

SLING, a missive weapon made by a strap and two strings; the stone is lodged in the strap, and thrown by loosing one of the strings.

SLING likewise means a kind of hanging bandage, in which a wounded limb is sustained. This is too frequently a badge of ostentation, or deception, which a weak military man, who *may* have been wounded, continues to wear, though perfectly recovered; or which a designing scoundrel, whose vices have entailed decrepitude, insidiously displays, about the streets of a capital; impudently insinuating that he has had an affair of honour. In the latter sense, see **SWINDLER**.

Breeches SLING, an article of regimental necessaries which is used to keep up the breeches, and which must be paid for by the men; vulgarly called *Gallowases*.

To SLING, to hang loosely by means of the strap belonging a firelock.

SLING arms! a word of command which is given in the field previous to the march of artillery, when the artillerymen are ordered to fall in to their several stations, and the men to the drag-ropes.

SLING your firelocks! a word of command formerly used in the exercise of British grenadiers.

SLIP, a place lying with a gradual descent on the banks of a river, or harbour, convenient for ship-building.

SLIPPER. See **PLINTH**.

SLOPE arms, a word of command by which the musket rests upon the shoulder with the butt advanced. In long marches, soldiers are sometimes permitted to slope arms. In all other instances it is strictly forbidden.

SLOPING swords, a position of the sword among cavalry, when the back of the blade rests on the hollow of the right shoulder, the hilt advanced.

SLOPS. See **NECESSARIES**.

SLOPS also signifies a sailor's trowsers. The French say, *culottes de matelot*.

SLOW time. See **ORDINARY time**.

SLUGS, cylindrical, or cubical pieces of metal, shot from a gun.

SLUICE-gate, a water-gate, by which a country may be inundated, or the water excluded at pleasure.

SLUICES, in military architecture,

are made for various purposes; such as to make rivers navigable; to join one river to another, which is higher or lower, by means of a canal; to form inundations upon particular occasions, or, to drain spots of ground that are overflowed by high tides; they are also made in fortresses, to keep up the water in one part of the ditches, whilst the other is dry; and to raise an inundation about the place when there is any apprehension of being attacked.

SLUICES are made different ways, according to the uses for which they are intended: when they serve for navigation, they are shut with two gates presenting an angle towards the stream; when they are made near the sea, two pair of gates are made, the one pair to keep the water out, and the other in, as occasion may require: in this case, the gates towards the sea present an angle that way, and the others the contrary way. The space inclosed by these gates is called *chamber*.

When sluices are made in the ditches of a fortress, to keep up the water in some parts, instead of gates, shutters are made, so as to slide up and down in grooves; and when they are made to raise an inundation, they are then shut by means of square timbers let down into *cullisses*, so as to lie close and firm.—Particular care must be taken in the building of a sluice, to lay the foundation in the securest manner; that is, to lay the timber, grates, and floors, in such a form, that the water cannot penetrate through any part, otherwise it will undermine the work, and blow it up, as it has sometimes happened: lastly, to make the gates of a proper strength, in order to support the pressure of the water, and yet to use no more timber than what is necessary.—Those who wish to be thoroughly acquainted with this kind of work, may refer to *L'Architecture Hydraulique, par M. Bélidor*; or to Mr. Millar's *Practical Fortification*.

SLY, meanly artful; secretly insidious; cunning. Dr. Johnson, in a quotation from *Watts*, justly observes, "Envy is a cursed plant; some fibres of it are rooted almost in every man's nature, and it works in a *sly* imperceptible manner." Some weak fools imagine themselves sagacious when they are only *sly*. See **SAGACITY**.

SMALL arms, muskets, fusils, carabines, pistols, &c. The French use the word *portatif*, as, *armes portatives*.

SMALL gun department. See **OFFICE**.

SMALL-pox blanket. The Americans have had recourse to this mode of warfare against the wild Indians, whom they have never yet been able to conquer. Blankets thus recently introduced, are sent as presents, and the introduction of this fatal disorder, especially in the hot summer months, is sure to prove destructive to them.

SMARTS. The different sums which are received by recruiting parties under the head of *Smart-money*, are frequently so called. It is a standing order in most regiments, that an account of all Smarts should be kept, and regularly accounted for, by an officer or non-commissioned officer commanding the parties, to the officer commanding the regiment, in the different abstracts, that he may give orders for the distribution thereof when the parties join the regiment. See **MONEY**.

SMUGGLERS, persons who carry on an illicit trade upon the shores, or between the frontiers, of two adjacent countries. These men are useful in secret expeditions.

SNAFFLE, after the English make, is a very slender bitt-mouth, without any branches: the English make much use of them, and scarcely have any true bridles, but in the service of war.

SNAFFLE, or *small watering bitt*, is commonly a scatch-mouth, accoutred with two very little straight branches, and a curb, mounted with a head-stall, and two long reins.

SNAPHANCE, a firelock; a gun that fires without a match, *Bailey*.—**SNAPHANCE**, according to *Nugent's French and English Dictionary*, signifies in French, *rouet d'arquebuse*.

SNAPSACK, from the Swedish *snap-sack*, a soldier's bag; more usually *knap-sack*.

SNARES, small pieces of leather attached to the cords of a drum, for the purpose of bracing it.

SNICK and SNEE, a combat with knives, such as the Dutch carry.

SNORT, the sound which a horse full of fire makes through his nostrils: this noise or sound proceeds from a cartilage within the nostrils.

SOBRIETY, (*sobriété, tempérance*, Fr.) general temperance. In a military

consideration, abstinence from an inordinate use of strong liquors. However frequent the deviations from this great and uncommon virtue may be found among soldiers, nothing can excuse or exculpate an officer who should so far forget himself, especially upon service, as to give the least countenance to such excesses, even by an occasional, much less by an habitual, dereliction of this estimable quality. Sobriety keeps the head cool, strengthens the nerves, and renders moderate abilities equal to great exertions. Drunkenness, on the contrary, unfits the man for the common functions of life, and makes an officer not only contemptible to his soldiers, and dangerous to the cause he has engaged to fight for, but an indirect spur to the enterprize of an enemy; who will soon know how to take advantage of his vice and weakness.

SOC, *Fr.* a machine made of leather, which is fixed near the stirrup, to receive the end of the standard staff in cavalry regiments. It is likewise called *braïer*, and is used by the persons who carry the colours either in infantry or cavalry regiments. In the former instance, it is fixed to a leathern belt that comes over the shoulder, or that is fixed to the waist.

SOCKET generally means any hollow pipe that receives something inserted.

SOCKET of a bayonet, the round hollow part near the bent or heel of a bayonet, into which the muzzle of a fire-arm is received when the bayonet is fixed.

SOCLE, } in architecture, a flat,
ZOCLE, } square member, under the bases of pedestals of statues, vases, &c. to which it serves as a foot or stand.

SODS, pieces of turf with which works are faced.

SOFFIT, } (*sofite, Fr.*) in archi-
SOFFITO, } tecture, is any plafond or ceiling formed of cross beams or flying cornices, the square compartments, or pannels, of which are enriched with sculpture, painting, or gilding. According to a modern author, if the soffits of arches are divided into pannels, they must be of an uneven number, by having one pannel in the middle.

SOFFIT, or *soffito*, is particularly used for the under-side or face of an architrave; and for that of the *corona*, or *larnier*, which we call plafond, and the ancient Roman architects *lacunar*. In

ordinary buildings, *soffit* or *sofit*, is taken for the boards over the tops of windows, opposite to the window boards at bottom.

SOHAN, *Ind.* the seventh month. It, in some degree, corresponds with July and August.

SOI, *Fr.* one's self; itself; one.

Soi-disant, *Fr.* pretended; would-be. Hence, *soi-disant soldat*, a pretended or would-be soldier; *Soi-disant roi*, pretending to be king, but not acknowledged as such. This was said, by the British, of James the II, when he lived at St. Germain, in France.

SOL, *Fr.* soil; ground.

Sol, *Fr.* the ground upon which any building or edifice is erected.

SOLAIRE *de la jambe*, *Fr.* the greatest of the six hinder muscles of the leg, ending in the sole of the foot, which it serves to extend.

SOLAKS, bowmen or archers belonging to the personal guard of the Grand Seigneur. They are always selected from the most expert bowmen that are among the Janizaries. Their only arms are the sabre, bow, and arrows.

SOLANDRES, *Fr.* chaps or ulcers in the ham of a horse.

SOLBATU, *Fr.* in farriery, surbated.

SOLDAN. This word is pronounced *Soudan*. It was formerly given to a general who commanded the caliph's army. Saladin, a general under Nardin, king of Damas, having killed the caliph Caym, usurped the throne, and assumed the title in 1146; so that he became the first Soldan of Egypt.

SOLDAT, *Fr.* a soldier. Although we have offered our own observations respecting the etymology of this word, under *Soldier*; we shall nevertheless extract, from a French authority, what is said upon the same subject. In the *Nouveau Dictionnaire Militaire* we find that *Soldat*, which comes from *Solde*, signifies any man who serves the state for a stipulated sum of money. This distinction did not obtain ground, nor was it acknowledged in France, until after the reign of Francis I. Under the reigns of Charles the VIIIth and Louis the XIIth, persons who took up the profession of arms, were simply styled *aventuriers* or *adventurers*; and before we conclude this article, it will not be thought superfluous to remark, that although many writers have given various interpretations to the word

aventurier, the term may be brought under a plain and historical explanation. These *aventuriers*, or adventurers, were nothing more than a certain description of soldiers or armed men, who were hired by a number of lords, that had the command of little jurisdictions beyond the Pyrenees and the Alps. Charles the VIIIth, Louis the XIIth, Francis the Ist, and Henry the II, made use of these adventurers during their campaigns in Italy. To return to our first article, it is nevertheless certain, that, in France, bodies of armed men were already taken into pay under the reign of Philippe Auguste; and it is equally certain, that foreigners or mercenaries were first employed, for money, by Philippe-le-Bel. Among the Romans, soldiers were distinguished under a multiplicity of appellations, which grew out of the dress or uniform of each particular arm or corps; which was again marked by some particular service, and peculiar weapon of offence. When strangers were taken into their pay, they were called *auxiliiarii*.

Simple SOLDAT, *Fr.* a private, or a soldier in the ranks.

SOLDAT écroné, *Fr.* See *ÉCROUÉ*.

SOLDAT d'ordonnance à l'armée, *Fr.* an orderly man.

SOLDATS étrangers ou mercénaires, *Fr.* foreign or mercenary troops.

SOLDATS de marine, *Fr.* marines, or soldiers who do duty on board ships of war.

SOLDATS gardiens, *Fr.* a description of invalid soldiers, so called during the old French monarchy. They were stationed at the sea-ports. There were 300 at Toulon, ditto at Rochefort and Brest, and 50 at Havre-de-Grace. There were besides, 300 in each of the first three ports, who received half-pay.

Faux SOLDATS, *Fr.* See *FAGOT*; *PASSE-volant*.

SOLDATESQUE, *Fr.* a substantive of the collective feminine gender, which signifies private soldiers, viz.

La bourgeoisie était exposée aux insultes de la soldatesque; the citizens were exposed to the insults of the soldiery.—*La soldatesque s'est révoltée contre les officiers*, the soldiers revolted, or mutinied, against the officers.

SOLDATESQUE. The French say also *soldatesque*, or *qui sent le soldat* in a bad sense, meaning thereby coarse, rough, and overbearing. Hence *insolence sol-*

datesque, a military broil, or a dispute among private soldiers. We have an adjective, which is derived from the same source, and which is frequently used, as soldier-like conduct, soldier-like behaviour; unsoldier-like being the opposite.

SOLDE, *Fr.* the pay or subsistence of a soldier. In a work published at Paris, by P. N. Quillet, *Chef du Bureau de la Solde au Ministère de la Guerre*, entitled, *Etat Actuel de la législation sur l'Administration des Troupes*, we find the following observations.

In the infancy of the French monarchy, the soldier's pay (la solde) consisted only of the plunder he made in an enemy's country.

The troops, says Mezerai, (in his book *Mœurs et Coutumes, sous la première race*.) found magazines, stores, and provisions in the different provinces, particularly on the frontiers. But, I believe, they had no other pay than the booty they collected, and which they shared among one another.

In process of time, fiefs, or tenures, were given in lieu of pay, *beneficium propter officium*. It was only under Louis Augustus that a particular description of troops began to be regularly subsisted. This monarch having been reduced to the necessity of establishing a given rate for the payment of the infantry which he was leading into the Holy Land, fixed it at one sol ($\frac{1}{2}$ penny English) per day; whence it was called *solde*, at least according to this writer. The first regular rates for the payment of the troops were established under Francis the First; which were successively augmented according to circumstances, as may be seen in the regulations for the years 1549, 1553, 1567, 1633. Page 7, v. i.

The pay of the British army was first brought into regular rates by William the Third, when he was in Flanders, as may be seen in a paper signed by Sir Robert Harley, then Secretary of State, and still extant in the Museum. From that period down to the present day, no augmentation has taken place, except a partial one in favour of the subalterns, and of general officers who are not colonels of regiments. See *British Pay*.

Demie-SOLDE, *Fr.* half-pay. The

French likewise say, *demie paye*, half-pay.

SOLDE arriérée, *Fr.* arrears, or money stopped.

Compagnies SOLDÉES, *Fr.* troops or companies receiving stated pay.

SOLDER, } a metallic or mine-
SODDER, } ral composition used in soldering or jointing together other metals.

SOLDIER, a piece of money; the pay of a soldier. Dr. Johnson derives the word from *solidarius*, low Latin of *solidus*. We conceive it to be immediately taken from the French *soldat*, which comes from the Latin *solidatus*, *Veget.* a soldier in pay—*à solido quem meretur*. Some again trace both the English and French word to the Italian *soldato*, and others to the German *soldat*; *sold* in German signifying pay. So that originally soldier meant only one who listed himself to serve a prince or state, in consideration of certain daily pay. The word *Soldier* was formerly applied to persons of different ranks and pay; for we meet with the term *Scutifer*, or *Esquire Soldier*, at 12d. per diem, and *Soldier-constable* with simple *Soldier* having the same rank and pay.

SOLDIER, (*soldat*, *Fr.*) Under this head so much might be written, that it would become rather a dissertation than an article in a dictionary. Who is the best soldier? All the people in Europe have claimed this honour in their turn; even the Tartar and the Arab are not without well-founded pretensions. Perhaps some nations may have greater aptitude for war than others; but then that very aptitude is formed, strengthened, and even created, by particular habits, education, and a certain state of society. The laurel on the warrior's brow is not perennial, but is liable to wither and decay. Almost every country in Europe has had its share of military renown, at some particular period. Greece, Italy, France, Germany, Sweden, Spain, Russia, England, have all to boast of the bravery of their soldiers, and the skill of their generals. This reflexion ought to diminish the pride of those nations who consider themselves, at this moment, as the most military; and, at the same time, administer consolation to the infirmity of weaker powers, who

may yet hope to have their day, and to be illuminated by the sun of warlike glory. Of all the puerile vanities into which national presumption and national prejudice have caused men to fall, surely none is less consonant to reason, or more reprehensible, than the idle, we might say blasphemous opinion, that God has created one nation braver than another. Courage, perhaps, depends upon human institutions more than any other quality of the mind; and upon those strong impelling circumstances, which induce every individual to become a party in the common cause, and to fight the battles of the public as if they were his own. The King of Prussia (sometimes a great authority, but at others a disingenuous and miserable sophist) has declared his opinion that soldiers ought to be machines, beings with sense and motion, but without feeling and understanding; born for confinement, chains, hunger, and drilling. This principle may do on the parade, for *there* a soldier may be an automaton, to be moved by the stick of the corporal; but his Prussian Majesty found out the folly of this position, or rather of this assertion, (for he was too great a man to believe in it himself,) when he lost 25,000 men by desertion, in the campaign of 1778, against the Austrians. History and military experience sufficiently vindicate human nature from this stain. Perhaps soldiers are so far from being automatons, that the greatest successes in war have derived their origin from the influence of the human passions. What did the Arabs, operated upon by an intolerant zeal and religious enthusiasm? The raw levies of the French, at the commencement of the war in 1792, resisted and repulsed the veteran troops of Europe; animated by a mistaken love of what they called liberty, and by an unconquerable determination not to suffer foreign powers to interfere in their domestic concerns. At other times, hope and confidence have enabled soldiers to perform the most illustrious achievements; hope, inspired by former success, and confidence, built upon the knowledge of the talents and military views of a fortunate general. It is certainly true, that a mistake, which would ruin a general of inferior reputation, has sometimes added to the fame of a superior one. Caesar and Alexander often

tempted fortune, and risked more than was prudent or perhaps justifiable. The confidence, with which they had inspired their soldiers, led them out of every difficulty. Under such leaders they thought themselves invincible, and they actually became so. We have dwelt particularly on this part of the subject, because we are convinced, that the most erroneous and dangerous opinions have been adopted upon it. We repeat it again, and we would never cease to re-echo it, till the solemn sound vibrated upon the ear of every British officer, that a soldier is not an automaton, but a man, in whose humble breast the pulse of glory often beats high, and who rushes, with indifference, into the heat and danger of battle, without the hope of fame, or the prospect of sharing in the reward of victory. Where is the philosophy—where is the reason of him who asserts, that in order to draw forth the best exertions of a man, and to make him a hero in the cause of his country, it is necessary first to degrade him from the rank of a human being, and to level him to the standard of a brute? No; on the contrary, arm the human passions in your favour; teach the soldier to believe that he has an interest in your cause; pity his weakness; cherish his good and noble qualities; instil into his breast principles of honour and rectitude; you will then be invincible, and place around you a wall stronger than brass, which the efforts of no earthly power shall ever be able to penetrate. Should you be induced to assert, that a soldier is a machine, make an appeal to your own heart; if you are not contradicted, retire from the profession of arms, for you are a man without passions, and consequently without talents.

This doctrine of the moral education of the soldier, ought not only to be inculcated, but should be acknowledged and adopted. When you reflect that all the European powers have now nearly the same arms, the same constitution, practise the same movements, and follow the rules of the same tactic; to look upon them on a parade, or in a field of exercise, the shades of distinction between the troops of different countries are only just perceptible; so that the superiority which the army of one power may have over that of another, cannot arise from practices which are similar in all, but

from causes arising out of the moral and intellectual qualities of man. To give strength and perfection to those qualities is the great desideratum, and ought to be the object of our most zealous pursuits. Our military institutions are not perhaps the best possible, but we will adopt the idea of a great legislator, (Solon,) and say, they are ours, and consequently the best for us, as far as national habit and constitution go. Among the ancients, the army of one nation might have had a great and real advantage over that of another, from the comparative excellence of their tactic, and the superiority of their arms; but in our times the European nations, with the exception of the Turks, have all of them adopted a tactic nearly similar, if not the same. We do not mean to say, that there are not great shades of difference, and a marked line of separation, which clearly distinguish the soldier of one country from that of another. War is a science, which, like physic, is divided into a multiplicity of different branches; because a man is great in the practice of one, it does not therefore follow, that he should be excellent in another. So it is with the troops of different nations; they have each their peculiar qualities and comparative merits. The cool and steady courage, the phlegm, the obedience of a German, make *him* excellent in a retreat; the natural sagacity, the activity, the promptitude of a Frenchman, make *him* admirable in a war of posts, and in a country of mountains. In a plain, and in a day of general action, the British infantry are inferior to none in Europe; there is a decision in their mind, a boldness in their character, and perhaps even an impatience in danger, which ever prompts them to close with their enemy, and to bring the contest, at once, to a glorious issue. Every officer, who looks to great command, ought to study the nature, the habits, the constitution of the different European armies. This knowledge is absolutely necessary, in order to become thoroughly acquainted with the strength and the weakness of the troops of his own country, of its allies, and of those which are opposed to him. There is, perhaps, no part of the profession which requires more serious meditation. The French first brought into practice a system of operations peculiarly consonant to the tone and temper of the mind, the disposition and

state of the troops which composed their armies. The Austrian generals had the weakness, or rather the imbecility, to follow them, and to imitate a mode of warfare, which their soldiers, by nature and habit, were eminently disqualified to adopt. They committed the greatest of all possible errors, that of suffering themselves to be dictated to by their enemies, and to wait upon their movements. Had they sufficiently studied the constitution of their own troops, and that of the enemy whom they opposed, they would have avoided those multiplied affairs of posts which led to their defeat and ruin; on the contrary, had they concentrated their troops, and engaged in nothing but general actions, the ultimate issue of the war would, probably, have been very different from what it unfortunately was.

We cannot conclude this important subject without conjuring British officers to consider war as a science, the common property of all; to place themselves above narrow, little, dangerous prejudices; to cease to over-rate themselves, and to under-rate their enemies. It is not permitted to despise your enemy, and least of all, an illustrious people, who, in modern times, have produced more great generals than any other; who were victorious for sixty years in the former century, and who, in the latter, over-ran half Europe. It is in vain to deny, that the French are a military nation; history and our own experience demonstrate, that the French troops have been and are excellent.

The three great and necessary qualities of an army are, marching, abstaining, and fighting; in the latter virtue, we yield to none in the world: but surely candour must allow, that the French are better marchers, and require a much less quantity of food to subsist on than an English army of the same force. To have contended with such a nation, so superior to us in population, extent of territory, and natural resources for five hundred years; to have generally been victorious over her, has been the fortune, and is now the glory and boast of the British name.

SOLDIER now generally signifies any fighting man.

Private SOLDIER, a man in the ranks; one under the degree of a corporal; as distinct from the commanders.

A real SOLDIER, a term amongst mili-

may yet hope to have their day, and to be illuminated by the sun of warlike glory. Of all the puerile vanities into which national presumption and national prejudice have caused men to fall, surely none is less consonant to reason, or more reprehensible, than the idle, we might say blasphemous opinion, that God has created one nation braver than another. We cannot conclude this important subject without conjuring British officers to consider war as a science, the common property of all; to place themselves above narrow, little, dangerous prejudices; to cease to over-rate themselves, and to under-rate their enemies. It is not permitted to despise your enemy, and least of all, an illustrious people, who, in modern times, have produced more great generals than any other; who were victorious for sixty years in the former century, and who, in the latter, over-ran half Europe. It is in vain to deny, that the French are a military nation; history and our own experience demonstrate, that the French troops have been and are excellent.

The three great and necessary qualities of an army are, marching, abstaining, and fighting; in the latter virtue, we yield to none in the world: but surely candour must allow, that the French are better marchers, and require a much less quantity of food to subsist on than an English army of the same force. To have contended with such a nation, so superior to us in population, extent of territory, and natural resources for five hundred years; to have generally been victorious over her, has been the fortune, and is now the glory and boast of the British name.

SOLDIER now generally signifies any fighting man.

Private SOLDIER, a man in the ranks; one under the degree of a corporal; as distinct from the commanders.

A real SOLDIER, a term amongst mili-

may yet hope to have their day, and to be illuminated by the sun of warlike glory. Of all the puerile vanities into which national presumption and national prejudice have caused men to fall, surely none is less consonant to reason, or more reprehensible, than the idle, we might say blasphemous opinion, that God has created one nation braver than another. Courage, perhaps, depends upon human institutions more than any other quality of the mind; and upon those strong impelling circumstances, which induce every individual to become a party in the common cause, and to fight the battles of the public as if they were his own. The King of Prussia (sometimes a great authority, but at others a disingenuous and miserable sophist) has declared his opinion that soldiers ought to be machines, beings with sense and motion, but without feeling and understanding; born for confinement, chains, hunger, and drilling. This principle may do on the parade, for *there* a soldier may be an automaton, to be moved by the stick of the corporal; but his Prussian Majesty found out the folly of this position, or rather of this assertion, (for he was too great a man to believe in it himself,) when he lost 25,000 men by desertion, in the campaign of 1778, against the Austrians. History and military experience sufficiently vindicate human nature from this stain. Perhaps soldiers are so far from being automatons, that the greatest successes in war have derived their origin from the influence of the human passions. What did the Arabs, operated upon by an intolerant zeal and religious enthusiasm? The raw levies of the French, at the commencement of the war in 1792, resisted and repulsed the veteran troops of Europe; animated by a mistaken love of what they called liberty, and by an unconquerable determination not to suffer foreign powers to interfere in their domestic concerns. At other times, hope and confidence have enabled soldiers to perform the most illustrious achievements; hope, inspired by former success, and confidence, built upon the knowledge of the talents and military views of a fortunate general. It is certainly true, that a mistake, which would ruin a general of inferior reputation, has sometimes added to the fame of a superior one. Caesar and Alexander often

tempted fortune, and risked more than was prudent or perhaps justifiable. The confidence, with which they had inspired their soldiers, led them out of every difficulty. Under such leaders they thought themselves invincible, and they actually became so. We have dwelt particularly on this part of the subject, because we are convinced, that the most erroneous and dangerous opinions have been adopted upon it. We repeat it again, and we would never cease to re-echo it, till the solemn sound vibrated upon the ear of every British officer, that a soldier is not an automaton, but a man, in whose humble breast the pulse of glory often beats high, and who rushes, with indifference, into the heat and danger of battle, without the hope of fame, or the prospect of sharing in the reward of victory. Where is the philosophy—where is the reason of him who asserts, that in order to draw forth the best exertions of a man, and to make him a hero in the cause of his country, it is necessary first to degrade him from the rank of a human being, and to level him to the standard of a brute? No; on the contrary, arm the human passions in your favour; teach the soldier to believe that he has an interest in your cause; pity his weakness; cherish his good and noble qualities; instil into his breast principles of honour and rectitude; you will then be invincible, and place around you a wall stronger than brass, which the efforts of no earthly power shall ever be able to penetrate. Should you be induced to assert, that a soldier is a machine, make an appeal to your own heart; if you are not contradicted, retire from the profession of arms, for you are a man without passions, and consequently without talents.

This doctrine of the moral education of the soldier, ought not only to be inculcated, but should be acknowledged and adopted. When you reflect that all the European powers have now nearly the same arms, the same constitution, practise the same movements, and follow the rules of the same tactic; to look upon them on a parade, or in a field of exercise, the shades of distinction between the troops of different countries are only just perceptible; so that the superiority which the army of one power may have over that of another, cannot arise from practices which are similar in all, but

from causes arising out of the moral and intellectual qualities of man. To give strength and perfection to those qualities is the great desideratum, and ought to be the object of our most zealous pursuits. Our military institutions are not perhaps the best possible, but we will adopt the idea of a great legislator, (Solon,) and say, they are ours, and consequently the best for us, as far as national habit and constitution go. Among the ancients, the army of one nation might have had a great and real advantage over that of another, from the comparative excellence of their tactic, and the superiority of their arms; but in our times the European nations, with the exception of the Turks, have all of them adopted a tactic nearly similar, if not the same. We do not mean to say, that there are not great shades of difference, and a marked line of separation, which clearly distinguish the soldier of one country from that of another. War is a science, which, like physic, is divided into a multiplicity of different branches; because a man is great in the practice of one, it does not therefore follow, that he should be excellent in another. So it is with the troops of different nations; they have each their peculiar qualities and comparative merits. The cool and steady courage, the phlegm, the obedience of a German, make *him* excellent in a retreat; the natural sagacity, the activity, the promptitude of a Frenchman, make him admirable in a war of posts, and in a country of mountains. In a plain, and in a day of general action, the British infantry are inferior to none in Europe; there is a decision in their mind, a boldness in their character, and perhaps even an impatience in danger, which ever prompts them to close with their enemy, and to bring the contest, at once, to a glorious issue. Every officer, who looks to great command, ought to study the nature, the habits, the constitution of the different European armies. This knowledge is absolutely necessary, in order to become thoroughly acquainted with the strength and the weakness of the troops of his own country, of its allies, and of those which are opposed to him. There is, perhaps, no part of the profession which requires more serious meditation. The French first brought into practice a system of operations peculiarly consonant to the tone and temper of the mind, the disposition and

state of the troops which composed their armies. The Austrian generals had the weakness, or rather the imbecility, to follow them, and to imitate a mode of warfare, which their soldiers, by nature and habit, were eminently disqualified to adopt. They committed the greatest of all possible errors, that of suffering themselves to be dictated to by their enemies, and to wait upon their movements. Had they sufficiently studied the constitution of their own troops, and that of the enemy whom they opposed, they would have avoided those multiplied affairs of posts which led to their defeat and ruin; on the contrary, had they concentrated their troops, and engaged in nothing but general actions, the ultimate issue of the war would, probably, have been very different from what it unfortunately was.

We cannot conclude this important subject without conjuring British officers to consider war as a science, the common property of all; to place themselves above narrow, little, dangerous prejudices; to cease to over-rate themselves, and to under-rate their enemies. It is not permitted to despise your enemy, and least of all, an illustrious people, who, in modern times, have produced more great generals than any other; who were victorious for sixty years in the former century, and who, in the latter, over-ran half Europe. It is in vain to deny, that the French are a military nation; history and our own experience demonstrate, that the French troops have been and are excellent.

The three great and necessary qualities of an army are, marching, abstaining, and fighting; in the latter virtue, we yield to none in the world: but surely candour must allow, that the French are better marchers, and require a much less quantity of food to subsist on than an English army of the same force. To have contended with such a nation, so superior to us in population, extent of territory, and natural resources for five hundred years; to have generally been victorious over her, has been the fortune, and is now the glory and boast of the British name.

SOLDIER now generally signifies any fighting man.

Private SOLDIER, a man in the ranks; one under the degree of a corporal; as distinct from the commanders.

A real SOLDIER, a term amongst mili-

may yet hope to have their day, and to be illuminated by the sun of warlike glory. Of all the puerile vanities into which national presumption and national prejudice have caused men to fall, surely none is less consonant to reason, or more reprehensible, than the idle, we might say blasphemous opinion, that God has created one nation braver than another. Courage, perhaps, depends upon human institutions more than any other quality of the mind; and upon those strong impelling circumstances, which induce every individual to become a party in the common cause, and to fight the battles of the public as if they were his own. The King of Prussia (sometimes a great authority, but at others a disingenuous and miserable sophist) has declared his opinion that soldiers ought to be machines, beings with sense and motion, but without feeling and understanding; born for confinement, chains, hunger, and drilling. This principle may do on the parade, for *there* a soldier may be an automaton, to be moved by the stick of the corporal; but his Prussian Majesty found out the folly of this position, or rather of this assertion, (for he was too great a man to believe in it himself,) when he lost 25,000 men by desertion, in the campaign of 1778, against the Austrians. History and military experience sufficiently vindicate human nature from this stain. Perhaps soldiers are so far from being automatons, that the greatest successes in war have derived their origin from the influence of the human passions. What did the Arabs, operated upon by an intolerant zeal and religious enthusiasm? The raw levies of the French, at the commencement of the war in 1792, resisted and repulsed the veteran troops of Europe; animated by a mistaken love of what they called liberty, and by an unconquerable determination not to suffer foreign powers to interfere in their domestic concerns. At other times, hope and confidence have enabled soldiers to perform the most illustrious achievements; hope, inspired by former success, and confidence, built upon the knowledge of the talents and military views of a fortunate general. It is certainly true, that a mistake, which would ruin a general of inferior reputation, has sometimes added to the fame of a superior one. Caesar and Alexander often

tempted fortune, and risked more than was prudent or perhaps justifiable. The confidence, with which they had inspired their soldiers, led them out of every difficulty. Under such leaders they thought themselves invincible, and they actually became so. We have dwelt particularly on this part of the subject, because we are convinced, that the most erroneous and dangerous opinions have been adopted upon it. We repeat it again, and we would never cease to re-echo it, till the solemn sound vibrated upon the ear of every British officer, that a soldier is not an automaton, but a man, in whose humble breast the pulse of glory often beats high, and who rushes, with indifference, into the heat and danger of battle, without the hope of fame, or the prospect of sharing in the reward of victory. Where is the philosophy—where is the reason of him who asserts, that in order to draw forth the best exertions of a man, and to make him a hero in the cause of his country, it is necessary first to degrade him from the rank of a human being, and to level him to the standard of a brute? No; on the contrary, arm the human passions in your favour; teach the soldier to believe that he has an interest in your cause; pity his weakness; cherish his good and noble qualities; instil into his breast principles of honour and rectitude; you will then be invincible, and place around you a wall stronger than brass, which the efforts of no earthly power shall ever be able to penetrate. Should you be induced to assert, that a soldier is a machine, make an appeal to your own heart; if you are not contradicted, retire from the profession of arms, for you are a man without passions, and consequently without talents.

This doctrine of the moral education of the soldier, ought not only to be inculcated, but should be acknowledged and adopted. When you reflect that all the European powers have now nearly the same arms, the same constitution, practise the same movements, and follow the rules of the same tactic; to look upon them on a parade, or in a field of exercise, the shades of distinction between the troops of different countries are only just perceptible; so that the superiority which the army of one power may have over that of another, cannot arise from practices which are similar in all, but

from causes arising out of the moral and intellectual qualities of man. To give strength and perfection to those qualities is the great desideratum, and ought to be the object of our most zealous pursuits. Our military institutions are not perhaps the best possible, but we will adopt the idea of a great legislator, (Solon,) and say, they are ours, and consequently the best for us, as far as national habit and constitution go. Among the ancients, the army of one nation might have had a great and real advantage over that of another, from the comparative excellence of their tactic, and the superiority of their arms; but in our times the European nations, with the exception of the Turks, have all of them adopted a tactic nearly similar, if not the same. We do not mean to say, that there are not great shades of difference, and a marked line of separation, which clearly distinguish the soldier of one country from that of another. War is a science, which, like physic, is divided into a multiplicity of different branches; because a man is great in the practice of one, it does not therefore follow, that he should be excellent in another. So it is with the troops of different nations; they have each their peculiar qualities and comparative merits. The cool and steady courage, the phlegm, the obedience of a German, make *him* excellent in a retreat; the natural sagacity, the activity, the promptitude of a Frenchman, make him admirable in a war of posts, and in a country of mountains. In a plain, and in a day of general action, the British infantry are inferior to none in Europe; there is a decision in their mind, a boldness in their character, and perhaps even an impatience in danger, which ever prompts them to close with their enemy, and to bring the contest, at once, to a glorious issue. Every officer, who looks to great command, ought to study the nature, the habits, the constitution of the different European armies. This knowledge is absolutely necessary, in order to become thoroughly acquainted with the strength and the weakness of the troops of his own country, of its allies, and of those which are opposed to him. There is, perhaps, no part of the profession which requires more serious meditation. The French first brought into practice a system of operations peculiarly consonant to the tone and temper of the mind, the disposition and

state of the troops which composed their armies. The Austrian generals had the weakness, or rather the imbecility, to follow them, and to imitate a mode of warfare, which their soldiers, by nature and habit, were eminently disqualified to adopt. They committed the greatest of all possible errors, that of suffering themselves to be dictated to by their enemies, and to wait upon their movements. Had they sufficiently studied the constitution of their own troops, and that of the enemy whom they opposed, they would have avoided those multiplied affairs of posts which led to their defeat and ruin; on the contrary, had they concentrated their troops, and engaged in nothing but general actions, the ultimate issue of the war would, probably, have been very different from what it unfortunately was.

We cannot conclude this important subject without conjuring British officers to consider war as a science, the common property of all; to place themselves above narrow, little, dangerous prejudices; to cease to over-rate themselves, and to under-rate their enemies. It is not permitted to despise your enemy, and least of all, an illustrious people, who, in modern times, have produced more great generals than any other; who were victorious for sixty years in the former century, and who, in the latter, over-ran half Europe. It is in vain to deny, that the French are a military nation; history and our own experience demonstrate, that the French troops have been and are excellent.

The three great and necessary qualities of an army are, marching, abstaining, and fighting; in the latter virtue, we yield to none in the world: but surely candour must allow, that the French are better marchers, and require a much less quantity of food to subsist on than an English army of the same force. To have contended with such a nation, so superior to us in population, extent of territory, and natural resources for five hundred years; to have generally been victorious over her, has been the fortune, and is now the glory and boast of the British name.

SOLDIER now generally signifies any fighting man.

Private SOLDIER, a man in the ranks; one under the degree of a corporal; as distinct from the commanders.

A real SOLDIER, a term amongst mili-

tary men to mark out one who knows and does his duty, and is ready to face the enemy in all climates.

No SOLDIER, an expression of familiar currency in the British service. It is sometimes used as a term of reproach, and sometimes of harmless irony; as, You're a dirty fellow and no soldier.

Citizen SOLDIER, (*soldat citoyen*, Fr.) In a general acceptation of the term, a citizen soldier signifies any man who is armed for the support and vindication of his rights.

A Brother SOLDIER, a term of affection which is commonly used in the British service by one who serves under the same banners, and fights for the same cause, with another. In a more extensive signification, it means any military man with respect to another.

SOLDIER of fortune, (*soldat de fortune*, Fr.) During the frequent wars which occurred in Italy, before the military profession became so generally prevalent in Europe, it was usual for men of enterprise and reputation to offer their services to the different states that were engaged. They were originally called *condottieri*, or leaders of reputation. They afterwards extended their services, and under the title of *soldiers of fortune*, sought for employment in every country, or state, that would pay them.

SOLDIER'S friend, a term in the British service, which is generally applied to such officers as pay the strictest attention to their men; granting them seasonable indulgencies without injuring the service; seeing their wants relieved; and above all things, having them punctually paid, and regularly settled with. There is much confidence in the multitude when they are justly dealt by, and every soldier fights well under the guidance of a soldier's friend!

SOLDIER-officer, a term, generally used among naval men, to signify any officer belonging to the land service.

Old SOLDIER, a familiar phrase used in the British army to signify a shrewd and intelligent person. It sometimes means an individual who will not scruple to take advantage of the credulity or inexperience of others. Hence to come the old soldier over you. The French say *un vieux routier*, to which, however, they attach a more extensive signification.

Our countryman, Mr. Hume, speaking of national characters, makes the following remarks on soldiers in general.

A soldier and a priest are different characters in all nations, and all ages: and this difference is founded on circumstances, whose operation is eternal and unalterable.

The uncertainty of their life makes soldiers lavish and generous, as well as brave. Their idleness, together with the large societies, which they form in camps or garrisons, inclines them to pleasure and gallantry; by their frequent change of company, they acquire good breeding and an openness of behaviour: being employed only against a public and an open enemy, they become candid, honest, and undesigning: and as they use more the labour of the body than that of the mind, they are commonly thoughtless and ignorant.

It was a saying of Menander that *it is not in the power of God to make a polite soldier*.—Men. apud Stobæum. Yet, as Mr. Hume properly remarks, the contrary observation with regard to the manners of soldiers takes place in our days.

To use the words of Caius Marius, a soldier ought to glory in the wounds he receives in the service of his country, not in the monuments of the dead, and the statues of his ancestors. See *Plutarch's Lives*.

SOLDIER'S ointment, a medicine for a horse that is shoulder splaited. It is prepared in the following manner:—Take 12 ounces of fresh bay-leaves, rosemary, and basil, of each 2 ounces, 5 pounds of olive oil, 1 pound of yellow wax, an half pound of Malaga wine. Bruise all the leaves, and boil the whole to the consistence of an ointment.

SOLDIERSHIP, (*métier de soldat*, Fr.) the profession, character, and qualities of a military man.

SOLDIERY, body of military men; soldiers collectively.

SOLDURIERS, Fr. a term anciently used among the French to signify those persons who attached themselves to some particular general or military knight, whose fortunes they followed, in consequence of being paid and supported by him.

SOLDURIERS. According to the author of the *Nouveau Dictionnaire*, these were intrepid men among the Gauls, who were so closely attached to some particular chief, that if he fell in action, they fell also, by continuing to fight, or by destroying themselves. It is said, in Cæsar's Commentaries, that no man of

this class was ever known to forfeit his engagement. The word comes from *soldarius*, a man sworn and devoted to his friend, to partake of his good and ill fortunes; a retainer to a great person, or one of his clan. With certain modifications, the clans of Scotland come under this description.

Barque à SOLE, *Fr.* a flat-bottomed vessel.

SOLE, *Fr.* a horse's hoof.

SOLE, (*plafond*, *Fr.*) bottom, &c. a term used in fortification. The sole of the embrasure is the under part of the embrasure. In embrasures, for cannon, the sole inclines *outwards*; but in those for mortars it inclines *inwards*.

SOLE of a horse, a horny substance, which encompassing the flesh, covers the whole bottom of the foot.

The sole ought to be strong and thick, and the whole lower part of the foot, where the shoe is placed, hollow.

The shoe of a horse ought to be so set upon the hoof, as not to bear upon the sole; for otherwise the sole would be hurt, and not only make the horse lame, but corrupt the flesh which separates it from the coffin bone.

Crowned SOLE is when the foot is shaped like the back part of an oyster shell, and the sole higher than the hoof; so that the whole foot is quite filled up on the lower part.

High soled, when his sole is round underneath, so that it is higher than the hoof, which frequently causes a horse to halt, and hinders the shoeing of him, unless the shoe be vaulted.

SOLEIL, *Fr.* the sun. The French say figuratively, as we do, *Adorer le soleil levant*, to adore, or court, the rising sun, *i. e.* a growing power, or a presumptive heir to a crown, &c.

SOLEIL fire, an artificial fire-work, so disposed, that when it takes fire, it emits a brilliant light from a fixed center, and resembles the sun at mid day.

SOLEIL tournant et courant sur une corde, *Fr.* an artificial fire-work made in the shape of the sun, which is so contrived, that it moves in full illumination, either backward or forward, along a rope.

SOLEIL montant, *Fr.* an artificial fire-work, so called from its ascending in full illumination, and scattering fire in various directions, by a desultory movement. It is likewise called *tourbillon de feu*; a whirlwind of fire.

SOLEIL tournant et girandole, *Fr.* an artificial fire-work, which, when set fire to, resembles a sun moving round its axis, and exhibiting the figure of a girandole; which see.

SOLID, (*solide*, *Fr.*) in geometry, is the third species of magnitude, having three dimensions, viz. length, breadth, and thickness, and is frequently used in the same sense with body. A solid may be conceived to be formed by the direct motion, or revolution of any superficies of whatever nature and figure.

A solid is contained, or terminated, under one or more planes and surfaces; as a surface is under one or more lines.

Regular SOLIDS are those terminated by regular and equal planes; under this class come the *tetrahedron*, *hexahedron*, or *cube*, *octahedron*, *dodecahedron*, *icosahedron*.

Irregular SOLIDS are such as do not come under the definition of *regular solids*; such are the *sphere*, *cylinder*, *cone*, *parallelogram*, *prism*, *parallelopiped*, &c.

SOLID angle is an angle made by the meeting of three or more planes, and those joined in a point, like the point of a diamond well cut.

SOLID numbers are those which arise from the multiplication of a plane number by any other whatsoever, as 18 is to a solid number made by 6, (which is plane,) multiplied by 3; or of 9 multiplied by 2.

SOLID problem, in mathematics, is one which cannot be geometrically solved, but by the intersection of a circle and a conic section; or by the intersection of two other conic sections besides the circle.

SOLID bastion. See FORTIFICATION.

SOLIDAIRE, *Fr.* consolidated. An old French legal term, but now generally used to signify a concentration of good qualities, &c. Thus the French Convention declared—*Que les armées étaient solidaires de gloire*; that the armies had consolidated their glory; meaning thereby, that the victories of one part of the army had been added to the account of the rest. *Solidaire* also signifies responsible, liable to; as partners are answerable for the commercial engagements of their general firm.

SOLIDATUS, the Latin word for soldier, or for any person who carried arms for pay.

SOLIDE, *Fr.* This word is applied

not only to the solid earth, upon which a foundation is laid, but also to any thick massive body of mason-work, which has no cavity within.

SOLIDITY, (*solidité*, Fr.) is the quantity of space which a body fills, or occupies in length, breadth, and thickness; called also the *solid content* and the cube thereof. The space or solidity of a body is ascertained by making the product of the above three dimensions.

SOLIDITY, in architecture. See **SOLIDE**, Fr.

SOLINS, Fr. the spaces which are between the joists, or rafters, above the beams.

SOLINS also signify the lays of plastering along a gable end, for the purpose of keeping together the first tiles.

SOLITAUILLIA, (*solitauilles*, Fr.) sacrifices of three things of sundry kinds, as a bull, a ram, a boar, which were made by the Romans in honour of Mars, the god of war.

SOLIVE, Fr. in carpentry, a girder; a joist, or piece of wood slit, or sawed, with which the builders lay their ceilings.

These girders, or joists, are made of different thicknesses in proportion to their several lengths; and their distances from each other are usually equal to their depths. The author of the Builder's Dictionary uses the word *solive*, as an English term. Belidor classes it under several denominations, viz.

SOLIVE de brin, Fr. that which consists of the entire thickness of the tree. This kind is preferable in building, to that which is rounded, cleft, or sawed.

SOLIVES d'enchévêtre, Fr. the two strongest joists, or girders in a floor, which support the chevrons, or rafters. They are generally made of round, or uncleft wood. Those pieces which are of shorter dimensions, and are assembled in the roof a building, are likewise so called.

SOLIVE de sciage, Fr. those girders, or joists, which are cut out of a thick tree according to its length.

SOLIVE passante, Fr. joist, or rafter, of round, or uncleft wood, which runs the whole breadth of a floor without any beam to support it.

SOLIVE, Fr. a measure used in taking the different dimensions of timber, and which is supposed to contain three cubic feet; thus the *solive* in the measuring

of timber, is what the cubic toise is with respect to that of ground or mason-work. The French divide the *solive* into six feet, which they call *pieds de solive*, (which see.) The *piéd* or foot, into 12 inches, called *pouces de solive*; and the inch into 12 lines, which are likewise called *lignes de solive*. In order to form a correct idea of the *solive*, as a measure with respect to all its parts, it must be considered as a parallelopiped, whose base is a rectangle of 12 inches in breadth, upon six in height, with the toise for its length; this solid, (or parallelopiped) containing three cubic feet.

SOLIVEAU, Fr. a small girder, joist, or rafter.

SOLTICE, (*solstice*, Fr.) the point beyond which the sun does not go; the tropical point; the point at which the day is longest in summer, or shortest in winter. It is taken, of itself, commonly for the summer solstice.

The **Summer SOLTICE**, (*le solstice d'été*, Fr.) is when the sun is in the tropic of cancer, and gives us the longest day, which is about the middle of June.

The **Winter SOLTICE**, (*le solstice d'hiver*, Fr.) is when the sun is in the tropic of Capricorn, and gives us the shortest day, which is about the middle of December. There is not any solstice under the equator; there being, in that quarter, without variation, equal day and equal night.

SOLUTION, (*solution*, Fr.) resolution of a doubt; removal of any intellectual difficulty.

SOMACHIE, Fr. brackish, salt. The mixture of sea and river water is so called, as *eau somache*.

SOME-WAR, Ind. Monday.

SOMME, Fr. See **SUM**.

SOMMERS, in an ammunition wagon, are the upper sides, supported by the staves entered into them with one of their ends, and the other into the side pieces.

SOMMET, Fr. in geometry. See **SUMMIT**.

SOMMIER, Fr. See **SUMMER**, in architecture and in carpentry.

SOMMIER d'un pont levés, Fr. See **SEUIL de pont levés**.

SONAILLER, Fr. a term used among the drivers of mules, to signify the leading animal that has a bell tied to his neck, which they call *sonaille*.

SONDE, Fr. sounding lead; also a

probe, or any instrument used to ascertain the nature of soil, &c.

SONDER, *Fr.* to sound, to throw out the lead; to sound, or ascertain the nature of ground upon which it is intended to build. This is done by means of an instrument resembling an auger, or large wimble. This is forced into the ground, and from the sort of earth which is brought up, the fitness of it with respect to building is discovered.

SONNANT, *Fr.* a participle which is frequently used by the French, to express a specific period of time, or the nature of any thing.

A 5 heures SONNANTES, *Fr.* at five o'clock precisely, or as the clock strikes five.

Argent SONNANT, *Fr.* hard cash. This term was in familiar use at the commencement of the French Revolution, when it was found expedient to pay a select body of troops, called the *gendarmes*, in ready money, whilst the aggregate of the nation took paper currency, or assignats.

SÖNNER, *Fr.* to sound. *Sonner de la trompette*, to sound the trumpet.

SONNETTE, *Fr.* a machine which is used in driving piles of wood into the earth; a sort of rammer.

SOODER, *Ind.* the fourth, or lowest of the original tribes of Hindoos, as they come from the feet of Brama, which signifies objection. They are obliged to labour, and to serve when called upon.

SOOKRBAR, *Ind.* Friday.

SOORETHAUL, *Ind.* statement of a case.

SOQUENILLE, *Fr.* See **SARRAU**.

SORDET, } the small pipe or
SORDINE, } mouth piece of a trumpet.

SORN, a servile tenure in Scotland, by which, formerly, a chieftain might, with his followers, live upon his tenants at free quarters.

SORT, *Fr.* fate; lot; destiny.—*Sort de la guerre*, the fate of war.

Tirer uu SORT, *Fr.* to draw lots.—*Etre condamnés par le SORT*, to be condemned in consequence of lots being drawn.

SORTIE extérieure, *Fr.* a sortie or sally which is made out of a besieged place, or invested camp, when the besieging army is at some distance from the works, and which is consequently full of uncertainty and danger.—*Grande sortie*, a sortie, or sally made by a large

proportion of the troops in camp, or garrison.

SORTIE intérieure, *Fr.* a sortie or sally which is made when the enemy gets close to the covert-way. This sort of sally is less dangerous than the former, because the retreat is more certain. The Turks are remarkable for their prowess on these occasions; they generally commence their sorties at break of day, and at the very beginning of a siege. The ancients, on the contrary, always sallied out in considerable force, at midnight.

SORTIES, in a siege, parties that sally out of a town secretly to annoy the besiegers, and retard their operations.

SORTINGUES, *Fr.* the Scilly Islands.

SORTIR, *Fr.* to go out.—*Sortir sur l'ennemi*, to rush upon the enemy.

SORTIR du camp, du port, *Fr.* to leave camp; to sail out of port.

SORTIR d'un péril, *Fr.* to get out of a scrape.

SORTIR des bornes de la discipline militaire, *Fr.* to trespass upon military discipline, or to go out of military rules and regulations.

SOUBASSEMENT, *Fr.* base, ground-work.

SOUBASSEMENT de colonne, *Fr.* the base, or foot of a pillar.

SOUBASSEMENT d'un mur, *Fr.* the foundation or ground-work of a wall, which is carried up to a certain height, and is generally made of shards, rubble, &c. It is thicker than the rest of the wall, or that part of the wall which is exposed to the open air. The foundation, or ground-work, which is laid under revêtements in fortification, contribute greatly to that power of resistance which is necessary against the pressure of the earth. For further information on this head, see *La Science des Ingénieurs*, livre i.

SOUBREVESTE, *Fr.* a part of the old dress of a musketeer, which was somewhat similar to a close jacket without sleeves, and was hooked on each side like a cuirass.

SOUCHET, *Fr.* a kind of free stone; also the last layer of stone in a quarry.

SOUCI, *Fr.* care; anxiety.

Un sans Souci, *Fr.* a person devoid of all care, &c.

SOUDAN, *Fr.* See **SOLDAN**.

SOUDARD ou Soudart, *Fr.* an old

French term, signifying *soldat*, or soldier. It is often used in familiar discourse, when the subject relates to a person who has served for any length of time. Hence *un vicieux soudard*, an old soldier.

SOUDOYER, *Fr.* to keep in pay.

SOUDOYÉS, *Fr.* from *soudoyer*, to keep in pay. This name was originally given to a body of men who enlisted themselves under Philip Augustus of France, on condition that they should receive a certain daily pay in the way of subsistence. Froissart calls all soldiers, who are paid for doing duty, or for going to war, *soudoyés*.

SOUDRILLE, *Fr.* a term of reproach, signifying a dishonest soldier; a vagabond, or thief.

SOVEREIGN, supreme in power; having no superior. In Great Britain the sovereign is so far limited with respect to this explanation, that he has no power beyond the legislative delegation of their authority by the two Houses of Parliament. He has, however, no superior with regard to the army and navy.

SOVEREIGN contempt. This expression is used to signify contempt that is shewn in the highest degree.

SOUFFLAGE, *Fr.* sheathing, or furring of a ship.

SOUFFLE, *Fr.* the wind of a cannon.

SOUFFLER les canons, *Fr.* to scale pieces of ordnance. This is done, by means of a moderate charge of gunpowder, for the purpose of cleaning them.

SOUFFLER, *Fr.* This word is used figuratively among the French, and signifies to do any thing underhand, or by stealth. Hence, *souffler la division, le feu de la discorde*, to sow the seeds of, or secretly to blow up the embers of discord.

SOUFFLER un avancement, *Fr.* to obtain promotion, without having any claim from personal service or merit. To rise by underhand, or low means. See SCABARD.

SOUFFLER le froid et le chaud, *Fr.* to blow hot and cold.

SOUFFLER un poil, *Fr.* a term used in farriery, to signify that the pus or matter oozes out of the crown of a horse's hoof, through the hair that grows round it.

SOUFFLER un exploit, *Fr.* to boast of some exploit which has never taken

place. The French also use the word *souffler* in an absolute sense, to signify any fruitless attempt, or wild scheme to become rich, by looking after the philosopher's stone, and trying to make gold and silver by chemical operations. Hence, *il a dépensé tout son bien à souffler*, he has spent or wasted all his property in visionary pursuits.

SOUFFLER un vaisseau, *Fr.* to sheath a vessel.

SOUFFLEURS, *Fr.* a mean, degraded set of men, who get military promotion at the expense of neglected merit, and succeed in life by being subservient to the vices and caprices of imaginary greatness.

SOUFFRE-douleurs, *Fr.* a drudge.

SOUFFLURE, *Fr.* a cavity, or hole, which is frequently occasioned when pieces of metal have been forged in too intense a fire. Cannon balls lose their required weight by flaws of this sort.

SOUFFRIR, *Fr.* to bear; to support; to meet. Hence, *souffrir une tempête*, to meet a storm.

SOUFFRIR un siège, *Fr.* to stand a siege.

SOUFFRIR une attaque, *Fr.* to stand an attack.

SOUFRE, *Fr.* See SULPHUR.

SOUGARDE, *Fr.* guard, throatband of a gun. A semi-circular piece of brass which is fixed beneath the trigger of a musket, to prevent it from going off by accident.

SOUGARDES, *Fr.* See DÉCHARGEURS.

SOUGH, (*sous*, *Fr.*) a subterraneous drain.

SOUGORGE, *Fr.* throat-band of a bridle.

SOUILLARD, *Fr.* in hydraulic architecture, a piece of wood laid upon stakes, in front of the slopes that are between the piles of stone bridges: it is also placed between those of wooden ones.

SOUILLER, *Fr.* to sully; to stain; to defile.

SOUILLER ses mains de sang, *Fr.* to sully, or stain one's hands with blood.

SOUKARS, *Ind.* a general name for bankers.

Se SOULER, *Fr.* to get drunk. See SOBRIETY.

SOULEVEMENT, *Fr.* insurrection, revolt.

SOULEVER, *Fr.* to stir up, to excite to insurrection.

Se SOULEVER, *Fr.* to rise; to revolt;

to mutiny. *L'armée s'est soulevée contre son général*; the army rose, or mutinied against its general.

SOUJETTRE, *Fr.* (as an active verb,) to subdue, to overcome, to reduce to subjection.

Se SOUJETTRE, *Fr.* to submit oneself; to yield.

SOUSSION, *Fr.* submission.

SOUMIS, *Fr.* in fortification, to lie under, to be commanded. Thus, one work is said to be commanded, *être soumis*, when it is lower than another. The same signification holds good with respect to heights, or elevations.

SOUND, (*son*, *Fr.*) any thing audible, noise; that which is perceived by the ear. The experiments are numerous by which it has been found, that sound is audible to the distance of 50, 60, or 80 miles; but Dr. Hearne, physician to the king of Sweden, tells us, that at the bombardment of Holmia, in 1658, the sound was heard 30 Swedish miles, which make 180 of ours: and in the fight between England and Holland in 1672, the noise of the guns was heard even in Wales, which cannot be less than 200 miles.

The velocity of sound is 380 yards, or 1142 feet in a second of time, as found by very accurate experiments. The exactness of measuring distances by sound, has been sufficiently proved by measuring the same distances by trigonometry.

SOUND, (*sonde*, *Fr.*) an instrument used by surgeons in probing.

SOUND. A horse is said to be sound, when he does not halt, hot or cold.

To SOUND, to betoken, or direct by a sound; as, to sound the retreat. Hence

SOUNDINGS, signals made by any kind of instruments.

SOUPAPE, *Fr.* every part of the machinery in a pump, which tends to stop the water; also the sucker of a pump.

SOUPENTES, *Fr.* the braces of a coach.

SOUPENTE de cheminée, *Fr.* an iron hold-fast which supports the dossier of a kitchen chimney; *soupenite* also signifies a loit.

SOUPENTE de machine, *Fr.* a piece of wood, which being kept perpendicular from above, is hung for the purpose of sustaining the roll, or axle-tree and wheel of a machine, as is the case in a crane.

SOUPIRAIL d'aqueduc, *Fr.* a vent-hole in a covered aqueduct, made for

the purpose of letting out the air and wind that may be collected within, and which must naturally impede the course of the water.

SOURA, *Ind.* a division; as that of a chapter.

SOURCES, *Fr.* See SPRINGS.

SOURD, *c*, *Fr.* literally means deaf, dull. It is variously applied by the French, viz.

Lanterne SOURDE, *Fr.* a dark lantern.

Lime SOURDE, *Fr.* a file which is made in such a manner, that you may separate pieces of iron without making any noise in the operation. It is likewise used in a figurative sense—To signify a person who says little, but is always meditating something mischievous, or injurious to others.

The French likewise say, *sourdes pratiques*, *pratiques sourdes*; secret, or underhand practices; *sourdes menées*, *menées sourdes*; secret or underhand ways. These terms are always used in a bad sense. In mathematics, the French call those quantities *quantités sourdes*, which are incommensurable, that is, which cannot be exactly expressed, either by whole numbers, or by fractions. Thus the square root, or *racine carrée*, of two, is a *quantité sourde*.

SOURDINE, *Fr.* a little pipe, a mute. It likewise means a small spring, which is fixed in a dumb repeater. The French make use of this word in a figurative sense, to signify *literally*, without noise. *Les ennemis ont délogé à la sourdine*; the enemy decamped privately, and without noise.

SOURIS, *Fr.* literally, a mouse. For its application in fortification, see *pas de souris*.—*Le souris qui n'a qu'un trou est bientôt pris*; the mouse that has only one hole to run to, is soon caught.

SOURIS is a cartilage in the nostrils of a horse, by the means of which he snorts.

SOURNOIS, *Fr.* a sullen character.

SOUS, *Fr.* a preposition which is used to denote the state or condition of one thing with respect to another which is above it, viz.

Sous-tangente, *Fr.* See SUB-TANGENT.

SOUS, *Fr.* under; close to. *Camper sous une ville*, to encamp under a town; *être sous le feu d'un bataillon*, to be under the fire, or exposed to the fire of a battalion; *les soldats sont sous les armes*, the soldiers are under arms; *sous les dru-*

peaux, under the colours; *sous les auspices*, under the auspices; *être en sous-ordre*, to be under orders.

Sous bande, Fr. an iron plate which is fixed upon a mortar carriage where the trumions are laid.

Sous-basement, Fr. pattern of a pillar; bases of a bed; socket.

Sous-brigadier, Fr. sub-brigadier.

Sous-chevron, Fr. a rafter belonging to a dome, or to the roof of a dome.

Sous-fuite, in carpentry, a long piece of timber, from six to seven inches thick, which is laid under the ridge of a house, and is parallel to it; commonly called under roof timber.

Sous-garde, Fr. throat-band of a gun.

Sous-gorge, Fr. throat-band of a bridle.

Sous-gueule, Fr. a bridle.

Sous-lieutenance, Fr. under-lieutenant's place or appointment.

Sous-lieutenant, Fr. sub-lieutenant.

Sous-secrétaire, Fr. under-secretary.

Sous-ventrière, Fr. under-girth.

SOUSSIGNE, Fr. underwritten.

Le SOUSSIGNÉ, Fr. the undersigned.

SOUSSIGNER, Fr. to undersign.

SOUSTRAIRE, Fr. to withdraw; to take away.

La SOUTE, Fr. the powder or bread-ruin on board ship.

SOUTENEUR, Fr. in a bad sense, a bully; a bravo; one who attempts to carry things, by noise and menaces, in opposition to truth and reason.

SOUTENEUR, Fr. a supporter; an abettor.

SOUTENIR, Fr. to maintain; as *soutenir le combat*; to maintain the fight.

SOUTENIR le feu de l'ennemi, Fr. to stand the enemy's fire.

SOUTENIR le siège, Fr. to hold out in a besieged place.

SOUTENIR. This word is also used in the French drill, and signifies to support or balance the body on the right or left foot, according to the given direction. The point upon which the heel turns, is called the pivot, (*le pivot*.)

SOUTERRAINS, Fr. subterraneous passages, lodgments, &c. that are bomb-proof.

There are several lodgments of this description in the different fortified places upon the continent. The most remarkable are those at Landau, an ancient and strong town of Lower Alsace, in France; New Brisach, a town of Alsace, in France, not far from Brisach, the ancient

capital of Brisgaw, in Germany, and Figuieros. The latter belongs to Spain, and is so skilfully and so solidly constructed, that the horses of several regiments may be quartered in them.

SOUTHWARK, a dependency of the city of London. All musters of soldiers taken or made in the borough of Southwark, must be in the presence of two justices. See *MUTINY ACT*, Sect. 21.

SOUTIEN, Fr. a prop; a support: any work in fortification, which props or supports another.

SOUVERAIN, Fr. sovereign. The person in whom sovereignty is vested.

SOUVERAINETÉ, Fr. sovereignty; supremacy; highest place; supreme power.

SOW, in ancient military history, a kind of covered shed, fixed on wheels, under which the besiegers filled up and passed the ditch, sapped or mined the wall, and sometimes worked a kind of ram. It had its name from its being used for rooting up the earth like a swine, or because the soldiers therein were like pigs under a sow.

SOWER, *Ind.* a horseman.

SOWGUND, *Ind.* an oath.

SPADASSIN, Fr. in familiar language, a bully. It also signifies a cut-throat; a fellow who is regardless of his own life, and attempts that of another, for the slightest offence or contradiction.

SPADE, (*bèche*, Fr.) an instrument for digging. See *Intrenching Tools*, *Mining*, &c.

SPADROON, a sword much lighter than a broad sword, and made both to cut and thrust.

SPADROON Guard, a guard sometimes used with the cut and thrust sword, and also with the broadsword. It consists in dropping the point towards the right from the outside guard, till it comes under your adversary's blade, the edge being upwards, and your wrist at the same time raised.

SPADI, an upper garment made of blue cloth; which is worn by the Janizaries, in the same manner that we wear a loose great coat, or surtout.

SPAHILAR-AGASI, Fr. colonel-general of the Spahis. He has the same command or authority over them which is vested in the *Aga*, who is head of the Janizaries.

SPAHIS, a corps of Turkish cavalry, which is kept in pay by the Grand Signor. The Spahis do not possess any lands as

the Zaims and Timariots are allowed to do. This corps is composed of twelve or fifteen thousand men, and consists of the *Silhataris*, whose standard or cornet is yellow, and of the *Spahis-Glanis*, who have a red one. When these troops were first formed, the latter acted as servants or batmen to the former: they became a separate class or troop in consequence of their superior conduct on service, and are distinguished in this manner: they are armed with a sabre and a lance, which they call *misrack*. They likewise make use of a long dart or javelin, called a *gerie*, with an iron ferrel at one end, which they throw at an enemy with surprizing skill; and if they should happen to miss their aim, they can instantly bend from their saddles, and catch it up, whilst the horse is on full gallop.—Others again are armed with bows and arrows, and some have pistols and carbines. When the Grand Signor takes the field in person, he generally makes a present of five thousand aspers to each *Spahi*. This bounty is called *sadach-ackchiasi*, or gift to enable each man to purchase bows and arrows.

When the *Spahis* take the field, they march in rear of their standard; but they do not observe any particular order of route. They divide themselves, on the contrary, into small bodies, and advance in the most desultory manner.

Besides these two troops of *Spahis*, there are four others in the Turkish service, which are only called upon under circumstances of extreme pressure and emergency. The first is called *sag-vlesigi*; the standard is red and white. The second is named *sol-vlesigi*; the standard is white and yellow. The third is styled *sag-gureba*; the standard green: and the fourth, *sol-gureba*; the standard is white. All these *Spahis* receive a daily pay of twelve to twenty aspers; and they are subject to every species of duty.—There are *Spahis* called *Timars*, or *Tinariots*. See TIMARIOTS.

SPAHIS-GLANIS, *Fr.* See SPANIS.

SPAN, a term used in civil architecture. The span of an arch is the distance between the imposts, or the parts of piers from which the arch springs, or on which it rests.

SPANISH, a vulgar phrase, used principally among sea-faring men, to signify money.

SPANNER, the lock of a fusil, or carbine.

SPARUM, a kind of dart, which was used by the ancients in war, and was shot out of a cross-bow. The wound it occasioned was extremely dangerous, as its point was triangular. Several of these darts were discharged in a volley.

SPATHIAIRES. See PROTOSPATHAIRES

SPATTERDASHIES, a kind of covering for the legs of soldiers, made of cloth, or coarse linen waxed over, and buttoned tight; by which the wet is kept off: now called long gaiters.

SPATTS, a small sort of spatterdashes, that reach only a little above the ankle; called also half gaiters. This word is seldom used, except among common soldiers.

SPATULE, spatule, from the Latin *spatula*, a slice or instrument which apothecaries and surgeons use wherewith to spread plasters. Also an instrument used in the composition of gunpowder.

SPAVIN. This disease, in horses, is a bony excrescence or crust as hard as a bone, that grows on the inside of the hough.

Blood SPAVIN, a distension of the sinews in a horse occasioned by extravasation.

SPEAKING trumpet, a trumpet by which the voice may be carried to a great distance. It was formerly used in large armies; and even so late as the siege of Gibraltar, when General Elliott, (afterwards Lord Heathfield) caused the brigade words of command to be given by means of this instrument. The French say *porte-voix*.

SPEAR, a lance, or long weapon with a sharp point, formerly used as a manual, or missile weapon. See LANCE.

Major Cartwright, in a late ingenious publication, has given some curious particulars respecting this weapon. See *Aegis* published by that gentleman.

SPEAR, the feather of a horse, called the streak of the spear, is a mark in the neck, or near the shoulder of some barbs; and some Turkey and Spanish horses represent the blow or cut of a spear in those places, with something like the appearance of a scar. This feather has been reckoned by some an infallible sign of a good horse.

SPEAR, the long piece of wood which is fixed to the body or beam of a cheval de frize. The spears are 53 in number,

weighing 2lbs. each, are three feet long, and 1½ inch square. They are placed 9½ inches asunder.

SPEAR hand or *sword hand*, of a horse-man, is his right hand.

SPEAR foot of a horse is his far foot behind.

SPECTACLE, *Fr.* spectacle; show; exhibition.

SPECULATOR. This word had three different meanings among the ancient Romans. It signified a spy in war, or a sentinel and a scout; it also expressed a soldier who did duty at the imperial palace; and sometimes it was used to mark out the person who did the function of a public executioner.

SPECULATOIRES. According to Suetonius, there was a body of men among the ancient Romans, which was called *caliga speculatoria*, (the word *caliga* signifying a sort of military spatterdash) whose duty was to observe the motions of the enemy, and be constantly hovering about him. The speculatores were better paid than any other soldiers, on account of the dangers to which they were exposed, but they were not so well clothed, being looked upon as a forlorn hope.

To SPEND. This term is used at sea of a mast of a ship; when it is broken down by foul weather, it is said to be spent. It is sometimes used in military matters to express the consumption of any thing; as to spend all your ammunition.

SPENT ball, (*boulet mort*, *balle morte*, *Fr.*) A cannon or musket ball, &c. is said to be spent when it reaches an object without sufficient force to pass through it, or otherwise wound, than by a contusion. Spent balls, however, are frequently fatal in their effects, especially when they hit any of the noble parts. It is on occasions of this sort, that the activity and skill of a field or ambulating surgeon are absolutely necessary; for which reason a sufficient number of these useful attendants upon an army ought always to accompany the different battalions that go into action. The French pay the strictest attention to this branch of the service. Their flying hospitals are not only well supplied with all the requisites for so important an establishment, but every dependent part is equally well provided.

SPHERE, or *Sphoræ*. See *CESTUS*.

SPHERE, a round body, of which

the center is at the same distance from every point of the circumference; as in the case with shot, shells, &c.

SPHÈRES d'artifice, *Fr.* iron hoops with matches steeped in combustible matter, fixed round them. When there is only one hoop it is called *cercle d'artifice*; when there are two or three, one within the other, the assemblage of them is called *sphère d'artifice*, from its resemblance to that figure.

SPHERICAL, round; as *spherical* case shot.

SPHEROID. When it is generated by the revolution of the semi-ellipsis about its greater axis, it is called an *oblong spheroid*; and when generated by the revolution of an ellipsis about its lesser axis, it is called an *oblate spheroid*. M. D'Aviler observes, that the contour of a dome, should be half a *spheroid*. Half a sphere, he says, is too low to have a good effect below.

SPIES, in war, are persons em-

SPIALS, employed to give intelligence of what the enemy is doing. They should be well paid; for he who pays them ill, is never well served. They should never be known to any body, nor should they know one another. When they propose any thing very material, their persons, or their wives and children, should be secured and kept as hostages for their fidelity. If they are apprehended they immediately suffer death.

SPIES are found in the cabinets of princes, in the closets of ministers, amongst the officers of the army, and in the councils of generals; in towns belonging to the enemy, and in monasteries, &c. The greatest generals strongly recommend them, whatever expense they may occasion; and indeed a commander had better be in want of many particulars, however necessary, than be destitute of spies. Nothing should be spared to procure them; and even the promises made to them should be observed with the most inviolable integrity. By making a proper use of these necessary creatures, the most secret designs of an enemy may be discovered, the positions his armies are to take, the stations of his fleets, and even the manner in which the former is to be secured by masked batteries, or the latter be kept firm by chain moorings, &c. as was the case off Boulogne in 1800.

When a spy or a person suspected to

be one, is admitted into the presence of a general, it should always be so managed as to have his face opposite the light; by which means, all the changes and variations of his countenance will appear; and few persons can sufficiently command their feelings to keep down the natural ebullition of the blood, &c. In matters of considerable weight, one spy should always be placed to watch another. The French adopt this system in civil and military diplomacy.

To SPIKE a gun. To choak up the touch-hole of a piece of ordnance, so as to render it useless. For a new and effective mode of rendering the touch-hole of a piece of ordnance useless, except by fresh casting, see VARNISH.

SPIKES, in gunnery. See HAND-SPIKES.

SPIN, or *to spin hay*, is to twist it up in ropes, very hard, for an expedition; by which means it is less bulky, and less troublesome for the cavalry to carry behind them. An expert horseman can spin five days forage into a very narrow compass.

SPIRAL, (*spirale*, Fr.) in architecture, a curve that ascends winding about a cone or spire, so that all the points thereof continually approach the axis.

SPIRAL line, (*ligne spirale*, Fr.) a curve line, which makes a circular movement like a screw, perpetually diverging, or going off from its center.

SPIRAL, } a line drawn progressively

SPIRE, } round the same axis, with a distance between each circle; as the thread of a screw. See SCREW.

SPIRIT, ardour, courage, elevation, vehemence of mind, genius, vigour of mind, intellectual powers distinct from the body. The French say, *cœur, courage, fierté, ardeur*. Junius has very justly observed, that one of the surest indications of real spirit is a quick sense of shame.

To SPIRIT, to animate, to encourage; as to spirit the soldiers.

A man of SPIRIT, a resolute determined character.

Party SPIRIT. See PARTY.

SPIROLE, Fr. a small culverin, which was so called from the spiral or crooked direction that was taken, and the hissing noise which was made by the ball shot from it. Hence it was also called *serpentine* and *basilisk*.

SPLEGET, a cloth dipped in any kind of liquor to wash a sore.

SPLENTS, a disease in horses, which is a callous insensible swelling, or hard gristle, breeding on the shank bone, which, when it increases, spoils the shape of the leg, and generally appears upon the inside of it; but if there be one opposite it on the outside, it is called a *peg* or *pinned splent*, because it pierces, as it were, the bone, and is extremely dangerous.

The simple *splents* are only fastened to the bone, at some distance from the knee, and without touching the back sinew. These are not very dangerous; but those that touch the back sinew, or spread on the knee, will make a horse lame in a short time.

Horses are also subject to *fuzes* in the same place. These two are *splents* joined by the ends, one above the other, and are more dangerous than a *simple splent*.

To SPLICE, (*épisser un cordage*, Fr.) to join together; as to splice a rope by interweaving the strands in a regular manner; or two pieces of wood by interlacing and glewing them together.

SPLICING below the tail pipe is glewing a piece of wood on the back part of the stock below the lower pipe of the ramrod. This extends to the nose-cap, and is called a *whole splice*.

SPLICING above the tail-pipe is the same process, only above instead of below, and being generally about the middle, is called a *half-splice*.

SPLICING under the trumpet, or upper pipe, is the same process, and is called a *quarter-splice*.

SPLINT, a malady incident to horses which resembles the splent. A splint is found for the most part on the inside of the shank, between the knee and the fetlock joint.

A splint may be known both by the sight, and by feeling; for if it be pinched matter used by chirurgeons to hold the bone newly set in its place.

SPLINT, a thin piece of wood or other with the thumb or finger, the horse will draw up his leg.

SPLINTERS, in artillery, fragments of shells, &c.

SPLINTER-proof, a fence or guard which is provided in field attacks to protect the person who attends in the powder magazine, and gives out ammu-

nitron, from the splinters of shells, &c. It consists of a shelving sort of frame made of strong timber, through which an aperture is made to give out the powder, &c.

SPLINTS, in ancient armour, a defence for the arms, which constituted a part of the suit, called an *almaine ryvett*.

SPOKES, the bars of a wheel that pass from the naves to the felly.

SPOLIA, from *spolium*, among the ancient Romans, spoils; booty taken from an enemy.

SPOLIA Opima, among the ancient Romans, those spoils which a subaltern officer took from any officer of distinction belonging to the enemy.

SPONTON, *Fr.* See **SPONTOON**.

SPONTOON is a weapon much like a halberd, formerly used instead of a half-pike, by the officers of foot. When the spontoon was planted, the regiment halted; when pointed forwards, the regiment marched; and when pointed backwards the regiment retreated.

SPRAIN, γ (*cutorse*, *Fr.*) a misfortune incident to horses through the extension, or stretching, of the sinews beyond their strength, or by a slip or wrench. These strains may happen in the shoulder, in the pastern or fetlock joint.

To SPRAWL, to widen out in an irregular and unsoldier-like manner. This term is chiefly applicable to the cavalry.

SPRAWLING, loose, unconnected, wide of each other.

A SPRAWLING charge, a loose and irregular movement of cavalry, instead of a close, compact forward attack.

To SPRING, to give vent to any combustible matter upon which gunpowder principally acts by the power of explosion. Hence to spring globes of compression, &c. The latter are frequently used for the same purposes that sky-rockets, &c. are, viz. to serve as signals when any sudden attack is to be made.

SPRING, in a general acceptation, an elastic body; a body which when bent, or distorted, has the power of restoring itself to its former state. It is, in general, a piece of tempered metal, which by means of its elastic force, is useful in several machines to give them motion. In a gun-lock, the springs are distinguished by various appellations according to their several uses, &c.

Seer, and Seer SPRING. The seer is a

piece of hardened iron or steel in a gun-lock, which moves on a pivot, the point of which is received in a notch cut in the tumbler, and the other end is acted upon by the trigger.

The **seer spring** is a small spring, which throws the seer into the notch cut in the tumbler of a gun cock, when the piece is at half cock, or full cock.

Feather SPRING, or **Hammer SPRING**, the spring of a gun-lock beneath the foot of the hammer.

Main SPRING, the spring of a gun-lock which operates on the tumbler, and gives force to the cock.

To SPRING, in a military sense, to step forward with a certain degree of elasticity.

SPRING up, a word of command which has been occasionally used when sections double up. It signifies, indeed, the same as double up, and is sometimes used singly, as *Spring!* particularly to light infantry men.

To SPRING the fire-lock, to bring it briskly up to any ordered position; to the recover, for instance.

SPRINGER. See **VOLTIGEUR**.

SPUNGE, (*écouvillon*, *griffon*, *Fr.*) a long staff with a roll at one end, covered with a sheep's skin, of the bigness of the bore of a gun, to scour it after firing; and to prevent any sparks from remaining. It is sometimes called merkin, from its artificial texture of hair at the end of the staff.

Pyrotechnical SPUNGES, sponges which constitute the black match, or tinder that is brought from Germany, for striking fire with a flint and steel. These sponges are made of the large mushrooms, or fungous excrescences which grow upon old oaks, ash trees, firs, &c. These are boiled in water and beaten, and then put in a strong lye made of saltpetre, and afterwards dried in an oven.

To SPUNGE the gun, (*écouvillonner le canon*, *Fr.*) to cool and cleanse the bore of a piece of ordnance by means of a wet sponge, which is fixed to the end of a long pole.

SPUNGE of a horse-shoe is the extremity, or point of the shoe, that answers to the horse's heel, upon which the calkins are made.

Jingling SPUR, a curious spur which was worn in the seventeenth century. The Reverend Walter Harte, in his ingenious translation of the Life of Gustavus Adolphus, King of Sweden, has furnished

the following particulars respecting it. His words are—

“I have seen one of these jingling spurs which was found in the *Star Park*, on the famous *White Mountain*, near Prague, where the battle was fought between the Imperialists and troops of the union; by the event of which the Elector Palatine lost the crown of Bohemia. The spur was large and strong; it was made of brass, and had a short curved neck. The box (from whose center the rowels came) was as broad as an half crown piece; hollow, and something more than a quarter of an inch. It was of bell metal gilt, and contained three or four metal balls, about the size of a small field pea. The rowels, which were generally four or six, passed through the sides of the box, and measured near three inches, from opposite point to point.” In the text it is observed, see *ESSAY*, Vol. i. page 43, that it is thought, these spurs were made to jingle, in order to animate the horses, and keep them up to their duty, without goring their flanks unmercifully.

SPURS, in *old fortifications*, are walls that cross a part of the rampart, and join to the town wall.

SPURS, instruments fixed to the heel of horsemen, with which they can, at pleasure, goad the horse to action.

SPURS, in the construction of a wooden bridge, are braces which prop the two pillars that support it. The French use the word *éperon*.

SQUAD, (*escouade*, Fr.) a diminutive of squadron. It is used in military matters to express any small number of men, horse, or foot, that are collected together for the purposes of drill, &c.

To SQUAD, to divide a troop or company, into certain parts, in order to drill the men separately, or in small bodies, or to put them under the direction and care of some steady corporal, or lance corporal. In every well regulated troop, or company, the men are squadded in such a manner, that the most minute concern with respect to the interior economy can be instantly accounted for.

Aukward SQUAD. The aukward squad consists not only of recruits at drill, but of formed soldiers that are ordered to exercise with them, in consequence of some irregularity under arms. This term has likewise been used, partly in ridicule, and partly in reproach, to mark out those officers who are negligent of their

duty. A well known industrious Tactician in the British army, frequently uses the expression, in the latter sense.

SQUADRON, (*escadron*, Fr.) a body of cavalry, composed of two troops. The number is not fixed, but is generally from 80 to 120 men. The oldest troop always takes the right of the squadron, the second the left.

The most scientific and the most experienced officers, have always held the cavalry in high estimation. The services which have been rendered by this body of men, their innumerable successes, of which so many records are preserved both in ancient and modern history, together with the unanimous approbation of those authors, who are considered as masters in the art of war; all these circumstances sufficiently evince, that cavalry is not only useful, but indispensably necessary in war. Marshal Turenne was known to say—*Avec une bonne cavalerie, on travaille l'armée de son ennemi par détail*, with a body of good cavalry, one works, or harasses the army of one's enemy by detail; meaning thereby, that the desultory and rapid movements of dragoons, if properly managed, are of a nature to destroy the best concerted plans of an adversary, by hanging upon his flanks, driving in his outposts, intercepting his convoys, and by taking advantage of every opening during the heat of engagement. The Austrians had a memorable instance of the latter, when the French General Désaix, at the head of a body of horse, decided the fate of the battle of Marengo. In pursuits the superiority of the cavalry is unquestionable.

SQUARE, (*carrée*, Fr.) a figure with angles and equal sides.

The SQUARE, a particular formation into which troops are thrown on critical occasions; particularly to resist the charge of cavalry.

Solid SQUARE, a body of foot, where both ranks and files are equal. It was formerly held in great esteem; but when the prince of Nassau introduced the hollow square, this was soon neglected.

Hollow SQUARE is a body of foot drawn up, with an empty space, in the center, for the colours, drums, and baggage, facing every way to resist the charge of the horse.

Oblong SQUARE, a square which is not at right angles, but represents the figure of an oblong, whose sides are unequal.

Thus, as eight companies of equal numbers would form a perfect square, ten make an oblong.

Perfect SQUARE, a square whose sides are equal and at right angles.

The perfect square, in the formation of troops, seems best calculated for military movements and arrangements. Battalions, for instance, which are composed of eight companies, with one hundred rank and file in each, are equal to every species of disposition. It is upon this principle, we presume, that the French have distributed their infantry. British regiments, on the contrary, consist of ten companies, and are so composed that no square of this kind can be formed. This is manifestly a defect in our system. It is indeed remedied by the grenadier and light infantry companies being occasionally detached, or cast into separate battalions; so that the remaining companies, by being told off, are brought to eight equal parts. Tacticians will perhaps agree with us, that it would be better to have seven companies flanked by a subdivided one of grenadiers, the whole being so equalized as to produce eight equal parts. In this case, the light companies should be formed into separate bodies of chasseurs, or riflemen, after the manner of the French.

Shakespeare uses the word square, to signify squadron; but it is now obsolete.

SQUARE root, in geometry. The square root of any number is that which multiplied by itself, produces the square; thus 4 is the square root of 16.

SQUARE number, in arithmetic, is when another number, called its root, can be found, which multiplied by itself, produces the square; thus 16 is the square number of 4, and 9 the square of 3.

SQUARE, an instrument of brass, or wood, having one side perpendicular, or at right angles to the other, sometimes made with a joint to fold for the pocket; and sometimes with a back to use on a drawing board, to guide the square.

SQUARING, in mathematics, signifies the making of a square, equal to a circle. Thus the quadrature, or squaring of the circle, is the finding a square equal to the area of a circle.

SQUELETTE, *Fr.* literally means a skeleton. It is used by the French, as by us, to signify the remnant, or incomplete state of a regiment, viz. *Le*

squelette d'un régiment, the skeleton of a regiment.

SQUELETTE, *Fr.* likewise means the skeleton state of a ship, or a ship upon the stocks, which has only her ribs and first timbers laid in. So that *squelette*, among the French, will apply either to the first organization, or arrangement of the parts belonging to a work, or establishment, before it is completed, or to the remnant of such a work, or establishment, after it has been completed. In the first sense, the word *cadre*, frame, outline, &c. bears the construction of *squelette*, among the French, as *cadre d'un corps*. When the expedition into Brittany was planned, there were several cadres of this description. They consisted of French noblemen and gentlemen who were to organize the Chouans, and to receive appointments according to their respective ranks, &c. &c. Carcass, in building, signifies the same thing.

SQUIRE. An attendant on a warrior was formerly so called. See **ARMIGER**.

STABLE, a convenience well known for the comfortable reception of a horse. A stable should be in good air, and upon hard, firm, and dry ground. It ought, if possible, to be built upon an ascent, that the urine, foul water, or any other moisture may be conveyed away by means of trenches, or sinks, cut for that purpose.

Brick is better for building stables than *stone*; the latter being liable to sweat in wet weather, and the moisture causes rheums and catarrhs.

In some stables, (in those for instance, at Woolwich,) a hollow, or cavity with a grating over it, is made in every stall, into which the urine runs; but we humbly conceive, that this drain is highly prejudicial to the horse's eyes; as the saline particles must collect, especially in summer.

STABLE horse, *Ind.* that part of Tip-poo Sultaun's cavalry, which was best armed, accoutered, and most regularly disciplined.

STADIUM, (*stadion*, *Fr.*) an ancient Greek long measure, containing 125 geometrical paces, or 625 Roman feet, corresponding to our furlong.—This word is formed from the Greek term, which signifies station. It is said, that Hercules, after running that distance at one breath, stood still. The Greeks measured all their distances by stadia. The Romans had, likewise, their stadia, derived from the Greek, by which they measured dia-

tañces. The stadium at Rome contained 620 geometrical paces. Eight stadia make one Italian mile.

The *STADION*, among the Greeks, signified also a space of inclosed or open ground, (containing that measure,) where the public races were run.

STAFF, in military affairs, consists of a quarter-master general, adjutant-general, majors of brigade, aides-de-camp, &c.

Regimental STAFF are the adjutant, paymaster, quarter-master, chaplain, and surgeon.

The staff in India consists of a general staff, station staff, cantonment and garrison staff; and an hospital staff.

The staff in Great Britain is comprehended under general staff, garrison staff, district staff, and staff belonging to the cavalry depôt at Maidstone, and the general infantry one in the isle of Wight. There is likewise an hospital or medical staff.

STAFF of command. See *BATTOON*.

Personal STAFF, those particular officers who are constantly about the person of a general; as the military secretary, aides-de-camp, &c.—according to the nature of their appointment; or the composition of the arm or corps to which they may be attached.

Civil STAFF. Under this head may also be included commissaries, purveyors, &c. Upon this important point volumes might be written.

Medical STAFF, an important branch of public service; on the good management of which the health, and consequently the effective vigour of our bravest troops, must at all times, in all seasons, and under all circumstances, depend. Various rules and regulations have been framed for the proper administration of this branch. The following indispensable form is called for, before an individual can be appointed. It is necessary for every gentleman who is desirous of entering the medical department of the army, to apply to the inspector general at the office, (Berkeley-street, Berkeley-square,) and to pass a medical examination there, as well as a surgical one at the College of Surgeons. After which, the first appointment is that of Hospital mate, from whence the next step is assistant regimental surgeon, then regimental surgeon; so on to staff surgeon; deputy inspector, and inspector.

Physicians are appointed under the

recommendation of the physician general. The candidates must be members, or licentiates, of the College of Physicians, or be graduates of one of the Universities.

STAFF-corps, a corps which was formed in July, 1799, consisting of intelligent and active officers and men. They are chiefly attached to the adjutant-general's department.

STAFF corps of cavalry, a particular description of men that are employed for general service under the immediate controul of the adjutant-general.

District-STAFF, a specified number of commissioned and non-commissioned officers, that are stationed in a district for the use of the army in general, and the conduct, &c. of recruiting parties. The officers consist of a paymaster, adjutant and surgeon, who are under the command of the general of the district.

STAG-evil, in a horse, a distemper which is a kind of palsy, in the jaws, which frequently proves mortal, if it should spread all over the body.

It chiefly proceeds from the horse's being exposed to cold after great heat.

STAGGERS, } in horses, a disease
STAVERS, } which is a giddiness in the brain, and often occasions madness.

STAKES. In former times the archers to protect themselves from the attacks of the enemy's horse, carried long stakes pointed at both ends; these they planted in the earth, sloping before them.

Hammer STALL, a piece of leather, which is made to cover the upper part of the lock belonging to a musket.

STALLION, (*cheval entier*, Fr.) an unget horse. A stallion is also called a stone-horse.

STAMP duties, imposts laid upon paper that is used for legal or commercial purposes. Proceedings of courts-martial, whether copies or originals, are not chargeable with stamp duties; nor are the receipts given by officers for their respective pay or allowances; but all commissions, warrants, &c. fall under the duty.

STAMPE, *Batte, ou Demoiselle*, Fr. a large rammer.

STAMPER, Fr. to beat down earth, &c. with a rammer.

STANCHING blood, (*étancher*, Fr.) In case a horse should happen to be cut or hurt, fill the cut full of wool of a hare or rabbit, and hold it for some time with

your hand, or else bind it on the part; then burn the upper leather of an old shoe, strew the ashes among the wool, and let it lie on for twenty-four hours, and it will stanch the bleeding.

STANCHIONS, supporters in building, from the French *étançons*.

STAND, the act of opposing; thus troops that do not yield, or give way, are said to make a *stand*.

To STAND the enemy's fire, to remain with steady firmness, in orderly array, without being discomposed by the shot, &c. of an opposing enemy. British troops are remarkable for their coolness on these occasions.

To STAND, to have an erect position. Every recruit should be taught to hold his body in such a manner, that he feels himself firm and steady upon whatever ground he may be placed for the purposes of exercise or parade. See **POSITION without arms**.

To STAND well under arms, to be so perfectly master of the firelock as not to be embarrassed, or to be rendered unsteady by its weight, but to be able to preserve a correct relative position of the body through all the changes of the manual and platoon, &c. and during the prescribed movements in parade and field exercises. See **POSITION with arms**.

To STAND at ease, to be allowed a certain indulgence with regard to bodily position, with or without arms. See **EASE**. It is likewise a word of command, as *Stand at—Ease!*

STAND fast. This term is frequently used as a caution to some particular part of a line, or column. In the first of the nineteen manoeuvres, for instance, the grenadiers are directed to *stand fast*, while the remaining companies march from their alignment to form close column behind them. When a battalion, drawn up in line, is to move forward in front of its original position from the right, left, or center, the named division, subdivision, or section stands fast, and the remaining ones, which have been wheeled backward into column, march towards the inward flank of the standing division, subdivision, or section. On the first of the moving bodies arriving at the inward pivot of the standing one, the latter receives the word *March*, and the former wheels into the ground. The rest successively do the same. By this method, the leading division is spared the trouble of wheeling back, and returning again to its original ground.

To STAND to, to oppose oneself to anything, to be resolute and determined upon any point.

To STAND to the guns, to prepare for action, by taking one's station at the guns.

STAND to your arms! a cautionary word of command when soldiers are put upon the alert.

To STAND by another, to second and support him, let the consequences be what they may.

STANDARD, that which is the test or criterion of other things.

STANDARD, a measure by which men enlisted into his Majesty's service have the regulated height ascertained.

STANDARD, in war, a sort of banner, or flag, borne as a signal for the joining together of the several troops belonging to the same body.

The standard is usually a piece of silk $1\frac{1}{2}$ foot square, on which are embroidered the arms, device, or cypher of the prince or colonel. It is fixed on a lance, eight or nine feet long, and carried in the center of the first rank of a squadron of horse, by the cornet.

STANDARDS belonging to the cavalry. Standards are posted in the following manner:

The King's with the right squadron.

The second with the left; and the third with the center.

In advancing to the front on foot, the advanced standards and their sergeants must not slacken their pace, or deviate from right to left, as the lieutenant-colonel, or leading officer, may happen to do; but if he be in their way, they must call to him, because they alone regulate the march.

The standards must always be brought to the parade by the troop, viz. by that which has its private parade nearest to head-quarters. They must be accompanied by as many trumpeters as can conveniently assemble with that troop. Swords must be drawn, and the march sounded. The cornets parade, of course, with that troop to receive the standards. The standards are received by the regiment, or squadron, at open ranks, with swords drawn, officers saluting, and the march sounding by the remaining trumpeters. They must march off from head-quarters, and be lodged with the same form.

Royal STANDARD, (*oviflamme*, Fr.) a standard, which is carried when sovereigns accompany their armies to battle.

STANDARD-bearer, he who carries the standard; a cornet, ensign, &c.

STANDARD-Bearer to the Gentlemen Pensioners.—The gentlemen pensioners have, for almost three centuries, been the nearest guard of his Majesty's person, and on all state occasions they take precedence of all guards, being stationed close to the person of the sovereign. Their services are never required except upon state occasions. The honourable band, as it is termed, consists of a captain, (who must, in virtue of his office, be a peer of the realm,) three officers, and a paymaster. There are 25 gentlemen pensioners who, being esquires, are in point of rank equal to captains in the army. They are occasionally knighted, particularly at an installation; and two have always obtained that distinction at a coronation. The standard-bearer is the next officer but one to the captain. The band of gentlemen pensioners was originally a corps of staff cavalry; each pensioner being provided with a certain number of attendants in the field; whence the appellation of standard-bearer takes its origin, as it is at a coronation only that the standard of royalty is borne. At other times the baton, or silver stick of office, similar to that of the field officer in waiting, is the only badge he wears. The salary is 310*l.* per annum, subject to the land and other taxes, which are levied on all places of the same description, and which reduce the salary to about 240*l.* The stipend has never been increased since the first institution of the band. The situation of standard-bearer is, like the rest, to be purchased; three thousand guineas have been given.

STANDARD-Hill, a hill in England, near Battle, in Sussex, so called because William the Conqueror set up his standard on it, before he joined battle with Harold.

STANDING, settled, established, not temporary.

STANDING army, (*armée sur pied*, Fr.) an army which is quartered upon a country, and is liable to every species of duty, without any limitation being fixed to its service. The life and foot guards form a part of the standing army of Great Britain. The militia, but not the volunteers, may be partially considered as such; the adjutant, non-commissioned officers and drummers, being in constant pay, and a third of the quota of men, together with all the officers, being called

out once a year to be exercised for 23 days.

STANDING, rank, condition. It likewise signifies length of time. As, such an officer is of very old standing in the army.

STAPLES are loops of iron, or bars pointed and bent so as to be driven in at both ends.

STAR, (*étoile*, Fr.) a mark of distinction which sometimes is conferred upon merit, and is always attached to certain privileged individuals; also a mark of rank among field officers, which is attached to the strap of an epaulette.

STAR Chamber, a chamber in Westminster Hall, so called because the ceiling of it was adorned with the figures of stars, where the lord chancellor formerly kept a court in order to punish riots, forgeries, &c. This chamber was rendered infamous by the oppressive measures which were resorted to in the reign of Charles the First, and which ended in his execution.

STAR fort, in fortification. See **FORT** and **FORTIFICATION**.

STAROSTIES, Fr. certain tenures or fiefs, which the kings of Poland formerly granted to the nobility and gentry of the country, for the purpose of enabling them to support the expenses of military expeditions. The person who received, out of the royal domains, a fief of this sort, (for the public were not taxed on that account,) was called a Staroste. Staroste also signified a Polish nobleman, and Starostise his wife.

STATARIUS, hence stationary, that keepeth in his standing, and doth not move from one place to another.

STATARIUM prandium, that the soldiers eat standing. This was frequently done among the ancient Romans, not only to save time, but to enure themselves to every species of military dispatch.

STATARII excubitores, a standing watch, or sentinels who were upon the alert, and did not sit or lie down, but stood steady at their posts.

STATE, condition of any thing; as a weekly state of a regiment, &c.

STATE of a detachment. The difference between the state of a corps or detachment, and a mere return of the same, consists in this, that the former comprehends the specific casualties, &c. that have occurred; whereas the latter gives an abstract account of the officers

and men in a more general and comprehensive manner. The word *state* is likewise used to express the condition of every thing belonging to the equipment of a regiment; as, state of arms, accoutrements, &c.

STATEMENT, (*exposé*, Fr.) a plain, explanatory, or comprehensive exposition of any thing.

STATES, nobility; also the governing power in a country; as the states-general of Holland and the states of Venice were, before the French usurpation

STATESMAN, (*homme d'état*, Fr.) a politician; one versed in the arts of government.

STATHOLDER, (*Stathouder*, Fr.) from the Teutonic *Stadthalter*. According to Bailey, this word signifies a governor of a province, chiefly that of Holland. The author of the *Dictionnaire Militaire*, says, on this subject, that Statholder was, some time back, (alluding to the period before the French invasion,) the name of the head of the Dutch Republic. This title, or dignity, had rank with that of sovereign princes, although the person invested with it was subordinate to the United States, in the same manner as the Doge of Venice acted under the Senate. The French writer further adds; the orthography of this word is not right, although I have followed the *Dictionnaire de l'Académie Française*. It must both be written and pronounced Statholder—Stadthouder.

STATHOUDÉRAT, *Fr.* the dignity of the Statholder, when such was acknowledged in Holland. At present it is absorbed in the title of King of the Netherlands.

STATICS, (*statique*, Fr.) a branch of mathematics which considers weight or gravity, and the motions of bodies arising therefrom. Those who define mechanics to be the science of motion make statics a member thereof, viz. That part which considers the motions of bodies arising from gravity. Others again say, that statics should be the doctrine or theory of motion, and mechanics the application thereof to machines.

Hydro-STATICS, (*hydrostatique*, Fr.) a science which treats of the gravity of fluids, or of the weight of solid bodies that are immersed in any liquid, or that float upon its service.

STATION, in geometry, a place pitched upon to make an observation, to take an angle, or the like.

STATION, a standing place; also post, condition, rank.

Military STATION, a place calculated for the rendezvous of troops, or for the distribution of them; also a spot well calculated for offensive or defensive measures.

STATION-staff, a mathematical instrument used by surveyors.

STATION Orders. See ORDERS.

Mortar STATION, any particular spot, selected for the placing of mortars, or battering pieces, during a siege, &c.

Rocket STATION, a spot chosen for the convenience of the officer who has the management of the rockets.

STATIONARIUS, a sentinel, a garrison soldier.

STATIONERY, paper, sealing-wax, pens, &c. for which an allowance is made to officers on the staff.

STATIRI *Milites*, stationary soldiers, or soldiers in garrison.

STATISTICS. According to the author of a late work, statistics are that comprehensive part of municipal philosophy, which states and defines the situation, strength, and resources of a nation. They constitute a kind of political abstract, by which the statesman may be enabled to calculate his finances, as well as guide the economy of his government; and they are equally useful in ascertaining the military resources of a country.

STATIVA *Castra*, standing camps. The ancient Romans accustomed their troops to remain occasionally under canvass, both in winter and summer; but these encampments were of short duration. At first, they were only for a single night, and they were then named lodgments: but if they lasted several nights they were called *Stativa*.

The winter camps were always better supplied with provisions and warlike stores than the summer ones. Whilst Rome was governed by Emperors, their armies were constantly in the field, or encamped upon the frontiers of the empire, both in peace and war. They were certainly less considerable in the first than in the latter instance, and they always remained in the camp during the winter, as well as the summer months. Particular care was taken to have these camps well fortified, and abundantly provided with stores and provisions.—This precaution was the more necessary, because, in those days, there were not

strong places enough along the frontiers of the Roman empire, to prevent the incursions of the barbarians into the different provinces. By degrees, fortified camps grew into fortified castles and strong forts, and even into fortified towns; many of which took their names from the several legions that had been encamped upon the ground. *Stativa* likewise signifies, generally, quarters.

STATOR, one of the standing watch. It also signified, among the ancient Romans, a serjeant, a messenger, or any person who was always attending about an officer, to be ready at command. The term, in some degree, corresponds with our word *orderly*.

STATORES Prætorii, a certain description of soldiers among the ancient Romans, belonging to the Imperial guard, who always did duty at the entrance of the Prætorium, or general's pavilion.

STATURE, height. See **STANDARD**.

STATUTE duty, (*corvée*, Fr.) The word *corvée* seems derived from *cura viæ*, i. e. the care of the roads. It signifies a call made on individuals to furnish labour, and materials in kind, for the construction and repair of roads. The same did exist in England, under the name *statute duty*, and is with us, at present, under very proper restrictions; but, in France, where there are no turnpikes, all the roads are made and repaired by Government.

STAVES, used in ammunition and other wagons or carts, are round and flat sticks between the summers and side-pieces, also in common and scaling ladders.

To **STAY the hand**. To stay, or sustain, a horse, is to hold the bridle firm and high.

STAYS, in truck carriages, are the irons which are fixed one end under the fore axle tree, and the other to the side-pieces, in the form of an S.

STEAM Boats. The Americans claim the honour of having discovered "the art of navigating a vessel, with a keel 160 feet long, so as to go, by the force of steam, 6 miles an hour, without a sail, and against the wind and tide." The idea, however, has often been practically tried in England; and it is believed, that the principal merit of the discovery in question is owing to a native of Scotland, born at the Calton-hill in Edinburgh, where a number of

ingenious mechanics reside; the son of one of whom, after living at Glasgow as an engineer, went some years ago to America, and having a mechanical turn, completed, with the assistance of an American gentleman, this important invention. *Steam-boats*, as they are called, are already established on the Hudson, where the tide runs at the rate of six miles an hour; and in the Delaware, where it runs four miles; and it is soon to be extended to the Ohio and the Mississippi.

Steam boats and vessels have been lately used to cross arms of the sea; two regularly sail from the river to Margate, and we understand it is in contemplation to try them across the channel. The principle has been also successfully applied to iron rail-ways.

STECCADO, the lists; a place railed in for beholding a combat or duel. The term is Spanish.

STECCADO, in fortification, a sort of pale, or fence, which is raised before the trenches.

STEED, a horse either for state or war.

STEEL, particularly applied, means *weapon or armour*.

STEEL also signifies sword.

STEELED, being tipped with steel, as is the case sometimes in a horse-shoe, especially if the animal should go near to the ground, and occasionally hit the front of his shoes.

STEELYARD, a balance for weighing.

STEGANOGRAPHY, (*stéganographie*, Fr) the art of secret writing, or of writing in cyphers, known only to persons corresponding. It is much used in war.

STENOGRAPHY, (*sténographie*, Fr.) See **STEREOGRAPHY**.

STEP, (*pas*, Fr.) progression by one removal of the foot. It likewise signifies pace.

To **STEP**, to move forward or backward, by a single change of the place of the foot.

To **STEP out**, to lengthen your pace.

To **STEP short**, according to the *Regulations*, is to diminish or slacken your pace. This step is useful when a momentary retardment of either a battalion in line, or of a division in column, shall be required.

To **STEP out**, according to the *Regulations*, is to lengthen the step to 33 inches, by leaning forward a little, but without altering the cadence. This step

is necessary when a temporary exertion in line and to the front, is required; and is applied both to the ordinary and quick time.

These phrases are frequently used in military movements, when it is found necessary to gain ground in front, or to give the rear of a column, &c. time to acquire its proper distance. The officer who leads a head division, should be particularly attentive, when he is ordered to step out, or step short, especially in the different wheelings, not to lose the precise moment when either may be thought expedient; and in marching in open column, every successive officer should watch the seasonable moment, after a wheel, of preserving his relative distance.

To STEP off, in a military sense, to take a prescribed pace from a halted position, in ordinary or quick time, in conformity to some given word of command or signal.

Balancing STEP, (*pas d'école*, Fr.) a step so called from the body being balanced upon one leg, in order to render it firm and steady in military movements, &c. Men at the drill should be frequently exercised in this step.

Deploy STEP; *Lock STEP*, (*pas de manœuvre*, Fr.) See *LOCK*.

The side or closing STEP, (*pas de côté*, ou *pas serré*, Fr.) a step which is taken in order to gain ground to the right or left, without altering the front of the battalion, or of closing it to its center, whenever a chasm occurs in the line after it has wheeled from the column, &c. According to the Regulations, this step is performed from the halt, in ordinary time, by the following words of command:—

Close to the Right—March, (*Appuyez à la droite*, Fr.)

Close to the Left—March, (*Appuyez à la gauche*, Fr.)

Back STEP, (*pas en arrière*, Fr.) a step taken to the rear from any position without any change of aspect. According to the Regulations, the back step is performed in the ordinary time and length of pace, from the halt, on a given word of command. It will be generally recollected, that a few paces only of the back step can be necessary at a time.

STEP back, *March*, (*en arrière*, *marche*, Fr.) a word of command which is given

when one or more men are ordered to take the back step according to the regulation.

Quick STEP, (*pas accéléré*, Fr.) a military step consisting of 30 inches, (of which 103 are to be taken in a minute, making 270 feet in a minute,) which constitutes what is technically called *quick time* in marching.

Quickest STEP, (*pas précipité*, Fr.) a step measuring 30 inches, and of which 120, making 300 feet, may be taken in a minute.

This step is applied chiefly to the purpose of wheeling, and is the rate at which all bodies accomplish their wheels; the outward file stepping 33 inches, whether the wheel is from line into column, during the march in column, or from column into line. In this time also, and by this step, should divisions double, and move up, when they pass obstacles in line; or when in the column of march; the front of divisions is increased, or diminished.

To STEP between, to interfere.

To STEP forth or forward, to take an active part in any thing. Thus, when the circle was formed, the grenadiers stepped forward to beg off their comrade, &c. The officers stepped forward, and remonstrated against their colonel.

STEP is likewise figuratively used to signify promotion. As, the next step from a lieutenancy is a troop or company, and from that to a majority; except in the Guards, who have the exclusive privilege of going over this intermediate rank, and stepping into a lieutenant-colonelcy at once. The Engineers enjoy the same privilege.

To STEP over, to rise above another. This term is generally used in a bad sense. As, young men of interest and connection frequently step over old soldiers.

STEP, (*échelon*, Fr.) According to the Translator of Rules and Regulations for the field exercise and manœuvres of the French infantry, *échelon* means, in a figurative sense, what we understand by step in military promotion. See *Grades Militaires* in the *Nouveau Dictionnaire Militaire*, by A. T. Gaigne.

STEP and Leap is one of the seven airs, or artificial motions of a horse, being as it were three airs.

The step puts the horse upon the hand, and gives him a rise to leap, like unto

one that runs before he leaps, and so may leap higher than he that goes every time a leap.

STEPPING off to music. In stepping off to music, or to the tap of the drum, it will be recollected, that the word of command is the signal to lift up the left foot, and that it comes down, or is planted, the instant the tap is given, or the music completes its first note, so that the time must be invariably marked by the left foot, and not by the right, as has been practised by the Guards and the Artillery, until a recent regulation.

STÈRE, *Fr.* a measure for firewood which has been adopted by the French, since the revolution. The stère is equal to the cubic meter. It is used instead of the *voie*, and is about half of that measure. The *Corde*, in decimals, answers to 3.335 stères.

STEREOGRAPHY, (*stéréographie*, *Fr.*) the art of drawing the forms of solids upon a plane.

STEREOMETRY, (*stéréométrie*, *Fr.*) the art of measuring, or that which teaches how to measure, all sorts of solid bodies.

STEWARD, one who manages the affairs of others. In all well conducted messes belonging to military corps, certain officers are named to act as stewards, for some specific period. These act, conjointly with the treasurer and pay-master, for the good of the whole.

STICK, the same as *Baton*, an instrument of dignity, which is occasionally carried by persons and officers in high situations, particularly by such as are in waiting near the royal person.

STICK, an instrument of punishment among the Germans, and attempted to be introduced among the French by M. De St. Germain, minister of the war department under Louis XVI. No such instrument is used among the British.

Gold Stick, an officer of superior rank in the Life Guards so called, who is in immediate attendance upon the king's person. When his Majesty gives either of his regiments of Life Guards to an officer, he presents him with the gold stick. The colonels of the two regiments wait alternately month and month. The one on duty is then called gold stick in waiting, and all orders relating to the Life Guards are transmitted through him. During that month he commands the brigade, receives all

reports, and communicates them to the king. This temporary command of the brigade does not, however, interfere with the promotions that may be going forward, as each colonel lays those of his own particular corps before his majesty. Formerly the gold stick commanded all guards about his Majesty's person. On levees and drawing-room days, he goes into the king's closet for the parole.

Silver Stick. The field-officer of the Life Guards, when on duty, is so called. The silver-stick is in waiting for a week, during which period all reports are made through him to the gold-stick, and orders from the gold-stick pass through him to the brigade. In the absence of the gold-stick on levees and drawing-room days, he goes into the king's closet for the parole.

STICKLER, a sidesman to fencers, or second to a duellist; also an individual that adheres to trifles.

STEREOTOMY, (*stéréotomie*, *Fr.*) the art of cutting solid bodies; it also means the method of cutting stones.

Mr. *Frezier* has written scientifically upon this subject in a work called *Traité de Stéréotomie*.

STILETTO, (*stilet*, *Fr.*) a small dagger, with a round blade and sharp point.

STINKPOT, a firework made of offensive combustibles, which is used at sieges, &c. See **LABORATORY**.

STIPEND, (*salair*, *Fr.*) salary, hire, wages, pay.

STIPENDIARY, (*stipendiaire*, *Fr.*) that serves a foreign power for pay. Hence, stipendiary troops.

STIPENDIUM, wages, or pay for soldiers. This term was applied, among the ancient Romans, to the money which was paid, by way of subsistence, for military service, and which only took place in the year 347 of the Roman æra. Until that period the Roman soldiers, or rather citizens, served voluntarily, and without pay; clothing and subsisting themselves until the close of the war, in which the Republic might be engaged. It was so, likewise, in the early days of Greece; among the Lacedæmonians, the Athenians, and the Spartans, who never paid their soldiers except when the campaign was at a great distance from home. The pay of the foot soldiery, among the Greeks and Romans, resembled, in some degree, the

subsistence which is given to modern soldiers; being equally subject to deductions for arms, accoutrements, necessaries, &c. But the cavalry of the ancients was more amply supplied than that of the moderns in every respect, and better paid.

STIRATOCRACY, (*stiratocratic*, Fr.) a government in which military power has the ascendancy.

STIFF legs, a disease in horses, under which are also comprehended *dried*, *decayed*, or *bruised legs*.

STIFLE, in a horse, a large muscle, or that part of the hind leg which advances towards his belly. It is a most dangerous part to receive a blow upon.

STIFLE-joint, in a horse, the first joint next the buttock, and above the thigh.

STIFLED-horse, whose leg bone is put out, or the joint much hurt.

STIFLING, a malady which accidentally befalls a horse either by some strain, by leaping, or by a slip in the stable, or on travelling, or else by some blow, which either puts out the *stifle-bone*, or hurts and strains the joint.

STILES, in joinery, &c. are the upright pieces, which go from the bottom to the top in any wainscoat.

STIRRUP, (*étrier*, Fr.) a well known iron frame fastened to a saddle with a thong of leather, for the foot of the rider to rest upon.

It is observed, in a publication entitled the Sportsman's Dictionary, that you should bear vigorously upon your stirrup when you have your foot in it, and hold the point of your foot higher than your heel.

When you would stop your horse, you must bear upon your stirrups.

You should keep your right stirrup half a point shorter than the left, for in combat the horseman bears and rests more upon the right; which also, from the weight of the sword, carbine, &c. renders that side heavier than the left, and the pressure consequently greater. Besides in mounting, the facility is increased by the imperceptible length of the left stirrup.

To lose one's STIRRUPS, to suffer them to slip from the foot; this may happen from the coxcombical practice of resting upon the toe instead of the ball of the foot, which is the true fulcrum.

STIRRUP foot is the left foot.

STIRRUP leather is a lathe or thong of leather descending from the saddle,

down by the horse's ribs, upon which the stirrups hang.

STIRRUP-bearer, an end of leather made fast to the end of the saddle, to truss up the stirrups when the rider is alighted, and the horse sent to the stable.

STOCCADO, a push or thrust with a rapier.

STOLE. See *ORDER of the Stole*.

STOCK, the whole of the wooden part of a musket or pistol.

STOCK, (*col*, Fr.) a part of an officer's dress, which consists generally of black silk or velvet, and is worn round the neck instead of a neckcloth. The soldier's stock is of black ribbed leather, and is part of his small mounting. Red stocks were formerly worn in the Guards; they are still so in some Prussian regiments.

As his Majesty has been graciously pleased to relieve the British soldier from a load of grease, &c. by dispensing with clubs and tails, we cannot forbear expressing a wish, that the same humane attention could be paid to the stiff piece of leather in which his neck is confined. One of the punishments, still existing among the French, and frequently resorted to during the old monarchy, is the carcan or iron collar. We mention this circumstance, because we honestly believe, that hundreds, among our brave soldiers, would sooner be put into the black hole, or even suffer corporal punishment, than be doomed to have their necks so dreadfully hampered. Indeed we may appeal to those officers who have been in warm climates, or upon service, to acknowledge the propriety of this remark. They will say, that soldiers sieze the first opportunity to get rid of this galling encumbrance.

Stock purse, (*masse*, Fr.) a certain saving which is made in a corps, and which is applied to regimental purposes. In some corps this fund is so honestly managed, that, without encroaching upon the public, the most beneficial effects are produced: in others again, it is so mysteriously handled between commanding officers and paymasters, that it becomes a perpetual source of discontent and jealousy.

Stock purse in his Majesty's Foot Guards, a fund which is created at the expense of the effective state of every company, and regularly shared among the captains who rank as lieutenant-colonels in the line.

STOCKS for building ships, (*chantier*, Fr.) certain places, on the sides of rivers or up creeks, which are appropriated to the construction of vessels, &c.

Elm STOCKS, the naves of wheels for field carriages are so called in the ordnance service.

STOMPER, Fr. to sketch out a design, or to draw with colours that have been pounded into dust. Instead of the pencil or crayon, a roll of paper which is dipt into the coloured dust, serves to put on the different colours.

STONES, in military architecture, may be distinguished into two sorts; that is, into hard and soft: hard stone is that which is exposed to the open air, such as rocks, and which lies loose upon the surface of the earth: the soft stone is that which is found in quarries, and under ground. It is undoubtedly true, that the hardest stones make the most durable works; but as there is seldom a sufficient quantity to build the whole fortification, the best serve in the facings of the building, in the foundations, and where the works are exposed to the violence of the waves.

The stones of some quarries are very soft, and easily worked, when first cut out; but when exposed for some time to the open air, become very hard and durable.

As there is undoubtedly a kind of sap in stones, as well as in timber, by which the same sort of stone, taken out of the same quarry, at one season, will moulder away in a few winters, but, when dug out in another season, will resist the weather for many ages; stones should always be dug in the spring, that they may have time to dry before the cold weather comes in; for the heat of the sun will extract the greatest part of the moisture, which otherwise expands in frosty weather, and causes the stone to splinter, although it be otherwise hard and good.

As stones lie in the quarries in horizontal beds or strata, (that is, they cleave in that direction,) and have likewise a breaking vein, which is perpendicular to the former; both these directions must be observed in cleaving, as well as in raising them out of their beds. Stones that will not easily cleave, must be blown up by gunpowder.

Marble is of various sorts and colours; the most beautiful of which is imported from abroad. The marble found in

England is mostly blackish, and so very hard and difficult to polish, that very little use is made of it, except to burn and make lime.

Fire-STONE comes from Reygate, and serves chiefly for chimnies, hearths, ovens, furnaces, and stones; being a dry, porous, gritty stone, which bears the heat without breaking: on account of this quality, it is called *fire-stone*.

Purbeck-STONE is a hard, greyish stone, and serves chiefly for paving, coping of walls, and for all such other uses where strength is required; it being the most hard and durable stone, except the Plymouth marble. It is found on Purbeck island.

Rag-STONE is of a bluish colour, and commonly used in paving; but there is a stone called *Kentish rag*, that is very useful in building: it splits very easily, and yet is very hard.

Free-STONE, more generally called *Portland-stone*: it is a fine whitish stone, without any veins. This stone is very soft when it comes out of the quarry, is easy to be worked, and becomes very hard in time. Hence it is very fit for military works.

Alabaster is a clear whitish stone, not unlike coarse marble. It is plentiful in some parts of Italy: but there is none to be found in England. It is to be had in great abundance in Scotland, and makes the very best lime.

Whin, or *Aberdeen whin*, is of a greyish colour, intermixed with veins, not unlike coarse marble. This stone is fittest of any for military works: because it withstands the weather, and the violence of the waves, better than any stone found in England.

Russian STONE, commonly called *Asbestos*. Cloth, which is proof against fire, may be fabricated out of this stone, when decomposed. It is indigenous to Russia.

Keep-STONE, center stone in a chimney piece.

Key-STONE of an arch is the middle stone of an arch to bind the sweep of the arch together.

STONE-shot. The ancient bombards were sometimes very large, and chiefly discharged stone balls of a monstrous size. There is an order extant in Rymer, from King Henry V. to the clerk of the ordnance, and John Bonet, a mason of Maidstone, to cut 7000 stone-shot in the quarries there.

STOP. To form a stop in horsemanship is to stop upon the haunches.

Half a STOP, a stop not finished, but a pesate; so that the horse, after falcading three or four times upon the haunches, resumes and continues his gallop, without making pesates or curvets.

STOPPAGES, in a military sense, deductions from a soldier's pay the better to provide him with necessaries, &c.

Great coat STOPPAGE, to provide each man with a great coat; to defray the expense of which, government allows 3s. annually per man, and the colonel contributes 2s. 6d. for each serjeant, and 1s. 10d. for each rank and file annually.

STOPPAGE, for the subsistence of the *Sick*. In the Regulations for the better management of the sick in regimental hospitals, it is particularly laid down, under the head Subsistence, p. 16, that sufficient funds should be established for the support of the sick without any additional charge to government; and, at the same time, that the sick soldier should be provided with every reasonable comfort and indulgence that can be afforded. The sum of four shillings per week from the pay of each soldier will, under proper regulations, and with strict company, be sufficient for this purpose; which sum is to be retained by the paymaster of the regiment.

STOPPER, a piece of wood or cork, made to fit the bore of a musket barrel, which soldiers use in wet weather; and, on other occasions, when the piece is not loaded, to prevent moisture and dust from getting into the barrel.

STOPPLE. See **PATCH**.

STORE-Keeper, a person entrusted with the care of the stores in the magazines, such as the provisions, forage, &c. During a war, storekeepers receive these articles from contractors, and deliver them out to the troops. They have several clerks under them, appointed to different departments, of provisions, hay, straw, oats, &c. The storekeepers belonging to the ordnance have charge of all the King's stores, belonging both to land and sea-service.

Government STORE-keeper général, an appointment of recent date, which has been given to John Trotter, Esq.

STORE-ship. See **SHIP**.

STOREHOUSE. See **MAGAZINE**.

Military STORES are provisions, forage, arms, clothing, ammunition, &c. Officers, storekeepers, or commissaries, who are convicted of embezzling or misapplying any military stores, are to make good the damage, forfeit 100l. and to be cashiered. See *Mutiny Act*, Sect. 65.

Medical STORES on board transports.

Certain articles of diet which are put on board each transport, are so called. These are to be considered as intended solely for the use of the sick, or convalescents; they are to remain in the charge of the master of the transport, and only to be issued upon demand in writing, made by the surgeon from time to time as he shall judge proper; or, when there is no surgeon, upon demand of the commanding officer. And the surgeon or commanding officer is to give the master, at the end of the voyage, a certificate that his demands for the said medical stores have been made only upon proper occasions, and have not been expended for any other use, than that of the sick, or convalescent.

To STORM, (*donner l'assaut*, Fr.) in military matters, to make a violent assault, on any fortified place, or works. At the siege of Louisbourg in the year 1758, the following anecdote occurred; and as it shews the superiority of true generalship over brutal courage, we recommend it to the perusal of every officer, and to the imitation of every general who may have the lives of his fellow subjects entrusted to his judgment. The celebrated General Wolfe, always brave, always eager to put forth the energies of his nature, proposed to General Amherst who commanded the besieging army, that the place should be stormed. The General asked his friend Wolfe, how many lives he thought it might cost? the latter said, about three hundred; and he then asked how long he thought it might hold out against a blockade? Not above three days. Well then, let us wait three days and save our men. The place surrendered on the second day.

STORMING party, a select body of men, consisting generally of the grenadiers, who first enter the breach, &c.

STORY, history; account of things past: hence to be famed in story. Also small tale, petty narrative; idle or trifling tale; also a deviation from the truth.

Long STORY, a tedious recital of any

thing; a minute description, &c. Such as military men, especially at their table or mess, consider intolerable.

STOUT, brave, bold, determined, not to be dismayed.

STRAGGLERS, (*traineurs*, Fr.) men who wander from the line of march. It is the business of the rear guard to pick up all stragglers, &c.

STRAIGHT, in horsemanship. To part or go straight, or right out, is to go upon a tread, traced in a straight line.

STRAIN. See **SPRAIN**.

STRAIT, with bricklayers, a term used for half, or more or less than half of a tile.

STRANGLES, a disease in a horse's throat, proceeding from some choleric or bloody fluxion, which issues out of the branches of the throat veins, into those parts, and there causes a violent inflammation. It engenders a hard swelling between the horse's chaps, and upon the roots of his tongue, and about his throat, which swelling if not prevented, will stop his wind pipe, and so strangle or choak him.

STRANGURY, } a distemper in
STRANGULLION, } horses, which may be known by the horse's having an inclination to stale often, and yet voiding only a few drops.

STRAP, a narrow long slip of cloth or leather. It is directed, that every recruit shall, on his final approval, be provided with straps for his coat, the amount of which, namely 2s. 4d. is to be stopped out of his bounty.

STRAP, a strap made of worsted, silk, gold, or silver, which is worn upon the shoulder that has no epaulette. The French call it *contre épaulette*.

STRAP, a piece of round leather, which is attached to the martingale, for the purpose of confining a horse's head.

Coin STRAP, a strap which was formerly used for the purpose of securing the coins or wedges in a gun or limber carriage. Not known in the present service.

Lashing STRAP, a leather strap for the purpose of lashing on side-arms, and intrenching tools, on the gun and limber carriages.

Muzzle STRAP, a leather strap applied round the muzzle cap to secure it to the gun.

STRAPON TIN, *Fr.* a sort of hammock which is used in hot countries, &c.

Also a moveable seat in a chariot or chaise, or what we vulgarly call **Bodkin**. See **HAMMOCK**.

STRAPPADO, (*estrapade*, Fr.) a punishment sometimes inflicted upon foreign soldiers, by hoisting them up with their arms tied behind them; and then suddenly letting them down within a certain distance of the earth.

Black-STRAPPING, a term in common usage among several regiments of the line, to express their being upon fatigue duty. When they are on the King's works, where other men whose tour of duty it is to receive an allowance of spirits or wine, they are obliged to work without any remuneration.

STRAPS of a saddle are small leather straps nailed to the bows of the saddle, with which the girths are made fast to the saddle.

STRATAGEM, in war, any scheme or plan for the deceiving and surprizing an army, or any body of men.

STRATAGEMS of war, (*stratagèmes de guerre*, Fr.) certain feints which are resorted to by able generals, &c. to cover their real designs during the operations of a campaign. It is impossible to lay down any specific rules on this head, as every general, according to the capacity and activity of his mind, makes use of the various means and expedients which grow out of times, circumstances, and occasions. It has been asserted by some writers, that all sorts of stratagems, (even those which are connected with treachery,) may be adopted for the accomplishment of any design. This maxim is, however, strongly combated against by those who have written upon the law of nations. Probity, in fact, and elevation of mind, (which are superior to the pitiful measures of teacherous affiliation, or intercourse,) should always bear the ascendancy in human actions. There are stratagems which may be practised and carried on, without the least deviation from honour and good faith. Many distinguished generals have had recourse to these; but none ever succeeded so well as Hannibal. Wishing to cross the river Rhone, and being in want of almost every article, that was necessary to effect the passage in the presence of an enemy who was diligently watching his motions, he caused him to imagine, that it was his intention to keep the ground he occupied. He ordered large fires to be lighted up in dif-

ferent quarters of his camp, and directed some of his troops to shout and make loud noises, as if they were perfectly stationary. During this apparent state of inactivity, he broke up his camp, marched along the river's side, and crossed it at a place where it was least expected he would make the attempt.

Among other good qualities, which are indispensably necessary in an able general, that of knowing how to conceal a projected march, and to anticipate the motions of an enemy, is not the least important.

The army under the command of the Duke of Saxe Weimar, having laid siege to Brissack in 1638, the Imperialists went to the relief of that place. The Duke, on receiving intelligence of their approach, instantly marched against them, with a body of forces composed of Swedes and French allies. The Imperialists, who had advanced by rapid marches, had gained possession of an eminence, by means of which they would have enjoyed all the advantages of local superiority, had not the Count de Guébriant, who was then a lieutenant-general in the Swedish service, suggested a stratagem to dislodge the enemy. The following plan was consequently adopted, and it succeeded to the full extent of his design.

The drums and trumpets of the different corps were collected together, and stationed in a neighbouring wood, so as to draw the enemy's force and attention from the quarter proposed to be carried. The Imperialists being naturally led to believe, from the noise and concurrence of so many military instruments, that they were going to be attacked from that quarter, beat to arms, and left their position in complete order of battle. They had scarcely quitted the eminence, before the Duke of Saxe Weimar appeared in their rear, took possession of the ground which they had so imprudently abandoned, and became master of all the advantages which his enemy would otherwise have enjoyed.—An interesting account of this ingenious manœuvre may be found in the History of Le Maréchal de Guébriant.

Stratagems of this description have been frequently used by the French during the late war, particularly in Italy. Stratagems, in fact, constitute one of the principal branches in the art of war. They have been practised in all ages by

the most able generals, and have contributed, in a great degree, to their military reputation. Virgil, in his *Æneid*, Book II. says:—

Dolus an virtus quis in hoste requirat.

The history of France abounds with instances, in which stratagems of every kind have been successfully practised. It seems the peculiar talent of the inhabitants of that country to derive advantages from well concerted feints, &c. in war, and to secure their victories more by science than by downright hardihood. Nevertheless, far be it from us to detract from the latter. Modern Frenchmen, as soldiers, seem to have acquired, or to have had awakened in them, on shore, the courage and perseverance which are so remarkably conspicuous amongst us at sea. Perhaps it is out of the natural course of things, that they should ever reach the naval excellence by which this country is so singularly distinguished; and perhaps it is equally ordained, that we should never be the first in military knowledge. France and England unquestionably hold between them the destinies of Europe, and of the three other quarters of the globe: France by the natural advantages of her continental position, added to a predilection for arms, which is manifest throughout her population; and England by its insular situation, rendered, as it were, impregnable, by an innate courage, and unrivalled aptitude at sea. Time alone, and the experience of facts, must hereafter determine how far either nation will be benefited by a deviation from the primary advantages which nature furnishes to each. For it must be acknowledged, that the true element, in which a Frenchman seems calculated to act, is on shore, or within the guardian range of his artillery and fire-arms; and that an Englishman, though far from being wholly out of his element on land service, is thoroughly himself at sea. From the increase of our foreign possessions, but most especially from the extent of our territories in India, and the armed state of Europe, it has been found expedient to enlarge the scale of our military establishments, in proportion to the exigencies of a very desultory service abroad, and a possible necessity at home for military operations. Without, therefore, entering into the policy of either country, we shall content ourselves with observing, that as we have an army, it

behoves every efficient character belonging to that army, to obtain a thorough knowledge of his profession, and to study the nice shades of an art which, of all others, has principles that are fixed and immutable, under circumstances of the greatest apparent casualty. It has been wisely observed by a French writer, under the article of *stratagèmes de guerre*, that a chief, who is defeated in a general action, will sometimes attribute his failure to fortune, although it be universally acknowledged, that chance, or fortune, has a very trifling share in pitched battles, while art and science regulate the different movements, and finally determine their issue. Whoever, therefore, suffers himself to be surprized by his enemy, cannot be said to stand wholly exculpated from ignorance, or neglect, since it must have been in his power to have avoided the snares laid for him, by means of vigilant spies, and unremitting attention. This remark appears to us, not only to be generally correct; but it seems more immediately applicable to all generals that have secret service money at command. The influence of that commodity (upon which no embargo can be laid) will be felt in every garrison town, or sea port; and those who have the management of the public purse, must be dull indeed, if they do not feel their way into the secret preparations of an enemy, before they hazard an attack against him. Of a deficiency on this ground, we have had melancholy proofs both in Spain and Holland, particularly at Walcheren in 1809.

Besides the different stratagems, which may be used by an able general, to bring about the overthrow of the whole or part of an army, by leading it into an ambuscade, there are various ones which may be practised against a fortified place. To effect the latter purpose, you may contrive to get soldiers, in disguise, through the gates at unguarded hours; to introduce them through subterraneous passages, or by any other means that may offer. Before any attempt of this sort is made, every part of the fortifications should be narrowly reconnoitred, and as much knowledge be obtained of the interior situation of the place as can be procured by means of good spies, or from deserters. You must, above all things, be well assured, that the garrison is relaxed in duty; that the different guards are negligently attended to; that

the soldiers who compose them are in the habits of drinking, or gaming, that their officers neglect their rounds, or go them without system, or regularity; that the gates are ill guarded, and the avenues to them ill watched; and that there are certain places, or entrances, which are not watched at all; for it is almost impossible to surprize any place, that has been regularly fortified, while the garrison does its duty.

If it should appear practicable to surprize a town, by taking advantage of the negligence of the sentries, &c. at some particular gate, previous means must be adopted to introduce some soldiers dressed like market women, or in the garb of some religious order. You may then contrive to get a wagon or cart, (seemingly loaded with hay or straw, but with soldiers concealed beneath it,) so placed in the entrance of the gate that it will serve as an obstacle when it may be found necessary to shut it. In order to do this effectually, let a pin be taken out, so that the wheel comes off, or the axle-tree gets broken. The instant this is done, the soldiers, who had entered the town in disguise, must join the drivers, the men that have been concealed in the wagon will then leap out, and the whole must rush upon the port-guard. While this happens, the troops that have been placed in ambush round the fortifications, will advance with promptitude and firmness, and endeavour to get possession of the town before a sufficient force can be collected to repel the attack. In the year 1789, a rabble from Courtray took advantage of the carelessness of the Imperial troops, who were in garrison at Gand, in Flanders, and by seizing upon the gate and port-guard, brought about a temporary rebellion in the country. The author of this compilation was an eye-witness to the consequent effects of this coup de main; and he is fully persuaded that Antwerp might have been taken in 1809, by a prompt and vigorous approach. This, indeed, was done without stratagem; but the circumstance proves, that when the sentries of a fortified place are negligent in their duty, a surprize is always practicable. We are precluded, by the limits of our undertaking, from going more fully into this important branch of military science. Several treatises have been written on the subject. Among others, one appeared in 1756, entitled, *Stratagèmes de guerre*,

illustrating, from history, the various stratagems which had been practised by some of the ablest generals, during a long period of time, down to the peace of Aix-la-Chapelle. It was published by Mr. Carlet de la Rosière; an officer in the French service, and acting engineer in the isles of France and Bourbon. It contains much curious matter.

STRATAGEM and force united. Count Turpin, page 43, vol. i. in his Essay on the Art of War, judiciously remarks, that when an enemy, superior in force, is in possession of a pass, from which he cannot be dislodged but by art, stratagem and force should be blended together as often as possible. Onozander, the Greek general, set fire to a wood which was at the foot of a mountain in the enemy's possession, and which he wanted to go over; the flames and smoke forced the enemy to abandon it, and leave the passage free for him.

STRATEGICALLY, according to the principles of strategy; done out of sight of an enemy.

STRATÉGICS and Tactics. Mr. C. Malorti de Martemont in his translation of a work entitled *the Modern System of War*, has defined these terms in the following manner.

"I define *strategics*, the science of the movements in war of two armies, out of the visual circle of each other; or, if better liked, out of cannon reach.

"*Tactics* are the science of the movements made within sight of the enemy, and within reach of his artillery.

"The reader may, if he pleases, prefer the reach of cannon to that of sight, for the bounds within which the movements of war cease to be strategics and become tactics. But were I to decide for one of them, I should adopt the reach of sight; for the following reason: that deploying columns in order of battle, is an operation of tactics; yet, it is generally done out of cannon reach. At Rosbach, to be sure, it was not so, but what was the consequence?" p. 87.

STRATARITHMOMETRY, in war, the art of drawing up an army, or any part of it, in any given geometrical figure; and of expressing the number of men contained in such a figure, as they stand in order of battle, either at hand, or at any distance assigned.

STRATEGY, (*stratégie*, Fr.) Strategy differs materially from *tactic*; the latter belonging only to the mechanical

movement of bodies, set in motion by the former. One is, in fact, the soul, the other, the mere body of military science. In a most excellent publication, entitled *Idées Raisonnées sur un Système Général, &c. pour étudier la Science de la Guerre, &c.* by Nockhern de Schorn, we find the following explanation of the term; and as it does not exist in any of our English lexicographers, we presume the extract must be particularly gratifying to the intelligent officer. In page 198, *Troisième Partie, Sixième Chapitre, Sixième table Méthodique*, our author thus continues:

"We are at length got to the sixth integral part of military knowledge, which is termed *stratégie*, or the art of knowing how to command, and how to conduct the different operations of war: the word is derived from the Greek *strategos*, which signifies chief, or general of the army. The term *general* or *chief* conveys the same meaning, indeed, that constitutes the word universal, and points out an officer of superior rank, whose mind is well stored with military theory, and who can practically lead into active service, all the different arms, or component bodies belonging to war; such as cavalry, infantry, and artillery. This definition clearly points out the impropriety of confining the terms *general*, *lieutenant-general*, and *major-general*, to any particular body of armed men: for what is a general, whose skill consists in being able to manage a body of cavalry, or of infantry only, without knowing how to conduct others? A general, whether he be commander in chief, or be acting in a subordinate capacity to him, ought to know cavalry, infantry, and artillery movements, and possesses all the branches of military science.

"Nor are these observations confined to the generals and superior officers of armies: subaltern officers should be more or less versed in the science of knowing how to conduct men into action, and to combine the different operations of war; particularly so, if their natural ambition should lead them to aspire to the highest posts of military preferment.

"Strategy, or the knowledge of commanding armies, may be divided into two parts; one comprehending the higher, and the other embracing the lower branches of the art. The first embraces all that a commander in chief,

and all that his subordinate generals should be acquainted with ; and the second (which may also be called *la petite guerre*, being the diminutive of the first) appertains to the staff, and to a certain proportion of subaltern officers.

To be adequate to a chief command, it is necessary, that the person, so selected, should possess extraordinary talents, and not only be master of all the theory of war, but likewise know, from practice and experience, every species of military operation. He should, in fact, to refer to one of our own articles, (*vide MIND*) be gifted with a military mind.

In order to obtain all that can be obtained by study, (for natural genius must supply a very large proportion,) the intelligent officer will first fix upon a distinct and clear idea of the part he means to investigate. From one idea he will gradually proceed to another; and when the whole system has thus been progressively touched upon, he will take an analytical view of the several component parts; examine them together; weigh their relative points, and then look into the different authors that have written upon this vast and complicated subject. He will peruse what relates to the first branch, or *La Grande Stratégie*, in the following works:—

1. Les Mémoires de Montécuculi.
2. L'Esprit de Folard.
3. Art de la Guerre, par le Maréchal de Puiségar.
4. Les Réveries du Maréchal de Saxe.
5. L'Essai sur l'État de la Guerre, par Turpin.
6. Les Instructions du Roi de Prusse.
7. Le Cours et le Traité de Tactique, par Joly de Mézeroy.
8. Théorie de la Guerre par le même.
9. Pensées sur la Tactique et la Stratégie, par M. de Sylva.
10. L'Essai Général de Tactique, par M. Guibert.

The best writings on what is called *La Petite Stratégie*, or the inferior branches of the art of war, are

1. Le Premier livre du 1 tome, et le cinquième livre du 2 tome, de l'Art de la Guerre, par M. Turpin.

This work has been translated by Captain Otway.

2. Le Traité sur la Petite Guerre, par Grand Maison.

3. Le Partisan, par Jenny.

4. Principes sur la Petite Guerre : Ouvrage ajouté aux Instructions du Roi de Prusse.

5. La Petite Guerre, par M. le Capt. Knock.

6. Sentimens d'un Officier Hessois sur l'art de conduire les détachemens à la guerre.

7. Le Chasseur à la Guerre, ou du service des troupes légères.

8. Observations sur le Service de Cavalerie à la Guerre, par le Chevalier de Shônacken.

Although these celebrated writers ought to be considered by every young officer as the oracles of his profession, he must, nevertheless, guard his mind against that fatal persuasion, which might lull it into a belief, that nothing more is required than to peruse and to digest their rules and regulations. When he has made himself completely master of their thoughts, he must endeavour to identify himself, as it were, with the authors and the generals themselves. By this method he will probably hit upon some of those hidden truths in military science, from which many secondary ones are drawn; and in contemplating the commentaries, &c. of great generals, he will discover, that they knew well how to calculate dangers, to appreciate probabilities, and by occasionally deviating from ordinary rules and prescribed principles, how to move in untrodde paths, and to obtain signal advantages, where, to superficial minds, nothing but desperate hazard and destruction appeared.

STRATOGRAPHY, (*stratographie*, Fr.) the description and details of all that belongs to an army; of the dress, arms, &c. of the soldiers, and of the manner of encamping, &c. Vegetius has given the stratography of the Romans.

STRATOR. Among the ancient Romans, strator signified an officer, belonging to the army, whose duty was to take care of the military roads; to see that all obstacles to the ready movement of troops were taken away; to level heights, throw bridges over rivers, cut down woods, and to execute all the orders which tended towards facilitating the march of an army.

STRAW. According to the regulations, published by authority in 1799, relative to forage, &c. which troops are to receive in the home encampments, it is directed that straw is to be allowed at

the rate of one truss of 36 pounds to each *paillasse* for two men, being a *full bedding*; at the expiration of sixteen days to be refreshed with half a truss to each *paillasse*; and at the expiration of 32 days to be removed, and a fresh bedding of one truss to be given:—and so on every succeeding period of sixteen and thirty-two days.

For the sick in the hospital, the straw is to be changed as often as it may be deemed necessary.

Two trusses per troop, or company, are to be allowed for *bâtmen*, or servants, not soldiers; and three trusses per troop, or company, for the washer-women, to be changed every sixteen days, not having *paillasses*.

Thirty trusses of straw per troop, or company, are allowed on first taking the field for thatching the women's huts.

Regiments, *not having paillasses*, are allowed straw at the following rates:—

On taking the field, two trusses of 36 pounds each to every five men, at the end of eight days to be refreshed by one truss, and at the end of eight days more to be refreshed again by the same quantity. At the end of twenty-four days the whole to be removed, and an entire new bedding to be given, and refreshed as before, viz. two trusses for every five men.

Four pounds of straw are to be added to the ration forage for the cavalry and artillery horses only.

Six pounds of straw are to be allowed to the general officers and staff, in addition to the prescribed ration of forage.

The straw which is allowed to cavalry regiments for the bedding of their horses, is called *long forage*.

For STRAW, a word of command to dismiss dragoons when they have grounded their arms, so that they may be ready on the first signal given. The French say—*A la Paille*. See PAILLE.

STREAKS, the iron bands on the outside of the wheel to bind the fellys strongly together.

STREAK *nails* are those driven through the streaks into the fellys.

STREET. See ENCAMPMENT.

STREET-firing. See FIRING.

STRELITZ, a Russian word, whose plural number is *strelitzzy*, derived from *strelai*, an arrow, in the same language. An ancient militia, which was formerly kept in pay among the Muscovites, both in time of peace and in time of war,

was so called. The men who composed it always served on foot, and were originally armed, as their name indicates, with bows and arrows. They afterwards received muskets, or firelocks, and laid aside the bows and arrows. The rest of the Russian army, which was only called together in cases of emergency, retained the bows, arrows, and lances; with which each soldier armed himself, according to his own particular whim or notion.

In the remote periods of the Russian empire, the *strelitzzy* were the only regular body of troops that formed any part of the standing army of that country. It consisted of twenty to twenty-four thousand men, who enjoyed a multiplicity of privileges and immunities, and were quartered in one of the suburbs of Moscow, which is still called *strelitzkaia slaboda*. From the latitude allowed them, and the peculiar indulgences which these soldiers enjoyed, they might well be compared to the *Prætorian bands* under the first Roman emperors, and, in some degree, to the present *Janizaries* of Constantinople. They frequently mutinied, like the latter, and interfered in the management of public affairs. Their last revolt, however, was fatal to them. It happened in 1698, during the absence of the Czar Peter I. who, on his return into Russia, broke the whole corps, erased its name from the list of military establishments, and put his troops upon the same footing that those of the rest of Europe were.

STRENGTH. This word may be variously understood in military matters, viz.

STRENGTH, fortification; fortress; strong hold. It likewise signifies armament; power; force. In all returns which are made of corps, *strength* implies the number of men that are borne upon the establishment, in contradistinction to *effective force*, which means the number fit for service: hence, the strength of a battalion, troop, or company, &c.

STRENGTH of a country. This consists principally in narrow passes, as the passes between Spain and France; mountains, rivers; but above all the sea, provided the naval resources are adequate to the extent of coast that may be invaded; for without that the sea is nothing.

STRENGTH of body, force of any bodily

faculty; vigour and exercise of the limbs.

STRENGTH of mind, force of any mental faculty; vigour and exercise of reason.

STRENGTH of an army, the infantry, of which it is principally composed, commanded by able officers.

To be returned upon the STRENGTH of a corps, to stand upon the general or regimental report as actually present with the regiment, in contradistinction to *absent on leave*, or otherwise.

STRIE, in ancient architecture, are the lists, fillets, or rays which separate the flutings of columns.

STRIBORD, *Fr.* a marine term signifying starboard.

STRICT, exact, severe, rigorous; the contrary to mild, indulgent. Hence a strict officer. It is sometimes used in a bad sense, to signify a petulant, troublesome commander.

STRIGES, an ancient term for flutings.

To STRIKE. This word is variously used in military phraseology, viz.

To STRIKE at, to attack; to endeavour to destroy, directly or indirectly.

To STRIKE off, to erase; to blot out; as to strike off the list of the army. This can be done only by the King's order.

To STRIKE a tent, in castrametation, to loosen the cords of a tent which has been regularly pitched, and to have it ready, in a few minutes, to throw upon a *bât-horse*, or baggage-wagon.

To STRIKE terror into an enemy, to cause alarm and apprehension in him; to make him dread the effects of superior skill and valour.

To STRIKE a blow, to make some decisive effort.

To STRIKE the colours. This is properly a naval term, but it may be applied to military matters on some occasions. Thus at the battle of Fontenoy, when the British had driven the French out of the field, Louis XV. who was upon an eminence in the neighbourhood with the Dauphin, and his guards, &c. ordered the royal standard to be *struck*, from a full persuasion that the battle was lost. But the victory was ultimately gained through the bravery of the Irish Brigade; and in this instance, as in many others, England may be said to have been defeated by her own flesh and blood!

STRING-halt, in horses, an imperfection which is a sudden twitching or snatching up one of the hinder legs much

higher than the other. A high-mettled horse is more subject to this defect than any other.

STRIPE. Dr. Johnson calls a stripe a lineary variation of colour. Regimental sword knots are directed to be made of crimson and gold in stripes.

STRUCTURE, (*structure*, *Fr.*) the manner in which any thing is built *Une édifice de belle structure*, an edifice which is built in a handsome manner.

To STRUGGLE with or against, to make extraordinary exertions in direct contest with an enemy, or against superior forces.

STUC, *Fr.* stucco; plaster of Paris.

STUCATEURS, *Fr.* the men employed at stucco work.

STUCCO, a sort of fine white mortar or composition, which is made of lime mixed with pounded marble.

To STUD, to imboss; to cover with knobs either for use or ornament. Thus, a fortified position is said to be studded with redoubts.

STURMBALKEN. These are large cylindrical pieces of timber. When used in defence of a breach, they are hollow and filled with shells; but when they are laid on the summit of a height and rolled down on the enemy, during his ascent, they are merely ponderous and solid, or filled with stones.

STYLE, in chronology, a particular method of reckoning the year, according to the *old* or *new style*.

New STYLE, the new computation of time according to the settlement of Pope Gregory XIII. (hence called the Gregorian style) which now goes 11 days before the old; the first day of the month, among those that go by the old style, being the twelfth with those who observe the new; so that their fixed festivals fall eleven days before the other: this style is used in most places beyond sea, and is now adopted by us.

Old STYLE is the computation of time according to the settlement of Julius Cæsar. This style was used in England, and in some other Protestant countries; but, for the convenience of trade, &c. was altered by act of parliament in 1752; so that the new style is now almost universal.

STYLE, a manner of expression, as a military style; also of appearance and presentation.

STYLE, (*in heraldry*,) the manner in which a person has a right to be ad-

dressed or accosted. Every officer under the rank of Captain is called Mr. ; his commission running Lieutenant or Ensign ———, Gentleman; as is also the case with an attorney at law. The commission of a Captain, &c. is coupled with the word or *style* Esquire.

STYPTIC, (*styptique*, Fr.) a strong astringent; a liquid to stop the effusion of blood from a wound.

SUB, a familiar abbreviation which is used in the British army to signify subaltern.

SUB-brigadier, an officer in the old Horse guards, who ranked as cornet.

SUB-lieutenant, an officer in the royal regiment of Artillery and Fuziliers, where they have no ensigns, and is the same as second lieutenant.

SUBA, *Ind.* a province.

SUBADAR, *Ind.* the governor of a province. It likewise signifies a black officer, who ranks as captain in the company's troop; but ceases to have any command when a European officer is present.

SUBADARY, *Ind.* the appointment or office of a subadar.

SUBALTERNES, (*officiers subalternes*, Fr.) subaltern officers. This word is used among the French, as with us, to signify all officers of a certain inferior degree, viz. *les subalternes*, the subalterns.

All officers under the rank of major, technically considered, are subalterns; captains of troops and companies, in an effective battalion, under arms, are in a subaltern station, and subject to the word of command given by one person; hence subaltern,—from the Latin *sub* and *alter*—in the same manner that lieutenants, cornets and ensigns, are under the controul of captains of troops or companies.

SUBARMALE, *Fr.* a thick garment or clothing, which was formerly used to secure the body from the hard and cold contact of armor.

SUBDIVISION, the parts distinguished by a second division. Thus a company divided forms two subdivisions; whereas two companies added together make a grand division: except the flank companies, which constitute grand divisions of themselves.

SUBDUR, *Ind.* chief.

SUBJECT, (*sujet*, Fr.) one who lives under the dominion of another. It is only used in the first instance, as no one can be the subject of a secondary power,

although he is bound to obey his orders. Thus soldiers are obliged to submit to the orders of a general, but they are not his subjects. The French make the same distinction.

SUB-MARINE-navigation. See MACHINE.

SUBIR, *Fr.* to undergo; to suffer; as *subir une punition*, to undergo a punishment.

SUBLIMITY of the parabola, in projectiles, is what the altitude of the projection wants of being equal to the impetus.

In any two projections equally above and below the elevation for the greatest amplitude of any impetus, the altitude of the lower projection will be equal to the sublimity of the higher, and the altitude of the higher equal to the sublimity of the lower. Hence the sum of the altitude and sublimity in every projection is equal to the impetus of the projectile force.

Military SUBMISSION, *military obediencce*, (*obéissance militaire*, Fr.) an implicit deference which is paid to military rules and regulations; and a proper and vigorous execution of what is ordered to be done.

SUBMULTIPLE (*sous multiple*, Fr.) number or quantity (among mathematicians) is that which is contained in another number or quantity, a certain number of times exactly; thus 4 is the submultiple of 24, being contained in it just six times.

SUBMULTIPLE proportion, (in mathematics,) the reverse of multiple proportion.

SUBNORMAL, in mathematics, is a line determined in any curve, the intersection of the perpendicular to the tangent in the point of contact with the axis.

SUBORDINATION, a perfect submission to the orders of superiors; a dependence which is regulated by the rights and duties of every military man, from the soldier to the general. Subordination should shew the spirit of the chief in all the members; and this single idea, which is manifest to the dullest apprehension, suffices to shew its importance. Without *subordination*, it is impossible that a corps can support itself; that its motions can be directed, order established, or the service carried on. In effect, it is *subordination* that gives soul and harmony to the service: it adds strength to authority, and merit to obe-

dience; and while it secures the efficacy of command, reflects honour upon its execution. It is *subordination* which prevents every disorder; and procures every advantage to an army.

To **SUBORN**, (*suborner*, Fr.) to put one upon bearing false witness, or any mischievous design; to send one privily and instruct him what to do or say contrary to truth.

SUBORNATION, the act of setting up, or hiring false witness; also the enticing thereto.

SUBPENA, (i. e. under the penalty, as *sub pœnâ centum librarum*, under the pain of forfeiting one hundred pounds,) a writ for the summoning of witnesses, to testify or give evidence in courts of justice, &c.

SUBSIDE, Fr. See **SUBSIDY**.

SUBSIDIA. Among the ancient Romans, the subsidia consisted of troops, that formed a body of reserve, and remained in the rear, in order to support any part of the line that might give way. This corps was always composed of allies, or subsidiary soldiers. Their post was in the rear of the Triarii; and until they were called into action, they sat upon the ground.

SUBSIDIARY troops, troops of one nation assisting those of another, for a given sum or subsidy.

SUBSIDY, (*subside*, Fr.) an aid, tax, or tribute, granted, in England, by the Parliament to the King upon some urgent occasion, and imposed upon the subjects according to a certain rate on lands or goods.

SUBSIDY also means money given to a foreign power to enable it to carry on a war.

To **SUBSIST**, in a military sense, to give pay or allowance, &c. to soldiers; as a captain of the light company will subsist 20 men belonging to other companies, for so many days during the march.

SUBSISTANCE *des pièces*, Fr. This term is used among the French to signify the pay or allowance which is given to the officer, bombardier, and men belonging to the train of artillery who serve the batteries.

SUBSISTENCE, (*subsistance*, Fr.) in a military sense this word may be divided into two sorts, viz. the species of subsistence which is found in the adjacent country: such as forage, and frequently corn that is distributed in

parcels; and that which is provided at a distance, and regularly supplied by means of a well conducted commissariat. The latter consists chiefly of meat, bread, beer, &c. To these may be added wood or coals, and straw; which are always wanted in an army. Every general will take proper precautions to have his men well supplied with these first necessaries of life. A very sensible treatise has been published in this country, respecting the system of a British commissariat staff in England; it is entitled the *British Commissariat*.

Baron d'Espagnac has written more at large upon this important subject.— See *Éléments Militaires*, tom. I. page 162; and that writer's *Suite de l'Essai sur la Science de la Guerre*, tom. i. page 246.

SUBSISTENCE should be the clear and nett pay which is given to an officer and soldier, as the wages of his person in the service of his king and country.

To **SUBSTITUTE**, (*substituer*, Fr.) to put in the place of another.

SUBSTITUTE, one placed by another to act with delegated power.

SUBSTITUTE *in the militia*, a person who voluntarily offers to serve in the room of another that has been chosen by ballot. But if afterwards he should himself be chosen by ballot, he is not exempted from serving again, as principals are, within certain restrictions.— Substitutes may be provided for Quakers. Every substitute is liable to a penalty for not appearing to be sworn upon due notice being given; and every regularly enlisted soldier who shall offer to serve as a substitute in the militia, is liable to forfeit 10l. or to be imprisoned. Substitutes who desert are to serve the remainder of their term when taken.

SUBSTITUTION, Fr. an algebraical term used by the French, signifying to substitute in an equation any quantity in the room of another, which is equal to it, but which is differently expressed.

SUBSTITUTION, (*substitution*, Fr.) the act of placing any person, or thing, in the room of another. Thus the substitution of what is false, instead of what is true, in addition to the suppression of the truth, is doubly criminal; and is what the Latins call *suppressio veri et substitutio falsi*.

SUBTANGENT, (*sous-tangent*, Fr.) in any curve, is the line which deter-

mines the intersection of the tangent in the axis prolonged.

SUBTENSE, (*soustendante*, Fr.) a geometrical term signifying the base of an angle, that is to say, a straight line opposite to an angle, which is supposed to be drawn from the two extremes of the section that measures it. Likewise the chord of an arch; that which is extended under any thing.

SUBTERFUGE, trick; evasion; unmanly recourse to equivocation.

SUBTRACTION, (*soustraction*, Fr.) one of the four fundamental rules of arithmetic; a method of taking a quantity from a greater, in order to take the product of the greatest number.

SUBTRAHEND, in arithmetic, the lesser number, which is to be taken or subtracted out of a greater.

SUBTRIPLE proportion, in arithmetic, is when one number is contained in another just three times; thus 2 is said to be the subtriple of 6, and 6 is the triple of 2.

SUBVERSION, (*subversion*, Fr.) a state of total disorder and indiscipline; generally produced by a neglect of small faults at the beginning, and a gradual introduction of every sort of military insubordination.

SUBURBS, (*fauxbourgs*, Fr.) buildings without the walls of a city; from the Latin *sub* and *urbs*.

SUCCESS, (*succès*, Fr.) the happy issue of some undertaking, or enterprize. In a very general sense, but an usual one, it also signifies the event, or issue of a business either good or bad. Success, without an epithet, signifies generally *good success*.

SUCCESS of arms, the good luck, or fortune, which attends military operations, and upon which the fate of a nation frequently depends. It has been observed, that military successes, above all others, elevate the minds of a people.

SUCCESSION of rank, relative gradation according to the dates of commission.

SUCCESSION of Colonels. A particular part of the official Army List is so called. The dates of the several appointments are therein specified, together with the numbers and facings of the different regiments.

A commission in SUCCESSION, a commission in which an individual has an inherent property from having purchased it, or raised men; or which, through interest, he is at liberty to sell to the

best advantage, provided it does not go in the regiment; in which case no more than the King's regulation can be taken.

SUCCOUR, in war, an assistance in men, stores, ammunition, &c.

To SUCCOUR, (*secourir*, Fr.) to strengthen, to make more firm, as to *succour a mast, a cable, &c.*

To Succour a place, (*secourir une place*, Fr.) to raise the siege of it, by forcing the enemy from before it.

To throw in SUCCOURS, to introduce armed men, ammunition, provisions, &c. into a besieged place.

SUCCULA, in mechanics, a bare axis, or cylinder, with staves in it, to move it round with any *tympunum*.

SUD, *Fr.* This word is variously used by the French. It signifies, in sea language, the south wind, and the southern regions; and in an absolute sense, it means one of the four cardinal winds which blows from the south. Hence, *le sud*, the south wind; *sud est*, south east; *sud ouest*, south west.

To SUFFER, (*souffrir*, Fr.) to allow; to permit; to be the cause through negligence, &c. As to suffer an enemy to turn one of your flanks, or to take a strong position.

SUFFISANTE, *Fr.* See **PASSEMUR**.

SUFFOCATING POTS, see **STINK POTS**; and for further particulars, see **POCKET GUNNER**, page 82.

SUFFRAGES, *Fr.* votes.

SUICIDE, (*suicide*, Fr.) the act of self-murder.

SUISESSE, *Fr.* The Swiss soldiers who were in the pay of France previous to the 10th of August, 1792, were generally so called. It was also a general term to signify stipendiary troops. Hence, *Point d'argent, point de Suisse!* which agrees with our cant phrase—No pay, no soldier.

SUITE, or **SERIES**, *Fr.* This term signifies generally any regular collection and successive distribution of things.

This word was also used among the French, to signify, that although an officer might be reduced, or put upon half-pay, he was, nevertheless, obliged to follow (*être à la suite*) some given regiment, or to remain stationed in some fortified place. Perhaps a regulation of this kind might be resorted to with benefit to the service, as far as regards the British half-pay, who, in time of peace, might occupy the vacant barracks.

Officiers à la SUITE, *Fr.* supernumerary officers attached to a regiment, &c.

during the old monarchy of France, who were not required to do duty with it.

SUIVRE, *Fr.* to follow. The French say, *suivre la profession, le métier des armes*, to follow the profession, or trade, of arms; to embrace a military life.

SUIVRE la fortune, *Fr.* to adhere to the strongest side; to follow fortune.

SUIVRE le chemin de la gloire, *Fr.* to follow the path of glory.

SULPHUR, or *brimstone*, a mineral very useful in making gunpowder, and artificial fire-works.

SULTAN, or **SULTAUN**, *Ind.* king. The title which was assumed by Tippoo Saib, chief of the Mysore country. Hence, called Tippoo Sultaun. This term generally signifies the Emperor of the Turks; but in that case it is proper to prefix the word Grand or Great; as most Mahometan princes, especially those of Tartary, assume the title of Sultan.

SULTAN shirki, *Ind.* king of the East.

SULTAUNUT, *Ind.* the decorations or appendages annexed to royalty.

To SUM up, (*sommer*, *Fr.*) in a judicial sense, to collect particulars into a total for the purpose of explaining them to a jury; in which case it is also called the judge's charge. In a general court-martial, the judge advocate, or his deputy, reads to the members of the court all the minutes thereof, for their final decision. In regimental courts-martial, the president does the same.

SUMMARY arithmetic, the art of finding the flowing from the fluxion.

SUMMER, in architecture, is a larger stone, the first that is laid over columns and pilasters in beginning to make a cross vault; or it is a stone which being laid over a piedroit, or column, is hollowed, to receive the first haunce of a plat-band.

SUMMER, in carpentry, is a large piece of timber, which being supported on two stout piers, or posts, serves as a lintel to a door, window; likewise a large piece of timber to which the girders are framed.

There are also *summers* in various engines, serving to sustain the weight. Summer is derived from the Latin *trabs summaria*, or the principal beam of a floor.

SUMMER-tree, in architecture, a beam full of mortises for the joists to lie in.

SUMMERING; in architecture, the

level joists betwixt the courses of bricks in an arch.

To SUMMON, (*sommer*, *Fr.*) to demand the surrender of a place. This is done either in writing, by beat of drum, or sound of trumpet; it also signifies to excite; to encourage; to call up. Thus our immortal poet exclaims:—

When the blast of war blows in our ears,

Stiffen the sinews, *summon up* the blood!

Military SUMMONS, (*sonnation militaire*, *Fr.*) a call of authority; a citation to surrender any fortified place, or body of men. In this case the governor is informed, that unless he yield before the assault is made, the inhabitants will be put to the sword, and their property given up to the plunder of the soldiers.

SUMNUTCHEER, *Ind.* a word, among others, which signifies Saturday.

SUMOODER, *Ind.* the sea, or main ocean.

SUMPTER horse, (*sommier*; *cheval de somme*, *Fr.*) a horse that carries necessaries on a journey; the same as *bât-horse*.

SUN, *Ind.* the year.

SUNAT, *Ind.* old rupees, on which a discount is allowed. Hence, *sunat rupces*.

SUNEEBAR, *Ind.* another word for Saturday.

SUNEECHUR, *Ind.* a word likewise meaning Saturday.

SUNNUD, *Ind.* a charter, grant, or patent, from any man in authority, When it is given by the king, it obtains the appellation of *firmaun*.

SUNNUD dewauny, *Ind.* a grant or instrument in writing, which entitles a person to hold land in India.

SUNSET. See *RETREAT beating*.

SUNSET, the time at which the evening gun fires, and the retreat is beat in camp, or quarters, &c. When troops are embarked on board transports, or any of his Majesty's ships, the men are ordered to parade at half an hour before sunset, quite clean as to their persons. See *Regulations and Orders*, page 178.

To SUP up, a term used in the British cavalry, to signify the last duty which is performed under the inspection of the quarter-masters of troops, when the horses are allowed to rest for the night.

SUPERANNUATED, (*suranné*, *Fr.*) in a general military sense, too old to

serve, either from age, infirmity, or incapacity; and in a more specific one, having passed the period at which an individual may be admitted into any establishment. Thus young gentlemen intended for cadetships at Woolwich must be entered on the master-general's list before 16.

SUPERCILIOUS, haughty; dictatorial; arbitrary; despotic; over-bearing. Some officers commanding corps, &c. are betrayed into supercilious habits, from a mistaken idea, that familiarity engenders contempt. Instead of adopting a middle path, where dignified conduct is tempered by a suavity of manners, they assume the elevated ground of a hateful superiority, and, to use a common phrase, never unbend. As good nature, connected with good sense, is a sure indication of courage, so superciliousness, even with talents, is almost always a proof of cowardice.

SUPERFICIAL, shallow; having no depth. Hence, an officer of shewy appearance, and desultory conversation, but devoid of true knowledge in his profession, is said to be superficial.

SUPERFICIES, (*superficie*, Fr.) extent in length and breadth, without depth or thickness.

In bodies, the superficies is all that presents itself to the eye.

There are various sorts of superficies or surfaces, viz.

A rectilinear SUPERFICIES, that comprehended between right lines.

A curvilinear SUPERFICIES, that comprehended between curve lines.

A plane SUPERFICIES, that which has no inequality, but lies even between its boundary lines.

A concave SUPERFICIES, the interior part of an orbicular body.

A convex SUPERFICIES, the exterior part of a spherical body.

The measure or quantity of a superficies, or surface, is called the *area* of it.

The finding the measure, or area of a superficies, is called the quadrature of it.

SUPERINTENDENT, (*surintendant*, Fr.) a person appointed to take charge of any particular district, or department. Hence, military superintendent.

SUPERINTENDENTS of army accounts. The examination of regimental, and certain other accounts of the ordinary service of the army were, on the

25th of December, 1809, committed to the charge of three superintendents; to whose office in Duke-street, Westminster, the accounts and estimates of agents and paymasters, and their answers to abstracts of examination for the past, as well as for the current period, were to be transmitted; those of the paymasters being, however, addressed under cover to the Secretary at War, with the words "Superintendents of Accounts," on the left hand of the cover.

SUPERIOR, (*supérieur*, Fr.) that is above others in authority, dignity, power, strength, and knowledge. This term always implies some rank, title, or situation, by which one person is placed above another. In military life, as well as in every other branch of society, the individual who holds an inferior post, or place, is bound to pay due obedience and respect (as far as regards the exercise of his duties, or functions) to his superior in rank. At all times, indeed, the latter is entitled to a certain degree of deference and attention.

SUPERIOR officer, an officer of higher rank than another, or who has priority in the same rank, by the date of his commission, &c.

Officier SUPÉRIEUR, Fr. when not used comparatively, conveys the same idea as our word field officer, meaning any officer above a captain and under a general officer.

SUPERIORITY, (*supériorité*, Fr.) pre-eminence, excellence above others. Although men, in general, viewing them abstractedly, and with regard to legal rights may be called, and indeed are, equal; human nature is, nevertheless, so constituted, that, for the sake of good order in civil, and good discipline in military, life, certain persons must be selected out of the mass of community, for the guidance and government of others. Hence the origin of intelligent leaders. We shall here recommend to the perusal of those in power, the following passage out of the *Life of Gustavus Adolphus*, (vide p. 7, *Essay on the Military State*, &c. vol. i.) After stating the laudable methods which were pursued by that able king, in the formation of his troops, his ingenious translator thus continues:—"Hence it happened, that the loss of the commanding officers, in some sharp engagements, rarely decomposed a Swedish regiment, (a thing frequent enough in other armies,) for

half the corps was just as capable to take the command as those who had given them laws. There were but two means of advancement: *seniority* (which was sometimes superseded) and merit. Birth, quality, and court friends availed nothing; so that the world can hardly expect to see such another army; at least but very seldom; an army formed by a monarch equally brave, moral, and religious; and nursed by him for 20 years, with all the care that a parent educates a single child. The same plan was observed, more or less, by his generals, till the conclusion of the peace of Westphalia; and this body of troops, from the year 1612 to 1628, had hardly ever tasted a single month's repose. The regulations, order, and discipline, of Julius Cæsar, can bear no comparison with the correct emendations, harmonious adjustment, and religious decency, of Gustavus." It is not difficult to conclude, that the ground-work of this excellent military superstructure, was *superiority* in talents, and not mere *seniority*, or rank in life; and this conclusion is a tacit condemnation of those rigid rules, without exception, by which the promotion of able officers, in our service, is constantly impeded.

SUPERNUMERARY, (*surnuméraire*, Fr.) beyond a fixed, or stated number. In a strict military sense, it means the officers and non-commissioned officers that are attached to a regiment, or battalion, for the purpose of supplying the places of such as fall in action, and for the better management of the rear ranks when the front is advancing, or engaged.

Supernumerary officers and non-commissioned officers must always divide their ground equally in the rear of the division they belong to, and pay the strictest attention to the orders which are issued for its exercise or movement.

If an officer is killed, or wounded, in action, the supernumerary officer of the division takes the command, and so on to the quarter-master and serjeants, &c.

To SUPERSEDE, (*remplacer*, Fr.) See to RESPITE.

To be SUPERSEDED, (*être remplacé*, Fr.) Both these terms are used, by the French, in the same military sense that we adopt them, viz. to be deprived of rank and pay for some offence, and to have another put in one's stead.

SUPERSEDING signal, a signal hoisted by order of a superior officer on board a ship, giving notice that some individual has been deprived of his authority. Officers of the army, when in transports, have the power of hoisting up the superseding signal on proof of misconduct, or mismanagement in the captain of the transport. But this rarely happens, as the responsibility which devolves upon the land officer is great and hazardous.

SUPLANT, (*supplanter*, Fr.) literally, to trip up the heels; in a figurative sense, to displace by stratagems; to turn out. It is generally said in a bad sense, as the means are seldom honourable.

To SUPPLE, from the French *souple*, to render pliant, flexible; as is the case when young countrymen are first sent to drill, in order to fit their bodies to military action.

SUPLÉANT, Fr. a substitute; any person named to do the functions of another.

Le SUPLÉANT, Fr. officer in waiting.

SUPPLEMENT, addition; augmentation, in case of deficiency.

SUPPLEMENT of an arch, in geometry, or trigonometry, the number of degrees which it wants of being an entire semicircle; as complement signifies what an arch wants of being a quadrant.

SUPPLEMENT of an angle, (*supplément d'un angle*, Fr.) the number of degrees which are wanting in an angle to constitute, or make up two angles.

SUPLÉMENT, Fr. supplement; addition to any thing by which its defects are supplied. In the staff of the French army, there are officers attached to generals as supernumerary aides-de-camp. These are called *aides-de-camp de supplément*.

SUPLÉMENT, Fr. additional allowance, or gratification money, given by a sovereign to his officers, over and above their regular subsistence.

SUPPLEMENTAL, } (*supplémentaire*, Fr.)
SUPPLEMENTARY, } additional; such as fills up what is wanting.

SUPPLEMENTARY militia. See MILITIA.

SUPPLY, relief of want; making up deficiencies; as a fresh supply of troops, ammunition, &c.

To SUPPLY, to make up deficiencies; to aid; to assist; to relieve with some-

thing wanted; to fill any room made vacant. Thus covering serjeants supply the places of officers when they step out of the ranks, or are killed in action.

To SUPPORT, to aid; to assist; it likewise signifies to preserve untarnished, viz. to support the ancient character of the corps.

Line of SUPPORT, the second line in action.

SUPPORT. (*support*, Fr.) This term is used to mark any particular work by which another, on a larger scale, is defended and secured.

Well SUPPORTED, well aided; well assisted. It likewise signifies well kept up, as a *well supported fire from the batteries*; a well supported fire of musketry.

To SUPPRESS, to conceal; not to tell; not to reveal; also, to quell; as, to suppress a mutiny.

SUPPRESSION *of the truth*, the concealing, directly, or indirectly, that which ought to be told fairly and wholly.

SUPREMACY, (*suprèmatie*, Fr.) highest place; highest authority; state of being supreme; owning no superior, except God, in temporal, or spiritual rights. Dean Swift has observed, that Henry VIII. had no intention to change religion, he continued to burn Protestants after he had cast off the Pope's supremacy. The objection, which the Roman Catholics feel on this ground, precludes them from the full enjoyment of our civil constitution.

Oath of SUPREMACY, an oath administered, or supposed to be administered, to all persons, civil and military, who are entrusted with places of trust under the British government. This oath is never dispensed with, or omitted, with regard to privy counsellors, members of Parliament, and officers of the royal navy, above the rank of lieutenant. It is not enforced in the army, owing to the great number of Roman Catholics who are now permitted to hold commissions, for the defence of their own country, notwithstanding their attachment to the Pope.

SUR, Fr. upon; against. It is often used in the latter sense by the French, as, *marcher sur une place*, to march against a place.

A coup SUR, Fr. most certainly; without fail. The French also say, *pour sûr*, for certain.

Homme SUR, Fr. See SAFE.

SURAPAN, *Ind.* an honorary dress, which is given to an inferior by a superior.

SURARBITRE, Fr. an umpire.

SURBAISSEMENT, Fr. the line of every arc drawn in an elliptic, or circular portion which has less elevation than the half of its base, and is consequently under the full arch.

To SURCHARGE, to make a demand of money for things, either not returned, or supposed not to have been.

SURCOT, Fr. See NEW RECKONING.

SURPLOMBER, Fr. to slope.

SURAT *hoal*, *Ind.* a state, or representation of the case.

SURBATE, } (*surbature*, Fr.) a
SURBATING, } bruise under a horse's foot, which is often occasioned by the loss of a shoe, and by his travelling too long in that state.

SURBATED, fatigued; harassed.

SURCINGLE, (*surfaix*, Fr.) a girth, with which the saddle, or any other burden, is bound upon a horse.

SURCULOTTE, Fr. over-all; a covering which officers and soldiers have on service, over their breeches and pantaloons.

SURETY, bondsman; one that gives security for another; one that is bound for another. Every paymaster in the British service is obliged to find two sureties, who bind themselves in given sums, for the security of monies entrusted to him by government.

SURFACE, in fortification, is that part of the side which is terminated by the flank prolonged, and the angle of the nearest bastion; the double of this line with the curtain is equal to the exterior side.

SURGEON, (*chirurgien*, Fr.) one who cures by manual operation; one whose duty it is to act in external maladies, by the direction of the physician; a staff officer, who is chief of the medical department in each regiment, or hospital ship, &c.

Navy SURGEON, one who is obliged to act in the three capacities of physician, surgeon, and apothecary, on board a ship of war.

SURGEON-general, the first, or senior surgeon of the army.

When a soldier is punished, it is the duty of the regimental surgeon to attend at the execution of the sentence,

and to see that the life of the culprit is not endangered by excessive rigour. He is, in fact, paramount to the commanding officer on this occasion, and ought to interfere whenever his judgment dictates. If any commanding officer should be hardy enough to continue the chastisement, in spite of the surgeon's interposition, the responsibility will then rest with him.

Assistant-SURGEON, the person who acts immediately under the regimental surgeon. In the Regulations for improving the situation of regimental surgeons and mates, which took place in 1796, it is expressed, that surgeons' mates in future are to be styled Assistant Surgeons, and to be appointed by commission from his Majesty, or by generals authorized by him. For further particulars respecting surgeons and assistant surgeons, see *Military Finance*.

Veterinary SURGEON. See **VETERINARY**.

SURHAUSSÉ, *Fr.* in architecture, any thing built higher than the full or regular circle, as is the case in a gothic arch.

SURHAUSSEMENT, *Fr.* the reverse of *surbaissement*; thus *surhausser et surbaïsser* is to give to an arch either more or less elevation than the half of its base: i. e. to raise a vault higher or lower.

SURINTENDANT *des fortifications*, *Fr.* a place of great trust and considerable importance during the old French government. It was his duty to submit plans of places that were to be fortified, or of others that wanted repairing; to give in estimates of the expenses that would attend the works; and to state to the directors the degrees of skill and activity which he had discovered in the different engineers who acted under him. He likewise communicated with the king on every weighty branch of ordnance. The surveyor general in our service only communicates with the master general, or the Board, who reports to the King.

SURINTENDANT général des poudres et salpêtres de France, *Fr.* superintendent general of the powder and saltpetre magazines of France; an appointment in the old French artillery, which was created in 1684, and paid the Paulette.

SURMENER, *Fr.* to founder; a

term in the French *manège*, signifying to over-ride, or over-work a horse. Hence, *un cheval surmené*, a jaded horse, or one spoiled by too much work.

To SURMOUNT, (*surmonter*, *Fr.*) to lie above; as a figure or ornament in architecture does, when it is placed over an arch, &c.

To SURMOUNT difficulties, to rise superior to the various obstacles which occur, especially in warfare, by means of skill and activity.

Les SURPENTES, *Fr.* the slings or straps used in the artillery. The French also say, *les herces d'affût*.

SURPLOMB, *Fr.* not upright, or in a perpendicular situation, as is the case when a wall bellies.

To SURPRIZE, (*surprendre*, *Fr.*) in war, to fall on an enemy unexpectedly, in marching through narrow and difficult passes, when one part has passed, so as not easily to come to the succour of the other; as in the passage of rivers, woods, inclosures, &c. A place is surprized by drains, casemates, or the issues of rivers or canals; by encumbering the bridge or gate, by wagons meeting and stopping each other; sending soldiers into the place, under pretence of being deserters, who, on entering, surprize the guard; being sustained by troops in ambush near the place, to whom they give entrance, and thereby seize it. Soldiers, dressed like peasants, merchants, jews, priests, or women, are sometimes employed for this purpose. The enemy sometimes sends in his soldiers, as if they were his coming from the hospitals, &c. he also dresses opponent's soldiers in his regimentals, who, presenting themselves at the gate as such, are immediately admitted, seize the guard, and become masters of the place. Sometimes houses are set on fire, and whilst the garrison comes out to extinguish it, troops who lay in ambush march in, and surprize the place. Officers, commanding guards at the principal gates, are lured out under various pretences; matters being so contrived, that a party may seize the gate in coming in with them. Sometimes an alarm is given at one side of the garrison, whilst the enemy enters secretly at the other, which at that time is too often neglected.

SURPRIZES, (*surprises*, *Fr.*) in a military sense, may apply either to those

measures which are adopted by one army in the field to surprize another, or to those which are followed in the attack of fortified places. The French make a distinction between *surprises de campagne*, and *surprises des places*; or the surprizes which are practised against an army in the field, and those which are executed against fortified towns or places. What has been said under the article *Stratagems of War*, will equally apply to the latter system.

When it is found expedient to attempt a surprize in the field, a sufficient number of men must be collected, for the purpose, not only of advancing with confidence against the enemy, but of being able to make good a retreat should he prove stronger than was expected. The troops that are selected for this duty should be remarkable for their fidelity, and be able to undergo the greatest fatigues. Intelligent and faithful guides must be distributed among the different troops and companies, in order to keep up the continuity of the march, and to put those of the rear in the right paths, should they have deviated from the direct route, or line of march.

If the detachment or corps, that is entrusted with the secret expedition or surprize, be marched out of an entrenched camp, proper precautions must be taken, to prevent any intercourse between the enemy and persons employed to send, or give intelligence. To do this effectually, the instant the rear guard has left the camp, the gates must be shut, and the strictest orders be issued to prevent spies, or deserters, from stealing out. Small parties of dragoons and riflemen must likewise be sent forward to scour the roads, and to pick up stragglers. Care is taken to have it understood by the people of the country, that these parties are detached for no other purpose than to escort some wagons, which are expected for the use of the army, to parley, or, apparently, to execute some business that can neither create jealousy, nor give uneasiness.

About an hour after, it must be proclaimed, in and about the camp and adjacent country, that no officer, soldier, sutler, or inhabitant of the villages, &c. shall, on any account, go more than one quarter of a league from the army.

Small scouring parties, with the provost marshal's field patrols, must be distributed beyond these limits, in order to pick up stragglers, and to search their persons lest they should be the bearers of letters, &c. A great number of small ambuscades must be laid along the leading avenues between the enemy's camp and your own. If, notwithstanding all these precautions, you should learn, that the enemy has gained some information respecting your movement, a report must be instantly spread to make him imagine, that you have some other design in contemplation.

If, during the night, or in the course of the day, small reconnoitring parties, belonging to the enemy, should be discovered upon the road, or about it, one half of your patrol or scouring detachment must be placed in ambush along one side of the road, in order to take them in the rear, whilst the other half attacks them in front, and by thus surrounding them, prevents any intelligence from being carried to the enemy.

When such parties consist of a regular advanced detachment from the enemy's forces, that challenges you on your approach, your out-scouts must instantly give the name of the prince or general against whose troops you are marching, or make them imagine, that you are returning from some secret expedition which had been undertaken in his favour, or that you came out of a neighbouring state which is in alliance with him. As you draw near, proper measures must be adopted to get upon its flanks; so as ultimately to surround the whole guard, and to prevent any information from being forwarded to the main body of the enemy. This operation cannot fail of success, if you act with promptitude; and most especially, if you can get possession of the enemy's watchword, or countersign.

Such are the leading precautions to be observed at the first outset of an army, whose design is to surprize its enemy. But these are not all. A perfect knowledge of his position must have been acquired; correct descriptions of all the posts and stations, local as well as artificial advantages, must likewise have been given in, with a specific account of the bridges, fords, &c. the state of his provisions, and of the general's head-quarters.

If it be your design to surprize any strong holds, or particular posts, to fall suddenly upon some detached general's command, or to carry the head quarters themselves, you must be made thoroughly acquainted with all the intricacies of ground about them, with the number of men which may be opposed to you; and, when you have gained the necessary information respecting these matters, particularly the latter, you must assemble a body of active and zealous troops, whose number shall be one-third at least greater than that of the enemy, to execute your plan.

When your project has been completed, you must call your men together. For in all expeditions of this sort, desultory operations are unavoidably necessary, and the troops employed upon them must be dispersed. Should any be found absent at the roll-calling of the different companies or detachments, it may reasonably be presumed, that they are engaged in pillaging the place they entered. In which case, you must set fire to the houses, if you cannot withdraw the free-booters by any other method.—Strict orders should be given out, that no soldier, or follower of the army, shall move before the detachment returns to the main body, after having effected the surprize, or remain behind when it marches off. It frequently happens, that a few irregular soldiers, &c. will avail themselves of the confusion of the moment, to conceal the property that may have fallen into the hands of the detachment, and thereby avoid sharing it with their comrades. Patrols must be sent out of the camp, and be posted along the road or roads, that lead to the place which has been surprized, and strict injunctions to stop all stragglers; and the quarter and rear guards of the camp itself must see, that none enter before the detachment is regularly marched in. When any are found guilty of this unmilitary practice, they must not only be stripped of their booty, but they must also be severely punished, for the sake of example. If there should not be a sufficient number of wagons to bring off the wounded, the cavalry must dismount, and the wounded be put upon their horses. But if it be found expedient to make use of the cavalry, you must then convey the disabled in the best manner you can, by

taking all the horses, &c. which may have been found in the place you have surprized.

After a *surprize* has been accomplished, the troops, employed upon that service, must, if possible, be marched back to head-quarters by a different road to the one they took in advancing against the enemy. For it would be extremely impolitic to expose them, even though their number were a third greater than that of the enemy, to a second action; under the manifest disadvantages of being fatigued with the march, and the attack they had just made, and of being encumbered with the booty, &c. of the place they had surprized. Their retreat must be effected the shortest way back. But if there should be the least ground to apprehend, that any attempt might be made by the enemy to cut them off, the first movement must be upon the same road they came; and when night approaches, the troops must be suddenly countermarched, in order to take a different road, and to avoid any ambush that might be laid by the enemy.

Under these circumstances, every measure must be embraced to deceive the enemy. Some prisoners may be suffered to escape, before the troops have been countermarched, in order to give false information; some mules or horses may be left on the road, and small parties of drummers, &c. be detached forward to keep beating along the first road, as if the whole body were marching that way. Fires may also be lighted by patrols sent forward for that purpose. Among other means which may be resorted to, to induce the enemy to believe that the original line of march has been continued, that of sending horses and men forward to mislead them by their footsteps is not the worst imagined.

It is more than probable, that if the retreat be made during the night, and through an inclosed or intersected country, the enemy will scarcely run the risk of pursuing, lest ambushades should be formed to surprize him on his march.

If, notwithstanding all your precautions, the enemy should get intelligence of what has happened, and, in consequence thereof, he should have time to collect his forces together in order to

attack you in your retreat; under these circumstances, a position must be taken that is best suited to the kind of troops you have with you, and to their effective number.

If there be a ford, a bridge, or a defile, near to the ground you have taken up, which the enemy must unavoidably pass, the greatest expedition must be made to get beyond the obstacle, so as to have it securely in your rear. Should the obstacle be upon either of your flanks, a detachment must be posted there to keep the enemy in check, while your main body continues on its march. If you cannot conveniently send forward your booty, for fear of weakening your forces, it must be placed in such a manner, as not to be in the way when you find it necessary to engage the enemy.

As soon as the enemy approaches, the whole body must be halted, and the proper dispositions be made for battle. The guard that is entrusted with the care of the prisoners must instantly strip them of their swords, bayonets, and of every offensive weapon, (supposing them to have had permission to wear them,) and must order them to sit down, threatening to shoot, or cut down, the first man that should presume to stir. On this account, the men who compose the guard, should always be ready to do their duty upon the least symptom of irregularity. A small cavalry detachment is usually employed upon this service, as it would not be in the power of the infantry to act with so much promptitude and activity. Before the troops are ranged in order of battle, directions must be given for every soldier to take off his knapsack, or havresack; for if the men were allowed to retain this load of baggage and booty, it would not be in their power to act.

History furnishes us with various instances in which fortified places, strong holds, and gates have been surprized. There are others again, in which *surprizes* have been practised with success by means of spies, and of secret intercourse with one or more of the party against whom you are engaged. In 1707, several Miquelets disguised themselves as peasants, entered Balvastro, and remained concealed in the houses of some of the inhabitants, who supplied them with arms to enable them to attack the gate of Monsons, in order

to co-operate with a detachment which was advancing towards that quarter for the purpose of surprizing the place. But they did not succeed: for two regiments, which lay in the town, to guard the hospitals and magazines belonging to the army, instantly flew to arms, marched against the detachment, and forced them to retreat. Had the latter been superior in force, it is more than probable that the stratagem used by the Miquelets, and seconded by the treachery of the inhabitants, would have amply succeeded. In 1580, Count Egmont surprized Courtray, by ordering a number of determined good soldiers to get into the town *à la débâdée*, and to remain concealed in the houses of the Roman Catholics. See *Stratagèmes de Guerre*, page 164, &c. &c.

For various interesting particulars which regard the article we have been cursorily discussing, we refer our reader to *La Suite de l'Essai sur la Science de la Guerre*, tom. iii. page 259; and tom. iv. page 87. Likewise *Les Œuvres Militaires*, tom. ii. p. 69; and to the *Stratagèmes de Guerre*, page 173.

To prevent a SURPRISE. Turpin in his Art of War observes, that it is not sufficient for the security of the quarters, that they are well distributed, that the guards of horse are posted on the outside, and guards of foot on the inside, and that patrols also are added to them; detachments must likewise be sent out in advance of the guards, in order to make discoveries.

A quarter should never be imagined to be totally secure, whilst there are only guards before it: it would not be difficult for the enemy to come close up to them, particularly if the country is enclosed, either during the day or night; and if it is an open country, in the night time only.

Detachments, in advance of the quarters, are absolutely necessary, even when there are guards; they should be increased, according to the number of the troops, and in proportion to the extent of country to be guarded.

These detachments should march separately in the front, and they should occupy as much country as possible upon the flanks; they must march upon the roads leading to the enemy. In the day time they must scour the hedges, thickets, and woods; the villages, the hollows, and every sort of place that

may serve for an ambuscade: in the night time, they must draw near the quarter, and remain at the distance of at least four hundred paces, and even farther, if the country is open.

In the night, detachments must march very leisurely, not advancing, but crossing each other; and besides the word given out in orders, they will have another particular one to recognize each other. Every now and then, they must stop and listen, in order to discover whether they can hear anything. The officers commanding the detachments should avoid fighting till the last extremity; they should constantly bear in mind, that the sole purpose of their being ordered to advance, is to preserve the quarters from a surprize.

These detachments should not continue out above six or eight hours, and consequently should never dismount. If there are any hussars in the quarters, they should be employed in these detachments preferably to any other troops. as they are better calculated to scour a country than cavalry, or even dragoons: their horses being more in wind, and less liable to be fatigued. It is, besides, the sort of war which is natural to hussars.

As soon as these detachments are returned, others should be sent out for the same purpose; as the quarters should never be uncovered in front. If these detachments hear any thing in the night, the commanding officer should send to discover what it is, and must afterwards convince himself of the truth of it; if it should be occasioned by troops, he will directly send an hussar to the commanding officer of one of the guards, if there are any in the front of the quarters; but if not, then to the commandant of the first quarter, who will apprise the general. He must conceal himself in some place, whence, without being discovered, he will with greater ease be able to form a judgment of what is marching towards him; and when he shall be more confirmed that they are enemies, he will send a second hussar to give notice to the first post, who will inform the general; and will always continue to observe their motions by marching either on their flank, or before them. See p. 36, &c. of Turpin's *Art of War*, vol. ii.

For some very sensible observations

respecting surprizes, see Hints to Non-commissioned officers on actual service, compiled and translated by Colonel Sontag, page 68.

To SURRENDER, (*se rendre*, Fr.) to lay down your arms, and give yourself up as prisoner of war.

To SURRENDER a besieged town or place, (*rendre une place de guerre*, Fr.) to offer to capitulate, or give up any fortified place which has been entrusted to one's care and courage.

During the reign of Louis XIV. of France, it was ordained that every governor or commandant of a town, or fortified place, should not offer to surrender until a practicable breach had been effected by the besiegers, and the walls had been assaulted three times successively, under pain of death.

The late Emperor of the French, Napoleon the first, acting up to this sound doctrine, ordered a military commission to inquire into the conduct of General Monnet, who was governor of Flushing, when besieged by the English under Lord Chatham. He was convicted of an inefficient defence, and condemned accordingly. Indeed, if the mere bombardment of a place were sufficient reason to give it up, what would become of some of the most celebrated sieges in history? What should we think of Prague, Bergen-opzoom, Ismaël, &c.? It is within our own recollection, and personal observation on the spot, to have seen the ruins of the Quartier des Fives in Lille, which city maintained a bombardment for eight days successively, and was several times on fire during that period, yet neither the governor nor the inhabitants would yield, although the Emperor's brother in law, Prince Saxe-Teschén, commanded the besieging army in person; and on the day of St. Francis, the emperor's birth-day, Christina, governess of the low countries, used every exertion to intimidate them.

SURRENDER, (*reddition*, Fr.) the act of giving up; as the surrender of a town or garrison.

SURROGATE, a deputy, a delegate. It applies chiefly to an ecclesiastical appointment, although the term be generally applicable. In Doctors' Commons this person has some share in the distribution of prize-money. See PRISAGE.

To SURROUND, in fortification, to

invest. In tactics, to outflank and cut off the means of retreating.

SURROUNDED, inclosed, invested. A town is said to be surrounded when its principal outlets are blocked up; and an army, when its flanks are turned, and its retreat cut off.

SURSOLID, (*sursolide*, Fr.) in algebra, the fourth multiplication, or power, of any number whatever, taken as the root.

SURSOLID problem, in mathematics, that which cannot be resolved but by curves of a higher nature than a conic section.

SURTOUT, Fr. This term is used by the French, to express the elevation of the parapet, and of the rampart, which is made at all the angles of a fortified town or place, in order to protect the garrison from enfilades and ricochet firings.

SURTOUT, Fr. a great coat. We also use the word *surtout* to signify the outward garment of a man; generally however one coat over another.

SURVEILLANCE, Fr. inspection; superintendence; the act of watching. This substantive is new among the French, and comes from *Surveiller*, to watch.

Etre en SURVEILLANCE, Fr. to be under the eye of the police, as is the case of many an individual in Paris and elsewhere.

Conduit et SURVEILLANCE, Fr. a term used in public offices; as *conduite et surveillance des prisonniers de guerre*, conduct and management of prisoners of war.

SURVEY. A survey is an examination of any place or stores, &c. to ascertain their fitness for the purposes of war, &c.

SURVEYING, in military mathematics, the art or act of measuring lands; that is, of taking the dimensions of any tract of ground, laying down the same in a map or drawing, and finding the content or area thereof.

Surveying, called also *geodasia*, is a very ancient art; it is even held to have been the first, or primitive, part of geometry, and that which gave occasion to, and laid the foundation of all the rest.

Surveying consists of three parts; the first is the taking of the necessary measures, and making the most necessary observations, on the ground itself; the second is, the laying down of these

measures and observations on paper; and the third, the finding the area, or quantity of ground there laid down. The first is what we properly call *surveying*; the second we call *plotting*, *protracting*, or *mapping*; and the third, *casting up*.

The first again consists of two parts, viz. the making of observations for the angles, and the taking of measures for the distances. The former of these is performed by some one or other of the following instruments, viz. the theodolite, circumferenter, semi-circle, plain table, or compass. The latter is performed by means either of the chain, or perambulator.

The second branch of surveying is performed by means of the protractor, and plotting scale. The third, by reducing the several divisions, inclosures, &c. into triangles, squares, trapeziums, parallelograms, &c. but especially triangles; and finding the areas or contents of these several figures. See *Love's Geodasia*, and *Wyld's Practical Surveyor*.

SURVEYOR General of the Ordnance. The surveyor general of the ordnance is the second person in rank at the Board, which he attends with the other principal officers, to give directions in all matters relating to the department in general; and he is particularly looked to at their meetings for his advice and opinion respecting contracts and the prices of every article of store or material wanted for the ordnance service; the artificers' proposals being referred to him for comparisons to be made, in all cases where the lowest tender cannot be ascertained at the time they are opened at the Board. He is directed to survey all stores and provisions of war in charge of the principal storekeeper, and to see that they are properly placed for their preservation; to take care that all labourers, artificers, and workmen, are kept to their labours and duties, and that the clerk of the cheque keeps his account according to the rules prescribed. He is to peruse and allow all bills demanding payment of monies for goods delivered, or for works and services done at home or abroad, and to examine and allow all the accounts of the storekeepers and of the paymasters of the artillery, engineers, and other military corps, under the direction of

the ordnance, both for subsistence and allowances: the accounts thus to be audited and passed, comprehending the whole of the charges for that part of the department which is in Ireland, and altogether comprizing (with the exception of the salaries of the persons on the civil branch at home,) the entire expense of the office of ordnance in all its ramifications, and which at this time (1809) exceeds six millions of pounds sterling per annum. The surveyor general is further required to assist at the taking of all accounts and remains, and to survey all stores returned into the magazines from ships of war, forts, and garrisons. It is in his office that the estimates made by the different officers commanding the royal engineers, at home and abroad, are examined, as far as is practicable in regard to prices and calculations; the sort of materials to be used, the measurement of the works when executed, and the general superintendance of the works themselves having been left with the engineer department since that corps has so much increased. The surveyor general is, notwithstanding, allowed to be competent to submit his sentiments to the master-general, or board, on any point wherein he conceives the public service may be benefited, by regulation, or otherwise. To him is committed the particular superintendance of the small arm department, in manufacture and arrangement; he also has the direction of the repairs of the Tower, and is one of the officers who is to survey all stores received from the artificers and tradesmen, whether for land or sea service; and he is required to sign the warrants for their provision.

The business of the surveyor general of the ordnance, from the nature of his office, in some shape or other, materially affects every branch of the service; but its most essential objects are the due provision and distribution of stores to meet the various demands on the ordnance; and for the correct investigation of the pecuniary arrangement of the department, he is in a great degree responsible.

The manufacture of ammunition, gunpowder, small arms, cannon, carriages, and other implements of war, are intimately connected with the duties of the surveyor general's office.

The controul of contracts, agreements,

and comparison of tenders for supplies, or carrying on works, and of all cash accounts, depends principally on the surveyor general; and the rest of the board make official orders for his reports on these points where the cases are doubtful or intricate.

By the instructions of King Charles the Second, which have been confirmed, or amended, by each succeeding monarch, the surveyor general, in conjunction with the clerk of the ordnance, is required to sign all warrants for the provision of stores; and from his general knowledge of the expenditure, it is the particular duty of the surveyor general to point out the best means of obtaining them.

Either in his own person, or by his clerks, the surveyor general is to assist at the taking of remains of stores; he also gives orders for repairs within the Tower, and the clerk of the chequer there, is considered under his direction.

The surveyor general is likewise expected to ascertain that all stores and provisions of war, in charge of the principal storekeeper, are properly placed for their preservation, and his clerks assist at the receipt of stores in the Tower, or its vicinity, to see that they are of good quality and according to agreement.

An allowed bill of the surveyor general is the only authority on which the board orders a final payment, his audit being conclusive in the department.

The calculations of estimates for works or repairs, the tonnage of demands of stores, and the examination of accounts, previous to their being brought under the inspection of the surveyor general, is performed by his chief clerk, assisted by the rest of the establishment of clerks in the surveyor general's office at the Tower, who are divided into four branches, each under a principal, viz.

- 1st. The home storckeeper's and tradesmen's bills.
- 2d. The Irish accounts.
- 3d. The foreign accounts.
- 4th. The military, and those of corps under the ordnance.

After this examination, the surveyor general is required to peruse, and state his objections by a report to the board, or to allow, as he may judge proper, all bills demanding payment of monies for goods delivered, and for works and

services done at home and abroad; he is to examine and allow, in like manner, all accounts of the ordnance storekeepers, of the paymasters of the royal artillery, engineer and other military corps, as well as those of the field train of artillery, and barrack department of the ordnance, both for subsistence and allowances at home and abroad.

The accounts thus to be examined in the surveyor general's office, and allowed by him, comprise the whole of the public expenditure for ordnance services in all its various distributions.

SUSBANDE, *Fr.* the iron band or plate which covers the trunnion belonging to a piece of ordnance, or to a mortar, when either is fixed upon its carriage.

SUSBOUT, *arbre sur bout*, *Fr.* a thick piece of timber standing upright and turning on a pivot, like the tree of a mill, into which several assemblages of carpentry are received, for the purpose of communicating motion to machines.

SUSCEPTIBLE, (*susceptible*, *Fr.*) capable of admitting; disposed to admit. It may be used in a good or bad sense. Men of extreme susceptibility are not calculated for command.

SUSCITER, *Fr.* to excite; to encourage persons to rise. This frequently happens between neighbouring princes.

SUSPECT, *Fr.* a term adopted by the modern French, to signify any person suspected of being an enemy, or indifferent to the cause of the Revolution. Hence, *classe des suspects*, the list of the suspected; *réputé suspect*, looked upon as a suspected person.

SUSPECT d'être suspect, *Fr.* one of those extraordinary phrases adopted during the effervescence of the French revolution, which had currency for a time, and was practically felt by many unfortunate individuals. It literally signifies to be *suspected of being a suspicious* character.

To **SUSPEND**, (*suspendre*, *Fr.*) in a military sense, to delay, to protract; hence to suspend hostilities. It is likewise used to express the act of depriving an officer of rank and pay, in consequence of some offence. This sometimes happens by the sentence of a general court-martial, or by the summary order of his Majesty through the commander in chief. In both cases, it

is usual for the commanding officer of the regiment to report him to the general of the district, by whom he is again reported to the commander in chief, through the adjutant general. He is then directed, by letter to the commanding officer of the regiment, to be suspended agreeably to the nature of the transgression. In a trifling case, he is only suspended from pay, and is respited accordingly upon the next muster roll, for the government of the regimental agent. But when the offence is aggravated by palpable neglect, or obstinacy, in not sending a satisfactory reason for his absence, (which can only be done by vouchers from the Medical Board, &c.) he is suspended from both rank and pay. So that to be suspended is either partially or generally to be deprived of the advantages of a military appointment.

To **SUSPEND hostilities**, to cease attacking one another.

SUSPENDED, in a military sense, deprived of the pay and emolument of a situation, and rendered incapable of exercising the duties attached to it, during the pleasure of some ruling power.

SUSPENSION of arms, a short truce which contending parties agree on, in order to bury their dead, without danger, or molestation; to wait for succours; or to receive instructions from a superior authority.

SUSPENSION, temporary privation of an office.

SUSPENSION, as a military punishment, was probably intended to operate as pecuniary fining does in that of the common law; but (to use Mr. Sullivan's words, in his Treatise on Martial Law,) it can neither be considered as deprivation, or degradation. It does not divest an officer of his military character, though it puts him under a temporary incapacity to exercise the duties of his station: he still possesses his rank, though he does not reap any immediate advantage from it. It, in fact, may be looked upon, and considered, as borrowed from the ecclesiastical system of jurisdiction, which admitted suspension as a minor excommunication.

The late Mr. Tytler, deputy judge advocate of North Britain, who has published an Essay on Military Law, quotes the case of Lord George Sack-

will, when he treats of officers under suspension, and agrees in every point with the author just referred to. Suspension, observes the late Mr. Tytler, in his Essay on Military Law, though it has the effect of depriving an officer, for the time, of his rank and pay, and putting a stop to the ordinary discharge of his military duties, does not void his commission, annihilate the military character, or dissolve that connection which exists between him and the sovereign, of whom he is a servant. He retains his commission, and is, at all times, liable to a call to duty, which would take off the suspension. See Essay on Military Law, pages 131, 132.

SUSPENSION of parliamentary privilege. This can only be considered, in a military point of view, as affecting such officers, who, being Members of Parliament, are entrusted with any specific appointment in the army, and thereby make themselves liable to the Mutiny Act, or Articles of War. We have had an instance, during the late war, of a militia colonel, (who was a member of the House of Commons,) having been put in arrest, tried before a general court-martial, cashiered in consequence of gross offences and misdemeanours, and afterwards expelled the house, in consequence of military delinquency. We do not hesitate to say, from the character of the culprit, that if the privilege of Parliament could have been taken advantage of, it would have been by *him*.—Mr. Tytler, however, does not speak so positively as we could wish on this important question; for important it certainly is, when we reflect, that there is scarcely a general of a district, or colonel of a militia corps, but might avail himself of this privilege; since the majority of them are Members of Parliament. It is, indeed, within the personal knowledge and recollection of the compiler of this Dictionary, that all the field officers and two captains of a company, in a militia regiment, belonged to the Lords or Commons.

Mr. Tytler, pp. 129 and 130, writes in the following manner: “It has been questioned, whether the privilege of Parliament prevents any officer, who is a member of either House of Parliament, from being put under arrest by his general, or tried by a court-martial. This is a subject of difficult discussion. If

the privileges of Parliament were to be considered only in the light of immunities, or benefits, personal to the individual who claims them, it might, with some reason, be argued, that a Member of Parliament, by the acceptance of a military commission, subjects himself, in all respects, to the operation of the military law, and renounces his privilege of freedom from personal arrest; as every person is competent to renounce a benefit granted in favour of himself. But the privileges of Parliament belong to the Parliament as a body, and their dignity and independence, being interested in maintaining them inviolate, it would thence seem to follow, that no individual member has a right to renounce any of those privileges, without consent of the whole body of which he is a part. General utility, however, demands, that the ordinary course of justice should not be impeded in the prosecution of crimes; and therefore it is an understood point of law, that the privilege of Parliament does not protect from arrests in cases of treason, felony, or breach of the peace. With respect to military crimes, the same political expediency demands, that the course of justice should not be obstructed: but as the law has not expressly warranted the suspension of parliamentary privilege, in such cases, the safest course seems to be, that previously to the arrest of any member, in order to try him for a military crime, notice should be given to the House of which he is a member, with a request, that, for the sake of public justice, they should consent to renounce the privilege in that instance, in so far as the body of Parliament is concerned; as the individual member is understood to have renounced it for himself, by the acceptance of a military commission.”

The method which is here proposed, though perfectly consonant to the usual proceedings in civil cases, and full of deference to the legislative body of the country, would be attended with innumerable inconveniences in military matters. The service would be exposed to perpetual interruptions. most especially as it would be necessary to make a motion in Parliament, every time it should be found expedient to put a privileged officer in arrest. The learned advocate, besides, did not probably recollect, that

the most active period of military service in England, except in cases of actual invasion, or insurrection, occurs at a time when Parliament is not sitting; so that the very object, for which he contends, would be lost by the course of justice being considerably impeded. It must be manifest to every thinking man, that military service is of such a prompt imperious nature, as not to bear the most trifling suspension, or interruption, in the exercise of its duties. Though, in one sense, the military be subject to the civil power, according to the principles of the constitution, in every other it ought to be paramount to extraneous authority; and one simple question would shew the impolicy not to say the absurdity of such an interruption. A member of Parliament, who claims his privilege whilst he is an officer, is, in fact, like the man who would, but cannot, serve two masters at once.

Among other inconveniences, and indeed partial hardships, which do arise from members of Parliament claiming their privilege and attending in either house, that of the regiment being left without its efficient officers, and the duty consequently falling most heavily upon a few unprivileged individuals, is certainly not the least. This, as we have already stated, has been the case, and probably still is, in many militia regiments. No such anomaly is allowed in foreign services.

SUSPICION, (*soupeçon*, Fr.) the act of suspecting; imagination of something ill without proof. The French use the word *suspicion* in law. A generous mind is seldom open to this unworthy affection. It is almost always an indication of something base and unmanly in the person who indulges his imagination by yielding to every trifling impression of mistrust. Among military men, it is peculiarly mischievous.

To **SUSTAIN**, (*soutenir*, Fr.) to aid, succour, or support, any body of men in action, or defence; to receive and bear with firmness any violent attack.

SUTLER and *Victualler* (*vivandier*, Fr.) may be considered as synonymous terms as far as they relate to military matters; most especially when an army lies encamped, or rather takes the field. A sutler may be considered as one who follows the camp, and sells all sorts of provisions to the soldiers. There are also sutlers in garrison towns, who serve the sol-

diery, and are subject to military regulations.

Among the French, according to the establishment of their army under Bonaparte, a sutler was a soldier or inferior officer, who was authorized to follow head quarters, and to be constantly with the corps to which he was attached. He was permitted to sell the necessaries of life to the soldiers, and, under certain restrictions, to deal in wine and spirituous liquors.

The sutlers are usually chosen from the regiments to which they belong, and are subordinate to the quarter-masters, after they have been appointed by the regimental committee, or council of administration. They receive a licence enabling them to sell and buy, which licence must be approved of by the chief of the *état-major* or staff of the division, in which the corps is stationed, or under which it acts.

The sutlers, attending head-quarters, are licensed by the quarter-master-general. In order to distinguish them from adventitious travellers or pedlers, &c. it is wisely recommended by Paul Thiébauld, (author of a treatise upon the duties of an *état-major*, or general staff,) that they should have a particular number, which is to be engraved on a tin plate, and constantly worn by them, as a mark of their being licensed by the quarter-master general.

When an army moves, the sutlers accompany the baggage. As many irregularities must naturally grow out of this necessary evil, the conduct of sutlers ought, at all times, to be narrowly watched, and severe penalties to be announced in general orders, for every instance of unlawful depredation among the inhabitants, or of disorder in their booths. It is the duty of the piquet, at night, to be particularly watchful on these occasions.—See **MARCHANDS**.

SUTURE, (*suture*, Fr.) a seam; a sewing, joining, or fastening together.

Dry SUTURE, (*suture sèche*, Fr.) a closing up of wounds, by glewing on either side thereof a piece of indented cloth, whose points answering one another, are gently drawn together with needle and thread.

Intertwisted SUTURE, in surgery, a suture wherein the needles are left sticking in the wound with a thread twisted round them.

Incarnative SUTURE, in surgery, so

named, because it rejoins the edges of a wound and keeps them close together, by means of a thread thrown across them with a needle, which causes them to grow together and incarnate.

SWALLOW'S-tail, (*queue d'aronde*, Fr.) in fortification, an out-work, differing from a single tenaille, as its sides are not parallel, like those of a tenaille; but if prolonged, would meet and form an angle on the middle of the curtain; and its head, or front, composed of faces, forming a re-entering angle. This work is extraordinarily well flanked, and defended by the works of the place, which discover all the length of its long sides, &c.

Swallow's-tail signifies also in building a fastening of two pieces of timber so strongly together, that they cannot fall asunder.

SWAMMIES, *Ind.* pagan gods or idols.

SWAMP. See **MARSH**.

A **SWAP**, a vulgar expression signifying one thing given for another; a matter of barter.

SWAY, the swing or sweep of a weapon. Likewise power, as military sway.

SWAYING of the back, in horses, a serious injury which may be received several ways, viz.

1. By some great strain, slip, or heavy burden.

2. By turning him too hastily round.

The pain usually lies in the lower part of the back, below his short ribs, and directly between his fillets.

The malady may be perceived by the reeling and rolling of the horse's hinder parts in his going, he being then ready to fall to the ground by his swaying backwards and sidelong; and when he is down, he cannot rise but with great difficulty.

To **SWEAR in**, to administer oaths, which are prescribed, to persons entering into certain official situations, such as the privy council, &c. and to men enlisting into the army or militia of the United Kingdom.

To **SWEEP**, to clear or brush away; as, the cannon swept every thing before it. The French say, *balayer* and *ruser campagne*.

SWEEP-bar of a wagon is that which is fixed on the hind part of the fore guide, and passes under the hind pole, which slides upon it.

SWEEPING, taking in every thing;

comprehending matters that may not be distinctly stated in Acts of Parliament, &c.; a word which is peculiarly attached to one of the sections, or clauses, in the Articles of War, namely the 21th. Hence *Sweeping Clause*.

SWEEPING Clause or Section. This comprehensive clause states, that all crimes, not capital, and all disorders, and neglects, which officers and soldiers may be guilty of, to the prejudice of good order and military discipline, though not specified in any of the foregoing rules and articles, are to be taken cognizance of by a general, or regimental, court-martial, according to the nature and degree of the offence, and to be punished at their discretion.

This wisely imagined clause serves as a check to the paltry tricks and subtuges, which are sometimes resorted to by men who are not thoroughly soldiers. It frequently happens, even among officers, that the service is hurt and embarrassed by the ingenuity of evasive characters, who think they are safe, provided they do not glaringly transgress specific rules and regulations. Another advantage is likewise derived from this clause. It enables officers, at a court-martial, in cases where the offence is manifestly felt but cannot be brought under any specific article, to do justice to the service, by punishing the delinquent under an indisputable clause.

SWELLED legs, in a horse, an infirmity to which a horse is frequently exposed through hard riding, or much fatigue. It may also proceed from his being too fat, carelessly put out to grass, or set up in the stable too hot, whereby he takes cold, which causes the blood, grease, and humours to fall down into his legs, and to make them swell.

SWIMMING. Although we have touched upon this article under *Nager*, we shall now enter more fully into the subject. This art consists wholly in being able to support the body towards the surface of the water, so as to float, and to advance by means of a combined and regular action performed by the hands and feet. Man is the only animal that learns to swim. The brute creation has an aptitude, more or less, by instinct.

Everard Digby, our countryman, and Nicolas Winman, a German, have both written treatises on this art. Boselli, in his publication entitled *De Motu*

Animalium, has also touched upon the subject, and may be consulted.

It is ascertained, upon the truest principles in hydrostatics, that the body of a man is nearly equal, in weight or gravity, to the proportionate volume of water in which it is immersed; so that it is, almost of itself, in equilibrium, and consequently requires very little aid to support it.

There is no country, perhaps, better calculated for improvement in this art than Great Britain and Ireland; and none in which common sense prescribes more forcibly the necessity of having its youth early instructed. It is manifest, that although every sea officer is exposed ten times a day to the danger of being drowned, too few of that class know how to swim. We have, indeed, experienced, in the loss of the brave and gallant Captain Jarvis, the truth of this observation.

The French have paid particular attention to this branch of military knowledge, and there are not only individuals attached to their armies, who can swim with perfect ease, but companies, called *compagnies de nageurs*, have been formed, and are still encouraged in their service. Their dress is adapted to the functions they are destined to perform, such as passing a river, &c. in order of battle, or in detached parties, &c. for the purpose of surprising an enemy's advanced posts, or of affording assistance (by dragging light cables across) to large bodies of their own men who might be ordered to pass in pontoons.

In 1799 a detachment of French swimmers passed the river Linth in the neighbourhood of Zurich, took the advanced posts of the Cossacks by surprise, and cut them to pieces. The victory, indeed, which was afterwards gained by Massena over the Russians, was entirely owing to the protection which this corps of swimmers afforded, when a considerable division of French troops effected their passage over the Linth. It is well known, that the Russian general Prince Corsacow, made a most disorderly retreat out of Zurich, after having lost his military chest, his magazines, stores, &c. and upwards of 5000 men. The particulars of this event may be seen in General Massena's dispatches, where he speaks in the highest terms of the corps of swimmers.

In 1800, whilst the French army, un-

der the command of Moreau, was watching the right bank of the Danube, that French general followed the example of Massena, and was equally successful. Two companies of experienced swimmers crossed the river during the night, and whilst one was engaged in driving in the Austrian advanced posts, the other was employed in dragging some pontoons across, and thus enabled a whole battalion to get over.

The Austrians, being suddenly attacked throughout the whole extent of their cantonments, made a precipitate retreat, and before the close of the following day, the whole of the republican division were on the right bank of the Danube.

We are perfectly convinced within ourselves (and indeed the example of the ancients as well as the practice of the modern French bear us through) that the formation of a school of military natation would be very beneficial to Great Britain. A small corps of swimmers could, in the space of six weeks or two months, at farthest, be rendered not only masters of the art themselves, but be made capable of teaching others.

Extract of a letter written by General Moreau, when he had the chief command of the army of the Rhine, to the minister of the war department.

Neresheim, 24th June.—I herewith transmit to you a copy of my dispatch to the First Consul, with a correct detail of the battle of Hochstedt. Marshal Kray is forced to abandon Ulm. This successful event on our part is of considerable moment; but great exertions were required to secure it. You will be able to form some opinion of the difficulties we had to encounter, when I state, that although we had neither the advantage of a bridge, nor a single pontoon to cross on, the passage of the river was rendered easy by the intrepidity of a small body of swimmers.

(Signed) MOREAU.

Certified as correct,

(Signed) CARNOT.

After having given a detailed account of the state of the two armies, the French general states, that eighty swimmers having crossed the river, and being supplied (by means of two very small boats dispatched after them) with muskets and cartouch boxes, took possession of the two villages of Grensheim

and Blenheim, and seized several pieces of ordnance, which were instantly served by some cannoneers that had effected their passage on ladders thrown across the chasm of the broken bridge. These men stood their ground with wonderful steadiness and courage, whilst a detachment of sappers and pontooneers were occupied, under the enemy's fire, in repairing the bridges, across which fresh succours were thrown, in order to meet the reinforcements of the enemy; who was no longer at a loss to ascertain the precise object of the attack.

General Grenier likewise made the necessary dispositions to cross the Danube at Guntzburgh; but the Austrians, who had previously destroyed the center arches of the bridge, threw up a sort of temporary fortification on the part that remained, with straw steeped in pitch and other combustible materials, which were to be set on fire the instant the attack should be made. They did not, indeed, omit doing this as soon as they saw the detachment of swimmers plunge into the river. The latter were so eager, that several volunteered to extinguish the fire under a discharge of heavy ordnance and musketry; but that was not practicable.

General Moreau, speaking of this detachment of swimmers in another part of his dispatches, concludes by saying, "the behaviour of the corps of swimmers, under the command of Citizen Degrometric, who was adjutant of the 94th demi-brigade, is a proof of intrepidity, of which there are few instances or examples."

The following account is also on record, and was transmitted to Paris by a French officer, who was then serving in Germany.

One of the detachment of swimmers, having crossed the Danube, suddenly took possession of a howitzer, and instantly threatened to fire upon a guard consisting of twenty men, unless they surrendered and gave up their arms; the latter took to their heels, leaving their firelocks behind them, and the swimmer, with a reinforcement of some of his naked comrades, seized the muskets of the Austrian fugitives, and dislodged a guard which had occupied a *tête-de-pont*.

In order to give our military readers a more accurate idea of the importance of the *coup de main* which was executed

by the detachment of swimmers, we shall make another extract from General Moreau's official communication.

"The movement, which to me appeared absolutely necessary, was not only difficult, but extremely hazardous. We were unluckily destitute of every species of pontoon equipage, &c. and the enemy had not only destroyed the bridges, but also sunk his boats, pontoons and rafters."

This was the position of the army on the 18th day of June; which position had been gained by dint of hard fighting, and by forcing the enemy to fall back on Ulm.

We have already stated, that eighty swimmers, naked, or rather slightly clothed, and afterwards armed with muskets and cartouch-boxes, had crossed the river. In consequence of their success, the 94th demi-brigade immediately followed, took possession of the villages of Grensheim, Blenheim, Langenau, and Sheringen, where General Marigny was slightly wounded.

General Grenier, on the other hand, had crossed the Danube at Guntzburgh.

These different movements, which were begun by a small body of swimmers, gradually led to the memorable battle of Hohenliinden, the success of which secured to France so marked a superiority over the Austrians in Germany, and completed Bonaparte's triumph in Italy.

In offering these extracts to our readers, we are aware of the high colouring which was invariably given to the official dispatches of France during her revolutionary career. The proof, however, of the utility of a corps of swimmers in every country, cannot be weakened by the manner in which partial occurrences may be represented; and that such a corps should be formed at Woolwich is unquestionable. We know, indeed, that if a certain nobleman had continued at the head of the ordnance, this indispensable branch of military education would have been attended to, and the plan which was conveyed to his successor by the compiler of this work would have been carried into execution.

In addition to these observations, the following authenticated facts cannot be deemed superfluous.

In 1757, (when General Keith retreated out of Bohemia,) among the Austrian irregulars, or fri-corps, which

incommoded the movements of our troops in their march, there was a party of Croats, who (with more courage than prudence, putting their arms in three small boats) threw themselves into the Elbe, near Ister, and swam across that river, in order to intercept a small body of Prussians who were escorting the baggage. *The Life of Gustavus Adolphus*, Vol. ii. page 204.

Flavius Vegetius, lib. i. cap. 10. De Re Militari, speaks in the following terms respecting the necessity of having soldiers regularly taught to swim—

Natandi usum, astivis mensibus, omnis aequaliter debet tyro discere; non enim pontibus semper flumina transcurtur, sed, et sedens et insequens, nature cogitur frequenter exercitus. Sape repentinis imbribus, vel nivibus, solent exundare torrentes, et ignorantia non solum ab hoste, sed etiam ab ipsis aquis, discrimen incurrit; ideoque Romani veteres, quos tot bella et continuata pericula, ad omnem rei militaris erudierunt artem, Campum Martium, viciniam Tyberis, delegerunt: in quo juventus, post exercitium armorum, sudorem, pulveremque dilueret, ac lassitudinem cursus, natandi labore deponeret. Non solum autem pedites sed et equites, ipsosque equos, ad natandum exercere percommodum est, ne quid imperitis, cum necessitas incumbit, eveniat. Page 10. Editio Lugduni Bataavorum.

“Every young man ought to be practised in the art of swimming, during the summer months; for there are not always bridges ready to cross rivers upon; but an army, whether stationary or moving, is often under the necessity of swimming. Sudden inundations frequently happen, through a heavy fall of rain or snow; and a want of knowledge in swimming, not only exposes the ignorant man to imminent danger from the enemy, but also from the waters themselves. On this account, the old Romans (who, from the experience of so many wars, and such continued dangers, had become perfect masters of the military art) had their field of Mars near the banks of the river Tiber; where the youth of the Capital, after having been practised with arms, might wash off the sweat and dust, and get relieved from their fatigue by the exercise of swimming. It is not only proper and advantageous that foot soldiers, but also that the cavalry, and the horses themselves,

should be taught to swim, lest, in cases of necessity, something hazardous should happen to the inexpert.”

To SWINDLE, a cant word, signifying to cheat; to impose upon the credulity of mankind, and thereby defraud the unwary, by false pretences, fictitious assumptions, &c. This criminal and unmanly practice oftentimes proves successful under the garb of a military dress and character, and even sometimes under that of holy orders. The records of Bow-street are filled with pseudo-majors, captains, parsons, &c.

SWING-tree of a wagon, the bar placed across the foreguard, to which the traces are fastened.

SWIPE, an engine which is used to draw up water; also that part of a drawbridge on which it is swung: likewise one which serves to throw grenades.

SWIVEL, a small piece of ordnance which turns on a pivot or swivel.

SWIVELS, commonly called *Loop and Swivel*, and *Guard and Swivel*; two iron rings attached to a musket, through which the swing passes.

SWOLLEN vein, a crooked vein, swelling with corrupt blood in the temples, belly or leg of a horse.

SWORD, a weapon used either in cutting, or thrusting. The usual weapon of fights hand to hand. It also signifies, figuratively, destruction by war; as, by fire and sword; *à feu et à sang*, Fr.

Broad Sword, an original weapon of Scotland: it is sometimes called a *Back Sword*, as having but one edge: it is basket-handled, and three feet two inches long.

A small Broad Sword, a weapon of the same construction as the common broad sword, but less and lighter. The French call this sort of sword *briquet*.

Regulation Sword, a sword which is ordered to be worn by officers, throughout the British service. It has a spring shell and embossed blade.

The sword, which is worn by British officers, may be properly called a long cut and thrust.—It is a manifest imitation of the Austrian sword, and was introduced last war. It is not, however, so conveniently used by us as it is by the Austrians.—The latter have it girted round their waists, so that it hangs without any embarrassment to the

wearer, close to the left hip or thigh; whereas with us, it is suspended in an awkward diagonal manner from a cross belt over the loins, and is scarcely visible in front, except occasionally, when it is drawn, or gets between the officer's legs, and sometimes trips him up. We could exemplify our ideas upon this subject by various known occurrences, such as the sword being suspended so much out of the grasp of the wearer, that his right hand has appeared to run after the hilt, which has as constantly evaded its reach by the left side bearing it off, in proportion as the right turned towards it; by officers being reduced to the necessity of applying to their serjeants, &c. to draw their swords: but it is not our wish to turn any regulation into ridicule. It is, however, our duty, and the duty of all men who write for the public, to point out practical inconveniencies, &c. Perhaps it may not be thought superfluous to remark, that the sword ought not to be considered as a mere weapon of offence or defence in an officer's hand; for unless that officer should be singly engaged, which scarcely ever happens upon service, the very notion of personal safety will take his mind off the superior duty of attending to his men. Officers; in fact, should always bear in mind, that they are the cardinal points by which others are directed. Their whole attention should consequently be paid to their men, and not the slightest idea must interfere with respect to themselves. We are therefore convinced, with due deference to the superior judgment of others, that the swords of infantry officers, and of the staff in general, should be of the small sword kind, sufficiently long to dress the leading files, &c. and extremely portable. Setting aside this suggestion, we shall not be contradicted when we say, that every officer ought to know the use of his sword; and on this account it might be reasonable to propose a limited imitation of what was so generally practised in France. We mean the appointment of a fencing-master, or drill-swordsman, for every company of grenadiers in the service, who should be armed with sabres, or good cut and thrusts. With respect to the officers of the British army, common sense dictates the propriety of their being skilled in the art of fencing.

Among the French there are various sorts of swords, each adapted to the ser-

vice of some particular arm; with us the following only are according to regulation. Flank officers are distinguished by wearing the hanger blade with what is called a G. R. hilt, or Gnards hilt, as it was first worn by the flank officers of the Guards. Serjeants and drummers wear swords of the same pattern, not gilt. Heavy dragoon officers wear a broad straight cut and thrust blade with a hanger point, mounted with a hilt, with a shell as a guard. This is called their field sword, or sword for service. They have also a second sword, called a frock sword, which has a two edged blade of a lighter construction than their field sword. It is mounted with a gilt hilt, called a boat shell hilt. This is to replace their heavy field sword, and is worn chiefly when the officer is dismounted. The sword worn by the privates of heavy dragoons is of the same construction as the officer's field sword.

The officers of light dragoons wear a steel sabre with a steel scabbard and stirrup hilt; and for a frock sword one of the same construction with the sabre, only much lighter, with a leather scabbard.

The privates of light dragoons wear a sabre made as the above mentioned.

The admirals and captains in the navy wear the cut and thrust blade, same size as the infantry, with a stirrup gilt hilt lion's head, back piece and ivory gripe.

The lieutenants and midshipmen wear the same kind of blade, only not the end gilt, and the hilt differs in having a plain back piece instead of a lion's head, and the gripe fish skin instead of ivory.

Ship's cutlass is a short broad hanger with a common black japan hilt.

There are many fancy swords worn as dress swords for court, of various patterns, and many other fancy swords and scimitars which officers have according to their taste; but the regulation ones must be worn when on duty.

N.B. The artillery wear the same as the infantry of the line; the horse-artillery and drivers, the same as the light dragoons.

Position of the Sword at open order. When an officer stands or marches (slow time), in front of his company, &c. the position of the sword is diagonal across the chest. At close order, or when the officer is on the flank of his company, &c.

(and marches quick time) the hilt is close to the right thigh, and the blade in the hollow of the right shoulder. When mounted, he carries it diagonally across the bridle hand.

When troops or squadrons of cavalry advance:—In the walk, the sword is carried with the blade resting on the right arm; in the trot and gallop, the right hand must be steadied on the right thigh, the point of the sword rather inclining forward; and in the charge, the hand is lifted, and the sword is carried rather forward, and cross-ways in front of the head, with the edge outwards.

Sword-bayonet, a bayonet which is longer than the common one, and is generally used with rifles.

Sword-bearer, one who wears a sword. It also signifies a public-officer.

Sword-belt, a belt made of leather, that hangs over the right shoulder of an officer, by which his sword is suspended on the left side. When the sword is suspended from a belt round the waist, the French use the word *ceinturon*.

Sword-cutler, one who makes swords.

Sword-knot, a riband tied to the hilt of a sword.

Sword-knot, according to the regulation. This knot is made of crimson and gold.

Sword-law, (*la loi du plus fort*, Fr.) When a thing is enforced, without a due regard being paid to established rules and regulations, it is said to be carried by sword law, or by the will of the strongest.

Sword-player, a gladiator; one who fences publicly.

SWORDED, girt with a sword.

SWORDER, an old term signifying a man who plays, or fights with his sword.

SWORDSMAN, (*homme d'épée*, Fr.) This word was formerly used to signify a soldier, a fighting man. But at present it generally means a person versed in the art of fencing. Hence a good swordsman. The French use the terms *bretteur* and *bretailleur*. The former is more immediately applicable to a man who wears a sword and piques himself upon the exercise of it: the latter means a person who frequents fencing schools, and often exercises himself in that art.

To be **SWORN in**, or to take the oaths, an ordeal or ceremony through

which every officer in the British navy above the rank of lieutenant is obliged to pass, before he receives his commission. These oaths, which are administered at the Admiralty, and consist of a total abjuration of the Roman Catholic doctrine, and the consequent admission of the power, spiritual, as well as temporal, of the King, are called Allegiance and Supremacy. Officers in the army never take these oaths; the reason is obvious, with respect to English and Irish Roman Catholics; in regard to foreigners, see *Qualified OATH*.

Sworn brothers, soldiers of fortune, particularly in Germany, who used to engage themselves by mutual oaths, to divide among one another the rewards of their services.

SYBARITICAL, effeminate; wanton; luxurious. This term takes its origin and application from the Sybaritæ, who inhabited the city of Sybaris. These men had arrived to such a height of luxury and voluptuousness, that they taught their horses to dance to the sound of the flute, so that the Crotoniatæ, who waged war against them, bringing a great number of pipes into the field of battle, made their horses fall a dancing, and so broke their ranks, by which means they utterly overthrew them.

SYCOPIANT, a dirty, mean, grovelling creature that sometimes finds its way into the army, and gets to the ear of a superior officer for the purpose of undermining the good opinion, which honest valour and open manhood may have obtained; a thing that will fetch and carry; a paltry jackall that collects news, &c. and pours its trash in the ear of indolent credulity, pride or wickedness.

SYEF, *Ind.* a long sword.

SYEFUL, *mulk*, *Ind.* the sword of the kingdom.

SYMBOL, (*symbole*, Fr.) a badge, sign or mark, an emblem or representation of something; also a motto or device; as two hands joined or clasped together are a sign or symbol of union or fidelity.

SYMBOLS, in algebra, letters, characters, signs, or marks, by which any quantity is represented, or which denote addition, subtraction, multiplication, &c.

SYMBOLE, *Fr.* The French make use of this word in the same sense that they apply *Enseigne*. *Symbole* means

with them, in a military sense, what badge does with us.

SYMMETRY, (*symétrie*, Fr.) a word derived from the Greek. True symmetry consists in a due proportion.

Respective SYMMETRY is that where in the opposite sides are equal to each other.

SYMPATHETIC ink, (*encre sympathique*, Fr.) a sort of ink which is used by diplomatic persons, &c. for the purpose of carrying on a secret correspondence. This ink is called sympathetic because it can be made to appear or disappear by the application of something that seems to work by sympathy. Sometimes it is brought out by holding the paper before a quick fire; but it then remains.

SYNOPSIS, a sight or full view of a thing.

SYRTES, or *sables mouvans*, Fr. quicksands.

SYSTEM, (*système*, Fr.) a scheme which reduces many things to regular dependence, or co-operation. This word

is frequently applied to some particular mode of drilling and exercising men to fit them for manœuvres and evolutions. Hence the Prussian system, the Austrian system, &c. The Rules and Regulations, which have been compiled and published by authority, and consist almost wholly of extracts from Saldern, who wrote upon Prussian tactics, constitute the military system of Great Britain, with respect to order and discipline.

Military SYSTEM, specific rules and regulations for the government of an army in the field or in quarters, &c.

Rocket SYSTEM. See ROCKET.

SYSTEMS, (*systèmes*, Fr.) in fortification, a particular arrangement or disposition of the different parts which compose the circumference of a town or fortified place, according to the original idea or invention of an engineer. The systems best known under this head, and most followed, are those of Vauban, Coehorn, De Ville, Pagan, &c. See FORTIFICATION.

T.

T a subterraneous arrangement in mining; so called from its resemblance to that letter. See TÊ, Fr.

TABAC, Fr. tobacco. During the old monarchy of France there was a specific allowance made of tobacco to the cavalry and infantry, when they were in camp, quarters, or garrison. They were likewise supplied by the captains of troops or companies, with a certain quantity of this valuable leaf, whilst on the march from one province, or quarter, to another. We wish the same practice prevailed in this country, especially when soldiers are encamped at the close of the year, lie thick in barracks, or do prison duty.

TABARD, *(cotte d'armes*, Fr.) a he-

TABERD, § rald's coat; also a short jacket without sleeves.

TABER, a small drum. See TABOUR.

TABLE, in military affairs, a kind of register to set down the dimensions of carriages for guns, mortars, &c. also for the practice of artillery, charges of mines, &c.

TABLE, in literature, an index, a repository, at the beginning, or end, of a book, to direct the reader to any passage in it.

TABLE, (*table*, Fr.) in architecture, is a smooth simple membrane or ornament of various forms; but most commonly in that of a long square.

A *projecting* TABLE is that which stands out from the naked of the wall, pedestal, or other matter which it adorns.

Raked TABLE is that which is hollowed in the die of a pedestal, or elsewhere, and is usually encompassed with a moulding.

Crowned TABLE, in architecture, one which is covered with a cornice, and in which is cut a basso relievo; or a piece of black marble incrusted with an inscription.

Razed TABLE, in architecture; an embossment in a frontispiece for the putting an inscription, or other ornament in sculpture. This is what M. Perrault understands by abacus in Vitruvius:

Rusticated TABLE, in architecture, one which is picked, whose surface appears rough, as in grottoes.

The Round TABLE, a table to distinguish military merit, which was first invented by King Arthur, who succeeded his father, Uther Pendragon, King of the Britons, who was brother to Aurelius Ambrosius, and third son of Constantine. Arthur was the 11th King of England, from the departure of the Romans, and was crowned about the year 516.

Having expelled the Saxons out of England, conquered Norway, Scotland, and the greatest part of France, (where at Paris he was crowned,) this monarch returned to his native country, and lived in so great renown, that many princes and knights came from all parts to his court, to give proof of their valour in the exercise of arms. Upon this he erected a fraternity of knights, which consisted of twenty-four, of whom he was the chief; and for the avoiding controversies about precedence, he caused a round table to be made, from whence they were denominated Knights of the Round Table. This table, according to tradition, hangs up in the castle at Winchester, where they used to meet. The time of their meeting was at Whitsuntide.

TABLE *des officiers généraux et principaux*, Fr. mess or table as directed to be kept for the general and other superior officers of the old French army. During the old monarchy of France, the principal officers in the king's service were so handsomely provided for, that they were enabled to keep a respectable table, not only for themselves, but likewise for the accommodation of several officers, to whose finances it proved extremely beneficial. It is here proper to remark, that certain allowances were made to general officers for this express purpose; and in other instances it was always understood, that a proportion of the officers under their command should invariably have access to their table. This practice, indeed, prevails in the British service, but not universally; neither is it incumbent upon the generals of districts, &c. to provide a table. No allowance is made to them on that head; but it is usually expected, and, with the exception of a very few instances, the custom is general. The old French regulation expressed, that all general officers, to whom allowances were made for that

specific purpose, should keep *table ouverte*, or open table, for the convenience of such officers as stood in need of accommodation, and who might repair to it without waiting for a daily invitation, or being exposed to the galling caprice of ostentatious folly.

It has been observed by a French writer, that the custom of keeping an open table was peculiarly congenial to the character of the nation; and so little was there a necessity of enjoining it, that a regulation came out, limiting the expenses of the general officers, and strictly forbidding them to use sumptuous utensils, or to give rich repasts. It was specifically stated, by order of his Majesty, that no officer, whilst with the army, should have any other vessels or utensils in silver, besides spoons, forks, and goblets; and that all general officers, or such as kept open table, should confine themselves to soup, plain boiled and roasted meat, with vegetables, and one or two side dishes of ragout, &c. But they were not, on any account, to have high seasoned messes, &c. Their dessert was to consist of cheese, stewed pears or fruit in season, without confectionary, sugared biscuits, &c. The whole to be served up in common plates and dishes. Porcelain, china, and chrystal vessels, &c. were strictly forbidden. These restrictions grew out of two very rational principles, viz. to prevent unnecessary expense, and consequent embarrassment, and to give those, who kept open tables, a facility and convenience in asking guests to them. If any general, or other superior officer, &c. presumed to act contrary to this regulation, and the transgression reached the King's ear, he was ordered to quit the army, and to remain in a garrison town during the campaign.

The French regulation took place on the first of April, 1705, and was again renewed, with additional clauses, on the 20th of January, 1741, on the 1st of December, 1746, on the 17th February, 1753, and on the 9th of March, 1787. For further particulars, the curious are referred to a French publication, entitled, *Elémens Militaires*.

During the old French monarchy, it was usual for officers belonging to the line in that service, to mess together according to their several ranks; the colonel excepted, who had a private table to which he occasionally invited the officers of the corps. A re-

gular roster was kept for this purpose. The lieutenant-colonel and major uniformly messed with the captains; and the different tables were generally composed of eight or ten officers, of the same rank. The lieutenants dined together; so did the sub-lieutenants; each paying towards the mess in proportion to the receipt of daily subsistence. When an officer, of independent income, or private fortune, wished to fare better than those of his own immediate rank, he was at liberty to join the upper table, or mess. This method of messing was certainly preferable to the mode adopted amongst us. But a method still more preferable than either might be devised.

TABLE de capitaine de vaisseau, Fr. a mess, or table, which was regularly provided at the King's expense, for the superior officers who served on board.

TABLE d'hôte, Fr. an ordinary.

TABLE en saillie, Fr. in architecture, a table which juts out of the facing of a wall, or of a pedestal.

TABLE fougée, Fr. that which, instead of being salient, is indented: it is commonly adorned with a border.

TABLE d'attente, Fr. See *Rusticated TABLE*.

TABLE de marbre, Fr. a marble table. During the old monarchy of France, there were two courts, or jurisdictions, which were called *Tables de Marbre*, or marble tables; one was that of the Constable, and the Maréchaussée, or police of France; and the other that which gave directions for the general clearing of the forests, and the purifying of stagnant waters. They are so called from the meeting being held round a *large marble table*.

TABLE de réunion, Fr. an ordinary, or table, to which persons of different nations and situations in life are admitted.

TABLEAU, Fr. a description, a catalogue. It likewise signifies a chimney-piece.

TABLEAU de montagne, Fr. the level upon the top of a hill, or mountain. Hence *Table Mountain* at the Cape.

TABLETTE, Fr. a flat, thin stone, which is used to cover the outside of a wall belonging to a terrace, or the border of a basin, &c. Also a Memorandum Book; hence *tablet of memory*. Also small shelves or leaves in a case or drawer.

TABLIER, Fr. apron. It likewise

signifies an outside cover made for ornament, or to prevent any thing from being damaged by the weather. In the old French army, the kettle-drums had two of these aprons, or covers; one made of damask or satin, on which were embroidered the arms of the king, or of the general to whom they belonged, and the other of black leather. It is also called *Tablier de Timbales*.

TABLIER de pont levé, Fr. that part of a draw-bridge, which is raised for the purpose of shutting a gate, and to prevent access to it, and upon which persons pass when the bridge is let down.

TABLORINS, Fr. (a word used in the artillery,) the thick boards or planks that constitute the platform upon which cannon is mounted in battery.

TABNED, a jerkin, or short coat, without sleeves. Of this description is a military shell.

TABOUR,
TABOURET,
TABOURINE,
TABRET,
 } a small drum, beat
 } with one stick to
 } accompany a pipe.
 } It was anciently
 } used in war.

TABOURET ou TAMBOURET, Fr. an instrument used in draining water out of quarries.

TABULÆ Triumphales, public records among the ancient Romans, which were deposited in the Capitol at Rome, by the several generals, &c. who had made triumphant entries. These records were written in a sort of prosaic verse, having neither measure nor cadence. The following one was exhibited by Acilius Glabrio—*Fundit, fugat, prosternit maxime legiones*: he pours or rushes upon, he puts to flight, he overthrows the greatest legions.

TACES, armour for the thighs.

TACHE, Fr. properly means job, or a regular rate for labour. Workmen are thus hired and paid by the day, or by the lump. We also say *task*.

TACHE also means province, or business, in a general acceptance of the term—as, *Ce n'est pas la tâche d'un officier de terre de donner un Dictionnaire des termes de la marine*. It is not the province or business of a land-officer, to publish a dictionary, or vocabulary, of sea terms.—See *Discours préliminaire* of the new French Military Dictionary.

TACHE also signifies stain, blemish.—Hence one of the Auvergne regiments in France, viz. the royal Auvergne, was called by distinction, *Auvergne sans*

tâche, from the high reputation which it had invariably maintained.

TACKLE. The weapon, or arrow, shot from a bow, was so called by the ancient Welsh.

TACKLES are more particularly used for small ropes running in pulleys, the better to manage all kinds of ordnance. See **GIN**.

TACT, *Fr.* one of the five senses; the sense of touching.

Avoir le TACT fin, *Fr.* a figurative expression signifying to have a fine taste and judgment.

TACTICS, a word derived from the Greek, signifying order, or the distribution of things by mechanical arrangement, so as to make them subservient to the higher principles of military science: i. e. of Strategy. Tactics consist of a knowledge of order, disposition, and formation, according to the exigency of circumstances, in warlike operations. These dispositions are severally made, or one disposition follows another, by means of manœuvres and evolutions. Hence the necessity of paying the greatest attention to the first principles of military art; and hence the absurdity and ignorance of some men, who would pass for great and able tacticians, without having grounded themselves in the elements of their profession. As well might a person assume the character of a complete arithmetician, under a total ignorance of the first rules.

General tactics are a combination, or union, of first orders, out of which others grow, of a more extensive and complicated nature, to suit the particular kind of contest, or battle, which is to be given, or supported. Let it not however, be inferred from this, that evolutions and tactics are one and the same. They are closely connected, but there is still a discernible difference between them.

Tactics (or as the French say, *la tactique*, tactical art) may be comprehended under order and disposition; evolution is the movement which is made, and eventually leads to order. The higher branches of tactics, or *la grande tactique*, should be thoroughly understood by all general officers; but it is sufficient for inferior officers and soldiers to be acquainted with evolutions. Not that the latter are beneath the notice of general officers, but that having already acquired a knowledge of them, they ought to direct their at-

tention more immediately to the former; carefully retaining, at the same time, a clear apprehension of every species of military detail, and thereby obviating the many inconveniencies and embarrassments, which occur from orders being awkwardly expressed by the general, and of course ill-understood by the inferior officer. It may be laid down, as a certain rule, that unless a general officer make himself acquainted with particular movements and dispositions, and preserve the necessary recollections, it is morally impossible for him to be clear and correct in his general arrangements. Of all mechanical operations, founded upon given principles, the art of war is certainly the most compendious, the most enlarged, and the most capable of improvement. Almost every other science and art are comprehended in it; and it should be the subject matter, the chief study, and the ultimate object of a general's reflections. He must not be satisfied with a limited conception of its various branches; he should go deeply into all its parts, be aware of its manifold changes, and know how to adapt movements and positions to circumstances and places.

It will be of little use to a general to have formed vast projects, if, when they are to be executed, there should be a deficiency of ground; if the general movements of the army should be embarrassed by the irregularity of some particular corps, by their overlapping each other, &c. and if through the tardiness of a manœuvre, an enemy should have time to render his plan abortive by a more prompt evolution. A good general must be aware of all these contingencies, by making himself thoroughly master of tactics.

The Prussian tactics, under Frederic the Great, had for their principal object to concentrate forces, and to attack the chief points of an enemy, not at one and the same time, but one after another: whereas the tactics which have been uniformly pursued by the French, since the commencement of their revolution, have been founded upon this principle, — to attack all points with divided forces, at one and the same time. We thus see, that the principles of extension have been as much followed by the latter, as those of compression were studiously adhered to by the former.

TACTILE, *Fr.* See **TANGIBLE**.

TACTIQUE, *Fr.* the art of ranging

troops in order of battle, of encamping an army, and performing military evolutions. See TACTICS.

TACTIQUE *maritime*, Fr. naval tactics, or sea manœuvres, &c. See MARITIME *tactics*.

TACTIQUES, Fr. tacticians; a name which was formerly given in Persia and Greece, to those persons who taught the military art. See SCIENCE of War.

TAGBEERE, *Ind.* dismissal.

TAIGAU, *Ind.* a sabre.

TAIL of the trenches, the post where the besiegers begin to break ground, and cover themselves from the fire of the place, in advancing the lines of approach.

TAIL-pipe. See PIPE.

TAILLE du soldat, Fr. the size, height, and stature most proper for a soldier.

TAILLER, Fr. to cut.—*Tailler en pièces*; to cut to pieces.

TAILLEUR de pierre, Fr. a stone cutter, or one who shapes stones after they have been chalked or marked out.

TAILLOIR, in architecture, a term used by some writers in imitation of the French for *abacus*, commonly a square member which forms the upper part of a capital.

TAIRE, Fr. to silence. The French say, *faire taire le canon des ennemis*, to silence the enemy's cannon.

Se TAIRE, Fr. to hold one's tongue, to be silent.

To TAKE. This verb, as Dr. Johnson observes, like *prendre* in French, is used with endless multiplicity of relations. Its uses are so numerous that they cannot easily be exemplified; and its inferences, to the words governed by it, so general and lax, that they can hardly be explained by any succedaneous terms. But commonly that is hardest to explain which least wants explication. We shall content ourselves with giving a few general terms, in which the verb *Take* is used with respect to military matters.

To TAKE, to make prisoner.

To TAKE advantage of, to avail oneself of any peculiar event, or opening, whereby an enemy may be overcome, viz.—He took advantage of the debaucheries which were daily committed in the enemy's camp, to surprize the army.

To TAKE ground to the right or left, to extend a line towards either of those directions.

To TAKE up quarters, to occupy locally; to go into cantonments, barracks,

&c. To become stationary for more or less time.

To TAKE a position, to dispose troops in any particular spot, for the purpose of giving or receiving battle, or of remaining stationary.

To TAKE up the gauntlet, the correlative to throw down the gauntlet.—To accept a challenge.

To TAKE up arms, to embody and troop together for offensive, or defensive purposes. We likewise say, to take arms.

To TAKE down, to minute; to commit to paper what is spoken or given orally; as to take down his words.

To TAKE the field, to encamp. It likewise means generally to move with troops in military order.

To TAKE in, a low phrase, signifying to cheat, to gull. Officers, especially the junior classes, are frequently taken in by usurers and money-lenders, and sometimes by what are called, *old soldiers*.

To TAKE oath, to swear.

To TAKE up, to seize; to catch; to arrest; as to take up a deserter.

To TAKE on, an expression in familiar use among soldiers that have enlisted for a limited period, to signify an extension of service by taking a fresh bounty.

To TAKE. To adopt any particular formation:

Rear ranks take open order. } Words of
Rear ranks take close order. } command
which are used in the British service. For the manner in which they are executed, see ORDER.

To TAKE cognizance, to investigate with judicial authority.

To TAKE to any thing, (*embrasser quelque chose*, Fr.) to adopt, embrace, or follow any particular profession, &c. as to take to the army.

To TAKE to the collar, a term used with regard to draught horses when they go steadily in harness, of which the collar may be called the most important part. Too much attention cannot be given to it, particularly in the first outfit, and afterwards in the training of the animal. He should be gradually accustomed to its pressure against the chest, by being driven up and down hills, and occasionally through cross roads, &c. The unavoidable motion which will arise from his forcing his way through rutts, &c. will contribute not a little to the acquirement of this indispensable quality; for no horse can be called a safe horse

whose temper is not made subservient to the collar.

To TAKE *head*, to refuse the bit, (as a horse does,) and run furiously on, breaking the reins, &c.

TALC, (*talc*, Fr.) isinglass. In natural history, a shining, squamous fissile species of stone, easily separable into thin laminæ, or scales.

There are two kinds of talc, viz. the white talc of Venice, and the red talc of Muscovy.

TALE, information; disclosure of any thing secret.

TALE, *Ind.* an Indian coin equal to six shillings and eight pence.

TALEBEARER, one who officiously gives ill-judged, or malignant intelligence. With respect to the interior economy of military life, a talebearer is the most dangerous creature that can insinuate itself among honourable men; and however acceptable domestic information may sometimes seem to narrow minds, it will be found, even by those who countenance the thing, that such means of getting at the private sentiments of others not only defeat their own ends, but ultimately destroy every species of regimental harmony. The only way to secure a corps from this insidious evil, is, for commanding officers to treat those with contempt, who would endeavour to obtain their countenance by such base and unofficer-like conduct; for it is a known axiom, that if there were no listeners, there would be no reporters.

TALENT, quality; disposition; natural endowment; an aptitude to things.

Count Turpin, in his Essay on the Art of War, makes the following distinction between genius and talent:—Talent remains hidden for want of occasions to shew itself; genius breaks through all obstacles; genius alone is the contriver, talent only the workman.

TALENT of persuasion. See PERSUASION.

TALENT, *Fr.* This word is used by the French in the same figurative sense that it is generally received in England. We say a man of talents, *un homme à talents*; men of talents, *gens à talents*.

Un TALENT *manqué*, demi TALENT, *Fr.* a man of mistaken talents, a half genius.

Enterrer ses TALENS, *Fr.* to bury one's talents, to misapply natural endowments, or suffer them to remain inactive through indolence.

To TALK, to make use of the powers of speech. Officers and soldiers are strictly forbidden to talk under arms.

A great TALKER, a creature that makes a great noise about little things, and talks much but does little; one who laughs at scars but never felt a wound.

TALLOW, a well known name for the fat of animals. It is used as a combustible in the composition of fire-works. See LABORATORY.

TALON, *Fr.* in architecture, an ornamental moulding, which is concave below, and convex above.

TALON *renversé*, *Fr.* an ornamental moulding which is concave above; it is also called *cymaise droite et renversée*. This word is likewise applied to many other things, as the upper part of a scythe, &c. the end of a pike, &c.

TALON *d'un cheval*, *Fr.* a horse's heel, or the hind part of his hoof. Talon literally means heel.

TALONNER, *Fr.* to tread upon; literally to tread upon the heels of another. This term is used in a military sense by the French, as *talonner son ennemi*, to tread upon the heels of one's enemy. This seems to correspond with our expression, *to hang upon the rear of an enemy*.

TALOOKDAR, *Ind.* the head of any department under a superior.

TALPATCHES, *Fr.* a nickname which is given to the foot soldiers in Hungary. It is derived from TALP, which in the Hungarian language signifies sole of a shoe, and plainly proves, from the ridicule attached to it, that the Hungarians would rather serve on horseback than on foot. All persons are strictly forbidden to call them by this name.

TALUS, *Fr.* This word is sometimes written *Talut*. For its signification see FORTIFICATION.

TALUTER, *Fr.* to give a slope to any thing in fortification.

TAMBOUR, in fortification, is a kind of work formed of palisades, or pieces of wood, 10 feet long, and 6 inches thick, planted close together, and driven 2 or 3 feet into the ground; so that when finished, it may have the appearance of a square redoubt cut in two. Loop-holes are made 6 feet from the ground, and 3 feet asunder, about 8 inches long, 2 inches wide within, and 6 without. Behind is a scaffold 2 feet high, for the sol-

diers to stand upon. They are frequently made in the place of arms of the covert way, at the salient angles, in the gorges, half-moons, and ravelins, &c.

TAMBOURS, in fortification, are also solid pieces of earth which are made in that part of the covert-way that is joined to the parapet, and lies close to the traverses, being only 3 feet distant from them. They serve to prevent the covert-way from being enfiladed, and obstruct the enemy's view towards the traverses. When tambours are made in the covert-way, they answer the same purposes that works *en crémaillère* would.

TAMBOUR likewise means, in fortification, a single or isolated traverse, which serves to close up that part of the covert-way, where a communication might have been made in the glacis, for the purpose of going to some detached work.

TAMBOUR also signifies, both in French and English, a little box of timber-work covered with a cieling, within side the porch of certain churches, both to prevent the view of persons passing by, and to keep off the wind, &c. by means of folding doors. In many instances it is the same as porch.

TAMBOUR, in mechanics, the cylindrical axle-tree of a wheel, which serves to draw up stones out of a quarry. It is likewise called tympan. *Tambour* is also used for a round stone, or course of stones, several of which serve for a section of the shaft of a column.

TAMBOUR *de basque*, Fr. a tabor, timbrel; also portal in joinery.

TAMBOUR, *Fr.* See DRUM.

Marcher TAMBOURS battans et drapeaux flottans, ou enseignes déployées, Fr. to march with drums beating and colours flying.

TAMBOUR, *Fr.* See DRUMMER. We frequently use the word drum in the same sense as the French do, viz. to signify drummer. We likewise say *fife* for *fifer*; as, one drum and *fife* to each company.

TAMBOUR *major*, Fr. drum-major.

Batteries de TAMBOUR, *Fr.* the different beats of the drum. The principal beats among the French are—*La générale*, the general; *l'assemblée*, the assembly; *le dernier*, the last beat; *le drapeau*, the troop; *aux champs*, to the field; *la marche*, the march; *la diane*, the reveillé; *l'alarme*, to arms, or the alarm; *la chamade*, the parley; *l'appel*, the roll or call; *la fascine ou brélogue*, the workman's call. *Le ban et la retraite*.

Aux champs, or *le premier*, is beat when any particular corps of infantry is ordered to march; but if the order should extend to a whole army, it is then called *La générale*, the general. We do not make this distinction in our service, but we omit the *Premier*, or first beat, when one regiment, detachment, or company, marches out of a camp or garrison where there are other troops.

Le second, or *l'assemblée*, is to give notice that the colours are to be sent for.

La marche is beat when troops march off their parade.

Battre la charge, or *battre la guerre*, to beat the charge, or the point of war. This occurs when troops advance against an enemy. *Battre la retraite* is to beat the retreat, to cease firing, or to withdraw after the battle. It is likewise used in garrison to warn soldiers to retire to their quarters.

Battre la fricassée, to beat the long roll.—A beat which is practised to call soldiers suddenly together.

Battre la diane, to beat the reveillé. This is done in a camp or garrison at break of day. When an army besieges a town, the reveillé is confined to those troops belonging to the infantry that have mounted guard, particularly in the trenches; and it is then followed by the discharge of those pieces of ordnance which had ceased firing on account of the darkness of the night, that prevented their being properly pointed against the enemy's works.

TAMBOUR, in architecture, a term applied to the Corinthian and Composite capitals, as bearing some resemblance to a drum, which the French call *Tambour*.

TAMBOUR likewise denotes a round course of stone, several whereof form the shaft of a column not so high as a diameter.

Un TAMBOURIN, *Fr.* a timbrel.

TAMBOURINE, a drum somewhat resembling the tabor, but played in our military bands without either stick or pipe.

TAMING. *Colt-TAMING* is the act of breaking a colt so as to be mounted and ridden.

The best time is at three years, or four at most; but he who will have the patience to see his horse at full five, may be sure to have him of a longer continuance, and much less subject to diseases and infirmities.

TAMIS, *Fr.* a sieve.

TAMKIN, the stopple of the mouth of a great gun.

To TAMPER *with the enemy*, to carry on a secret correspondence for unlawful purposes.

TAMPIONS, or } are wooden cylinders
TOMPIONS, } ders to put into the mouths of the guns, howitzers, and mortars, in travelling, to prevent the dust or wet from getting in. They are fastened round the muzzle of the guns, &c. by leathern collars.

They are sometimes used to put into the chambers of mortars, over the powder, when the chamber is not full.

TAMPIONS, in sea-service artillery, are the iron bottoms to which the grape-shot are fixed; the dimensions of which are as follow, viz.

	<i>Diameter.</i>
42-pounders	6 6-10ths inches
32 ditto	6
24 ditto	5 4-10ths
18 ditto	4 9-10ths
12 ditto	4 3-10ths
9 ditto	3 9-10ths
6 ditto	3 3-4ths
4 ditto	2 9-10ths
1½ ditto	2 1-10th
½ ditto	1 4-10ths

TAMPON, *Fr.* a wooden peg or instrument which is used to plug up cartridges, petards, &c. a stopper.

TAMPONNER, *Fr.* to bung; to stop.

TAMPONS, *Fr.* in mason-work, are wooden pegs by which beams and boards for floors are fastened together.

TAMPONS, *Fr.* flat pieces of iron, copper, or wood, which are used by the French on board their men of war, to stop up holes that are made by cannon-balls during a naval engagement.

TAMPONS *de canon*, *Fr.* the apron made of cork or lead, which is put over the vent of any piece of ordnance.

TANACLES, from the French *tenailles*, instruments of torture, like pinchers, wherewith the flesh is plucked from the human frame. They are sometimes made red-hot.

TANG, the upper part of the plug, or breech pin; also that part of a sword-blade to which the hilt is rivetted.

TANGAGE, *Fr.* motion of a ship.

TANGENT, (*tangente*, *Fr.*) in trigonometry, is a right line raised perpendicularly on the extreme of the diameter, and continued to a point, where it is cut by a secant, that is, by a line drawn from

the center, through the extremity of the arch, whereof it is the tangent.

TANGIBLE, something whereon to fasten. Thus an officer, by the arts of a man, or the artifices of a woman, might be so far deluded, as to deviate from the line of strict honour and integrity, and by so doing, be brought to account on some very *tangible* ground.

TANGIBLE *arithmetical*, a mode or method of understanding arithmetic by means of artificial numbers, made in wood or bone, &c. See NAPIER'S *bones*.

TANGIBLE *manœuvres*, a modern invention, by which the different manœuvres may be gone through with pieces of wood, that are so arranged as to be convertible to any shape or form. Too close an attention, however, to this mode of learning military movements, may be productive of that confined view which lifeless objects give, and prevent the mind from going into enlarged tactics.

TANK, (*cuvette*, *fontaine*, *Fr.*) any place where water is collected for use, either by means of springs or rain.

TANNADAR, *Ind.* a commander of a small fort.

TAP, a gentle blow, as a tap of the drum.

TAPABORD, *Fr.* a sort of cap or slouched hat made in the English fashion, which the French sailors wear. Its sides hang over the shoulders, and shield them from rain in wet weather. It likewise signifies a riding cap, a montero.

La TAPE, le TAPON, ou TAMPON, *Fr.* the tampion, bung or stopple.

TAPER ou TAMPONNER *un canon*, *Fr.* to put in the tampion; *détaper un canon*, *Fr.* to take out the tampion.

TAPER, *tapering*, in joinery, &c. is understood of a piece of board, timber, or the like, when it is broad beneath, and sharp towards the top, or diminishing gradually from the biggest end. The French say, *Diminuant*.

TAPE-cul, *Fr.* that part of a swipe or swinging gate, which serves to raise and let down a draw-bridge.

TAPE-cu, *Fr.* a falling gate.

En TAPINOIS, *Fr.* slyly; secretly; lying close and still; ducking for fear of being seen, as is the case with sharpshooters and riflemen.

Se TAPIR, *Fr.* to lie squat.

TAPIS, *Fr.* This word literally means carpet, and is used by the French in a figurative sense, viz.

Amuser le TAPIS, Fr. to trifle.

Mettre une affaire sur le TAPIS, Fr. to open any particular transaction, to move a business.

TAPPEE, *Ind.* an express.

TAPROBANE, *Ind.* the ancient name for the island of Ceylon. It is derived from *tapoo*, an island; and *bany*, a ferry.

TAP-TOO, } See DRUM; also TATOU,
TAT-TOO, } *Fr.*

TACQUET, *Fr.* a brace or piece of wood nailed to a post, &c. to keep another from shaking or slipping; also the clapper of a mill.

TAR, a kind of liquid pitch used in the composition of some sorts of fireworks.

TAR, a familiar word for a sailor, &c. Dr. Johnson calls it a term of contempt. A jolly *tar*, however, is by no means a contemptible being.

TARANTHE, *Fr.* a thick iron peg which is used to turn the screw in a press.

TARAU, *Fr.* an instrument which is used in making the nut of a screw. It is a round piece of steel with a spiral shape.

TARAUDER, *Fr.* to make a hole like that which is effected by the operation of the *Tarau*.

TARD-venus, ou *mulandrins*, *Fr.* late-comers, or banditti: a body of men who formerly gathered together in France, without any order, or authority, from the king, or government, and who were commanded by a chief of their own selection. These troops or companies first made their appearance in 1360. They were professed plunderers, that did a great deal of mischief in France, until they made inroads into Italy. The author of the *Nouveau Dictionnaire Militaire* humorously concludes this article by observing, that the term *trop tôt-venus*, or persons coming too soon, would have been more suitable to the occupation of these freebooters.

TARE, *Fr.* a word adopted by the French from the English term *tar*.

TARE, (from *tarare*, *Ital.*) to subtract. The weight or allowance made to the buyer, for the weight of the cask, chest, bag, &c. in which goods are packed up; a deduction which is made from the offreckoning of the colonel of a British regiment; also a blemish, as *tare de cheval*.

TAREAU, *Fr.* a screw-tap.

TARGE, *Fr.* It is generally pro-

nounced *targue*, from whence is derived the figurative expression *se targuer*, to plume one's-self, or to be self-sufficient. *Le poltron se targue du courage de son père*, the coward plumes himself upon the courage of his father.

TARGE, *Fr.* a weapon of defence.— See PAVOIS.

TARGET, a sort of shield, being originally made of leather, wrought out of the back of an ox's hide. They were much used by the Scotch.

TARGET is also a mark for the artillery, &c. to fire at in their practice.

TARGET, a mark set up at certain distances, to be fired at with musket and ball. The mark is sometimes made in the form of a man, and of the same size; and sometimes in a circular form, on which are concentric circles, to determine the distance from the center; the point aimed at. The distance of the target, from the firing station, is generally about a hundred yards, and for security, it is placed at the bottom of a hill, or a large mound of earth is raised, or faggots are piled up to such a length or height, as is deemed sufficient to stop all the stray balls.

A round TARGET, a target made in a circular form.

A little TARGET, a small portable target, such as the Romans carried in battle, and the Highlanders formerly used.

A TARGET-fence. See TAUDIS.

TARIÈRE, *Fr.* auger, wimble, gimlet. The French make a distinction with respect to the gender of this word. When they express a large-sized auger or wimble, they say, *Un gros tarière*, making it masculine, and when they mean a small sized one, they say, *Une petite tarière*, making it feminine.

TARIÈRE, *Fr.* likewise signifies a miner's tool with which he bores into the earth. It is used to force a lighted match into the chamber of a countermine, and to make it explode.

TARIF, *Fr.* book of rates; tariff.

TARLE, *Fr.* a wood-worm, or moth; hence *tarlé*, or worm-eaten.

TARMEES, *Fr.* thick maggots; or short and hairy worms, oftentimes breeding in the fundaments of horses. They are destroyed by powders prepared with antimony. The *escarides* in the human frame are perhaps of the same genus.

TARPAULINGS are made of strong canvass, thoroughly tarred, and cut into

different sizes, according to their several uses in the field; such as to cover the powder wagons and tumbrels (carrying ammunition) from rain; each field piece has likewise one to secure the ammunition boxes.

TARPAULING also signifies, figuratively, a common sailor.

TARRASS, } a sort of plaster or strong
TERRASS, } mortar chiefly used in lining basins, cisterns, wells, and other reservoirs of water. In architecture, it signifies an open walk or gallery; also a flat roof of an house.

To be TARRED, a cant word used among the Guards to signify the punishment which privates undergo among themselves, when they have been tried and sentenced by their own comrades. It is the same as being scabbarded or booted; with this exception, that the Guards chastise with their cross-belts, whereas the cavalry and infantry of the line use their boots and scabbards.

TARTAN, (*tartane*, Fr.) a vessel used in the Mediterranean, whose prow and stern are even with the deck. It has only one large mast and a mizen. The sail is triangular or three-cornered, and when she carries a square one, it is then called *voile de fortune*. Oars are sometimes used in these vessels.

To catch a TARTAR. This expression, which signifies, figuratively, to get hold of something stronger than ourselves, is not without its moral with respect to military life. It may be generally applied to those rash minds, who, having more valour than judgment, not only run headlong into danger, but even presume to treat a brave enemy with contempt. Unfledged coxcombs sometimes catch a Tartar, by taking liberties with a truly brave but modest man.

TARTARES, Fr. a word used in the French army, to distinguish officers' servants and bat-men from the soldiers that serve in the ranks. *Tartare* likewise means a groom.

TARTARS, (*Tartars*, Fr.) Asiatics, whose principal arms are the bow and arrow, and sabre or pike. Some few have firelocks and pistols.

Calmuç TARTARS, a free people inhabiting the borders of the Caspian Sea, and the banks of the river Wolga. They are under the immediate protection of Russia, and in consideration of the security they enjoy, they are obliged to serve, when called upon. They consist

of wandering hordes, live in tents, and are armed with bows and arrows. Some have rifle guns, with one or two pistols. But they are extremely cruel, and worse disciplined than the Cossacks.

TARTES, Fr. bogs.

TAS, Fr. a heap. When the works of a fortification are lined with turf and fascines, &c. small beds of earth are previously prepared and laid one over another, till the necessary thickness is obtained; when completed, it is called *Tas de gazon*, or *de placage*; a heap of turf or a placage, which see.—*Tas* is likewise used in a sense of contempt to signify a crowd.—*Un tas de juiveans*; a heap, or crowd of parasites.

Un Tas de mensonges, Fr. a heap of lies.

Tas de charge, Fr. an arch made in a particular manner. It is generally found in Gothic buildings.

Tas droit, Fr. in paving, a line of pavement on the upper part of each side of a large street from which the slope or declivity is taken, right and left, to the gutter which runs in the middle, or to the borders of a paved highway.

TASK, something to be done imposed by another; employment; business.

TASSA, *Ind.* a kind of drum, formed from a semisphere of copper, hollowed out and covered with goat-skin. It is hung before from the shoulders, and beat with two rattans.

TASSÉ, Fr. literally heaped up or laid together. This is said of a building which has all its foundations laid.

TASSEAU, Fr. a small piece of wood kept by a tenon and mortise on the main part of a roof, in order to sustain the rafters.

TASSEAU, Fr. a small anvil; also a bracket.

TASSEL-close, a field in London where the cross-bow makers used to exercise themselves, and try their weapons at the popping-joy or artificial parrot. The field was so called from the number of thistles that grew there. This field was afterwards hired by the Artillery Company, and is called the Old Artillery Ground.

TASSELS, in building, are pieces of board that lie under the mantle-tree.

TASSES, armour for the thighs.

TASSETTE, Fr. all those parts of an iron armour which are under the cuirass, and serve to cover the thighs of an armed man.

TATTA, *Ind.* a bamboo frame, which incloses an herb called jawassea. Frames of this sort are made to put to the different openings of a room; by throwing water against them, the hottest wind, in passing through, becomes cool.

TATILLON, *Fr.* a busy-body.

TATILLONNER, *Fr.* to be meddling; to interfere in matters which do not concern ourselves.

TATOU, *Fr.* a kind of long-tailed hedge-hog, which has a scaly coat, whereinto, in times of danger, he draws up himself. It is not improbable but our word *tap-too* or *tattoo* has been taken from this term, signifying a notice given to go under cover, or into quarters.

TATTLE, (*bavarder*, *Fr.*) to talk or converse with indiscriminate freedom; to repeat private conversation, &c.

TATTLER, (*jaseur*, *bavard*, *Fr.*) one who collects all he can respecting persons or things, and who repeats all he hears, without any regard to truth.

TAUDION, *Fr.* a filthy place; as the privy at the back of a camp.

TAUDIR, *Fr.* to cover booths, &c with canvass or with raw cloth.

Se TAUDIR, *Fr.* to screen one's self; to duck under.

TAUDIS, *Fr.* the roof or vault of a house; any shroud or shelter made roof-wise. Hence a target fence, or a defensive engine under which approaches are made, or breaches entered by soldiers. It is also called *porvoisade*.

TAVERNIER, *Fr.* a tavern-keeper; a sutler; any person keeping a house of reception, where drink or meat is given for money.

TAUGOUR, *Fr.* a small lever which is used for various purposes.

TAUPINS, *Francs Taupins*, *Fr.* a name which was formerly given to a body of free archers, or Francs archers, in France. This body, consisting chiefly of countrymen and rustics, were probably so called from *taupe*, a mole; of which there are great quantities in the fields. *Taupin* likewise signifies swarthy.

TAUX, *Fr.* assize, tax, rate.

TAX, (*tare*, *Fr.*) an impost; a tribute imposed; an excise; a tallage. Hume observes, that the most pernicious of all taxes are the arbitrary. They are commonly converted by their management, into punishments on industry; and also, by their unavoidable inequalities, are more grievous than by the real burden which they impose. It is therefore sur-

prising to see them take place among any civilized people.

TAX upon property, or income TAX, a tribute which was required from all persons, civil as well as military, of the tenth part of their incomes, if they exceeded 60*l.* per annum.

This tax was peculiarly burthensome to British officers. It was repealed in 1816, by a large majority in the House of Commons.

TAX also signifies charge, censure; as to be taxed with having acted contrary to good order and discipline.

TAX-gatherer, a person who collects the taxes. In a military sense, an army agent, who is ordered to stop a given sum out of the subsistence and allowances of officers, and to pay the same into the War-office at prescribed periods.

WAR TAXES, particular taxes which were imposed upon the inhabitants of these islands, to enable the government to carry on the war against France.

TAX on the use of hair powder, or powder TAX, a contribution which is exacted from the public, and to which all officers in the army, subalterns excepted, are liable.

TAYLOR, (*tailleur*, *Fr.*) a person who cuts out and makes clothing apparel. A certain number of men are always selected out of a regiment either to make, or to fit on the clothing of the non-commissioned officers and privates of the corps. They are under the immediate direction of the quarter-master, and occasionally do duty, especially on days of review, &c.

TCHAROTCHIEKA, a small measure of brandy, which the Russian soldier takes with his toloqueno on service.

TÉ, *Fr.* a term used among miners to express a figure which greatly resembles the letter T, and which consists of a certain arrangement and disposition of the furnaces, chambers, and lodgments that are made under any particular part of a fortification, in order to blow it up. The *té* has four lodgments; the double *té* has eight; and the triple *té* has twelve.

To TEASE, to give unnecessary trouble. This frequently happens when soldiers fall under the command of men who have all the show without any of the good qualities, or a military character.

TÉBET, a sort of hatchet which the Turks use in war. It hangs suspended on one side of the saddle.

TECHNICAL, (*technique*, Fr.) All terms, or words, which have been invented for the purpose of expressing particular arts, are called *technical*; hence the distinction which is frequently made when a person is said to be *radically* wrong, though *technically* right.

Mots TECHNIQUES, Fr. technical words.

TE DEUM, as far as it concerns *military matters*, is a holy hymn sung in thanksgiving for any victory obtained.

TEEP, *Ind.* a contract, or note of hand.

TEETH, called also *Denticles* and *Dentils*, in architecture, an order in cornices bearing some resemblance to teeth, particularly affected in the Ionic and Corinthian orders.

TEFTERDA (*ffendi*). The commissary general is so called among the Turks.

TEIGNES, in horses, a distemper in the foot, when the frush moulders away in pieces, and goes the length of the quick, causing so much itching pain, that it will often make the horse halt.

TEINT, (*teinte*, Fr.) in painting, an artificial or compound colour, or the several colours which are used in a picture, considered as more or less high or bright, deep or thin, or weakened &c. to give the proper relieve, or softness, or distance, &c. of the several objects.

TEINT, which is used to draw a plan (*Teint dont on se sert pour lever un plan*, Fr.) Teint, in the general acceptation of the word, means any shade that is given to an object which is raised from the canvass, paper, &c. and placed in perspective.

TELAMONES, a term used in ancient architecture, to express the figures of men supporting entablatures, and other projectures.

TELEGRAPH, a machine by which any combination of letters, or words, may be made known in fine weather, to a person within sight of it, by means of a telescope. It is made in England with three upright beams, and three cross parallel beams, which divide the space between the four outside beams, into six compartments, to each of which is a shutter opened, or shut, by means of a string and pulley. Under this machine is a room provided with telescopes, in which the observer, sitting at a table, can, by drawing the strings, open, or shut, any shutter at pleasure. The let-

ters of the alphabet are expressed according to agreement, each by a certain position of the shutters, and the other positions serve for any signal which has been previously determined upon.

Anthropo TELEGRAPH, a telegraph formed by means of persons placed in different spots, and making different signals. This mode was suggested by a lieutenant of the navy. It is also called *homo telegraph*; from the Latin and Greek word signifying man.

Marine TELEGRAPH, an invention of Capt. (now Admiral) Sir Home Popham, of the royal navy, has been used with great benefit by him at different times; and by many others. When Admiral Dickson commanded the North Sea fleet, during the late war, and was lying off Elsinour, Sir Home Popham was stationed off Copenhagen with the Romney man of war. To facilitate the conveyance of intelligence, the latter invented a set of flags to be used as a sea telegraph; and although the distance between these places is at least six miles, yet it was conveyed in five minutes. He afterwards practised it while commanding in the Red Sea, and brought it to great perfection. On his return from thence to Calcutta, he printed at the Company's press there, a small volume, entitled, "A Marine Vocabulary: or, Telegraphic Signals." In April, 1803, he returned to England, and submitted his plan to several of the first naval characters, who approved highly of it, and deemed that it might be of the most essential service in the royal navy. This induced him to reprint his work with considerable additions, and the great advantages derived from it have been universally acknowledged.

Semaphoric TELEGRAPH, from *σημα, signum, indicium*, sign, indication, and *φορος, ferax, ferens*, bearing. The telegraphs with shutters have been lately superseded by an improved Semaphoric Telegraph, which consists of an upright post, with two arms, moving on pivots; the one arm at top, the other near the center of the post. Each arm is capable of being placed in three different positions (two diagonal and one horizontal) on either side of the post. The means of communication thus afforded are equally applicable to every purpose by land or sea; and with the assistance of a well-arranged Vocabulary, the system has been rendered at once simple and com-

prehensive. These improvements, we understand, are the result of the further studies of the intelligent officer before mentioned.

Sea TELEGRAPH OF SEMAPHORE. This is in reality a division of the Semaphoric Telegraph above described, for the sake of convenience and perspicuity. Instead of two arms placed on one post, two posts are used, with only one arm to each: the arm on one post representing the upper arm of the semaphoric telegraph, and that on the other corresponding with the lower.

Night TELEGRAPH, invented by Ensign Beaufoy of the 27th, or Enniskillen regiment.

The principle of this telegraph is its being capable of conveying intelligence by night; and worked in the most simple manner. The advantage of ground and situation being observed, and the machine placed forty feet high, the author conceives, that it will afford all the use of the solar telegraph, in its communications. It is perfectly portable, and will require very little trouble in establishing it for operation.

This machine is, in fact, in miniature, what the common telegraphs are upon a larger scale. The light is thrown through the several apertures by means of lamps suspended within.

Portable field TELEGRAPH, (*télégraphe de campagne*, Fr.) a very ingenious machine which was originally invented by an engineer in the British service, when he was doing duty in Corsica. It is extremely simple, and can always be carried with any movable force; serving to convey the necessary information for bodies acting together, although they are not immediately in contact with one another. The inventor was Major Le Febure, who fell in the honourable discharge of his duty at Matagorda.

Movable TELEGRAPH for communicating and receiving intelligence. (*Télégraphe mobile de reconnaissance et correspondance*, Fr.) See BALLOON.

TELEPHIUM, (among surgeons,) a great ulcer, and of difficult cure; so named from *Telephus*, who received a wound from Achilles, which proved incurable. See *Homer's Iliad*.

TELESCOPE, (*télescope*, Fr.) an optical instrument, composed of lenses, by means of which, remote objects appear as nigh at hand. The telescope was invented by Galilæo.

TELIFEROUS, dart bearing.

TELINGY, *Ind.* a word used upon the Coromandel coast to signify Sepoy.

To TELL off, a term used in military formations, to designate the relative proportions of any given body of men. Thus a battalion may be told off into wings, grand divisions, divisions or companies, subdivisions or sections. It is the peculiar duty of every adjutant and serjeant-major to be particularly expert at telling off. Squadrons of horse are told off by half squadrons, 4 divisions, and 8 sub-divisions, ranks by threes, and files right and left.

TELLERS, (*in the Exchequer*,) 4 officers whose business is to receive and pay all the monies on the King's account.

TÉMÉRAIRE, *Fr.* rash; heedless of danger. *Un homme téméraire*, a rash man. A French author observes under this word, (after having said the French were naturally rash,) that courage is not always an inmate, or even a companion, of rashness, since the latter too often exceeds the bounds of sober discipline. There are, however, occasions and moments, in which a soldier may be rash; particularly in a storming party, and when he mounts a breach.

TEMOIN, *Fr.* a witness. It likewise signifies the second in a duel.

A piece of tinder (also so called) which corresponds in size and preparation, with that which a miner lays upon the saucisson. By means of this duplicate, he can ascertain the moment of explosion.

TÉMOINS, *Fr.* in civil and military architecture, are pieces of earth left standing as marks or witnesses in the fosses or places which the workmen are emptying, that they may know exactly how many cubical fathoms of earth have been carried.

TEMPER, a state of steel or other metal, that best fits it for the use to which it is to be applied.—Thus, the blade of a sword should be so tempered as to admit of considerable flexure without breaking, yet so elastic as to return to its shape, on the pressure being removed.

To TEMPER, in a military sense, to form metals to a proper degree of hardness; hence a fine *temper'd* blade.

TEMPEST, (*tempête*, Fr.) according to Dr. Johnson, the utmost violence of the wind: the names by which the wind is called, according to the gradual increase of its force, seem to be, a breeze; a gale; a gust; a storm; a tempest.

TEMPLARS, certain Christian soldiers, dwelling about the temple at Jerusalem, whose office was to entertain Christian strangers that went thither for devotion, and to guard them in safety when they visited the places of the holy land; they wore, by their order, a white cloak, or upper garment, with a red cross. See *Military ORDERS*.

TEMPORARY, being in force, having effect, or lasting only for a limited time; as a *temporary truce*, *temporary rank*. See *RANK*.

TEMSE *bread*, } bread which is
TEMSED *bread*, } made of flour
better sifted than common.

TENABLE, (*tenable*, Fr.) such as may be maintained against opposition; such as may be held against attacks.

TENAÏLLE, Fr. (this word literally means shears,) a military evolution which was performed in the times of the ancients. In page 206 of *Observations on the Military Art*, we have the following account of it.

“A phalanx, attacked by a lozenge or triangular wedge, bent its right and left forward by a half-quarter conversion, each wing on their common center; and when they found themselves opposite the sides of the enemy's arrangement, they each marched on their own side, right before them; by which means, they both inclosed and attacked the enemy together, at the same time, while the enemy was engaged and at blows with the center of the phalanx that had kept its ground. Such is the description authors have left us of the design and effects of this manœuvre.

The tenaille had considerable advantage over the triangular wedge; but, according to the Chevalier Fôlard, it was not equally efficacious against the column. The latter could alter the direction of its march, and fall upon one of the wings, whether in motion or not, or detach the section of the tail, or rear, to take its wings in flanks, while it was occupied in making the quarter conversion. The column and tenaille were formed for acting against each other, and could only be victorious over one another by the superior abilities of their commander. I fancy, however, the column was always exposed to less danger than the tenaille, for the latter could not pursue the column without changing its order; whereas the column must destroy, and, in a manner, annihilate

the tenaille, in case it could once break it.”

The tenaille is unquestionably an excellent manœuvre, and strictly conformable to a very wise maxim, which directs us to multiply our strength and efforts as much as possible against one point. We sometimes, indeed, make use of it in war, without being sensible of its advantages. This, however, does not hinder the manœuvre from being well performed; for the nature of the ground not being level like a sheet of paper, the commander in ranging his troops, according to the advantages of the situation, does not form a perfect tenaille, such as may be drawn or sketched out, but one of an irregular kind, which produces the same effects; and this is what should be sought on all occasions.

TENAÏLLES, in fortification, are low works made in the ditch before the curtains. There are three sorts: viz. the first are the faces of the bastions produced till they meet, but much lower; the second have faces, flanks, and a curtain; and the third have only faces and flanks.

Single TENAÏLLE, (*tenaille simple*, Fr.) is a work whose front is advanced towards the country, having two faces, forming a re-entering angle: its two long sides terminate on the counterscarp, opposite to the angle of the shoulder.

Double TENAÏLLE, (*tenaille double, ou flanquée*, Fr.) is a work whose front, having four faces, forms two re-entering, and three salient angles; its long sides are likewise parallel, and terminate on the counterscarp, opposite to the angle of the shoulder. Both the single and double tenailles have this fault, viz. that they are not flanked or defended at the re-entering angle, because the height of the parapet hinders the soldiers from discovering before that angle. Therefore tenailles should only be made when there is not room enough to make horn-works. The ramparts, parapets, ditches, covert-way, and glacis of tenailles, are the same with other out-works.

TENAÏLLE of a place is what is comprehended between the points of two neighbouring bastions; as the faces, flanks, and curtains. Hence it is said, the enemy attacked the whole tenaille of a place, when they made two attacks on the faces of the two bastions.

TENAÏLLES, Fr. pincers, nippers, tenails.

TENAILLER, *Fr.* to tear off the flesh with red hot pincers. This punishment existed in civilized Europe, until a year or two before the French revolution.

TENAILLON, *Fr.* This is sometimes called, among the French, *grande lunette*. It is a work composed of two parts, each of which covers the faces of the half moon; in whose front the tenaillon is constructed.

Un TENAILLON, *Fr.* a little tenaille. See FORTIFICATION.

TENDELET, *Fr.* an awning; such as is used on board of a ship, and over carriages, in hot countries.

TENDRE, *Fr.* to stretch; to spread. This word has various significations in the French language. In military matters, it is common to say,

TENDRE un piège à quelqu'un, *Fr.* to lay a snare for a person.

TENDRE une marquise, une tente, *Fr.* to pitch a marquise, a tent.

TENIR, *Fr.* to hold; to keep, &c.

TENIR tête à quelqu'un, *Fr.* to cope with any body.

TENIR la campagne, *Fr.* to keep the field.

TENIR, *Fr.* to hold out, as in a siege.

TENIR, *Fr.* to cover, as *Le camp tient tant de terrain*, the camp covers so much ground.

TENIR une armée en respect, *Fr.* to keep an army in a constant state of alertness.

TENIR tête à l'ennemi, *Fr.* to face the enemy; to hold up against all his attacks.

Se TENIR, *Fr.* to remain; to stay; to hold fast.

Se TENIR bien à cheval, *Fr.* to sit well on horseback; to have a good seat.

TENNON, a term in carpentry, the end of a side piece in the frame of a bed which goes into the posts; any thing that holds or keeps fast.

TENON d'arquebuse, *Fr.* loop of a gun.

TENT, (*tente*, *Fr.*) (This word is originally derived from the Latin *tendo*, I stretch; whence *tendre*, to stretch.) A soldier's movable lodging place, commonly made of canvass, and extended upon poles.

The sizes of the officers' tents are not fixed; some regiments have them of one size, and some another. A captain's tent and marquise is generally 10½ feet broad, 14 deep, and 8 high: those of the subalterns are a foot less: the majors and

lieutenant colonels, a foot larger; and the colonel's 2 feet larger.

The subalterns of foot lie two in a tent, those of horse but one.

The tents of private men are 6½ feet square, 5 feet high, and hold five soldiers each.

The tents for the horse are 7 feet broad, and 9 feet deep: they hold likewise five men and their horse accoutrements. The new tents contain sixteen men.

In a common infantry tent, the length of the ridge pole is seven feet; length of standards six feet. Weight complete 27lb.

Bell TENTS, so called from their resemblance to a bell. They serve to shelter the fire-arms from rain.

Round TENT, a circular tent which contains twelve men; the weight complete, with poles, 43lbs. Length of pole, nine feet.

Hospital TENT, a large commodious tent, which is appropriated for the sick. It sometimes happens, that when a contagious disorder breaks out in a camp, or in barracks, the persons infected are removed from the hospital and lodged in a tent, which is pitched for that purpose, in their neighbourhood. It is usual for the commanding officer of the regiment to order one or more sentries to be furnished to the regimental hospital, and the same to the hospital tent; which sentries are directed to permit no person to enter but those concerned in the hospital, or belonging to the staff, and officers of the regiment. They are to be particularly careful in preventing liquor, or any thing improper from being carried into the hospital; nor are they to permit any patient to go out (to the necessary excepted) without a ticket of leave from the attending surgeon. See pages 20 and 21 of Regulations for the better Management of the Sick.

Laboratory TENT, in artillery, a large tent which is sometimes carried to the field for the convenience of fire-workers and bombardiers. The weight complete, with poles, pins, &c. 3 cwt. 24lbs.; length of ridge pole 18 feet, length of poles 14½ feet.

TENT-bedstead, a small portable bedstead, so contrived as to correspond with the shape of an officer's tent.

TENT-pins, pieces of wood which are indented at the top, and made sharp at the bottom, to keep the cords of a tent

or marquee firm to the earth. There are four large ones which serve for the weather cords.

TENT-poles, the poles upon which a tent or marquee is supported.

TENT-walls. See WALL.

TENT likewise means lint to put on a wound.

TENT, in surgery, a certain instrument used by surgeons for the searching of wounds.

TENT, Ind. A tent in India costs about 300 rupees, and every officer, the instant he enters the country, must be provided with one.

TENT allowance, Ind. an allowance made in India for the purchase of a tent, together with four, five, or six camels and their drivers, for the purpose of carrying that and his other baggage.

TENTAGE, a term used in India to signify the allowance which is made under that head.

TENTED, having tents pitched on it. Hence the tented field.

TENTER, any thing whereon articles may be stretched or hung. As *teuter-pole*; tenter-hook. To tenter is used both as an active and a neuter verb; as to stretch by hooks or to admit extension.

TENTORIA, the tents or pavilions under which the ancient Roman soldiers, and, indeed, the shepherds of Italy were accustomed to lie. The first tents were made out of the branches of trees; these were improved into covers made of the skins of wild beasts, and kept together by means of cords. When the Romans wished to express a distinction between a soldier's and a shepherd's tents, they said of the former *sub pellibus esse*, to be under skins; in the same manner that we say, to be under canvass. During the winter months, the Roman tents were made of wood.

TENUE, Fr. steadiness.

Avoir de la TENUE, Fr. to be steady.

Fond de bonne TENUE, Fr. good anchorage.

TERGIDUCTEUR, Fr. from the Latin *tergiductor*, the bringer up of a rear file of soldiers, or *Serre-file*.

TERM, (*terme*, Fr.) in geometry, sometimes signifies a point, sometimes a line, &c. a line is the *term* of a superficies, and a superficies of a solid.

TERM, in algebra, signifies the different members of which an equation in algebra is composed: thus in the equa-

tion $a + b = x$ the three terms are a, a, b, x .

TERM, } in architecture, a
TERMINUS, } sort of statue, or column adorned at the top with the figure of the head of a man, a woman, or satyr, as the capital, and the lower part ending in a kind of sheath or scabbard. These terms are sometimes used as consoles and sustain entablatures; and sometimes as statues to adorn gardens. The ancients made great variety of these termini, viz. *angelic, rustic, marine, double, in bust, &c.*

Military TERMS, among the ancient Greeks, were heads of certain divinities, placed on square land-marks of stone, or on a kind of sheath to mark the several stadia, &c. in roads.

Military TERMS, or *terms used in war*, (*termes de guerre*, Fr.) certain technical expressions, which, either directly or indirectly, ought to be used by every military man, when he writes upon his profession, or when he relates the events of war.

TERNIR, Fr. to tarnish; to soil.

TERNIR sa réputation, Fr. to tarnish one's reputation.

TERRA a terra, in the manege, is a series of low leaps, which a horse makes forwards, bearing side-ways, and working upon two treads.

TERRACE, } (*terrasse*, Fr.) a plat-
TERRASS, } form; a bank of earth
TERRASSE, } raised and breasted, or lined by a strong wall in order to conform to the natural inequality of the ground, made sometimes in *talus* or slope, and covered with turf; an open raised walk in a garden, &c. Among the ancients a bank of this sort answered the purpose of an epaulement in modern fortification. This bank was raised behind in such a manner, that it surrounded the fosse, and served as a cover for the archers, who poured in showers of darts, while the exterior defences of a fortified town or place, were insulted at all points. The terraces also answered the same end, in those days, that trenches and contravallations do in these times. A terrace likewise signified, in former times, a sort of cavalier, which was carried to a great height, in order to overlook and command the walls of a town. These terraces were constructed by means of mantelets, which stood very high, for the purpose of covering the working parties from the arrows, &c. of the besieged.

Alexander the Great had frequent recourse to these terraces when he attacked a town.

Counter-TERRACE is a terrace raised above another for the purpose of joining the ground, or of raising a parterre.

TERRACE, in building, is used to signify the roofs of houses which are flat, and may be walked upon; as also balconies which project.

The terrace is properly the covering of a building which is in platform. As that of the *peristyle* in the *Louvre*.

TERRAIN, *Fr.* sometimes written *Terrein*, generally any space or extent of ground.

TERRAIN, *Fr.* the ground or soil upon which any thing is built.

TERRAIN de niveau, *Fr.* level ground.

TERRAIN par chutes, *Fr.* any piece of ground whose continuity is broken or interrupted and again connected with another piece by means of steps or glacis.

Gagner du TERRAIN peu-à-peu, *Fr.* to gain ground little by little.

Perdre du TERRAIN, *Fr.* to lose ground.

Ménager son TERRAIN, *Fr.* to make the most of one's ground. It is likewise used in a figurative sense, viz. *Un homme est fort quand il est sur son terrain*, *Fr.* a man always speaks with great confidence when he is thoroughly master of his subject.

TERRAIN du camp, *Fr.* the ground within the lines of encampment.

Lever le TERRAIN, *Fr.* to reconnoitre, to take a survey of ground.

Chicaner le TERRAIN, *Fr.* to dispute the ground, to fight it inch by inch.

Tenir un grand TERRAIN, *Fr.* to take up much ground.

TERRAIN, with horsemen, the manage ground upon which the horse makes his pist or tread.

TERRASSE de Hollande, *Fr.* a sort of powder or dust which is made of an earth that may be found near the lower Rhine in Germany, and in the neighbourhood of Cologne; it is concocted or made up like plaster, and afterwards reduced to a powder. This powder is a very good ingredient for the composition of mortar that is to be used in buildings under water.

TERRASSE de sculpture, *Fr.* the lower part of the plinth.

TERRASSE de marbre, *Fr.* the soft or defective part in marble.

TERRASSER, *Fr.* to level with the

earth; to throw down; to route completely.

TERRASSIER, *Fr.* This word is used among the French, not only to signify the person who undertakes to see heaps of earth removed, &c. for any specific purpose, but likewise the man who actually carries it.

TERRE, *Fr.* earth, land, ground.

Ouvrages de TERRE, *Fr.* works which are thrown up with earth. This does not, however, imply, that nothing but earth is used; since palisades, traverses, chevaux de frizes, &c. may also form part of the defence.

A TERRE, *Fr.* on the earth, or ground.

Etre genou à TERRE, *Fr.* to kneel.

Genou à TERRE! *Fr.* Kneel! a word of command used in the French service, in firing, or when the sacrament passes.

TERRE also signifies dominions, possessions, as *les terres de France*.

TERRE à dégraisser, *Fr.* fuller's earth.

En TERRE étrangère, *Fr.* in a foreign country.

En TERRE ennemie, *Fr.* in an enemy's country.

TERRE-franche, *Fr.* a sort of clay or fat earth, without gravel, of which mortar is made.

TERRE massive, *Fr.* solid earth without space or cavity.

TERRE naturelle, ou terre vierge, *Fr.* earth that has never been moved or turned up.

TERRE rapportée, *Fr.* earth which has been brought from any place to fill up a ditch, or to make ground level, &c.

TERRES jectisses, *Fr.* This term not only signifies that earth which has been dug up for the purpose of being carried away, but also that which is left in order to raise a piece of ground.

TERREIN. See *TERRAIN*.

TERRE-PLEIN, TERRE-PLAIN, *Fr.* See *FORTIFICATION*.

TERRER, se Terrer, *Fr.* to hide under ground. The French say, *Les gens de guerre se sont bien terrés*; meaning thereby, that they had thrown up entrenchments with earth, so as to be covered from the enemy's fire. *Terrer un artifice*, to cover the head of any fire-work with earth.

TERRES-amendées, *Fr.* earths that have been used in the cleansing of saltpetre. Saltpetre-men call these earths *terres réuninées*.

TERREUR, *Fr.* fear; apprehension.

Répandre la TERREUR, *Fr.* to spread

terror; to cause dismay. *Jeter la terreur parmi les ennemis*, to throw terror amongst the enemies. A French author has made a very just distinction between causing fear and apprehension to exist in an adversary's army, and occasioning terror and dismay among the inhabitants of a country through which troops are obliged to march. Marshal Saxe was particularly cautious on this head; so much so, that he was always well received by the inhabitants of every place, where he had made war. This cannot be said of all conquerors or generals. In cases of tumult, or insurrection, raw and unexperienced officers and soldiers should be employed as little as possible, as, from their ignorance of real service, they are generally brutal, and cause dismay and terror among the peaceable and well inclined part of community.

TERREUR panique, Fr. See PANIC.

TERRIGNOL, a horse that cleaves to the ground, that cannot be made light upon the hand, or put upon his haunches; in general, one whose motions are all short and too near the ground.

To *TERTIATE*, in gunnery, is to examine the thickness of the metal of a piece of artillery, in order to judge of its strength. This is usually done with a pair of calliper compasses.

TERTRE, Fr. a small rising ground that stands unconnected with any other.

TESSELLATED pavement is a rich pavement of Mosaic work, composed of curious small square pieces of marble, bricks, or tiles called *tesselle*, from having the shape of tiles.

TESSERA, a composition which has been lately invented to cover the tops of houses, &c. in lieu of using tiles or slates.

TESSERA. See *SIGNUM Militare*.

TESSERÆ Militares, military watch-words or countersigns. Among the ancient Romans, the military watch-word or countersign, was passed in the following manner:—

One soldier was selected throughout ten legions, and was called *tesserarius*, the bringer, or the giver, of a watch-word. It was the duty of this man to wait, at sunset, upon the tribune of the guard, from whom he received, written upon a small wooden tablet, certain orders which had been issued by the general. This tablet, besides the watch-word, contained also some specific order from headquarters. As soon as the *Tesserarius* had received the orders from the tribune,

he immediately repaired to his legion, and delivered the tablet to the commanding officer, in the presence of witnesses. This officer transmitted it to the next in command, after having inserted the particulars in his own orderly books; and as each centurion (when he sent to the tribune for orders) was obliged to transmit the tablet, containing the watchword, after sunset, the latter, by referring to the minutes, (which he kept of every part of the army,) easily ascertained every omission or neglect of orders; and if the person so offending, affected to deny his having seen the tablet, the witnesses were examined, as to the delivering of it by the *Tesserarius*. See *RONDE*, Fr.

TESSONS, Fr. potsherd; or pieces of broken earthen vessels, or free-stone, which are pounded to dust for the purpose of making mortar for cement.

TESTAMENT, Fr. will, testament.

TESTAMENT Militaire, Fr. among the French, a will which is made in the presence of two witnesses only, by word of mouth, and is not committed to paper.

TESTIMONY, verbal declaration, given upon oath or honour, before any court martial. The testimony of a witness should neither be influenced nor interrupted, and the precise words used by him should be written down in the proceedings without any alteration.

TESTUDO, in the military art of the ancients, was a kind of cover or screen, which the soldiers of each company made themselves of their bucklers, by holding them up over their heads, and standing close to each other. This expedient served to shelter them from darts, stones, &c. thrown upon them, especially those from above, when they went to the assault.

TESTUDO was also a kind of large wooden tower, which moved on several wheels, and was covered with bullocks' hides: it served to shelter the soldiers when they approached the walls to mine them, or to batter them with rams.

TETE, Fr. head.

TETE du camp, Fr. the head of the camp, or the front ground which looks towards the country; also that part of a camp which lies contiguous to the enemy, and where the troops bivouac.

TETE de la sappe, Fr. head of the sap.

TETE de chevalement, Fr. a cross beam which lies upon two stays, and supports any part of a wall, &c. whilst it is in repair.

Faire (ou tenir) TETE à quelqu'un, Fr. to oppose a person; to keep him at bay.

Avoir quelqu'un en TETE, Fr. to have any person opposed to one, viz. *Turenne avoit en tête Montécuculli*; Turenne was opposed by Montécuculli.

TETE baissée, Fr. headlong.

A la TETE, Fr. at the head of.

TETE d'une armée, Fr. the head of an army. This consists of the troops which are farthest advanced towards the enemy, or on any given point of direction.

Montrer une TETE, Fr. This phrase is used among the French, to signify any particular direction that an army takes.

TETE de tranchée, Fr. that part of a trench which is closest to a fortified town or place.

TETE de Maure, Fr. a sort of grenade which is thrown out of a piece of ordnance.

TETE d'un ouvrage à corne, à couronne, Fr. that part of a horn, or crown-work, which looks towards the country.

TETE d'un ouvrage, d'une armée, qui assiège une ville, Fr. that part of a fortified work, or proportion of an army, which looks towards the country, and is connected with the line of contravallation.

Avoir la TETE de tout, Fr. to be the most advanced.

TETE de pont, Fr. that part of a bridge which is on the enemy's side. When the bridge is fortified on both sides, the French say, *les deux têtes de pont*.

TETE couronnée, Fr. a crowned head. This term is used, as with us, to signify emperor, or king.

Avoir le rang de TETES couronnées, Fr. to rank with crowned heads. Thus the Republic of Venice, and the United States of Holland, formerly ranked with crowned heads.

TETE de travail, Fr. in fortification, the front, foremost part, or that which is farthest advanced and closest to the enemy.

TETE de mur, Fr. all that is seen of the thickness of a wall in an opening, which is generally lined with a chain of stones.

TETE de vousoir, Fr. the front, or back part of the bending of an arch. Richelet writes the word *vousseau* as well as *vousoir*.

TETE perdue, Fr. This word refers to all the heads of iron pins, screws, or

nails, which do not appear over the surface of anything they hold, or are fixed to; hence

Clou à TETE perdue, Fr. a sunk nail.

TETE de porc, Fr. This word means literally a hog's head. It is used to denote a military arrangement of the triangular kind. Those mentioned under the term wedge, were composed of ranks, greater one than another, in a regular progression from the incisive angle to the base. The *tête de porc* was formed of small bodies ranged in lines in the same sense, and in the same progression as the ranks in the preceding wedges; that is to say, a small body (probably square) was placed at the head, another of the same size was posted behind it, having two others, one on its right, the other on its left, both extending the full length of their front beyond the wings of the first. Behind those three, five others were ranged in the same order, and so on successively until all were placed.

This arrangement is equal to the former (viz. that of the wedge) with regard to defects; as to advantages, it has but one only, which will never be of weight enough to gain it any degree of reputation; it is this, that being composed of small bodies, each having its leader or commander, all the different parts are more or less capable of defence, should they be attacked at the time they are forming or dividing; and if the enemy attempted to form the *tenaille*, they might detach some of those small bodies to interrupt their motions, or to attack them in flank. See *Observations on the Military Art*, page 205.

TETES, Fr. in the plural number, are the same as men or lives, viz. *La prise de la place a coûté bien des têtes*, the reduction or taking of the place has cost many lives or men.

TETHER, (*entrave*, Fr.) a string by which horses are held from pasturing too wide. We say, figuratively, to go the length of one's tether; to speak or act with as much freedom as circumstances will admit.

TÉTIÈRE, Fr. the fillet, or head-stall, of a horse's bridle.

TETRACTYS. In ancient geometry, the *Pythagoric tetractys* consisted of a point, a line, a surface, and a solid.

TETRAEDRON, (*tétrédre*, Fr.) in geometry, one of the five regular bodies. It is a pyramid which is terminated by

four equilateral triangles, that are equal to each other; in the same manner that the tetragon is a rectilineal figure of four equal sides, which has four right angles.

TETRAGONAL, (*tétragone*, Fr.) four square, having equal sides and angles.

TETRAGONISM is used by some writers to signify the quadrature of a circle.

TÉTRALISTE, *Fr.* a building supported by four columns, or pillars.

TETRARCH, a Roman governor of the fourth part of a province.

TETRASTYLE, in ancient architecture, was a building, and particularly a temple, which had four columns in front and rear.

TETU, *Fr.* a large hammer.

TEUTONIC, (*teutonique*, Fr.) See **ORDERS**.

TEVEEL, *Ind.* the treasury.

TEVEELDAR, *Ind.* the treasurer.

THACK tiles. See **TILES**.

THANE, an ancient military title of honour, now obsolete.

To **THANK**, in military matters, to make honourable mention of a person or persons, for having behaved gallantly in an action, or otherwise rendered a public service.

To be **THANKED**, to receive a public testimony of good conduct. Officers, &c. are generally thanked in public orders.

THANKS, public acknowledgments for gallant actions.

Vote of THANKS. It has been customary, in all civilized countries, for the legislature to pay a public tribute of applause to those warriors who have fought their country's battles with success, and have otherwise distinguished themselves by particular feats of gallantry and good conduct. The French, during the progress of their Revolution, have had frequent recourse to this mode of adding new zeal and fresh courage to their armies, and of expressing national gratitude. It has been the good fortune of this country, to have experienced occasions of testifying a higher sense of its obligations to the navy, and of late years to the army, than can be found in the history of any people.

THANLACHIES, *Fr.* weapons which were used among the Gauls, or ancient French, of an offensive and defensive nature. The former were made in the

shape of halberds or pikes, and the latter were a sort of small round shields.

THEATRE of war. Any extent of country in which war is carried on may be so called. The French say *théâtre de la guerre*. It signifies the same with us as seat of war. According to Turpin, page 21, in his Essay on the Art of War, there are but three sorts of countries which may become the theatre of war; an open country divided by rivers, a woody, or a mountainous one. The dispositions for a march must of course be varied as the situations of places differ.

THEATRE, in architecture. This word is chiefly used by the Italians to signify an assemblage of several buildings, which, by a happy disposition and corresponding elevation, exhibits an agreeable scene to the eye.

Of this description are the vineyards at Rome; particularly that of Monte Dragone in Frescati, and the new castle of St. Germain en Lay, in France.

THEOCRACY, (*théocratie*, Fr.) government by God himself; such as the Jewish form of government was before they had an earthly king. It also signifies the government of the Lama, which was vested in the Incas, and which still exists among the tribes of Tartary.

THEODOLITE, (*théodolite*, Fr.) a mathematical instrument generally useful, and particularly so to engineers and artillerymen, in surveying and taking heights and distances.

THEOREM, (*théorème*, Fr.) in mathematics, a proposition which is purely speculative, and tends to the discovery of some hidden truth.

An *universal THEOREM*, in mathematics, is one that extends universally to any quantity without restriction; as that the rectangle of the sum, and difference of any two quantities, are equal to the difference of their squares.

A *particular THEOREM* is when it extends only to a particular quantity.

A *negative THEOREM* is one that demonstrates the impossibilities of an assertion, as, that the sum of two biquadrate numbers cannot make a square.

A *local THEOREM*, that which relates to surface, as the triangles of the same base and altitude are equal.

General THEOREMS are those which extend universally to any quantity, without restriction.

Plane THEOREMS are such as either

relate to a rectilinear surface, or to one terminated by the circumference of a circle.

Solid THEOREMS are those which consider a space terminated by a solid line, that is by any of the three conic sections.

Reciprocal THEOREMS are those whose converse is true.

THEORETICAL, (*théorique*, Fr.) what appertains to theory.

THEORY, (*théorie*, Fr.) the speculative part of any particular science, in which truths are demonstrated without being perfectly followed.

School of THEORY. In order to secure to the army intelligent and well informed officers, it has been wisely suggested, that there should be a school of Military Theory in each regiment. The persons selected for this purpose are to pass an examination before the professors at the Military College, whenever the vicinity of the regimental quarters will allow them to attend.

Order of MARIA THERESA, a military order of knighthood, which was founded and established by the House of Austria, on the 18th of June, 1757, and was distinguished by the name of the reigning queen and empress, being called the Imperial Military Order of Maria Theresa. It was instituted with the view of manifesting the sovereign's approbation of the merits of the army, and of consigning to the latest posterity, a memorial of its good conduct. The 15th regiment of British Light Dragoons, by its singular prowess and good conduct on the 24th of April, 1794, were found worthy of imperial notice and consideration.

THERMES, Fr. small barges or boats in which persons bathe. There are several upon the river Seine, between the Pont-Neuf and the Pont-Royal, at Paris. There is also one on the river Thames, near Westminster-bridge.

THERMOMETER, (*thermomètre*, Fr.) an instrument for measuring the heat of the air, or of any matter.

THERMOSCOPE, (*thermoscope*, Fr.) an instrument by which the degrees of heat are discovered; a thermometer.

Soldier's THIGH figuratively means an empty purse, or, speaking familiarly, a pair of breeches that sit close and look smooth, because the pockets have nothing in them.

THIGHS of a horseman. The effect of the rider's thighs is one of the aids

that serves to make a horse work vigorously in the manège.

Fore THIGH, or arm of a horse, is that part of the fore leg that runs between the shoulder and the knee.

THILL, the shafts of a wagon; hence the horse which goes between the shafts is called the thill-horse, or thiller.

To THIN, to make less numerous. As to thin the ranks by a heavy discharge of ordnance and fire-arms. The French say, *éclaircir les rangs*.

THIRD point, } in architecture, is
TIERCE point, } the point of section in the vertex of an equilateral triangle. Arches or vaults of the third point, which the Italians call *de terzo acuto*, are such as consist of two arches of a circle, meeting in an angle at the top.

A THIRTEEN, a shilling is so called in Ireland; thirteen pence of that country's currency being only equal to twelve pence English.

THOROUGHFARE, a passage without any stop or let.

THREAD, one of the two component parts of a screw. It consists of a spiral protuberance, which is wound round a cylinder.

To THREATEN, in a military sense, to shew a disposition to attack; as, the enemy threatened our left wing.

THREE deep. Soldiers drawn up in three ranks, consisting of front, center, and rear, are said to be three deep. It is the fundamental order of the infantry, in which they should always form and act at close order, and for which all their operations and movements are calculated.

THREES, a term used in the tellings off in a squadron.

Ranks by THREES, each half squadron told off by threes.

THROAT, a well known part of the human frame. An enterprising warrior always takes his enemy by the throat, *par la gorge*; that is, he disregards minor objects in order to secure some well digested plan, or fortunate occurrence.

THROAT, or *gorge*, in architecture, is a sort of concave moulding, wider, but not so deep as a scotia, chiefly used in frames, chambranles, &c.

To THROW, to force any thing from one place to another; thus artillerymen say to *throw* a shot or shell, or so many shot or shells are thrown: also to supply, as to throw in succours, &c.

THRUST, (*botte*, Fr.) hostile attack

with any pointed weapon, as in fencing. When one party makes a push with his sword, to wound his adversary with the point, it is called a thrust.

To THRUST home, (tirer à fond, Fr.) a term used in fencing. This thrust is used after any parade of tierce, or of half-circle, when the adversary does not throw in a reposte, or is late in doing it.

To THRUST carte, (tirer carte, Fr.) The thrust in carte is made after a close disengage, or disengagement.

To THRUST tierce, (tirer tierce, Fr.) This thrust differs from the thrust in carte over the arm, only by the position of the hand, which must be reversed; and it is never used in attacks.

To THRUST seconde, (tirer seconde, Fr.) the thrust in seconde is commonly done on the following occasion: having parried in tierce, if you perceive that your adversary keeps his sword heavy against your's, disengage dexterously under the hilt, reversing the nails downwards, and make your *thrust* on the flank; taking care that your arm be in a perfect opposition, and that your head is inside the thrust.

THUMBSTALL, (couvre-platine, Fr.) a piece of leather which every careful soldier carries with him to secure the lock of his musket from moisture.

THUNDERING Legion. This legion is said to have saved the whole army, then ready to perish from thirst, by procuring, by their prayers, a very plentiful shower thereon, and at the same time, a furious storm of hail, mixed with lightning and thunder-bolts, on the enemy.

This is the account commonly given by ecclesiastical historians, and the whole history is engraved in bass-relievs on the Antonine column. See **FULMINANTE.**

Near **TIDES**, the ebbing, falling, or decreasing tides.

Spring **TIDES**, the great and full tides.

TIDEGATE. See **SLUCE-gate.**

TIERCE, a thrust in fencing, delivered at the outside of the body over the arm.

TIERCEON, TIERCERET, Fr. in architecture, a cross branch on the outside of a vault. This applies more particularly to Gothic vaults, where the arches begin to rise in the angles, and join at the entertoises.

Le **TIERS-état, Fr.** that state in community which does not belong to the nobility or clergy; the commonalty.

TIERS-point, Fr. the point of section which takes place at the summit of an equilateral triangle, either above or under: it is so called, because it is the third point after the two that constitute the base.

TIGE, in architecture, a term used by the French, for the shaft, or fust of a column; comprehended between the astragal and the capital.

TIGE, bois de tige, Fr. forest timber which has reached its highest growth; also the trunk of a tree.

TIGETTE, Fr. in the Corinthian capital, a sort of stalk, generally grooved and ornamented with leaves, whence are derived the volutes and vermicular lines.

TIL, ou TILLE, Fr. rind of a young linden tree, out of which cords are made for tracing large plans of buildings, &c. They are particularly useful on these occasions, because they are not liable to stretch.

TILE, in building, a sort of thin, factitious, laminated brick, used on the roofs of houses; or more properly a kind of clayey earth, kneaded and moulded of a just thickness, dried and burnt in a kiln, like a brick, and used in the covering and paving of different kinds of military and other buildings. The best brick earth should only be made into *tiles*. See **Builder's Dictionary.**

TILLAC, Fr. the orlop; or more generally the hatches of a ship.

Franc **TILLAC, Fr.** the lower deck.

TILT, a thrust, or fight with rapiers; also an old military game. See **TOURNAMENT.**

TILTER, one who fights, or contests in a tournament.

TILTING- armour consisted in general of the same pieces as those worn in war, except that they were lighter and more ornamented.

TILTING-lances differed from those used in war, both in their heads and staves; the heads of tilting lances being blunt, or occasionally fitted with a contrivance to prevent penetration, called a coronel or cronel, from its resemblance to a crown.

TIMARIOT, a Turkish soldier who has a certain allowance made him, for which he is not only obliged to arm, clothe, and accoutre himself, but he must likewise provide a certain number of militia men. The allowance is called **Timar.**

The **Timariots** are under the imme-

diate command of the Sangiack or Bey, according to their particular distribution. When the Timariots belonging to Natolia do not join the standard, they forfeit a whole year's allowance, which is deposited in a chest, or stock-purse, called *mankafat*. But the Timariots in Europe, or Turkey, are not liable to this fine. When they refuse to serve, they are suspended for two years. The income of a Timariot amounts to five thousand aspres, and the Timariots of Hungary have six thousand. When a Hungarian Timariot dies, the Bashaw of Buda has the power of dividing his property into two parts which is placed to the account of the Ottoman government, and enables it to pay two soldiers.

There are different classes among the Timariots: some are called *Ikmalers*, some *Isels*, and others *Bernobets*.

The *Ikmalers* are in possession of that species of timar which cannot be divided for the benefit of government, after the decease of the individual.

The *Isels* are subject to a division of property among two or three persons, at the will of the Porte.

The *Bernobets* are in possession of that kind of timar, which may become the property of three or four individuals who serve together, or relieve each other alternately, on condition that the one who takes the field enjoys the whole benefit of the timar during his stay with the army. There are many of this kind in Natolia. Every thing which appertains to the Turkish cavalry, known by the name of *Topachly*, and which is regularly clothed, armed, accoutred, and paid by certain officers belonging to the Ottoman empire, out of revenues called *maly-mukata*, may be ascertained and known under the several appellations of *Timariots*, *Zaims*, *Begliers*, and *Beglier-beys*.

TIMARS, certain revenues, in Turkey, growing out of lands which originally belonged to the Christian clergy and nobility, and which the sultans seized, when they conquered the countries they inhabited.

By means of these *Timars* and *Ziamets*, the Grand Signor is enabled to support the greatest part of his cavalry.

The *Timars* differ in value. The richest, however, do not exceed twenty thousand aspres annually, which may be considered as equal to about sixty or seventy pounds sterling; and the *Ziamets* receive full as much. Those who are

entitled to *Timars*, are called *Timariots*, and those who have *Ziamets* are named *Zaims*.

TIMBALE, *Fr.* a brass kettle-drum, such as is used in the cavalry. French soldiers say figuratively, *faire bouillir la timbale*; to make the pot boil.

TIMBALIER, *Fr.* kettle-drummer.

TIMBER, in military architecture, includes all kinds of felled and seasoned wood used in several parts of building, &c.

TIMBON, *Fr.* a kind of brass drum.

TIMBRE, *Fr.* helmet; stone trough.

TIMBRÉ, *Fr.* stamped. The French say figuratively—*Avoir l'esprit mal timbré*, to want sense; also to be wrong headed, or have a false bias; also crazy.

TIMBRER, *Fr.* to stamp paper.

TIMBREUR, *Fr.* the person who stamps.

TIME, the measure of duration, by which soldiers regulate the cadence of a march; as *ordinary*, *quick*, and *quickest* time or step, *which see*.

Double quick TIME, a measure now adopted to accelerate the movement of troops.

TIME, in manœuvring, the necessary interval betwixt each motion in the manual exercise, as well as in every movement of the army, or of any body of men.

TIME, in fencing. There are three kinds of time; that of the sword, that of the foot, and that of the whole body. All the times that are perceived out of their measure, are only to be considered as appels or feints to deceive and amuse the antagonist.

TIME thrust, in fencing, a thrust given upon any opening which may occur by an inaccurate or wide motion of your adversary, when changing his guard, &c.

TIME. The Lacedæmonians were accustomed to say, that time was the most precious thing in life. Great men, who frequently make use of others, take no note of time; nor make any allowance for the sacrifice of that inestimable thing. Men of sense know its value.

TIME in marching, prescribed periods, during which a body of armed men is made to go over any given proportion of ground, in quick, ordinary, or slow time.

TIME-book. See **BOOK**.

TIME-piece, an instrument for the measurement of time, synonymous with **CLOCK**, **WATCH**, and **CHRONOMETER**. Although these exquisite machines are of

more impottance in naval than in military matters, as it is principally by them that the longitude at sea is ascertained, they are, nevertheless, of very considerable utility in military operations; especially in the practice of artillery; in ascertaining the range of shot and shells, and the distances of places, by the flight of sound, the velocity of which, being estimated to be 1142 feet per second, the number of seconds between the flash and report of any gun gives the distance of the gun.

This instrument was used by the ancients under the title of CLEPSYDRA, or WATER CLOCK, supposed to have been invented in Egypt under the Ptolemies; in these machines the time was measured by the passage of water through small apertures. It is needless, therefore, to say, their imperfections were very great.

The SAND GLASS probably succeeded the CLEPSYDRA, next in point of antiquity; but the ancients knew nothing of the application of pendulums, balances, weights, or springs, to the measurement of time. They are the gradual production of later ages. The first mechanical clocks are believed to have been made about the sixth century, and to have been first introduced into this country in the year 1368. GALILEO was the first who used a heavy body, suspended by a string, for the measurement of time; but HUYGENS first applied the pendulum as the regulating organ to a clock. The balance, and balance-spring, applied to watches and chronometers, to answer the same purpose as the pendulum to clocks, is the invention of the celebrated Doctor Hooke, about the close of the 17th century. Since the first construction of clocks and watches, the most ingenious mechanics and artists have employed themselves in refining and improving upon the original construction; but without any essential variation as to the principle of connection between the motive power of the clock or watch, and the pendulum or balance. We find, however, that a patent has lately been taken out by Sir William Congreve, whose mechanical labours we have already had occasion to mention, which seems to open a new æra in the science of measuring time. We shall therefore refer our readers to the specification of his patent, as published in the Repertory of Arts, not only as explanatory of the new system invented by himself, but as

shewing the most important and delicate considerations attaching to the principle of time-keepers in general.

TIMING, in fencing, the accurate and critical throwing in of a cut or thrust upon any opening that may occur, as your adversary changes his position.

TIMON, *Fr.* coach-pole; shafts of a cart; also the staff or handle (which we call the whip) of the helm, or rudder, of a ship.

TIMONIER, *Fr.* This word is frequently used as a sea term by the French, and signifies helmsman, or steersman, from *timon*, which is applied to the part of the helm he holds.

TIMPAN, } a timpan, or timbrel;
TYMPAN, } also a tabor; also the gable end of a house; also the square frame covered with parchment upon which a printer lays the sheet or leaf that is to be printed.

TIMPAN *de machine*, *Fr.* any hollow wheel, in which one or more persons may move, for the purpose of turning it, such as the great wheel of a crane; also a mill wheel that takes and yields water in turning.

TIMPAN *dentelée*, *Fr.* the cog wheel of a mill.

TIMPANNE, *Fr.* the pannel, or flat square, on the top or head of a pillar.

TIN tubes. See TUBES and LABORATORY.

TINDALS, *Ind.* native officers employed in the artillery, and in ships.

TINGUES, *Fr.* small boards of an unequal length, upon which clay is laid, with moss above it, and which serve to cover or fill up the joints and seams of planks belonging to wooden quays, behind which they are nailed.

TINS, *Fr.* a sea term. Ship-carpenters use it to signify large pieces or blocks of wood which are laid upon the ground, for the purpose of sustaining the keel and the ribs of a vessel whilst it is upon the stocks.

To TIP, a term used in farriery, signifying, to guard the hoofs of the forefeet of a horse, when he is sent to a straw-yard, by covering them with a slight shodding.

TIR, *Fr.* in artillery, a term used to express the explosion or discharge of any fire-arm in any given direction. *Un bon, un mauvais tir*, a good, a bad shot; or a shot well or ill-directed.

La théorie de Tir, *Fr.* the theory or art of firing.

TIR *perpendiculaire*, Fr. a shot made in a perpendicular direction.

TIR *oblique*, Fr. an oblique shot.

TIR *à ricochet*, Fr. a ricochet shot.

TIR *rasant*, Fr. a grazing shot; or shot made *rasant*. See FORTIFICATION.

TIR *plongant*, Fr. a downward, or plunging shot.

TIR *fichant*, Fr. a shot made *fichant*. See FORTIFICATION.

TIRADE, Fr. a volley; also of words; strong remonstrance, either of a reproachful or satirical nature.

TIRAGE, Fr. the foot-path which is made upon the banks of a canal or river, &c. for men or horses employed in towing barges, &c.

TIRAILLER, Fr. to shoot, to keep shooting unskilfully. Among military men, however, this word signifies to shoot, as light armed marksmen do, in a desultory manner, but with specific aim.

TIRAILLEUR, Fr. a person who shoots at random. In a strict military sense, one who fires individually, and out of the regular line of fire, for the purpose of annoying out-posts, reconnoitring parties, &c.

TIRAILLEURS are likewise riflemen, skirmishers, or marksmen, advanced in front to annoy the enemy, and draw off his attention; or they are left behind to amuse and stop his progress in the pursuit. In page 263, of the *Spirit of the Modern System of War*, lately published, with a commentary by C. Malort de Martemont, French professor at Woolwich, we find the following account of the origin of these troops:—"What, however," observes the author, "renders this war remarkable, in a military point of view, is, that the first use of *tiraillours* may be dated from that period, and that the American soldiery were the first troops employed in that manner."

TIRANT, Fr. a sea-term, signifying the quantity of water which a ship draws, technically called the ship's gauge.

TIRANT, Fr. a long iron bar, at the end of which a hole has been made, called an *eye*, in order to pass an iron-brace. It is used in flood-gates.

TIRANT, Fr. a long piece of timber or beam, running through the whole extent of a dwelling, which, being fastened at both ends with iron braces, prevents the widening of the under-roof, as well as that of the walls which support it. It is also called *entrait*.

TIRANT, Fr. a boot-strap.

TIRE are great guns, shot, shells, &c. placed in a regular form. See PILES.

TIRE-balle, Fr. an instrument used by surgeons to extract musket-balls. This word is also used by the French, to express a strong worm, with which bullets and balls are drawn out, after having been well rammed down.

TIRE-bourre, Fr. in artillery, a wad-hook. It likewise signifies a worm to draw the charge out of a musket.

TIRE-fond, Fr. an instrument which is used among the French to fix a petard. It likewise means a surgeon's terebra or piercer.

TIRE-ligne, Fr. an instrument used in drawing lines; a ruler; a drawing pen.

TIRE-ployer, Fr. to discharge; to unload.

TIRE-botte, Fr. a boot-strap; a jack or piece of wood, by means of which a boot may be drawn off.

TIRE-bouchon, Fr. a cork-screw.

TIRE-elou, Fr. a nail-drawer.

TIRE-fieul, Fr. a crooked dung-fork.

TIRER, Fr. to shoot; to fire; to let off.

TIRER, Fr. to pull. *Cheval qui tire à la main*, a horse that pulls, or bears heavy in hand.

TIRER à boulets rouges, Fr. to fire with red hot shot.

TIRER le canon, Fr. to fire or discharge pieces of ordnance.

TIRER likewise means to move towards any place, viz. *Après la bataille gagnée, l'armée tira vers un tel lieu*, after the battle had been won, the army moved towards such a quarter.

TIRER dix ou douze pieds d'eau, Fr. to draw ten or twelve feet water.

TIRER à la mer, Fr. to put off to sea.

TIRER l'épée, Fr. to draw swords; to fight.

TIRER l'épée contre son prince, Fr. to rise in open rebellion against one's sovereign.

TIRER un homme de prison, Fr. to take a man out of prison.

TIRER le plan d'une forteresse, Fr. to draw or take a plan of a fortress.

TIRER avantage, Fr. to take advantage.

TIRER parti, Fr. to derive advantage. See PARTI.

Se TIRER, Fr. to get out or off; to extricate oneself.

TIREUR, Fr. a game-keeper; a shooter.

TIREUR d'arc, Fr. a bowman; an archer.

TIREUR d'armes, Fr. a fencing-master.

TIROLIANS, a body of sharpshooters in the Austrian service. They take their name from the Tyrol, a country in Germany, about 150 miles long, and 120 broad. It is rather mountainous, and forms part of the hereditary dominions of Austria.

TIRONES. Among the ancient Romans, the Tirones were supernumerary soldiers, who were not enrolled or enlisted, but were regularly sworn when they replaced the superannuated, or dead, belonging to a legion.

TISSUE, (*tissu*, Fr.) in a figurative sense, any regular series or continuation of things, &c. viz. *un tissu de grandes actions*, a series of great actions.

TOCSIN, Fr. an alarm bell.

TOD, a certain weight, twenty-eight pounds; as a tod of wool.

TOGA militaris, the dress which was anciently worn, tucked up, by the Roman soldiers, when they were quartered in a town. The *Sagum* was worn in camp.

TOHIE, Ind. a canoe.

TOILE, Fr. canvass. The French say as we do, *l'armée est sous la toile*, the army is under canvass, or is encamped.

TOISE, in military mensuration, is a French measure, containing 6 feet, or a fathom: a square toise is 36 square feet, and a cubical toise is 216 feet.

These two measures correspond in the division of the feet; but these divisions being unequal, it is necessary to observe, that the proportion of the yard, as fixed by the Royal Society in London, to the half toise as fixed by the Royal Academy at Paris, is as 36 to 33.355.

TOISE carrée, Fr. any square extent, having six feet in every sense.

TOISE cube, Fr. any substance having six feet in length, six ditto in breadth, and six in depth.

TOISE courante, Fr. the length of a thing measured by the toise, whose height or breadth is supposed to be every where alike.

TOISE quarrée, ou superficielle, Fr. a surface or superficies containing one fathom, or six feet, in length, upon the same quantity in breadth, the product of which is thirty-six square feet. The French say figuratively, *On ne mesure pas les hommes à la toise*; the merits of men are not to be estimated by their size of body.

Le TOISÉ, Fr. This word is used in the masculine gender, and signifies in mathematics, the science or art of measuring surfaces and solids, and of reducing the measure by accurate calculation.

Une affaire TOISÉE, Fr. a familiar phrase, signifying the thing is done, all is over.

TOISÉ, Fr. a measure taken by the toise.

TOISÉ, Fr. measure of brick-work, in order to ascertain the price and quantity of any work done about a building.

TOISÉ, du bout d'avant, Fr. in carpentry, the enumeration of the pieces of timber belonging to a building, taken from their lengths.

TOISER, Fr. to measure by the toise.

TOISER, Fr. in a military sense, to take the height of a man, as, *toiser un soldat*, to take the height of a soldier; to put him under the standard. The French likewise say, in a figurative sense, *toiser son homme*, to examine one's man with great attention, in order to find out his merits, or good qualities.

TOISEUR, Fr. a measurer; a person employed, among the French, in the constructing and repairing of fortifications.

TOISON d'or, Fr. the golden fleece.

La TOISON, Fr. The order of the golden fleece is so called.

TOIT, Fr. roof.

TOKERY, Ind. a basket made with cane.

TOLE, Fr. iron beat into thin plates, such as is used for locks, &c.

TOLERATION, (*tolérance*, Fr.) a suffering, permitting, or allowing of.

TOLOQUENO, a sort of dough which the Russian soldier bakes on thin plates of heated iron, and carries with him for subsistence in time of war.

TOLPACHES. See **TALPATCHE**.

TOMAN, Ind. ten thousand men.

TOMAND, Ind. equal to something more than three guineas.

TOMBAC, Fr. pinchbeck.

TOMBER, Fr. to fall. *Le vent tombe*, the wind falls; *tomber entre les mains des ennemis*, to fall into the hands of enemies.

TOMBEREAU, Fr. a dung cart; also tumbrel.

TOMBIE, Ind. a wind instrument made in the shape of a globe.

TOMPION. See **TAMPION**.

TAMSOOK Hazin Zaminee, Ind. a security for personal appearance.

TAMTOM, *Ind.* a drum made in the shape of a tambourine.

TON *de garnison*, *Fr.* a peremptory coarse manner of expressing one-self, what we would familiarly term garrison slang.

TONDRE, *Fr.* to shear; shave one's head; cut one's hair; to crop.

Se laisser TONDRE la laine sur le dos, *Fr.* figuratively to endure any thing, alluding to the tame and passive nature of sheep.

TONG. See TENAILLE.

TONG *of a wagon*, a piece of wood fixed between the middle of the hind ends of the shafts, mortised into the fore cross-bar, and let into the hind cross-bar.

TONGUE *of a sword*, that part of the blade on which the gripe, shell and pommel are fixed,

A *triangular TONGUE*. The bayonet is figuratively so called from its shape. Its wonderful effect, in peremptorily putting an end to the senseless jargon of contending factions, has sometimes been acknowledged. Cromwell, who was a man of few words, and since him Bonaparte (equally remarkable for his taciturnity) found the application of it wonderfully efficient.

Devil's TONGUE, a battery so called in Gibraltar. See Colonel Drinkwater's account of the memorable defence of that honorary, but unprofitable spot, to Great Britain.

To *swallow the TONGUE*, with horsemen, is said of a horse when he turns it down his throat, which makes him wheez as if he was short winded.

Aid of the TONGUE, with horsemen, a sort of agreeable clacking, or a certain sound made by the rider, &c. by striking the tongue against the roof of the mouth, when he would animate the horse, sustain him, and make him work well in the manage.

TONNAGE, *Fr.* a word adopted from our term tonnage.

TONNAGE, a custom or impost due for merchandize, brought or carried in tons, from or to other nations, after a certain rate in every ton; also on vessels carrying passengers. It was formerly a partial duty laid upon the English packets between Dover and Calais, in 1801 and 1802; but by a retaliatory act in 1815, it is now a general one.

TONNAGE. The usual method of finding the tonnage of any ship is by the following rule:—Multiply the length of

the keel by the breadth of the beam, and that product by half the breadth of the beam; and divide the last product by 94, and the quotient will be the tonnage.

Ship's keel 72 feet: breadth of beam 24 feet.

$$72 \times 24 \times 12$$

$$= 220.6 \text{ tonnage.}$$

94

The tonnage of goods and stores is taken sometimes by weight and sometimes by measurement; and that method is allowed to the vessel which yields the most tonnage.—In tonnage by weight, 20 cwt. make 1 ton.—In tonnage by measurement, 40 cubic feet equal 1 ton.—All carriages, or other stores, to be measured for tonnage, are taken to pieces, and packed in the manner which will occupy the least room on board ship.—All ordnance, whether brass or iron, is taken in tonnage by its actual weight.—Musket cartridges, in barrels or boxes, all ammunition in boxes, and other articles of great weight, are taken in tonnage according to their actual weight.

The following is the tonnage allowed to the military officers of the ordnance embarked for foreign service, for their camp equipage and baggage:—

For a field officer - 5 tons.

For a captain - - 3 do.

For a subaltern - 1½ do.

TONNE, *Fr.* a tun: it likewise signifies, a large cask or vessel which is used for stores and ammunition.

TONNE, *Fr.* a marine term; the same as *bouée*, whence our word *buoy*, a large machine in the shape of a barrel, which is kept afloat by a cable and anchor in order to point out a sand bank, rock, &c. in the sea, and to warn navigators not to approach.

TONNEAU, *Fr.* ton. The French ton, in shipping, contains about three muids and a half, French measure, or twenty-eight cubic feet, and weighs 2000 pounds; so that when we say a vessel carries three hundred tons, we mean that it carries three hundred times the value of 2000 pounds weight, that is, 600,000 pounds, and to that end, the sea water which would fill up the space occupied by the ship, in its sinking or immersion, weighs exactly as much as the ship and its cargo put together.

TONNEAUX *Meurtriers*, *Fr.* casks which are bound together with ropes, or circled round by iron hoops, and are filled with gunpowder, pebbles, &c.

The particular method in which these casks are prepared may be seen in tom. ii. page 218, *Des Œuvres Militaires*.

TONNELLON, *Fr.* a drawbridge, which was used by the ancients, in order to get suddenly over the fosse upon the walls of a besieged place.

TONNERRE, *Fr.* that part of a piece of ordnance, or fire-arm, wherein the charge is deposited.

TOOKSOWARS, *Ind.* the vizier's body of cavalry.

TOOLS, used in war, are of many denominations and uses, as laboratory tools, mining tools, artificers tools, &c. which see.

TOOP, *Ind.* a small wood or grove.

Toop e Wallu, *Ind.* a person who wears a hat.

Toop Conna, *Ind.* the place where the guns are kept.

Shell-TOOTHED. See **SHELL**.

TOPARCH, (*toparque*, *Fr.*) the principal man in a place.

TOPARCHY, (*toparchie*, *Fr.*) superintendance; command in a district.

TOPASS, *Ind.* This name was originally given by the natives of India to a native Portuguese soldier, on account of his wearing a hat. It is now generally used to distinguish all Europeans.

TOP-beam, the same as *collar beam*; in building, a beam framed across between two principal rafters.

TOPEYS, *Fr.* the cannoniers belonging to a Turkish army are so called.

TOPGI-Bachi, grand master of the Turkish artillery. This appointment is one of the most important situations in the gift of the Porte. It is generally bestowed upon a relation to the Grand Signor, or upon a favourite to the Grand Vizier.

The name is derived from *Top*, which, in the Turkish language, signifies cannon, and from *Bach*, which means lord, chief or commandant.

The next person in command to the Topgi-Bachi is called *Dukigi-Bachi*, or Master of the Topgis, who are both cannoncers and foundiers. The latter are paid every month by a commissary of their own, whom they call *Kiatib*.

TOPGIS, sometimes written *Topchis*, a name generally used among the Turks to signify all persons employed in the casting of cannon, and who are afterwards appointed to the guns. It is here necessary to observe, that, on account of the vast extent of the Ottoman

empire, the Turks do not attach much heavy ordnance to their armies, especially when they carry on their operations from one frontier to another. This is owing to the scarcity of draught horses, and to the natural obstacles of the country. So that they seldom carry into the field above eight or twelve pounders.

But when it is their design to form any considerable siege, they load camels with all the materials requisite for casting cannon. A certain number of Topgis accompany them, and the instant the army takes up its quarters near to the spot where the attack is to be made, they set to work, and make pieces of ordnance of every species of calibre or bore.

The Turkish cannon is extremely beautiful and well cast. The ornamental parts consist of plants, fruits, &c. for it is expressly forbidden in the Alcoran to give the representation of any human figure upon fire-arms, particularly upon pieces of ordnance; the Turks being taught to believe, that God would order the workman to give it life, or would condemn him to eternal punishment.

The Turks are very awkward in constructing platforms for their batteries, and are almost ignorant of the art of pointing their pieces. From a consciousness of their deficiency on this head, they encourage Christian artillerymen and engineers to come amongst them; but until the late war they seldom viewed them but with a jealous eye, and always gave the preference to renagadoes. General Koehler, with a few British officers belonging to the train, joined their army in 1801, for the purpose of acting against Egypt.

TOPH, among surgeons, a kind of swelling in the bones.

TOPOGRAPHER, a person skilled in ground and locality, &c.

TOPOGRAPHY. In *military history*, a description or draught of some particular place, or small tract of land, as that of a fortification, city, manor or tenement, garden, house, castle, fort, or the like; such as engineers set out in their drawings, for the information of their prince or general. Hence a Topographical Chart—*Carte Topographique*. Topography constitutes, very deservedly, a principal branch of study at the Royal Military College or School, and is an indispensable quality in officers belonging to the Staff Corps.

TOQUE, *Fr.* a velvet cap with the sides turned up, and flat at the top. The Cent Suisses, or the King's Swiss body guard, wore the toque during the old French monarchy.

TOR, a tower, or turret

TORCHENESS, (*torche-nez*, *Fr.*) a long stick with a hole at the end of it, through which a strap of leather may be run; the two ends whereof being tied together, serve to straiten closely, and tie up a horse's nose, as long as the stick is stayed upon the halter or snaffle. This is done to keep the horse from being unruly when he is dressed, &c.

TORCHES, (*torches*, *Fr.*) in military matters, are lights used at sieges, &c. They are generally made of thick ropes, &c.

TORCHES inextinguibles, *Fr.* particular lights or torches, which are made for the use and convenience of workmen at a siege, and which are not extinguished by wind or rain.

TORCHES, *Fr.* in masonry, wads of straw which are used by the workmen in conveying stones that have been dressed, to prevent their sides or edges from being injured. Also wisps or wads of straw, which women place upon their heads, when they carry burthens.

TORCHIERE, *Fr.* a high stand upon which a chandelier is placed, to adorn and give light in rooms of state. M. Blondel has given some curious drawings of this sort of ornament, at the end of the second volume of his work entitled *Décoration des Edifices*. Richelet and other authors write the word *torchère*.

TORCHIS, *Fr.* mud; clay; also clay mixed with chopped straw, with which the walls of barns, cottages, &c. are usually made.

TORCULARIS, with surgeons, a contrivance for stopping the flux of blood in amputation.

TORE, *Fr.* See **TORUS**.

TORLAQUI, a sort of priest in Turkey.

TORMENTUM, an instrument of torture, which was used by the ancient Romans, when they had reason to suspect the fidelity or honesty of a slave. The delinquent was tied to a wheel, by his neck; having his legs and arms fastened on it in the form of St. Andrew's cross. The wheel was then put in rapid motion, and continued so, until some confession was extorted from

him. This punishment was confined to slaves. *La Question*, among the French, was an imitation of this barbarous practice; with this difference, that it was extended to all ranks and degrees, to answer the views of despotism and tyranny. It ceased at the Revolution in 1789.

TORNADO, a Portugueze word, which is used on the southern coasts of Africa, to express furious whirlwinds that are often fatal to mariners and seamen. Dr. Johnson calls it generally, a hurricane; a whirlwind.

TORSE, *Fr.* This word means, literally, twisted. In architecture, it signifies a pillar, the body of which, or the part between the base and the capital, is surrounded with concave and convex circular lines.

TORSEL. See **TASSEL**.

TORTILLIS, *ou Vermiculé*, *Fr.* in architecture, a sort of ornament which is cut upon the embossment of stones in rustic decorations, and which resembles worm-work in cloth.

TORTOISE. See **TESTUDO**.

TORTS, *Fr.* See **WRONGS**.

Avoir des TORTS réels vis-à-vis de quelqu'un, *Fr.* to be completely in the wrong with respect to another person; or to have done him some serious injury, without any justifiable cause.

TORTUE, *Fr.* literally means tortoise. It likewise signifies the testudo, a warlike machine which was used among the ancients.

TORTUE d'hommes, *Fr.* a particular formation which was formerly adopted by the besieged, when they made a sortie.

TORTUE de mer, *Fr.* a sort of vessel which has its deck raised in such a manner, that it resembles the roof of a house, or the shell of a turtle, beneath which soldiers and passengers may conveniently stand or sit with their baggage in bad weather.

TORTURE, rack, extreme torment or pain; a punishment which has been frequently resorted to abroad to exact confessions of guilt, but it is not known in Great Britain.

TORUS, in architecture, a large round moulding used in the bases of columns.

TOSCAN, *Fr.* See **Tuscan ORDER**.

TOSHA couna, *Ind.* store-room, wardrobe.

TOSTE, *Fr.* a rowing bench in a

boat. It is likewise called *Toste de Chaloupe*.

TOTALITE, *Fr.* the whole; as *La totalité de la cavalerie*, the whole of the cavalry.

TOUCHER, *Fr.* to touch. The French say—*Toucher ses appointemens*, to touch, or receive one's pay, or allowances.

TOUCH-hole, the vent through which the fire is conveyed to the powder in the chamber of a gun.

TOUEUX, *Fr.* small anchors used for the purpose of towing any thing along. They also called *ancres de touage*, or towing anchors.

TOUR, turn. That which is done by succession.

Tour of duty. The tour of duty, throughout the British army, is always from the eldest downwards. The following are the different heads of duty, and the ranks in which they respectively stand.

1. The King's guard.
2. The guards of the royal family.
3. The Commander in Chief's guard.
4. Detachments of the army and out-posts.
5. General officer's guard.
6. The ordinary guards in camp and garrison.
7. Pickets.
8. Courts-martial.
9. Fatigues, or duties which are done without arms.

Tour bastionnée, *Fr.* a small bastion, with subterraneous passages under it, which are bomb proof, where cannon is placed to defend the pass of a fortified place.

Tour à feu, *Fr.* a light house.

Tour de treuil, *Fr.* a large wooden cylinder, roll, or axle tree, which is used in machines for raising weights, and is moved by a wheel, or by levers with a rope going round it.

Tours de bâton, *Fr.* by-profits.

Tours mobiles, *Fr.* moveable towers. These were made use of in remote ages; and although the invention of them has been attributed by some to the Greeks, and by others to the Romans, it does not belong to either; for we read of moveable towers in Ezekiel. The curious may derive much information on this head from the Chevalier Folard, in his translation of Polybius, page 536, tom. ii. See *Moveable Towers*.

Tours isolées, *Fr.* detached towers; such as are made in forts, or stand upon the coast to serve for light houses.

Tours terrières, *Fr.* large pieces of wood, which are used in mechanical operations, to convey or remove heavy burthens.

La TOURBE menue, *Fr.* the common people; the rabble.

TOURBILLON, *Fr.* whirlwind; vortex. The French likewise call a waterspout by this name.

TOURBILLON de feu, *Fr.* See **SOLEIL Montant**.

TOURELLE, *Fr.* a turret.

TOURILLON, *Fr.* a sort of pivot, upon which the swipes of drawbridges, and other machines, turn; also an inner verriil; also a thick round piece of iron which is fixed at the bottom of the gates in coach houses, and at the ends of the axle trees of a mill wheel, to make them move more conveniently, and with less friction.

TOURILLON du bras, *Fr.* the head or top of the arm where it is joined with the shoulder blade.

TOURET, *Fr.* a drill or instrument with which holes are made in metal, &c.; also the chain which is at the end of the cheek of a bit.

TOURILLONS. See **TRUNNIONS**.

TOURMENTE, *Fr.* a violent storm.

TOURNAMENT, from the old French word *tournoi*, which is derived from *tourner*, to turn. An exercise of honour formerly practised, wherein princes and gentlemen afforded specimens of their dexterity and courage in public places, by entering the lists and encountering all opposers. They were well mounted on horseback, clad in armour, and accoutred with lance and sword: first tilted at one another, and then drew their swords and fought hand to hand.

These exercises being designed to make the persons, who practised them, expert in the art of war, and also to eutertain the court, the arms were, in a great measure, rendered so far innocuous, that they could not kill the combatants. For this purpose, the points of the lances and swords were broken off; but notwithstanding this precaution, frequent mischief occurred; in consequence of which, the Pope prohibited all sorts of tournaments, under pain of excommunication.

Tournaments had their origin from

the ancient gladiatory combats, and not from the usage of the northern people, as is commonly believed. In Cicero's time, they were called by the Greek name, Anabatis; because their helmet, in a great measure, obstructed their seeing.

TOURNE à gauche, Fr. a tool used by carpenters, masons, and other artisans, in turning screws, saws, &c.

TOURNÉE, Fr. a circuitous journey made for the purpose of inspection, &c.

Le général fit une TOURNÉE pour examiner les avant postes, Fr. the general went round to examine the outposts.

TOURNER, Fr. to turn. In military matters it signifies to get upon the flank, or in the rear, of any object you propose to attack.

TOURNER un ouvrage, Fr. in fortification, to turn a work. This is effected by cutting off its communication with the main body of the place, and taking possession of the gorge. *Tourner le flanc*, to turn the flank; *tourner l'aile droite, ou l'aile gauche*, to turn the right or left wing; *tourner un poste, une montagne*, to get into the rear of a post, mountain, &c.

TOURNEVENT, Fr. a sort of pent-house or portal set before a door to keep off the wind; also a kind of moveable horse at the top of a chimney, or house; or what is generally called a cowl.

TOURNEVIRE, Fr. a large cable with which the anchor is weighed.

TOURNEVIS, Fr. the key of a screw.

TOURNIQUET, Fr. a turnstile; it likewise signifies a swivel, or iron ring.

TOURNIQUET, Fr. among artificers, a species of firework composed of two fusées, which, when set fire to, produces the same effect as the *soleil tournant*.

TOURNIQUET, (*tourniquet*, Fr.) in surgery, an instrument made of rollers, compresses, screws, &c. for compressing any wounded part, so as to stop hæmorrhages.

The common tourniquet is very simple, consisting only of a roller, which, with the help of a small stick, serves to stop the effusion of blood from large arteries, in amputation, by forcibly tying up the limb. The things required in this operation are, a roller of a thumb's breadth, and of an ell in length; a

small cylindrical stick, a conglomerated bandage, two fingers thick and four long; some compresses of a good length, and about three or four fingers' breadth, to surround the legs and arms, and a square piece of strong paper or leather, about four fingers wide. By the regulations published in 1799, for the better management of the sick in regimental hospitals, every surgeon, and assistant surgeon, is directed to have, among other surgical instruments, a certain number of tourniquets; and serjeants, &c. are to be taught the method of using them.

In May, 1793, two tourniquets were directed to be sent to each regiment, the rest are to be made by the men of the regiment; and besides one to each person, who will be taught the use of it, it is necessary to have four for every hundred men.

The non-commissioned officers, band, and drummers of every regiment, are to be taught the manner of applying it, according to instructions sent down from the surgeon general's department.

TOURNIQUETS de fer, Fr. swivels; such as loop and swivel, guard and swivel.

TOURNOIS, Fr. tournament.

TOURTEAU goudronné, Fr. old rope which is untwisted, steeped in pitch or tar, and afterwards left to dry. It is used in fossés and other places during a siege. The French make the *tourteau goudronné* in the following manner.—Take 12 pounds of tar or pitch, six ditto of tallow or grease, which put to three pints of linseed oil, and boil the whole together. You then take old matches, or twisted pieces of rope of any length you want, and let them soak in the boiling liquor. If you wish to prevent them from burning too fast, add six pounds of resin and two of turpentine.

TOURTOUSE, Fr. a rope about a criminal's neck.

TOUT le monde haut, Fr. a French word of command at sea, which corresponds with our sea phrase, Pipe all hands up!

TOUT le monde bas, Fr. a French word of command at sea, which corresponds with, Pipe! all hands down.

TOUTE volée, Fr. the utmost distance to which a ball can be shot.

Tirer à TOUTE volée, Fr. to raise the piece so as to make the shot go as far as possible.

To TOW, (*touer*, Fr.) a sea-term,

signifying to put along, which is done either by fastening a cable or rope to some fixed point on the bank of a river, or to an anchor in the sea, and dragging yourself towards it by straitening the rope round a capstan.

TOWER, (*tour*, Fr.) any high building raised above another, consisting of several stories, usually of a round form, though sometimes square or polygonal: a fortress, a citadel. Towers are built for fortresses, prisons, &c. as the tower of the Bastille, which was destroyed by the inhabitants of Paris, July 14th, 1789.

The Tower of London, commonly called *The Tower*; a building with five small turrets, at different angles, above it, situated on the banks of the river Thames. The Guards usually do duty in it.

The Tower of London is not only a citadel to defend and command the city, river, &c. but it is also a royal palace, where the kings of England, with their courts, have sometimes lodged; a royal arsenal, wherein are stored arms and ammunition for 60,000 soldiers; a treasury for the jewels and ornaments of the crown; a mint for coining money; the archive, wherein are preserved all the ancient records of the courts of Westminster, &c. and the chief prison for state delinquents. The officers belonging to the Tower of London consist of

	<i>per ann.</i>		
1 constable and chief governor at - - - -	1000	0	0
1 lieutenant governor, at	700	0	0
1 deputy lieutenant, at -	365	0	0
1 major, at - - - - -	182	10	0

1 apothecary, 1 yeoman porter.			

TOWER-bastions, in fortification, are small towers made in the form of bastions, by M. Vauban, in his second and third method; with rooms or cellars underneath to place men and guns in them.

Martello Towers. See **MARTELLO**.

Moveable Towers, in ancient military history, were three stories high, built with large beams, each tower was placed on four wheels, or trucks, and towards the town covered with boiled leather, to guard it from fire, and to resist the

darts; on each story 100 archers were posted. They were pushed with the force of men to the city wall. From these the soldiers, placed in the different stages, made such vigorous discharges, that none of the garrison dared to shew themselves on the rampart.

TOWN, any walled collection of houses, from the Saxon, meaning any enclosed place.

Town-Adjutant, an assistant to the town-major. See **ADJUTANT**.

Town-Major, (*major de place*, Fr.) an officer constantly employed about the governor or officer commanding a garrison, &c. He issues the orders to the troops, and reads the common orders to fresh troops when they arrive. He commands according to the rank he had in the army; but if he never had any other commission than that of town or fort-major, he is to command as youngest captain.

TRABAND, a trusty brave soldier in the Swiss infantry, whose particular duty was to guard the colours and the captain who led them. He was armed with a sword and a halbert, the blade of which was shaped like a pertuisan. He generally wore the colonel's livery, and was excused all the duties of a sentry. His pay was eight deniers more than the daily subsistence of the company.

TRABE d'un ancre, Fr. the beam or staff of an anchor.

TRABEA, (*trabée*, Fr.) a white gown bordered with purple, and adorned with clavi or trabæ of scarlet. See *Kennett, Rom. Antiq.* page 313.

TRABEATION, (*trabéation*, Fr.) the same as entablement or entablature.

TRABOUR, a species of fire-arm resembling a blunderbuss, with a very wide muzzle, carrying ten or twelve small pistol balls; used by the Austrians in 1760. Warnery speaks of this fire-arm, but observes, at the same time, that the Prussians never perceived any effect produced by it.

TRACÉ, Fr. This word is used, by the French, in fortification, as a substantive; thus, *le tracé d'un ouvrage*, the plan or drawing of a work.

TRACER, Fr. to chalk out; describe; to trace.

TRACER en grand, Fr. to chalk out or draw a large plan; or to draw the full dimensions of a column, or any other piece of architecture.

TRACER *au simpleau*, Fr. to chalk out with a tracing cord according to various given centers, upon a plan or model, ellipses, elliptic arches, winding of stair-cases, curves, &c. in order to make the figures larger hereafter with a compass.

TRACERET, Fr. a small instrument of sharp iron, with which carpenters mark and point wood.

TRACES, the harness by which beasts of draught are enabled to move bodies to which they are yoked.

When horses are put to, very particular attention should be given to the traces. They must be even, and the inside traces should always be somewhat shorter than the outside ones, in order to keep the horses' heads together, and by throwing out their haunches, to prevent the traces or pole of the carriage from galling them.

TRACTRIX, in geometry, a curve line, called also *catenaria*.

TRADE, according to Johnson, occupation; particular employment, whether manual or mercantile, distinguished from the liberal arts; or learned professions. Among the French, the word *métier*, which corresponds literally with trade, is applied to arts and learned professions, as *métier de la guerre*, the science or art of war. With us, as the learned lexicographer very justly states, trade is not expressive of any liberal art, science, or profession,

TRAFFICK, trade or commerce; sale or exchange of goods.

A TRAFFICKER, a trader; a person who deals in the sale or exchange of goods, &c.: as, a trafficker in army commissions, &c.

TRAGULA, a javelin, with a barbed head. It was used among the ancients, and the wound, occasioned by it, was extremely dangerous. It is supposed to be the same as *Jaculum amantatum*, or a javelin fastened with something, (such as a strap or string,) so that it might be drawn back by the thrower.

TRAGULARII, soldiers among the Romans, who shot arrows out of cross-bows, or threw barbed javelins.

TRAHISON, Fr. treason.

Haute TRAHISON, Fr. high treason.

Tuer en TRAHISON, Fr. to kill in a treacherous manner.

TRAIL, in gunnery, the end of a travelling carriage, opposite to the wheels, and upon which the carriage

slides when unlimbered, or upon the battery. See **CARRIAGES**.

To **TRAIL** literally means to draw along the ground. In military matters it signifies, to carry the firelock in an oblique forward position, with the butt just above the ground. Hence *Trail Arms*, a word of command for that purpose. This practice is certainly unnecessary; and we believe only in use amongst us. Indeed it must be obvious to common sense, that when troops are marching through a wood with trailed arms, they must be exposed to a variety of accidents; especially where there is underwood.

TRAILLE, Fr. a large flat-bottomed boat to cross wide rivers in. It is also called *pont-volant*; which see.

TRAIN, (*train*, Fr.) in a military sense, all the necessary apparatus, implements of war, such as cannon, &c. that are required at a siege or in the field.

TRAIN of Artillery, (*train d'artillerie*, Fr.) in a general sense, means the regiment of artillery; it also includes the great guns, and other pieces of ordnance belonging to an army in the field. See **ARTILLERY**.

TRAIN, (*trainée*, Fr.) in mining, a line of gunpowder laid to give fire to a quantity thereof, which has been lodged for the purpose of blowing up earth, works, building, &c.

TRAIN is also used to denote the attendants of a prince or general, upon many occasions.

TRAIN-bands, or *trained-bands*, a name formerly given to the militia of London; out of which the 3d regiment, or old Buffs, were originally formed.

Field-TRAIN, a body of men, consisting chiefly of commissaries and conductors of stores, which belong to the Royal Artillery.

Field TRAIN. See **ARTILLERY**.

Wagon-TRAIN, a body of men which formerly belonged to the ordnance, but has since been made a sort of regular corps, divided into troops, for general service.

Le TRAIN de guerre, Fr. warfare.

TRAIN, Fr. in navigation, a sort of timber-raft, composed of several pieces of wood, which are tied together, and made to float upon rivers.

TRAINE, Fr. a term among French sailors and soldiers at sea, signifying a thin rope, or rather packthread, to which they tie their linen; leaving it to float

or be dragged through the waves until it is clean.

TRAINE, Fr. This word is used variously by the French, in conjunction with other words, viz.

TRAINE-malheur, Fr. a miserable wretch.

TRAINE-potence, Fr. a villain; a galls-looking fellow.

TRAINE-rapière, Fr. a bully; a Hectoring fellow.

TRAINEAU, Fr. See **DRAY**.

TRAINEAUX, Fr. several pieces of wood made in the form of a large sledge, upon which pieces of ordnance and stores, &c. are conveyed to the rampart, and brought from one place to another.

TRAINÉE, Fr. a train, a certain length, or space, which is filled with gunpowder, for the purpose of setting fire to some particular spot or place.

TRAINER en plâtre, Fr. in architecture, to make a cornice, or any other moulding with a wooden bore, which is cut according to the profile that may be wanted; and then drawn repeatedly up and down, the whole thickness of the profile, which is covered with very fine clear plaster, until the cornice has obtained a thorough consistency, and taken the form that is wanted.

TRAINEURS, Fr. stragglers, men who on a march lag behind, and thereby occasion a loose and unconnected appearance in the line of march. It is the duty of the rear guard to pick up all stragglers, and to report them to headquarters.

TRAINEUR d'épée, Fr. a parasite; a man who has never done a day's duty, but wears a sword and looks big; a bully.

TRAIT, Fr. in a general sense, any line drawn to form a figure of whatsoever description.

TRAIT corrompu, Fr. a line which is simply drawn by the hand without the aid of a compass, differing from the regular figures of geometry.

TRAIT quarré, Fr. a line, which intersecting another perpendicularly, and at right angles, makes the angles square.

TRAIT biais, Fr. a line which inclines upon another, or is drawn diagonally in a figure.

Cheval de TRAIT, Fr. draught horse.

TRAITÉ, Fr. a treaty.

TRAITÉ public, Fr. an act, or treaty, which is made for the public, or nation at large.

TRAITEMENT, Fr. allowance or

pay; as, *traitement de cinq chelins par jour*, an allowance of five shillings per diem.

TRAITOR, (traitre, Fr.) a betrayer of his king and country; one who is guilty of high treason. Tacitus says, it was usual among the ancient Germans to tie traitors and deserters to trees, and to let them die suspended from them.

TRAITTS, Fr. drag-ropes, &c. used in the artillery.

This word is also generally used by the French, to signify all sorts of arrows, darts, javelins, &c. that are cast out of bows, or thrown from the hand.

TRAJET. See FERRY.

TRAME, Fr. a plot.

TRAME de la vie, Fr. the thread of life.

TRAMER, Fr. to plot; to enter into a conspiracy.

TRAMMEL, an iron moving instrument in chimnies, upon which a pot is hung over the fire.

TRAMMEL, a machine for teaching a horse to amble.

TRAMMELLED. A horse is said to be *trammelled* that has blazes, or white marks, upon the fore and hind feet on one side; as the far foot before and behind.

TRAMONTAINE, Fr. The north wind in the Mediterranean is so termed by the French. It is so called, because it blows beyond the hills that are near Rome and Florence. The French say figuratively, *perdre la tramontaine*, to be at a loss. This word comes from the Italian *tramontana*, signifying the north. The French say *perdre la tramontaine*, literally, to lose the north, or the means of directing the vessel by the magnetic needle.

Une épée à deux **TRANCHANS, Fr.** a two-edged sword.

TRANCHANT, Fr. cutting.

Couleurs TRANCHANTES, Fr. glaring colours.

TRANCHÉE, Fr. See **TRENCH**.

TRANCHÉE double, Fr. a double trench, one side of which serves as a traverse to the other; by which means they are mutually covered from a reverse or enfilade firing.

TRANCHÉE à crochct, Fr. a bending trench, or one in the shape of a hook. This species of trench is found where the line turns, at the extremities of the places of arms, and at the ends of the cavaliers.

TRANCHÉE directe, Fr. a trench which is carried, or run out in a straightforward direction, and which serves to shut up any spot whence you might be enfiladed.

TRANCHÉE tournante, Fr. a trench which is carried round a work, that is or may be attacked. Of this description is the glacis, or the head of the trench.

TRANCHÉE (retours de la), Fr. See **RETOURS**.

TRANCHÉE, Fr. in architecture, an opening which is made in the ground, dug deep and square, to lay the foundation of a building; or carried lengthways, in order to place leaden or iron pipes, or for the purpose of planting trees.

TRANCHÉE de mur, Fr. a long opening which is made in a wall for the purpose of receiving partition posts or laths. It also signifies a notch or jag in a line or chain of stone, on the outside of a wall, in order to enclose in it the iron brace of the head-beam of a door, and then cover it with plaster.

Depots de la TRANCHÉE, Fr. places where tools and materials necessary for a siege are collected together and lodged.

TRANCHÉES, Fr. gripes; as gripes in horses.

TRANCHEFILE, Fr. the cross-chain of a bridle that runs along the bit-mouth from one branch to the other.

TRANCHE-montagne, Fr. a hector, a bully, a swaggering coward.

TRANSFERS. Soldiers taken out of one troop, or company, and placed in another, are so called.

When a man is transferred from one troop to another, his own horse is to go with him (unless it be of a different colour from those of which the troop into which he goes is composed) but not his arms, nor any of his accoutrements, excepting his belts; and if the troop receiving such man, finds out that he has not been transferred with his own horse, the commanding officer of it must immediately make his complaint to the officer commanding the regiment. The transfers are to be entered in the general, and troop, or company registers, as soon as they take place, so that no mistake may arise from delay.

Whenever a troop receives a man as a non-commissioned officer, or for any other reason, the troop that transfers, if it does not receive a non-commissioned officer in return, must receive a man from the troop, on which, in the course

of the transfer, it falls to give a man to the said troop; and a troop so giving a man, must set apart its non-commissioned officers, officers' servants, and four men, including its lance corporals, if it has any; out of the remainder, the other captain chuses.

It ought to be generally observed, that the most convenient period at which transfers should be made, is the 24th day of each month.

TRANSFIXED, an ancient term used to express the state of being desperately wounded by some pointed instrument, as being run through by a spear, javelin, or bayonet, &c.

TRANSFUGE, Fr. from the Latin *transfuga*, a turn-coat, a deserter, a runaway, one who abandons his party, in time of war, and goes over to the enemy. It also signifies, generally, any person that is guilty of tergiversation in private or public life. A French author has made the following distinction between *un transfuge* et *un déserteur*, which terms have been considered as synonymous. A man may be looked upon as a *transfuge*, or turncoat, although he should not go over to the enemy of the party which he abandons. When the well-known Count de Saint-Germain left France, and sought military employment under the King of Denmark, he was most unquestionably a transfuge, or deserter, from his country; and when he again suddenly returned to France, on the commencement of hostilities with Denmark, and became minister of the war department, he was equally looked upon in the same light. For it is a known truth, that to quit, abruptly, the service of any state or king, by which an individual has been paid, for the direct purpose of fighting under the banners of his adversary, not only implies desertion, but justifies the imputation of treachery; but it must be allowed, that that is a man's country, where he has been well received, and to which he has pledged his life and talents. There are certainly shades of difference in the manner, and in the motive, of quitting one party for another. It is, however, necessary to observe, that Count Saint-Germain sent in his resignation, and returned the cross of St. Louis previous to his entering into the Danish service, and Count Langallerie, a French general-officer, went abruptly from the French army in Italy to the Austrian army, and served

in the same capacity the day after his desertion. Count Bonneval did the same from the Austrian to the Turkish service. Arnold left the American service to come to the British, and General Lee left the British for the American. The best proof that Count de St. Germain was not in disgrace for quitting the service, is the fact, that previous to his being made minister at war by Louis the XVIth, he enjoyed from Louis the XVth, a pension of 10,000 livres per annum.

The celebrated Eugene of Savoy, for instance, may be considered as a transfuge, but certainly with less reproach or disgrace than must be attached to Saint Germain; since the latter quitted France from peevishness, and unjustifiable disgust; whereas Prince Eugene (who had never received any commission in the French army, but was, on the contrary, rejected, with disdain, by Louis the XIVth, when he applied for service) was graciously received by the Emperor of Germany, and remained attached to Austria, which became his country, during the remainder of his life. There were instances of both kinds, during our contest with the alienated colonies of America, which might be brought in illustration of this article. The French say proverbially, *on hait les transfuges plus que les ennemis même*, one hates a transfuge, or a turn-coat, more than the enemies themselves.

TRANSMUTATION, in geometry, the reducing, or changing, one body into another of the same solidity, but of a different figure; as a triangle into a square; a pyramid into a parallelo-piped, &c.

TRANSOMS, in artillery, pieces of wood which join the cheeks of gun-carriages; there is but one in a truck-carriage, placed under the trunion-holes; and four in a wheel-carriage, the trail, the centre, the bed, and the breast transoms.

TRANSOM-plates, with hooks. There is one on each side of the side-pieces, against each end of the transom, the bed-transom excepted, fastened by two transom bolts.

TRANSOM-bolt, with bars. They serve to tie the side-pieces to the transom.

TRANSOM, in building, a piece that is framed across a double window light.

TRANSPARATION, *Fr.* This word is used by the French in hydraulics, to signify the oozing of water through the

pores of the earth. It often happens, in digging a canal through sandy ground, that the transpirations, or ooziings, are so plentiful as not to leave water enough for the intended purposes of navigation. This occurred at New Brisack, when a canal was dug in order to convey materials for its fortifications. The waters having been let in, the whole body was absorbed in the space of twenty-four hours. This evil, or inconvenience, can, however, be remedied; as may be seen in the fourth volume of Belidor's *Architecture Hydraulique*.

TRANSPORT, (*vaisseau de transport*, *Fr.*) a vessel in which soldiers are conveyed on the sea.

TRANSPORT-board, an office in Cannon Row, Westminster, which was created by the late Mr. Pitt, at the commencement of the French war in 1793, but has been abolished in 1816, and the building changed into the Foreign Office.

TRANSPORTATION, the act of banishing, or sending away, a criminal into another country.

The number of convicts transported to Botany Bay has, of late years, increased so much, that regular regiments are sent from Europe to do garrison duty in that quarter of the globe.

TRANSPOSTER, *Fr.* to transfer, to remove, to change the situation of any thing.

TRANSPOSTER les files et les rangs d'un bataillon dans les évolutions, *Fr.* to change files or ranks in military evolutions. To countermarch any given number of men so as to place the right where the left stood, and make the front rank take the ground that was occupied by the rear, with a different aspect. See **COUNTERMARCH**.

When the countermarch is effected on the centre, or by a central conversion, the French use the phrase, *faire le moulinet*, from the similarity of movement round a central point; *moulinet* signifying capstan, turnstile, &c.

TRANSVERSE, going across from the right to the left.

TRAP. See **AMBUSH**, **STRATAGEM**, &c.

TRAPE, *Fr.* a falling door.

TRAPEZE, *Fr.* See **TRAPEZIUM**.

TRAPEZIUM, a quadrilateral, or square figure, whose four sides and angles are unequal, and no sides are parallel.

TRAPEZOID, (*trapézoïde*, Fr.) a figure in geometry, which is formed by the circumvolution of a trapezium, in the same manner that a cylinder is by that of a parallelogram.

TRAPPINGS. See **HOUSINGS**.

TRATTES, Fr. the several beams and long pieces of wood which support the body of a windmill.

TRAVADE, Fr. a whirlwind; a violent squall accompanied by thunder and lightning.

TRAVAILLER, Fr. to work. In mechanics, to warp, to open, &c.

TRAVAILLER also signifies, in a familiar sense, to work upon the feelings, or understanding, of a person, so as to impose upon him. *Travailler les esprits des soldats*, to work upon the minds of the soldiery. *Travailler un pays*, to feel the pulse of a country by working upon the minds of the inhabitants.

Grand TRAVAILLEUR, Fr. a person who gives up his whole time to business.

TRAVAILLEURS, Fr. literally, workmen. In military matters, pioneers and soldiers employed in fatigue duties, or in digging trenches, &c.

TRAVAILLEURS à la tranchée, Fr. a detachment consisting of a given number of men from each battalion, which is employed in the trenches.

TRAVAISSON, Fr. entablature.

TRAVAUX militaires, Fr. See **MILITARY Works**.

TRAVAUX avancés, Fr. advanced works, or outworks. The same as *pièces détachées*, or *dehors*. See **DEHORS**.

TRAVÉE, Fr. a bay of joists; a scaffold.

TRAVÉE de balustres, Fr. a balustrade, or row of rails between two pillars, or pedestals.

TRAVÉE de pont, Fr. that part of the floor of a wooden bridge which is between two rows of piles, or buttresses.

TRAVELLING forge. See **FORGE**.

TRAVERS, Fr. a rope which is used to fasten cannon on their carriages, &c. and which serves for various other purposes.

TRAVERSE, in fortification, is a parapet made across the covert-way, opposite to the salient angles of the works, near the place of arms, to prevent being enfiladed. Traverses are 18 feet thick, and as high as the ridge of the glacis. There are also traverses

made by caponiers; but then they are called *tambours*.

To TRAVERSE a gun, or mortar, to bring her about to right or left with hand-spikes, till she is pointed exact to the object.

TRAVERSE, in horsemanship. A horse is said to traverse when he cuts his tread crosswise, throwing his croupe to one side, and his head to another.

TRAVERSE contre un commandement, Fr. an elevation, made of earth, in a bastion, either on a curtain, or on any other work of a fortified place, for the purpose of protecting it against the enfilading fire of an enemy, from some commanding spot.

TRAVERSE d'attaque, Fr. See **PLACES d'armes**.

TRAVERSE de tranchée, Fr. When an engineer, either through oversight, or even through necessity, has exposed himself to the enfilade of an enemy's cannon, he leaves a certain proportion of the field *terre-pleine* in the *boyau* of the trench, in order to conceal from the besieged the operations in that quarter. This is called *traverse de tranchée*.

TRAVERSE dans le fossé, Fr. a sort of trench which the besiegers make across a dry ditch, in front of the point of a bastion, to pass the miner and those that are ordered to assist or protect him. This ditch is always lined with two parapets on the side from which the besieged fire, and it is made proof against fire-works.

TRAVERSE du chemin couvert, Fr. a body of earth, or, more properly speaking, a parapet, which takes up the whole width of the covert-way, and which separates the branch, or side, from the place of arms, or from the salient angle that is in front of the half-moon.

TRAVERSE, TRAVERSIER, Fr. a cross piece of timber.

TRAVERSE, Fr. a cross iron bar; also a short cut, a cross-way.

Cheval TRAVERSÉ, Fr. a thick, broad-set, well-trussed, short-made, horse.

Homme TRAVERSÉ, Fr. a broad-shouldered, broad-chested man.

TRAVERSÉE, Fr. passage; short trip by sea.

TRAVERSER, Fr. to cross, to mar, to render abortive.

TRAVERSIER, Fr. a passage boat,

which has only one mast, although it frequently carries three sails, and is sometimes rowed. In the Levant it is called *tartane*. It likewise means a wind that blows into port; also a pontoon.

Perche TRAVERSIER, *Fr.* a cross-pole.

TRAVERSIN, *Fr.* a bolster, such as is used in beds; also a cross-beam, or piece of timber, in a ship.

TRAVERSINES, *Fr.* pieces of timber which are laid across a dam, or sluice; and lie square-ways upon the *longrines*, (which see) and which constitute a part of the grating that is laid as a foundation in the assemblage of the boards of a sluice; the other pieces, which lie cross-ways, are also called *traversines*.

TRAVERSING, in fencing, is the change of ground made by moving to right or left round the circle of defence.

TRAVERSING-plates, in gun-carriages, are two thin iron plates, nailed on the hind part of a truck carriage of guns, where the hand-spike is used to traverse the gun.

TRAVERSING *platform*, a method of mounting guns, introduced some years back for the defence of the coast, and generally for all sea batteries, as affording greater facility of traversing the gun, so as to follow, without loss of time, any quick moving object on the water. In this system, the gun is mounted on a common garrison carriage; but instead of this carriage being placed and working on a fixed platform, as formerly, it works and recoils on a moveable platform; or, as it may be more properly termed, a rail-way, moving round a centre in its front, on rollers, the axes of which produced would intersect in this centre of motion; so that this platform, with the carriage and gun upon it, may be traversed with considerable ease in any direction. The length of the skids, or rail-way, on which the upper carriage recoils, is sixteen feet, and the hinder part is somewhat higher than the front, so that by running up hill the recoil is reduced, and the facility of running the gun out again much increased.

Another advantage of the *traversing platform* is, that it raises the gun so that it may be fired over a parapet without embrasures, which gives at once more security to the artillerymen, more

scope for the fire of the gun, and greater strength and solidity to the parapet.

Sir William Congreve, the inventor of the rockets, has brought forward an improvement upon the *traversing platform*, by which the upper carriage is dispensed with; the necessary height for firing over the parapet being given by the lower carriage, or, as it is called, the platform itself. In this construction, the gun recoils on trucks which work upon its trunnions, and which are allowed to turn as the gun runs out, but are palled by a strong catch concealed in the trunnion, which prevents their turning when the gun recoils; the elevation being regulated by a small cast iron cradle also attached to the trunnions. This construction not only very much reduces the expense of the *traversing platform*, by saving the upper carriage, but gives much greater ease in working the gun; for by palling the trucks the recoil is diminished, and by getting rid of the weight of the upper carriage the men have little more to move than the gun, instead of having, in addition to it, a heavy carriage also to run out. There is also a very important advantage attending this improvement, namely, the reduction of vulnerable space for the enemy's shot to strike; for not only is the length of the skids, or platform, itself reduced, but all the surface of the upper carriage is entirely done away with, at the same time that, by the diminution of the general weight, it is evident that it requires less labour to traverse the platform, as well as to fight the gun. This system of mounting guns, by putting the trucks upon the trunnions, and placing those trucks immediately on the skids of the traversing platform, has been offered by Sir William Congreve as being particularly well adapted to the arming of the *Martello Towers*, which have been deemed too small for the number of guns originally intended, namely, one long gun and two short ones. The diameter of the interior of the top of these towers is twenty-six feet: it occurred to Sir William Congreve that his method of putting the trucks upon the trunnions of the gun brings the gun so near to the skids of the platform that a platform so constructed might be laid upon the upper surface of the parapet of a martello tower, without ex-

posing more or even so much surface as at present, where the platform is kept within the parapet; for the muzzle of the gun would be no higher in one case than in the other. On this principle, therefore, Sir William Congreve proposed to take four feet all round the tower for the ends of his platform to work upon, which would at once *virtually* make a tower of twenty-six feet in diameter equal to one of thirty-four feet; that is to say, it actually gives the area of a circle of thirty-four feet diameter for the guns to work in, instead of one of only twenty-six feet; and thus would afford abundant area for the three guns originally intended. But this is not all; for by this plan there is actually *less* of the space in the area within the parapet occupied by the *three* improved traversing platforms than by *one* on the old construction: the latter completely occupies a space of sixteen feet in length by five in breadth; whereas all the skids of Sir W. Congreve's three platforms are above the men's heads, so that they may pass freely to and fro in all directions under them, having every where six feet six inches headway; nor is there any part of these platforms that takes up any of the space of the area, except two perpendicular legs of eight inches square to each platform, on which the rear of the platforms is supported. To these advantages are to be added the greater facility, as above explained, of working the gun, and also that the muzzle is by these means thrown forward beyond the parapet, which gives a power of greater depression, and prevents the possibility of accident to the parapet from the explosion of the gun when depressed.

There is another most important improvement in the practice of fortification, which Sir William's traversing platform has given rise to, and which was first matured with the assistance of Captain Lefebure of the Engineers, and brought before the committee of that corps upwards of two years since: it is the *inversion of the embrasures* of casemated defences, that is to say, the presenting of the small aperture of the embrasure to the enemy instead of the large one. Thus, in an embrasure of this description, which Sir William Congreve has constructed, he can fight a twenty-four pounder through an aperture only one foot six inches wide, and

one foot ten inches high, preserving all the thickness of masonry entire, and allowing the piece a field or scope of thirty degrees with the ordinary power of elevation and depression; to obtain all which on the common principle requires an exterior aperture of six feet high and six feet wide. Now the whole of this depends on the extraordinary compactness of the platform, and its piece of ordnance, as mounted by putting trucks on the trunnions of the gun, or on the trunnion bolt of the carronade, and to the greatly increased facility of working either, especially the latter, which the trucks afford: for by these means, the gun or carronade, instead of being obliged, as in the common mode, to be worked in the body of the casemate, is here actually worked in the thickness of the wall itself so that in the carronade as well as in the gun, the muzzle is actually protruded through the embrasure, and is fired in free space: whence result all the following important comparative advantages.

The *common* EMBRASURE acts as a widely extended funnel to lead the enemy's shot into the body of the casemate, and is particularly objectionable on this account as to grape shot, and presents a large line of edge to be chipped and ruined by the enemy's shot.

In the *inverted* EMBRASURE, the shot, whether round or grape, must strike a space of eighteen inches by two and twenty inches to enter; a very small quantity of grape shot, therefore can take effect, and a proportionably less line of edge is presented to be destroyed by round shot.

In the *common* EMBRASURE, the explosion of firing the gun takes place within the arch, from which not only is the masonry constantly shaken by firing a few rounds, but the noise and smoke rebound into the body of the casemate greatly to the annoyance of the men.

In the *inverted* EMBRASURE, the muzzle when fired being projected into free space, no accident or jar can possibly happen to the masonry from the explosion; nor does the smoke, or the report, return into the casemate as above.

Another advantage is, that such an embrasure may be close to the bottom of the ditch without danger of being stormed, and that in fact it requires no prevention against such attack, as when the gun is in its place a man cannot

possibly force himself in. Nor does there in fact appear any drawback to these obvious advantages; for the loading and firing goes on with the same rapidity or even greater than in the common mode: the gun or carronade necessarily recoiling when fired far enough to be loaded with perfect ease, and allowing, by the application of the trucks as already explained, of being run out again with even greater facility than by any other construction hitherto devised; in so much that the heavier the nature of ordnance, the greater is the comparative advantage.

We shall conclude this article by stating that Sir William Congreve has applied this same principle of gun and carronade carriage very successfully to naval purposes, several ships having already been armed on his plan. Having therefore already given a general idea of the construction, the principles of which are common to all its applications, we shall here only take notice of the advantages proposed by it on ship board.

First, Sir William Congreve has contrived, in the application of the principles of his traversing platform to the sea service, to *give all the advantages of quick pointing, and of the diminution of labour in a space not exceeding that occupied by the common gun carriage*, in so much that the heavy guns in a line of battle ship will not require more than half the ordinary number of men to fight them, without taking up more room than is now required for the common carriage.

Secondly, A gun mounted on this principle will recoil much more smoothly, and without jumping as the common gun carriage does, when fired; not only because it is confined to the port-sill and cannot rise, but because the plane on which it recoils is so much nearer the axis of the piece; for as Sir William Congreve has demonstrated, the jumping of the common carriage is owing to the height of the gun above the plane of the deck, on which it recoils; this height acting as a lever to tip the carriage over backwards when the gun is fired, and so producing a double motion in the recoil, first raising the fore trucks and then the hind ones off the deck; all which he proves to be obviated by putting the trucks on which the gun recoils on its own trunnions, and thereby getting rid of the lever which produces the mischief.

Thirdly. The actual weight of the sea service gun carriage is reduced by this mode of mounting ship guns.

Fourthly. The new carriage presents considerably less vulnerable surface than the common carriage, and consequently less is to be feared from splinters; nor has the new carriage the same liability to rot the decks, as the air circulates freely underneath it instead of its causing a continual dampness, as is the case with the present carriage; seamen will feel the force of this property.

Fifthly. By this construction the muzzle of a short gun may be run out as far as that of the long gun can be with the common carriage.

Sixthly. This carriage allows of very greatly more training than a common carriage, owing to the comparative difference of breadth and to its working on a fixed center; thus it may be traversed 90°. This is a most important point gained, and yet,

Seventhly, it does not require, to give this power of training, a port so wide as the common port by nine inches of a side, which is obviously of great consequence, both to the strength of the ship and the security of the men at the guns against musketry and grape shot.

Eighthly. The span of this carriage is so much less than that of the common carriage, that four of them, if required, might be put in the space of three common carriages, leaving the same intervals, yet it cannot be upset as it works on a fixed center.

Ninthly. This carriage may be housed fore and aft so as not to take up more than two feet from the breadth of the deck, or in bad weather it may be secured athwart ship without occupying more room than the common carriage. It is however capable of better security, and may be housed so as to take off *all strain whatever* from the side of the ship, and to prevent the possibility of its stirring, as it allows of direct lashings to ring bolts on the deck, which the common carriage will not any how admit of, and must therefore always have some motion in a gale of wind.

Lastly. Notwithstanding all these points, which would appear to be the result of a complicated machine, the construction of this carriage is so simple, that it is actually easier repaired at sea than a common carriage, and is even less perishable: in fine, it requires nothing but common square scantling, and the

work of any ship carpenter. Sir William Congreve has published an account of this important improvement in mounting heavy artillery, with a series of plates explanatory of the different modes of construction and advantages, and we understand that he has a patent for the invention.

TRAVESTISSEMENT, *Fr.* disguise. In the old French service, it was ordained, that no dragoon, or foot soldier, should change his uniform or regimentals whilst in garrison, nor within the boundaries of it. Every infraction of this order was punished with three months imprisonment.

TRAUMATICK, vulnerary; useful to wounds; as *traumatick* decoction.

TRAVOIS, *Fr.* a frame, ceiling, or floor, made with beams or thick planks.

TRAVONAISON, *Fr.* an arched frame, ceiling, or floor, made of beams.

TRAVONIZER *la muraille*, *Fr.* to arch or floor a wall over with a frame of beams, &c.

TRAVONS *ou* **SOMMIERS**, *Fr.* the principal pieces of timber which run across a wooden bridge, not only to support the cross-beams, but also to bear the pile-work underneath.

TRAYNE, *Fr.* a large round post, or piece of timber like an apple-tree; also a dray without wheels.

TREACHERY, perfidy; breach of faith; of all other acts, the most dishonourable in military life.

TREAD (of a horse) is good, if it be firm, without resting more on one side of the foot than upon the other, or letting down the toe or heel one before the other; for if he should let his heels first to the ground, then it is a sign that he is foundered in his feet; but if he should set his toes first to the ground, it shews that he has been a draught-horse; therefore the whole foot should be set down equally at the same instant of time, and turned neither out nor in.

TREASON, disloyalty; treachery; perfidious dealing.

High TREASON, an offence against the security of the commonwealth, or of the king's majesty, whether by imagination, word or deed. It is a capital crime, and subjects the offender not only to loss of life, but also to forfeiture of all he may possess.

TREASURER, (*trésorier*, *Fr.*) one who has care of money; one who has charge of money.

TREASURER of the ordnance, a person

appointed by the treasury, to take charge of all monies issued for the ordnance service. His salary is 560*l.* per annum. In May, 1806, a bill was brought into the House of Commons for regulating the office of treasurer of the ordnance, by which bill it is specifically ordered, that all monies shall be paid, *instanter*, into the Bank of England; the same being placed to his credit, for the use of the public. In order to protect public property, securities are required from every person holding this situation, and this is, or ought to be, the case with every public accountant.

TREASURER's office. The office of the treasurer of the ordnance is at the Tower, where all payments are made for that service. He has a chief clerk with subordinate assistants under him. This office, like that of the surveyor general, communicates with the board in Pall-Mall.

TRÉBUCHET, *Fr.* an ancient machine for throwing stones, for which purpose a sling was sometimes fixed on it. It acted by means of a great weight fastened to the short arm of a lever, which being let fall, raised the end of the long arm with great velocity.

TRÉBUCHET, *Fr.* a trap.

Se trouver pris au TRÉBUCHET, *Fr.* to be caught in a trap. This was the case of the French at Moscow, in 1812.

TRECHETOR, } one who betrays
TRECHEUR, } a place, or body of men; an obsolete word.

TREE of a saddle, the wooden part of a saddle which is covered with leather. The French say, *just de selle*.

TREEKS, the iron hoops about a cart.

TREFFLE, *Fr.* trefoil; a term used in mining, from the similarity of the figure to trefoil. The simple trefle has only two lodgments; the double trefle four; and the triple one six.

TRÈFLE, *Fr.* fringe; any ornament which is affixed to the extremities of things; as the fringe of a shoulder-knot, &c.

Mine-TRÉFLÉE, *Fr.* a mine having three chambers.

TREILLAGE, *Fr.* any assemblage of wood which is laid cross-ways. Of which description are the palisadoes, &c. in gardens.

TREILLIS, *Fr.* the method that is used in copying plans, &c. It consists of a certain arrangement of straight lines, which being measured at equal distances from one another, and crossed

from right to left, represents a quantity of small equal squares. This arrangement, or disposition of lines, is used by painters, engravers, and engineers, in taking accurate copies of plans, &c. and is called by the French *treillis*.

TREILLISSER, *Fr.* to trellis, to furnish with a trellis.

TRELLIS, (*treille*, *Fr.*) an assemblage or setting together of wooden or iron bars, which cross one another in a straight line, or slopingly; the use of it being chiefly for wall-fruit trees, or to surmount low walls, in order that running sprigs, &c. may grow along them.

Wire TRELLIS, a trellis made of iron wire.

TREMEAU, *Fr.* an ancient term in fortification. See **MORTAR**.

TREMIE, *Fr.* a mill-hopper.

TREMION, *Fr.* in carpentry, a piece of timber which supports the mill-hopper. *Tremion* also signifies the wooden bar which serves to support the dossal of a chimney.

TREMPÉ, *Fr.* the temper of a weapon; also the disposition or composition of the mind; as *esprit d'une bonne ou mauvaise trempe*, a good or bad disposition; also *corps d'une bonne trempe*, a robust body.

TREMPER, *Fr.* literally to soak, to drench; *tremper dans une conspiration*, to be concerned in a conspiracy.

TRENCHANT, *Fr.* sharp or cutting.

TRENCHER, the same as **TAMPION**. Trenchers are sometimes made of green wood, when the ball is hot. See **TAMPION**.

TRENCHES, in a siege, are ditches made by the besiegers, that they may approach more securely to the place attacked; on which account they are also called lines of approach. The tail of the trench is the place where it was begun, and its head is the place where it ends.

Trenches are also made to guard an encampment.

The trenches are usually opened or begun in the night-time, sometimes within musket-shot, and sometimes within half or whole cannon-shot of the place; generally about 800 toises. They are carried on in winding lines, nearly parallel to the works, so as not to be in view of the enemy, nor exposed to his shot.

The workmen employed in the trenches are always supported by a number of troops to defend them against the sallies of the besieged. The pioneers,

and other workmen, sometimes work on their knees, and are usually covered with mantlets or saucissons; and the troops who support them lie flat on their faces, in order to avoid the enemy's shot. On the angles, or sides of the trench, there are lodgments, or epaulements, in form of traverses, the better to hinder the sallies of the garrison, and to favour the advancement of the trenches, and to sustain the workmen.

The platforms for the batteries are made behind the trenches; the first at a good distance, to be used only against the sallies of the garrison. As the approaches advance, the batteries are brought nearer, to ruin the defences of the place, and dismount the artillery of the besieged. The breach-batteries are made when the trenches are advanced near the covert-way.

If there are two attacks, it will be necessary to have lines of communication, or boyaus, between the two, with places of arms at convenient distances. The trenches are 6 or 7 feet high with the parapet, which is 5 feet thick, with banquettes for the soldiers to mount upon.

The approaches at a siege are generally carried on upon the capitals of the works attacked; because the capitals produced are, of all other situations in the front of a work, the least exposed to the fire of either the cannon or musketry; and are the least in the line of fire between the besieged and besieger's batteries. But if, from particular circumstances, these or other advantages do not attend the approaches upon the capitals, they are by no means to be preferred to other positions.

The trenches of communication, or zig-zags, are 3 feet deep, 10 feet wide at bottom, and 15 feet at top, having a berm of one foot, beyond which the earth is thrown to form a parapet.

The parallels, or places of arms of the trenches, are 3 feet deep, 12 feet wide at bottom, and 17 or 18 feet wide at top, having a banquette of about 3 feet wide, with a slope of nearly as much.

On the first night of opening the trenches, the greatest exertions are made to take advantage of the enemy's ignorance as to the side of attack; and they are generally carried on as far in advance as the first parallel, and even sometimes to the completion of that work. The workmen set out on this duty, each with a fascine of 6 feet, a pick-axe and

a shovel; and the fascines being laid so as to lap one foot over each other, leave 5 feet of trench for each man to dig.

The usual method of directing the trenches or zigzags, is by observing, during the day, some near object in a line with the salient parts of the work, and which may serve as a direction in the night; or if the night be not very dark, the angles of the works may be seen above the horizon; but as both these methods are subject to uncertainty, the following is proposed to answer every case:—Having laid down the plan of attack, the exact positions of the flanked angles of the works of the front attacked, and particularly of those most extended to the right and left; mark on the plan the point of commencement for the first portions of zig-zag, the point where it crosses the capital, and the point to which it extends on the other side of the capital: this last point will be the commencement of the second branch; then mark off the point where this branch crosses the capital, and its extent on the other side; and this will give the commencement of the third branch; and so on for the others. Thus provided with a plan ready marked off, it will be very easy, even in the darkest night, to lay down the points where the zig-zags are to cross the capital, and the points to which they are to be produced beyond them.—The first parallel is generally run about 600 yards from the place, and of such extent as to embrace the prolongation of the faces of all the works which fire upon the trenches; and each end has a return of about 30 or 40 yards.

The second parallel is constructed upon the same principles, and of the same extent as the first, at the distance of about 300 yards from the salient angles of the covert-way.—This parallel is usually formed of gabions; each workman carrying a gabion, a fascine, a shovel, and a pick-axe.—After this the trenches are usually carried on by sap.

The half parallels are about 140 or 150 yards from the covert-way, and extend sufficiently on each side to embrace the prolongation of the branches of the covert-way.

The third parallel must not be nearer than the foot of the glacis, or it will mask the ricochet batteries. It is generally made rather wider than the other parallels.

Cavaliers of the trenches must not be nearer than 28 yards from the covert-way, or they will be liable to be annoyed by hand-grenades.

Returns of a TRENCH are the elbows and turnings, which form the lines of approach, and are made, as near as can be, parallel to the place, to prevent their being enfiladed.

To mount the TRENCHES is to mount guard in the trenches, which is generally done in the night.

To relieve the TRENCHES is to relieve the guard of the trenches.

To scour the TRENCHES is to make a vigorous sally upon the guard of the trenches, force them to give way, and quit their ground, drive away the workmen, break down the parapet, fill up the trench, and nail the cannon.

Counter-TRENCHES are trenches made against the besiegers; which consequently have their parapet turned against the enemy's approaches, and are enfiladed from several parts of the place, on purpose to render them useless to the enemy, if they should chance to become masters of them; but they should not be enfiladed, or commanded by any height in the enemy's possession.

To open the TRENCHES is to break ground for the purpose of carrying on approaches to a besieged place.

TRENCH-master. In former times there was an officer of this description. He had the command over all the pioneers, under the directions of the master-general of the ordnance, who was then actively employed, and it was his duty to see all manner of trenches cast up, whether for guard and inclosing of the camp, or for any other particular purpose to annoy the enemy. He was sometimes called *Devisour*, from the French *deviser*, of the fortifications to be made.

TRENTE-six mois, Fr. thirty-six months: a sea-phrase. By this term was understood among the French before the Revolution, *un engagé*, a person who hired himself for that period to another, on condition that the latter defrayed his passage to the East Indies; after the expiration of which term, the former was at liberty to settle in that country.

TREPAN, Fr. an instrument which is used to find out the quality of any ground into which beams or stakes are to be driven.

This instrument likewise serves to

give air in the gallery of a mine, and its necessity is discovered by means of a lighted candle, when it ceases to blaze.

TREPAN, (*trépan*, Fr.) an instrument by which surgeons cut out round pieces of the skull. Also a snare; a stratagem, by which any one is ensnared.

To TREPAN, (*trépaner*, Fr.) to perforate with an instrument of that name.

TREPANDRION, in surgery, an instrument used to cut out a small bone.

TREPANER *une mine*, Fr. to let fresh air into a mine.

TREPIHNE, a small trepan; a smaller instrument of perforation managed by one hand.

TREPIGNER, Fr. to clatter; in horsemanship it is used to describe the action of a horse who beats the dust with his fore feet in managing, without embracing the volt; who makes his motions and time short and near the ground, without being put upon his haunches. This defect is usually occasioned by a weakness in the shoulders.

TRESOR, Fr. the military chest.

TRESORIER, Fr. paymaster. There were formerly on the French military establishment two classes of paymasters, viz. *trésoriers de l'ordinaire*, and *trésoriers de l'extraordinaire*, paymasters, or treasurers, for the ordinary expenses of the service, and ditto for the extraordinary. The latter were accountable to government for a just distribution of stores and provisions, and gave in their estimates and vouchers to the comptroller general's officer in Paris. These were formerly called *clercs du trésor ou payeurs*, clerks attached to the military chest or paymasters. They were partly the same as our paymasters and commissaries-general on service.

During the old monarchy in France there were several treasurers, or paymasters general in ordinary, belonging to the army, who had their several departments, &c.

TRESORIER *de la gendarmerie et des troupes de la maison du roi*, Fr. treasurers, or paymasters, attached to the gendarmes and the king's household.

TRESORIER *de l'extraordinaire de guerre*, Fr. treasurers, or paymasters of the extraordinaries of the army.

TRESORIER *des maréchaussées de France*, Fr. treasurers, or paymasters, of the marshalsey, or armed police of France.

TRESORIER *payeurs des troupes*, Fr.

treasurers, or paymasters-general of the forces.

TRESORIER *des gratifications*, Fr. treasurers, or paymasters of compensations, gratuities, &c.

TRESORIER *de la prévôté de l'hôtel*, Fr. treasurers, or paymasters of the provost-marshal's department at the hotel, or town-hall in Paris.

Le TRESORIER *général de l'artillerie*, Fr. the treasurer or paymaster-general of the artillery.

Le TRESORIER *général des fortifications*, Fr. the treasurer, or paymaster-general of fortifications.

All these treasurers, or paymasters, were subject to their several comptrollers of accounts, and their issues, &c. were audited accordingly. There were likewise provincial, or subordinate paymasters of the extraordinaries of the army. They were appointed by the treasurers, or paymasters-general, and resided in the different departments and general districts of the kingdom.

TRESSELS, pieces of wood used to support any thing.

TRÈVE, Fr. See TRUCE.

TRÈVE *du seigneur*, Fr. a particular law, or injunction, that was passed under Henry II. king of France, in the year 1041, by which all duels and private combats were forbidden from Wednesday night until the morning of the Monday following. President *Hénaut* remarks, that this was all which could, in those days, be effected by royal authority and interference, to prevent men from killing one another.

TREVET, (*trépied*, Fr.) any thing that stands upon three legs; an iron instrument to set a pot, or saucepan on over the fire. It is likewise used in field ovens.

TREUIL, Fr. a roll; an axle-tree, &c.

TRIAIRES, Fr. See TRIARI.

TRIAL, test; examination; experiment. It is in the power of his Majesty to dismiss an officer from the regular army, militia, or volunteer service, without any species of investigation or trial.

TRIAL *by jury*, an investigation of matters of fact, before a certain number of men, impannelled upon cases of a criminal, or civil, nature. The trial by jury is the pride of English justice, and the bulwark of English liberty. No British subject can, in fact, be legally condemned except by the verdict of a jury, composed of his own countrymen.

Such is the glorious boast of this envied land; and no power on earth should make the slightest encroachment upon it. Englishmen have been cradled in this darling privilege.

TRIANGLE, (*triangle*, Fr.) The triangle may be considered as the most simple of all figures. It is composed of three lines and three angles, and is either plain or spherical.

TRIANGLE, Fr. a carpenter's instrument, consisting of two rules assembled at right angles, with which a square line is drawn.

A *plain TRIANGLE* is one that is contained under three right lines.

A *spherical TRIANGLE* is a triangle that is contained under three arches of a great circle or sphere.

A *right angled TRIANGLE* is one which has one right angle.

An *acute angled TRIANGLE* is one which has all its angles acute.

An *obtuse angled TRIANGLE* is that which has one obtuse angle.

An *oblique angled TRIANGLE* is a triangle that is not right angled.

An *equilateral TRIANGLE* is one whose sides are all equal.

An *isosceles TRIANGLE*, } a triangle
An *equilegged TRIANGLE*, } that has
only two legs, or sides, equal.

A *scalenus TRIANGLE*, one that has not two sides equal.

Similar TRIANGLES are such as have all their three angles respectively equal to one another.

TRIANGLES, a small triangular piece of metal, which is used in military bands, emitting a sharp reverberating sound in concord with the rest of the music.

TRIANGLES likewise mean a wooden instrument consisting of three poles which are fastened at top in such a manner, that they may spread at bottom in a triangular form, and by means of spikes affixed to each pole, remain firm in the earth. An iron bar, breast high, goes across one side of the triangle. The triangles are used in some regiments for the purpose of inflicting military punishments.

TRIANGULAR compasses, compasses that have three legs, or feet, with which any triangle may be taken off at once.

TRIANGULAR quadrant, a sector with a loose piece to make it an equilateral triangle, which has the calendar graduated on it, with the sun's place, decli-

nation, &c. used in dialling, navigation, surveying, &c.

TRIANON, Fr. a generical French term signifying any pavilion that stands in a park, and is unconnected with the castle, or main building. Of this description was the late French Queen's Petit Trianon in the neighbourhood of Versailles.

TRIARI, soldiers so called among the Romans. According to Kennet the Triarii were commonly veterans, or hardy old soldiers, of long experience and approved valour. They had their name from their position, being marshalled in the third place, as the main strength and hopes of their party. They were armed with a pike, a shield, a helmet, and a cuirass. They are sometimes called *Pilarii*, from their weapon the pila. See *Kennet's Roman Ant.* p. 190. They were likewise styled *Tiertiarii*. A certain number of these veterans was always distributed in each cohort.

Polybius, in his 6th book, classes the Roman troops under four different heads: the first he calls *Pilati*, or *Velites*, light armed men, selected from the lower order of the people, and generally composed of the youngest men in the army. The second class consisted of pikemen, *Hastati*, were more advanced in age, and had more experience. The third class, called *Principes*, were still older, and more warlike than the second.

The fourth class consisted of the oldest, most experienced, and bravest soldiers. These were always posted in the third rank, as a reserve, to support the others in case they gave way. Hence, their appellation of *triarii*, or *tiertarii*; and hence, the Roman proverb, *ad triarium ventum est*, signifying thereby, that the last efforts were being made. The *triarii* were likewise named *post-signani*, from being posted in the rear of the *princeps*, who carried the standard in a legion.

TRIBUNAL castrense. Among the ancient Romans the tribunal castrense, or camp-tribunal, was made of turf. The curulean chair was placed upon this elevation, and the Roman general not only dispensed justice, but also harangued the soldiers occasionally from it.

TRIBUNATE, (*tribunat*, Fr.) the office of tribune.

TRIBUNE, (*tribun*, Fr.) a title which

was originally given to certain Roman magistrates, who were established for the specific purpose of maintaining the rights of the tribes, or mass of the people, in opposition to the possible encroachments of the consuls and the senate; on which account, they were styled the tribunes of the people, *les tribuns du peuple*. The number, at first, was limited to two; but they were subsequently augmented to ten. There were likewise military tribunes, *tribuni militares*.

TRIBUNI ærarii, paymasters-general belonging to the military establishment of ancient Rome. These persons were selected on account of their great wealth and known probity.

TRIBUNUS Celerum, the chief, or commandant, of a body of men which Romulus, the founder of Rome, selected from his own body-guard. The individuals, who composed it, were called *Celeres*, swift-footed. According to the *Dictionnaire des Dieux*, they were very wealthy, of high birth, and distinguished for their bodily and mental qualifications.

TRICKER. See **TRIGGER**.

TRICOISSES, *Fr.* pincers used by farriers.

TRICOLOR, *Fr.* three coloured; hence the tricolor-cockade, which was adopted by the French at the commencement of their Revolution. It consisted of *sky-blue*, *pink*, and *white*, and was emblematical of the three estates of the kingdom, viz. nobility, clergy, and peasantry.

TRICOT, *Fr.* a cudgel. The cloth which is used for the waistcoats and breeches of the French army is also so called.

TRIDENT, with mathematicians, is used for a kind of parabola, by which *Des Cartes* constructed equations of six dimensions.

TRIDENT, any three forked instrument, particularly the three forked mace, which Neptune is feigned by the poets to have wielded.

To hold the TRIDENT of the seas, a familiar word, among the British, to express their dominion at sea.

TRIÈGE, *Fr.* a strong able-bodied horse.

TRIEULE d'un puit, *Fr.* the round beam about which the rope of a well turns.

TRIER, *Fr.* to pick and chuse. Hence *trier les plus beaux soldats*, to pick out

the finest soldiers. *Triage* is used as the substantive, signifying the act of picking and chusing.

To TRIG a wheel, (*enrayer*, *Fr.*) to put in the necessary spokes, &c.

TRIGAUDER, *Fr.* to shuffle; to play fast and loose.

TRIGAUDERIE, *Fr.* shuffling; playing fast and loose.

TRIGGER, an iron hook which is used to trig, or stay a wheel: also a catch, which being pulled, disengages the cock of a gun-lock, that it may strike fire.

Hair TRIGGER, (*détente à cheveux*, *Fr.*) The hair trigger is generally used for rifles, when there is a great nicety required for shooting. The difference between a hair trigger and a common trigger is this:—the hair trigger, when set, lets off the cock by the slightest touch; whereas the common trigger requires a considerable degree of force, and consequently is longer in its operation.

To pull a TRIGGER, to fight a duel.

TRIGLIPHS, (*triglyphes*, *Fr.*) in architecture, certain triple gutters, furrows, or trenches graven along columns, or pillars; a sort of ornament repeated at equal intervals in the Doric frieze; or they are a kind of steps (in the Doric frieze) between the metopes. The ordinary proportion of these triglyphs is one module in breadth, and one and a half in height. *Vignola* makes the pillars, in the intercolumniations of porticos, five modules broad; but *M. Le Clerc* accommodates the proportion of the triglyphs to that of the intercolumniations. When the *triglyphs* and the *metopes* follow each other regularly, the columns must only stand one by one; excepting those of the inner angles, which ought always to be accompanied with two others, one on each side; from which the rest of the columns may be placed at equal distances from each other; and it is to be observed, that these two columns, which accompany that of the angle, are not less necessary, on account of the solidity of the building, than of the regularity of the intercolumniations.

TRIGON, a triangle; hence,

TRIGONOMETRY, (*trigonométrie*, *Fr.*) the art of measuring triangles, or of calculating the sides of any triangle sought. This is either plain, or spherical.

TRILATERAL, having three sides.

TRILLION, in arithmetic, the number of a billion of billions.

To TRIM, in carpentry, to fit one piece into another; hence, to *trim in a piece*. Figuratively, to change sides or politics for one's own interest; to fluctuate between two parties.

TRIMESTRE, *Fr.* a period of three months.

TRIMMERS, in architecture, pieces of timber that are framed at right angles to the joists, against the ways for chimneys and well-holes for stairs; figuratively, persons who change sides, or politics, from motives of interest.

TRINE dimension, or *three-fold dimension*, what includes length, breadth, and thickness. The trine dimension is peculiar to bodies or solids.

TRINGLE, in architecture, a name common to several little square members, or ornaments, as reglets, listels, and platbands. It is more particularly used for a little member fixed exactly over every triglyph, under the platband of the architrave; whence hang down the guttae, or pendent drops.

TRINGLE, *Fr.* a curtain rod; also a lath that reaches from one bed-post to another; likewise a long and narrow wooden rule.

TRINGLER, *Fr.* to draw a straight line upon wood by means of a stretched piece of packthread, or cord, which is chalked. Belidor uses the words **TRINGLER**, **SINGLER**, and **CINGLER** as synonymous.

TRINOME, *Fr.* a word used among the French, in algebra, to express any quantity which is produced by the addition of three numbers or quantities that are incommensurable.

TRINOMIAL, or **TRINOMIAL root**, in mathematics, is a root consisting of three parts, connected together by the signs + or —, as $x + y + z$, or $x - y - z$.

TRINQUET, *Fr.* a word used in the Levant to signify the mizen or foremast of a ship. It also signifies generally the foremast and sail.

TRINQUETTE, *Fr.* a sail used on board the ships in the Levant, which is of a triangular shape.

TRIOMPHE, *Fr.* See **TRIUMPH**.

Arc de TRIOMPHE, *Fr.* a triumphal arch.

TRIPARTITE, being of three parts, or three parties being concerned: hence tripartite alliance.

L'Histoire TRIPARTITE, *Fr.* an abridgment of the history of **EUCEBIUS**, **SOCRATES**, and **SOZOMENEUS**.

TRIPARTITION, a division by three; or the taking the third part, as was the case when Frederick called the Great, of Prussia, Catherine, Empress of Russia, and Maria Theresa, the *devout* Queen of Hungary, took their separate shares of Poland.

TRIPASTE, *Fr.* a machine which consists of three pullies, and is used in raising heavy weights.

Raison **TRIPLEE**, *Fr.* among mathematicians, the agreement or correspondence which is between cubes.

TRIPPLICATE, the second copy of an original, the duplicate being the first. In matters of importance, especially when the transmission of papers is across the ocean, or to any very distant quarter, duplicates, triplicates, and even quadruplicates are advisable. In these cases, the original is usually sent by one vessel or conveyance, the duplicate by another, and so on.

TRIPOT, *Fr.* a tennis court.

Chevalier de **TRIPOT**, *Fr.* a sharper.

TRIQUE, *Fr.* a large cudgel.

TRIQUE-BALE, *Fr.* a sling cart or machine which is used to convey pieces of ordnance from one quarter to another.

TRIRÈME, *Fr.* a galley with three benches for rowers.

TRISECTION, (*trisection*, *Fr.*) the division of a thing into three. The term is chiefly used in geometry for the partition of an angle into three equal parts.

The trisection of an angle geometrically, is one of those great problems whose solution has been so much sought by mathematicians; being in this respect on a footing with the quadrature of the circle, and the duplicature of the cube angle.

TRIVELINADE, from *Trivelin*, an old comedian, a piece of low wit.

TRIUMPH, a solemnity practised by the ancient Romans, to do honour to a victorious general.

There are two sorts of triumphs, the greater, and the lesser particularly called ovation; of these the triumph was by much the more splendid procession. None were capable of this honour but the dictator, consuls, and prætors; though there are examples to the contrary, as particularly in Pompey the Great, who had a triumph decreed him when he was only a Roman knight, and had not yet reached the senatorial age.

The triumph was the most pompous

show among the ancients; authors usually attribute its invention to Bacchus, and tell us, that he first triumphed upon the conquest of the Indies; and yet this ceremony was only in use among the Romans. The Grecians had a custom which resembled the Roman triumph; for the conquerors used to make a procession through the middle of their city, crowned with garlands, repeating hymns and songs, and brandishing their spears; their captives were also led by them, and all their spoils exposed to public view. The order of a Roman triumph was chiefly thus: the senate having decreed the general a triumph, and appointed a day, they went out of the city gate and marched in order with him through the city. The cavalcade was led up by the musicians, who had crowns on their heads; and after them came several chariots with plans and maps of the cities and countries subdued, done in relieve: they were followed by the spoils taken from the enemy; their horses, arms, gold, silver, machines, tents, &c. After these came the kings, princes, or generals subdued, loaded with chains, and followed by mimics or buffoons, who exulted over their misfortunes.—Next came the officers of the conquering troops, with crowns on their heads.—Then appeared the triumphal chariot, in which was the conqueror, richly clad in a purple robe, embroidered with gold, setting forth his glorious achievements. His buskins were beset with pearls, and he wore a crown, which at first was only laurel, but afterwards gold; one hand held a laurel-branch, the other a truncheon. His children were sometimes at his feet, and sometimes on the chariot-horses. As the triumphal chariot passed along, the people strewed flowers before it. The music played in praise of the conqueror, amidst the loud acclamations of the people, crying, *Io triumphe!* The chariot was followed by the senate clad in white robes: and the senate by such citizens as had been set at liberty or ransomed. The procession was closed by the sacrifices, and their officers and utensils, with a white ox led along for the chief victim. In the mean time all the temples were open, and the altars were loaded with offerings and incense; games and combats were celebrated in the public places, and rejoicings appeared every where.

TRIUMVIRI, or TRESVIRI CAPITA-

LES, men employed, among the ancient Romans, to preserve the public peace, &c. For particulars, see *Kennet's Roman Antiquities*, page 121. They likewise signify the three persons, Cæsar, Crassus, and Pompey, who seized on the government of the republic, and divided it among them. Hence,

TRIUMVIRATE, (*triumvirat*, Fr.) an absolute government administered by three persons with equal authority.—There are two triumvirates particularly recorded in history: Pompey, Cæsar, and Crassus, who had all served the republic as generals of marked reputation in the first instance; and Augustus, Mark Antony, and Lepidus, in the second. The three consuls of France were nearly of the same cast, in 1800, Bonaparte, Cambaceres, and Le Brun.—Bonaparte soon followed the example of Augustus, first becoming Chief Consul, and then Emperor of the French.

TROCAR, (*trocar*, Fr.) a surgical instrument wherewith to make incisions.

TROCHLEA, one of the mechanical powers usually called a pulley.

TROCHOID, in geometry, a figure made by the upper end of the diameter of a circle, turned about a right line.

The trochoid is the same with what is otherwise called the *cycloid*.

TROCHOLIQUE, *Fr.* a name used among the French for that branch of mathematics which treats of circular movements.

TROMBE, *Fr.* a water-spout. It is likewise called *siphon* or *syphon*.

TROMBLON, *Fr.* a fire-arm which has a rest, and from which several balls and slugs may be discharged. An ancient wall-piece; also a blunderbuss.

TROMPE, *Fr.* in architecture, an arch which grows wider towards the top.

TROMPES, *Fr.* in artificial fireworks, a collection of *pots à feu*, or fire-pots, so arranged, that upon the first being inflamed, a ready communication takes place with the rest, and the explosion is successively effected.

TROMPETTE, *Fr.* This word, which signifies trumpet, is applied by the French, not only to the instrument, but to the man who blows it, in the same manner that we say fifes and drums, for fifers and drummers; but we do not say trumpet for trumpeter, although we say *bugle* for the man who blows the bugle-horn; *trompette*, when used in this sense, is of the masculine gender.

TROMPETTE *sonnante*, Fr. with sound of trumpet, or trumpet sounding.

TROMPETTE *parlante*, Fr. a speaking-trumpet. This instrument is generally used at sea; and owes its invention to an Englishman.

Déloger sans TROMPETTE, Fr. to steal away, to take French leave.

TROMPILLON, Fr. the diminutive of *trompe*, a term used in architecture, which owes its origin to the resemblance that exists between the wide part of a trumpet, and the arch or vault so called.

TRONC *d'une colonne*, Fr. the shaft of a pillar; *Fust* signifies the same.

Le TRONC *de la queue d'un cheval*, Fr. the dock of a horse's tail.

TRONCHE, Fr. a thick short piece of timber, something like the end of a beam, out of which a bending for a staircase may be cut.

TRONCHILE, } is that hollow ring
TRONCHILUS, } or cavity which runs round a column next to the *tore*; or it is one whose cavity is composed of two arches.

TRONÇON, Fr. a piece cut or broken.

TRONÇON *de lance*, Fr. a trunked spear.

TROOP, any body of soldiers.

TROOP, in cavalry, a certain number of men on horseback who form a component part of a squadron. It is the same, with respect to formation, as company in the infantry. When a troop dismounts and acts on foot, it is still called a troop.

TROOP, a certain beat of the drum. See **DRUM**.

To **TROOP** the colours. See **COLOURS**.

TROOPS, the same as *copiæ* in Latin, and *troupes* in French, any collective body of soldiers.

Heavy TROOPS, (*troupes d'ordonnance*, Fr.) horse soldiers heavily armed and accoutred for the purpose of acting together, in line, &c. The Life Guards come under this description.

Light TROOPS, (*troupes légères*, Fr.) hussars, light horse, mounted riflemen, and light infantry are so called, in opposition to cavalry or heavy horse, grenadiers and battalion men. Skirmishing is solely the business of light horse, who, according to Count Turpin, should be constantly exposed as the forlorn hope of the army; or as troops whose duty it is to be continually watchful for its repose and security.

When the light horse compose an advanced camp, the men should keep their horses constantly saddled; it being only an indulgence to allow those off duty to have their horses unsaddled. It is very true, that a camp of cavalry cannot be managed after the same manner; but then cavalry is seldom so situated as to be attacked, or to attack every day, which is the real business of light horse. They should serve as vedets to the whole army, in order to prevent the enemy from approaching it; whereas cavalry should never be employed, but in the greatest operations; and on occasions which are to decide the fate of a campaign.

Light troops, according to the same writer, are employed to gain intelligence concerning the enemy, to learn whether he hath decamped, whether he hath built any bridges, and other things of the same nature, of which the general must necessarily be informed, and should have a day fixed for this return. There are other detachments, which should be sent out under intelligent officers, and which should never lose sight of the enemy, in order to send in daily intelligence, to attack small convoys and baggage, to pick up marauders, and harass the advanced guards. There should not be any time fixed for the return of these detachments, neither should they be confined to particular places; they should, however, return to the camp at the expiration of eight or ten days at farthest. The inconvenience, arising from confining these detachments to a particular time, would perhaps be, that the very day appointed for their return, would be that on which they might have the fairest opportunity of learning intelligence of the enemy: consequently their being forced to return would defeat the objects for which they were sent out.—See page 122, vol. ii. of *Count Turpin's Art of War*. In addition to this valuable work, we recommend the perusal of the following, which treat more or less, of light troops: *Baron Gross's Duty of Officers in the Field: Duty of Officers commanding Detachments*, by Lieut.-Colonel John Ormsby Vandeleur; and a small Treatise on the *Duty of Hussars*, translated by Mr. Rose, junior. Likewise a very well written treatise entitled, *Instructions concernant le Service de l'Infanterie légère en Campagne*; also *Guide de*

l'Officier en Campagne. The former production comes out of the Royal Military College at Sandhurst, and has been published in French and English.

Light Troops are sometimes called irregulars, as they almost constantly act in detached and loose bodies. The tirailleurs, Tyroliens, Yagers, sharpshooters, the *Chasseurs à cheval et à pied*, and *Voltigeurs*, to which the French owed much during the whole course of their stupendous Revolution, are of this description. General Money observes in page 8, of a small pamphlet addressed to the late Secretary at War, "that what was called in this country, advancing *en masse*, by the French, was nothing more than very large bodies of irregulars (or light troops,) which covered the country, in the front of their armies, like an inundation. To their irregulars, and to their light artillery, are the French indebted for most of the victories they have gained." He adds, that the troops styled in France *Chasseurs*, are, more or less, to be met with in every service in Europe, except the British. The Austrians have many regiments of them; the Prussians have them attached, in a certain proportion, to each corps; but the French, seeing the good effect of these irregulars, have brought them more into the field than all the combined powers together." These troops are peculiarly useful in enclosed countries, and must, of course, be highly essential in Great Britain. Upon this principle four regiments of Lanciers have been recently formed.

Revenue Troops, a body of invalid troops in the service of the Honourable the East India Company. Their establishment in 1787 consisted of eight battalions, each battalion containing five companies, and each company containing 150 men: so that the total of the battalions (each being 650 strong) amounted to 5232. The strength of each company was 1 captain commandant, who was an European, 1 Subadar, 1 Jemidar, 5 Havaldars, 3 Naigues, 16 Sepoys, 104 Sepoys who were natives. The strength of a battalion was 1 European captain commandant, 3 European serjeants, 5 Subadars, 5 Jemidars, 25 Havaldars, 15 Naigues, 80 Sepoys, 520 effective Sepoys.

In the event of a war, these troops were drawn into the garrisons of the district to which they belonged; on which

occasion they were placed upon the same footing and pay, in every respect, as the regular battalions. One vakeel or paymaster was allowed to every company, who received monthly 1 pagoda 38 fanams. The revenue troops did not receive any bounty, nor were any stoppages made out of their pay. The following clothing and half-mounting were issued to them annually, viz. one coat, one sash, two white jackets; also two pair of short drawers, and three turbans, every two years. The commanding officers of these corps drew per annum 400 pagodas off-reckonings. Considerable alterations having taken place in the organization of the different corps in India, we have given the above article according to what existed in 1787.

Foreign Troops, (*troupes étrangères*, Fr.) bodies of armed men, the individuals of which are not the natural born subjects of the realm.

TROOPER, (*cavalier*, Fr.) a horse soldier. According to Dr. Johnson, a trooper fights only on horseback; a dragoon marches on horseback, but fights either as a horseman or footman. There is no such thing as a trooper in the British service. The Blues were the last corps that deserved that appellation; but they now act, like the rest of the cavalry, on foot.

TROPHÉE, Fr. See *TROPHY*.

Faire TROPHÉE, Fr. to glory in.

TROPHY, something taken from an enemy, and shewn or treasured up in proof of victory. Among the ancients, it consisted of a pile or heap of arms of a vanquished enemy, raised by the conqueror in the most eminent part of the field of battle.

The trophies were usually dedicated to some of the gods, especially to Jupiter. The name of the deity to whom they were inscribed, was generally mentioned, as was that also of the conqueror. The spoils were first hung upon the trunk of a tree: but instead of trees, succeeding ages erected pillars of stone or brass, to perpetuate the memory of their victories. To demolish a trophy was a sacrilege, because they were all consecrated to some deity.

TROPHY-money, certain money annually raised in the several counties of the kingdom, towards providing harness and maintaining the militia.

TROPHY, in architecture, is an ornament which represents the trunk of a

tree charged, or encompassed all around, with arms of military weapons, both offensive and defensive.

TROPIQUE, *Fr.* tropic. It is likewise used as an adjective, and signifies tropical.

Baptême du TROPIQUE, *Fr.* the ceremony which is performed when a person crosses the line for the first time.

TROSSERS, } a kind of breeches
TROUSE, } reaching down to the
TROUSERS, } ankles, worn by some
regiments of infantry and light cavalry.
See **PANTALOON**.

TROSSULL, a select body of cavalry among the old Romans, to every individual of which was given the title of Roman Knight, from their having taken Trossulum, an inland town in Tuscany, (still called Trosso,) without the assistance of the infantry. According to Pliny, they were first called *Celeres*, and then *Flexumines*.

TROTTOIR, *Fr.* a footway. It more properly means a raised pavement on the sides of a street or bridge, for the convenience of foot passengers; also the path at the sides of bridges under their parapets.

TROU, *Fr.* a hole.

TROU de rat, *Fr.* literally a rat-hole or rat-catch. Figuratively, any disadvantageous position into which troops are rashly driven. Thus Quiberon was called by the French a *trou de rat*, when that foolish expedition took place in 1794.

TROU de mineur, *Fr.* a lodgment which is made for the safety and convenience of a miner, when he first begins his operations.

TROUBADOUR, *Fr.* literally, a provincial or country poet. The French apply the word to any lively person.

TROUÉE, *Fr.* an opening; a gap. This word is applied to any passage, which is made through an abatis, wood or hedge; also to the impression of cavalry, when it breaks the line, &c.

Les cinq TROUÉES en Champagne, *Fr.* the principal openings through which an enemy can penetrate into France in the province of Champagne. The Duke of Brunswick, in 1792, took possession of these openings; and the Prussian and Austrian armies passed through them in 1814 and 1815.

TROUGH, a hollow wooden vessel to knead bread in. It is used among the utensils of field bakery.

TROUPES, *Fr.* troops; forces.

TROUPES légères, *Fr.* light troops.

TROUS de loup, *Fr.* Wolf-holes, in field fortification, are round holes, about 6 feet deep and pointed at the bottom, with a stake placed at the middle. They are frequently dug round a redoubt, to obstruct the enemy's approach. They are circular at the top, of about $4\frac{1}{2}$ feet diameter.

TROUSEPAS, *Fr.* a sort of iron spade which is used in cutting turf.

TROUSEQUEUE, *Fr.* with horsemen, a large case of leather as long as the dock of a horse's tail, which serves for a covering for the tails of leaping horses, &c. abroad; also for those of coach horses in dirty weather.

TROUSEQUIN, with horsemen, a piece of wood cut archwise, raised above the hinder bow of a great saddle, which serves to keep the holsters tight.

TROUSSE, *Fr.* a quiver. It also signifies any bundle of things tied together, viz. *une troussé de foin*, a bundle of hay.

Monter en TROUSSE, *Fr.* to ride behind.

Un cheval bien TROUSSÉ, *Fr.* a well-set horse.

TROUSSEAU, *Fr.* a long piece of wood in the shape of a cane, which has one end smaller than the other, and is used in foundries to make cannon-moulds.

Etre aux TROUSSES, *Fr.* to be upon one's heels; literally at one's trowsers.

TRUCE, (*trève*, *Fr.*) a suspension of arms, or a cessation of hostilities between two armies, in order to settle articles of peace, bury the dead, &c.

TRUCHEMAN, or **TRUCHEMENT**, *Fr.* an interpreter.

To TRUCK, to give in exchange: to traffic by exchange.

TRUCK, wooden wheels for the carriage of cannon, &c.

TRUCKS of a ship carriage are wheels made of one piece of wood, from 12 to 19 inches diameter; and their thickness is always equal to the calibre of the gun.

The trucks of garrison-carriages are made of cast-iron.

A truck carriage goes upon four trucks of 24 inches diameter; has two flat side pieces of ten inches broad, and serves to carry guns, ammunition boxes, or any other weights, from the store-houses to the water-side, or to any small distance.

To TRUCKLE. This word is adopted

from truckle-bed, which is a low mean bed, that can be pushed under another. Hence,

To TRUCKLE to, to submit to; to allow the superiority of another.

TRUE-born, according to Dr. Johnson, having a right by birth to any title; as a true-born Englishman.

TRUELLE, *Fr.* a trowel.

TRUG, a hod for mortar.

TRULL, a low, vagrant strumpet; a hedge-whore, or one that has promiscuous dealings upon the road, or elsewhere, with men of all descriptions. Hence a soldier's trull. In every well regulated camp and garrison the utmost precaution should be taken, to prevent these wretches from having the least intercourse with the soldiery.

TRULLIZATION, in ancient architecture, all kinds of couches or layers of mortar, wrought with the trowel of the inside of the vaults; or to hatches made on the layers of mortar, to retain the lining of the striæ.

TRUMEAU, *Fr.* in architecture, the space in a wall which is between two windows. It also signifies a pier-glass.

TRUMPET, or *trump*, a wind instrument made of brass or silver, with a mouth piece to take out and put in at pleasure. Each troop of cavalry has one.

TRUMPET soundings. See **SOUNDINGS**.

TRUMPETER, the soldier who sounds the trumpet.

TRUNCHEON, a club; a cudgel; also a staff of command. See **BATON**.

To TRUNCHEON, to beat with a truncheon. Dr. Johnson has quoted a passage out of Shakspeare, which is extremely apposite to those blustering imposing characters that sometimes annoy public places, and commit swindling acts of depredation, under the assumed title of captain. *Captain! thou abominable cheater! if captains were of my mind, they would truncheon you out of taking their names upon you before you earned them!*

TRUNCHEONEER, one armed with a truncheon.

TRUNDLE, a sort of tube used for fuses.

TRUNK, in architecture, is used for the fust and shaft of a column, with that part of the pedestal between the base and cornice, called the die.

TRUNNIONS, in guns, two cylindrical pieces of metal in a gun, mortar, or howitzer, which project from pieces of

ordnance, and by which they are supported upon their carriages. See **CANNON**.

TRUNNION plates are two plates in travelling carriages, mortars and howitzers, which cover the upper parts of the side pieces, and go under the trunnions.

TRUSS, a bundle; as a bundle of hay or straw. Any thing thrust close together. Trusses of this description have been sometimes used in military affairs; the men carrying them in front for the purpose of deadening shot.

TRUSS of forage is as much as a trooper can carry on his horse's crupper. See **SPUN HAY**.

TRUSS, a machine used for herniæ, commonly called rupture; various are the instruments that have been formed for this purpose, the chief of which that have been brought into general use, have been made known by advertisements. The makers of these instruments are careful to call them spring trusses; intimating the advantage that arises from a truss being constructed with a spring, whereas the springs of trusses in general are so defective for the purpose intended, that straps are affixed by which they become merely bandages, in as much as the springs being confined by strapping, they of course cease to act as springs. We have seen a truss invented by Tatham, of Charing-Cross, which is chiefly in use in the army and navy, that is composed of a complete spring, taking the whole circumference of the body, and is applied without the aid of straps. This has ever been the object of truss makers, but none have succeeded until the inventor of this truss found out the art of turning tempered steel without the use of heat, and for which he has obtained a patent.

TRUSSED. A horse is said to be well trussed, when his thighs are large and proportioned to the roundness of the croup.

To TRUST, to give credit to, on promise of payment. In article 63, of the 39 and 40 of the king, cap. 27, it is enacted, that no soldier shall be liable to be arrested for a sum under 20*l.* and then an oath of the debt must be made before a judge.

TRUSTY, honest, faithful, true, fit to be trusted. This word is used in the preamble of military commissions, &c. viz.—*To our trusty and well beloved, &c.*

and frequently applied to things, as a *trusty sword*.

TRUTH, purity from falsehood; honesty; virtue. That which makes a coward brave, and through the want of which the bravest man becomes a coward. The human mind is so oddly constituted, that some persons, especially in the military classes, would fight a fellow creature for the bare insinuation of a lie, and yet have not sufficient courage to tell the truth. See **LIAR**.

TUBA, a trumpet or military instrument which was used among the ancients. There were three kinds among the Romans, viz.—The straight or long trumpet, with which they sounded the charge; the crooked ones, or *buccinæ*, with which the signal for battle was given, in the presence of the general, or for any military punishment; and the horn, by which orders were communicated from the general to the standard-bearer.

TUBE, (*tube*, Fr.) a *pipe, conduit, or canal*; being a cylinder, hollow within, of lead, iron, or wood, &c. for the air, or some other fluid to have a free passage. It is particularly applicable to optical instruments.

TUCDUMMA, *Ind.* an account which is closed, after it has been examined.

TUCK, a long narrow sword.

TUDESQUE, *Fr.* Teutonic; Germanic.

TUEL, the fundament of a horse.

TUERIE, *Fr.* slaughter, massacre.

TUF, TUFFEAU, *Fr.* a soft sandy stone, which answers two purposes, either to build upon, or to build with. The French say figuratively—*C'est un homme de tuf*, he is a man of no depth, or profound knowledge.

TUFFES, *Fr.* See **PÉTAUX**.

TUFT *hunter*, a term used at our universities, when an individual of common extraction and ordinary means, is meanly obsequious to a young nobleman, &c.

TUG, *Fr.* a Turkish term for tail; a sort of standard called so by the Turks. It consists of a horse's tail, which is fixed to a long pole, or half pike, by means of a gold button. The origin of this standard is curious. It is said, that the Christians having given battle to the Turks, the latter were broken, and in the midst of their confusion, lost their grand standard. The Turkish general,

being extremely agitated at the untoward circumstances which happened, most especially by the loss of the great standard, cut off a horse's tail with a sabre, fixed it to a half pike; and holding it in his hand, rode furiously towards the fugitives, and exclaimed, *Herc is the great standard! let those who love me, follow me into action!* This produced the desired effect. The Turks rallied with redoubled courage, rushed into the thickest of the enemy, and not only gained the victory, but recovered their standard. Other writers assert, that six thousand Turks having been taken prisoners during a general engagement, contrived to escape from their guard, or escort, and afterwards fought so gallantly, that they gained another battle; that in order to recognize one another, they cut off a horse's tail which they carried as a standard; that when they joined the Ottoman army, they still made use of the tug, or tail; that the Turks, in consequence of the victory which was obtained under this new standard, looked upon it as a happy omen: and that since that period they have always fought under it, as their banner and the signal of success.

Whatever may have been the origin, it is certain, that when the Grand Signor takes the field in person, seven of these tails are always carried before him; and when he is in camp, they are planted in front of his tent.

The Grand Vizier is entitled to three of these tails.

The three principal Bashaws of the empire, (viz. those of Bagdad, Grand Cairo, and Buda,) have the Grand Signor's permission to use this mark of distinction, throughout the whole extent of their jurisdiction.

Those Bashaws, that are not Viziers, have the privilege of having two tails.

The Beys, who are subordinate to the Bashaws, have only one.

In the bas-relievo which is under the tomb-stone of John Cassimir, King of Poland, in the abbey church of St. Germain *des prés de Paris*, that monarch is represented at the head of his cavalry, with a horse's tail, or tug, for his standard.

Tug, a draught chain.

Tug-pins are the iron pins which pass through the fore end of the shafts of the army carts, to fasten the draught chains for the fore horses.

TUILE, *Fr.* a tile.

TUÏLE creuse, Fr. a gutter tile.

TUÏLE de petit moule, Fr. a tile measuring about 10 inches in length, and six in breadth. About 300 will cover a square toise.

TUÏLE de grand moule, Fr. a tile measuring about 10 inches in length, and about eight and a half in breadth. One thousand are sufficient to cover seven toises.

TUÏLE flamande, Fr. a hollow tile whose profile is an S.; a Dutch tile.

TUÏLEAUX, Fr. shards of tiles.

TUÏLERIE, Fr. tile kiln.

TUÏLIERIES, Fr. the gardens belonging to the Royal Palace in Paris are so called from the spot having originally been used for tile kilns.

TUKNEKYAH, Ind. carpenters.

TUKNAR jumma, Ind. money brought more than once to account.

TULBANUA, Ind. a fee taken by Peons when placed as guards over any person.

TULLUB, Ind. This word literally means a demand, but it is often used for pay.

TULLUB chitty, Ind. a summons.

TULWAR, Ind. a sword.

TUMBLER, that part of the lock that has two bents, in which the nose of the seer catches at half cock and whole cock.

TUMBRELS, (*tombereaux*, Fr.) covered carts, which carry ammunition for cannon, tools for the pioneers, miners, and artificers; and sometimes the money of the army.

TUMULT, (*tumulte*, Fr.) According to Bailey, a bustle, uproar, stir, hurly-burly, riot, sedition, mutiny. When this happens, especially in any British populous town or city, recourse is first had to the civil power, which, if well managed, seldom fails to put down the most violent ebullitions of a mob. When the military are, from extreme necessity, called in, the greatest attention should be paid to the description of troops that are employed. Men, but especially officers, who have seen service, and are marked for bravery and forbearance, should always be selected in preference to raw troops, and inconsiderate youths.

TUMULTUS. Among the ancient Romans, the word *tumultus* signified more than was generally understood by the term *bellum* (war.) For during hostilities, the civil distribution of justice was never interrupted; whereas in times of tumult, and popular insurrection, all

functions of the kind ceased; every magistrate, and public officer, was obliged to take up arms, and the *Consuls alone* were invested with the full authority of the state.

TUMUSSOOK, Ind. a bond.

TUNCAW, Ind. an assignment.

TUNES, Fr. small twigs which are inlaced, or twisted across, round several stakes planted in the earth, and which serve to keep the fascines together.

TUNIC, (*tunique*, Fr.) a coat without sleeves. It derives its name from the Latin word *tunica*, or close coat, which was the common garment worn within doors by itself, and abroad, under the gown. It was distinguished by different names among the Romans, corresponding with the several classes of the people, that were clothed according to their rank in life. See Kennet's Roman Antiquities, page 311, &c.

This sort of clothing is still worn in the East, and was prevalent among the French after their return from the Crusades to the Holy Land. They adopted it from the Saracens, and seemed ambitious of appearing in a garb which bore testimony to their feats of valour. These tunics, which were converted into a sort of uniform, obtained the name of Saladines among the French, in compliment to the origin of Salade, which not only signified the armour that was worn beneath the tunic or Saladine, but also the light helmet of that name.

Among the French it likewise signified a particular dress which was worn by their kings, under their robes of state, at a coronation.

TUNICA palmata, a purple garment, or long robe, worn among the ancient Romans, which had a gold cloth border on it of a hand's breadth. Littleton says under *Palmatas*, a gown embroidered and branched all over with palms, worn in triumph; also marked with the palm of one's hand. The Roman Emperors, by a refinement in politics, had attached a considerable consequence to this appointment; for they well knew, that it was necessary to keep the public mind in a state of constant amusement or occupation; and this could only be done by popular feasts and games. The person who presided on these occasions was intitled to the first posts and employments in the Republic. This policy was followed by the French, particularly during the reign of Bonaparte, when the

sans-culotte system gave way to that of the consulate; and Napoleon, the late Emperor, carried it still farther.

TUNTUNGI-bashi, a Turkish term signifying master of the pipes, a situation under the Pacha.

TUQUE, *Fr.* a tarpaulin.

TURBAN, } (*turban*, *Fr.*) a cover

TURBANT, } consisting of several

TURBAND, } folds of white muslin,

&c. which is worn by the Turks and other oriental nations. The blacks belonging to the different bands that are attached to British regiments likewise wear turbans, ornamented with fictitious pearls, and feathers. Those of the Foot Guards are particularly gorgeous. The French say familiarly *Prendre le turban*, to turn Turk.

The Great Turk bears over his arms, a turban enriched with pearls and diamonds, under two coronets. The first, which is made of pyramidal points, is heightened up with large pearls, and the uppermost is surmounted with crescents.

Green-TURBAN, a turban worn by the immediate descendants of Mahomet, and by the idiots or saints in Turkey.

White-TURBAN, a turban generally worn by the inhabitants of the East.

Yellow-TURBAN, a turban worn by the Polygars who are chiefs of mountainous, or woodland districts, in the East Indies. By the last accounts from India, this turban has been adopted by the revolted natives of that part of the globe, as a signal of national coincidence and national understanding. The Polygars are in possession of very extensive tracts of country, particularly among the woods and mountains, and are likely to be extremely troublesome to the British. For an interesting account of them, see *Orme's History of the Carnatic*, pages 386, 390, 396, 420, &c.

TURCIE, *Fr.* mole; pier; dyke.

Grand TURCOPOLIER de la Religion, *Fr.* Before the Reformation, (when the Roman Catholic religion prevailed in Great Britain,) England formed the sixth tongue in the Order of Malta; and the Grand Prior, as *Turcopolier de la Religion*, had the chief command of the troops belonging to the Order. See *Nouveau Dictionnaire Militaire*, published in 1802.

TURC-Opilier, *Oppiler*, *Fr.* *Oppilo*, *Lat.* *Oppilare*, *Ital.* to stop.—English also, *Oppilate*, to obstruct.

This word, with its substantive and

adjective, almost confined to medical uses, is rare, except with the physicians, who threw such a lustre over Italy, in the 17th century; and among them, Johnson quotes our Harvey.

From the physicians, it got into the French poets of the time, as *Regnier* and *Senecè*; or, perhaps, it might have come from *Lucretius*—

Uti possit, magnus congestus arena

Fluctibus adversis OPPILARE ostia, contra

Cum mare permotum ventis, ruit intus arenam.

An hypothesis of his, on the periodical swell of the Nile.

Pilier, *Fr.* also signifies a buttress. Perhaps, we may not strain the interpretation, when we say *Turco-Pilier*, a buttress against the Turks; in which light, the Order of Malta was originally considered. So that (by a very easy affinity to the word) *Grand Turcopilier de la Religion* meant the grand support, or buttress, of the Roman Catholic Religion against the Turks; and a compliment was paid to England, by investing the Grand Prior of the English language or tongue, with that dignity.

TURK, (*Turc*, *Fr.*) The following account of the Turks has been given by a modern French writer:—"The Turks are a nation that is naturally warlike, whose armies are commanded by experienced generals, and are composed of bold and executive soldiers. They owe their knowledge of war, and their experience in tactics to three national causes, two of which do credit to their intellects. In the first place, they become inured to arms, from being bred to the profession from their earliest infancy; in the second, they are promoted upon the sole ground of merit, and by an uninterrupted gradation of rank; and in the third, they possess all the opportunities of learning the military art that constant practice and habitual warfare can afford. They are naturally robust, and constitutionally courageous, full of activity, and not at all enervated by the debaucheries of Europe, or the effeminacy of the East. Their predilection for war and enterprize grows out of the recollection of past victories, and is strengthened by the two most powerful incentives to human daring, viz. reward and punishment: the first of which is extremely attractive, because it is very great; and the other equally deterring, because it is

rigorous in the extreme. Add to these the strong influence of a religion, which holds out everlasting happiness, and seats near Mahomet in heaven, to all who die fighting for their country on the field of battle; and which further teaches them most implicitly to believe, that every Turk bears inscribed upon his forehead his fatal moment, with the kind of death he must submit to, and that nothing human can alter his destiny. When anything is to be carried into execution, the order they receive is absolute, free from every species of intervention or controul, and emanating from one independent authority. The power which is entrusted to their generals (like that of the Romans to their dictators) is brief and comprehensive, viz.—Promote the interests of your country, or your sovereign." See *Essai sur la Science de la Guerre*, tom. i. p. 207.

Such is the character of the Turks, as detailed by their old allies the French. How far it corresponds with reality, especially in regard to military knowledge, we must leave to future historians to determine; observing at the same time, that a few sparks of British valour and perseverance contributed more to the preservation of the Ottoman empire, during the late war, than all the fantastic images, or well-devised hypocrisies of Mabouret, could have done. Our brave countrymen, on their return from Egypt, have been enabled to give a more faithful and correct account of their character as soldiers.

TURKISH-Bow, a remarkably strong bow, which, to use the words of Lord Verulam, gave a very forcible shoot, inasmuch that it has been known that the arrow has pierced a steel target, or a piece of brass, two inches thick.

TURLUPINADE, *Fr.* the art of punning, or making people laugh by sallies of false wit, and by ridiculous equivocation, or double meaning. It is so called, from a celebrated French buffoon of the name of Turlupin. It has been very properly observed by a French writer, that persons of taste reject this species of pretended wit. It was, however, very prevalent at the French court, particularly before and during the reign of Louis the 14th. Boileau says:—

*Toutefois à la cour les Turlupins res-
sèrent.*

The most notorious imitator of this

original jester or buffoon, was Monsieur d'Armagnac. In the second part of Bailey, we read *Turlupinade*, a low dry jest or witticism.

TURLUPINER, *Fr.* to jest, or make game of another, in a low, coarse manner. See **QUIZ**.

TURLUPINES, a sect or sort of people who made a public profession of impudence, going naked, without so much as covering their privy parts, and who were not ashamed to have to do with women in the open market.

TURMA, a troop of cavalry among the ancient Romans. The horse required to every legion was three hundred, divided into ten *turmae* or troops, thirty to a troop, every troop making three *decuria*, or bodies of men. See **KENNETT**, R. A. p. 192.

TURN, a word commonly used by the riding masters when they direct their scholars to change hands.

TURNCOAT, a renegade, a deserter; one who abandons his party.

TURNOVER, a piece of white linen which used to be worn by the soldiers belonging to the British cavalry over their stocks, about half an inch deep. Three turnovers per annum are ordered to be provided by stoppage, in the list of necessaries, from the pay of each cavalry soldier.

To **TURN out**, to bring forward; to exhibit; as, to turn out the guard; to turn out so many men for service.

To **TURN out the line**, to exhibit, in battle array, a certain number of men, for the purpose of parade, or to bring them into action.

To **TURN in**, to withdraw; to order under cover; as, to turn in the guard.

TURNPIKE, an obstacle placed across a road, to prevent travellers, wagons, &c. from passing without paying an established toll. Officers and soldiers, regimentally dressed, and on duty, may pass through turnpikes gratis.

TURNPIKE is also used in the military art, for a beam stuck full of spikes, to be placed in a gap, a breach, or at the entrance of a camp, to keep off the enemy. It may be considered as a sort of *cheval de frize*.

TURPENTINE, a very combustible gum, used in the composition of fireworks.

TURRET, a small tower.

Moveable TURRETS. See **TOWERS**.

TURRIS, a tower; a turret. This

was formerly a sort of retrenchment, used among the people in Asia, and which the Greeks adopted for warlike purposes. It was a moveable machine and principally employed at sieges. In the latter case, Vegetius calls it *Turris ambulatoria*, a moveable turret, which was higher than the walls of a town, and went upon wheels. Athenæus gives the invention of this turret to the Sicilians; and Servius says that Agrippa, a celebrated sea captain among the Romans, first introduced it. We are of opinion, with the author of the French Military Dictionary, that it owes its origin to the remotest antiquity, and that it was common among the Hebrews, the Israelites, &c.

American TURTLE, a machine invented by Mr. David Bushnell, of Saybrook, in Connecticut, for sub-marine navigation. The Catamarans, so pompously submitted, and so expensively attended to, by the late Mr. Pitt, as being the original invention of Mr. Fulton, were direct imitations, or rather copies, of the American Turtle. It is a decked boat, to go under water, and several persons have gone under water many leagues. The difficulty is to provide the persons in the boat with fresh air for respiration, and this is contrived, by having a reservoir of air, of suitable dimensions to the size of the boat, and the number of persons in it. By means of a condensing pump, the air, in this reservoir, is condensed about four hundred times; and by a spring, the air is let out at intervals, as circumstances require; the impure air being rectified by carbonic acid, neutralized with chalk. Within the boat are flaps, like those of a rundle, to move the boat, two rudders, one vertical, the other horizontal, and a pump to empty the hold, or air reservoir. The persons within can, at pleasure, come to the top of the water; and to injure an enemy's vessel, the boat is steered to the ship, and a machine, filled with combustibles, is fixed to it, which is set on fire by a cock let off by a spring, after a certain time, during which the persons within the boat have provided for their safety. It does not appear, that any vessel has, as yet, suffered by this invention. Experiments have been made, particularly by the French, but the difficulties of carrying them into execution, in real practice, are too great to afford any cause of alarm to our navy.

TUSCAN-order. See ORDER.

TUSCAN-work is rarely used, except in vaults, in some rustic edifices, and huge piles of building, such as amphitheatres, &c.

TUSK, (in carpentry,) a level shoulder made to strengthen the tenon of a joist, which is let into the girder.

TUSSULDAR, *Ind.* the Company's collector of the kisty bundy.

TUYAU, *Fr.* nozzle, the end. Any pipe, &c. of lead, or gutter, or canal, made of burnt clay, &c. which serves to carry off the water from the roof of a house.

TUYAU de cheminée, *Fr.* the cylindrical conduit which receives, and lets out, the smoke at the top of a chimney.

TUYAUX de descente, *Fr.* the pipes which convey the water downwards.

TWEED, a river that divides England from Scotland.

BERWICK upon TWEED. The power respecting the militia for the county of Northumberland extends to this place; the men belonging to it being subject to be balloted for, in the same proportion with the other divisions, and to join and be deemed part of the militia of that county.

The chief magistrate of Berwick upon Tweed has authority to appoint deputy lieutenants, and to nominate officers.

TWIBIL, an instrument used by carpenters to make mortise-holes.

TWIIINDI, an old term signifying men, valued at 200 shillings, who were of the lowest degree: and if such a man was killed, the mulct was thirty shillings.

TWIST, with horsemen, the inside or flat part of a man's thigh, upon which every true horseman rests on horseback.

TWISTED IN, a term synonymous to sworn in, used by the insurgents of the manufacturing towns and villages in Yorkshire and Lancashire, in 1812.

TWISTING, with horsemen, the reducing a horse to the same state of impotence with a gelding, by the violent wringing, or twisting, of his testicles, twice about, which dries them up, and deprives them of nourishment.

TWOPENCES, an allowance in the pound, given to army agents.

TYMPAN, (*tympan*, *Fr.*) in architecture, the area of a pediment, being that part which is on a level with the naked of the frieze. Or it is the space included between the three cornices of a triangular pediment, or the two cornices of a cir-

cular one. Among joiners, it signifies the panels of a door.

TYMPAN of an arch is the triangular space or table in the corners or sides of the arch, usually hollowed and enriched, sometimes with branches of laurel, olive-tree, or oak, or with trophies, &c. Sometimes with flying figures, as Fame, Victory, &c. or sitting figures, as the Cardinal Virtues.

TYMPANUM, a drum, a musical instrument which the ancients used, and which consisted of a thin piece of leather or skin stretched upon a circle of wood or iron, and beat with the hand. Hence the origin of our drum.

TYMPANUM, in mechanics, a kind of wheel placed round an axis or cylindrical beam, on the top of which are two levers, or fixed staves, for the more easy turning the axis about, in order to raise a weight required. It is also used for any hollow wheel, wherein one or more persons or

animals, such as horses, dogs, &c. walk, to turn it. This wheel is found in cranes, calenders, &c.

TYMPANUM, the area or space included between the cornice which crowns it, and the entablature which supports and serves it as a foundation.

TYRANT, (*tyran*, Fr.) Any individual is so called, who, by force of arms, or by other illegitimate means, has encroached upon, or usurped, the sovereign authority in a country. Thus Dionysius was called the tyrant of Sicily, and Robespierre the tyrant of France.

Petty TYRANTS, (*tyranneaur*, Fr.) a low, grovelling set of beings, who, without one spark of real courage within themselves, execute the orders of usurped or strained authority, with brutal rigour. The creatures belonging to an oligarchy are generally of this cast; hence the Poet's line—

And fly from petty tyrants to the throne.

V.

VACANCY, (*vacance*, Fr.) vacant state of an office or commission to which no one is appointed.

Emplois-VACANS, Fr. During the old French monarchy, seniority of rank or standing did not give the right of promotion. It belonged solely to the king to appoint and nominate all persons to vacant commissions or employments. The same power is vested in our King, forming a part of his prerogative: thus the Prince of Saxe-Cobourg has been appointed colonel of the vacant regiment of Dragoon Guards, the 5th, or Princess Charlotte of Wales's own.

VACANT, (*vacant*, e, Fr.) empty; not filled. Hence, *vacant* mind.

VACANT companies, (*compagnies vacantes*, Fr.) companies to the permanent command of which no person is appointed, for the time being.

VACANT Pay. See **PAY**.

VACATIO militia, military exemption. Among the Greeks no man was called into active service after he had reached his sixtieth year. The Romans established the *vacatio-militiæ*, or military exemption, at forty-five and fifty. We imitate the latter.

VACCINATION, the **VACCINE**. The term *inoculation* signifies the transplanting of distempers from one subject

to another; and is used, particularly, for the engraftment of the small pox; while **VACCINATION** denotes the operation for communicating the *variola bovillu*, or cow pox.

VACHE enragée, Fr. a term used in France to express great discontent. *Je te ferai manger de la vache enragée*, thou shalt go for a soldier; intimating thereby that soldiers are obliged to eat any thing, and any sort of meat, even that of a mad cow or bullock. This, thank God, is not the case with us: for no men live better than the soldiers of Old England.

VADEMANQUE, Fr. short of cash.

VAGUE, Fr. wave; surge. *Flot* is used in the same sense.

VAGUE-maitre, Fr. a term adopted from the Germans, signifying master of the wagons of an army. There being no W in the French alphabet the V is used: we say simply, wagon-master.

VAGUE-Mestre-Général, Fr. This word has been adopted by the French from the German term *Wagen-Meister*, which signifies wagon-master.

VAIGRES, Fr. a marine term, the clamp and thick stuff used in the ceiling of a ship. It is sometimes written *vegres*.

VAIGRES de fond, Fr. the thick stuff laid next to the keel.

VAIGRES *d'empature*, Fr. the thick stuff laid between the floor-heads and the keel.

VAIGRES *de pont*, Fr. the clamps which support the ends of the beams.

VAIGRES *de fleures*, Fr. the thick stuff laid opposite to the floor head.

VAINCU, Fr. beaten; overcome; defeated.

VAINQUEUR, Fr. a conqueror; one who beats, overcomes, or defeats another.

VAIRON, Fr. a silver-eyed or wall-eyed horse; or a horse that has one eye different from the other. The same is said of a man.

VAISSEAU, Fr. a ship.

VAISSEAU *du premier rang*, Fr. a first rate.

VAISSEAU *du second rang*, Fr. a second rate.

VAISSEAU *de guerre*, Fr. a man of war.

VAISSEAU *marchand*, Fr. a merchant-man.

VAISSELLE *d'argent*, Fr. silver utensils; plate. We have already remarked under *Table d'Officiers*, that during the old government of France, it was strictly forbidden to use any other plate than silver goblets, spoons, and forks.

VAIVODE, Fr. an old Sclavonian word, which signifies prince or general. This title was formerly given to the sovereign princes of Wallachia, Moldavia, and Transilvania.

VAJIB UL ARZEE, *Ind.* a petition, memorial, or proposal to a superior.

VAKEEL, *Ind.* an agent, a subordinate envoy or ambassador.

VAKIAS, *Ind.* a weight nearly equal to a pound. It also signifies a measure.

VAKILIT, *Ind.* the first office in the empire.

VALET, Fr. a servant-man; a person in waiting about another; a valet. In ancient history, there is an account of valets under the article of esquires, who received 12d. per diem. Du Cange and other writers are of opinion that the appellation of *valet* was generally given to young gentlemen of rank and family, who were not yet knighted. At present, it means a menial; one who is about the person of another in a servile capacity; as *VALET de chambre*.

VALET *à louer*, Fr. figuratively, a man out of place; as a minister sometimes is; or a discarded general.

Ame de VALET, Fr. a mean, base, sneaking soul.

VALET *de miroir*, Fr. the desk of a table looking glass.

VALET *à débotter*, Fr. a jack to pull off boots.

VALET, with horsemen, is a stick armed at one end with a blunt point of iron, to prick and aid a leaping-horse.

VALET, Fr. an instrument which is used by carpenters to keep boards, that have been glued, close together.

VALETS *de l'armée*, Fr. officers' servants; they are likewise called by the French *tartares*.

VALETS *d'artillerie*, Fr. men attached to the guns on board ships of war, for the purpose of assisting the regular cannoners.

VALET *d'huis*, Fr. a log, block, or piece of metal hanging by a rope on one side of a door, for the purpose of closing it after a person has passed.

VALETS *à patin*, Fr. an instrument which is used by surgeons; a small pincer to take up the arteries when it is found necessary to make a ligature.

VALETS *de ville*, Fr. constables, &c. men who are attached to the police of a town.

VALETER, Fr. to wait; to cringe; to dance attendance.

VALETUDINARIUM, an infirmary, or hospital for sick folks. Among the Romans, the valetudinarium, or hospital, was only established in time of war, when their armies marched beyond the boundaries of the republic. In the remote periods of their history, the wounded soldiers were lodged with the inhabitants of the several towns belonging to the republic, by whom they were nursed and fed; and when they were on foreign service, the wounded were obliged to dress one another. There were in those times, neither physicians nor surgeons attached to the armies; and it often happened, that superannuated or old soldiers did their business.

VALEUREUSEMENT, Fr. courageously.

VALIANT, } personally brave,
VALOROUS, } fearless of danger
in war, &c.

VALLÉE *de misère*, Fr. in Paris, the poultry and game market.

VALLEY, (*val*, Fr.) a space of ground between hills.

VAN-foss, in fortification, a ditch dug without the counterscarp, and running all along the glacis, usually full of water.

VALLUM, *agger, Vinea, Turres*. All

these different terms were used among the Greeks and ancient Romans, as well as among the Eastern nations, to signify the retrenchments which were made for offensive or defensive purposes. That which was called *Agger* consisted of an elevation made with piles of wood, branches of trees, &c. and afterwards covered with turf. It was sufficiently high to overlook the town. This artificial mount was surrounded by a fosse or ditch, and fenced with palisades. These retrenchments had different terms applied to them, according to the different manner in which they were constructed. The *vineæ* were engines of war made of timber and hurdles, beneath which the ancients, in assaults, came safely under the walls of a town, and so scaled them. Then came the *Turres*, which see.

VALOIR, *Fr.* to have value, or to be worth something.

Faire VALOIR le talent, *Fr.* to enhance any particular talent or quality of the mind.

Se faire VALOIR, *Fr.* to support one's own dignity as a man; not to permit one's self to be degraded or under-rated.

VALOUR, (*valeur*, *Fr.*) courage, bravery, intrepidity; a generous quality, which, far from assuming brutality and violence, with-holds the fury of the soldier, protects helpless women, innocent infants, and hoary age. Nothing which is incapable of resistance can ever be the object whereto true valour would exercise its powers. Courage is that grandeur of soul, which prompts us to sacrifice all personal advantages, and even the preservation of our beings, to a love of doing our duty. The exercise of this determined courage in the profession of arms is called *valour*. It is composed of bravery, reason, and force: by bravery we understand that lively ardour which fires us for the combat; reason points out to us the method of conducting it with justice and prudence; and force is necessary for the execution. It is bravery which animates the heart, reason springs from the soul, and force depends upon the body; without bravery we fear obstacles, danger and death; without reason, courage would have no legitimate view; and without force it would be useless: these three qualities should concur to form true military valour.

Dr. Johnson defines valour, bravery, and courage almost as synonymous terms. Mr. Addison distinguishes between that sort of courage which springs, by instinct,

from the soul, and from that which originates in a sense of duty, and is strengthened by reflexion. Count Turpin, on the other hand, establishes a wide difference between bravery and courage, which he makes two terms. In page 5 of the Preliminary Discourse to his Essay on the Art of War, he has the following passage:

“Is the officer—(speaking of the requisite qualifications in a general)—who loves his duty, and who would make himself master of it, under no obligation to ascertain what qualifications his station requires? That he ought to have such or such a quality, under such or such a circumstance? That here, only bravery is necessary, there, only courage? And that he is not always obliged to have both at the same time?”

These two qualities, which are often confounded in the same subject, merit a particular distinction: they are not so closely united, but that one may be found without the other. Courage seems fittest for a general, and for all those who command; bravery more necessary for a soldier, and for all those who receive orders; bravery is in the blood; courage in the soul; the first is a kind of instinct, the second a virtue; the one is an impulse almost mechanical, the other a noble and a sublime conception. A man is brave at a particular time, and according to circumstances; but he has courage at all times, and upon all occasions: bravery is impetuous, in as much as it is less the result of reflection; courage, on the contrary, in proportion as it grows out of reason, becomes more or less intrepid. Bravery is inspired by the force of example, by insensibility to danger, and by the mingled fury of conflict and action; courage is infused by the love of our duty, the desire of glory, and by the zeal we feel to serve our king and country: courage depends on reason, but bravery on the constitution. Achilles, such as Horace describes him from Homer, implacable, cruel, despising every law except that of the strongest, presents nothing to the idea, but the hardness of a gladiator. But the Roman general, whose death would have occasioned the ruin of the army, the great Scipio, when covered by the bucklers of three soldiers, to avoid a shower of arrows, which the enemy directed against him, approaches in safety the walls he besieged, and standing only a spectator of the action, exhibits the picture of true courage, whilst he contents himself with giving the

necessary orders; and in the same manner did the present Duke of Wellington remain undaunted in one of his squares, during the heat of the battle of Waterloo. Bravery, again, is involuntary, and does not depend wholly upon ourselves; whereas courage (as Seneca observes) may be acquired by education; provided nature has sown the first seeds of it. Cicero, sheltering himself from the hatred of Catiline, undoubtedly wanted bravery; but certainly he possessed an elevated firmness of mind (which is in reality courage) when he disclosed the conspiracy of that traitor to the senate, and pointed out all his accomplices; or when he pleaded for Deiotarus against Cæsar, his friend and his judge.

Coolness is the effect of courage, which knows its danger, but makes no other use of that knowledge, than to give direction with greater certainty; courage is always master of itself, provided against all accidents, and regulated by existing circumstances; never confounded by any danger, so as to lose sight of the motions of the enemy, or of the means by which he may be most effectually opposed.

The Chevalier Folard makes the following remarks upon this quality of the mind and heart. He says, in his notes on Polybius, there are various kinds of that species of courage, intrepidity, or strength of soul, which no circumstances can vanquish, and no events can shake. I do not know whether a quality, so diversified in its nature, can be found united in the same person to the full extent of its activity. We generally discover, that some men possess a larger proportion of it than others.

In order to form a correct opinion of its existence in the human character, we should find out some individual who has acted through all the vicissitudes of life, and has uniformly discovered the same firmness of mind and intrepidity of heart. But where shall we pick out a character of this sort? Life is too short for the full exercise of its various powers, and were it of a longer date, the circumscribed faculties of man render the research useless. I do not believe it is possible to point out an individual who, free from the natural weaknesses that are attached to our constitution, has, in adversity as well as prosperity, been equally determined throughout all the changes to which military operations are unavoidably subject.

This intrepidity and strength of mind have been peculiarly visible on manifold occasions, in some extraordinary characters, who have been equally remarkable on others for weakness and pusillanimity. We have seen them bold, to the full extent of hardihood, during a succession of triumphs; we have then beheld them shamefully agitated under a temporary reverse of fortune, and we have again seen them recover their wonted energy on the first favourable opportunity. These opposite qualities succeed one another; and we see boldness and timidity occupy, by turns, the same man, so as to produce, according to circumstances, the utmost solicitude and caution in some instances, and the greatest courage, firmness, and decision in others, during the prosecution of a war.

These fluctuations of the human character may be traced, almost every day, in a certain description of generals. When they are reduced to defensive operations, their understanding becomes perplexed; they know not how to act, and not only omit to make use of favourable opportunities themselves, but unwittingly afford them to their enemies; whilst, on the other hand, in offensive war, their genius expands itself into a variety of expedients; they create occasions that did not seem to exist, turn them to account, and finally succeed. Thus we see united in the same men promptitude, vigour, and enterprize in one species of warfare; and timidity, doubt, and consternation in another.

I have known, says Folard, generals of marked intrepidity (who in trifling matters have discovered a solicitude that approached to a want of manliness) conceive projects of vast extent, that were full of intricate developements, and chequered by incertitude; and I have seen them conquer the greatest obstacles by their courage and good conduct.

Human nature is so strangely constituted, that whilst one man will rush into danger, as if attracted by blood and devastation, another will not have firmness enough to stand his ground, and face the coming evil. He, who in the hour of battle would give fresh courage to his troops, by being the foremost to advance, has been known to turn pale in the very trench where a soldier's boy or woman has sat, undisturbed, selling spirits and provisions, or has been discovered to tremble, when the signal for storming

was given. The very man that would courageously lead his troop into action, or would prove the most expert marksman in the world, were he directed to practise in the front of a whole line, has been known to shrink at a single combat, and would rather rush headlong into a guarded breach, than measure swords, or point a pistol, with an antagonist. Another again, whom no danger could affect in public contests or in private feuds, when visited by sickness, is full of apprehension, has recourse to physic, and in proportion as his malady increases, grows timid, scrupulous, and unhappy. It sometimes happens, on the other hand, though rarely, that the rankest coward will lie peaceably in bed amidst all the surrounding terrors of dissolution, and will even smile as his agony approaches.

I have seen, continues the same author, (and daily experience confirms his observation,) one of the bravest officers in the world, suddenly turn pale in a thunder-storm, and even so far give way to his fears, as to hide himself in a cellar. One man possesses what the French so forcibly style *une valeur journalière*, a sort of ephemeral courage, or what depends upon the influence of the moment; to-day he is as bold as Achilles; to-morrow, he sinks into the degraded character of Thersites.

These changes in character and constitution, which are so visible in individuals, may be traced in their influence over whole nations, with little or no deviation. The Persian cavalry still maintains its ancient reputation for valour, and is still dreaded by the Turks. Tacitus relates, that the Sarmatian horse was invincible; but when the men were dismounted, nothing could be more miserably defective in all the requisites of war. Their whole dependance was on their cavalry, and, as far as we are enabled to judge, the same partial quality exists to this day.

The French, until their unprecedented revolution, seem to have preserved the character and disposition of the ancient Gauls. They went with more alacrity into action, and met death, at first sight, with more valour, than they discovered firmness and resolution to wait patiently for its approach. Hurry and agitation appeared more congenial to their minds than calmness and composure.

In order to conquer, it was found necessary, by their ablest generals, to make them attack and insult their enemy.

They grew impatient in slow operations, and gradually became less capable of meeting their antagonists in proportion to the time they were restrained from coming to action. Their whole history, indeed, is a continued proof of the justness of this observation; and although their character seems to have undergone considerable changes since their Revolution, they have still retained so much of the original cast, as to shew more promptitude in offensive, than steadiness and perseverance in defensive operations: not that they are deficient in the latter, but that the former quality has been more brilliantly successful. To the first they owe their stupendous triumphs under Bonaparte; but they have again been rendered almost equally conspicuous by their conduct in the second under General Moreau, in his celebrated retreat out of the Black Forest. Having said so much of our rival, we shall not be thought unjust to other nations, or too much prejudiced in favour of our own, if we assert that the British character unites within itself every quality that constitutes the real soldier. Let British soldiers be well officered, and ably commanded, and they will march into action not only with the elastic promptitude of the Frenchman, but they will also carry with them the cool determined courage of the German. If there be a feature in their character that approaches nearer to one nation than another, it is in the quickness and vigour of their attacks. In the hard fought battle of Waterloo it even surpassed the French.

In a work, originally written by the Marquis of Santa Cruz de Marzenada, and translated under the title of *Réflexions Militaires et Politiques par De Vergy*, the following just observations are made relative to this important quality of the mind.

Valour (by which we understand a thorough indifference to all sort of personal danger, and even a contempt of death) is so necessary an ingredient in the character of a general, that were I to discuss the subject, I should pay a bad compliment, indeed, to the idea which every individual must have formed of it in his own mind. A real general, in my opinion, should therefore remain satisfied with saying in the words of Marius, *Nihil melius nisi turpem famam*—(Salust. Bel. Jugur.) I fear nothing except the disgrace which must be incurred by a bad reputation; or in those of Alcibiades,

Ne vivere quidem vellem, si timidus essem.

—Plut. 1. 5. Alci. 1. I would not even live, were I conscious of being timorous, or afraid of death: and this saying is the more correct, because, according to Strada, *Belli dux nihil magis timere debet, quam timere videatur* (Famianus Strada de Bello Belgico, 1. 7.) There is nothing which a general or chief of an army should so much fear as having it known, or even suspected, that he is afraid.

To these might be added the more modern saying:

Je crains Dieu, cher Abner—et n'oi point d'autre crainte. I fear God, dear Abner—and have no other fear.

VALUE, in a general acceptance of the term, signifies the rate at which any thing is estimated. It is particularly applicable to the half-pay, in contradistinction to full pay. The former, having an inherent value, but not being a saleable commodity, (as every officer is strictly forbidden to sell that allowance,) it cannot properly be said to have a price, which implies bargain and sale, but still it has a value within itself; whereas full pay has both value and price. Hence regulation price of a commission means the marketable rate at which a full pay commission may be bought or sold; and regulation value of a half-pay signifies the rate at which it is estimated, but cannot be sold.

VAMBASIUM or *Wambasium*, an ancient military vestment, calculated for the defence of the body, differing very little from the aketon, gambeson and jack.

VAMBRACES. See BRASSARTS.

VAMPLET, a piece of steel sometimes in the shape of a tunnel, used in tilting spears, just before the hand, to secure and defend it; it was made to be taken off and put on at pleasure.

VAN, the front of an army, the first line.

VAN-guard, that part of the army which marches in the front. See GUARD.

VANCOURIER. See AVANT-COURIER.

VANDALS, a barbarous and fierce people of a part of Sweden, which was afterwards, from the *Goths*, their successors, called *Gothland*, who, leaving their native soil, took pleasure in ranging to and fro, and spoiling countries. Thus the French, during the course of their Revolution, were called the modern *Goths* and *Vandals*.

VANES, in mathematical instruments, are sights made to move and slide upon them.

VANITEUX, *Fr.* ridiculously vain.

VANNE, *Fr.* a floodgate.

VANNES, *venteaux, ou cloisons de bois de chêne*, *Fr.* floodgates, generally made of oak.

VANNETTE, *Fr.* a sort of flat open basket, or sieve, in which oats are given to horses.

VANTAUX, *Fr.* window-shutters.

VANTAIL, *Fr.* leaf of a folding-door.

VANT-brass, armour for the arm.

VANTER, *Fr.* to praise excessively; to extol the merit of a person, or to enhance the price of a thing.

Se VANTER, *Fr.* to praise oneself; to speak boastingly of one's own actions.

VANTILLER, *Fr.* in carpentry, to lay strong planks or boards to stop the influx of water.

VAQUER, *Fr.* to be vacant.

Venir à VAQUER, *Fr.* to become vacant. *Ce régiment vient à vaquer*; that regiment is become vacant. The French also say *vaquer à ses affaires*, to attend to one's business.

Terres VAINES et VAQUES, *Fr.* waste ground.

VARAIGNE, *Fr.* the inlet of sea water into salt-marches.

VARANGUES, *Fr.* floor timbers in a ship.

VARANGUES *acculées*, *Fr.* the crotches or floor-timbers afore and abaft.

VARECH, *Fr.* a term used in Normandy, upon the coast of France, to signify all goods, &c. that are washed on shore, and are near enough for a man on horseback to touch them with a lance, thereby making them his property.

Droits de VARECH, *Fr.* the right to salvage; a term used in Normandy.—*Varch* likewise signifies any vessel under water.

VARENNE, *Fr.* a warren; a chase.

VARENNE, *ou varène*, *Fr.* waste land, kept so for the convenience of the King in hunting.

VARLESSE, in horses, an imperfection upon the inside of the ham, a little distant from the curb, but about the same height. There is a bone somewhat high and raised; that part of the ham which is below the said bone sometimes swells by the discharge from the great vein, and is termed *varisse*; this defect does not make the horse halt, but spoils his sale by growing excessively

large. Rest and ease, especially if the part be bathed with spirit of wine, will so bind and restrain it as not to be perceived for the time.

VARLET, Fr. In the days of chivalry this word was synonymous to page. With us it anciently meant a yeoman's servant. Varlet is also taken in a bad sense, and signifies a sorry wretch, a rogue, or rascal.

In Stat. 20 Rich. II. varlets meant yeomen, or the servants of yeomen. For the etymology of this word, see p. 149, in the second part of Mr. Horne Tooke's learned and interesting publication, entitled the Diversions of Purley.

VARLET, ou valet, Fr. in a dam or sluice, an assemblage of several pieces of carpenter's work which together form a sort of cross-beam or gallows that leans against one of the walls of the sluice, and is shut by a turning flood-gate.

VARLOPE, Fr. a carpenter's large plane.

VARNISH. Meunier, a distinguished officer of the royal corps of engineers in France, under the old government, in effecting the decomposition of sea-water, in order to render it fit for the purposes of masonry, had, as a part of his apparatus or recipient, the cylinder of an old cannon, in which he submitted the sea-water to the heat of a reverberating furnace. After his experiment he examined the cylinder, and found it covered with a layer or coating of varnish, which set all instruments at defiance, for neither steel nor iron could make any impression upon it. It is beyond all doubt, that by this varnish pieces of ordnance may be choked, and rendered useless.

VARRER, Fr. to put to sea.

VARSA, Ind. the rainy season.

VASA-conclamare. Among the ancient Romans, the first signal to decamp, (which was given by the sound of a bugle-horn,) was so called. The first time the bugle sounded, the general's tent was struck, and immediately after, the soldiers struck theirs, and packed up. When it sounded the second time, the wagons were loaded; and at the third signal, the army marched off the ground; care being taken to leave lighted fires in the camp, for the purpose of deceiving the enemy.

VASANT, Ind. the mild season, or spring.

VASE, (vase, Fr.) in architecture, a sort of decoration made of stone, marble,

bronze, or gilt lead, which is placed, at equal distances, at the tops of houses, in gardens, &c.

VAULT, (voûte, Fr.) in architecture, is a piece of masonry-arch without side, and supported in the air by the artificial placing of the stone which forms it, its principal use being for a cover or shelter; or it is an arched roof, so contrived, as that the several voussours or vault stones, of which it consists, do, by their disposition, sustain each other. Vaults are to be preferred on many occasions to *soffits*, or flat cielings, as they give a greater rise and elevation, and are, besides, more firm and durable.

Salmasius observes, that the ancients had only three kinds of vaults. The first was the *fornix* made cradle-wise; the second a *testudo*, that is, *tortoise-wise*, which the French call *cul de four*, or oven-wise; and the third, *coucha*, or trumpet-wise.

But the moderns have subdivided these three sorts into many more, to which they have given different names, according to their figures and uses; some of them are circular, and others elliptical.

Again, the sweeps of some are larger, others lesser portions of a sphere. All such as are above hemispheres are called *high* or *surmounted vaults*; and all that are less than hemispheres, are called *low* or *sunbated vaults*, or *testudines*.

Key of a VAULT is a stone or brick in the middle of the vault in the form of a truncated cone; which serves to bind or fasten all the rest.

Reins of a VAULT are the sides which sustain it; they are also called the filling up.

Pendentive of a VAULT is the part suspended between the arches or *ogives*.

Impost of a VAULT is the stone on which the first *voussoir*, or stone of the vault, is laid.

Master-VAULT (mâtresse voûte, Fr.) is that which covers the principal part of a building, in contradistinction to the upper or subordinate *vaults*, which only cover some little part, as a passage or gate, &c.

Double VAULT (double voûte, Fr.) is one that is built over another, to make the outer decoration range with the inner, or to make the beauty and decoration of the inside consistent with that of the outside; leaving a space between the convexity of the one, and the concavity of the other. Instances of which may

be seen in the dome of *St. Peter's* at Rome, *St. Paul's* in London, and in that of the *Invalids* at Paris. P. Derand, the French architect, has written largely upon this subject in his *Traité sur l'architecture des voûtes*, and M. Frézier in that of the *Coupe des pierres*.

According to the author of the *Builder's Dictionary*, besides *Gothic vaults with ogives*, &c. there are various sorts of vaults, such as *single, double, cross, diagonal, horizontal, ascending, descending, angular, oblique, pendent*, &c. Belidor, in his *Dictionnaire portatif de l'Ingénieur*, mentions several. See *VOÛTE*.

To VAULT a shoe, in farriery, is to forge it hollow for horses that have high and round soles; in order that the shoe, thus hollow, may not bear upon the sole that is then higher than the hoof.

But, after all, this sort of shoe spoils the feet, for the sole, being softer than the shoe, assumes the form of the shoe, and becomes, every day, rounder and rounder.

VASSAL, *Arrière Vassal*, Fr. Under the race of Charlemagne, in France, the *arrière vassal* was a man who owed allegiance at the same time for feudal tenure, both to the king and to some particular lord of the manor, so that when the king and the lord of the manor differed, he did not know which master he was bound to serve. This monstrous and incongruous system, so disgraceful to the very name of manhood, continued until the third race of French kings, when it was reduced to a mere rational homage, which was paid to the king or lord of the manor, with a low rent for the right of tenure.

VASSAL-ligé, Fr. See *VASSALACE*.

VASSALS, they who, in the feudal system, were obliged to attend their lord in war, as a tenure by which they held their lands, &c.

VASSALAGE, subjection, or the condition of a vassal.

A VAUDERAULE, Fr. in utter confusion.

VAUDOIS, or *Barbets*, a species of light troops in the service of Sardinia. They consist of mountaineers or highlanders, who are lightly clothed and armed, and are enured to the chicanery of mountain-service.

VEAU, Fr. in carpentry, a piece of wood which is sawed from the inside of a bending, for the purpose of cutting or dressing it.

VEDETTE, (*vedette*, Fr.) in war, a sentinel on horseback, with his horse's head towards the place whence any danger is to be feared, and his carbine advanced, with the butt end against his right thigh. *Vedettes* are generally posted at all the avenues, and on all the rising grounds, to guard the several passages when an army is encamped.

The *Vedettes* to the out-posts should always be double, for the following reasons: first, that whenever they make any discovery, one may be detached to the commanding officer of the out-posts; secondly, that they may keep each other watchful: and thirdly, that the vigilance of both may render it impossible for any thing to come near them without being seen. They should be at no greater distance from their detachments than 80 or 100 paces.

For particular instructions, relative to the posting of *vedettes*, see a *Treatise on the Duties of an Officer in the Field*, by Baron Gross; see likewise *Gen. Reg. and Orders*, page 34 to 37.

VEHICLE, (*véhicule, voiture*, Fr.) carriage, a machine which is made to convey one or more persons: of this description are our military cars.

VEILLE, Fr. literally, privation of rest, want of sleep; also a night-watch.

Faire la VEILLE des armes, Fr. an ancient ceremony in which the knight who was to be armed and accoutred the following morning, passed the preceding night on watch in a chapel, where the weapons were deposited.

Être à la VEILLE de venir aux mains, Fr. to be upon the eve of coming to blows.

VEINES des pierres, Fr. veins, streaks, or lines in stones, which generally arise from some inequality in their consistency, so that they break or loosen in certain parts. Stones of this kind are sometimes rejected as unfit for nice work.

VEKILCHARES, a word used among the Turks, which signifies the same as *fourrier* in the French, and corresponds with our quartermaster.

VELICE, a cover; a case; as a saddle velice.

VELITES, Roman soldiers, who were commonly some of the Tiro, or young soldiers of mean condition, and lightly armed. They had their name *a volando*, from flying, or *a velocitate*, from swiftness. They seem not to have been divided into distinct bodies or companies, but to have hovered in loose order before the army.

Kennell's R. A. page 190. Their arms consisted of a sword and javelin, and they had a shield or buckler, which was sufficiently large to cover its man, being round, and measuring three feet and a half in diameter.

They generally wore a wolf's skin, or some other indifferent ornament upon their heads, to distinguish them during an action. Their javelins were a sort of dart, the wood of which measured three cubits in length, and was about the thickness of a finger. The point was about a hand's full breadth in length, and was so thin and brittle, that it snapped off the instant it reached or penetrated its object, so that the enemy could not return it. It was distinguished, in this particular, from other darts and javelins.

VELITES, *Fr.* a corps in the late imperial French service. See VOLTIGEURS.

VELOCITY, the quickness of motion with which bodies are moved from one place to another.

In the years 1788, 1789, 1790, experiments were made at Woolwich with the ballistic pendulum, to ascertain the initial velocity of military projectiles; the result of which will be found in a work entitled the Pocket Gunner, first published in 1801.

Chemin VELOUTÉ, Fr. a foot-path covered with turf.

VELUE, } stone as it comes
Pierre VELUE, } out of the quarry;
it is also called *pierre brute.*

La VENDEE, Fr. See CHOUAN.

VENDEANS, *Fr.* See CHOUAN.

VENEERING } is a sort of mar-
VANEERING } quetry, or inlaid work, whereby several thin slices, or leaves of fine woods of different kinds, are applied and fastened on a ground of some common wood.

There are two kinds of inlaying; the one, which is the more ordinary, goes no farther than the making compartments of different woods; the other requires a great deal more art, and represents flowers, birds, &c.

The first kind is what is properly called *vencering*, the other is *marquetry* or inlaid work.

VENEREAL disease, *pox, lues, syphilis* or *siphilis.* See Pox.

In the navy, the surgeons are entitled to receive a certain sum of money, stopped out of the pay of their venereal patients, for extraordinary trouble and attendance. No specific regulation exists

in the army. The captains of companies have sometimes assumed a discretionary power with respect to their men, and the latter have submitted to the charge. One great evil has, however, grown out of both practices; namely, the men, to avoid the stoppage, have applied to country quacks, and very frequently taken nostrums of their own. Every officer of a company, for the welfare of his soldiers, should examine their linen at the weekly inspections, as the disorder is generally first made manifest by stains upon the shirt.

It is generally believed, that the venereal malady was first brought into Europe in 1492, by the followers of Christopher Columbus, after his discovery of America. These people gave it to their countrywomen in Spain; the Spaniards extended it to Naples; and the French caught it during the siege of the latter place in 1495; and from France it has spread over the rest of Europe; so that its original nursery, on this side the Atlantic, seems to have been a camp.

VENETIANS, a kind of long breeches, or trowsers, (similar to the present pantaloons,) worn by Queen Elizabeth's soldiers in Ireland. In Grosse's History of the English army there is the following item with regard to the price of these articles:—One pair of Venetians, of Kentish broad cloth, with button, loops, and lining of linen, thirteen shillings and four-pence.

VENGEANCE, (*vengeance, Fr.*) punishment; penal retribution; avengement. There is an old proverb in our language, regarding the first part of the interpretation of this term, which has been quoted by N. Bailey in the following manner:—

When Vice goes before, Vengeance follows after. The notion of impunity often animates ill-disposed persons to the commission of *flagrant crimes*, which would never have been perpetrated, had the verity of this proverb been impressed in the minds of those delinquents; for certain it is, however slowly Vengeance may seem to move, it will assuredly overtake the offender at last; and by how much it is the longer in coming, being once arrived, it will fall on them the heavier. According to that maxim, *though Justice has leaden feet*, it has iron hands. Horace says, *Raro antecedentem scelestum descriuit pede pana claudo.*

With respect to the last interpretation,

avengement, a French author very justly observes, that the indulgence of this fatal passion has, at all times, proved a source of the greatest evils. Vengeance, among men, grows out of self-interest; is the offspring of ambition; and frequently the effect of the blackest ingratitude. It also often happens, that under the mistaken veil of justifiable chastisement, the most unmanly acts of *vengeance* are perpetrated; happy the man who is a stranger to this mean and unworthy propensity! It has been said, (and most absurdly so,) that vengeance is a godlike pleasure. The wretch who fosters in his breast this melancholy notion, is secretly nursing ten thousand vipers that must, sooner or later, sting him to the heart. Let it, however, be remembered, that if the suppression of the dictates of revenge be ornamental to the human mind, the never giving cause for vengeance is equally brilliant; and if the person, against whom sufficient has been done to excite a just resentment in his mind, can rise superior to his own wrongs, such a person may be truly called a high-minded man, and a hero in the best sense. The French call a low and mean revenge *la vengeance des femmes*.

VENGER, *Fr.* to revenge; to avenge.

VENT, (*lunière*, *Fr.*) in artillery, or, as it is vulgarly called, the touch-hole, is the opening through which the fire is conveyed to the powder that composes the charge.

As the placing the vents in mortars, howitzers, and guns, in the best manner, is so very delicate a point, and about which both authors and practitioners differ, we will advance what the result of experiments has demonstrated. The most common method is to place the vent about a quarter of an inch from the bottom of the chamber or bore; though we have seen many half an inch, and some an inch from the bottom. It has always been imagined, that if the vent was to come out in the middle of the charge, the powder would be inflamed in less time than in any other case, and consequently produce the greatest range; because, if a tube be filled with powder, and lighted in the center, the powder will be burnt in half the time it would otherwise be, were it lighted at one end. This gave a grounded supposition, that the greater the quantity of powder which burnt before the shot or shell was sensibly moved from its place, the greater force it would receive. To determine this,

the King of Prussia, in 1765, ordered that a light three-pounder should be cast, with three shifting vents, one at the center of the charge, one at the bottom, and the other at an equal distance from the bottom and center one; so that when one was used, the others were effectually stopped. The gun weighed 2 cwt. 1 qr. 20 lb. its length was 3 feet 3 inches, and the bottom of the bore quite flat. It was loaded each time with one-fourth of the shot's weight; and it was found, that when the lowest or bottom vent was used, the shot went farthest, and the ranges of the others diminished in proportion as they were distant from the bottom. The piece was elevated to 1 degree 30 minutes.

In 1766, the same monarch caused several experiments to be tried with three small mortars of equal size and dimensions, but of different forms in their chambers; each of which held seven ounces and a half of powder. From these experiments it appeared, that the concave chamber produced the greatest ranges, and that the bottom of the chamber is the best place for vents, having in that place the greatest effect.

VENT-field is the part of a gun or howitzer between the breech mouldings and the astragal.

VENT-astragal, that part of a gun or howitzer which determines the vent-field.

VENT, *Fr.* that vacancy which is occasioned by the difference between the calibre of a piece of ordnance, and the diameter of its ball. See WINDAGE.

VENT, *Fr.* wind. The French use this word in various senses.

VENT *d'un boulet de canon*, *Fr.* the wind of a cannon-ball.

Coup de VENT, *Fr.* heavy weather; a squall.

VENT *régulé*, *Fr.* a regular wind; such as the trade-wind; the monsoon.

Avoir du VENT, *Fr.* in farriery, to be persury.

VENTS-*alizés*, *Fr.* trade winds.

VENTAIL, *Fr.* the fold of a door or of a shutter; it is also called *battant*.

VENTAILLE, *Fr.* the breathing part of a helmet, the sight of the beaver; also the folding parts of a flood-gate.

VENTAILS ou VENTEAUX, *Fr.* the two posts which constitute the flood-gates in a sluice, when they open and close like folding doors.

VENTIDUCTS, in building, are spiracles or subterraneous places, whence fresh, cool winds are made to communi-

cate, by means of ducts, funnels, or vaults, with the chambers, or other apartments of a house, to cool them in sultry weather.

VENTOUSES, *Fr.* air-holes, ventilators.

VENTRE, *Fr.* belly; womb. When a piece of ordnance is off its carriage, and lies on the ground, it is said, among the French, to be upon its belly—*être sur le ventre*.

Se coucher VENTRE à terre, *Fr.* to lie down flat on your face. *Le capitaine ordonna à ses soldats de se coucher ventre à terre*, the captain ordered his men to lie down. This frequently occurs in action, when any part of the line or detached body is so posted as to be within reach of the enemy's cannon, and not sufficiently near to make use of its own musketry. A cool determined officer never lies down himself.

Demander pardon VENTRE à terre, *Fr.* to ask pardon in a most abject position.

VENTRIÈRE, *Fr.* a belly-band for a draught horse.

VENTRIÈRE, *Fr.* in hydraulics, a large piece of even timber which is fixed before a range of boards in order to make some mason-work more secure, either against the current of a river, or the pressure of earth.

VENTRIÈRES, *Fr.* also pieces of timber which are laid horizontally under the railing of wooden quays. They are likewise used in the roofs of ordinary buildings.

VENTS ou **RUMBS DE VENT**, *Fr.* Belidor has the following article on this term.

“For the convenience and ease of navigation, mariners have divided the horizon into thirty-two equal parts, which the French call *Rumbs de Vent*, or *Airs de Vent*, so marked upon the compass. Among these thirty-two winds, there are four principal ones which correspond with the four cardinal points of the globe, and which are known by the following names. *Nord* means *Septentrion* or the North, and is always distinguished by a *flower de lys* upon the compass; *Sud* is *Midi* or South; *Est*, *Levant*, or *Orient*, the East; *Ouest*, *Couchant* or *l'Occident*, the West: also *Ponant* in the Mediterranean. These four winds are called by the French *vents primitifs*, primitive winds, and are each distant from one another 90 degrees. By dividing each quarter of a circle into two equal parts, we shall have the *collateral winds*,

whose names grow out of the two primitive winds between which they are placed. For instance, the wind that is between the North and the West, is called *Nord-Ouest*, North-West; that which is between the South and the West, is called *Sud-Ouest*, South-West; that which is between the North and the East, North-East; that between the South and the East, South-East. These four collateral winds, and the four primitive ones, which are 45 degrees distant from one another, are called *rhumbs cutiers*.” For the subdivisions of the winds, see a French work entitled *Dictionnaire Universel de Mathématique et de Physique*.

VERACITY, (*véracité*, *Fr.*) an inviolable attachment to truth; one of the attributes of the Divinity, and the most sublime virtue in the human mind.

VERANDA, *Ind.* the covering of houses, being extended beyond the main pile of building, by means of a slanting roof, forming external rooms or passages. It is sometimes spelt *Varhanda*.

VERBAL orders, instructions given by word of mouth, which, when communicated through an official channel, are to be considered as equally binding with written ones.

VERBAL, *Fr.* verbal; given by word of mouth.

Procès-VERBAL, *Fr.* a verbal deposition, or a written report which is made officially of what has been seen, said, and done, between persons concerned. When applied to things, *procès-verbal* corresponds with our word *survey*.

VERBIAGE, *Fr.* mere words; superfluous talk; nonsense.

VERBIAGER, *Fr.* to talk much about nothing.

VERBOQUET, *Fr.* a small rope, or cord, which is tied to a cable, at the end of which hangs a piece of wood or large stone, that is to be raised to any given height in a building. The *verboquet* is used for the purpose of preventing the cable and its weight from touching any part of the building while it is drawing up.

VERD, *Fr.* green. This word is sometimes used in a figurative sense by the French, viz.

Homme VERD or *VERT*, *Fr.* a resolute man.

Tête VERTE, *Fr.* a giddy, thoughtless fellow.

VERD pour les chevaux, *Fr.* green forage or grass.

VERDICT, (*jugement, rapport*, *Fr.*)

the determination of the jury declared to the judge; decision, determination, opinion.

VERDIGREASE, (*verd-de-gris*, Fr.) a kind of rust of copper, which is of great use among painters. It is also taken medicinally.

Green VERDITER, a sandy colour, which does not bear a good body, and is seldom used but in landscapes, where variety is required. It should be washed before it is used.

Blue VERDITER is somewhat sandy, not of a very good colour, nor of a good body of itself, being apt to turn greenish; but being mixed with yellow, it makes a good green. It should be washed before it is used.

VERGE, Fr. a yard; a measure; a switch, &c. See **ROD**.

VERGE Rhinlandique, Fr. a measure which is equal to two French toises, or to 12 French feet. It is often used by Dutch engineers, in the measuring of works in a fortification.

VEROE de fer, Fr. See **ROD of iron**.

VERGE d'or, Fr. the same as *arbutète*, *urbalestrille*, or Jacob's staff; in astronomy, a beam of light.

VERGES, Fr. rods.

Passer par les VERGES, Fr. to run the gauntlet; a punishment which was formerly practised among the French. See **PUNITIONS corporelles**.

VERCES, Fr. twigs or branches, measuring from ten to twelve feet in length, which are used in making fascines.

VERGUE, Fr. a ship's yard.

La VÉRITÉ, Fr. truth. A French lexicographer has entered very diffusely into the explanation of this term: we shall satisfy ourselves by extracting the most remarkable passage in it; this relates to the general character of his countrymen. He says, "The French, considered collectively, are mostly of an open and ingenuous character; but it must be allowed, at the same time, that the generality of the nation are light and thoughtless, and extremely indifferent about what they may assert as truth, and indeed about their actions." See **TRUTH**.

En VÉRITÉ, Fr. in truth; without disguise, or prevarication.

A la VÉRITÉ, Fr. a term used among the French to acknowledge a thing forthwith, viz. *L'ennemi avoit, à la vérité, que deux mille hommes*; the enemy, to speak the truth, had only two thousand men.

VERMICULÉ, Fr. in ornamental architecture, a term used to express the representation of worms in the act of crawling, &c. as may be seen in rustic work. Hence our term *vermiculated*.

VERMILION is the most delicate of all light reds, being of itself a perfect scarlet colour: it is made artificially out of quicksilver and brimstone.

VERNACULARNESS, peculiarity to one's own country; whence *vernacular tongue*, or the language of one's mother country.

VERNIS, Fr. varnish.

VÉROLE, Fr. great pox, which see.

VERRE pour prendre hauteur, Fr. a thick coloured glass, through which an observation is taken of the sun.

VERRE pilé, Fr. broken pieces of glass, which are sometimes used in artificial fire-works.

VERRIN, Fr. a machine which is used to raise large weights; such as cannon, &c.

VERRIN, Fr. a machine, consisting of two screws and two pieces of timber laid horizontally, which serves to raise or lower the flood-gates in sluices, water-mills, or to drain inundations; also to draw large piles out of the ground, &c. Likewise a kind of jack-screw used occasionally to launch a ship from the stocks.

VERROU, Fr. a bolt.

VERS, Fr. towards. Hence, *marcher vers la côte*, to march towards the coast; *diriger les opérations vers la côte*, to direct a plan of operations towards the coast.

VERSER, Fr. to spill; to shed; to pour in. *Verser du sang*, to spill blood; *fusées versées à l'arsenal*, firelocks delivered up, or thrown into the arsenal; *verser des fonds*, to lodge money.

VERTEVELES, Fr. staples of a bolt.

VERTEX, the top of any thing; as the vertex of a cone, pyramid, conic section, &c.

VERTICAL, (*vertical*, Fr.) perpendicular.

VERTICAL point, (*point vertical*, Fr.) a term used in astronomy, to express an imaginary point in the heavens, which is supposed to fall perpendicularly upon our heads.

VERTUGADIN, Fr. in gardening, a glacis or rising ground that is made in the form of an amphitheatre, whose circular lines are not parallel to each other.

Vertugade, whence *vertugadin*, signifies a fardingale, a sort of hoop-petticoat.

VERUTUM, a weapon or dart, which was used among the ancients, short and narrow, headed with iron, like a narrow spit; some call it a casting dart with a string.

VERVENA, (*verveine*, Fr.) vervein, an herb that was reckoned sacred among the Romans, with which the *Pater Patrus*, or the king of heralds, was crowned, when he quitted the council of heralds, for the purpose of declaring war, or proclaiming peace.

VERVINA, among the Romans, a long javelin; also a spit or broach.

VESSIGNON, a wind-gall, or soft swelling on the inside and outside of a horse's hoof; that is, both on the right and left of it.

VESSION, a sort of wind-gall, or swelling, about the bigness of half an apple, consisting of soft spongy filth growing between the flesh and the skin, in the hollow next the hock of a horse, and beneath the big sinew, a little above the capelet and bending of the hain.

VESTIBLE, (*vestibule*, Fr.) in architecture, a kind of entrance into large buildings; being an open place before the hall, or at the bottom of the staircase.

VESTIBULE, (*vestibule*, Fr.) in fortification, is that space or covered ground which is in front of guard-houses, and is generally supported by pillars. Of this description is the front part of the new guard-house near Buckingham Gate. In a more general sense, any large open space before the door or entrance of a house. In the West-Indies the vestibule is called a balcony.

VETERAN, (*vétérán*, Fr.) an old soldier. This word comes from the Latin *veteranus*, a soldier in the Roman militia, who was grown old in the service, or who had made a certain number of campaigns, and on that account was entitled to certain benefits and privileges.

Twenty years service were sufficient to entitle a man to the benefit of a veteran. These privileges consisted in being absolved from the military oath, in being excused all the duties and functions of a soldier, and in being allowed a certain salary or appointment.

A French soldier is entitled to the honourable name of veteran, after he has served twenty-four years, without any break in his service.

VETERAN, as an adjective, is affixed to any person or thing that has been tried; as a *veteran* soldier, *veteran* skill.

VETERAN *Battalions*, regiments composed of men of a certain age.—They were formed during the late war.

VÉTÉRANCE, Fr. the state, condition of an old soldier.

Lettre de VÉTÉRANCE, Fr. the document or letter which enables an old soldier to claim the rights and privileges of an old soldier.

VETERANI. Among the Romans all soldiers were so called who, after having served twenty-five years, obtained their discharge. If they chose to continue in the service, they were exempted from all sentry and fatigue duties; and they only joined their different legions when the army took the field. The period for being put upon this list was shortened by the Emperor Augustus, and was (from having once been 29) reduced to twenty years service in the infantry, and to ten in the cavalry.

VÉTÉRINAIRE, Fr. See VETERINARY.

Ecole VÉTÉRINAIRE, Fr. veterinary school.

VETERINARIAN, (*veterinarius*, Lat.) one skilled in the diseases of cattle; a farrier, or horse-leech.

VETERINARY, appertaining to the science of taking care of cattle.

VETERINARY *surgeon*. The surgeon appointed to take care of the horses in a cavalry or dragoon regiment is so called. He is subordinate and accountable to the Veterinary College.

VEIILLES, Fr. This word literally signifies triles. In artificial fire-works, they are small serpentine compositions, confined within a single roll of paper. They have generally three lines in diameter.

VETO, *are*, Lat. to forbid; to command not to be done; to prevent; to hinder. The Queen of France, Antoinette, who was universally supposed to exercise undue influence over the weak mind of her husband Louis XVI, and was consequently hated by the nation at large, became peculiarly obnoxious on this ground. Pasquinades and placards were stuck upon the walls of the capital, and a popular song, called *Madame Veto*, was sung about the streets. Nor can any sensible man be surprized at this expression of national disgust; especially in a country where a law existed to prevent all sort of female ascendancy in government. The veto constitutes, at present, a material obstacle to the

emancipation of the Irish Roman Catholics.

VEXTIOUS and *groundless*. Charges of accusation, and appeals for redress of wrongs, are so called, when the persons who make them cannot substantiate their subject matter. Officers, non-commissioned officers, and soldiers, are liable to be punished, at the discretion of a general court-martial, for vexatious conduct. His Majesty sometimes peremptorily dismisses the former, without permitting them to stand the investigation of a court-martial.

VEXER, *Fr.* See **To TEASE**.

VEYILLARI, standard-bearers. Among the Romans, the vexillarii were a certain number of chosen men, who were attached to the standards, and who were the first on the lists of promotion, and military reward. This standard was called *vexillum legionis*. There were five hundred vexillarii, or standard-bearers, belonging to each legion, who enjoyed the same privileges as were given to the veterans; with this exception, that they were obliged to carry the standard on service.

VEYILLUM, the standard which was carried by the Roman horse. It corresponds with the standard and guidon of modern times. It also signifies, generally, a banner, ensign, or flag.

VEYILLUM navale, a streamer; the top-gallant of a ship. Whence *vexilla submittere*, to strike the colours.

VEYILLUM likewise means the Imperial standard. See **LABARUM**.

UGHUN, *Ind.* a month which partly corresponds with November: it follows **Katik**.

VIANDE, *Fr.* meat; animal food. In the old régime, every French soldier was allowed half a pound of meat per day.

M. de Louvois, who was in a public situation under the old monarchy of France, sent in a plan, recommending that a quantity of dried meat reduced to powder, should be distributed to troops on service. He took the idea from a custom which is prevalent in the East. He did not, however, live to fulfil his intentions, although he had already constructed copper ovens that were large enough to contain eight bullocks. Very excellent broth can be made of this powder; one ounce of which, boiled in water, will supply a sufficient quantity for four men; and one pound of fresh

meat gives one ounce of powder; so that, according to the inventor's assertion, there is a saving of one pound. The portable soup-balls and dried meats which are sold in this country are of the same nature.

VIBRATION. See **PENDULUM**.

VICE, among smiths, &c. is a machine or instrument serving to hold fast the piece to be filed, bent, riveted, &c.

VICE, with glaziers, a machine for turning or drawing lead into flat rods, with grooves on each side, to receive the edges of the glass.

VICE-ADMIRAL, (*vice-amiral*, *Fr.*) a naval officer of the second rank, who takes rank with generals of horse. Louis XIV. who endeavoured to establish a French navy in 1669, created two vice-admirals of the fleet, whom he called vice admiral of the East, and vice-admiral of the West.

VICE-ROY, one acting with delegated powers from the chief or heads of a government; as the vice-roy of Ireland; the vice-roy of Mexico, &c.

VICTOR, a conqueror; generally applied to the chief officer of a successful army.

VICTORY, (*victoire*, *Fr.*) the overthrow, or defeat of an enemy in war, combat, duel, or the like.

VICTUAILLES, *Fr.* The provisions which are embarked on board ships of war, are so called by the French.

VICTUALLER, } (*victuaillieur*, *Fr.*)

VICTUALLERS, } See **SUTTLERS**.

VICTUALS, food or sustenance allowed to the troops, under certain regulations, whether on shore or embarked in transports.

VIDAM, (*vidame*, *Fr.*) the judge of a bishop's temporal jurisdiction. He formerly held lands under the bishop, on condition, that he should always be ready to defend the temporal rights of the church, and to place himself at the head of the ecclesiastical troops.

VIDIMER, *Fr.* to certify that an act is conformable to its original.

Crier la VIE, *Fr.* to ask quarter of an enemy, who has one's life in his power.

Donner la VIE, *Fr.* to give quarter.

VIE, *Fr.* is also used in a variety of significations, as *donner, hasarder, exposer sa vie*, to give, to hazard, to expose one's life; *ôter, arracher, ravir la vie*, to take away, to wrest, to snatch away life; *entreprendre sur la vie de*

quelqu'un, to have some design against the life of another; *sous peine de la vie*, under pain of death, or at the forfeit of one's life; *soutenir au péril de sa vie*, to sustain any thing at the risk of one's life.

A *VIE*, *Fr.* for life.

Eau de VIE, *Fr.* brandy.

VIÉDASE, *Fr.* a puppy; a coxcomb.

Les VIES de mulets, *Fr.* literally, mules' pintles. See *SWIVEL*.

VIEUX corps, *Fr.* a term used among the French before the Revolution, to distinguish certain old regiments. There were six of this description, viz. Picardy, Piedmont, Navarre, Champagne, Normandy, and the Marine corps. The three first were formed in 1562, and that of Champagne in 1575. They were then called *les vieilles bandes*, the ancient or old bands; and before that period, each was known by the name of its colonel.

Les petits VIEUX corps, *Fr.* La Tour du Pin, Bourbonnois, Auvergne, Bel-sunce, Meilly, and the Régiment du Roi, or the King's own, were so called, during the old French monarchy. All the other regiments ranked according to the several dates of their creation, and the officers took precedence in consequence of it.

VIEW of a place. The view of a place is said to be taken when the general, accompanied by an engineer, reconnoitres it, that is, rides round the place, observing its situation, with the nature of the country about it; as hills, valleys, rivers, marshes, woods, hedges, &c. thence to judge of the most convenient place for opening the trenches, and carrying on the approaches; to find out proper places for encamping the army, and for the park of artillery.

To VIEW. See *To RECONNOITRE*.

VIF, *Fr.* This word is frequently used among the French to signify the core, or inside of any thing—viz.

VIF d'un arbre, *Fr.* the inside of a tree.

VIF d'une pierre, *Fr.* the inside of a stone.

VIF de l'eau, *Fr.* high water.

VIF, *Fr.* alive, busy; applied to the artificers in a wharf, dock or ship, who are all at work on the shipping.

Etre en VIGIE, *Fr.* to watch at the top of the mainmast.

VIGIER, *Fr.* to keep watch; to reconvoy.

VIGIER une flotte de vaisseaux marchands, *Fr.* to convoy a fleet of merchantmen.

VIGIES, *Fr.* a term given to certain rocks under water near the Açores. *Vigie* likewise signifies a watch, or sentinel, on board ship; but it is chiefly used among the Spaniards in South America.

VIGILANCE, (*vigilance*, *Fr.*) watchfulness; circumspection; incessant care. This quality is essentially necessary in a general; nor will it be found in his character, unless he has sedulously cherished it through all the intermediate stations of his profession.

Vigilance, or *vigilancy*, must not be confounded with precipitancy of conduct; for the latter does not comprehend either the care or the reflection and regularity which must all be united in the former.

It is well said, page 199, vol. ii. *Guide de l'Officier particulier en Campagne* par M. Cessac Lacuée. "Pendant les marches de nuit, on doit redoubler de soins et d'attentions; alors, comme le dit Xénophon, *les yeux doivent être remplacés par les oreilles*."

VIGILANT, (*vigilant*, *Fr.*) watchful; attentive.

VIGILES, guards or outposts, round a camp, &c. and sentinels, were so called among the Romans. Their duty was, in some degree, similar to that which is practised in these days; with this difference, that the *Vigiles*, among the ancients, were not armed, in order to prevent them from sleeping, either by leaning against their pikes, or by lying upon their shields. The man or sentry held a sort of dark lantern, which was so constructed, that the light reflected to himself and his three comrades only. The Roman sentinel challenged in the following manner:—*State, viri; quæ causa viæ? Quivæ estis in armis?* Stop, men; what is the cause of your journey, or on what business are you? or wherefore are you in arms? He then demanded the *tessera*, or watchword, from the patrolle.

VIGNETTE, *Fr.* a flourish; head-piece; generally ornamental.

VIGOROUS, (*vigoureux*, *Fr.*) strong, brisk, active, resolute; as, a vigorous attack.

VIGOTE, *Fr.* a model by which the calibres of pieces of ordnance are ascertained, in order to pick out appropriate bullets. This model consists of a

thick piece of wood, in which there are holes of different sizes, according to the several calibres of cannon.

VILBREQUIN, *Fr.* a wimble.

VILLAGE, (*village*, *Fr.*) Gen. Lloyd in his history of the Seven Years War, viz. 1756,—has laid down the following maxim:

When a village is intended to be supported, the retrenchment must be separated from the houses by an interval, sufficient for the troops to form in, between the houses and the retrenchments; and the village must be cleared behind, that you may march two or more battalions in front, otherwise you cannot defend it; the instant it is put on fire, you must abandon it in such confusion as sometimes communicates to the whole line.

VILLAIN, (*villain*, *Fr.*) formerly a man of low and servile condition, who had a small portion of cottages and land allotted him, for which he was dependant on his lord, and bound to certain work and corporal service. In the ancient days of France, it was customary to degrade officers and men of rank, by reducing them to the condition and servitude of a villain. In these times, villain generally signifies an arrant rogue, or pitiful sordid fellow.

VILLE, *Fr.* See TOWN.

VILLE *moyenne*, *Fr.* See *Moyenne*.

VILLE *ouverte*, *Fr.* See *Ouverte*.

VILLES *libres*, *Fr.* free towns. See HANS-TOWNS.

VIN, *Fr.* wine. The genuine juice of the grape, which is so plentiful and so cheap in France, that a common soldier has a larger quantity to his share than a British soldier can get of small beer here.

VINCIBLE, conquerable; in a state to be defeated.

VINDAS, *Fr.* See WINDLASS.

VINEÆ. See VALLUM.

VINEGAR, (*vinaigre*, *Fr.*) Vinegar is frequently used in the artillery to cool pieces of ordnance. Two pints of vinegar to four of water is the usual mixture for this purpose.

VINGTIÈME. See POUNDAGE.

VINTAINE, *Fr.* a small rope which masons use to prevent stones from hitting against a wall when they draw them up.

VINTENARY, or *Vintenarius*, a military officer in the reign of Edward III. belonging to the army sent to Ire-

land. He had 20 archers under him at four pence per diem.

VINGTNIERS, a term used in the old English army to designate a particular class of officers who had the command of twenty men. The companies or hundreds were commanded by centenaries; but the title of the officer commanding thousands is not mentioned.

VIOL, *Fr.* a rape, or the act of forcing a female, by main force, to give up her person. It sometimes happens, that through the obstinacy of the governor of a besieged place, the inhabitants are exposed to the dreadful calamity of seeing themselves and their property given up to the plunder of an enraged soldiery. When this is the case, the conquering general does himself infinite honour, by strictly forbidding every soldier, under pain of death, to commit the least violence on the persons of the inhabitants, but most especially on those of defenceless women, or to set fire to their houses.

The punishment in the French army for a rape on a girl under fourteen years of age, is two years in irons; if followed by death,—death.

VIOLENCE, (*violence*, *Fr.*) an irrational indulgence of an ungovernable temper, which is frequently mistaken for real spirit; and almost always defeats itself.

VIOLENT man, (*homme violent*, *Fr.*) a person who yields to the first impulse of passion, and never listens to the sober dictates of good sense.

VIRAGO, a female warrior.

VIRE, *Fr.* a quarrel, an arrow used for a cross-bow.

VIRER, *Fr.* to change, to turn round. The word is used figuratively by the French, viz. *tourner et virer*, to beat about the bush; as, *tourner et virer quelqu'un*, in an active sense, to pump another, or to draw out his secret.

VIRETONS, *Fr.* arrows.

VIREVAU, *Fr.* the same as *vindas*, a sort of moveable capstan; a draw-beam; a windlass.

VIRE-VOLTE, *Fr.* a quick turning about. It is a term in the manege.

VIROLE, *Fr.* a ferrule; a verrel.

VIRTUE, (*vertu*, *Fr.*) efficacy, power, force, quality, property.

By VIRTUE of, (*en vertu de*, *Fr.*) in consequence of powers vested, or delegated; by authority of.

Political VIRTUE, a steady adherence

to sound principles; an inviolable attachment to truth; unshaken integrity, in matters of state.

Military VIRTUES, (*vertues militaires*, Fr.) strict adherence to discipline, great patience and undaunted resolution, under the controul and guidance of unblemished honour and fidelity.

VIS, Fr. the vice or spindle of a press; also a winding stair.

Vis à jour, Fr. stairs so contrived that, though consisting of many steps, a person may from the highest discern the lowest.

Vis, ou noyau d'escalier, Fr. in architecture, the center piece of timber of a staircase.

Vis, ou noyau de montée, Fr. the spindle tree of a staircase.

Un escalier à Vis, Fr. a winding staircase.

Vis à Vis, Fr. over against; opposite; as *vis-à-vis de l'ennemi*, opposite to, or in front of the enemy.

VISA, a word from the Latin, and generally used by the French in their passports and other public documents. It is a form in an instrument which must bear the sign manual of the person through whom it becomes authentic and has effect.

VISER, Fr. to aim at any thing.

VISER à un but, Fr. to aim at a mark; also to have some object in view.

VISIBLE, Fr. visible; at home; ready to see any body: a familiar instruction which masters give to their servants when they mean to receive a person. *Not visible* is the contrary.

VISIER, } (*visir*, Fr.) an officer of
VIZIER, } dignity in the Ottoman
VIZIR, } Empire; whereof there are two kinds, the first called by the Turks *Vizir Azem*, or *Grand Vizir*, first created in 1370 by Amurath the First, in order to ease himself of the chief and weightier affairs of the government. The *Grand Vizir* possesses great powers, especially with regard to military affairs. The orders he issues are so thoroughly discretionary, that when he quits Constantinople to join the army, he does not even communicate his intentions to the sultan. This system entirely differs from that which is followed by European generals. When the latter take the field, they proceed upon plans that have been previously digested; and although they may occasionally change their dis-

positions, yet they never deviate from the essential and governing principles.

The *Grand Vizir*, on the contrary, not only makes the arrangements according to his own judgment, but he even changes an operation that has been previously ordered by the sultan, if, on his arrival at the spot, he should think it expedient to employ the troops in a different way. This absolute power is not, however, without its risk; for if the *Grand Vizir* should fail in his enterprise, it is more than probable that the sultan will cause him to be beheaded: a punishment which has long been familiar to the Turks, from the arbitrary manner in which it is practised, and the frequency of its occurrence.

When the Turks engage an enemy, the *Grand Vizir* generally remains with the reserve, and seldom mixes with the main body, which is soon converted into a mob of desperate combatants. The war which was carried into Egypt once bade fair to change the whole system of Turkish tactics.

VISIÈRE, Fr. the sight which is fixed on the barrel of a musket or fire-lock.

To VISIT, (*visiter*, Fr.) to go to any place, as quarters, barracks, hospital, &c. for the purpose of noticing whether the orders or regulations which have been issued respecting it, are observed.

VISITE des postes, Fr. the act of visiting posts, &c.

Faire la VISITE, Fr. to visit, to inspect.

VISITEUR, Fr. the person who visits, or goes the rounds.

VISITING officer, he whose duty it is to visit the guards, barracks, messes, hospital, &c. See *Orderly OFFICER*.

VISOR, } that part of the helmet
VIZARD, } which covered the face.

VITAL, essential; chiefly necessary.

VITAL air, or oxygen, the cause of the rapid ignition of gunpowder.

VITCHOURA, Fr. a furred coat; a corruption of the German word *Wildschurr*, which signifies the skin of a wild beast.

VITESSE, Fr. dispatch; promptitude of action.

VITIS, a vine; a centurion's rod; such as was used among the old Romans to chastise soldiers that stepped out of the ranks, or were guilty of small irregularities. Mercenaries, and those men that were not Roman citizens,

were flogged with switches on their naked shoulders.

VITONIERES, *Fr.* limber holes.

VITRAGE, *Fr.* This term comprehends every thing that relates to the glazing of houses, &c.

VITRERIE, *Fr.* a term comprehending every thing that appertains to the use of glass; also the glass trade.

VIVANDIERS, *Fr.* victuallers, sutlers, &c.

VIVAT, *Fr.* a familiar exclamation, which is used not only by the French, but by the Dutch and Germans. It comes from the Latin and signifies, literally, May he live!

VIVE le Roi! *Fr.* God save the king! Long live the king.

VIVE la République, *Fr.* Long live the republic.

Qui VIVE? *Fr.* a military phrase which is used in challenging.—Who comes there? literally, who lives? To be kept upon the *Qui Vive*, to be roused to particular vigilance by some unexpected accident, or occurrence.

VIVE eau, *Fr.* high water; the same as *vif de l'eau*, or *marée*.

VIVO, in architecture, the shaft or fust of a column; it is also used for the naked of a column.

VIVOTER, *Fr.* to live from hand to mouth; as is the case with most military men.

VIVRE, *Vivres*, *Fr.* food; provisions; subsistence. In the *Dictionnaire Militaire*, vol. iii. page 525, there is an interesting account of the manner in which troops were subsisted during the first years of the old French monarchy.

VIVRES, *et leur distribution chez les Turcs*, *Fr.* the kind of provisions, &c. and the manner in which they are distributed among the Turks. The food or provisions for the Turkish soldiery form an immediate part of the military baggage.

The government supplies flour, bread, biscuit, rice, bulgur or peeled barley, butter, mutton or beef, and grain for the horses, which is almost wholly barley.

The bread is generally moist, not having been leavened, and is almost always ready to mould. On which account, the Armenians, who are the bakers, bake every day, in ovens that have been constructed under ground for the use of the army. When there is not sufficient time to bake bread, biscuit is distributed among the men.

The ration of bread for each soldier consists of one hundred drams per day, or fifty drams of biscuit, sixty of beef or mutton, twenty-five of butter to bake the peeled barley in, and fifty of rice. The rice is given on Friday every week, on which day they likewise receive a ration of fifty drams of bulgur mixed with butter, as an extraordinary allowance, making a kind of water-gruel.

These provisions are distributed in two different quarters. The meat is given out at the government stall or butchery, where a certain number of Armenians, Greeks, and Jews regularly attend. Each company sends a head cook, who goes with a cart and receives the allowance from a sort of quartermaster serjeant, who is in waiting with a regular return of what is wanted for each oda.

This person is styled among the Turks *Meidan Chiaous*. He stands upon a spot of ground which is more elevated than the rest, and receives the allowance due to his district.

The distribution of bread, &c. is made within the precincts of the Tefterday-Basey, where the Vekil-Kharet attends as director or superintendant of stores and provisions, and by whose order they are delivered.

When the allowance is brought to the oda or company, the Vekil-Kharet, a sort of quartermaster, sees it regularly measured out, and if any portions be deficient, he takes note of the same, in order to have them replaced for the benefit of the company. The remainder is then given to the head cook, who divides it into two meals, one for eleven o'clock in the morning, and the other for seven in the evening.

These two meals consist of boiled or stewed meat, mixed with rice, and seasoned with pepper and salt; water-gruel being regularly made for each man on Friday.

There are six kitchen-boys or quateri attached to each oda, by which they are paid a certain subsistence. On solemn occasions, and on festival days, the quateri are dressed in long gowns made of skins, with borders to them; they likewise wear a large knife, with an encrusted silver handle, which hangs at their side. They serve up the victuals in two copper vessels, that are laid upon a table covered with a skin, round which seven or eight persons may be seated.

VIVRES-pain, Fr. bread provided for the sustenance of a French army by contract or requisition.

VIVRES-viande, Fr. meat provided for the sustenance of a French army, by contract or requisition.

VIVRIERS, Fr. purveyors and other persons employed by the commissary general, or contractor for stores and provisions.

Mons. Dupré D'Aulnay, in a work entitled *Traité des Subsistances Militaires*, has suggested the establishment of a regular corps of *Vivriers*, or persons whose sole duty should be to attend to the subsistence of an army in the field, as well as in garrison. His reasoning upon this subject is very acute, full of good sense, and seems calculated to produce that system of economy and wholesome distribution, that, to this day, are so manifestly wanted in all military arrangements.

VIZ, *Ind.* a small coin; it is also a weight equal to about three pounds; but differs much in value according to place.

VIZARUT, *Ind.* the office of vizier.

VIZIER, *Ind.* prime minister.

UKASE, a Russian word signifying manifesto, proclamation, &c.

ULANS, *Fr.* This word is sometimes written *Hulans*, and more frequently *Uhlans*. A certain description of militia among the modern Tartars was so called. They formerly did duty in Poland and Lithuania, and served as light cavalry.

It is not exactly known at what epoch the Tartars first came into Poland and Lithuania. Dlugossus, in his *History of Poland*, book XI, page 243, relates that there were troops or companies of Tartars attached to the army which was under the command of Alexander Witholde, Grand Duke of Lithuania. Heidenstein, in his account of Poland, *Rer. Polonic.* p. 152, makes mention of a corps of Tartars belonging to the army which Stephen Bathori, King of Poland, carried into the field when he fought the Russians. This corps, according to the same author, was headed by one Ulan, who said he was descended from the princes of Tartary.

Although the origin of the word Ulan, as far as it regards the modern militia so called, does not appear to be indisputably ascertained, it is nevertheless

well proved, that besides the Tartar chief under Stephen Bathori, the person who in the reign of Augustus II, formed the first pulk, or regiment, of that description, was not only called Ulan himself, but likewise gave the name to the whole body under his command. This chief is mentioned in the records of the military institution of Poland in 1717. He was then colonel or commandant of the first pulk, or King's regiment, and there were three captains under him of the same name, viz. Joseph Ulan, David Ulan, and Cimbey Ulan. In 1744, one of these was captain of a company of *Ulans* in Bohemia, and was afterwards colonel of a corps of the same description in Poland. He is likewise said to have been descended from the Tartar princes. It is, however, left undecided, whether Ulan be the name of a particular family, or a term given to distinguish some post of honour; or again, whether it barely signify a certain class of turbulent haughty soldiers, such as the *Strelez* of Russia, or the *Janizaries* of Constantinople.

If there be any thing which can make us question the authenticity or probability of this account, it is the passage we find in the book already quoted; viz. Dlugossus, where he says, liv. XIII. page 423, that in 1467 an ambassador from Tartary had arrived at Petrigkow to announce to King Cassimir, that, after the death of Ecziger, his son Nordowlad had ascended the throne of Tartary, with the unanimous consent and concurrence of all the princes and *Ulans*.

Quitting the etymology of the word, and leaving the original name to the determination of wise and scientific men, we shall confine our present researches to the modern establishment of the *Ulans*: which, by the best accounts, we find to have happened in 1717.

It is acknowledged by all writers, that the *Ulans* are a militia, and not a separate nation or class of people; their origin, in this particular, resembles that of the *Cossacks*. When Augustus II, in 1717, altered the military establishments of Poland, he formed two regiments of *Ulans*; one consisting of six hundred men, which had already existed, and was called the King's Pulk, and the other of four hundred, which was given to the great general of the republic.

Augustus III. on his accession to the

throne, took both these regiments into his own immediate pay, and afterwards augmented the establishment by raising several other pulks or corps of this description. The Ulans are mounted on Polish or Tartar horses, and do the same duty that is allotted to hussars; with this essential difference, that they are better armed and accoutred, and that their horses excel those of the hussars in strength and swiftness, although they are mostly of the same size. The Ulans have frequently distinguished themselves on service, particularly in Bohemia.

Their principal weapon is a lance five feet long, at the end of which hangs a silk streamer, that serves to frighten the horse of the Ulan's opponent, by its fluttering and noise. The lance is suspended on his right side, by means of a belt which is worn across the Ulan's shoulders, or by a small leathern thong which goes round his right arm, the end of the lance resting in a sort of stay that is attached to the stirrup. Before the Ulan takes his aim, he plants his lance upon his foot, and throws it with so much dexterity, that he seldom misses his object.

The dress of the Ulan consists of a short jacket, trowsers or breeches, made like those of the Turks, which reach to the ankle bone, and button above the hips. He wears a belt across his waist. The upper garment is a sort of Turkish robe with small facings, which reaches to the calf of the leg; his head is covered with a Polish cap. The colour of the streamer which is fixed to the end of the lance, as well as of that of the facings, varies according to the different pulks or regiments which it is meant to distinguish. The Ulan is likewise armed with a sabre, and a brace of pistols which hang from his waistbelt.

As the Ulans consider themselves in the light of free and independent gentlemen, every individual amongst them has one servant, if not two, called *pocztowy* or *pacholeks*, whose sole business is to attend to their baggage and horses. When the Ulans take the field, these servants or batmen form a second or detached line, and fight separately from their masters. They are armed with a carbine, which weapon is looked upon with contempt by their masters, and they clothe themselves in the best manner they can.

The Ulans generally engage the enemy in small platoons or squads, after the manner of hussars; occasionally breaking in the most desultory manner. They rally with the greatest skill, and frequently affect to run away, for the purpose of inducing their opponents to pursue them loosely; a circumstance which seldom fails to be fatal to the latter, as the instant the pursuers have quitted their main body, the Ulan wheels to the right about, gets the start of him through the activity of his horse, and obtains that advantage, hand to hand, which the other possessed whilst he acted in close order.

The instant the Ulans charge an enemy, their servants or batmen form and stand in squadrons or platoons, in order to afford them, under circumstances of repulse, a temporary shelter behind, and to check the enemy. The batmen belonging to the Ulans are extremely clever in laying ambushes.

The pay of the Ulans in time of peace is very moderate. Poland, before its infamous dismemberment and partition by Russia, Prussia, and Austria, kept a regular establishment of four squadrons and ten companies on foot. These troops were annually supplied with a thousand rations of bread and forage, which quantity was paid them at the rate of 272 florins, Polish money, per ration. The Grand Duchy of Lithuania subsisted, in the same manner, fifteen other companies of Ulans. The other pulks were paid by the king. The annual pay of the captains was five rations, and that of the subalterns two; that is 1360 florins to the former, and 544 florins to the latter.

In 1743 Marshal Saxe, with the approbation and concurrence of the French court, raised a regiment of Ulans, which was attached to the military establishment of that country. This corps consisted of one thousand men, divided into six brigades, each brigade composed of one hundred and sixty men, eighty of whom were Ulans, and eighty dragoons. So that the regiment consisted of five hundred Ulans, properly so called, armed and accoutred like those in Poland, and the other five hundred were dragoons, without being considered as the servants or batmen of the Ulans; in which instance, they differed from the *pacholeks* of the Polish Ulans. These dragoons

were paid by the king; whereas in Poland each Ulan paid his own servant or batman, who looked to him only for clothing, arms, and subsistence. On the death of Marshal Saxe, the Ulans in France were reduced; and the dragoons only kept upon the establishment. They were considered as a regiment; being in the first instance given to Count de Frise, who was a major-general in the service, and became their colonel. They remained on that footing until the Revolution.

The uniform of the French Ulans consisted of a green coat or cloak, with green breeches, Hungarian half-boots, pinchbeck helmet, with a turban twisted round it of Russian leather; the tail, or mane, of the helmet consisted of horse hair, which was coloured according to the facings of the brigade; their arms were a lance nine feet long, with a floating streamer at the top, a sabre, and a pistol in the waist-belt.

The dragoons were clothed like other regular troops. Their coat was green, with cream-coloured facings and scarlet linings; plain brass buttons, an aiguillette or tagged point, made of red worsted; a fawn-coloured waistcoat, edged round with scarlet; leather breeches; half-boots that were laced up to the calf of the leg; pinchbeck helmet, with a seal-skin turban round it, and two rosettes made of pinchbeck; the top was adorned with horse-hair, which hung behind. Their arms consisted of a fusil with a bayonet, which was always fixed; two pistols and a sabre; the horse was covered with a wolf's skin. The Ulans rode horses which were somewhat lower than those of the dragoons, and were more active. The dress of the German Ulan is somewhat similar to that of the French.

At the commencement of the French revolution, particularly in 1792 and 1793, the Ulans belonging to the Imperial army that endeavoured to penetrate into France, were the terror of the inhabitants all along the frontiers. The excesses which they committed, and the desolation they occasioned, rendered their very name a signal of alarm. They seldom gave quarter, and they never received it.

ULTIMATUM, a term used in negotiations to signify the last condition or conditions upon which propositions that

have been mutually exchanged, can be finally ratified.

ULTRAMARINE, (*d'outre mer*, Fr.) from beyond the sea; foreign.

ULTRAMARINE, (*outré mer*, Fr.) a very delicate sky-blue powder used in the drawing of plans, &c.

ULTRAMONTANE, derived from the Latin, *ultra*, beyond, and *mons*, mountain. This term is principally used in relation to Italy and France, which are separated by the Alps. According to Bailey, *ultramontanus* is a name given by the Italians to all people who live beyond the Alps.

UMBO, the pointed boss, or prominent part in the center of a shield or buckler; literally, the navel.

UMBRO, a colour which resembles that of new oaken wainscot; it dries quickly and with a good gloss.

UMBRIERE, the visor of a helmet.

UMPIRE, (*arbitre*, Fr.) an arbitrator, or a power which interferes for the adjustment of a dispute or contest.

UNANELED, a term in Shakspeare, signifying without the bell rung, from *un*, negative, and *knell* the tolling of a bell. Dr. Johnson doubts the propriety of this interpretation. As the term, however, was used with respect to the mangled remains of our brave countrymen who fell in the battle of Talavera de la Reyna in Spain, and who were left to the mercy of the elements, we cannot omit the word; and in so doing, we are solicitous to pay that just tribute, which the heroic conduct of British soldiers deserves from every well thinking Englishman. Their bodies may lie unaneled on foreign ground, but their praises will be rung as long as the memory of that hard fought day shall last.

UNARMED, the state of being without armour or weapons.

To UNCASE, in a military sense, to display, to exhibit; as, to uncase the colours. It is opposed to the word *To Case*, which signifies to put up, to enclose.

To UNCOCK, to put the trigger of a musket completely at rest.

To UNCOVER. When troops deploy, the different leading companies or divisions, &c. successively uncover those in their rear, by marching out from the right or left of the column.

UNCONDITIONAL, at discretion; not limited by any terms or stipulations.

UNCONQUERED, not subdued or defeated; in opposition to conquered or defeated. Thus Wales considers itself unconquered, though subject to England, because it never yielded to invasion.

UNDAUNTED, not appalled by fear; valiant.

UNDECAGON, a regular polygon of eleven sides or angles.

UNDECIDED, not determined. See **PROMPTITUDE**.

UNDER, in a state of subjection to; also in the days of, or during the reign of, as under Alexander the Great; under George the Third.

UNDER-arms, (*sous armes*, Fr.) in a state of military array; having the necessary weapons of offence and defence, as musket, sword, &c.

UNDER-sentence, liable to be punished according to a sentence passed; as, under the sentence of a general court-martial; under sentence of death.

UNDER-acceptances, in a state of being liable to, or limited by; as, every acromptant is who accepts a bill.

UNDER command, (*sous ordre*, Fr.) in subjection to; liable to be ordered to do any particular duty.

To be cool UNDER fire, (*être de sang-froid sous le feu de l'ennemi*, Fr.) not to be disconcerted by the noise, or smoke, or other casualties of a battle; the groans of the dying, or the ghastly appearance of the dead.

UNDER cover, (*à couvert, à l'abri*, Fr.) shielded, protected, &c. See **COVER**.

UNDER-officer, an inferior officer; one in a subordinate situation.

UNDER contribution, liable to give, in money or in kind, what may be authoritatively called for. Countries are sometimes put under contribution, for the support of an army. See **REQUISITION**.

This term is also figuratively applied, when an individual is weak enough to permit himself to be alarmed at the abuse of a hacknied and unprincipled writer; especially, if he should ever have committed himself to him by an ill-placed confidence.

UNDER-Secretary of State, a principal clerk in the home or foreign department, who acts under the orders and instructions of the chief secretary.—The Under-Secretary of State for the Home Department has now the superintendence and direction of all aliens; the office in Crown Street, Westminster, having been abolished.

To bring UNDER, to submit to the perusal and consideration of another; as to bring the memorial of an officer *under* the Commander in Chief's eye.

UNDERHAND, (*sous main*, Fr.) clandestinely; with fraudulent secrecy. A term not known in military phraseology; or if known, that ought to be expunged, by the expulsion of every secret pander, and underhand dealer.

To UNDERMINE, to dig cavities under any thing, so that it may fall, or be blown up; to excavate.

To UNDERMINE, in a figurative sense, to injure by clandestine means.

UNDERMINER, a sapper, one who digs a mine.

UNDERMINING, in a figurative sense, adopting secret measures for the purpose of attaining any particular end.

UNDERPENASING, in building, signifies the bringing it up with stone under the ground cells. Sometimes it is used to signify the work itself when finished.

UNDERSTANDING, skill; knowledge; exact comprehension; also intelligence; privity; concurrence.

UNDISCIPLINED, not yet trained to regularity or order: not perfect in exercise or manœuvres.

To UNFIX, in a military sense, to take off, as *Unfix bayonet!* on which the soldier disengages the bayonet from his piece, and returns it to the scabbard. The word *Return*, as we have already observed, is sometimes used instead of *unfix*: but it is improperly used, although it more immediately corresponds with the French term *Remettre*.

UNFORTIFIED, not strengthened or secured by any walls, bulwarks, or fortifications.

UNFURLED. A standard or colour, when expanded and displayed, is said to be unfurled.

UNGENTLEMANLIKE-conduct.—Under this term is comprehended every infraction of the laws relative to social intercourse, in which the most trifling deviation from truth, honour, or honesty, must subject an officer to a charge for ungentlemanlike conduct and behaviour.

UNGENTLEMANLY, illiberal, not becoming a gentleman.

UNGULA, in geometry, is the section of a cylinder, cut off by a plane, passing obliquely through the plane of the base, and part of the cylindrical surface.

UNIHARNESSED, disarmed; divested of armour or weapons.

UNHORSED, thrown from the saddle; dismounted.

UNHOSTILE, not inimical, or belonging to an enemy.

UNIFORM, (*uniforme*, Fr.) The coat, waistcoat, breeches, &c. of an officer and soldier, are comprehended under this term.

Scarlet is the national uniform of the British army, blue of the modern French, except of the Legions who are dressed in white, white of the Austrian, green of the Russian, &c. But in each of these armies there are particular corps which are clothed in other colours, and whose clothing is made in a shape peculiar to themselves. Though, generally speaking, each has an uniform within itself, yet this uniform, strictly considered, is a regimental. Thus, the regimentals of the Guards cannot be called the regimentals of the 29th, but scarlet is the uniform of both. In the same manner, though sky blue be the regimental colour of dragoon regiments which serve in India, and dark or bottle green be that of rifle corps, yet neither the one nor the other can be called the uniform of the British army. It were to be wished, indeed, that, like the navy, all the land troops could be clothed alike, and in one colour. With respect to the origin of *Military Uniforms*, we may assert, with some degree of confidence, that however ancient the custom of being clothed in some distinguished manner is allowed to be, it is impossible to trace their first adoption beyond the eleventh century.

We should make useless inquiries, were we to direct our attention to those periods in which the Romans fought covered with metal armour, or with leather, which was so dressed and fitted to the body, that the human shape appeared in all its natural formation; nor to those in which the French, almost naked, or at least very lightly clad in thin leather, conquered the ancient Gauls.

Better information will be acquired by referring to the crusades which were made into Palestine and Constantinople by the Europeans. We shall there find, that the western nations, France, England, &c. first adopted the use of rich garments, which they wore over their armours and adorned their dresses with furs from Tartary and Russia.

We may then fix the origin of coloured

dresses to distinguish military corps, &c. in the eleventh century. The Saracens generally wore tunics or close garments over their armour. These garments were made of plain or striped stuffs, and were adopted by the Crusaders under the denomination of coats of arms, *Cottes d'armes*. We refer our readers, for further particulars, to a French work intitled, *Traité des Marques Nationales*, and to page 533, tom. iii. of the *Dictionnaire Militaire*; observing, that the uniforms of the French army were not completely settled until the reign of Louis XIV. and that the whole has undergone considerable alterations since the late revolution. The uniform of the British army is too well known to require any particular detail from us. We must, however, observe, that from the great attention which the Commander in Chief pays to every species of military system and organization, we make no doubt, but the great principles of economy and uniformity in dress, will form no inconsiderable part of the reform and good order which he is gradually effecting.

UNIFORMITY, conformity to one pattern; resemblance of one thing to another. In order to preserve this essential requisite, in the exercise and manœuvres of the British forces, it is expressly ordered by his Majesty, that the general officers appointed to review his troops shall pay particular attention to the performance of every part of the Regulations issued for the Formations, Field Exercise, &c. and report their observations thereupon, for his Majesty's information; so that the exact uniformity required in all movements may be attained and preserved, and his royal intentions thereby carried into full effect. See *General Regulations*.

UNION. The King's or national colours are called the Union.

The Union, a term used to signify the junction of Scotland with England, under certain stipulations. It also signifies the annexation of Ireland to Great Britain, without almost any stipulations, except for the benefit of the latter.

UNITED, connected; bound together by oath, &c.; hence United Irishmen.

UNIVERSITY, in a general acceptance of the word, any nursery where youth is instructed in languages, arts, and sciences. It likewise means the whole in general, generality. But, in a

more partial sense, it signifies one of the two national institutions which have been established for the encouragement of literature at Oxford and Cambridge.— Among other privileges which belong to these royal foundations, the vice-chancellors have a right to know the authority by which any armed force enters either city; and every commanding officer, the instant he has marched in, should report to the vice-chancellor the nature of his route, &c. In this respect, the vice-chancellors of both Universities are to be looked upon as governors of their respective cities.

To **UNLOAD** a gun or a musket, (*décharger un canon, un mousquet*, Fr.) to take the powder and ball out of a piece of ordnance, or musket.

UNMILITARY, (*pas militairement*, Fr.) not according to military rules and regulations. Thus, to quote the words of General Dundas, "The marching of great bodies in file, where improper extension is unavoidable, must be looked upon as an *unmilitary* practice: and ought only to be had recourse to when unavoidably necessary."

UNSAFE, not to be trusted; not to be depended upon; liable to betray.

UNSAFE-man, a person from whose indiscretion, or want of principle, every thing may be apprehended, that is contrary to honour and honesty. A creature of this sort is a most dangerous inmate at head-quarters, and ought always to be kept aloof.

To **UNSHOT**, a gun, (*désarmer un canon*, Fr.) to take the ball out of a piece of ordnance.

UNSKILLED, wanting skill; wanting knowledge; as, unskilled in the stratagems of modern warfare.

UNSOLDIERLIKE conduct. This term is intimately connected with a former article on ungentlemanlike conduct, with some additional circumstances in regard to personal behaviour when on service, that may expose the character of a military man to censure or degradation. Cowardice, like the loss of virtue in a female, is, however, the most to be guarded against. In the Articles of War these terms constitute what is generally called the *Sweeping Clause*, under which officers may be tried, when any difficulty arises with respect to a specific article.

To **UNSPRING**, a word of command used in the exercise of cavalry.

UNSPRING your carbine; quit the reins

of your bridle, and take hold of the swivel with the left hand, placing the thumb on the spring, and opening it; at the same time take it out of the ring.

UNSTEADY, mutable; restless; as, unsteady under arms.

UNTENABLE, not to be held in possession; incapable of being defended.

UNTRAINED, not disciplined to exercise or manoeuvre.

UNTRUTH, moral falsehood; false assertion; a thing of so base and degrading a nature among military men, that the very appearance of it is sufficient to create disgust. See **LIAR**.

UNVANQUISHED, not conquered or defeated.

UNWALLED, being without walls of defence; dismantled.

UNWARLIKE, not fit for, or used to war.

UNWEAPONED, not provided with arms of offence.

VOGUE, Fr. the course, or way which a galley, or ship, makes when it is rowed forward.

VOGUER, Fr. to make way upon water either by means of sailing, or by oars. It also signifies generally to row.

VOIE, Fr. way, means, course of communication.

VOIE ou voye, Fr. a way; a road.

VOIE royale, Fr. the king's high-way.

VOIE militaire, Fr. a military road.

VOIE, Fr. This word also means the way of conveying any thing. As, *par la voie de Paris*, by the way of Paris. We generally adopt the Latin term *viâ*, as *viâ Dublin*, by the way of Dublin.

VOIE, Fr. the riding bed in a carriage.

VOIE, ou voye d'eau, Fr. a leak in a vessel.

VOIE de pierre, Fr. a load of stone. Among the French this load is generally reckoned not to contain less than fifteen cubic feet.

VOILE, Fr. a sail. This word is frequently used by the French to signify the ship itself; and so sail is with us.

VOILE quarrée, ou à trait quarré, Fr. a square sail, such as the main-sail.

VOILE latine, voile à tiers point ou à oreille de lièvre, Fr. a triangular shaped sail, such as is used in the Mediterranean.

Jet de VOILES, Fr. the complete complement of sails for a ship.

Faire VOILE, Fr. to go to sea.

VOIR, Fr. literally to see; to behold.

VOIR en grand, Fr. to view, or consider

things and men upon a large scale; and not to be diverted from a main object, by attending to trifles.

VOIR en petit, Fr. to view, or consider things and men in a confined way; and by so doing to lose sight of the main object.

VOIR l'ennemi, Fr. to be in active warfare; literally, to see the enemy.

VOIRIE, Fr. a lay-stall. The French say figuratively, *jetter quelqu'un à la voirie*, to deny a person Christian burial.

Gens de VOIRIE, Fr. scavengers, dung farmers, &c.

VOIRIE, Fr. a road, way, path, &c.

VOITURES, Fr. carriages, wagons, &c.

VOL, Fr. theft. The military regulations on this head during the existence of the old French monarchy were extremely rigid and severe.

Whosoever was convicted of having stolen any of the public stores was sentenced to be hanged, or strangled; and if any soldier was discovered to have robbed his comrade, either of his necessaries, bread, or subsistence money, he was condemned to death, or to the galleys for life. So nice, indeed, were the French with respect to the honesty of the soldiery in general, that the slightest deviation from it rendered an individual incapable of ever serving again.

VOLANTS, Fr. the sail-beams, or flights of a windmill.

VOLÉE, Fr. the vacant cylinder of a cannon, which may be considered to reach from the trunnions to the mouth.

VOIÉE et culasse d'une pièce, Fr. This term signifies the same as *tête et queue d'une pièce*, the mouth, or head, and the breech of a piece of ordnance.

VOLÉE signifies not only a discharge of ordnance, or musketry, but also the single shot of a cannon. *Il eut la tête emportée d'une volée de canon*; his head was carried off by a cannon shot.

Tirer à toute VOLÉE, Fr. to fire a cannon laid upon the sole, without giving it any particular aim, so that the ball may hit and rise again *à ricochet*. In a general sense, *tirer à toute volée* signifies, to fire so as to propel the shot to the greatest possible distance by elevation.

Homme de haute VOLÉE, Fr. a person of high rank and distinction.

Parler à la VOLÉE, Fr. to talk at random.

Prendre entre bond et VOLÉE, Fr. to get any thing by availing one's-self of

the nick of time, or of circumstances just arising.

VOLÉE, Fr. See *SONNETTE*.

VOLET, Fr. a shutter. It likewise means a small sea compass.

VOLET ou oiseau, Fr. a mason's hod.

VOLET brisé, Fr. a shutter made of two folds which close, and enter into the opening of a wall.

VOLIGE ou Volille, Fr. in carpentry, a small piece of deal, or poplar, which is extremely thin and light; it is generally from three to five lines thick, ten inches broad, and six feet long.

VOLISSE ou Volice, Fr. in carpentry, the lath or thin board upon which a slate is nailed; it is generally twice the breadth of the common lath.

VOLETTES, Fr. horse's net.

VOLLEY, the discharging of a great number of fire-arms at the same time.

VOLONÉS. In a general acceptance of the term, *volones* signified volunteers among the ancient Romans. This word was also particularly applied to those slaves who volunteered their services after the battle of Cannæ, and on which account they became Roman citizens.

VOLONTAIRES, Fr. See *VOLUNTEERS*.

VOLONTÉ, Fr. will, &c. It likewise signifies readiness to do any thing. *Officier, soldat de bonne volonté*, an officer, a soldier that is ready to do any sort of duty.

Dernières VOLONTÉS, Fr. the last will and testament of a man.

VOLT, (*volte*, Fr.) in horsemanship, a bounding turn. It is derived from the Italian word *volta*; and, according to the Farrier's Dictionary, is a round, or a circular tread; a gait of two treads made by a horse going sideways round a center; so that these two treads make parallel tracts; the one which is made by the fore feet larger, and the other by the hinder feet smaller; the shoulders bearing outwards, and the croupe approaching towards the center.

Mettre un cheval sur les VOLTES, Fr. to make a horse turn round, or perform the volts. They likewise say in the manège, *demi-volte*, half-turn or volt.

VOLTE, Fr. in fencing, a sudden movement, or leap, which is made to avoid the thrust of an antagonist.

VOLTE-face, Fr. right about.

Faire VOLTE-face, Fr. to come to the right about. It is chiefly applicable to a

cavalry movement; and is sometimes generally used to express any species of facing about, viz. *Les ennemis furent jusqu'à un certain endroit, ou ils firent volte face*; the enemy fled to a certain spot, where they faced about.

VOLTE is also used as a sea phrase, among the French, to express the track which a vessel sails; likewise different movements and tacks that a ship makes in preparing for action.

VOLTER, *Fr.* in fencing, to volt; to change ground in order to avoid the thrust of an antagonist.

VOLTIGER, *Fr.* to float; to stream out; to hover about; *la cavalerie voltige autour du camp*; the cavalry hovers about the camp. It also means in the manège, to ride a wooden horse for the purpose of acquiring a good seat.

VOLTIGEURS, *Fr.* springers, leapers.

"The corps of voltigeurs were formed but a few years since, by Bonaparte himself.

"The difference betwixt tirailleurs and voltigeurs, is, that the first move irregularly, and scattered about, and the others are formed and act as numerous and collected bodies.

"The qualifications required for being admitted into that corps are, an unequivocal reputation for courage, a short stature, a sound body, and great agility.

"Their uniform is the same as worn by the French infantry, with the appropriate distinction of the collar being yellow.

"They wear the grenade, and enjoy the same additional pay as the grenadiers, though the greatest part are of a diminutive size.

"Each regiment of infantry has a company of voltigeurs, which always marches in front of the grenadiers. They have two trumpeters instead of drummers.

"The voltigeurs are armed with a short fusil, (carbine,) and a short broadsword, the pouch is supported on the loins by a waist-belt; according to regulation, their pack should be very light.

"When in presence of the enemy, the voltigeur companies of each regiment are collected together, forming a distinct corps, and lead the attack; they are in general employed to climb up the mountains, (if there be any,) or to attempt difficult passes; the grenadiers follow at a short distance; but it is the voltigeur's

privilege to shew the road to victory. They are, on such occasions, carefully reminded of that honourable distinction.

"Ever since their formation, those corps have proved of the greatest utility to the French armies; the pride of their grenade, the hope of being first at the pillage, every thing has contributed to raise the spirit of these diminutive soldiers to the highest degree of enthusiastic valour."

VOLUMUS, i. e. *We will*, the first word of the clause in the king's letters patent, and letters of protection.

VOLUNTEER, in a general acceptation of the word, any one who enters into the service of his own accord. The signification of it is more or less extensive, according to the conditions on which a man voluntarily engages to bear arms.

VOLUNTEERS are also bodies of men who assemble, in time of war, to defend their respective districts, and do so, generally, without pay.

To VOLUNTEER, to engage in any affair of one's own accord. Officers and soldiers often volunteer their services on the most desperate occasions; sometimes specifically, and sometimes generally.—Hence, to volunteer for any particular enterprise, or to volunteer for general service. In some instances, soldiers volunteer for a limited period, and within certain boundaries. Of this description were the drafts from the militia in 1798, who volunteered to serve in Europe only. It is not our business to enter into the impolicy of this measure; the inconveniences which have already arisen from it, and the enormous addition to the half-pay list, sufficiently condemn it. We are certainly advocates for a limited period of enlistment, quoad time or duration, but decidedly repugnant to limited service, quoad place and situation. Even the regular militia ought, in our humble opinion, to be subject to Channel duty. A real soldier knows no boundary to his exertions, when the interests of his country require an extension of them.

With respect to the volunteer system, of which so much has been written, and concerning which so many contradictory opinions have been hazarded by individuals, both in and out of Parliament, we cannot conceive, how any difference should exist on the ground of national utility. That there were defects in its organization no man will pretend to deny; but that the root of its establish-

ment, and its staminal branches, might have been converted into a state-engine of defence, the most prejudiced of its opposers must acknowledge. When the enemy was on the frontiers of France, and a victorious, because an imposing army from established fame, was ready to storm the gates of her capital, no member of the French Convention, no regular old officer, or upstart hero of the line, attempted to weaken the energies of the country, by throwing a damp upon the public spirit of the nation. All were invited to join the threatened standard of their mother country; all were respected alike, and when uncommon genius was elicited by uncommon circumstances and events, extraordinary stations were allotted to it. La Fayette, who had distinguished himself, as a regular officer, against the bravest troops that ever crossed the Atlantic, had too much good sense, and (though not the best politician in the world) too much discernment not to see, that the aggregate of a nation is never to be despised. Every part has its little orbit; and if it be permitted to move so as not to jar, or come in mischievous contact, with larger bodies, it will always contribute to that general harmony, which constitutes good order. It is a solecism in state, and a most fatal error in military government, to cause any man to feel little within himself, whose assistance in person, or mind, may be useful to community; but it is more than a solecism, and worse than an error, to depreciate a whole body of men. Every part can be usefully employed, and no part, especially in a military organization, ought to be lessened or degraded. With regard to individuals, it will certainly not be denied, that in the dispensations of Providence, and in the immense variety of the gifts of nature, many may be found, who, without having been born in the womb of grandeur, or brought up in the lap of opulence, are equal to the first employments of a state. History can furnish us with innumerable instances of this sort; and the annals of our own times sufficiently prove the justness of this observation. How, therefore, any man of these Islands,—whose great boast is equality of right, and whose pride is the aristocracy of talents!—could descend to invidious comparisons, or degrading animadversions before the grave senate of such a nation; or how any officer, of common sense, could be prejudiced

against an active and meritorious individual, because he had not been in the line, is a circumstance, in our opinion, which deserves the severest censure.— This gentleman did not, probably, recollect, that some of the best generals in Europe, and, indeed, some of the bravest warriors on record, have issued out of the aggregate of a nation, and, not infrequently, out of bodies of volunteers,—witness General Moreau, who was a lawyer till he was more than 30 years old.

To VOLUNTEER. Dr. Johnson calls this a cant word, signifying to go for a soldier. It is, however, in such general currency now, especially among military men, that with all due deference to the learned lexicographer, we shall treat of the term according to its acceptation. There appear to be three different kinds of volunteers, exclusive of the common class who go into the ranks as enlisted soldiers. The first consists of young gentlemen joining a regiment going upon service, and doing duty with that corps, until they get a commission. This kind of volunteer in the Austrian, Prussian, and Russian services, is called a cadet. The second kind of volunteers, are officers of foreign armies who serve with troops not belonging to their own sovereign, for the purpose of acquiring experience, and learning their profession. The third species of volunteers, are officers who, though actually in the same service, do not belong either to any regiment employed, or to the staff of the army. With respect to the prevailing notion, that officers actually employed may volunteer in general; it does not appear, how such a notion can be admitted; as every man must do his appropriate duty, and go where he is ordered, and not where he chuses himself; nor can the circumstance of not offering to go on any extraordinary service be viewed in any light derogatory to the high spirit of an *individual*.

The official answer, *that whenever an officer's services may be wanted, they will be called for*, ought to silence the least insinuations of that sort.

Volunteers formerly were much more numerous, and men of higher rank in the world than they have been of late years. Spinola was a volunteer in the Spanish army before Genoa, during one year; and in the next campaign he commanded that very army. Prince Eugene began his military career as a volunteer in the Austrian army against the Turks. We

could enumerate many other instances of the same cast. We wish, however, to impress upon the minds of young military men, that although to volunteer be very laudable, not volunteering, when actually employed, is not disgraceful.

VOUCHERS, receipts; written documents to prove the payment of monies, &c. Bankers, agents, commissaries, and regimental paymasters, &c. cannot be too circumspect, or minute on this head, particularly with officers and soldiers. They ought not only to require receipts for the most trifling disbursement, or payment; but also, at stated periods, to deliver them to the several parties, taking especial care, at all such periods, to require a written acknowledgement of the examination, and final delivery of the documents. Public accountants are, above all others, most interested in the observance of this rule. Entries may be omitted, double entries may be made, and miscellaneous services may be confounded together; but vouchers can always replace the first, correct the second, and separate the third. The French call vouchers, *pièces justificatives*.

Regimental VOUCHERS, particular documents which are signed by regimental colonels, paymasters, adjutants, quarter masters, &c. for pay and allowances, &c.

VOUGE, *Fr.* a sort of hedging bill. It likewise signifies an axe, which the ancient bowmen of France had fixed to their halberts. It is also called a hunter's staff.

VOULGUE, *Fr.* a sort of javelin which was formerly used in hunting the wild-boar. See **GUISARMIERS**.

VOUSSOIR, in architecture, a vault-stone, or a stone proper to form the sweep of an arch.

VOUSSURE, *Fr.* the arch, or bending of a vault.

VOUTÉ, *Fr.* a vault; an arch.

VOUTÉ, *Fr.* vaulted; arched.

Fer de cheval VOUTÉ, *Fr.* a horseshoe hollowed.

VOUTÉ, *Fr.* speaking of persons crooked, round shouldered.

VOUTER, *Fr.* to vault; to make an arch roof; to arch.

Se VOUTER, *Fr.* to bend; to stoop with age; to grow round shouldered.

VOYAGE sur mer, *Fr.* a sea voyage. The French call a voyage to the East Indies, *un voyage de long cours*.

UP, an adverb frequently used in military phraseology, viz.

To cut UP, the same as cut down, in a military sense; or rather a more general term to signify the entire destruction of a body of men. See **CUT**.

To draw UP, to put in regular array, as to draw up a regiment.

UP, in a state of insurrection, ready to oppose. This term is also figuratively used; as, my soul is up in arms.

Up-hill. A line of cavalry will always make a more advantageous attack up hill, than when it is descending; but the case is reversed with infantry.

Up-to, adequate to. Hence, up to the circumstances of the times. The French say, *à la hauteur des circonstances*, up to every thing, or commensurate with circumstances; a trite, and indeed a vulgar phrase, which implies, that a person is adequate to, and ready for, every project, or undertaking. It is generally used in a bad sense. The French say, particularly with respect to play, &c. *Il a fait les quatre coups*, or he has been up to every thing.

To come UP with, a term used in the British service, when an army, or detachment is in pursuit of an enemy, and gets near enough to harass and attack him.

UP! exhorting, exciting, or rousing to action.

Thus, Dryden says:

UP! up, for honour's sake; twelve legions wait you,
And long to call you chief.

Heads-UP, (*la tête haute*, *Fr.*) a term used at the drill, by which recruits and soldiers are cautioned to take an erect and soldier-like posture, without constraint.

UPHERS, in carpentry, long fir poles, used in scaffolding, for masts, &c.

UPON, this word is variously used in military matters.

UPON, noting assumption; as, he took the office of commander in chief upon him. Also to incur responsibility; as, the general took every thing upon himself.

UPON, near to; adjoining; as, the enemy lodged themselves upon the river Thames.

UPON, noting attack; as, the infantry rushed upon them.

UPON also denotes security, as, upon honour. This term is particularly used when an officer, who purchases a commission, or exchanges, &c. in the British army, is obliged to sign upon honour,

that he has not given, or received, one shilling above, or under the regulation. It were to be wished, for the honour of the service, that so long as trafficking for commissions is allowed to exist, an oath could be attached to each negotiation.

UPRIGHT, in architecture, a representation, or draught of the front of a building, called also an *elevation*.

UPRIGHT, a principal piece of timber which serves to support rafters, or any part of a building.

UPSET, part of a horse's bit. See **PORT**.

URBANICI, from Urbanicus, belonging to a city; a body of armed men, amounting to six thousand effectives, which was formed by the Emperor Augustus for the defence and internal tranquillity of Rome. This body was divided into four cohorts, which were quartered in a particular part of the city called *Castra Urbana*.

VRILLE, *Fr.* a wimble.

VRILLER, *Fr.* among fire-workers, to rise in a spiral manner, as sky-rockets do.

URN, in architecture, a sort of vase of a circular form, but largest in the middle. It serves as an ornament over chimney pieces, a buffet, &c.

A funeral URN, a covered vase enriched with sculpture, and serving as the crowning, or finishing of a tomb, a column, a pyramid, or any other funeral monument. It is generally made in imitation of the ancients, who deposited the ashes of their deceased friends in this kind of urn. We sincerely wish, for the sake of the survivors, that this decent custom could be restored with respect to the remains of the dead in our time. See *Funereal PILE*.

USARH, *Ind.* the name of a month; which partly corresponds with June; it follows Jeth.

To USE, to employ to any particular purpose; to bring into action; as, he used his choicest troops on that decisive day.

To make USE of another, to convert the talents and industry of a fellow creature, either to one's own advantage, without the least regard to truth or honour, or to that of the public, for the common interest of all. In the first sense, which is a bad one, genius and real knowledge are frequently made use of, or rather abused and misused, by assumed superiority, under the mean

garb of affected friendship, and barren patronage; in the latter sense, which is a good, and certainly a political, one, wise men know how to derive advantage, by employing characters of all descriptions, and adapting their abilities and sources of information to the various exigencies of the state.

USTENSILES, *Fr.* the necessary articles which a soldier, who is quartered or billeted at an inn, &c. has a right to be supplied with.

USTENSILES de magasin, *Fr.* Under this word are comprehended all the various tools, implements, &c. which are required in military magazines and store-houses.

USTENSILES d'un vaisseau, *Fr.* every thing which is necessary in the navigation of a ship.

USTENSILES de canon, *Fr.* every thing which is required to load and unload a piece of ordnance, viz. the rammer, sponge, priming horn, wedges, &c.

To USURP, (*usurper*, *Fr.*) to seize upon by violence or stratagem.

USURPER, (*usurpateur*, *Fr.*) Any person is so called, who by force, or stratagem, gets possession of a power, or authority, to which he is not legally entitled.

USURY, (*usure*, *Fr.*) excessive interest for money lent; from the Latin *usura*. No class of individuals, perhaps, (if we except that of gamblers,) are so often driven to the necessity of applying to this ruinous source of accommodation, as that of military men; especially of such of the profession as have been placed upon the half-pay list of Great Britain and Ireland. The danger which attends every species of usurious contract, is rendered less, and the practice consequently more frequent, in proportion to the nice sense of honour that is attached to a military character. It is not, however, less criminal, particularly with regard to the half-pay; and we should be deficient in our duty to the army at large—for whom alone we write—did we omit to warn them against the insidious aid of discount, and of temporary loans. Nor do we scruple to say, (however sacred the word of an officer must at all times be held,) that a deviation from it, under circumstances of palpable extortion, is not dishonourable. Perhaps it might not be wholly useless, were the legislature so far to interfere, as to express in the Mutiny

bill, not only the nullity of all pecuniary engagements, beyond the *bonâ fide* interest of the law, between officers and money lenders; but also to make it criminal in the latter to injure the King's service, by inveigling the former into promissory notes, &c. With regard to usury in general, it is defined to be an unlawful profit which a person makes of his money; in which sense, usury is forbidden by the civil and ecclesiastical, and even by the law of nature. For the information of those *gentlemen* who are in the habit of accommodating officers, it may not be irrelevant to state, that by stat. 12 Ann, c. 16, which is called the statute against *excessive usury*, it is ordained, that no person shall take for the loan of any money, or other thing, above the value of five pounds for the forbearance of one hundred pounds for a year; and so in proportion for a greater or lesser sum: and it is declared, that all bonds, contracts, and assurances, made for the payment of any principal sum to be lent on usury, above that rate, shall be void; and that whosoever shall take, accept, or receive, by way of corrupt bargain, loan, &c. a greater interest than 5 per cent. shall forfeit treble the value of the money lent; (provided the information is laid within the space of one year, for the borrower, or informer, and of two years for the King;) and also that scriveners, solicitors, and drivers of bargains, shall not take, or receive, above five shillings for the procuring of the loan of one hundred pounds for one year, on pain of forfeiting twenty pounds.

In an action brought for usury, the statute made against it must be pleaded; and in pleading an usurious contract, as a bar to an action, the whole matter is to be set forth specially, because it lies within the party's own privacy; yet on an information on the statute for making such contract, it is sufficient to mention the corrupt bargain generally; because matters of this kind are supposed to be privily transacted; and such information may be brought by a stranger. 1 Hawk. P. C. 248. See *Ord on Usury*, also *Bentham*.

It will likewise be remembered, that upon an information on the statute against usury, he that borrows the money may be a witness, after he has paid the same. In closing this article, we cannot help remarking, that if money were in

this country to obtain its level, the term usury might be converted into a beneficial mode of general accommodation. Money would then be legally lent at 6, 7, or 8 per cent. and the necessity of granting ruinous annuities at 10, 12, and even 16½ per cent. be superseded; as is the case all over Europe, except Great Britain.

UTENSILS, in a military sense, are necessaries due to every soldier, and to be furnished by his host, where he is in quarters, viz. bed with sheets, a pot, a glass or cup to drink out of, a dish, a place at the fire, and a candle. See BILLETING.

UTENSILS, &c. directed to be provided for the use of regimental hospitals. In page 19, of the Regulations for the Sick, it is stated, that each hospital ought to be furnished with a slipper bath or bathing tub, two water-buckets, one dozen of Osnaburgh towels, one dozen of flannel cloths, half a dozen of large sponges, combs, razors, and soap; two large kettles capable of making soup for 30 men, two large tea kettles, two large tea-pots, two sauce-pans, 40 tin cans of one pint each, 40 spoons, one dozen of knives and forks, two close-stools, two bed-pans, and two urinals.

A regiment consisting of 1000 men, and provided with three medical persons, ought to be furnished with hospital necessaries and utensils for at least 40 patients. It should be provided with 40 cotton night caps, 40 sets of bedding, in the proportion of four for every hundred men; each set consisting of one paillasse, one straw mattress, one bolster, three sheets, two blankets, and one rug. For regiments of a smaller number, the quantity of hospital necessaries will, of course, be proportionally reduced.

Bakery UTENSILS. The following list of bakery utensils, being the proportion requisite for an army of 36,000 men, has been extracted from the British Commissary, to which useful treatise we refer the military reader for a specific description of field ovens, &c. and field bakery, page 16, &c.

12 double iron ovens, 11 feet long, 9 feet diameter, and 3 feet high; 23 troughs and their covers, 16 feet long, 3 feet wide, and 3 feet deep, to knead the dough.

12 large canvass tents, (having double coverings,) 32 feet long, and 24 feet wide, to make the bread in.

4 ditto to cool and deposit the bread in.

2 ditto to deposit the meal and empty sacks in.

200 boards, 8 feet long, and $1\frac{1}{2}$ foot wide, to carry the bread to the ovens and back when baked; 24 small scales to weigh the dough, with weights from half an ounce to 6lb; 24 small lamps, for night work; 24 small hatchets; 24 scrapers, to scrape the dough from the troughs; 12 copper kettles, containing each from 10 to 12 pails of water; 12 trevets for ditto; 12 barrels with handles, to carry water, containing each from 6 to 7 pails.

12 pails, to draw water; 24 yokes and hooks, to carry the barrels by hand; 24 iron peels, to shove and draw the bread from the ovens; 24 iron pitch-forks to turn and move the fire-wood and coals in the ovens; 24 spare handles, 14 feet long, for the peels and pitch-forks; 24 rakes, with handles of the same length, to clear away the coals and cinders from the ovens; 4 large scales, to weigh the sacks and barrels of meal, and capable of weighing 500lbs.; 4 triangles for the said scales; to each must be added 500lbs. of weights, 3 of 100lbs. each, 2 of 50lbs. each, and downwards to half a pound.

UTER, a bladder to swim with. This machine is mentioned in Cæsar's Commentaries, and was frequently used by the Romans in crossing rivers, &c.

VU, *Fr.* seeing that; considering.

Vu *l'état de l'armée*, *Fr.* considering the state of the army.

VUE, *Fr.* sight; view; prospect; look, &c. The French say, *Les armées sont en vue*; the armies are in sight of one another. *Camper en vue de l'ennemi*; to encamp in sight of the enemy. *Marcher à vue de pays*; to march by guess, or without any particular direction to move by, except the mere appearance of the country.

Garder un prisonnier à vue, *Fr.* to watch a prisoner so closely as to keep him always in sight.

Payable à vue, *Fr.* payable at sight; or so many days after sight.—A term used in drawing bills of exchange.

A vue d'œil, *Fr.* visibly.

VUE, *ou bœ*, *Fr.* This term signifies generally, every species of opening or aperture through which day-light enters; *bœ* meaning open.

Vue à plomb, *Fr.* a perpendicular

view of a building from its top and flat roof, taken in their whole extent. Some persons improperly call this *plan des combles*, plan of the roofs.

Vue de bâtiment, *Fr.* the view or inspection of a building taken from the center; hence called *vue de front*, front view.

Vue de côté, *Fr.* a side view.

Vue d'angle, *Fr.* a corner view.

Vue d'oiseau, *Fr.* a bird's eye view, or the representation of a plan raised in perspective, supposed to be seen from a very elevated spot.

Vue de toute longueur, et de toute hauteur, *Fr.* When you stand directly opposite the center of a plan or building, the aspect is called *vue de front*, a front view; when placed on one of the sides, it is called *vue de côté*, a side view; when the building is seen from one of its corners, the aspect is angular, or a corner view.

VIDANCE d'eau, *Fr.* the draining or emptying of water out of any particular place, by means of water-mills, or other machines used in hydraulics, for the purpose of making the ground thoroughly dry, and building thereon.

VIDANCE de terre, *Fr.* the carriage of any particular sort of earth, which is sold according to its quality.

VIDE, tant plein que vuide, *Fr.* This expression is used in carpentry to signify the distribution of beams or rafters in a floor, in such a manner, that the intervals are not wider than the thickness of the beams or rafters. The French also say of a façade, or front of a building, *elle est espacée tant pleine que vuide*, when the piers or parting walls are as broad as the windows.

Tirer au vuide, *Fr.* to diverge or bulge, as the front of a house does when it goes out of its perpendicular direction. *Pousser au vuide* has the same signification.

VIDER, *Fr.* literally, to empty.

VIDER un fossé, *Fr.* to drain a ditch.

VULCANO, (*volcan*, *Fr.*) a burning mountain which throws forth flames, smoke and ashes; such as Mount Vesuvius, Mount Etna, &c.

VULNERABLE, susceptible of wounds; liable to external injuries; capable of being taken; as the town is extremely vulnerable in such a quarter. It is also applied to military dispositions, viz. the army was vulnerable in the center, or on the left wing.

VULTURE, a large bird of prey, well known and figuratively applied to many members even of civilized society, such as money scriveners, law attorneys, &c. It has lately been used to mark one of those blood thirsty followers of the French revolution, that pay no regard to honour or honesty. Hence

Bonaparte's vultures, or the adherents of that system which was governed by lawless rapine and devastation.

UVULA spoon, in surgery, an instrument to be held just under the *uvula*, with pepper and salt, or any other ingredient in it, to be blown up into the hollow behind the same.

W.

WAD, in gunnery, a substance made of hay or straw, and sometimes of tow rolled up tight in a ball. It serves to be put into a gun, after the powder, and rammed home, to prevent the powder from being scattered, which would have no effect if left unconfined.

WAD-hook, a strong iron screw, like that which serves for drawing corks, mounted upon a wooden handle, to draw out the wads, or any part of cartridges, which often remain in guns, and, when accumulated, stop up the vent.

WAD-mill, a hollow form of wood to make the wads of a proper size.

WADA, or **WADADARY**, *Ind.* a farm of a district.

WADABUNDY, *Ind.* stated periods or dates, on which money is to be paid.

WADADAR, *Ind.* a government officer, who is responsible for the rents of a zemindary.

WADDING, hay or straw, or any other forage, generally carried along with the guns to be made into wads.

Experiments relative to the effects of WADDING. The quantity of powder requisite to raise a shell weighing 218 pounds, clear of the mortar and bed, was found to be 4 oz. 2 dr. without any wadding; but with the help of a little wadding, rammed over the powder, 3 oz 1 dr. were sufficient. The powder requisite to raise a shell weighing 106lb. clear of the mortar and bed, was found to be 2 oz. 6 dr. without any wadding; but with wadding, properly rammed over the powder, 2 oz. were found to be sufficient.

To raise a shell of 16lb. 4 dr. were sufficient without wadding, and only 3 dr. with wadding.

And to raise a shell of 8lb. 2 dr. were enough without wadding, and 1 dr. two thirds with wadding.

From the above experiments, it may be observed, that the judicious ramming of a little wadding over the powder, adds about $\frac{1}{4}$ part of the whole effect.

WAFER, paste made to close letters, &c. The French call it *pain à cacheter*.

The Irish WAFER is very thin, and consequently the best for use; the English wafer is thick, and if not well moistened, and left to dry a few minutes in the paper, it may be cut through. The safest method, however, especially in dispatches and official communications, is first to use a wafer, and then to cover it with sealing wax.

To WAGE, to attempt; to venture; to undertake any thing dangerous. Whence to *wage war*.

WAGON, in the army, a four-wheel carriage drawn by four horses, and for sundry uses.

Ammunition WAGON, a carriage made for transporting all kinds of stores, as also to carry bread, it being lined round in the inside with basket-work.

WAGON Train. The wagons, carts, &c. that are provided for the use of an army are so called. In page 25 of the British Commissary we find the following observations concerning this necessary establishment. "The great engine in the hands of the commissariat, on which the movements of an army depend, is a proper establishment of wagons. In all wars where a British army has taken the field, great abuses have unfortunately prevailed in this department, and it even now remains a problem, whether government ought to purchase wagons and horses, and form temporary establishments, or whether the army should be provided with a train by contractors?"

"In the seven years war, there was a general contractor for the wagon train,

and his contract was kept until the very year before the peace, when government bought the train of him. The contractor was Sir Lawrence Dundas, father to the present peer of that name. In the American war, wagons were considered almost as a privilege by the departments to which they were attached, until the arrival of the gentleman (we presume Brook Watson) last sent there as commissary general, who found it necessary to make great reforms in that branch of the service. The same gentleman, when he went out to the continent with the army, (viz. in 1793) made use of the wagons of different contractors: but in the beginning of 1794, an experiment was made by raising a corps called the Royal Corps of Wagoners, and purchasing wagons and horses. Of this corps little need be said, as its miserable state became proverbial in the army; it failed completely in every part; and on many occasions the service suffered very materially in consequence.

“The idea of this corps was probably taken from the fine well-regulated establishment of Austrian wagons. This is a standing establishment kept up in peace and war, having officers and men trained to the service, and a system improved and perfected through a succession of years. The ingenious author very properly remarks, that such an establishment is necessary to Austria on account of its large military force, which is constantly kept up; but that it is utterly impossible for Great Britain to procure a similar one upon the spur of the moment. He further remarks, with great justness, that the excellent roads of England also render it difficult to find English drivers capable of acting in foreign countries in the same capacity; the carriages in those countries being constructed purposely for the roads, and both different from any thing seen here.

“Bad, therefore, as were the contract wagons in the campaign of 1794, they certainly did far better service than the Royal Corps of Wagoners.

“Accordingly the royal train was sold, and every purchaser of not less than 50 wagons was admitted to the advantages of a contract for all the wagons he purchased; he was insured the duration of his contract for three months, and was only to deposit one third of the cost, allowing the remainder to be paid out of his earnings. The form of the contract

and the pay of the wagons were previously fixed, and by this mode a most advantageous sale was procured, while a new set of contractors were introduced, with the additional advantage of obliging old contractors to reduce their prices, and to come under the same terms.”

Royal WAGON Train. Notwithstanding these sensible observations, an establishment of no small importance to the country, with respect to expenditure, has been added to the army; and what was originally a part of the train belonging to the artillery, is now formed into a corps consisting of several troops, under the Quarter Master General's Department. This corps has been frequently confounded with that of the Royal Artillery Drivers, with which it has no connection whatsoever.

The space of ground occupied by a wagon with four horses is about 16 paces; a mile will, therefore, hold 117 wagons; but allowing a short distance between each wagon in travelling, a mile may be said to contain about 100 wagons. Wagons, in convoy, may travel from one to two miles per hour, according to the roads and other circumstances. A great object in convoys, is to preserve the horses as much as possible from fatigue. For this purpose, if the convoy amounts to many hundred wagons, they must be divided into divisions of not more than 500 each. Should it consist of thousands, it will be advisable to divide them into *grand* divisions, and then again into subdivisions of 500 each: by this means, and the time of departure being calculated by the following rules, each division may remain at rest, till just before its time of movement; and which will prevent the necessity of the latter part of a large convoy being harassed for a considerable time before its turn to move.

Rule 1. *To find the time in which any number of wagons may be driven off:* Divide the number of wagons by 100, and multiply by the time of travelling one mile.

Rule 2. *To find the time in which any number of wagons will drive over any number of miles, to the time they take in driving off:* add the time any one of the wagons takes to travel the distance.

The different divisions of the convoy should be numbered, and obliged, each day, to change the order of their marching.

WAGONER, one who drives a wagon.

Corps of WAGONERS, or Royal WAGON corps, a body of men originally employed in the Train under the Board of Ordnance. It now forms a part of the regular army, and is subject to the Quarter-Master General.

WAINROPE, the large cord with which the load is tied on the wagon.

WAINSCOT, in joinery, is the timber work that serves to line the walls of a room, being usually in pannels, and painted, to serve instead of hangings. In most modern buildings, it is usual to have wainscot breast high, on account of the natural moisture of the walls. Some joiners put charcoal behind the pannels of the wainscot, to prevent the sweating of the stone and brick-walls from ungluing the joints of the pannels; others use wool for the same purpose; but neither one nor the other is sufficient in some diseases: the only sure way is to prime over the back-sides of the joints with *white-lead, Spanish brown, and linsced oil*.

To WAINSCOT, to line walls with boards; to line in general.

WAIT, *to lie in wait; to lay wait*. See **AMBUSH**.

In WAITING. This term is used, in the British service, to mark out the person whose turn is next for duty; as officer in waiting.

Field Officer in WAITING, a monthly duty taken by the field officers of the three regiments of Foot Guards, who attend his Majesty on Court days, to present the detail of this corps, and receive the parole or other orders from him personally, which are afterwards given to the guards in orders. The field officer in waiting commands all the troops on duty, and has the immediate care of his Majesty's person without doors, as the gold stick has of it while in Court. The latter also receives the parole from the King.

WAKANAGUR, *Ind.* a writer of occurrences.

To WALK, generally speaking, to move with the ordinary pace of man; it is likewise said with respect to horses. When the term is applied to the latter, it is commonly used in an active sense; as, to walk a horse.

WALK, the slowest and least raised of a horse's goings.

WALK about! a term used by British officers when they approach a sentry,

and think proper to wave the ceremony of being rested to.

A WALK, any particular spot where persons may indiscriminately meet, and walk about for exercise, or on business. Of this description are the walks in the Royal Exchange.

In the reign of James I. and Charles I. the body of St. Paul's Cathedral was the common resort of the politicians, news-mongers, and loungers of all denominations. It was called *Paul's walk*, and the frequenters of it *Paul's walkers*.

WALL, a series of brick, stone, or other materials, carried upwards, and cemented with mortar. When used in the plural number, wall signifies fortification; works built for defence.

Chinese WALL, or the great wall in China, a wall of immense extent, which the Chinese built to secure their country from the incursions of their neighbours, but which was not found sufficiently strong to keep out the Tartars. This wall, which has lasted one thousand nine hundred and thirty odd years, is still in good condition; it comprehends, in circumference, five hundred leagues; runs over mountains, down into vallies and steep descents, and is, almost in every part, more than 20 feet in breadth, and thirty in height.

To be driven to the WALL, a figurative term, signifying to be so pressed, that you can neither advance nor retreat.

WALLS of a tent or marquee, that part of the canvass which is attached to the fly, or top, by means of hooks and eyes, and which is fixed to the earth with wooden pegs. These walls should be frequently lowered in order to admit fresh air. When there is an hospital tent, this precaution is indispensable, if the weather will permit.

WALLS, in architecture, a wall of stone, brick, wood, or the like. Walls make the principal part of a building, serving both to inclose it, or to separate particular rooms, and to support the roof, floors, &c.

Walls are either entire or continued, or intermitted, and the intermissions consist either of pillars or pilasters.

Walls, though built very thick and strong, and with foundations laid deep, yet if carried on in a straight line, are inclined to lean or fall; and such as are built crooked, though thin and weak, are much more lasting.

A wall which is raised over a river or

arches of pillars, will stand as firm as others whose foundation is entire.

Hence it appears, that a wall built much thinner than usual, by only having, at the distance of every twenty feet, an angle set out at about two feet or more in proportion to the height of the wall; or by having a column, at the like distance, erected along with it, six or eight inches on each side, and above the thickness of the rest of the wall: such a wall will be much stronger than if five times the quantity of materials were used in a great wall.

Walls are distinguished into different kinds according to the matter, or materials, of which they are composed: as *plastered or mud walls, brick walls, stone walls, flint or boulder walls, and boarded walls.*

The following general rules are recommended to be strictly adhered to in the construction of walls.

1. That they be built exactly perpendicular to the ground work; for the right angle therein depending is the true cause of all *stability*, both in artificial and natural position.

2. That the most massy and heavy materials be laid lowest, as fitter to bear than be borne.

3. That the walls as they rise, decrease proportionably in thickness, to lessen the weight, and diminish the expense.

4. That certain burzes or ledges, of more strength than the rest, be interlaid, like bones, to strengthen the whole fabrick.

As *brick walls* are the most usual, and consequently the most important in this country, the following observations may be added to the foregoing rules.

1. Particular care is to be taken about laying the bricks. In summer, for instance, they must be laid as wet, and in winter as dry as possible, to make them bind the better with the mortar; for this purpose, in summer, as fast as they are laid they must be covered up, to prevent the mortar, &c. from drying too fast; and in winter, they must be well covered to protect them from rain, snow, or frost, which are all enemies to mortar. They must be laid point and joint in the walls as little as possible, but good bond must be made there, as well as on the outside.

2. The angles must be firmly bound, as they are the nerves of the whole edi-

fice, and are, therefore, commonly fortified by the *Italians*, even in their brick buildings, with well squared stone.

3. In working up the walls of a building, it is not advisable to raise any wall above eight feet high, before the next adjoining wall be wrought up to it, in order that good bond may be made in the progress of the work; for it is a bad custom among some bricklayers, to carry or work up a whole story of the party walls before they work up the fronts, or other work adjoining, that should be bonded, or wrought up together with them; which custom occasions cracks and settlings in the walls.

Stone WALLS, walls constructed with stone. They serve not only for walls of houses, &c. but also for fence walls round gardens, &c. particularly in Oxfordshire, Gloucestershire, &c.

Flint or boulder WALLS. These walls are much used in some parts of Sussex and Kent, both for fence walls, round courts, gardens, &c. and also for walls of stables and other outhouses.

Boarded WALLS. Walls are sometimes boarded, particularly the walls of some barns, stables, and other outhouses. See WEATHER-BOARDING.

WALLET. See HAVERSACK; KNAPSACK.

WAMBASIUM, a part of the ancient military vestment.

WANT, deficiency; need.

WANT of *ammunition*, a deficiency of gunpowder and ball, &c.

WANT of *money*, a lack of gold, silver, or any other currency. Without money, in these times, the greatest man is little, and with it the most insignificant may be seemingly great.

WANT of *courage*, a deficiency of that spirit and resolution which are required in the character of every officer and soldier.

WANT of *provisions, want of men*, not having the necessary quantity of food, the requisite number of troops, &c.; but in the management of an army the greatest of all wants is—

WANT of *intelligence*. This term can only be explained by appealing to the understanding, and practical good sense, of such officers as have had frequent opportunities of witnessing the disastrous consequences which have arisen from a want of intelligence. The French generally say *manque de*; as *manque de courage*, want of courage, &c.

WANTING, deficient; short of; a word used in military returns, as 100 men wanting to complete.

WANTY, a surcingle, large leathern girth, or belly strap for a pack horse.

WAPENTAKE, (from the Saxon,) the same as what we call a hundred, and more especially used in the northern counties beyond the Trent. There have been several conjectures as to the original of the word; one of which is, that anciently, musters were made of the armour and weapons of the inhabitants of every hundred; and from those who could not find sufficient pledges of their good abearing, their weapons were taken away; whence it is said *wapentake* is derived. *Spenser* says it was so named, of touching the weapon or spear of their alderman, and swearing to follow him faithfully, and to serve their prince truly.

WAR, a contest or difference between princes, states, or large bodies of people, which, not being determinable by the ordinary measures of justice and equity, is referred to the decision of the sword, &c.

It is that important event, for which all military education is designed to prepare the soldier. It is for this that, in peace, he receives the indulgence of a subsistence from society; and for this he is gratefully bound to secure the repose of that society from the outrage of an enemy, and to guard its possessions from the devastations of invaders.

There are five different kinds of war, each of which is to be conducted differently the one from the other, viz. the offensive; the defensive; that between equal powers; the auxiliary, which is carried on out of our own territories to succour a prince, or ally, or to assist a weaker whom a more powerful prince has attacked; and a civil war.

Offensive war must be long meditated on in private, before it be openly undertaken; when the success will depend upon two essential points:—that the plan be justly formed, and the enterprize conducted with order. It should be well and maturely considered and digested, and with the greatest secrecy, lest (however able the prince, or his council may be) some of the precautions, necessary to be taken, be discovered. These precautions are infinite both at home and abroad.

Abroad, they consist in alliances and security, not to be disturbed in the me-

ditated expedition, foreign levies, and the buying up of warlike ammunition, as well to increase your own stores, as to prevent the enemy from getting them.

The precautions at home consist in providing for the security of our distant frontiers, levying new troops, or augmenting the old ones, with as little noise as possible; furnishing your magazines with ammunition; constructing carriages for artillery and provisions; buying up horses, which should be done as much as possible among your neighbours; both to prevent their furnishing the enemy, and to preserve your own cavalry, and the particular equipages of the officers.

Defensive war may be divided into three kinds. It is either a war sustained by a prince, who is suddenly attacked by another, superior to him in troops and in means; or a prince makes this sort of war by choice on one side of his frontiers, while he carries on offensive war elsewhere; or it is a war become defensive by the loss of a battle.

A defensive war which a prince attacked by a superior enemy sustains, depends entirely on the capacity of his general. His particular application should be, to chuse advantageous camps to stop the enemy, without, however, being obliged to fight him; to multiply small advantages; to harass and perplex the enemy in his foraging parties, and to oblige him to go out with great escorts; to attack the convoys; to render the passages of rivers, or defiles, as difficult to them as possible; to force them to keep together; if they want to attack a town, to throw in succours before it is invested. In the beginning, his chief aim should be, to secure the enemy's respect, by his vigilance and activity, and by forcing him to be circumspect in his marches and manner of encampment; to gain time himself, and make the enemy lose it. An able general, carefully pursuing these maxims, will give courage to his soldiers, and to the inhabitants of the country; he affords time to his prince to take proper precautions to resist the enemy who attacks him; and thus changes the nature of this disagreeable and vexatious kind of warfare.

The management of a defensive war, requires more military judgment than that of an offensive one.

A war between equal powers is that

in which the neighbouring princes take no part, so long as the belligerent parties obtain no great advantage, the one over the other. This sort of war never should last long, if you want to reap any advantages from it. As to its rules, they are entirely conformable to those already given; but we may look on it as a certain maxim, in this sort of war, that the general who is the most active and penetrating will ever in the end prevail over him who possesses these qualities in a lesser degree; because, by his activity and penetration, he will multiply small advantages, till at last they procure him a decisive superiority. The success which attended the rapidity of the movements of the French armies, is a strong illustration of this maxim. A general whose mind is continually bent on procuring himself small advantages, always obtains his end, which is, to ruin the enemy's army; in which case, he changes the nature of the war, and makes it offensive; which should ever be the chief object of his prince.

Auxiliary WAR is that in which a prince succours his neighbour, either in consequence of alliances, or engagements entered into with them; or sometimes to prevent their falling under the power of an ambitious prince.

If it be in virtue of treaties, he observes them religiously, in furnishing the number of troops prescribed, and even offering to augment his quota, if required; or in making a diversion by attacking the common enemy, or his allies.

If it be to prevent a neighbouring prince from being crushed by a power, who, after this conquest, may become dangerous to yourself, there are several measures to be taken for your own particular interest. One of the chief is, to exact from those you succour, the possession of some place in security, lest they make their peace without your knowledge, or to your prejudice.

The general, therefore, who is chosen for the command of this auxiliary corps, should have wisdom, penetration, and foresight; wisdom to preserve a proper discipline in his corps, that the allied prince may have no cause to complain of him; foresight and penetration, to prevent his troops suffering from want of subsistence, or being exposed to the perils of war, except in proportion to their numbers with those of the allied

prince; and, finally, that nothing shall pass without his knowledge, which may be prejudicial to his master.

Civil or intestine WAR is that between subjects of the same realm, or between parties in the same state. In this sense, we say, the civil wars of the Romans destroyed the republic; the civil wars of Grenada ruined the power of the Moors in Spain; the civil wars of England began 1641, and ended in the king's death.

Religious WAR, a war maintained in a state on account of religion, one of the parties refusing to tolerate the other.

Holy WAR, that species of warfare which was anciently maintained by leagues and crusades, for the recovery of the Holy Land.

Civil and religious WARS are almost always fatal to the states that sustain them. These sorts of war, which the animosity of the different parties and fanaticism ever carry beyond the bounds of humanity, and the duties of society, have, in general, no other rules but those of the *offensive* and *defensive*. It has, however, always been observed, that civil wars form great men and good soldiers, because the nobility, citizens, and labourers, being equally obliged to fight for their property and preservation, every man has an equal opportunity of learning the art of war. This species of war may likewise be called revolutionary, with the additional circumstance, that in the latter sense it is of a more extensive nature.

Council of WAR is an assembly of great officers called by a general, or commander, to deliberate with him on enterprizes and attempts to be made. On some occasions, council of war is also understood of an assembly of officers sitting in judgment on delinquent soldiers, deserters, cowardly officers, &c.

WAR. This word is frequently prefixed, or attached to things, or persons, in order to distinguish their particular state or functions, viz.

WAR establishment. See ESTABLISHMENT.

WAR minister. See MINISTER.

Secretary at WAR, an efficient character at the head of the War-office, with whom all pecuniary matters belonging to the army rest. See OFFICE.

WAR-carts, in old times, a species of artillery carriage which carried two petarars, or chambered pieces. These carts.

were used at the siege of Boulogne, and seem to have been invented by the Scotch.

WAR-saddle, a species of defensive armour which was anciently used, whose arcon of bows of steel covered the rider as high as the navel.—Our modern hussar saddle seems to have been imitated from it.

WAR-cry was formerly customary in the armies of most nations, when they were just upon the point of engaging. Sometimes it consisted of tumultuous shouts, or horrid yells uttered with an intent to strike terror into their adversaries; such as are still practised by the Indians in America. See **WAR-whoop**.

WAR-horse. According to the author of the Sportsman's Dictionary, the following directions are given with respect to the chusing such a horse.

He must be tall in stature, with a comely head, and an ont swelling forehead; he must have a large sparkling eye, the white of which is covered with the eye-brows; a small thin ear, short and pricking; if long, well carried and moving; a deep neck, a large crest, broad breast, bending ribs, broad and straight chine, round and full buttocks; a tail high and broad, neither too thick nor too thin; a full swelling thigh; a broad, flat, and lean leg; short pasterns and strong joints.

WAR-whoop, a signal of attack among the Indians. See **Whoop**.

WARASDINS, a kind of Sclavonian soldiers, clothed like the Turks, with a sugar-loaf bonnet instead of a hat. Their arms are a fuzee and pistols; the butt end of their fuzees serves for a spade, when they have occasion to throw up earth.

To WARD, to guard; to watch; to defend; to parry any attack. The word *off* is generally used with it; as, to *ward off* a blow.

WARD, watch; the act of guarding; a garrison or party stationed for the defence of any place; a position of defence, or guard made by a weapon in fencing; that part of a lock, which, corresponding with the proper key, hinders any other from opening it; a district of a town; division of a building, &c. It is also used to denote one under the care of, and subject to, the controul of a guardian.

WARDEN, a keeper; a head officer.

WARDEN, or *Lord Warden of the*

Cinque Ports, a magistrate that has the jurisdiction of those havens in the east part of England, commonly called the cinque ports, or five havens, where he is invested with all that jurisdiction which the admiral of England has in places not exempt. His residence is supposed to be in Dover Castle. According to Cowel, from whom this explanation is taken, the reason why one magistrate should be assigned to these havens seems to be, because, in respect to their situation, they formerly required a more vigilant care than other havens, being in greater danger of invasion from our enemies. On this account the lord chief warden of the cinque ports is presumed to be an officer of some experience, well skilled in the art of defence, and equal to the superintendance of so important a range of coast, upon which France has cast a jealous eye from time immemorial, and where Cæsar made a successful landing. It is generally given to the prime minister.

By Act of the 26th of the King, it has been directed, that the warden of the cinque ports, two ancient towns, and their members, and, in his absence, his lieutenant, or lieutenants, may put in execution, within the said ports, towns, &c. all the powers and authorities given and granted by this act, in like manner as lieutenants of counties, and their deputy lieutenants, may do, and shall keep up and continue the usual number of soldiers in the said ports, towns, and members, unless he, or they, find cause to lessen the same. The militia of the ports is, according to this act, to remain separate from the militia of the counties, and may be called out, pursuant to an act passed in the 13th and 14th years of King Charles II. notwithstanding the pay advanced may not have been reimbursed.

WARDEN of the Stannaries. By Act the 26th of his present Majesty, it is directed, that the warden of the stannaries, and such as he shall commission and authorize under him, shall have and use the like powers with the lords lieutenants of counties, and array, assess, arm, muster, and exercise the tinners in the counties of *Devon* and *Cornwall*, within the said counties, or either of them, according to the ancient privileges and customs of the said stannaries.

WARDER, a guard; a truncheon by

which an officer at arms formerly forbade fight.

WARDER, a beadle, or staff-man, who keeps guard or watch in the day time.

WARDERS, or *Yeoman Warders*, of the Tower of London, officers whose duty is to wait at the gates, and to take an account of all persons who come into the Tower; it is also their duty to attend prisoners of state. They are appointed by the constable of the Tower, from whom they purchase their situations.

WARFARE, military service, state of war.

To WARFARE, to lead a military life.

WARRIABLE, } military; fit for
WARLIKE, } war.

WARLIKE *virtues* are, love of our country, courage, valour, prudence, intrepidity, temperance, disinterestedness, obedience, wisdom, vigilance, and patience. In the last celebration of the anniversary of the destruction of the Bastille, which took place at Paris on the 14th of July, 1789, the French characterized these eleven virtues by the following emblems:—a pelican, a lion, a horse, a stag, a wolf, an elephant, a dog, a yoked ox, an owl, a cock, and a camel.

WARNED, admonished of some duty to be performed at a given time or place. Thus officers and soldiers are warned for duty, &c.

WARRANT, a writ of authority inferior to a commission; thus quarter-masters are warrant officers. Likewise a document with the sign manual attached to it, to authorize the assembling a general court-martial in Great Britain and Ireland, &c. the receipt of public monies at the treasury, &c. Also a writ to arrest and take persons into custody.

A WARRANT, an order, authentic permission, power, &c.

The *Speaker's* WARRANT, a writ which is issued by the Speaker of the House of Commons, in consequence of some decision of the majority of the members assembled, and which the serjeant at arms serves upon any individual, in or out of parliament, with a power of summary commitment, and forcible entry, (aided by the military if opposed,) that is not vested in the other branches of the legislature.

A WARRANT-man, a non-effective allowed per company as a perquisite to each colonel of a regiment.

To WARRANT, to attest; to authorise.

To WARRANT a horse, (*vendre un cheval sain et net, le garantir sain et net, Fr.*) to be responsible for the health and soundness of a horse which one sells. A month is usually allowed on these occasions; during which period, if any material defect should appear, the horse is liable to be returned; especially if he should have been bought at a warrantable price.

To WARRAY, (*guerroyer, Fr.*) to make war upon any state or body of men; an obsolete word.

WARREN, a kind of park for rabbits.

WARREN, at Woolwich, so called from the spot having formerly been stocked with rabbits. It now comprehends the head-quarters for the royal artillery, the royal foundry, the royal laboratory, the royal military academy. It is also famous for proofs and experiments of artillery, and great apparatus of war. The Warren is now called the *Royal Arsenal*; in compliment to an observation made by his present Majesty.

WARRIOR, a soldier; one who fights in war.

To WARRY, an old word signifying to make war upon, &c.

WART, an excrescence, or superfluity of spongy flesh that arises in the hinder pasterns of coach horses, almost as big as a walnut.

A wart suppurates and voids red stinking matter, and is never effectually cured.

WART, or *spongy excrescence near the eye of a horse*. This imperfection proceeds from congealed phlegm lodged there, which, in time, causes the eye to waste, or to grow little, if it be not remedied.

WARWOLF, in ancient military history, an engine for throwing stones and other great masses.

WAR-WORN, worn out in the service.

WASELAAT, *Ind.* collections made.

WASEL *baky*, *Ind.* collections made, and balances struck.

WASHER, a flat circular ring put on the axle-tree, between the linch-pin and small end of the nave, to prevent the nave rubbing against the linch-pin and wearing it, as likewise to diminish the friction of the nave.

WASHERS of a cart, &c. the rings on the ends of the axle-tree.

WASHING, in painting, is when a

design, drawn with a pen or crayon, has any particular colour laid over it with a pencil, as Indian ink, bistre, or the like, to make it appear the more natural, by adding the shadow of prominences, apertures, &c. and by imitating the particular matters of which the thing is supposed to consist.

Thus we wash with a pale red to imitate brick and tile; with a pale *Indian* blue to imitate water and slate; with green for trees and meadows; with saffron or French berries for gold or brass; and with several colours for marbles.

WASHY, in horses, weak; feeble.

WASSYOUT *nama*, Ind. a will or last testament.

WASTAGE *of fuel*, an allowance of two pounds per diem which was made to the officer at the head of the Quarter Master General's Department in the West Indies. This allowance was discontinued in 1816.

The WASTE, that part which is between the main and the foremast of a ship.

To WASTE, in war, to destroy; to desolate.

WASTE, wanton or luxurious destruction: useless expense.

WASTE *of blood*, an unnecessary effusion of blood, which does not entitle even a conqueror to the thanks of his country: especially if the object could have been obtained by able management in the field, or cabinet.

WASTE *of character*, a wanton and unnecessary exposure of established fame or reputation, to answer the crooked policy of corrupt or ignorant rulers.

To WATCH, to keep guard; to be attentive and vigilant; to observe the conduct of any one.

A WATCH, a machine in common use, for the purpose of ascertaining the periodical divisions of time into hours, minutes, and seconds. Staff officers should always be provided with good watches. See *TIME-piece*.

WATCH, a duty performed on board ship. It likewise means the person who performs that duty.

Serjeant of the Watch, a non-commissioned officer belonging to the Marines, or other troops on board, who does duty for a stated period. At sea, the term watch denotes a measure or space of four hours, because half the ship's company watch and do duty in

their turn, so long at a time: and they are called the starboard watch and larboard watch.

The following instructions have been published respecting the watch duty which is to be done by troops embarked in transports, &c.

At eight o'clock in the evening, every man is to be in his birth, except the men on watch; the officer of the watch to go round with a lanthorn, to see that the above has been complied with.

The whole to be divided into three watches, both subaltern officers and men; the watch gives all the sentries, &c. &c.

A captain of the day to be appointed, to whom the subaltern of the watch will make his reports; and the captain to the commanding officer, if there be a superior officer on board.

The whole watch to be always on deck, except when rain obliges them to go down for shelter; and, in fine weather, every man should be upon deck the whole watch.

WATCH-HOUSE, a place where the chief constable of the night sits, to receive disorderly persons, that may be brought in by the watchmen.

WATCHMAN, a sentinel, one set to keep guard; also a constable of the night in and about London, Dublin, and Edinburgh, &c.

WATCH-TOWER, a tower on which a sentinel is posted to keep guard against an enemy.

WATER, an element well known, and of such general use and requisition, that the following observations, which are extracted from the Builder's Dictionary, cannot appear superfluous, although they may trespass greatly upon the limits of our undertaking.

This author observes, "that the learned *Varennius*, in his *System of General Geography*, tells us, from *Vitruvius*, 'that if fountains do not flow of their own accord, their heads are to be sought for under ground, and so collected together. These springs may be discovered in the following manner:— If you lie down on the ground, in places where you would seek for them, before the sun rises, and having placed your chin, as close as you can, till it is, as it were, propped by the earth, so that the adjacent country may be plainly seen, (the reason of this posture is, that by such a position, the sight will not wan-

der any higher than it ought.) If you keep your chin unmoved, it will give a certain definition and true level of the parts where you are placed, and, in those places where you see vapours gathering themselves together, and rising up into the air, there you may dig; for this sign never occurs in a dry place.

“*Coronarius* and some of the ancients intimate that, wherever the twig-withy, flea-bane, reeds, trefoil, pond-grass, and the bull-rush grow very plentifully, there you may, most probably, find water.

“Water may also be discovered by the nature of the soil. If it be a black fat soil, and abound with pebbles of a black or yellowish colour, you need not fear wanting water in such a place. If the soil be glutinous and clayey, you may expect to find water in it.

“Water or springs may be discovered by the natural produce of the soil, as we have already stated; particularly where water-plantane, the sun-flower, reed-grass, oxbane, brambles, or shave-grass, calamint, mat-rushes, maiden-hair, melilot, sour-sorrel or ditch-dock, cinquefoil, blood-wort, night-shade, water-milfoil, and coltsfoot, grow. Where these weeds grow in the greatest abundance, there will be found the most plentiful springs.

“Both the ancients and moderns agree, that flat and extensive plains are commonly most destitute of water, whereas, rising grounds seldom fail of abounding with it; and those eminences which are most shaded with trees have generally the greatest share of springs.

“The ancients used to maintain, that wherever swarms of flies were seen hovering and pitching about one and the same place, water was sure to be discovered.”

Quality of WATER. Next to the possession of this indispensable article of first necessity, especially in armies, the quality should be an object of most serious consideration. In the following places springs are certain and good.

In chalk, some writers say, it is fine, but does not rise very high; this is reckoned the best water.

In sandy gravel also it is fine; but if it be found in low places, it generally flows from rain springs; in which case it will be muddy and unsavoury; but in black soils, fine thin distillations may

be found, which are collected from winter rains as they subside in clayey grounds, and these have the best flavour.

In ground where there is a clear gravel, springs do not much abound, and the veins are uncertain; but the water is very sweet.

In large pebbly gravel, and in sand, stone, or loose veins of coal, the springs are more certain, and the water has uniformly a good taste.

Springs are also abundant in red stone, and if they remain and do not run off through the interventions thereof, they are good.

They flow plentifully also under the foot of mountains, and in stony places; these are very cold, but very healthy. Water, however, which is found in champaign open places, (such as the water is in all stagnated ponds,) is thick, betwixt hot and cold, and not sweet; unless it be that which springs out of the bottom of mountains, and runs into the middle of large plains; and where the springs or reservoirs are shaded with trees, they there excel the sweetness of mountain springs.

For further particulars see the *Encyclopædia Britannica*, and the *Builder's Dictionary*.

WATER-table, in architecture, is a sort of lodge, left in stone or brick walls, about 18 or 20 inches from the ground, (more or less,) from which place the thickness of the wall is abated (or taken in) the thickness of a brick.

WATER proper for horses. The preservation of horses depends considerably upon the water they drink while they are travelling: that which is least quick and penetrating is best: a river being preferable to a spring, and a fountain to a drawing well.

If it should be necessary to let a horse drink such penetrating water, it ought to be set in the sun, or some of it warmed, to correct the sharpness of the rest; or it may be a little corrected by stirring it about with the hand, or throwing hay among it; but if the water be extremely quick and piercing, a little warm water or wheat bran should be mingled with it.

Red WATER. This is a filthy humour, issuing from any wound, sore, or ulcer, in a horse, which is extremely mischievous to him, as long as it is suffered to remain.

WATER-deck, a painted piece of can-

vass, which is made sufficiently large to cover the saddle and bridle, girths, &c. of a dragoon's horse. When the tents are not large enough to admit of these articles, in addition to the fire-arms and bags of necessaries, the water decks serve to secure them from rain, and are fastened with pegs to the ground. The name of the regiment is generally painted on the outside; and when the dragoon is mounted for service on a march, it is strapped over his portmanteau.

WATER-clock, a vessel so contrived, that time may be measured by the distillation of water. It is what the ancients formerly used under the name of *Clepsydra*.

WATER-wheel, an engine for raising water in great quantity out of a deep well.

WATER-rocket, a kind of fire-work made to burn in the water.

WATER-casks, casks, or vessels, which ought to be properly prepared and sweetened, for the purpose of containing salubrious water on board ships of war and transports.

Casks which have had oil, or other liquors, formerly in them, without having been properly cleaned or purified, are sometimes sent on board troop ships, to the manifest injury and inconvenience of every person embarked.

WATERLOO, a small village in the vicinity of Brussels, rendered memorable on the 18th day of June, 1815, by the most decisive victory in modern history; in which the combined forces of Great Britain, Russia, Prussia, Austria and the Netherlands, under the immediate command of their respective Sovereigns, and the Duke of Wellington, on the part of England, were opposed to, and defeated, the choicest troops of France, under the personal guidance of Bonaparte. See **BATTLE**.

WATERLOO-Medal, a silver medal worn pendant from the military ribbon, about the size of a three shilling piece, having on one side the head of His Royal Highness the Prince Regent, and round the head inscribed *George P. Regent*: on the reverse a figure of Victory with wings elevated, sitting on a pedestal inscribed *Waterloo*—holding in the dexter hand a palm branch, and in the sinister a laurel branch; over her head is inscribed *Wellington*, and under the pedestal, *June 18, 1815*: round the edge of the medal is engraved the name of the officer to whom it was given.

WATERING-call, a trumpet sounding, on which the cavalry assemble to water their horses.

WATERING-cap, a cap made of leather or cloth, which dragoons wear when they water their horses, or do stable duty.

WATERING-jacket, a waistcoat with sleeves which dragoons wear on the above occasions.

WATERING-place, among sea-faring men, a situation where boats can load fresh water for the use of a ship. See new edition of Falconer's Naval Dictionary, by J. W. Norie, for some very pertinent remarks on this head.

WATERS, or } in horses. The
WATERY humours, } hind legs of horses are subject to certain white, sharp, and corrupt humours, or waters, which happen very rarely in the fore-legs, and are discovered by searching the pasterns, if a moistness be found beneath the hair, which is very fetid, and will gather round the pastern and pastern joint, and sometimes almost up to the very hani.

These waters frequently cause the pasterns to swell, keep the legs stiff, make the horse lean, and separate the flesh from the coronet, near the heels.

WATREGANS, *Fr.* This word is pronounced *ouregans*, there being no W. in the French alphabet. It is a Flemish term which is generally used in France, and signifies a ditch full of water, that has been made for the purpose of separating lands and inheritances. These ditches are sometimes large enough to receive small boats or barges, and run through a whole village.

WATTLE, a hurdle, made by entwining twigs together.

To WAVE, to flutter; to agitate; as to wave the colours by way of signal.

To WAVE, to decline; not to urge a thing which might of right, or from usage, be supported, or obtained; as, to wave one's rank, &c.

WAY, a military road among the Romans and Saxons.

Wax of the rounds, in fortification, is a space left for the passage of the rounds, between the rampart and the wall of a fortified town. This is not much in use at present. See *Berme*.

Wax-wiser, a hand in the road to shew travellers the way.

Wax-wiser, in a pocket, a movement, like a watch, to count one's steps to ascertain how far one walks in a day.

To WAYLAY, to beset by ambush.

WAYMODE, *Ind.* a prince; a chieftain.

WAYS and MEANS, a term used to express the financial state of a country, and to shew how its exigencies are to be supplied.

WEAKNESS, want of judgment, want of resolution, foolishness of mind. It has been well said by a French writer: *Que la haine des faibles n'est pas si dangereuse que leur amitié.* Max. 484, Vauvernagues. *La société des faibles est plus dangereuse que celle des méchants.* Idem. A weak man, or a fool, in fact, is more to be dreaded, especially if he be vainglorious and presumptuous, than a wicked one.

WEAPON, an instrument of offence.

WEAPONED, armed; furnished with arms of offence.

WEAPONLESS, unarmed; having no weapon.

WEAR, a sluice-gate, or dam to shut up the water.

WEATHER-boarding, in carpentry, signifies the nailing up of boards against a wall. It is sometimes used to signify the boards themselves when nailed up.

This work is usually done with feather-edged boards. In plain work, carpenters usually nail the thick edge of one board an inch or an inch and a half over the thin edge of another. But if the work is to be something extraordinary, they set an ogee on the thick edge of every board.

WEATHER-tiling is the covering the upright sides of houses with tiles.

WEDGE. See COINS, *Mechanic Powers*, &c.

WEDGE, (*coin*, Fr.) In a work translated from the French, and which is entitled, *Observations on the Military Art*, we find the following description of this instrument. It is composed of five surfaces, two of which are triangular, two long squared, and the fifth arbitrary. The two oblong surfaces, by their inclination to each other, form the point that insinuates itself in the wood, &c. that is to be split, as well as the sides or triangular surfaces, if the triangle, as it is driven, lengthens the slit or opening.—They are the square surfaces that first insinuate themselves into the body to be cleft; and what are called the triangular surfaces are only what fill the space that separates the two quadrangular sides. After this reflection, it appears, that the column has, at least, as just a claim as the triangle, to the term or word wedge.

We may even say, with confidence, it has a much better; for a triangle of men ranged according to the same proportion as the triangle of the mechanic wedge, would be of very little force; and a mechanic wedge, of which the incisive angle was as great as that of a triangle of men, would be too large to enter those bodies we might want to cleave or split.

The double phalanx amphistome, of which Epaminondas formed the wedge, contained 3000 men, who were ranged, in Bouchaud's opinion, one hundred in front, and 30 deep. This opinion, according to some, is erroneous. Among the different evolutions of the ancients, the wedge was frequently resorted to, and was, in some degree, connected with the lozenge, which is a figure in geometry composed of four sides and four angles: of the four angles two are always obtuse, and two acute. The angles that are alike are always opposed one to the other, and always in the same number of degrees. According to Elien, there are many ways of ranging squadrons in a lozenge. In the first, they have ranks and files; in the second, neither; in the third, they have files, but no ranks; lastly, in the fourth, they have ranks alone without files. With regard to the wedge, it was a formation which the ancients adopted both in cavalry and infantry evolutions, and was variously used, viz:—

The WEDGE of cavalry. This figure was formed on the same principles and movements as the lozenge, as far as the greatest rank of the latter, which served as a base to the triangular wedge. It was therefore as the half of a lozenge, cut and divided at its obtuse angles.

The triangular WEDGE of infantry. Some people pretend, that there were two sorts of triangular wedges in use among the ancients. The first was full, and formed after the same manner as the lozenge, and the wedge of the cavalry. The second was open at the base, and ranged differently from that of the first.

Triangular WEDGE with a full center. The Greek soldier occupied, at all times, a square space greater or less in proportion to the requisite order, either at a review, advancing towards the enemy, or standing in a position to receive him. This wedge was formed according to the arithmetical progression, $\div 1, 3, 5, 7, \&c.$

The open WEDGE. This species of

wedge was formed two different ways, with the Greeks and Romans. Bouchaud du Bussy, who takes them, one from *Elien*, whom he translates, and the other from *Vegetius*, gives us a third, which appears to be of his own invention, and is very much superior to the other two. According to *Elien*, Epaminondas, the Theban general, employed the open wedge at the battle of Leuctre, and overthrew the Lacedemonians, whose army was much superior to the one he commanded. To form this wedge, the two divisions of a double phalanx amphistome are to unite together at the head, being separate or open at the tail or rear; which gives them a near resemblance to the Greek letter Δ. Bouchaud du Bussy formed the wedge in the following manner:—

“The same body of troops being in array may likewise, says he, form the wedge in marching forward, and this manœuvre requires no preliminary movement. The three divisions being marked, as well as the three files of the center which composes the head of the wedge, the following words of command are given: *Marked divisions, prepare to form the wedge in marching: March.* At the first notice, the files and ranks close suddenly; at the second, the three files of the center, which will be the two first left files of the division on the right, and the first right file in the division on the left, march straight forward; at their second pace, the first file that is contiguous to them on the right, and that which is equally contiguous on the left, move in their turn, so as to have their chiefs or leaders on a line, and in a rank, as it were, with the second soldiers of the three files of the center; at the second pace of the files that have made the second motion, the files which touch them march immediately likewise, and the same manœuvre is to continue successively; each head of a file taking notice not to move until the moment he finds himself on a line with the second man of the file contiguous, &c.”

This method is beyond dispute the most simple, short, and secure that can be devised. The men occupy necessary and proper spaces, and if the enemy's resistance should stop their head, the rest of the files continuing their movements, would all arrive on the same front to engage together, that is, they would be in their primitive order of the phalanx.

This author, to whose observations we refer, from page 170 to page 203, thus concludes:—

“We shall only remark, that all terms, metaphorically applied, sooner or later produce doubt and uncertainty. Neither a column nor a triangle of men should have ever been denominated a wedge; for a line of troops is not formed to be split like a piece of timber; it may be opened, broken through or divided into as many parts as possible.”

WEIGHT, a quality in natural bodies, whereby they tend downwards towards the center of the earth.

Or weight may be defined to be a power inherent in all bodies, whereby they tend to some common point, called the center of *weight* or *gravity*; and that with a greater or less velocity, as they are more or less *dense*, or as the medium, through which they pass, is more or less rarefied.

Weight may be distinguished, like gravity, into *absolute* and *specific*.

WEIGHT, in mechanics, is any thing that is to be raised, sustained, or moved, by a machine; or any thing that in any manner resists the motion to be produced.

In all machines there is a natural ratio between the weight and the moving power. If the weight be increased, the power must be so likewise; that is, the wheels, &c. are to be multiplied, and the time be thus increased, or the velocity diminished.

WEIGHT, quantity measured by the balance; also a mass by which, as the standard, other bodies are examined. In the interior economy of cavalry regiments, particular attention should be paid to the weight of oats, as giving them out by mere measure is liable to gross abuse; for it is well known, that by sprinkling a little water over dry oats, some time before their delivery, the grain will swell so as to fill up a regulated measure, and yet be greatly deficient in weight and quantity, when dry. Indeed, a court-martial was lately assembled in the north of England for the trial of a quarter-master of dragoons, who was found guilty and broke upon this specific charge.

WEIGHTS, in military matters, are those in general use, except in the artillery, where hundreds are made use of, each of 112lb. quarters, each of 28lb. and pounds, each of 16 ounces.

The 100 lb. of England, Scotland, and Ireland, are equal to

- 91 8 of Amsterdam, &c.
- 96 6—Antwerp or Brabant;
- 85 0—Rouen, the viscounty weight;
- 100 0—Lyons, the city weight;
- 91 8—Paris;
- 90 9—Rochelle;
- 107 11—Toulouse and Up. Languedoc;
- 113 0—Marseilles or Provence;
- 71 7—Geneva;
- 93 5—Hamburg;
- 89 7—Frankfort, &c.;
- 137 4—Genoa;
- 134 11—Lejhorn;
- 133 14—Munich;
- 102 0—Venice;
- 154 10—Naples;
- 97 0—Seville, Cadiz, &c.;
- 104 13—Portugal;
- 112 8—Spain;
- 96 5—Lege;
- 112 $\frac{1}{2}$ —Russia;
- 107 $\frac{1}{2}$ —Sweden;
- 99 $\frac{1}{2}$ —Denmark.

WEIGHT, impression, pressure, burthen, overwhelming power. The great advantage which heavy cavalry has over the light horse, and particularly over infantry troops, consists wholly in its pressure and overwhelming power. The British are superior to all others, because, in addition to the weight of substance or carcass, their horses unite spirit and intrepidity to a natural eagerness of pushing forward; and what the light dragoons want in weight, they generally make up in velocity; so that the British cavalry may be looked upon as the best in the world for a charge. The same may be said of the infantry. The English, Scotch, and Irish are naturally robust, broad-set, and strong-limbed: they are likewise bold; and although the Germans may be equally well-bodied in appearance, neither they, nor even the Swiss, possess that elastic impulse and activity by which British troops, when well ordered and ably commanded, make use of the impetus with irresistible effect.

WELCH-gaite, a kind of bill which was recruited among the pole-axes in former times.

WELL, in the military art, a depth which the water rises under ground, with branches or galleries running out from it: either to prepare a mine, or to discover and disappoint the enemy's mine. See **SALT**.

WELL, in building, is a hole left in the floor for the stairs to come through.

WELL, a narrow opening of a cylindrical form.

WELL, made by digging in the earth. In digging for a well, you must work in a place remote from houses of office, stables, dung-hills, and other spots which, by their stench, may impart a very disagreeable taste to the water.

WERE, the pretense of I am.

As you WERE! a word of command in the British service which corresponds with the French *Revenez-vous!* It signifies to return to the same position from which you had faced or wheeled, &c. and is generally used when any motion of the firelock or movement of the body has been done improperly.

WERST, a Russian measure in travelling. The Werst contains seven hundred and fifty geometrical paces.

WESTMINSTER and SOUTHWARK. It is expressed in the Articles of War, that no commissary shall muster any regiment, troop, or company within the city of Westminster, and borough of Southwark, and liberties thereof, but in the presence of two or more justices of the peace, not being officers of the army, under the penalty of fifty pounds, and of being discharged from his office; unless such justices, upon forty-eight hours notice being given to six of his Majesty's justices of the peace, residing within the city and liberties aforesaid respectively, shall neglect to attend such muster: and in case of such neglect, such commissary may proceed to muster such regiment, troop, or company; provided that oath be made before any of his Majesty's justices of the peace, within forty-eight hours after such muster taken, that such notice was given to six justices of the peace: which justices so attending are empowered to sign the said muster-rolls, and to take cognizance of such muster, and to examine the truth thereof before they sign.

To WET, in a sense of good fellowship and hilarity, and of course in a military one, to take a cheerful glass, or, speaking popularly, to moisten one's clay.

To WET a commission. It has always been customary in the British army, (the Artillery, Life and Foot Guards excepted,) for every officer, when he obtains a commission, gets promoted, or exchanged, to afford some mark and acknowledgment

to the corps he joins. Among the Regulars, a pecuniary consideration is made for the benefit of the mess-plate, (where a service of plate is allowed,) according to the rank of the individual: where it is not, that acknowledgment is given in wine. To the best of our recollection, it is a rule in a well conducted regiment of Light Dragoons, for a lieutenant-colonel, on his joining, to pay five dozen of Port; the major 4; captain 3; lieutenant 2; cornet ditto; and the adjutant and surgeon, for each commission, like a cornet. Whenever the commission or promotion is obtained without purchase, the individual pays one bottle more according to his rank. In a regiment of foot, equally remarkable for its interior economy, the following regulation is observed with respect to wetting commissions:

A second lieutenant pays five guineas towards the mess-plate, a first lieutenant seven, a captain ten, a major fifteen, and a lieutenant-colonel twenty-five. Each pays more or less according to the regimental advantages which he obtains; all giving something more when they get their commissions, are promoted, or exchanged, without purchase or difference. There is also a grand day whenever these casualties take place; on which occasion, the usual allowance of wine is exceeded.

WHARFINGER *at the Tower*, the person who has the care of the wharf at the Tower.

WHEEL, in artillery, a circular body which turns round on its axis. The strength of these wheels is always, or should be, proportional to the weight they carry: the diameters of the wheels of heavy gun-carriages are 85 inches and those for light field-pieces 52 only.

Cylindrical WHEELS. In the first report from the committee on the high-ways of the kingdom, ordered to be printed May 11, 1808, we find the following particulars with regard to the superiority of these wheels.

The experiments tried at Batterby are of peculiar importance, and the result, in a national point of view, cannot be placed in a stronger light, than in the following words made use of by Mr. Jessop:—I may venture to assert, that, by the exclusive adoption of cylindrical broad wheels and flat roads, there would be a saving of one horse in four, of 75 per cent. in repairs of roads, 30 per cent.

in the wear of tire; and that the wheels with spokes alternately rounded, would be equally strong with conical ones, and wear twice as long as wheels do now on the present roads.

On the subject of cylindrical wheels, it has been much disputed, whether they ought to be a complete cylinder, or a little rounded at the edge, which, it is said, would promote facility in turning, and prevent the casting of the roads. But any deviation, however inconsiderable, is so apt to justify greater evasions, that, on the whole, the Committee in the House of Commons were of opinion it would be more expedient to enforce a shape strictly cylindrical.

The Wheel, in a military sense, to move forward or backward in a circular manner, round some given point. See **Pivot**. It is observed, s. 2, p. 19, of the Cavalry Regulations, that wheeling is one of the most essential and important operations of the squadron, necessary in many changes of position, and in the formation of column and of the line.

WHEELINGS, different motions made by horse and foot, either to the right or left, or the right and left about, &c. forward or backward.

General rules for Wheelings. The circle is divided into four equal parts: thence, wheeling to the right or left, is only a quarter of the circle; wheeling to the right or left about, is one half of the circle.

When you wheel to the left, you are to close to the left, and look to the right, as above directed. This rule will serve for all wheeling by ranks; as when a battalion is marching by subdivisions with their ranks open, then each rank wheels distinct by itself, when it comes to the ground on which the ranks, before it, wheeled; but not before.

In wheeling, the men are to take particular care, neither to open nor close their ranks, and to carry their arms well.

When you wheel to the right, you are to close to the right so near as to touch your right-hand man, but without pressing him; and to look to the left, in order to bring the rank about even.

In wheeling, the motion of each man is quicker or slower, according to the distance he is from the right or the left: thus, when you wheel to the right, each man moves quicker than his right-hand man, and, wheeling to the left, each man moves quicker than his left-hand

man; the circle that every man wheels being larger according to the distance he is from the hand he wheels to; as may be seen by describing several circles within one another, at two feet distance from each, which is nearly the space every man is supposed to take up.

Over-WHEELING, the act of moving beyond a given point or pivot, so as to be obliged to rein or fall back. When this happens, the leaders of squadrons or divisions are generally in fault.

WHEEL-Carriages, in artillery, &c. The whole doctrine thereof, as it stands on a mathematical theory, may be reduced to the following particulars, viz.

1. *WHEEL Carriages* meet with less resistance than any other kind of carriage.

2. The larger the wheels, the easier is the draught of the carriage.

3. A carriage, upon four wheels of equal size, is drawn with less force than with two of those wheels, and two of a lesser size.

4. If the load be all on the axle of the larger wheels, it will be drawn with less force than if laid on the axle of the lesser wheels; contrary to the common notion of loading carriages before.

5. Carriages go with much less force on friction wheels, than in the common way.

WHEELBARROW, a small carriage of burthen, pushed forward by the hands, on one wheel; a certain number are always attached to the artillery.

WHEEZING or *blowing*, in horses, is quite different from pursiveness; for this wheezing does not proceed from any defect in the lungs, but from the narrowness of the passages between the bones and the gristles of the nose.

WHINYARD, a sword, so called by Butler in his *Hudibras*; a sort of back-sword or scimitar.

WHIPCORD, a tight-spun cord, with which the cat-o'-nine-tails is made.

WHIPSAW, (*rabot*, Fr.) a saw which is used by joiners to divide such great pieces of stuff that the hand-saw will not easily cut asunder.

WHIRLIGIG, an instrument of punishment which was formerly used for disorderly persons. It was a kind of circular wooden cage, which turned on a pivot, and when set in motion, whirled round with such an amazing velocity, that the delinquent became extremely sick, and was subject to every sort of evacuation.

WHISKER, an appendage of natural or artificial hair, which is exhibited upon the upper lip of a light dragoon or hussar.

WHISKERED regiment, a corps in which the officers and men wear whiskers or mustaches.

WHITE face, or blaze, is a white mark upon a horse, descending from the forehead almost to the nose.

WHITE foot is a white mark that appears in the feet of a great many horses, both before and behind, from the fetlock to the coffin.

Horses thus marked are either trammelled, cross-trammelled, or white of all four.

Some horsemen place an unlucky fatality in the white of the far foot behind.

WHITE lead is the rust of lead, or lead dissolved by vinegar. It is much used by painters.

WHOLE, all, total, containing all.

Take care, The WHOLE, a cautionary word which was formerly used in the British service, and is sometimes, but improperly, given now. The term *Attention* is adopted in its room.

WHOOOP, a shout; a loud noise which soldiers make in charging, &c. It is a natural, though a barbarous habit, and has been preserved in civilized armies from a prevailing custom among savages, particularly the wild Indians of America.

WHORES, nuisances which, in former times, were ordered to be turned out of the army, their money taken from them, and, under circumstances of repeated transgression, were ordered to have their left arms broken. In modern times they are less severely handled, even by the chiefs of armies.

WICKET, a small door in the gate of a fortified place, through which people go in and out, without opening the great gate; likewise a small door within a gate, or a hole in the door, through which what passes without may be seen.

WIDERZOUROUK, a compound word from the German, which signifies back again. The French pronounce it *vuidersourouk*. It means a movement which is made to the rear, in order to bring a squadron to the right about, in the same manner that a battalion is faced about. Marshal Puysegur remarks, that the French adopted this movement from the Germans, in the year 1670. He is of opinion, that previous to this epoch, squadrons were

faced to the rear by means of a double caracol, describing a half-circle, the extent of whose front was equal to half of its diameter; on which account, the general order of battle in those days had considerable intervals.

WIDOW's *pension*. See PENSION.

WIG, a Saxon termination of the names of men, signifying war.

Big-WIGS, an expression of contempt which is sometimes used with respect to the great men of an University, or the stiff and unbending leaders of an army, who would sacrifice every thing rather than surrender established rules, however absurd and useless. Previous to the battle of Friedland, &c. Bonaparte, on receiving some intelligence about the Prussians, exclaimed, *Oh! les grosses Perruques!*

WIGWAM, a hut used in America.

WILBE, *Ind.* guardian, protector.

WILDFIRE, a composition of fire-work, so called from its ready ignition and rapid combustion.

WINCH, the handle, or lever, by which a jack, windlass, &c. is turned.

WIND. A horse that carries in the wind is one that tosses his nose as high as his ears, and does not carry handsomely.

The difference between carrying in the wind, and beating upon the hand, is, that a horse which beats upon the hand, shakes his head, and resists the bridle; but that which carries in the wind, puts up his head without shaking, and sometimes bears upon the hand.

The opposite to carrying in the wind, is arming and carrying low; and even between these two there is a difference in wind.

WIND-beam, also called collar-beam; a beam framed cross betwixt two principal rafters.

WIND-broken. This is a malady that happens to a horse when he is suffered to stand too long in the stable without exercise, by which means gross and thick humours are drawn into his body in such abundance, that, adhering to the hollow parts of his lungs, they stop up his wind-pipe, so that the wind cannot play backwards and forwards: but sometimes it happens to a horse that is run off his wind, when he is fat and foul.

This is to be known by his heaving, and drawing up his flanks together, and blowing wide with his nostrils.

WIND-gall, in a horse, is a soft swell-

ing, occasioned by over-working, just by the horse's fetlock, and about as big as half a pigeon's egg, and at first full of water.

A *wind-gall* upon the sinew, that grows hard, makes a horse halt, and in the end makes him lame.

Long-jointed horses are apt to be wind-galled, though they work ever so little.

The wind-galls, called sinewy, commonly happen in the hinder legs, and nothing but fire can cure them; and even that sometimes fails.

WIND-gun. See AIR-GUN.

WIND-mill, (*moulin à vent*, Fr.) a machine which receives its motion from the impulse of the wind.

WINDMILL-hills are frequently strong points of defence, especially if they overlook rivers, or defiles.

WINDAGE of a gun, mortar, or howitzer, the difference between the diameter of the bore, and the diameter of the shot or shell. In England the diameter of the shot is supposed to be divided into 20 equal parts, and the diameter of the bore into 21 of those parts. The French divide the shot into 26, and the bore into 27. The Prussians divide the shot into 24, and the bore into 25. The Dutch nearly the same as the English. The general windage of shells in England is $\frac{1}{7}$ of an inch, let them be large or small, which is contrary to all reason. It is evident, that the less windage a shot or shell has, the farther and truer it will go; and having less room to bounce from side to side, the gun will not be spoiled so soon.

It is true, that some artillery officers say, that the windage of a gun should be equal to the thickness of the ladle; because, when it has been loaded for a while, the shot will not come out, without being loosened thereby, in order to unload it; and when this cannot be done, it must be fired away, and so lost: but in our humble opinion, the most advantageous windage should be in dividing the shot into 24 equal parts, and the bore into 25, on account of the convenient scale it affords, not only to construct guns thereby, but also their carriages. Hence, agreeably to this plan, the windage of a 9-pounder will be .166 of an inch, consequently a sufficient thickness for a ladle; and those of a higher calibre become still thicker in proportion: but suppose this thickness

is not enough, the loss of a shot is a mere trifle, in respect to the advantage gained thereby.

WINDLASS, (*vindas*, Fr.) a roller of wood, square at each end, through which are either cross holes for hand-spikes, or staves across to turn it round: by this means it draws a cord, one end of which is fastened to some weight which it raises up. They are used in gins, and about Dutch mortars, to help to elevate them. The French say, *vindus ou cabestan horizontal*, the latter being a sea term.

Bay-WINDOW, one that is composed of an arch of a circle, usually called bow-window.

WINDSAILS, large pieces of canvass, which are used in ships at sea for the purposes of ventilation, &c. It is very judiciously observed, in page 101 of the Regulations and Orders, that during voyages in hot climates, the most beneficial effects are derived from the use of windsails. The master of the transport should be desired to have them made immediately as troops are embarked, if not already provided, and they should be constantly hung up. These sails throw a stream of cold air between decks. It is not an unusual practice among the men, at least among the unexperienced soldiers, to tie up the bottom of them, by which this salutary purpose is defeated. The serjeant of the watch must be responsible, that this irregularity is never committed.

To WINDWARD, towards the wind; as St. Domingo is to the windward of Jamaica.

WINE-houses, certain places of resort in the garrison of Gibraltar, from which the governor has been accustomed to derive a pecuniary profit; and which have uniformly contributed to the disgraceful licentiousness, disorder and intoxication which have prevailed in that garrison; particularly in 1802, until they were abolished by his Royal Highness, the Duke of Kent, then governor.

To WING, a term used in duelling, signifying to shoot another in or about the shoulder.

WINGS of an army, when drawn up in battle, are the right and left hand divisions; when a battalion is drawn up, the divisions on the right and left are called the wings. The word wing is sometimes used to denote the large sides of horn-works, crown-works, tenailles, and other out-works, &c.

To WINNY, to make a noise like a horse.

WINTER-quarters. See **QUARTERS**.

To WITHDRAW, to call back; to make to retire; as, the first condition was, that each party should withdraw its troops from the frontiers.

WITHE, a willow twig. Withes are used by thatchers to bind their thatching rods to the rafters.

WITHER-band, a piece of iron laid under a saddle, about three inches above the withers of the horse, to keep tight the two pieces of wood that form the bow.

WITHER-wrung. A horse is said to be wither-wrung when he has got a hurt in the withers; which hurt is very difficult to cure.

WITHERS of a horse, the shoulder-blades at the setting on of the neck. They begin where the mane ends.

These parts should be well raised and pretty strong, because they indicate strength and goodness. They keep the saddle from coming forward upon the horse's shoulders and neck, which circumstance immediately galls and spoils him, and a hurt in that place is most difficult to cure. The withers should be lean, and not too fleshy; for in the latter case they will be more liable to be galled.

WITHERS of the bow of a saddle, the arch which rises two or three fingers over the horse's withers.

WITNESSES, in fortification. See **TÉMOINS**.

WITNESSES, in a military judicial sense, persons summoned by the judge-advocate, or any of his deputies, to attend at a general court-martial, there to speak to facts which they know of their own knowledge, and to which they can *bonâ fide* swear, from having been present at the transaction, &c. See *Tytler on Courts-Martial*.

According to the Articles of War, (see Art. xii.) witnesses attending courts-martial are to be privileged from arrests, and, not attending, are liable to be attached. Their evidence is now taken upon oath.

WOLKEELE, *Ind.* an ambassador.

WOLF-holes, in the defence of places, are round holes, generally about 2 or 3 feet in diameter at the top, 1 at bottom, and $2\frac{1}{2}$ deep, dug in the front of any work. Sometimes a sharp-pointed stake or two are fixed at the bottom, and covered with very thin planks, and green

sods; consequently the enemy, on advancing, fall in, and are put into confusion.

WOMEN. From a thorough conviction of the necessity of allowing women to follow their husbands, a regulation exists by which their number is limited, according to the strength of a battalion, and the number of men in a troop or company.

WOMEN of the town, common prostitutes; such as infest the streets of every capital and large town, particularly the sea-ports of Great Britain. Upon the continent, especially in France, Prussia, and Holland, these dangerous animals are always under the strictest regulations, and subject to summary visitation, by order of the police. They also pay a tax, by way of licence.

WOOD. See **TIMBER.**

Alder-Wood, made into charcoal, is reckoned the best for gunpowder.

Teak-Wood, a wood growing in India, with which ships are built; remarkable for its solidity of texture, and imperviousness to worms.

WOODEN-bottoms, in laboratory works, are cylindrical pieces of wood, of different lengths and diameters, agreeable to the size of the gun. They are hollowed at one end to receive the shot, and the flannel cartridge is fastened to the other end; the whole forming one cartridge, which is put into the piece at one motion.

WOOL-packs, bags of wool. They are frequently ranged in form of a breast-work, because they resist cannot-shot. See **SIEGE.**

WORD, a single part of speech, consisting of one or more syllable, for the purpose of expressing ideas. In a military sense, it signifies signal, token, order; as, watch-word, &c.

The WORD,) is a peculiar word

Watch WORD, } that serves for a token and mark of distinction, given out in the orders of the day, in time of peace; but in war every evening in the field, by the general who commands, and in garrison by the governor, or other officer commanding in chief, to prevent surprize, and hinder an enemy, or any treacherous person, from passing backwards and forwards. This watch-word is generally called the *parole*, and to which is added the *countersign*. The first is known to all officers and non-commissioned officers, the latter only to

the sentinels. The officers that go the rounds, or patrols, exchange the word with the officers on duty; nor must the sentinels let any one pass who has not got the countersign.

Watch-WORD. According to the celebrated General Monk, when regiments are on service, the watch-word is given to officers only.

Field-WORD. This word is given to the soldiers, but only in cases of alarm.

Pass-WORD. See **COUNTERSIGN.**

WORDS of command, (*mots de commandement*, Fr.) certain terms, which have been adopted for the exercise and movement of military bodies, according to the nature of each particular service. Words of command are classed under two principal heads, and consist of those which are given by the chief or commander of a brigade, battalion, or division, and of those which are uttered by the subordinate leaders of troops, or companies, &c. As the principal, indeed, to speak more properly, the only object of exercise, is to accustom troops to the various vicissitudes of real action, it were to be wished, that the business of mere parade could so far be dispensed with, as to make every word of command, and every relative situation of a commanding officer, subservient to that indispensable end. It is truly ridiculous to see troops harassed and fatigued on a peaceable parade, or in a peaceable field-day, by front commands, when every man, who has been in action, must know, that the word of command, especially for firing on an enemy, invariably comes from the rear of each battalion. When an officer gives the word of command from the front, it ought to be recollected, that two senses are employed, viz. sight and hearing; and when soldiers come into real action they can only be guided by the latter.

Cautionary WORDS, (*commandemens d'avertissement*, Fr.) certain leading instructions which are given to designate any particular manœuvre. The cautionary words precede the words of command, and are issued by the chiefs of corps.

It was our intention to have inserted, under this head, all the different words of command that are directed to be given in infantry manœuvres, and to have added the *mots de commandement*, as practised in the French service. But as most of those used in the British

service have been published by Authority, we judged it expedient to encumber a work of this description with so much additional matter.

With respect to the French words of command, of which we have the arrangement by us, we have declined inserting them in the present volume; first, because they would have considerably increased its size, and, in the next place, because we had already given occasional explanations of them, with their corresponding terms in English. The reader is, however, referred to *Caumont Marcellin's Translation of French Tactics*, &c. for further particulars.

To **WORK** a horse, to exercise him at pace, trot, or gallop, and ride him at the manege. To **work** a horse upon rails, or head and shoulders on, is between two rails, is to passage him, or make him go side-wis upon two parallel rails.

WORKMEN, persons that attend the ammunition, bombardiers, carpenters, smiths, millers, tailors, wigmakers, masons, painters, &c.

When soldiers are employed upon fatigue, or working parties, the drums and files, &c. should invariably play to time and measure. According to Marshal Saxe, they should be relieved at the expiration of two hours and a half; by which means, the individuals are less harassed, and all the troops share alike. With regard to accompanying them in their march with music, the policy of it is warranted by history. The Lacedæmonians, with a detachment of only 3000 men, under the command of Lysander, destroyed the famous Pyramids of Athens in less than six hours. During the whole of the operation, the drums were playing to excite and encourage the troops. This custom existed in France, in a late period, among the gally-slaves at Marseilles, who, whilst they were employed in removing enormous piles of rubbish, &c. were constantly accompanied by musical instruments and drums. Marshal Saxe's *Reveries*, pages 267 and 268.

WORKS. This term is generally understood to comprehend the fortifications about the body of a place; or, by extension, the means used without the first intrenchment. The word is also used to signify the operations at the besieged, and the operations, stratagem, or assault round a place, in arms, or the like, for its delivery.

CROWN WORKS. See *CROWN-Work*.

FLORK WORKS. See *HEARN-Work*.

To **WORM** a gun, to take out the charge of a fire-arm by means of a worm.

WORM of a gun, an instrument, terminated, or turned round, that serves to extract any thing into which it insinuates itself by means of a spiral direction. It is much the same as wad-book; with this difference, that the one is more proper for small arms, and the other for ordnance.

WORM-CHOLIC, a distemper in horses, occasioned by bread, thick, and short worms or tracheas, like white beans, of a reddish colour, which sometimes bring violent cholick pains upon the animal: they know the guts, and sometimes eat holes through the maw, which kills the horse. The reddish red worms with the excrement is a sign of this distemper, for long white ones seldom gripe a horse. Other symptoms also occur, such as turning his flanks or his belly, or tearing his skin. He will be found sweaty all over, frequently striking out the two hinder legs near together.

WORMS, in horses, are produced from raw and undigested humours.

WORN WORSHIP. In section I. of the *Statute and Articles of War*, it is ordained that all officers and soldiers, not having just impediment, shall diligently frequent divine service and sermon, in the places appointed for the assembling of the regiment, troop, or company to which they belong.

Commissioned officers who wilfully absent themselves, or, being present, behave indifferently or irreverently, are liable to be brought before a court-martial, there to be publicly and severely reprimanded.

Non-commissioned officers and soldiers are liable to a forfeit of twelve pence, to be deducted out of the next pay of each individual so offending, for his first offence; for his second, he not only forfeits twelve-pence, but is laid in prison for twelve hours. The money so deducted is applied to the use of the sick soldiers of the troop or company to which the offender belongs.

To **WURST**, to defeat; to overthrow.

WURSTED, defeated: put to the rout.

WORTHY, a man particularly distinguished, more especially for his valour, as the heroines of antiquity.

Sea-WORTHY, fit to go to sea. The

term is not always applicable to the transgressions in which our brave troops are frequently stowed.

TRUST-WORTHY, is to be trusted, having the genuine principles of honour and honesty.

To **WOUND**, to make or cause a wound.

A **Wound**, the breaking of the continuity of the parts of the body.

A simple **Wound**, that which only opens the flesh, and does not affect the bones or sinews. The French say, *Wound simple*.

A complicated **Wound**, (*Wound compliquée*, Fr.) a wound which is accompanied with bad symptoms, as issues of blood, &c.

A dangerous **Wound**, (*Wound dangereuse*, Fr.) a wound by which the interior parts are affected; as when an artery is pricked, &c.

A mortal **Wound**, (*Wound mortelle*, Fr.) a wound which must unavoidably end in dissolution.

To **Wound** a *horse*. As soon as a horse has received a wound, apply oil of turpentine, and it will prevent bad consequences: or if oil of turpentine cannot be easily procured, let the part be washed with warm water and honey, or with common spirits and warm water.

The **WOUNDED**. Under this term are comprehended all the individuals belonging to an army, who may have been maimed or otherwise hurt in battle. It forms part of the general count which is made on service, viz. *killed, wounded, missing*, and taken *prisoners*. The care of the sick and wounded is one of the primary duties of a commander in chief.

To this list might be added *deserted to the enemy*, but desertion of this kind, though not unusual in other services, is so uncommon among British soldiers and sailors, that we think the mention of it the least expedient.

To **WREAK**, to discharge, or vent; as to *wreak one's vengeance*, or *malice*, or *detraction* *prossers*. A species of vengeance which is state policy can justify, not even in the Machiavelian system.

WREATH of glory, the garland or chaplet of triumph. See **TRIUMPH**.

WREATHING columns is not a term. According to M. Le Clerc, these columns, though commonly made very tall, ought never to be used except in pieces of architecture, as in altars, tombs, columns, and

other places where magnificence is required. Wreathing columns should never be used to support either walls or vaults, or any other considerable burden, on account of their weakness: nor should any thing be laid upon them beyond a plain, light, and delicate entablature: for although they appear by their circumference to have less solidity than the common columns, yet in effect, they have less solidity.

WRESTLER, one who contends in wrestling.

WRESTLING, a contest for superiority of bodily strength; as when two wrestlers attempt to throw each other down. It was in great vogue among the Olympic games; and is yet to be met with in many parts of England.

WRIST, the part of the arm joining to the hand. The *brachial-wrist* is the wrist of the horseman's left hand.

A horseman's wrist and his elbow should be equally raised, and the wrist should be two or three fingers above the pommel of the saddle.

WRIT, a legal instrument; a slender piece of parchment which is issued out of the clerk's office, and to which the stoutest officer must yield. The only mode of avoiding this lowering enemy to personal freedom, is to decline unnecessary expense, and to keep out of debt. The latter mode is, however, scarcely feasible under the circumscribed limits of British pay, and the high price of every necessary of life. By the Articles of War, no soldier can be sold unless for a real debt of 20*l.* of course no writ can be served upon him. Art. War, page 106, Art. XXII.

WRIT of Habeas Corpus. A writ when a man after proclamation issued out of the Court of Chancery or Exchequer, and made by the Sheriff, to present himself to the court under pain of his allegiance, by a certain day does not appear.

FRONT WRITER. See **PAROLE**.

WRITING WARRIORS, persons who treat of military subjects. Some of the best ancient and modern generals have been pre-eminently in this sort of writing; which so far from not forming a material branch of polite and useful literature, as some authors have asserted, constitutes an important and classical portion of it.—Cæsar and Xenophon were military writers.

WRITING WARRIORS, men who write

for hire. The French call them *Fesse Cahiers*, or quill-drivers.

Public WRITERS. Under this term may be classed all men who devote their time and talents to the service of mankind at large. To give their several divisions, sub-divisions, and sections, would take up a volume. We shall, therefore, satisfy ourselves with barely observing, that public writers are, perhaps, the most formidable set of men that can exist in any country. The human mind is so wonderfully constituted, and its aptitude to give and to receive impressions is so diversified, that even truth (though always victorious at last) is frequently defeated by false reasoners; especially by those metaphysical ones, who are ever upon the watch for ideas and words to dazzle the senses; misleading the understanding of others, as they have been misled themselves. A French writer, who gave the first impulse to national exertion, at the commencement of the French Revolution, has said, (we quote from memory,) *Les canons et les mortiers de nos armées, font beaucoup; mais l'artillerie légère des écrivains et des plumes fait bien plus*; the guns and mortars of our armies do a great deal, but the light artillery of inkstands and pens does a great deal more.

WRITERS and *Cadets in the East India Company's service*, young gentlemen appointed to serve in India in civil or military capacities, under certain rules and regulations which may be seen in the East India Register and Directory, published annually by permission of the Honourable the East India Company. In consequence of the gross and nefarious traffic which, for many years, had existed in this branch of patronage, and which was thoroughly proved before a Committee of the House of Commons in 1809, the following resolutions were entered into at a Court of Directors, held on Wednesday, the 9th day of August, 1809.

Resolved, That any person who shall, in future, be nominated to a situation, either civil or military, in the service of this Company, and who shall have obtained such nomination in consequence of purchase, or agreement to purchase, or of any corrupt practice whatever, either direct, or indirect, by himself, or by any other person, with or without his privity, shall be rejected from the service of the Company, and ordered

back to England, if he shall have proceeded to India before a discovery of such corrupt practice be made: and if such situation shall have been so corruptly procured by himself, or with his privity, he shall be rendered incapable of holding that, or any other situation whatever, in the said service. Provided always, that if a fair disclosure of any corrupt transaction or practice, of the nature before described, wherein any Director has been concerned, shall be voluntarily made by the party or parties engaged in the same with such Director, the appointment thereby procured shall be confirmed by the Court.

(Signed)

WILLIAM RAMSAY, Secretary.

Writers, in India, when employed under the Council, rank as subalterns in the Company's service.

WRONG, an injury; a designed or known detriment; not right, not justice.

WRONG-headed, acting precipitately without having duly weighed effects and consequences, and continuing to do so under a manifestation of error. Englishmen and Irishmen are apt to fall into this mistake; the Scotch are more wary.

WRONG-hearted, to have perverse and malicious intentions, and to act upon them. The inhabitants of Great Britain and Ireland are seldom wrong-hearted.

WRONGS. We have already observed under the article *Rights*, that although they are not specifically mentioned or described in the Mutiny Bill, they nevertheless exist in military life. Every officer and soldier possesses rights, and when either is wronged he is authorised to seek for redress. In Section III. Art. 1st, it is expressly laid down, That if any officer shall think himself wronged by his colonel or the commanding officer of the regiment, and shall, upon due application made to him, be refused to be redressed, he may complain to the general commanding in chief of His Majesty's forces, in order to obtain justice; who is by the same article required to examine into such complaint; and either by himself or by the secretary at war, to make his report to the King thereupon, in order to receive his further directions. It will be observed, that although officers may be peremptorily dismissed the service by the King, without trial or investigation, yet, according to this article, and in the true spirit of justice, they have a right to have any parti-

cular instance of grievance laid before his Majesty through the Commander in Chief or secretary at war; and if any difficulty should occur in either of these departments (as may sometimes be the case) recourse can be had to the House of Commons.

If any inferior officer, non-commissioned officer, or soldier, shall think himself wronged by his captain, or other officer commanding the troop or company to which he belongs, he is to complain thereof to the commanding officer of the regiment, who is required to summon a regimental court-martial for the doing justice to the complainant; from which regimental court-martial either party may, if he thinks himself still aggrieved, appeal to a general court-martial: and if upon a second hearing, the appeal shall appear to be vexatious and groundless, the person so appealing shall be liable to be punished at the discretion of the said general court-martial. The proviso which states that the wrong must be of a pecuniary nature, seems to have been suspended by the sense of the House of Commons.

To the credit of British jurisprudence, let it, however, be said, that no military power which is exercised with barbarity, is eventually paramount to the equality of justice that pervades our criminal code. No distance of time or place within the empire; no rank, no connection can rescue the offender from insulted justice. The trial of Governor Wall, for the inhuman murder of Serjeant Armstrong, after a lapse of twenty years, is corroborative of this assertion. He was convicted before a special jury on the 20th of January, 1802; and notwithstanding the exertions of considerable friends to save him, was, finally, executed on the 28th day of the same month.

The fate of Governor Wall will bear testimony to Europe and to the world, that English justice still retains its original purity, and is still equally and impartially administered to the peer and to the peasant; making no distinction between the private and his commander, but punishing, protecting, and avenging all alike. It will be a consolation to

such of the British seamen who may be dejected and cast down by the melancholy end of so many of their messmates, to find that no flimsy charge, no groundless imputation, no pretended mutiny, either imagined at the moment, or afterwards trumped up, as occasion may require, will be admitted as a justification of severities, causelessly and inhumanly inflicted. When they see the death of a simple serjeant, without family, or friends, in a country (Goree, in Africa), whence the report of his wrongs might possibly have never reached home, made the subject of a state prosecution, conducted by the two principal criminal officers of the crown, with the assistance of a number of other highly respectable counsel, and the attendance of every witness in the smallest degree necessary, collected with all the anxiety that could have been bestowed on the case at the commencement of the prosecution in 1784, by the widow and orphan children of the deceased (if such he had, and they were rich enough to afford the expense); will they not rejoice to see, that punishments are not for them alone, and that the proudest of those who rule them cannot tyrannize over them with impunity? It is natural to the ignorance of low situation, to suppose that suffering is confined to its own class. In some countries, this is unfortunately too much the case. In ours, great crimes are rare in the higher ranks of society; but in the few instances that have occurred, the equality of justice has been enforced in a manner which gives every peasant in the land reason to thank heaven that he was born in such a country. The sentence upon Captain Lake of the navy, and the investigation in the Commons, relative to his treatment of a private sailor, will add weight to these observations.

WUHAH, *Ind.* sandals.

WULANDA, or WULANDEZ, *Ind.* The Dutch are so called in India.

WURST, a French horse artillery wagon, which carries 57 rounds for 8 pounders; or 30 for 6 inch howitzers.

WYDRAUGHT, a water-course, or water-passage; properly, a sink or common sewer.

X.

Y A W

XEBEC, (*chébec*, Fr.) a sort of armed vessel, with lateen sails, which is used in the Mediterranean.

XENOPHON, a Greek general, who has rendered his name immortal by a well-conducted retreat; and is equally celebrated for good military maxims, which are still extant in his *Cyropædia*.

XERIFF. A prince, or chief ruler, in Barbary, is so called.

XEROPHTHALMY, (*xérophthalmie*, Fr.) a dry ophthalmia, or complaint in the eyes, which is extremely painful and is not accompanied by any swelling or lachrymal discharge.

XERXES, a king of Persia, son of Darius, and grandson of Cyrus. This monarch has been rendered notorious in history, by the extravagance of his preparations to invade Greece, and his ultimate failure; which latter may be attributed to the undisciplined state of his army, and to the presumption of his General Mardonius. He entered the Hellespont with so numerous a fleet that it covered its surface between the two lands. The number he embarked

exceeded 1,000,000 men, who were entirely defeated by 40,000 well disciplined troops from Greece.

XYSTARCHA, in antiquity, the master and director of the Xystus.

In the Greek Gymnasium, the Xystarcha was the second officer, and the Gymnasiarcha the first; the former was his lieutenant, and presided over the two Xysti, as well as over every species of exercise that was practised therein.

XYSTER, an instrument used by surgeons to scrape and shave bones with.

XYSTUS, or **XYSTOS**, among the ancients, a long portico, opened or covered at the top, where the *athletæ* practised wrestling and running; the gladiators who exercised therein were called *Xystici*.

Among the Romans, the *xystus* was only an alley, or double row of trees, meeting like an arbour, and forming a shade to walk under; so that, in this sense, it might be considered as an open walking place, where the Romans entertained one another.

Y.

YACHT, (*yacht*, Fr.) This word is taken from the Dutch. It is a small ship with one deck, carrying four, eight, or twelve guns, and thirty or forty men. Yachts, in general, are from 50 to 160 tons; contrived and adorned, both within side and without, for carrying state passengers. They answer the purposes of business as well as pleasure, being remarkably good sailers.

YAD DASHIT, *Ind.* a memorandum.

YAWL, a small vessel belonging to a ship.

YAWS, (*pian*, *épiàn*, Fr.) an acute disorder, which resembles the venereal in a most virulent state; with which the negroes, and sometimes the Creoles and whites, are infected in the colonies, and on the continent of America.

YEHOODY, *Ind.* a Jew.

The YELLOWS; (in a horse,) a disease which resembles that called the jaundice in human bodies, of which there are two sorts, the yellow and the black.

YEOMAN. In a general acceptance of the word, among us, yeoman signifies a free-born Englishman, who may lay out of his own free land in yearly revenue to the amount of forty shillings: in other words, a freeholder who has land of his own, and may vote for members of Parliament.

YEOMAN of the guard, one belonging to a sort of foot guards, who attend at the palace. The yeomen were of old uniformly required to be six feet high.—They are in number 100 on constant

duy, and 70 off duvy. They are armed with pertuisaus. Their attendance is confined to the sovereign's person, both at home and abroad. They are clad after the manner of King Henry VIII.

The yeomen of the guards were at first only 50 men of the next rank, under gentry; but they were afterwards augmented to 100, of which eight are called ushers, who have each 10*l.* per annum more than the other yeomen. This corps was first instituted by King Henry VII. anno 1486. The officers of this veteran corps, although they are never included in the general promotions of the army, or derive any benefit from the occasional rise in brevet-rank, have nevertheless the advantage of good pay, and the right of wearing regimentals, without the danger of being called into actual service. The officers are, one captain, 1000*l.* per annum; one lieutenant, 500*l.* per annum, and one ensign, 300*l.* per ann. Of the same description is the honourable band of gentlemen pensioners, which was established in 1509, viz. one captain, 1000*l.* per annum; one lieutenant, 500*l.* per annum one standard-bearer, 310*l.* per ann. and one clerk of the cheque, 120*l.* per ann.

YEOMANRY, the collective body of yeomen. In this class may be considered, gentlemen of small landed property, independent farmers, &c. When the successes of the French had almost laid Europe at the feet of their armies, England alone seemed destined to stop the torrent. She conquered in Egypt, defeated in Spain every army and every general that was opposed to her, turned the tide of invasion on the southern provinces of her insolent enemy, and at last convinced France and the whole world, on the day of Waterloo, of her moral and physical superiority, that she will ever be able to vindicate her ancient pre-eminence in arms, that she will still be the defender of the weak, the avenger of the oppressed, and that no power shall ever attack her with impunity.

During the late arduous struggle for national independence, it was deemed expedient to have recourse to the native energies of the land. Not only the militia, but the volunteer corps were increased; and in order to secure a ready co-operation with all the disposable parts of the regular army, &c. it was strongly recommended to the yeomanry to equip and arm, and to make themselves ac-

quainted with the ordinary routine of military evolutions. The plan was accordingly adopted, and in addition to the supplementary militia and volunteer corps that were formed in the different parishes, bodies of mounted yeomen were regularly assembled, and were headed by the principal noblemen and gentlemen belonging to the several counties. Conspicuous, however, as the martial spirit of the country appeared at that time, it was far surpassed in the exertions, to which Englishmen were excited, by the innate valour of their constitution, during the last few years of the late war. Roused into action by the repeated menace of invasion, and knowing no other surrender of this last asylum of liberty, but that which is connected and interwoven with their lives, the inhabitants of these Islands felt increased animation in proportion to the repetition of the old Roman sentence, (*Delenda est Carthago,*) which had so long been heard from Ushant to the Baltic. Among other noble instances of disinterested patriotism, his Grace the Duke of Northumberland raised among his tenantry, a corps of 1511 men, consisting of a body of horse artillery, commanded by a captain, six troops of cavalry, and 17 companies of infantry; the whole clothed, appointed, paid and maintained by himself; for government only found arms and accoutrements. The captain of artillery and the staff received a permanent pay.—Such a command and such a saving to the state were worthy of a British nobleman. Advocates, as we most unquestionably profess ourselves to be, for a regular army, in the most extended sense of the expression, we could never withhold our tribute of applause to such an effusion of native patriotism. It proved the determined spirit of the land to resist invasion, and by so doing, it shewed, that while the soldiers of general service were fighting their country's battles in all quarters of the globe, their native homes were not left defenceless or unguarded.

YEOMANRY *Cavalry*, (*la cavalerie des tenanciers volontaires*, Fr.) certain corps of mounted gentlemen and farmers, who subjected themselves to specific military regulations.

To YERK or *strike*, in the manage, is said of a horse, when he flings and kicks with his whole hind quarters.

YESAWUL, *Ind.* a state messenger;

a servant of parade, who carries a gold or silver staff; an aide-de-camp.

YETESAB, *Ind.* an officer who regulates the weights.

YEUX, *Fr.* the plural of *œil*, the eye.—The French say *entre quatre yeux*, alluding to two persons speaking together without a witness; literally, between four eyes.

YIELD. See **SURRENDER**.

YOG, *Ind.* junction or union.

Roman YOKE. This was made in the following manner: two spears were fixed in the ground, and a third placed across them in the form of a gallows. Such was the yoke constructed at Caudium, and under which the consuls of the Roman army, having first deposed the marks of their dignity, and the soldiers unarmed, were compelled to pass. Having gone through this ignominious ceremony amidst the scoffs of their enemies and the deep though silent lamentations of those amongst the sufferers who still felt for the honour of their degraded country, the Romans reached Capua, and the consuls returned to Rome to render an account of their conduct. See *Les FOURCHES Caudines*.

YOLATOLE, a sort of drink in the East Indies.

YOLI, a general name for tobacco in the West Indies.

YORK MILITARY ASYLUM, a laudable institution which has been adopted in this country, through the particular recommendation of His Royal Highness the Duke of York, for the education of orphans, and of the children of meritorious soldiers.

YOUNGER regiment is that which was last raised. See **SENIORITY**.

YOUNGER officer is he whose commission is of the latest date. Regiments and officers are posted and commanded; the former, according to the dates of their original establishment, and the latter according to those of their commissions. See **SENIORITY**.

YOUNGSTERS, a familiar term to signify the junior officers of a troop or company. The word *youngster* is likewise used in the navy. The French say *mousse* in naval phraseology.

YPREAU, *Fr.* a Dutch elm.

YZQUI-ATOTE, a sort of drink in the West Indies.

Z.

Z AAT, *Ind.* division of people into tribes or sects.

ZACCHO, in architecture, the lower part of the pedestal of a column.

ZAGAIE, *Fr.* a weapon made in the form of a long dart, which the Moors use in battle, and which they cast with extreme dexterity.

ZAIMS. Principal leaders or chiefs; after whom a mounted militia, which they support and pay, is called among the Turks.

One class of the Zaims receives its appointment direct from the Porte, and the other from the Beglierbeys. Whenever an order is issued by the latter for that purpose, the whole body of the Zaims must assemble, with their followers, at a given spot of rendezvous.

They are supported by certain revenues called Timars; and the money which they thence receive amounts to twenty thousand aspers—five aspers are

equal to one penny English—and they never can receive less. The Zaims are all of equal rank among themselves. They may be considered as the chief noblemen in Turkey; deriving considerable importance from the many privileges and immunities which are attached to their several Zaimets. The lowest annual revenue of a Zaimet is twenty thousand aspers, and the highest amounts to ninety-nine thousand nine hundred and ninety-nine. Whenever it exceeds the latter sum, the surplus is added to the income of the Sangia-Bey or Bacha, whose rank in Turkey is nearly similar to that of a count in France.

The Zaims seldom serve at sea. They prefer paying a certain sum of money to be exempted from that duty. But whenever they take the field, it is incumbent upon each to bring as many horsemen, accoutred and fit for service, as there are sums of five thousand aspers in the

annual receipt of his Zaimet; so that every Zaim who receives thirty thousand aspers, must produce six able bodied and well mounted followers; and every one having sixty thousand aspers per year must bring twelve.

Although the Turks take especial care to see, that the Timariots and the Zaims bring their complements of men, whom they call Jebelus or horsemen; nevertheless they do not reckon them as any part of the effective forces of the Ottoman empire. On the contrary, they call a Zaim, accompanied by his quota of horsemen, a Selectar or one sabre.

When a Zaim takes the field, he must provide himself with camp equipage, &c. and independent of the necessary number of tents for himself and his men, he must also have one to cook in, and another to serve for stabling.

The Zaims, as well as the Timariots, are under the immediate orders of their Ali-Beglier or colonel. These officers are subordinate to the Bacha, who has the rank of colonel-general; but in all considerable enterprizes, such as sieges, battles, &c. the Bacha is obliged to communicate with the seraskier or general in chief of the army; which is usually the Grand Vizir.

ZAIMET, *Ind.* the place, situation, &c. where a Zaim receives his revenue, &c.

ZAIN, a horse of a dark colour neither gray nor white, and without any white spots or marks upon him.

ZAMORIN. a title of sovereign princes, in Malabar, in the East Indies.

ZAMPOGNI, a common flute, or whistle.

ZARCOLA, a cap worn by the janizaries of Constantinople.

ZAYM, *Ind.* a feudal chief, or military tenant.

ZEAL, (*zèle*, Fr.) more than common ardour for the good of the service; an earnest passion for any thing; especially for religion, and for the welfare of one's country. In governments this zeal is apt to outrun discretion. Mr. Burke has said: One of the greatest beauties of a wise government is not to be too exact. It has been wisely remarked also by one of our best didactic poets, that excess of zeal may be detrimental to community:

For virtue's self may too much zeal be had;

The worst of madmen is a saint run mad.

POPE.

Military ZEAL. Under this term may be comprehended, not only a natural disposition to arms, but also an unwearied application to the science of war, and a prompt and undaunted exercise of all the duties which the situation of an individual may prescribe. There is not, perhaps, any profession in which the thorough devotion of a man's time and talents is so imperiously called for, as in the theoretical and practical branches of military knowledge. It is scarcely possible to have too much zeal; most especially when the heated imagination of a soldier has been gradually tempered by experience, calmed by the hand of time, and is constantly under the influence of well digested plans.

ZEBANBUNDY, *Ind.* a deposition.

ZECHIN, } (*Séquin*, Fr.) so called
ZACHIN, } from *La zeccha*, a place in the city of Venice, where the mint is settled; a gold coin worth about nine shillings sterling.

Turkish ZECHIN, a gold coin, in value about nine shillings.

ZEINAUB, *Ind.* a term of distinction used to persons of rank or eminence.

ZEMEEN, *Ind.* ground.

ZEMEENDAR, *Ind.* a person who holds a tract of land immediately from the government, somewhat similar to a lord of the manor.

ZEMEENDARY, *Ind.* the lands of a zemeendar.

ZENITH, (*zénith*, Fr.) the point or vertex in the heavens directly over one's head. If we conceive a line drawn through the observer and the center of the earth, which must necessarily be perpendicular to the horizon, it will reach to a point among the fixed stars called the zenith.

The zenith is directly opposite to the nadir; one above our heads, and the other below our feet.

ZERAKET, *Ind.* agriculture.

ZERB, *Ind.* a blow; a stroke.

ZERB SHALLAAK, *Ind.* a blow given with a stick.

ZERO, *Fr.* a word used to express a cipher, or nought (0).

ZIG-ZAG, *Fr.* a term used in mechanics. The working beams or balances, which give motion to the several pumps that throw the water up, from the river to the hill at Marly, near Paris, form a sort of zig-zag.

ZIG ZAGS, in fortification, are

trenches or paths with several windings, so cut, that the besieged are prevented from enfiling the besieger in his approaches.

ZIL, a military musical instrument which is used in the Turkish armies. It consists of two brass basons, that are struck together, so as to be in concord with other instruments.

ZIMRA, *Ind.* a certificate.

ZINDIGEE, *Ind.* grain, cattle, lands, plantations.

ZIYAMUT, *Ind.* a fief bestowed for military services.

ZOCLE, (in architecture,) a square member, lower than its breadth, serving to support a pillar, or any other part of a building, instead of a pedestal, base, or plinth.

ZODIAC, (*zodiaque*, Fr.) one of the greatest imaginary circles of the heavens, which passes obliquely between the two poles of the world; it is cut into two equal parts by the equator, one of which comprehends the six northern

signs towards the Arctic pole, and the other the six southern signs towards the Antarctic pole.

ZONE, (*zone*, Fr.) a fifth part of the globe.

ZONÆ, a portion of the surface of a sphere, which is terminated by the circumference of two parallel circles.

ZOOPHORUS or *Zoophoros*, (*zophore ou frize*, Fr.) in ancient architecture, particularly in Greece, the same thing as the frieze in the modern. It was so called among the ancients, because it was adorned with the figures of animals.

ZOOPHORIC *column* is a statuary column; or a column that bears and supports the figure of an animal.

ZOPISSA, (*zopissa*, Fr.) the best sort of pitch, or pitch which is scraped off from the sides of ships, and then tempered with wax and salt.

ZULLUM, *Ind.* violence; oppression.

ZUROOREAT, *Ind.* necessaries.

FINIS.
